4d) These claims (by Democratic Party federal politicians in the post-2008 environment) are not contradictory. Financialization obviously wouldn’t work (per 1930’s) without massive [4] *state-insurance schemes* (to prop up what would otherwise be a naked Ponzi scheme). This (approx. century of) insurance structure was simply added to earlier (“bankmoney regime”) supports of: [3] *federal funds/base money* (1920’s) and, before then, [2] *Treasury debt securities* (mid-19th century) and [1] ‘*special legislative charters* [delegating money creation] (from the early 19thc). AIG Insurance was at the heart of the Financial implosion of 2008 (which was initially on a scale surpassing the Crash of 1929), and the state-insurance and big-bank-supporting schemes have only been ramped up since then. See also “Dodd-Frank Act”, “Financialization”, “Feudalism, neo”.

¹¹⁴⁶ Pretty much “all of the growth since 2008 has been by the...5% of the population” (Hudson, 2020c, mn.32). See also “Feudalism, neo”.

4e) Federal insurance schemes (at least for the primary sector) actually started going over-the-top in the mid-1990's-- predicated by two decades of increasing federal "disaster programs" from "the mid-70's.... almost all [of them] demanded by the banking industry... because they're the ones that were getting [most of] the [farmers'] income" (Asbridge & Cook, 2020, mn.36). The Clinton Admn., however, "devised federal crop insurance.. [whereby] Congress...[was] relieved of its obligation to keep coming up with these disaster programs [almost "every year"]. So [voila], they made federal crop insurance [de facto] mandatory ...[i.e.] 'If you want to participate in federal farm programs.... now you have to buy federal crop insurance...[and] it's so *horrible* [sic] that if a guy...[tried] to sell it to you for your house, you'd throw him off your porch. [But since farmers are always in debt & under the feds]; It's mandatory... You can't get a loan to farm unless you have federal crop insurance... 65% of the premium of... all federal crop insurance policy is subsidized by the taxpayer. So farmers only pay 35% of the cost-- and it's *still* [sic] too high, and it [is 'insurance' that] doesn't pay. If you are a farmer and suffer a loss...[and] you [think] you can collect on a claim... you don't even get the check. Did you hear me?.... It goes directly to your [so-called] lender. They don't need your endorsement. You're just a middleman... And they claim they've solved the problem of [farming & food supply] disasters...[despite the Trump Admn. "pouring out... even more" funding for 'disaster' programs]... all facilitated by the banking industry. They're the ones that are clamoring, because if the farmer doesn't have the income, he can't pay his note. So we're doing [just another form of] bank bailouts here... We're not doing farm bailouts" (Asbridge & Cook, 2020, mn.36-38). See also "Parity pricing (for the primary sector)", "Food (and food-like substances)". See also "Academia", "Economics", "Federal Deposit Insurance Corp. (FDIC)", "AIG", "Parasite".

MarshMcLennan

[MarshMcClennan-21-"Over half of the world's cities have a smart city roadmap, but only 16% have mature projects running. Is it time to reboot #SmartCities".]

Fiscal- (the adjective for public budgets, especially for government taxation and spending)

- 1) Most reformers conflate *fiscal* policy (spending more tends to be popular) with *monetary* (unpopular) policy, usually dooming them to perceived sneakiness. People are skeptical of Monetary Reformers and rightfully so. See also "Monetary Reformers".
- 2) An example of the noun form-- *fiscalism* (or fiscalist approach)-- is when, for example; "MMT focuses on government money creation to finance budget deficits to spend money into the economy. The effect is to pump [more] money into the economy, as long as the government spends it on employment and buying goods and services (not financial bailouts)" (Hudson, 2019c). See also "Reform, false", "Modern Monetary Theory' (MMT)", "Window Guidance", "Monetary financing".

Fischer, Stanley- ('elder statesman of American finance'; 1st Dep. Dir. of the IMF [1994-2001]; Vice Chair of Citigroup [2002-05]; Gov. of the Bank of Israel [2005-13]; 'Vice' Chair of the Board of the Federal Reserve [2014-17];¹¹⁴⁷ Senior Advisor to ['COVID'→'Helicopter money'] BlackRock [2019-]) See also "M.I. [nonsense]; → "BlackRock" [usher], → "Helicopter money" ["CBDC"].

¹¹⁴⁷ "During his tenure at the Fed, Dr. Fischer headed the 1] internal supervision of the key policy divisions of the Board staff as well as 2] the Financial Stability Committee. He also chaired the important 3] Communications Subcommittee of the Federal Open Market Committee (FOMC)." - BlackRock.com. In late 2017, (de facto Gov.) Fischer, a dual Israeli-American citizen, suddenly retired from the Fed (and also apparently public life, at the age of 73) for "personal reasons", before re-surfacing, in Jan. 2019, as (the) 'senior advisor' to the world's largest "asset manager". See also "BlackRock", "Big 3 (Asset managers)", "Helicopter money".

1) The father of (today's dysfunctional) "New Keynesian" synthesis 'orthodoxy':

<https://www.centralbanking.com/awards/7943021/lifetime-achievement-award-stanley-fischer>

1b) ...via, in the late-70's, merging "Monetarism" and (so-called) Keynesianism at M.I.T.¹¹⁴⁸

2) See also "Super Imperialism", "Washington Consensus".

See also "Neoclassical Economics (NCE)", "Keynesianism (Abbaism)", "M.I.T."

[the fix-a-flat man; not to be confused with Mario Draghi (2013)]

Fitts, Catherine Austin- fmr. Asst. Secretary for Federal Housing (FHA)¹¹⁴⁹ and Commissioner Secretary for Housing and Urban Development (HUD), 1989-90,¹¹⁵⁰ prior to becoming America's highest ranking dissident (in the whistle-blowing, insider sense) over the course of the 1990's: "Not everybody has \$6 million dollars and 11 years to play 'enemy of the [deep] state'.... They gave me an offer to cave... and I said no... But I could only do that because I wasn't responsible for a family...[and] could afford to go down to peanut butter and jelly and risk my life" (Fitts, 2017r, mn.27).

(With any oligarchy), "The way you make it simple is by doing the [micro]economics. I spent a long time figuring out what the economics of the...drug business in my county was."- Fitts (Fitts, 2022d, mn.21)

1) "I was an investment banker until politics made it impossible to continue to practice my art. I was trained as a portfolio strategist-- so I map my world by watching the financial flows and allocation of resources" (Fitts, 2020d). The daughter of a surgery professor in Philadelphia, Fitts "grew up, essentially, in the Establishment" (2018, mn.1), yet nonetheless "...in a poor neighborhood, and watched my neighborhood be destroyed by mortgage fraud and narcotics trafficking.... So it's always been my interest to see how we could evolve a healthier economic model on planet Earth... I worked on Wall St. for many years... [where] at some point came to the realization: 'Oh, it's all being rigged from Washington'¹¹⁵¹... and I proceeded to build software tools that would help you map out how the federal government worked by place...[to] bring transparency to the federal government...[Then]... the Department of Justice... stole... all of our software and kept it under lock and key for 6 years" (Fitts, 2017c, mn.2-3). Now an investment adviser and commentator, "my interest is in helping people live a free and inspired life"

¹¹⁴⁸ Fischer's (1977) "Long-Term Contracts, Rational Expectations, and the Optimal Money Supply Rule" effectively supplanted (what was then the [1970's] fad of) "New classical economics", stitching together elements of both ('conservative') "Monetarism" and ('liberal') "Keynesianism"-- after the "Neoclassical-Keynesian Synthesis" (NKS) had fallen apart in the first half of the decade. Fisher's approach (which, after a few years came to be known as "*New Keynesianism*") provided a more credible salvaging [or picking up the pieces] of the NKS wreckage than did (the more macroeconomic assumptions-based) "New classical economics". See also "M.I.T.", "Science of assumptions".

¹¹⁴⁹ Established in 1934 to provide mortgage insurance, the FHA has been one of the "attempts...[that was] made to press the banks [& later thrifts] into making loans on real estate and other slow assets. The banks... have been unwilling again to risk that sort of expansion-- at least for the present. To get the banks to make such loans, the Government has been compelled to guarantee mortgages on homes" (Fisher, et al., 1939, 41), with what was the usual 20th century answer-- an insurance scheme (or bailout) to support banks. See also "Mortgage".

¹¹⁵⁰ "I had to clean up all the HUD fraud, and you would see these patterns of, quote, [laughing] 'urban re-development'...and you would notice [that] these [weren't] riots. This was an acquisition plan" (Fitts, 2020h, mn.15). Fitts was also "asked to join the Federal Reserve as a governor during the George H.W. Bush Administration" (Fitts, 2018). "I was trained as an investment banker, and...was trained my whole life to integrate the money" flows (Fitts, 2019w, mn.31).

¹¹⁵¹ "If you're gonna understand my little neighborhood in West Philadelphia, you're gonna have to understand the whole federal budget. If you're gonna understand the budget, you have to understand the global capital markets, and there you have it... [I]n a very centralized system, you have to understand the body to understand the molecule, and you have to have the molecule to understand the body" (Fitts, 2017k, mn.3).

(mn.5). For a fuller summary of Fitts' calling the DoJ's political bluffing, see also Fitts, 2019s, mn.24-25. See also "Investment banks", "Conspiracy theorist", "Deep State".

2) After raising much money for George H.W. Bush in 1987-88 primaries, "I always tell people [that] I got presidential cufflinks and the accountants [at the FHA] moved over to report to me" (Fitts, 2017h, mn.5).

3) "...I watched the world go [black budget] nuts in the beginning of the 90's¹¹⁵²... *radical* [sic] changes of policies... all designed to...coalesce huge amounts of money under central control and do secret projects. Why? What's that about?" (Fitts, 2018s, mn.21). "I spent 15 years trying to figure this all out" (Fitts, 2019o, mn.46). See also "Black budget", "*Military Executive Corpocracy (MEC)*" [UnitedStatesof], "Reserve currency".

4) In "1989, as Assistant Secretary at HUD, I assumed responsibility for the primary mortgage insurance funds of the US government. I heard a series of reasons why we could not produce reliable financial statements. They sounded logical to me. Consequently, I instituted a significant package of legislative, regulatory, and administrative reforms to address all of them. In 1990, I was fired to stop their implementation. My company, Hamilton Securities, was hired in 1993 by a new administration to help clean up the resulting mess. We were quite good at our job. Consequently, Hamilton was fired and targeted by the HUD Inspector General and DoJ, once again to prevent...implementation of the reforms. Every year since then, I have heard the same explanations for the financial failures at HUD. I recently picked up a HUD financial statement and laughed so hard I started to cry. Sure enough, it presented the same excuses and used the same playbook. 30 years of the same story, again and again and again. Every year, a new reporter asks me to refute the same phony cover stories-- the process depending on [a] high turnover of [*corporate media cartel*] reporters" (Fitts, 2019n).

5) After being forced out, Fitts went "through 11 years of litigation with the Department of Justice.... I used to pray that I would be given the knowledge" of how things really work in Washington, "and I got the crash course.... It's really important to understand the nuts and bolts of how this is engineered.... " (Fitts, 2018t, mn.4). "If you look at how individuals are manipulated, you have a lot of highly competent, highly capable, highly ethical people, who are constantly put in...[a] double-bind. And... they don't have the tools to understand the surveillance and the mind-control.... It's interesting to spend time with people who lived with Stasi, behind, the Iron Curtain...[because] You know we all [also] have a team of like 20 Stasi agents following each one of...[us] around each day-- it's just that 'they' are A.I.s [algorithms]-- and [that] they are invisible.... Bill Binney.... [at the NSA was] overruled, and what they said is...'We're gonna collect 100% of everything... and give it to corporate contractors. Now when... you look at the government, you see 21 [federal] agencies. I see 4 to 10 contractors who sucked up everything together [at an accelerating pace over the past half-century or so] and integrated it into what I call The Data Beast.... So you're gonna have 800 [mostly private] Stasi teams trying to sell you or exploit you for their thing... and it's gonna feel like being swarmed by invisible insects"¹¹⁵³ (Fitts, 2011 mn.7-9). See also "Attitude inoculation", "3rd Industrial Revolution", Appendix C: "1-2-3".

6) "We have literally, since World War Two, been financing two civilizations, from the budget of one, and keeping the one secret from the other.... Papa has got 2 families, and one family is completely clueless that the other exists.... So we have this parallel universe problem... [which] is one of the reasons why they engineered the [2008-] financial coup de tat... trillions of dollars moved out of the federal US government, and I suspect in other governments, too.... The debt-growth model has run its limit" (Fitts, 2017c, mn.10-11). See also "Monetization", "Central Banking-Warfare model".

¹¹⁵² By 2000, it "was clear that the honest people were forced out, so that trillions in assets could be shifted out of US government accounts" (Fitts, 2019c, mn.4). "[I]n my [prior D.C.] experience, there were major adults. They were very smart, they were very adult, and they planned - you know, we had 100-year plans... [but] Now, more & more, the people who are...shown to the public are not serious adults" (Fitts, 2020g, mn.8-9). "They decided they couldn't [or didn't really need to] do a human [beings] civilization. They're doing something I think will fail" (Fitts, 2020m, mn.9-10). See also "Criminalization of Banking, the", "Timarchy", App.C: "1-2-3", "Design".

¹¹⁵³ Friedrich von Hayek famously ascribed an "all-superior swarm intelligence" to "markets" (Huber, 2013, 7). See also "Market fundamentalism".

7) Even “local economies through the federal budget¹¹⁵⁴ are rigged for tight central control, and the reason they are rigged for tight central control is that they are trying to soak up a huge amount of money secretly. So...if you try and stop the local narcotics traffic in your county, what you’ll discover is you’re financing Tony Soprano, who is financing James Bond, and the black helicopters are going to come down on your head, because everybody [department] needs that money and nobody wants any county to get out of the model” (Fitts, 2017c, mn.42). “...[A]ll this money is disappearing down a rabbit hole, and it’s financing \$150 trillion of hardware that’s flying around in the skies” (mn.43). As with any empire, “everybody’s [still] looking at the criminal enterprise and thinking those guys are the winners” (Fitts, 2017c, mn.48). “Crime that pays is crime that stays. If we want to stop the corruption, then we need the money to be run according to the law... this is the 800 pound gorilla in the room” (Fitts, 2017p, mn.11). “We as citizens have to say [that] this money [even all money] has got to be subject to the rule of law” (Fitts, 2017r, mn.8). See also “White-collar crime”.

8) “What we were always trained in Washington is you’ve got to have an 80% consensus to turn the aircraft carrier” (Fitts, 2017c, mn.53). But most “Americans are still in a state of deep, deep denial.... this cycle of disrespect between the general population [a.k.a. ‘consumers’] and the Establishment” (mn.54). When Joint Chiefs Chairman Adm. Mullen went to inquire of the civilian side what their global vision for America in the world was.... [the answer was that] nobody had a vision...They’re just doing deals and making money.... So [Mullen] went back and he said ‘*Ok, well we’re going to have to come up with a vision for the military that also creates one for the civilians*’” (Fitts, 2017c, mn.104). See also “Denial”.

9) “If you look at the inhumanity that has happened within the United States, you know the psychic garbage that we’re all suffering from as a result of the decades and decades and centuries of inhumanity...it’s accumulated to an unbearable level,¹¹⁵⁵ and we’ve got to clear that psychic garbage.... It can all change in the twinkling of an eye” (Fitts, 2017c, mn.110-111). “They [parasites] have drained the host, and... the pigs have been too piggy... and now the party’s over” (Fitts, 2016d, mn.37). “The challenge before us is not whether we are going to get a financial crash. The challenge before us is whether we are going to be a human [beings] society or an inhuman society, and we are using technology in very inhuman ways...” (Fitts, 2017b, mn.45-46). “We haven’t gone through such radical change since the Reformation; and I would argue that this is much more radical than the Reformation was” (Fitts, 2018t, mn.11-12). See also “COVID”.

10) “The question is...‘*is reality created by reality,*¹¹⁵⁶ *or is reality created by a combination of the intelligence agencies and the [tapeworm] fake news media*¹¹⁵⁷...in failure mode” (Fitts, 2017, mn.5). “Life started to get much more pleasant after I started to get all those guys out. There’s like an energetic poison that comes with them.... Get the parasite out...” (Fitts, 2017b, mn.40). “We are really at the cusp...of deciding ‘are going to be a human civilization or an inhuman civilization’” (Fitts, 2017f, mn.3). “I hate to see people waste any time on the [criminal media’s] disinformation... Your time is much too

¹¹⁵⁴ “The question is ‘*is the Return On Investment for taxpayers positive or negative*’?... You can’t...estimate Return On Investment per taxpayer unless you can look at performance of government investment by place.... Governments are really in the business of place-based investment, and... if you buy a corporate stock, every year you’re required...to get an annual report. But if you pay your taxes to the federal government, you don’t get...an annual report that shows you-- contiguous to the area [where] you vote for political representation-- what the Return On Investment for taxpayers was from the money you spent, which, conceptually, is relatively easy to do. And that information is some of the biggest secrets in America, because it is phenomenally important for a control mechanism” (Fitts, 2016d, mn.28-30).

¹¹⁵⁵ “If you look at the reality, if you look at what the American establishment has done to manage the general population... [including] divide & conquer, global [Arab] Spring, vaccines, fluoride, you know [more], we are... under chemical, financial, and legal assault. And then we behave in dysfunctional ways, and the establishment says ‘*What an unattractive group of people*’... So you have this *cycle of disrespect*.... I think that’s the question, how do we reverse the cycle of disrespect, and get back to doing something... working towards a human society” (Fitts, 2016g, mn.14-15)

¹¹⁵⁶ Fitts generally sees American society, in the second decade of the 21st century, as (still) being run by “the New York Fed and their [large] member banks [money→finance→economy] and the IT [Information Technology (NSA-telecoms & CIA-tech giants)] contractors who [actually] run the IT [tech giants] systems” (Fitts, 2019p, 5). This is overseen, others note in passing, by the (predominantly Pentagon-based) Intelligence Community. See also “Desk, the”, “Intelligence Community (IC)”.

¹¹⁵⁷ In regards to mediated sub-reality, everyone seems to agree that CIA/Mockingbird can pretty much do whatever they want to with the ‘mainstream’ media. See also “Corporate Media Cartel (CMC)”, “Operation Mockingbird”, “Cultural Calendar”.

valuable to be bothered with any of that.... There is a huge amount that can be done to enforce the constitution...bottom-up.... We're going to have to get under the grids and switching the money flows" (Fitts, 2017j, mn.38-40). See also "Transhumanism", "Corporate Media Cartel"; "Integrity".

11) "We need to face reality about our world, because... it's reached a point where we [US] can spin off into a seriously mind-controlled, dysfunctional society-- which is where it looks to be headed.... You don't need to deal with disclosure of the whole planet. You can deal with disclosure of your county... The Black Budget finances one family and one household and one county at a time... [prior to it] spinning [reality] further and further out of control and [being] way too corrupt"¹¹⁵⁸ (Fitts, 2018o, mn.51; 52).

12) "If Donald Trump will engage-- not with the whole population-- but with the 5-to-10% in any local community who's willing to engage on that basis [of budget accountability], you know that's how you create a constituency and broker the sort of agreements between right & left and Republicans & Democrats that will agree on turning the money.... on how important it is that we run the **money** according to the law"¹¹⁵⁹ (Fitts, 2017g, mn.15-16). "Basically we're not running the [federal] money according to the law"¹¹⁶⁰ (mn.17). If Fitts were president, she would "basically...put a... simulation of the federal budget online and engage the 10% of the population that really want to be engaged-- sort of that leadership group-- and [say] 'Ok, what would you do and how would you do it?'" (Fitts, 2017i, mn.16).

13) "If you look at the power of blockchain, and the other technologies... in theory, it has... the potential to help us re-engineer, go to an equity system and create the rise in equity that lifts all boats.... The question is how do we transition the legal structure" (Fitts, 2017n2, mn.43-44). See also "Equity finance", "Monetary reform", "Equity".

14) "There're a lot of fine, competent, ethical people taking new technology, taking new scientific discoveries and doing wonderful and exciting and fabulous things, and we don't get to see and hear it, because there's so much of the corruption and fraud going on. But it's happening, and it's happening quietly" (Fitts, 2017r, mn.50-51). "It doesn't take but a few [Leonardo] Da Vincis to keep us out of the Dark Ages, 'cause otherwise that's where we're headed... Own the culture" (Fitts, 2019k, mn.4). "This is not about the money. It's about whether we are going to be a human[e] civilization" (Fitts, 2019v, mn.16). "In...[the] process of civil disobedience, we're going to have to force them to become transparent, on why they want... to destroy our bodies" (Fitts, 2019w, mn.49-50); and reduce average life expectancies, while lying most of the time. "It could be very, very unifying to get people focused on the problems we share in common that are the big, important problems" (Fitts, mn.53). See also "Integrity", "Dumb-downing".

15) For starters? "The defining characteristic for life on planet Earth...[has been] that our real global governance system is a mystery [not just 'invisible hand']...Think about it. It's phenomenal...[that] we don't demand to know how our governance system really works...[I]nstead it's a secret" (Fitts, 2020l, mn.38). See also "Economics", "Market fundamentalism", App.C: "1-2-3".

15b) Fitts-isms: "If we can face it, God can fix it"; "Crime that pays is crime that stays"; "If you guys would just collaborate about the money, you could hate each other rich instead of hating each other poor... It's called participatory budgeting". See also "Federal Reserve Bank of New York (FRBNY)", "Black Budget (US)".

16) Nonetheless, "If we're going to build a human [beings] civilization, it's gonna be a group of global people who do it. If you look at the people who decided that they would rather go with truth in[stead of] the cult, they're [typically] global. They're not in one place.... We have to have place-based optimization [a.k.a.

¹¹⁵⁸ The National Security State's "cult of secrecy" is (in addition to being un-American) rather expensive. How "much more wealth we could create, if we [would] just stop the oppression...how much oppression is used to keep a lid on this.... [L]ook at the amount of money that goes into...maintaining secrecy, [and] covert operations to continue to control and manage the official reality...the costs are beyond imagination" (Fitts, 2018o, mn.52-53). See also "Secrecy, cult of".

¹¹⁵⁹ "To me, the way you have to start enforcing the law is you have to enforce the law with the money...If 'crime that pays is crime that stays' [then] it's gonna keep on happening" (Fitts, 2018f, mn.21-22).

¹¹⁶⁰ Fitts was "part of a group of people in the 1st Bush administration who got a law passed requiring the government to produce audited financial statements. It has not complied with that law [now] for 20 years straight"; and no publicly traded corporation could get away with such behavior. Government agencies aren't producing the audited financial statements "because they are not in compliance with the law" (Fitts, 2017g, mn.23). 'The law' was then changed; see also "Federal Accounting Standards Advisory Board" [FASAB-56].

accountability; building].... bottom-up optimization...[networks...that eventually] have to be global” (Fitts, 2020m, mn.3-4). See also “[International Intelligence Community \(I.I.C.\)](#)”, “Cartel”, “[World Par Economy](#)”.
17) [Catherine Austin Fitts Updates](#): “I think that [‘how to convince people to use...(Sanders & Fitts’) gold & silver calculator to figure out what the local currency would be’] is a big thing, because *anything* [sic].... anything the state can do to make it possible for us to use gold and silver as a currency, you know, is wonderful. Particularly because-- if we have a state depository-- [then] we can just put the gold & silver in a state depository and just send around [more pretty much symbolic value] chits-- [laughing] especially if ‘we’ have our own encryption systems. You know then it [?] gets really fun” (Fitts, 2022j, mn.117-19). See also “[Gold Standards/bullionism](#)”, “[Market fundamentalism](#)” [.America], See also “[Local scrip & Complementary currencies](#)”, “[Jones, Alex](#)”, “[White-collar crime](#)”, “[Media, B](#)”.

Fixed income markets- see “[Direct financing](#)”, “[Bonds](#)”.

Flags of convenience- (migrant workers were essential to ‘globalization’¹¹⁶¹)

1) In places like (primarily) Panama or Liberia, multinational corporations “register in a country where [they] are going to take all their profits-- and this was done already [at lesser scale] in the 1920’s. Panama is not a real country. It doesn’t have its own currency.... A real country has its own currency... [and] tax system” (Hudson, 2016h, mn.18); not to be confused with real country “*tax havens*”, such as Ireland,¹¹⁶² Singapore, or Bahrain. “Of course none of these earnings end up in Panama. They just go through Panama. Right back to the US bank accounts... through US [bank] branches in Panama and Liberia, and similar countries. So the money never really leaves the United States. It appears to be a Balance of Payments flow... foreign investment and dollar inflow. But really all the money stays in the United States.... There are about 7 major [‘off-shore’] banking centers. And you can see all of this money coming to US branches in these... *money-laundering havens*... and they’re all sent in to the head [US or UK] office branch” (Hudson, mn.20-21). See also “[Foundations](#)”.

2) “In 1967” Chase, Citibank, etc. were “asked to set up these branches, as “the US government had a balance of payments problem...the Vietnam War.... The dollar was under pressure. General De Gaulle and Germany and other countries were saying: ‘*Give us our gold*’. So the State Department came to Chase and said: ‘*We want to get all the money we can from foreign countries.... We want to get the criminal savings... We want to replace Switzerland.... So can you please establish branches there [offshore-Caribbean]... so that...drug dealers in Columbia-Latin America can put their money in these branches in the Caribbean, and then just sent it on to our head offices... Otherwise, their money will go to Switzerland and Europe, and...[their] currencies will go up against the dollar*” (2016h, mn.21-23); and thus no more Vietnam-imperialism. “So that was my job for a little while... how to make America the criminal center”; around the same time It Congress [abolished its “15% income tax withholding of foreign investment in Treasury Securities](#)... just so that...criminals could end up investing [primarily] in Treasury bonds, which is the safest investment...” (Hudson, 2016h, mn.23). See also “[Petrodollar](#)”, “[Money laundering](#)”, “[White-collar crime](#)”.

2b) The resultant “demand for cheap labor” (particularly in shipping, after the oil crises), was largely met with the new pool of unemployed, English-speaking cheap labor (available with the Marcos-era hyperinflation in the Philippines, from 1971-74, which spiked again in 1984). In 1960, “15% of all seafarers were Asian. By 1987, that number had more than quadrupled to 67%” (Edinger, 2022, mn.4). See also “[Offshore banking centers](#)”, “[Foreign aid](#)”.

Floor system- See “[Channel-Floor systems](#)”.

¹¹⁶¹ “Perpetuating national borders when convenient; bypassing them when not” (Edinger, 2022, mn.3-4). See also “[Globalization](#)”, “[Regulation](#)”.

¹¹⁶² In (“tax haven”) “Ireland, it’s not secret who owns the accounts. In [‘launder-mat’] Panama, it is, because... they all end up in Delaware corporations, or Nevada corporations. But they go through the Cayman Islands, Riga, Latvia... There’re all sorts of centers people go through before it ends up in Delaware or Nevada, and then in the New York banks” (Hudson, 2016h, mn.24). See also “[Bank Holding Companies](#)”.

Food (and food-like substances)- (caveat emptor: “the [corporate] profit is in ruining the food” [Morrell, 2021, mn.52])¹¹⁶³ See also “Great Extinction, 6th”.

1) In the 1950’s, scholars such as R. Hofstadter portrayed the (agrarian-led) Greenback-Labor-Populist movement as an irrational response of ‘backward’-looking farmers to the challenges of modernity, as the share of farmers in the workforce had fallen from about 70% in the early 1830s, to about 33% in the 1890s. Since the 1970’s it’s been around 2%. Hubris? See also “Agriculture”.

2) “The Anglo-American alliance-- America, Australia, Canada, New Zealand... are really food export juggernauts. And that’s one of the areas that they get their real political power. And I think that’s going to continue.... [growing] one of the Big 5 crops for export market. [However]...if you can get real movement on the [draconian] food safety rules, which... destroyed the local market, [then] farmers can make a lot more [profits] locally” (Fitts, 2017b, mn.23-25). “Demand for fresh, organically grown food is one of the star performers...[among] industries that are growing... and it is [also] going to continue” (Fitts, mn.27-28); as children even less than 5 years old are now recommended to “be tested... [for cholesterol], and if they have high cholesterol then they should be [put] on cholesterol drugs...” (Gerson, 2010, mn.37). See also “Imperialism, American”.

3) ...even though “Americans spent \$2 billion on fresh fruits & vegetables...[vs.] \$10.5 billion on carbonated drinks” during the year ending June 2016 (Fitts, 2017b, mn.38); and “the average American blood Ph is... 6.8, and [if] it falls still further...[then] blood can’t carry oxygen... [which, all scientists know] kills...malignant tissue[s]” (Gerson, 2010, mn.17). “Why did Congress cancel...[meat] labelling requirements just as we see [a] major push to get investors financing lab-grown meat and quote/unquote ‘*clean food*’...food with synthetic pieces and particles?” (Fitts, 2019r, mn.21). See also “Dumb-downing”.

4) US ‘food’ production is, increasingly, a government (lobbyists’) product. “Through the federal government, you’ve created this food system. So instead of people growing [real] food and them selling it to their neighbors, they’re (the “20-25%” of Tennesseans “on food stamps”) getting food stamps from the federal government...going down to Walmart... [and] buying food that’s being trucked in from thousands of miles away. I mean if you care about [‘man-made’] climate change, it makes no sense whatsoever... [L]ocal farms...weren’t put out of business by... no demand for their products. They were put [of business] by regulation-- ‘*food safety*’ rules that make it impossible for you to do something locally. We’ve... used the federal government and federal subsidies, and federal regulations, and state regulations, to centralize control of the food system. And it’s scary, because if you look at how many farms are going bankrupt this year... the small farms are [still] imploding...” (Fitts, 2019w, mn.11-12). From “the late ‘70s, they [the USDA] encouraged all the small farmers to take out... big ag loans... [to] expand their operations. And so many of them did, and they were... growing things that had [USDA] subsidy attached to them. And then [Fed Chairman Paul] Volcker took the interest rates way up [in the early ‘80s], which hammered them on the debt, and then they pulled the subsidies...[Farmers] defaulted on their loans.... [in] a huge wave¹¹⁶⁴... And...[then] the corporate guys come in and...[were picking] up the land for cheap” (Fitts, mn.14-15). See also “Land”, “Lobbyists” [glyphosate], “Parity pricing”.

¹¹⁶³ In the 2020’s, “we’re really heading for [what will be] 2 food systems... The Industrial Food System, which is fraught with problems... [because the basic] goal is not to make you healthy. The goal is for them to make money on this food, and to make you *crave* [sic] the food.... But we [also] have a growing, vibrant, local food system.... [and] it gets easier and easier to find these [increasingly legal (via state legislatures)] people with the internet.... [Meanwhile], it gets harder and harder to keep...[the long-distance] food supply safe” (Morrell, mn.103-04). The Dutch “have [already] kind of figured this out.... and have exported this [new] system to many other countries” (Morrell, 2021, mn.105). See also “Parity pricing (for the primary sector)”, “Dumb-downing”, “Big picture” [dinosaurs].

¹¹⁶⁴ US farm debt doubled between 1978-1984. And prof. Harl at Iowa State estimated that over 3% of America’s 2.4 million farmers were leaving the farming business *each year* during the early ‘80s recession. The USDA estimated in 1985 that net farm income [NFI] had declined by 30%, and land values by 50%, making approx. 1/3rd of commercial-sized farms insolvent to their creditors. Other factors, in addition to record-high debt and interest rates, included high oil prices and a strong dollar. The latter three factors (interest rates, oil, and the dollar) turned around in the mid-80’s, but not the underlying-strategic policy problem. By the 1990’s, suicide had “become the number one cause of death on America’s farms.... [C]hoosing a violent and painful suicide over foreclosure is a decision that few can comprehend, outside of the 2% of Americans who still work the land or the hundreds of thousands of farm families that...lost their farms since 1980.... Farmers and others in rural America aren’t like those of us who make our way in the cities and suburbs. For these rural people, the loss of their land and their way of life creates an incomprehensible despair, more severe than the death of a loved one. It’s as if all the family members who had

5) Safety? “When Britain was deciding whether or not to allow genetically-engineered [GMO] food into the country, unlike [in] the United States,¹¹⁶⁵ there was a real debate and public information around it, and...[the UK] took a very different stance, in part because of Árpád Pusztai [perhaps the world’s leading plant lectin geneticist,] saying ‘I wouldn’t eat...[GMO] food. I *thought* [sic] it was safe, but my research [on it destroying the gut lining (digestion) of rats] indicates [that] it isn’t.’¹¹⁶⁶ We need to do a lot more research’. He was on the...[BBC in 1998] for a minute-and-a-half, and within days he was a) fired from his position...b) locked out of his lab-- he has never been back into his lab-- [and] c) his wife who was a scientist at the same institute was told, along with Arpad, that if you two speak out publicly in any way [about this or GMOs, then] **your pensions are history**. They had [earlier] signed confidentiality agreements.... There’re only a handful of studies that have...been done...[to answer whether] the genetically engineered food that we’re already consuming in the US is safe”; and, unlike in Europe, the “Pusztai affair” was pretty much covered up by the US CMC, so “we’re the guinea pigs here”¹¹⁶⁷ (Stauber, 2002, mn.57-59). See also “Lobbyists”, “Parties, political”, “Academia”, “Dumb-downing”, “COVID”.

[See also “Conspiracy theorist”.]

5b) By the early 2000’s, “the decisive patents-- a monopoly over crucial feed grains, soybeans, corn and so forth-- were... held by 3 or 4 global multinational corporations-- Monsanto, DuPont, Dow, and... Syngenta of Basel, Switzerland... a merger of Swiss, Swedish and...British biochemical entities. Those 3 or 4... as I saw the trend 5 or 6 years ago, were in a position to...patent and potentially control the seedstock of the entire human race within a decade or so.... [And they] are tightly, tightly interlinked with the Pentagon-military-industrial complex” (Engdahl, 2008). See also “COVID”.

6) “Most farmers don’t want to be reminded that the quality of what they’re growing has been deteriorating, because they have been [increasingly coerced into] chasing money, not quality. And they don’t have a choice. It’s from the absence of a sound policy from our [national] government” (Asbridge, 2019b, mn.24). See also “Options and Futures” (bookies), “American System, the”, “Imperialism”.

7) As of 2020, the vast majority of people on Earth still spend most of their income on purchasing food.

7b) And “The quality and transparency of food in the conventional system are on an accelerating decline [T]he continued use of toxic additives such as aspartame and monosodium glutamate (MSG) with intentionally deficient labeling laws...[fails] to inform consumers when these toxins are in food products... USDA is increasing the *lack* of transparency by indicating it will be eliminating label disclosure requirements for irradiated meat and poultry” (Kennedy, 2021).

worked that soil before them and all the children and grandchildren who should one day inherit that opportunity had suddenly been murdered by an unseen assailant: You don’t just lose a farm. You [also] lose your identity, your history, and, in many ways, your life” (Dyer, 1998, 3). A ‘tip of the iceberg’? “The US farmer suicide crisis echoes a much larger farmer suicide crisis happening globally: an Australian farmer dies by suicide every 4 days... in France, one farmer dies by suicide every 2 days; in India, more than 270,000 farmers have died by suicide since 1995” (Wiengarten, 2018). See also “Death Culture”.

¹¹⁶⁵ “The earliest research on GMOs was financed by the Rockefeller Foundation... actually [creating] an entire [new] field in the study of Biology, starting with grants to [the private] Cal Tech... and Cambridge [universities].... [It’s] a fraudulent branch of biology called Molecular Biology, based on a principle of scientific reductionism...[maintaining] that they could reduce the complexity of Life to a single gene [(or two), by simply injecting] foreign matter into that gene and changing the expression of that gene” (Engdahl, 2013, mn.3-4). In “the 1940’s and after the War, the Rockefeller Foundation with its tax-free money was one of the few [main] sources for scientific research in these elite universities, and the universities grabbed it up.... [The post-war] Green Revolution... was a Rockefeller Revolution, with a lot of hype and a lot of lies...[building on the also-Rockefeller-funded] Agri-business [model]...from the Harvard Business School in the 1950’s... [basically] latifundia...concentrations...[to] grow these strains of wheat that Rockefeller[-sponsored] scientists introduced” (Engdahl, mn.5-6). See also “Transhumanism”, “Robots”, “3rd Industrial Revolution”, “Academia”, “Distraction, the”.

¹¹⁶⁶ Prior to “1995, no peer-reviewed studies had been published investigating the safety of genetically modified food using human or animal feeding trials.[2] In 1995 the Scottish Agriculture Environment & Fisheries Dept. commissioned a £1.6 million 3-year research study to assess the safety of...[GMO] Desiree Red potatoes”, led by the distinguished plant geneticist Pusztai. See also “Power” [& desire].

¹¹⁶⁷ It’s not (like so-called ‘COVID’) ‘just here’. “You go today to a supermarket in Moscow... [or] Beijing, or any place in China, and you [now] see...the same products...brought in their by Unilever, by Nestle, by Kellogg’s...And all of those products...[at least as of 2013, contained] GM” (Engdahl, 2013, mn.7). For updates on the global exodus from GMOs that has taken place since the mid-10’s, see also Comments on this entry (above).

7c) Doctors today “have a thankless task. How do you make somebody healthy, or even keep them *alive* [sic], when all they eat is industrial [corporate] food?” (Morrell, 2021, mn.106). See also “[Corporate Media Cartel \(CMC\)](#)”.

8) A “gene-edit-free regime already exists in the USA, where the USDA and regulators allow CRISPR gene-edited soy oil, mushrooms that don’t brown, wheat with more fiber, better-producing tomatoes, herbicide-tolerant canola and rice that doesn’t absorb soil pollution as it grows.... The major lobbying push to remove EU regulations on gene-edited crops or animals is coming from Bayer-Monsanto and the other GMO agribusiness giants including Syngenta, BASF, and DowDupont’s Corteva” (Engdahl, 2021). See also “COVID” [gene-editing ‘vaccines’].

9) “Your people are driven by a terrible sense of deficiency. When the last tree is cut, the last fish is caught, and the last river is polluted; when to breathe the air is sickening, you will realize, too late, that wealth is not in bank accounts and that you can’t eat money”- Abenaki-Algonquian Indian saying (Obomsawin, 1972, 43); nor commercial [TAB](#)-bankmoney chits. See also “Dumb-downing”, “Priorities (‘national’)”.

10) [Food \(and food-like...\) Updates: 8/22](#)- The FDA Deputy Commissioner for Food Policy and Response, remarked at the International Association for Food Protection (IAFP) conference, “acknowledged that progress in reducing the number of foodborne illnesses has been flat for 2 decades. The FDA’s *Food Safety Modernization Act* (FSMA)-- landmark food safety legislation governing 80% of the US food supply-- has done nothing to change that trend since going into effect in 2011.... [Frank] Yiannis [also] stated that we are moving toward an age where everything will have a digital footprint and voice, and where regulators can monitor a food processing plant whenever they want, not just perform an inspection once every 5 years. Yiannis warned IAFP attendees, “things are going to dramatically change in the years ahead” (Kennedy, 2022). “The answer isn’t to increase regulation to the point of further consolidating the food industry-- instead, the solution is to grow the local food system. There is no need to spend billions on technological tools to establish transparency and traceability-- these are already built into local food” (Kennedy, 2022). See also “Blockchains”.

See also “Lobbyists”, “Armageddon”, “Parity pricing (for the primary sector)”.

Fool, political- one who doesn’t know that human beings, in aggregate, hate “Inequality” & “Statism” equally. See also “United States, the”, “Politics”, “Anthropology & Evolution (part 1 of 2)”.

Foreign aid- 1) when it is “(defined simply as any [foreign] government credit) depicts an almost utopian system uplifting all countries, not stripping their assets and [then] imposing austerity..[S]ince World War 1 ...the United States has taken the lead in shaping the international financial system to promote gains for its own: 1) bankers, 2) farm exporters...3) oil & gas sector, and 4) buyers of foreign resources... most of all, [in order] to collect on debts owed to it” (Hudson, 2017r).

2) “...one of the rules in international banking...[is] that pound sterling bankmoney stays with UK- authorised banks, Euros stay in eurozone economy banks, and US dollars remain with US banks [their respective turfs]. A so-called ‘US dollar deposit’ in the UK is in actual fact a deposit with a US bank that is crediting the account of its UK respondent bank.... It is of course possible to sell the foreign currency and purchase domestic currency with it-- but that only results in domestic bank credit [[TAB](#)] creation, something that can be undertaken without getting indebted to foreign bankers in foreign currency in the first place... As the currencies of developing countries invariably fall over time against those of industrialised countries, they quickly get stuck in a foreign debt trap, unable to service or repay the foreign debt which is spiraling out of control in domestic currency terms. That is when the foreign vultures move in and demand ‘*debt for equity swaps*’.... The developing country debt is in fact a form of predatory lending to ensure that the former colonies remain, in economic terms, in the hands of their former masters.... Developing countries do not need to borrow from abroad, and...should not borrow from abroad, as this puts them unnecessarily at mercy of the foreign creditors” (Werner, 2016c).

See also “World Bank”, “IMF”, “Washington Consensus”.

Foreign International Monetary Authorities (FIMA)- (radically-expanded foreign ‘repo’ support)

1) “Not only has the Fed [in recent years] extended its swap support to a wider range of countries than in 2008 and 2009, but on March 31, 2020, it opened a repo facility with foreign international monetary authorities (FIMA). The FIMA Repo Facility [now] allows other central banks and *other monetary authorities* to *directly* exchange their Treasury securities for dollars, thereby avoiding having to sell their Treasuries...into an illiquid market [for Treasuries]” (Feygin & Leusder, 2020).

See also “Repurchase (Repo) Agreements”, “Reserve currency”, “Systematically Important Financial Institutions (SIFIs)”.

Foreign Repo Pool (FRP)- (a.k.a. ‘reverse repurchase agreements [with] ‘foreign official and international accounts’; not to be confused with FIMA [est. 2020]) Established in the post-Bretton Woods 1970’s, FRPs “” (Burne, 2016).

1) is one of the ways that the FRBNY manages Reserve/RAB levels, and, as such, “has been a standard provision of the New York Fed to foreign public sector account holders for many years, and is separate from monetary policy operations, including the overnight and term reverse repo operations” (Federal Reserve Bank of New York, 2018).

2) “at the end of each business day, cash balances across these accounts are swept and invested in an overnight repurchase agreement using [their] securities held in the System Open Market Account (SOMA). At maturity, on the following business day, the securities are repurchased at a repurchase price reflecting a rate of return tied to comparable market-based Treasury repo rates... [in order to support] daily cash management needs to clear and settle securities” (Ibid).

See also “System Open Market Account (SOMA)”, “Foreign International Monetary Authorities (FIMA)”.

Forex (FX)- (‘foreign currency exchange’ trading is the largest component of the OTC Derivatives Markets and is by far the largest market in the world¹¹⁶⁸; either at ‘spot rates’ [1-2 days], or ‘forward exchange rates’ [30, 60, 90 days], approx. 85% of which involve the USD or eurodollars, and nearly all of which is unregulated and going through large international banks [that own and/or control the world’s CBs]). Why? “International trade is complicated by the fact that most countries have their own currencies, which move in idiosyncratic ways and can be held down to boost competitiveness.”- *The Economist*, Aug. 2019 See also “City (of London), the”, “Eurodollars”, “Reserve currency”, “Currency”.

1) The “very essence of froth on the world markets, currency trading is roughly...(100x) greater than all the world’s stock market transactions, and...(26x) more voluminous than the world’s GDP.... Wall Street banks relish volatile currencies” (Gilder, 2018, 87-88).

1b) The gradual shift “to floating exchange rates”, it may be argued, “was an inevitable consequence of [simply] increasing [post-war] capital flows... [F]rom 1945 through 1971, [capital] controls... allowed policymakers to pursue domestic goals without destabilizing the [foreign] exchange rate.... But.... [the] growth of highly liquid international financial markets, in which the scale of transactions dwarfed official international reserves, [eventually] made it impossible to carry out orderly adjustments of currency pegs”¹¹⁶⁹ (Eichengreen, 2019, 2).

1c) Nonetheless, there’s “no need for foreign currency at all for domestic spending. The only reason you would have to borrow a foreign currency is to *balance your exchange rate* or to *finance a trade deficit*...” (Hudson, 2020c, mn.48).

¹¹⁶⁸ “[P]reliminary...results from the [B.I.S.’] 2019 Triennial Central Bank Survey of Foreign Exchange & OTC Derivatives Markets Activity show that [Forex] trading... averaged \$6.6 trillion per day in April 2019... [with more] than \$5 trillion...traded on average every day... [exceeding] global equities trading volumes by 25 times” (Diplomatrix, 2020).

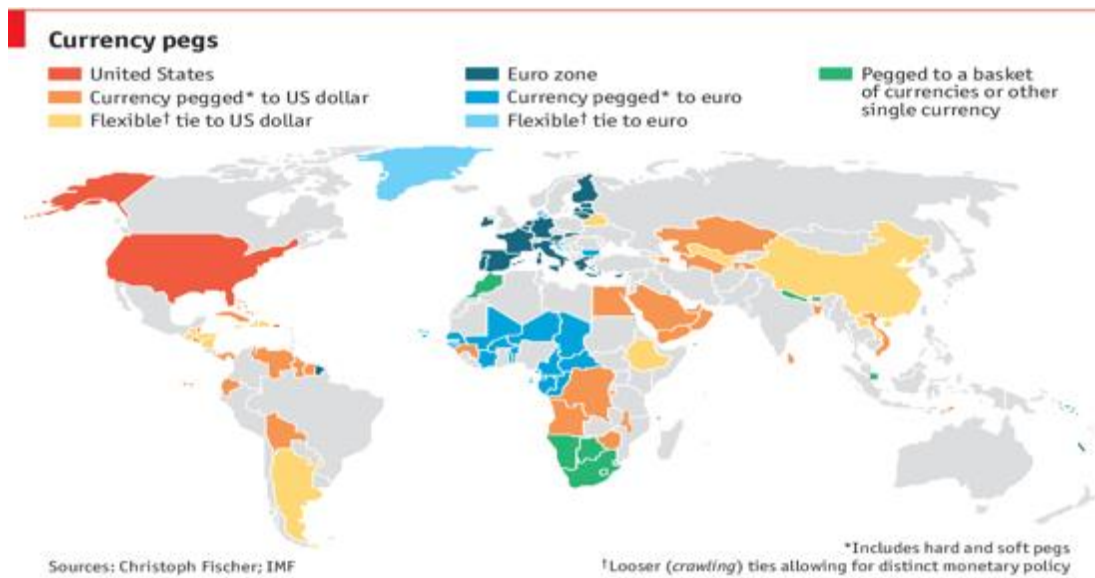

¹¹⁶⁹ More specifically, not “only could discussion before the fact excite the [forex] markets and provoke unmanageable capital flows, but also the act of [currency] devaluation, following [the] obligatory denials, could damage the [national monetary] authorities’ reputation for defending the [currency] peg. Thus at the same time that pegged exchange rates became more costly to to maintain, they [also] became more difficult to adjust” (Eichengreen, 2).

- 2) The UK was the leading forex trader from 2010-13, at approx. 37.6%, with the US a distant second at less than half that amount, approx. 17.9%. Go figure. See also “LIBOR”, “Eurodollars”.
- 3) Currencies tradability, since the early 1970’s,¹¹⁷⁰ may be placed within the following 4 categories:
- a] *freely convertible/‘floating’* (f.e. the dollar, pound, or Mexican peso);
 - b] *convertible within a band/‘managed float’* (f.e. the yuan, tenge, Egyptian pound, or Swiss franc);
 - c] *pegged to another currency* (f.e. the bolívar, Saudi riyal, or Danish krone); or
 - e] *non-convertible* (except on the **bill** market; f.e. the Brazilian real, Chilean peso¹¹⁷¹, N. Korean won).
- 4) Most currencies today are free-floating and/or pegged to the USD (since 1971 the ‘new gold standard’). *Free-floating* currency and gold prices were officially sanctioned by the IMF’s Jamaica Accords of Jan. 1976, and by 2006 had grown to “an estimated \$1.5 to \$2.5 trillion a day¹¹⁷²... dwarfing the \$30 billion a day traded in” the NYSE (Mendelsohn, 2006), and even the \$800 bn. per day traded in the various US bond markets, pre-Crisis. The vast majority of this trading is conducted, in multi-million or billion-dollar increments, on the interbank forex market. See also “Equilibrium”, “Tariffs”, “Globalism”.
- 5) Hence the “Fed can protect the dollar’s value with regard to other currencies... [For example, if] the dollar starts to go down, the fed can get...[other] central banks to either use their...[current account surplus] to buy dollars, or to start...[creating **RAB**] money themselves. And... all these [other] central banks still have QE-- they’re still [nearly 10 years on, creating **RAB**] money.... And that prevents the dollar from falling relative to those currencies... But doesn’t prevent the dollar from falling against gold. So that’s why they use the *naked shorts* [to keep down the price of gold] in the futures market...The price of gold...is [mainly] determined in the futures market.... It’s not [at all] like the real supply of gold” (Roberts, 2018c, mn.35-36).
- 6) “My calculations [in the late 1960’s] showed that the most important factors in determining exchange rates were neither trade nor direct investment, but ‘*errors and omissions*’, a euphemism for ‘hot money’. Nobody is more... ‘hot’ than drug dealers and public officials embezzling their country’s export earnings” (Hudson, 2015, 4). See also “Eurodollars”.
- 7) Since 2008, “the dollar [has] exhibited its most acute appreciation since being allowed ‘float’... in 1971. This [has] happened by virtue of the Fed’s crafting just enough dollars to keep the system going, but not enough to drive down demand for the dollar...[hence] the perfect drug dealer, keeping its customers always waiting for a little more” (Prins, 2018c, 9). See also “Currency swaps”.
- 8) “The average foreign currency investment [is] up now to 30 seconds” (Hudson, 2011, mn.11).
- 9) Higher interest rates (lower stocks) have also often appreciated the US dollar, as have uncertainty/fear in general.→ See also “Reserve currency”.
- See also “Dollar-diplomacy (& hegemony)”, “Currency manipulation”.

¹¹⁷⁰ Forex controls started loosening from 1959, with the restoration of current account convertibility (Eichengreen, 88). See also “Eurodollars”.

¹¹⁷¹ https://cdn2.hubspot.net/hub/310641/file-1000217413-pdf/Exotics/Exotics_Formatted_PDF.pdf%3Ft%3D1402579938515 ; p.3.

¹¹⁷² Volume up to “\$5.3-trillion-a-day” by 2013 (Taibbi, 2014). A big part of this massive scale is simply for currency stabilization, the heart of ‘globalization’, which is 100% rigged by the CBs, primarily the Fed, on a daily basis. For example, if Japan suddenly wanted to increase Reserve/**RAB** money creation (what Roberts calls ‘printing money’), the Fed and other CBs would prefer to know about it in advance and adjust accordingly, lest something upset their global ‘equilibrium’ and long-term planning. For nearly a decade now, “[w]e’ve been watching massive inflation... of the Reserve/**RAB**...[money, but since] they all move in step together.... If they’re all printing [at more-or-less the same time], then they all look the same” relative to the other ‘free’-floating currencies in the club (Roberts, 2018c, mn.39).

[Currency zone pegs, 2014]

'Forward guidance'- another dubious CB post-Crisis scheme to keep interest rates lowering for longer (Loneragan, 2019).

1) The "Fed's forward guidance experiments after the Great Recession would seem to have done more to sow confusion than to clarify the Fed's policy..."- St. Louis Fed VP Stephen Williamson (Williamson, 2015). See also "Negative Interest Rates Policy (NIRP)".

Foundations- (the [nearly invisible] foundries of imperialism)

How exactly did the US transfuse from the [19thc] 'American System' to a fully 'free enterprise' ethos (mostly) during the 'interwar' years? See also "American System", "Reserve currency".

Foundations (of totalitarianism)- (in, by, of, and for that 'long 20th century') See also "Oligarchy"; "Pilgrim Society"; "Imperialism, American"; "Reform, 101".

1) "" (Walters, 1971,). See also "Economics" [.macro]; "Economics, Parity".

2) c.1910, the Rockefeller Foundation and Carnegie Corporation "decided...that Carnegie would deal with the international part [of Education], and Rockefeller [with the] domestic"¹¹⁷³.... [By] 1934... many of the [Foundation 'educators'] were going back and forth to Russia.... The Carnegie Corporation had...been involved in trying to get us into world government. And after the League of Nations & all in 1917, they still had this goal" (Iserbyt, 2000-01, mn.17-18). See also "Dumb downing".

3) In *A.T. & T.: The Story of Industrial Conquest*, by N.R. Danielian, the former Economics instructor at Harvard and financial-utility expert with the newly-formed Federal Communications Commission [est. 1934] delved into the reports and interviews from the US Congress' voluminous 'Telephone Investigation' committee of 1935-37¹¹⁷⁴. He concluded that approx. 1/2th of the national wealth was controlled by

¹¹⁷³ Iserbyt's source is the Reece Commission Report of 1954. By c.1910, the "Carnegie Endowment..." (Iserbyt, 2017, mn.101-104).

¹¹⁷⁴ After a Congressional Investigative Committee on telecommunications industries reported in 1934 that "there is little, if any, Federal regulation of the rates, practices, and charges of the several branches of the communications industry", an official Committee "known as the Special Telephone Investigation (STI)...was led by the newly-appointed [FCC] Commissioner with telephone experience- Paul A. Walker... [who] chose to conduct the investigation as a Congressional investigation, and did not allow AT&T to introduce their own, or to cross-examine...witnesses.... [I]n 1938... Walker issued a Proposed Report, one very critical of AT&T...[recommending] such actions as direct regulation of...prices, and competitive bidding [on] all purchases. The frosty relations between Walker, and to a lesser extent the FCC, and AT&T had just turned considerably colder. AT&T tried to counter Walker's Proposed Report with a point-by-point public rebuttal, and behind the scenes lobbying with the other Commissioners. [When the] FCC issued its Report on the Investigation of the Telephone Industry... in June 1939; it became known as the *Walker Report*. It had white-washed...[Walker's] more controversial points and proved to

corporations, and that more than half of all incorporated wealth was then controlled by 200 corporations (Danielian, 1939; see also Schiller, 2015). See also “Corporations (and corporate ‘personhood’)”.

4) In 1953, the Congressional Reece Commission “uncovered was the determination of these large-endowed foundations, through their trustees, to actually get control over the content of American education” (Dodd, 1982, mn.17-18). RAND co-founder and Ford Foundation mastermind-president H. Rowan Gaither (1909-61) summoned Dodd, the Reece Commission’s chief investigator, to his New York office (sometime in 1953), where Gaither politely explained: “Mr. Dodd, we are here... [most substantively to] use our grant making power so to alter life in the United States...[so] that it can be comfortably merged with [the] Soviet Union’... I nearly fell off the chair” (Dodd, mn.20). See also “Oligarchy, American”, “Dumb downing”, “Communism”, “Parity pricing” [.1952].

[See also “Sutton, Anthony (1925-2002)”.]

5) Keeping up with the Joneses, by 1970 “an industry of drug-pushers... [headed at] the American Psychiatric Association was so dependent on drug company money that 30% of its [reported] annual budget came [directly] from pharmaceutical advertisements.”

- <https://home.solari.com/lets-go-to-the-movies-week-of-august-29-2022-psychiatry-an-industry-of-death/>, mn.54, 113-14. See also “Academia”. See also “Fascism, Modern Hand of”, “Statism”, “Public-Private Partnership”, “Big 3-4 (Asset managers) [hedge funds].

Founding fathers (of USA)- 1st tier [by chronology] Franklin-Washington;→Jefferson;

2nd tier) in addition to *S.Adams* [whom should be credited (as much as anyone) for kicking things off] & *J.Adams* [who had a hand in nearly every event of the latter 18thc], the great constitution-monetary tag-team of *G.Morris-Hamilton & Madison*.

1) 1760’s- the *Adamses*;

1770’s- Franklin & Washington,¹¹⁷⁵

1780’s- *Gouverneur Morris*¹¹⁷⁶ & co.;

1790’s- *Hamilton’s* Federalism¹¹⁷⁷;

1800’s- Jefferson’s revisioning;

1810’s- *Madison’s* compromises.

2) Lawyers: (in order of tier/chronology) Jefferson, J.Adams, G.Morris, Hamilton. See also “Legalism”.

non-lawyers: Franklin, Washington, S.Adams, Madison.

religious heritage-pref.: Anglican-Deist (Washington, Jefferson, Madison, G.Morris [& Monroe & Paine])

be a dud– no legislation, the ostensible objective, resulted. Neither did it gain much press” (<https://historyofcomputercommunications.info/section/2.9/the-fcc-and-at&t-regulation-1934-1946/>).

¹¹⁷⁵ Perhaps the original trans-Atlantic boat-setter, Franklin spent no less than 15 years of his prime in London (in between 1757-75), while General Washington, for his part, was a long-term shareholder & dividendee of the Bank of England. Only after the peace (c.1783) did Washington take “action to close the account and to repatriate the funds from...[his] Bank of England account.”

- <https://reformclub.blogspot.com/2019/05/general-george-washington-and-bank-of.html> [ProblemsRemain].

¹¹⁷⁶ In G.Morris’ “personal legacy, there is a uniquely modern, cosmopolitan, urban quality that separates Morris from the nostalgic, pastoral models-- Mount Vernon, Monticello, Montpelier, [even] the Adams retreat at Quincy-- [that] we associate with most of the founding figures”; “Morris’s politically incorrect style has a particular integrity and forthrightness that is refreshing in our own politically circumspect, cowardly times... In one of the great moments... in Philadelphia, you can almost feel the surge of his adrenaline rising even in Madison’s cramped, abbreviated notes, as...[Morris] gleefully takes on the powerful slave interests seated all around him in the humid State House, calling slavery a curse that might finally be the republic’s downfall...[T]his audacious quality to say what he meant in plain English both on and off the record in an unambiguous voice did not [necessarily] advance his [political] popularity.... Only the transatlantic Franklin came close to Morris’s sense of humor and passionate love of life” (Adams, 2008, xii; xiv). See also “Philosophy”, “Dumb downing”, “Tickbox”.

¹¹⁷⁷ Basically ‘Washington’s prime minister’ followed through (in building) what Gouverneur Morris had started.

Quaker-Deist (Franklin); Anglican (R.Morris¹¹⁷⁸); Puritan (J.Adams, S.Adams¹¹⁷⁹); ? (Hamilton).
 3) In terms of utility today, Bacon & Franklin's (17th-18th century) teachings ring vague; Jefferson & Wilken (19th-20th centuries) delivered the specs (of realizing Aristotle-Montesquieu's prophesied Rule-by-'Middle Class'/'Virtue', via an economically rational civil society [not imperialism]). See also "Ninnies". See also, "Franklin, Benjamin" [Fiat;PublicBanking;Physiocrats;CentralBank], "Jefferson, Thomas" [1800].
 4) Is the term ('Founding Fathers') still useful; was it ever? "I think the term trite, a fortuitous alliteration that has caused great harm¹¹⁸⁰. That said, I write about the 'Founding Era'. It is interesting to note that the *Founding Generation* (no alliteration, but that term does have meaning) did not see the 'Founding Fathers' as we do now. Adams was despised by half the people, Jefferson by the other half. At first, the men Americans most venerated were [simply] military heroes, Washington of course, and many local favorites: in New England, Old Put, the Fighting Quaker, Henry Knox, and the martyred Joseph Warren; in the South, Lighthorse Harry, the Swamp Fox, the Carolina Gamecock. Then, with Jefferson's ascent to power and the politically inspired veneration of the Declaration of Independence, the 56 'signers'...[But not] until the 50th Jubilee, when both Adams and Jefferson died on the same day, did Americans begin to feature the small crew [of 'Founding fathers' that] we know today."- Ray Raphael, <https://allthingsliberty.com/2015/12/how-do-you-define-founding-fathers/> . See also "Dumb downing", "National Identity Cycle". See also "Sovereignty" [Washington], "Bankmoney regime" [Taylor], "Headless Horseman (essay)", "Twain, Mark (1835-1910)"; "Foundations".

Fourth Branch of government- see "Monetary Branch of government", "Base money".

Fractional Reserve (Banking/Lending) (FRB/FRL)- (archaic term¹¹⁸¹ for the process of state-monetized credit institutions [d.b.t. 'depository institutions'] extending credit [mostly] to the non-banks sector [creating TAB]; a.k.a. 'fractional reserve deposit expansion', 'banking & discounting privileges'; informal usage: 'debt-money'; d.b.t. 'commercial loans')

1) Any fractional reserve system is, by definition, a ratio between 2 forms or credit, so that [whatever is used for] the (public) base money (RAB) backs the (private) bank credit (TAB) extension. This can also be said to be a scheme "in which [TAB] money is issued [i.e. created] against someone's debt (loans by commercial banks) at interest. Thus, it is also called [the] *debt money system*" (Yamaguchi & Yamaguchi, 2017, 2). The term is not 'deceptive', because the "fraction" comes from the much greater velocity of Reserves/RAB than, vis-à-vis TAB-bankmoney. More efficient money has higher velocity, and hence requires less volume. See also "Velocity of money".

2) What became known (mostly in the 20thc) as 'fractional reserve' "evolved from a time when [private sector and/or subcontracting] goldsmiths [in the late medieval and late coinage era, were sufficiently "free" to] double-up as bankers (i.e. money lenders). In those times, merchants [many of them international, because Europe had so many kingdoms] left their gold [bullion-- the *international* money (up until the mid-20th century dollar standard)] with [semi-public] goldsmiths for safe keeping, and the goldsmiths [now that paper was cheap & plentiful] issued [paper] receipts for...[the ownership of] gold, because...[this process] was safer [than] carrying gold around. Goldsmiths then got into a practice of giving out more [of these monetized] *receipts*

¹¹⁷⁸ Some accounts (i.e. the civil war days' "Apotheosis of Washington") have R.Morris in the top 3 founders (instead of Jefferson). To this day, there is still considerable scholarship work to be done differentiating the often-conflated (and/or overlooked) contributions of RM and GM, respectively. See also "Morris, Gouverneur", "Morris, Robert".

¹¹⁷⁹ Sam Adams "saw the Revolution as a holy war to create a Spartan America isolated from European corruption. 'Trade', and the merchants who engaged in it, was suspect to men who professed the older American values" (Adams, 2008, 114).

¹¹⁸⁰ "[T]he term infantilizes succeeding generations, including ourselves. A republican government requires constant vigilance, not hidebound filio piety about the ancients."- Benjamin Carp, <https://allthingsliberty.com/2015/12/how-do-you-define-founding-fathers/>

¹¹⁸¹ "When thousands of state-chartered commercial banks arose in the...[1st few decades of the 19thc]-- each issuing its own banknotes [supposedly] redeemable in gold & silver, but lending out far more in paper than they had cash & coin-- they were not simply conveying funds from savers to borrowers, or substituting bills for bullion. They were [in fact] creating an expanding currency [system] of banknotes and [eventually also] deposits backed by *fractional reserves*, that bankers controlled..." (Skllansky, 2021, mn.12). See also "State banking (era)".

than they had gold on deposit [in their vaults/safes]; and also of charging interest [for time] for them. (This worked well so long as everyone didn't come looking for their gold at the same time!). [Thus it] became established practice that goldsmiths held on deposit only a *fraction* of [the international 'reserve' money] gold for all the [paper] gold receipts [that] they had issued, hence the term 'Fractional Reserve' (O'Flynn, 2018, 2). This obviously enabled the rise of *banking* (getting private credits stamped as public money). And after England's somewhat chaotic 17th century and Glorious (i.e. 'Parliamentarian merchants') Revolution, "national banking [paper] systems came into existence [in the 18thc, and] 'fractional reserve' [i.e. banks being allowed to create public money from their private credit extensions] became the norm"-- in at least *supplemental* [remember, there were wars going on all the time then] public money creation (O'Flynn, 2018, 2).

3) "The most lucrative privilege"[i.e. license to steal] is being able to create bank credit and take deposits-- lured by governments-- [and thus] ultimately by [the] public right to tax" (Hudson, 2012g).

4) Money today "is principally created in the domestic economy...through the process known as 'deposit expansion' under which [banks' TAB] credit is extended, by banks to customers, in exchange for the assumption of an obligation by each customer to repay the amount of any such credit *with interest*" (HR 1452, 1999); hence the term 'debt-money'. See also "Debt money", "Loan swaps".

5) How does this actually work? From an everyday, "nonbank" perspective, it doesn't. The FRB/FRL model is archaic (at least in its terminology) and depends, arguably, upon *all-specie* or *all-cash* monetary systems. "Fractional Reserve Banking, as described in the textbooks, does not exist" today; because Fractional Reserve Banking assumes banks to be physical intermediaries of physical money (such as in 17thc The Goldsmith's Tale). The model "is simply impossible... unless all bank loans are in cash" (Keen, 2020, mn.3-6); as they haven't been for many centuries-- if ever really. Banks are simply not goldsmiths. The former deal in extending *account* credits, the latter deal in *physical* bullion-coinage-cash. See also "Banks" "Loan swaps".

6) In the larger picture, however, banks (and all other **state-monetized credit institutions**), do not just 'create money from nothing'. The credit extensions of banks cannot be made (since no later than the 3rd quarter of the 19thc) without much government support in the form of Reserves (**RAB**). "The interbank transfer of Reserves, or the interbank clearing of Reserves, is [always] of the same amount as the [TAB-] bankmoney transferred. The *fractionality* of reserves exists nevertheless. It results from the fact that customers never obtain [actual] Reserves [RAB/'basemoney'], but [instead] only a [federally-insured] 'deposit' [TAB] entry on account, while the banks [always] keep the Reserves [RAB] for themselves, so that the Reserves can [unlike TAB] repeatedly be reused in subsequent transactions, incessantly going out to other banks and coming in from other banks, offsetting each other. Put differently, the *interbank* circulation of Reserves [RAB] is many times faster (much more frequent) than is the use of [TAB-] bankmoney by each customer" (Huber, 2018). See also "Vellty of money", "Loan swaps".

7) It is not, by any means, 'just the Federal Reserve' System: "The creation of money through the extension of [bank] credit and...[its resultant] debt, a traditional [British, and before then Italian] banking function, preceded the establishment by the Congress of...the national banking system [in the 1860's], and subsequently, the Federal Reserve System" in the 1910's (HR 1452, 1999).

8) With a consistent categorization scheme, there have been 5 eras/stages of FRB in American history:

- 1600's-1790- pretty much no private banks (which required unique state charter, until c.1836)
- c.1800-mid-1830's- 'Free Banking' era (minimal and/or inconsistent records & regulations);
- mid-1830's-1863- 'State Banking' era (state-enforced capital-bond security requirements);
- 1863-1913- 'National Banking' era (new nationally-chartered/regulated banks compete w/ SBs);
- 1914-20??- 'Central Banking' era (private, member bank-owned F.R.S., working in conjunction with other 'globalist' CBs, and nominally overseen by a president-appointed Washington Board)

9) "The deeply respectable banking historian Lloyd Mints...[wrote] about the business of fractional reserve banking (1950): 'It would seem that an evil designer of human affairs had the remarkable prevision to arrange matters so that funds **repayable on demand** could be made the basis of profitable

operations by the depository institutions (banks). ‘Evil’¹¹⁸² is a big word, and Mints did not use it lightly. He had in mind the realities of the Great Depression: millions dispossessed and on the breadline, an international crisis that led to (and was only resolved by) the massive destructions of people, capital and debt in the Second World War. This is what the innocuous-sounding words ‘*business cycle*’ meant to him and his generation” (Mosley, 2013). See also “[Deceptive Banking Terms \(d.b.t.’s\)](#)”.

10) Underscoring debt cycles (‘the business cycle’) is the “ridiculous and *extraordinary* [sic] privilege that...[monetized credit institutions] have on 2 levels. #1 they are allowed [by We The People, via our elected government] to create money [with their credit extensions]; and #2 they are [also] allowed to *merge their funds* with their customers’ funds. Nobody else is allowed to do that. It is illegal everywhere else. [With] a mutual fund...[or] any of the shadow banking systems, or any investment fund, the owners cannot mix their own funds with their clients’ [funds]. It is illegal! But banks are allowed to do that. And this is why we have... financial instability...[T]heir are so many repercussions to our monetary system. It’s just crazy” (Kortsch, 2017b, mn.21-22). See also “Bank welfare”, “Custodial accounts”.

11) Much “of the history of the financial system in the United States has evolved around how to reconcile the problems of fractional reserve banking with aversion to federal control of [the growth of] the [public] money supply” (Phillips, 1995). See also “Big Government (growth of)”.

See also “Debt money”, “National debt economy (NDE)”, “Debt cycles”, “Thriffs”.

[Privatized debt-money is almost always strategically inflationary (i.e. Ponzi schemed).]

Fractional Reserve (monetary) institutions- (a.k.a. ‘banks of discount’ [Jefferson, 1813], ‘giro banks’ [in Europe]) 1) inclusive term for all institutions that are allowed to create money (from TAB/credits) whenever they issue a loan (or purchase assets): all commercial banks, and credit unions; and (since the early 1980’s) Savings & Loan Associations, and (since 1999) investment banks, and merchant banks. [we’re still not sure about the 80 or so remnant “Savings Banks”]

See also “[State-monetized credit institutions \(SMCIs\)](#)”, “Financial Intermediaries (non-monetary)”, “Nonbank Financial Institutions (NBFIs)”.

Fractional Reserve myth- 1) Technically, “Fractional Reserve Banking is a neoclassical textbook myth” (Keen, 2016b); because the term implies that banks are lending out a certain percentage of their money, which is not true, as 100% of TAB-bankmoney is created on the spot when a [state-monetized credit institution](#) issues a new loan.

2) The ‘fractional reserve’ term also pertains to reserve ratio ‘requirements’ (which are also now seem to be archaic).

See also “Exogenous vs. Endogenous’ (money creation)”, “Money multiplier”.

¹¹⁸² <https://www.youtube.com/watch?v=4GRiJd5rnm4> [1984Horses]; see also “[Cultural Calendar](#)”.

France (and the EU)- (why they often fall back to it)

It “is impossible there should be any fixed rule in our finances, since we always know that we shall have something or other to execute, without ever knowing what it is.”¹¹⁸³ It is no longer customary with us to give the appellation of a great minister to a wise dispenser of the public revenues, but to a person of dexterity and cunning” (Montesquieu, 1748, 216). See also “Constitution, US (of 1787-91)”.

1) France, unlike England, “did not achieve sovereignty [until rather late].”¹¹⁸⁴ [I]t did not because the king was going to rule according to law. That meant he was [unlike England] going to protect [land] *dominia* and not insist [upon absolute] *proprietas*...[And this] meant that he did not have the powers to be effectively a king. He had enormous incomes around; but, even in total, they were not enough for what was demanded of him. And what he did was-- instead of collecting the money from all of them into a Treasury, and then paying out what was necessary, and having some kind of a budget, or a system of account, or knowing where he was-- what he did was, he promised people or got people to promise they would do something for him that he needed done, whatever it would be, a royal printer or something of this kind, and then he said: ‘All right. So, here is a free income: it is the *octrois*, [i.e., the tolls paid going into a city, somewhere....[any] number of cities (depending on the King’s strength)]... I will divert these tolls to you, that will pay you for being my printer to publish my ordonnances’ and so forth...[A]t least 60 to 80% of his income...[was] committed to these different purposes...[Thus] the only funds that he had available in any particular year would be the...[contracts] that would come free for some reason” (Quigley, 1976c-pt.2, mn.215-17). See also “Georgism (& Land Value Tax)”.

1b) And the king did not even “have credit, because he couldn’t alienate [or collateralize] anything that the monarchy owned, because it wasn’t his. It was the monarchy’s.... [Because] the laws of usury against interest were still in force, and remained in force until the French Revolution.... they [instead] devised a system called *les rentes*-- the incomes-- and what it is, is this: Here is an income [stream]... the ‘interest’-- *but we won’t ’all it that...*’[W]ould you like to buy an income?...[H]ere is an income which yields 50,000 a year. If you will give me 100,000, I’ll let you have it for a year. That’s 50%. Then at the end of the year, I won’t be able to give you back...the 100,000, so if you want the money back, [just] sell it to somebody else. So *rentes* became *claims* upon incomes which could be sold almost like stock exchange certificates of some kind. And this is what became one of the chief sources [of Old Regime revenue], but they built up *fantastic* [sic] burdens of debt in this way.... [E]verything [sic] they were doing in the financial world was illegal. And they exempted supervisors and...accountants who had to be [sworn]; so in order to do this, they had to create thousands & thousands of fraudulent and forged documents to indicate that they were only getting [the legal usury ceiling of] 5.5%, and that the money was being repaid, when it wasn’t... [T]hey would make a document saying it was repaid, and then they would make another document saying that someone else had got it-- and [that] that somebody else is your brother-in-law... This is a most...[hopeless] story.... [T]he king of France was over the edge of bankruptcy... for [at least the] 200 years [that preceded the Revolution]. By that I mean, that his income, in gross, was smaller than the interest payments that he owed, in gross” (Quigley, 1976c-pt.2, mn.217-21).

2) From the 1600’s, “we have the beginning of...[eventually] all the judges [owning] their own seats.... [This meant] the sales of offices... the issue of *rentes*, all of these things I am telling you about...as examples of corruption...the private ownership of government offices-- including judgeships [and minting]...[A] judgeship...became...what a seat on the stock exchange is here. That is, you had a judicial seat, as [the] result of the judicial...[results that] you imposed...and these fees become your income. The

¹¹⁸³ There were (and perhaps still are [de facto]) numerous secret alliances & treaties of significance. Great princes, not satisfied with hiring or buying troops of petty states, make it their business on all sides to pay subsidies for [political] alliances, that is, generally to throw away their money. The consequence of such a situation is the perpetual augmentation of taxes” (Montesquieu, 1748, 217); even a century-and-a-half before they found a way to institutionalize (see also) “Taxation of income”...“Dirigism”; “Secrecy, cult of”.

¹¹⁸⁴ And yes, many were envious. “In England, where the customs are managed by the king’s officers, business is negotiated with a singular dexterity: one word of writing accomplishes the greatest affairs. The merchant need not lose an infinite amount of time; he had no occasion for a particular commissioner” [a.k.a. corruption] (Montesquieu, 1748, 324).

value of...[a judicial] seat...[was] the annual average income capitalized at the rate of interest¹¹⁸⁵.... And thus...the judicial seats became the possession of a new class in society, the *noblesse de la robe longue*--...the nobility of the long robe-- a... nobility...in the sense that the nobleness went from... the possession of his seat... Montesquieu, who wrote...[wrote *Persian Letters* in 1721] had inherited from an uncle a seat [in 1716], and...[after] his book was such a success...decided [that] he was better [off] as a popular writer...[and] sold the seat [in 1726].

Now what [all] this *meant* [sic] was that the king could not really control judicial...[policy]. They would decide cases against him; and this...[would be] the group...[that later] decided that the peasants in France owned the land, but [that] they still owed manorial dues [??], which...[were only] abolished in the Revolution. But as a result, you [nonetheless] had France all broken up into small little holdings, as you had in the 19th century" (Quigley, 1976c-pt.2, mn.224-26).

2b) "Now, this also meant that the king [*the Court*] *could not legislate*, because, if he passed a law, an ordinance, a decree... the judges...[could simply claim that] they never heard of it. So they never enforced it¹¹⁸⁶.... Now what this meant...[was] that not only did...[the Paris Court] not have the legislative power, but...[they also] did not have either the taxing power, or the ability to reform the tax [revenue] system. And since *everything* [sic] was the result of centuries of custom, everything was *extraordinarily* [sic] inequitable. That is, people who were not wealthy paid heavy taxes, [and] people who were quite wealthy paid very little... only [back then] they were much more excited about it...[even though] it was probably no more inequitable than our system today is, which is very inequitable, if you know anything about it" (Quigley, 1976c-pt.2, mn.226-28). See also "Taxation of Income".¹¹⁸⁷

2c) Eventually, "...the king could not pay officers... What he had to do was to let people take positions in the government...[to] use those positions to get money from fees. And if the fees...[were] not adequate, then they [could] take several positions, and...then all of them and spend a good deal of time working at something else, as a jeweler, or something¹¹⁸⁸.... [T]he king discovered that he could name dozens or more inspectors who would go around and would pay [the king] money to go around and sell inspection stickers, so they now had not 6 inspection stickers on each bolt of cloth, but you might easily have 8, and the fellow had to pay for those. Now. this is part of...[the] insane situation...[The 18thc Old Regime was] a totally irrational society" (Quigley, 1976c-pt.2, mn.221-23).

3) By "December 1770" Louis the XV realized that the regime was "bankrupt", after losing the great wars with Britain. So that month, "he [supposedly] abolished the [old] court system and established a new court system. It wouldn't work.... [H]e *admitted* [sic] that those judges, whose seats he had abolished, were private property; and, therefore, having abolished the seats, he had to pay them the value of the seats. And he could not...[do] that, because he could not tax. Furthermore, no one would take cases to the new courts that he set up-- [t]he new courts he [supposedly] paid. They didn't work for fees [anymore]. They were named by him, and paid by him, and [indeed] much simplified. But no one would take a case [to the new courts], because they said: 'Well, we know he has no money. He can't pay the value of the judicial seats to the judges, so eventually he is going to have to put them back'. And... [after] Louis XV died in 1774... his successor, Louis XVI" did in fact put the old courts back, in 1776. "He put it all back. And the result, when he called the Estates General...[for the first time in] 175 years in 1789 ...[was that] he

¹¹⁸⁵ Thus "if you made 10,000 a year out of this job, and people thought 10% was a fair return on investment, then you could probably sell the seat for 100,000" (Quigley, mn.225).

¹¹⁸⁶ The judges might, however, temporarily pretend that they would enforce it. During "a *lit de justice*, the judges admitted that, in the presence of the king, they became clerks; so they wrote...[what he wanted] down in their books, and [hence] registered it. But then they wrote, in the margin, in big letters: 'Inscribed in the presence of the king'-- '*coram rege*'... [so that] they never [actually] enforced it" (Quigley, 1976c-pt.2, mn.227)..

¹¹⁸⁷ (Supposedly) graduated income taxes, or a "so called *taille tariffé*", were strenuously avoided by judges, but "not by saying, 'We will not enforce it'. They issued [instead] an order that any Frenchman who answered any questions about his income, to anyone, was in contempt of court. That's the kind of Supreme Court we need here!" (Quigley, 1976c-pt.2, mn.229). The judges and Court had been arguing "endlessly for two centuries" prior to the Revolution, about whether or not judges were to form "members of a single corporation" (Quigley, mn.230).

¹¹⁸⁸ Quigley continued: "The Near East is [still] like this, as you know, now. Everyone...has 5 jobs and they don't appear at any of them except briefly, to say, 'How is everything to-day?'" (Quigley, mn.221).

did...[so] because the 'Parlement' (that is the Supreme Court of Paris) insisted that he must consult *the nation-- The Estates General*" (Quigley, 1976c-pt.2, mn.230-32).

3b) In addition to [no] judicial, legislative, and taxing power, the Court also had no Incorporating sovereignty. Old Regime "France was *filled* [sic] with corporations that had no charters, but...had [nonetheless] existed through all eternity. Some of them had been there much before there was ever any king of France-- the Cathedral of Rheims, and others like this. Also there were churches, towns, universities, guilds-- innumerable ones... [and] litigation between these corporations was endless... [A] case...[was] kept going because it [was] a source of *income*¹¹⁸⁹.... " (Quigley, 1976c-pt.2, mn.233-34).

3c) When finally "the Revolution came, it... wiped out just about everything. You cannot believe it. When I was in Paris in 1937... I found that there were hundreds & hundred & hundreds of tons of not only law books, but legal papers of all kinds; and no one had to look at them after the French Revolution, because they pulled down the curtain...[saying] 'What was, is over'. And they set up a new system of law, a single book, the Code Napoléon, about 1802; and if you hold it in your hands, it's smaller than an ordinary Bible. The ordinary Old Testament¹¹⁹⁰.... [W]hat the French Revolution did...[was to create] a fully *sovereign* state.... [T]he sovereign power in France after the French Revolution can do anything; the only restraint is it must be done according to the rules of the sovereign power.... [A] hierarchical system of subjects in communities and corporations & chaos, all interwoven together into a hierarchy...was wiped away and replaced by a system...[of] naked dualism: supreme state power and individuals" (Quigley, 1976c-pt.2, mn.235-37). See also "Revolution, French", "Statism".

3d) How long did it take France to become a 'nothing country'? John Stuart Mill, c.1859, noted that in "France, a large part of the people having been engaged in military service, many of whom have held at least the rank of non-commissioned officers, there are in every popular insurrection several persons competent to take the lead, and improvise some tolerable plan of action.... [but] Where everything is done through bureaucracy, nothing to which the bureaucracy is really adverse can be done at all" (Mill, 1859, 66). See also "Bureaucracy", "Dirigism", "Monopoly".

4) In 1800, "financial power was [still] in the hands of about 10 or 15 private banking houses whose fortunes, in most cases, had come from Switzerland in the 2nd half of the 18th century. These bankers, all Protestant, were deeply involved in the agitations leading up to the French Revolution. When the revolutionary violence got out of hand, they were the chief forces behind the [meteoric] rise of Napoleon, whom they regarded s the restorer of order. As a reward for this support, Napoleon in 1800 gave these bankers a monopoly over French financial life by giving them control of the new Bank of France. By 1811 [however] most of these bankers had gone over to the opposition...because they objected to his continuation of a warlike policy... [C]onstant war was injurious to commercial activity...[so] this group shifted its allegiance from Bonaparte to Bourbon, and survived the change...[of] regime in 1815... [establishing] a pattern of political agility¹¹⁹¹.... [Over] the course of the 19th century, a second group was added... largely Jewish...[and] also of non-French origin", 6 Ashkenazi and 2 Sephardic families¹¹⁹² (Quigley, 1966, 515-516). See also "Revolution, French", "Primary dealers", "Mutual funds (& Reform)".

4b) The "state [from the 1930's] was influenced by the Treasury's need for funds form the [privately owned] Bank of France.... and by the complete dependence of French banks on the Bank of France in any crisis... [which] arose from the fact that French banks did not emphasize gold reserves but instead regarded *commercial paper* as their chief reserve. In any crisis where this paper could not be liquidated [cashed] fast enough...[they just] resorted to the unlimited note-issuing power of the Bank of France....

¹¹⁸⁹ When "the Estates General assembled in 1789 and abolished the judicial system of France, there was before the court a case that had been before the court for more than 300 years...a lawsuit between the second-hand clothing dealers guild and the guild of the tailors of the city of Paris...[I]t had been going on for 300 and 30-some years, because it was such a juicy plum for the law firm... and the judges too, that they kept it going and never settled it" (Quigley, 1976c-pt.2, mn.234).

¹¹⁹⁰ The 1804 Code was actually based on the Byzantine Empire's *Corpus Juris Civilis* from the 6th century (Ibid, mn.128).

¹¹⁹¹ "Among these figures the chief bore the names Mirabaud, Mallet, Neuflyze, and Hottingeur" (Quigley, 516).

¹¹⁹² In the resultant political rivalry, "the Protestant group was more conservative than the Jewish group", each 2 factions were lead by their more moderate or centrist wing, meaning that 2 families, "Mirabaud and Rothschild...together dominated the whole financial system... frequently cooperating together even when their groups as a whole were in competition" (Quigley, 516).

[I]nvestment banks... were dominated by 2 banks: the Banque de Paris et des Pays Bas [Paribas], set up by the Rothschild group in 1872, and the Banque de l'Union Parisienne, founded by a rival bloc in 1904.... In 1931, Paribas held the securities of 357 corporations, and its own directors and top managers held 180 directorships in 120 of the more important of these.... [Union Parisienne, the] investment bank of the non-Jewish private banks”, had slightly less impressive reach numbers; but France’s Big 5 “commercial banks... [were] slowly [drifting] over to the new block... with the old Jewish group of private bankers losing ground rather steadily¹¹⁹³.... Regional deposit banks were controlled... by one or the other of the 2 blocs... [with] Paribas...stronger in the north, west, and south, while the Union-Comite bloc was stronger in the northeast, east, and southeast. Control of savings banks and insurance companies was also shared” (Quigley, 1966, 521-522). See also “Central Bank”, “Bank welfare”, “Philosophy, national”.

5) Regarding the famous capitulation of 1940, the French oligarchy was sharply (and evenly) divided, according to Quigley from “1932.... [with] the basic division [being] between east and west [France], the Jewish group [‘west’, also dominating] the colonies, North Africa, and the eastern Mediterranean... [It] was allied to Standard Oil and Rockefeller, while the [‘east’] Catholic-Protestant bankers... [were] allied to Royal Dutch Shell and Deterding” (Quigley, 1966, 522). “As a result of the stalemate between the 2...blocs... between supporters of the Russian alliance and supporters of appeasement... between Jews and anti-Semites, France was completely paralyzed and went down to defeat in 1940” (Quigley, 526).

5b) Union-Comite’s predominance in “such important fields as iron, steel, and coal was balanced to some extent by the skillful in which the Paribas bloc had taken control of the strategic points in the fields of communications and publicity.... Havas was a great monopolistic news agency, as well as the most important advertising agency in France. It could, and did, suppress or spread both news and advertising.... It received secret subsidies from the government for almost a century, and by the late 1930’s... had reached a fantastic size (Quigley, 524-525). The (Rothchilds’) Paribas block, nonetheless, soon “collapsed from its own contradictions... and the pressure of Great Britain” (Quigley, 525).

6) Frexit? One “...scenario [as of 6/16] is Marie Le Pen getting in, [and] trying to negotiate to some extent inside the Euro... and then announcing-- overnight-- that the *Euro* is now the *Frank*, that all debts are cancelled, and ‘*We’re going to go forward and build our national currency again*’. And if they do that... eliminate all private debts by writing off the denominated in Euros-- which is quite feasible-- the French economy could boom; and that would then legitimize the rest of Marine Le Pen’s program. Now this is...similar to what happened some years ago with a funny little bloke in Germany” (Keen, 2016k, mn.28).

6b) Another scenario, that actually happened, was that the establishment/banks would react to the Brexit threat by recruiting a fresh-faced ‘centrist’ candidate (the youngest final round presidential candidate ever), to constantly remind France’s aging electorate of Le Pen’s hitherto extremist/unacceptable family background the past decade or so, and that his victory celebration would be-- quite officially-- to the EU anthem and flags (more than to those of France). In the year since his inauguration, France has institutionalized the ‘state of emergency’ (police state) to a greater degree than at any time since the 1960’s. See also “Dirigism”, “Bank, universal”.

7) Before the EMU, in the decades of the mid-20th century: “It seemed in Paris you could discuss classic literature or architecture or great music with everyone from the garbage collector to the mayor.” - Julia Child, *My Life in France*; see also “European Monetary Union (EMU)”.

8) Half a century or so later, a Europe-wide survey of approval ratings for French president Emanuel Macron showed the highest disapproval (among 37 nations) in France itself, “with 4 times as many dislikes as likes”; but the next national election isn’t until 2022 (Still, 2019).

9) France (& the EU) Updates: 11/22- On the 2022 dust up with Italy: <https://tomluongo.me/2022/11/28/meloni-v-macron-the-colonial-end-game/>. See also “City (of London), the”, “Imperialism”.

See also “Socialism, political”, “European Monetary Union (EMU)”.

¹¹⁹³ Quigley adds that “[o]utside the banking system... the French [economy’s] ...trade associations, industrial monopolies, and cartels... were usually controlled by the Catholic-Protestant bloc of private bankers, since the Jewish group continued to use the older methods of financial [usury] capitalism, while their rivals moved forward to the more obvious methods of monopoly [ownership] capitalism” (1966, 523). See also “Capitalisms”; “Usury”, “Equity”, “Owners, the”.

Franklin, Benjamin (1706-1790)- (a.k.a. ‘the first American’, the USA’s principle founding father,¹¹⁹⁴ and the only signatory of all 4 of the primary founding documents¹¹⁹⁵: the Declaration of Independence [1776], the Treaty of Alliance with France [1778], the Treaty of Paris [1783], and the United States Constitution [of 1787]; i.e. ‘as famously optimistic as experimental’) See also “Founding fathers”.

1) Brief Essay on Franklin & Monetarism

How can one hope to understand, relative to mythology, [those bookends of the Eurasian continent]: England without Alfred the Great, or China without Confucius? More recently, how can one hope to understand Germany without Goethe (keeping the Mesotopholian crazies at bay for 1000’s of years), Russia and its deranged drainage system without Tolstoy, or Scotland without whiskey or Gerry Rafferty? Can understanding America be reduced-- unlike with Italy and France-- to a single man, not a single founding father, but perhaps a big or elder brother among them? It wouldn’t be younger brother Jefferson (who set the Federalists’ twig straight in 1800), cantankerous Adams (who wasn’t a philosopher), or mostly robo-signing president (and arguably average general)¹¹⁹⁶ Washington; nor 1787’s two agents for the Morris’ plan¹¹⁹⁷-- Hamilton or Madison-- the prime ministers for Washington and Jefferson, respectively. Samuel Adams hardly ever left Massachusetts¹¹⁹⁸, and Patrick Henry was only temporary. Thomas Paine? No. Only one of the proverbial founding fathers was designing or approving American monetary operating systems for half a century, and, in addition to numerous other tinkering, understood the empirical mechanics of things thoroughly, at an international level.¹¹⁹⁹ The key word here (with Franklin) being *empirical*. What’s the big idea?

<u>17thc</u>	<u>18thc</u>	<u>1st half 18thc</u>	<u>Morris’s 1787 Const. & CB</u>	<u>19thc</u>
(copyist) Bacon & the ‘New Atlantis’ ¹²⁰⁰	Fr.masonry’s unif.&expans. era	B.Franklin & S. Adams’ paper money revol.		

2) Franklin should also be known as ‘the father of public paper money’... although he perceived a different expediency in the 1770’s or ‘80s, enthusiastically supporting the Morris’ Bank of North America-to-First Bank of the United States scheme. Why does this matter? Because strategic ambiguity has always been the governing factor in the ‘adolescence of mankind’s ever-increasing reliance upon monetization. See also “Politics” [.sneaky], “Monetization” [.over-monetization]. Monetary-currency terms in the U.S. Code and government, to this day, are often misleading if not deceptive; and “even modern treatises on the legal definition of money in the US still make references to

¹¹⁹⁴ ...or ghost in the machine. And what does any ghost say: “UnderStand me.”

¹¹⁹⁵ Robert Morris and Roger Sherman (of Connecticut) were the only 2 men to sign the all 3 *de jure* founding documents of the USA: the Declaration of Independence, the Articles of Confederation (1777), and the Constitution of 1787. *De facto*, however, it was certainly Franklin, not [English-born] Robert Morris, who *1st* proposed a plan for uniting the 13 colonies under 1 national congress (in his “Albany Plan”, way back in 1754, before the ‘French & Indian War’ had even started).

¹¹⁹⁶ “[E]ven the most ardent of rebels would over time be ambivalent about their army’s commander” (Nelson, 2007, 113), whom John Adams publicly suggested “got the reputation of being a great man because he kept his mouth shut” (Nelson, 122; Rosenfeld, 1998, 476).

¹¹⁹⁷ Although the earliest known public call for a is George Washington’s 1783 “” (Raphael, 2013, 9), the General’s inner circle or brain trust (still extant from the recently-concluded war) was comprised primarily of best friends Gouverneur Morris & Hamilton, the former of which (not Hamilton) was then running (or trying to run) the liberated colonies’ economic system (to the extent that there was one) with Robert Morris in Philadelphia, at times with some assistance from a bookworm Virginian by the name of James Madison. A plan is not merely a dream or ambition, and the “Superintendent” Morris-- in and of themselves-- had access to the primary data of what was happening in the liberated lands c.1782-84, and hence why a political revolution (or counter-revolution) of sorts was necessary in (a big state like) Pennsylvania.

¹¹⁹⁸ Adams’ only known two exceptions were to attend the First Continental Congress in Philadelphia, for about a month, in autumn 1774, and then the Second Continental Congress from 1776-79, and 1780-81.

¹¹⁹⁹ Granted that the USA is a big place, Thomas Jefferson would be another candidate, or also-ran, like a Lao Tzu (long-term health) to Franklin’s Confucius (heart). This author would not dare (attempt to) reduce Franklin & Jefferson to one word each-- in part because there is little need, seeing how they both agreed on the same motto (in 1776 and 1790, respectively): “*Rebellion to Tyrants is Obedience to God*” (Jefferson, 1790). See also “Founding fathers”.

¹²⁰⁰ “...Slaves to some defunct [philosopher]...” (Keynes, 1936), indeed. See also “Technocracy”, “Transhumanism”.

historic law and court rulings from England” (Bindewald, 2018, 93), as if the American Revolution never happened.¹²⁰¹ See also “Central Bank”, “Currency”, “United States, the”, “Imperialism”.

3) Hardly anyone seems to know that Franklin (at least in the 1760’s) was pretty much a card-carrying “Physiocrat”. His professed economic “*Aphorisms*”, sent (earlier that year) to Lord Kames (Adam Smith’s long-time patron) appear to be in complete congruence (with what was then the cutting edge of economic science). The inventor of the lightning rod, bifocals, anti-counterfeiting measures, and Gulf Stream mapping concluded his foray into macroeconomics by simply observing that: “th^{er}e seem to be but 3 Ways for a Nation to acquire Wealth. The 1st is *by War*, as th^e Romans did in plundering their conquered Neighbours. This is [simply] Robbery. The 2nd [is] *by Commerce* which...[in the Mercantilist age, was] generally Cheating. The 3rd [is] *by Agriculture*, [and] the only honest Way; wherein Man receives a real Increase of the Seed thrown into the Ground, in a kind of continual Miracle wrought by the Hand of God in his Favour, as a Reward for his innocent Life, and virtuous Industry” (Franklin, 1769)¹²⁰². See also “Physiocrats, the”, “Common sense”, “Montesquieu” [trichotomy]; “Imperialism”, “Hell”, “COVID Op.”. See also “Founding fathers (of USA)”, “Jefferson, Thomas (1743-1826)”, “Freemasons”.

[the good Franklin(CM-book) and bad Franklin(Fr.-book), respectively]

[always ahead of the curve (Albany Plan banner of 1754); welcoming  . Washington to Philly (1780’s)]

‘Free Banking’ (era)- (a.k.a. ‘neo-austrian free banking’; not to be confused with the 19thc ‘state banking’ regulatory rubrics in the US)

1) “commercial banks issuing their own [private] bank notes [supposedly] against deposits of precious metals¹²⁰³” (Yamaguchi & Yamaguchi, 2017, 16), with no central control of Reserves.

1b) “Our whole System of Banks is a violation of every honest Principle of Banks. There is no honest Bank but a Bank of Deposit [a.k.a. ‘nonbanks’ today]. A Bank that issues [public currency] Paper at [their own private] Interest is a Pickpocket or a Robber. But the Delusion will have its Course. You may as well Reason with a Hurricane.”

- John Adams, letter to Benjamin Rush, Dec. 27, 1810 (Adams, 1810). See also “Estates, 3”, “Debt cycles”, “Debt money”, “Debt saturation”, “Public-Private Partnership”.

1c) Hence, “[a]n Aristocracy is growing out of them, that will be as fatal as The Feudal Barons, if unchecked in Time” (Adams, 1810). See also “Monetization”, “Great Extinction, 6th”.

2) Free banking predominated in 18th and 19th century Britain, until outlawed by the *Bank Charter Act of 1844*, and in the United States, to varying degrees, from the 1790’s-1863. The Philadelphia Federal Reserve prefers to label 1837-63 as “the state, or free, banking era” (2016, 1), conflating the two terms, which is not helpful. *Free banking* strongly implies freedom from a regulatory regime, which characterized

¹²⁰¹ And Franklin knew what both the Revolution, and the constitution of 1787, were about: “” (Franklin,).

¹²⁰² “Positions to be Examined” was subsequently published in French (not English) in *Ephémérides du citoyen, ou bibliothèque raisonnée des sciences morales et politiques*, x (Oct., 1769), pp. 6–16. See also “Physiocrats, the”, “Smith, Adam (1723-1790)”.

¹²⁰³ Government money doesn’t need to be “backed” (secured) by anything in order to float, although government-issued notes were, until the mid-1960’s, often “redeemable” (or ‘anchored’, mostly for public show) for specie-- a somewhat nebulous anachronism that goes back, officially, to Justice Gray’s conclusion of the “Legal Tender Cases” in *Juilliard v. Greenman*, 110 U.S. 421 (1884). See also “Fiduciary money”. In the preceding “state banking era” (of the antebellum 19thc), *private* bank notes were secured with mostly federal and/or state government *bonds*. It is really only from the 1790’s and the 1st quarter or so of the 19thc that “free banking” (i.e. private bank notes secured, at least in theory, by some actual deposits of *precious metals*) caught on and became common in the United States. See also “United States, the”, “‘State banking’ (era)”.

the Hamiltonian-Jeffersonian era from the 1790's-1830's,¹²⁰⁴ during which the “records of banks” were “very poor or non-existent”;¹²⁰⁵ it was only in the 1830's that congress first asked the Treasury to regularly report¹²⁰⁶ on (what was then) State Banking (Zarlenga, 2002, 438). This was because corruption was getting out of hand with the hitherto anarchic system of impromptu ‘special’ legislative charters¹²⁰⁷ being required to start a bank within a certain state. The ensuing quarter-century, from the mid-1830's to 1863, was, in most states,¹²⁰⁸ more like a 'State Banking' era of at least some degree of regulatory standards (most often minimum capital and bond security requirements) across those states that had already been fully incorporated into the Union, rather than the preceding era of **no** known uniform regulations across any of the states.¹²⁰⁹

3) The conventional misnomer of/for the so-called American “‘free banking’ era” would be more accurately termed “‘bond deposit banking’ [i.e. “the state banking” era], for it [in fact] required banks to buy certain approved bonds [from the state or federal government] as a condition for issuing [their private] notes. *Real* free banking without [any] bond deposit requirements [only] existed in some American states (such as Virginia and Louisiana)” prior to the Union government adopting a nationwide [centralized] bond-deposit system in 1863 (Schuler, 1998, 414).

3b) At “least for the US, one finds that from the **early beginnings**, government debt always served as the stable backing for [the issuance/creation of new] bank money.... and in the few instances that other backing was used, the return to government debt obligations was inevitable” (Papadimitriou, 1998, 446). See also “Bankmoney”, “Privilege”, “Public-Private Partnership (PPP)”, “Moral hazard”.

See also “‘State Banking’ (era)”, “Bank notes”, “Austrian School”, “Wildcat bank”.

‘Free Market’- There hasn't been a (unplanned) ‘free market’ since the Neolithic.¹²¹⁰

1) The trick, in America at least, has been to conflate-- in the minds of the average red-blooded frontier-lover (or nostalgist)-- the traditional (‘manifest destiny’) “19th century... abundance of [physical] free resources” (wilderness), which made genuine self-sufficiency relatively easy, with (economic) ‘free markets’, which of course is an altogether different subject (Roberts, 2017d, mn.47). Physical resources spring from nature; economic markets (regulated or not) spring from man. “Now once all these resources

¹²⁰⁴ In 1797, there were only 21 chartered banks in the USA, whereas by 1837 there were 775 (Weber, 2005). Some sort of regulatory framework, however skeletal, had to be established. And that new framework was, ironically, often called ‘free banking’-- i.e. “free” (of the need for special state legislation) to anyone with sufficient pledged capital and bond securitizations.

¹²⁰⁵ It has been widely noted that in 1814, when the vast majority of US banks suspended specie payments, “the federal government [then] had no way to pressure them to return to convertibility” (Allen, 2009, 356). And a study from the Minneapolis Federal Reserve did not find any published “banknote reporters” in New York prior to 1817 or in Philadelphia prior to 1830 (Weber, 2005, 5).

¹²⁰⁶ And it wasn't until 1840 that basic economic variables such as crop output and manufacturing capital were reported.

¹²⁰⁷ After the South Sea Bubble of 1720, Parliament moved to forbid “the formation of banking companies without a special charter...[though] it was not until 1740 that it was declared to be...[extended] to the colonies” (Conant, 1915, 335).

¹²⁰⁸ The antebellum USA (in the 1830's-50's) had approx. fully established states, as opposed to approx. 22 frontier ‘territories’ and future states. In the case of the latter, or even in new states such as Texas (1845), unregulated ‘free banking’ practices often did indeed predominate until after the Civil War: “In 1845, the first Constitution of the State of Texas provided that ‘[no] corporate body shall hereafter be created, renewed, or extended, with banking or discounting [i.e. money-creation] privileges’, and this prohibition against the chartering of banks was carried forward into the [Texas] Constitutions of 1861 and 1866, deleted in the Constitution of 1869, and added back into the present-day Constitution of 1876 as Article XVI, Section 16. Banking certainly existed during these periods, but was dominated by private, unincorporated (unregulated) banks, most of which issued their own currency” (Texas.gov, 2018).

¹²⁰⁹ Prior to the *Michigan Act* of 1837, bank charters were only enacted through special acts of state legislatures, which appear to have constituted the only regulatory standards. See also “Monobank”.

¹²¹⁰ “If a market is not free of privilege then it's not free” (Sullivan, 2017, mn.26). See also “Real estate”, “Land”.

are used up” and the frontier closed (as it was in 1890), “the situation is radically different” (Roberts, mn.47).

1b) ...But not the imperialistic ideology (or at least its propagation). “Basically... ‘free markets’ and [economic] libertarianism is a doctrine of central planning... central planning *by the banks*. America is a *much* more centrally planned economy than China.... America has concentrated the planning and the resource allocation [not to mention basic bankmoney creation on]...Wall Street”¹²¹¹ (Hudson, 2020c, mn.45). See also “Homogenization”, “Conditioning, classical”, “Myths, Big 6”.

2) “The essence of a ‘free market’ financial style is to take planning out of the hands of government– democratically elected political representatives– and [to] centralize it in Wall Street and other financial centers... to disable public regulation.... This isn’t the kind of [academic] ‘free market’ that economists discussed...in the 19th¹²¹² and 20th centuries. It is an exercise in Orwellian *doublethink*, a market of unchecked fraud and exploitation, with wealth and power being untaxed. This is the economics of General Pinochet... pushed under the slogan of the ‘Washington Consensus’. As Grover Norquist put matters, the aim is to ‘*shrink government to a size so small that it can be drowned in the bathtub*’¹²¹³. The victim that is to end up being drowned *in debt*¹²¹⁴ is the citizenry– labor and industry.... Financial *dirigisme* aims to endow a [2nd Estate] rentier oligarchy, not uplift the [3rd Estate] citizenry in the ‘real’ production- and-consumption economy... the financial sector’s objectives are the opposite of those in the public sector... Democratic governments seek to increase employment, output and living standards” (Hudson, 2012g). See also “Finance”, “Financialization”, “Tax shift”, “Market fundamentalism”, “Great Extinction”.

[shells]

Free-Trade, practice (1974-2016)- (a.k.a. ‘laissez-faire’) “The innocuous-sounding ‘free trade’ policy” has been the number-one priority of every American president since Watergate; “He must do 2 things:

- 1) rarely speak of it, and
- 2) allow it to move forward.

That’s all. In return, he gets to act as if he’s the most powerful man in the world. But if he wobbles and considers taking up a position against free trade (corporate domination of the planet), he can look back and see what happened to Richard Nixon.... He can recite the famous words of Zbiggie Brzezinski, co-founder of the Trilateral Commission and David Rockefeller’s intellectual flunkey: ‘*The nation state as a fundamental unit of man’s organized life has ceased to be the principal creative force: International banks and multinational corporations are acting and planning in terms that are far in advance of the political concepts of the nation-state*’” (Rappoport, 2013b). See also “National Identity/Nationalism”, “Corporations (and corporate ‘personhood’)”.

3) “Free-trade merely means dependency... a slogan for ‘*Don’t feed yourself... Buy your food from the United States. Become dependent on the countries that have monopolized food supply and high technology*’...It’s a slogan to convince other countries not to develop their economies.... [Going back to David] Ricardo’s [early 1800’s] example of trade between England and Portugal... [where] the idea was

¹²¹¹ Hudson adds: “...and that’s the [kind of (debt & interest-based)] central planning that is much more *corrosive*” (Hudson, mn.45) to society. See also “*Corrosion-Cancer-Debt*”.

¹²¹² 19th century economists “envisioned a market [end p.14] free from rent paid to a hereditary landlord class, and free from interest and monopoly rent paid to private owners. The ideal system was a morally fair market in which people would be rewarded for their labor and enterprise, but would not receive income without making a positive contribution... Adam Smith... Ricardo... Mill and their contemporaries... major aim was to prevent *landlords* from ‘reaping where they have not sown’” (Hudson, 2015, 14-15).

¹²¹³ After growing up with “post-war” 80-90% income tax rates from 1936-63, no doubt (<http://federal-tax-rates.insidegov.com>).

¹²¹⁴ ...the interest on which constitutes a private tax.

to convince Portugal and other countries not to industrialize...[just] to let England industrialize... to justify the existing status quo. The leading nations all like free-trade. It doesn't help other countries catch up" (Hudson, 2017I, mn.13-14). See also "Debt cycles", "Imperialism".

4) NAFTA (1994-) has also meant a certain convergence of culture. On two (rarely-cited) measures of everyday thought and life, Mexico and the US are now nearly identical. "Long-term orientation" is approx. "21" to "26", respectively (Hofstede, 2015, mn.6); while Mexico's population is "19%" rural, compared to USA's "17%" (<https://data.worldbank.org/indicator/SP.RUR.TOTL.ZS>).

See also "Corporate Media Cartel", "Imperialism, American".

Free-Trade, theory- (goes back to Adam Smith, but was formally developed as theory by David Ricardo's 'theory of comparative advantage' in 1817)

"Commerce is [generally] a cure for the most destructive prejudices... wherever we find agreeable manners, there commerce flourishes; and that wherever there is commerce, there we meet with agreeable manners."¹²¹⁵

- Montesquieu's *The Spirit of Laws* (1748, 316). See also "Ricardo, David (1772-1823)".

Nonetheless, it "is in the freest countries that the merchant finds innumerable obstacles; and he is never less crossed by laws than in a country of slaves.... The English constrain the merchant, but it is in favor of commerce" (Montesquieu, 1748, 323).

1) "A major reason why the world is [since the 1980's] polarizing is because of financial dynamics, between creditor and debtor economies.... the assumptions [see "Barter"] that all countries running trade deficits can stabilize, simply by imposing austerity, by lowering wages, by wiping out pension funds... which is [now] just what the IMF and European Central Bank are telling Greece... [even though] all of these ['free-trade'] assumptions...were repudiated already in the 18th century, when Britain sought to build its Empire by pursuing mercantilist policies. The protectionist *American School* of Economics, in the 19th century [see "American System"], put forth the economy of high wages doctrine to counter free-trade theory. None of this historical background appears in today's mainstream textbooks" (Hudson, 2016c). However, despite the Anglo-American successes with mercantilist - protectionist strategies...

1b) ...in "the 1920's, *free-trade theory* was used to insist that Germany could pay [war] reparations far beyond [its] ability to earn foreign exchange" (Hudson, 2016c). Directed against enemies of bankers ever since then, FTT is now, in this young 21st century, directed inward, against the very host-national populations that have supported and enabled the banks' *globalist* (i.e. global-imperialist) undertakings. Despite the century-long heritage of being "given all the [increasingly dubious] prizes," FTT today is "an argument for reducing wages and fighting a class war against labor" (Hudson, 2016c).

2) See also "Economics, Parity".

See also "Imperialism, classic", "American System, the", "Monopoly (and anti-trust)", "Race-to-the-bottom", "Serfdom, neo".

¹²¹⁵ ...that is for the most part. One notable exception is the virtue of hospitality, which is often "most rare in [more CNI] trading countries, while it is found in the most admirable perfection among [more ENI] nations of vagabonds. It is a sacrilege, says Tacitus, for a German to shut his door against any man whomsoever, whether known or unknown.... But when the Germans had founded kingdoms, hospitality had become burdensome" (Ibid). See also "Homo Economicus", "Anthropology".

The world's openness to trade reached record levels before the financial crisis

Global merchandise exports as a % of GDP

[See also "Currency Wars, the".]

Freedom- 1) "In the Bible, as in Mesopotamia, 'freedom' came to refer above all to release from the cycle of debt. Over time, the history of the Jewish people...[also] came to be interpreted in this light" (Graeber, 82). See also "Debt cycles".

2) "We honour Liberty in name and in form. We set up her statues and sound her praises. But we have not fully trusted her. And with our growth so grow her demands.... For Liberty means Justice, and Justice is the natural law-- the law of health and symmetry and strength, of fraternity and co-operation.... As the sun is the lord of life, as well as of light; as his beams not merely pierce the clouds, but support all growth, supply all motion, and call forth from what would otherwise be a cold and inert mass all the infinite diversities of being and beauty, so liberty is to mankind. It is not for an abstraction [or derivative] that men have toiled and died.... Only in broken gleams and partial light has the sun of Liberty yet beamed among men, but all progress hath she called forth" (George, 1879, 315). See also "Natural law".

3) "We speak of Liberty as one thing, and of virtue, wealth, knowledge, invention, national strength and national independence as other things. But, of all these, Liberty is the source, the mother, the necessary condition. She is to virtue what light is to color."- Henry George (Ibid). See also "Montesquieu". See also "Civil National Identity", "Freedom Continuum (maturation)", "Economics".

Freedom Continuum (maturation)- a 10-point dimension, from fully unfree, to fully free. The first 5 are essentially pre-modern/pre-constitutional concerns; the second 5 are typical preoccupations once constitutionality for the majority of inhabitants has already been established.

0% 50% 100%
 [-----]
 1.ChattelSlavery 2.RomanSlavery 3.Serfdom 4.Indentured 5. Hukou 6.Enfranchisement 7.ContractRts 8.Actual Repr. 9.from war- 10.from idleness

¹²¹⁶ *Indentured Servitude* differs from (illiterate) *serfdom* in that it involves a written, individual contract (volition), as opposed to traditional *serfdom*'s typically group-based identity and implied threats of force. The contracts usually involved *debt* obligations, so the terms 'debt servitude' or 'debt bondage' are broadly synonymous. Most European migrants to N. America, from the 1630's through 1760's, were indentured; and the US abolished it in 1917 (Galenson, 1984). Modern-day military service (to the nation instead of to creditors) is similar to an indenture. *Serfdom*'s primary distinction from *slavery* is that the former was only an economic institution (the subjects' physical-personal rights were supposed to be maintained). See also "Slavery", App.C: "1-2-3".

¹²¹⁷ The *Residence Permit* (or *Hukou* in Chinese) has been a permanent fixture of Chinese and Oriental societies for about as long as written records have been kept. For millennia, this was a cardinal distinction between empires of the Orient and the tribes-nations of the Occident. I.e. in the Orient, families and clans were (ideally) categorized for purposes of taxation, conscription and all-around social control, the primary tool for which was determining where subjects were allowed to live. Recently, however, residence permits (*hukou*) have been substantially watered down in China and actually banned in Korea (2008). The situation in Russia seems somewhere in between. Since "Peter the Great, imperial law had forbidden [serfs, and later] subjects [in general] from travelling without an internal passport outside their permanent place of residence (a radius of about 30km, which was expanded to about 50 in 1894)" (Avrutin, 2010, 91). The internal passport system was apparently abolished around 1918, and then re-instated in 1930, reportedly reaching Maoist levels of control in the 1970s, prior to the USSR collapse in the early '90s. It was officially abolished in the 1993 Russian constitution (which guarantees "free movement"), but still continued (and continues) in Moscow and very many other Russian oblasts, in various states of black market protocol and semi-legality.

¹²¹⁸ *Unrestricted Rights of Contract*- like 'free movement', is something that most 'Westerners' take for granted today. *Ethnic* and gender-based restrictions on contract & legal rights in the US had been (with a few exceptions) removed by the mid-1960s-- i.e Martin Luther King and Lyndon Johnson's *Civil Rights of 1964* and the US Supreme Court's opinion in *United States v. Yazell* (1966) that "the institution of *coverture* is... obsolete", (several states withstanding for several more years, i.e. *Kirchberg v. Feenstra*, 1980). In terms of chronology, women have often gained the vote substantially *prior* to attaining equal property-contract rights. This survey, however, is more weighted towards meaningful everyday freedoms than ceremonial. Some of the few societies in which women did gain reasonably equal property-contract rights substantially prior to voting rights are: Ancient Egypt (c.8000's BCE), Mosaic law (500's BCE), the latter Roman Empire, Visigothic Spain, Anglo-Saxon England & pre-Christian Scandinavia, 'post-Norman England' [at least vis-à-vis France & the H.R.E.], Texas (1840), the UK (1870), New Zealand (1884), Mexico (1917), China (1950), and, to a lesser extent, South Africa (1988). See also "Primogeniture".

¹²¹⁹ *Actual (de facto) citizenship power* (as opposed to meaningless ceremonies) is a trickier concept to get a handle on, as indeed this 8th step has been slippery (as oligarchs love to think up new ways of proclaiming that 'democracy' and public accountability already exist). In separating democratic accountability propaganda from democratic accountability reality, these dimensions should prove helpful: A] unobstructed rights to participate, not just watch (this involves ballot access and the ability to form parties-- more than 2 parties-- that are not in any way privileged in electioneering any by state, national, or local laws); B] a plentitude of elected state & local offices (not just rubber-stamping presidents or politicians from impossibly large districts); C] having a fluid & competitive media environment (democratic accountability is as important there as it is for political representatives); D] vote counting procedures that are fully public, audited, and beyond reproach; and (these first 4 factors should result in easily verifiable results, such as: E] reasonable turnover (instead of incumbent 'rigging' and USSR-type 98% re-election rates), and above 50% voter turnout. 'Democracy rating' institutes, such as (the majority US government-funded) "Freedom House", have traditionally only been concerned with measures in the A category (above), and only there to a rather unchallenging standard of having "more than one" political party (or graft club). Other prominent 'democracy raters', as is "Freedom House", are still more about steps 6 and 7 (i.e. 20th century-type *de jure* enfranchisement & unobstructed rights) than about moving on to step 8 concerns.

¹²²⁰ One of the first things apparent to serious researchers of this subject is that "debt-money" institutions are typically used to marshal resources for 1) warfare [and then 2) welfare]. Thus "*national debt*" *economies* (Dutch-UK-US) have typically been most successful at this game-- or sport, one might call it-- as they have been most successful at putting everyone on the debt-money treadmill or meter. These societies (though some are loathe to admit it) are generally high-tax, and much of this (public) taxation is used to pay for (private) debt, thus resulting in 'Hamiltonian'/regressive (class bifurcation) pressures, which, ironically, have (for a century now) been answered with still more taxation- only this time "progressive" taxes. Thus the entire public society can at times look like a Marxist football match-- fighting, zero-sum gain, over shifting the tax code (onto whomever gets less votes-- or less *counted* votes). A better way to escape the debt-borne money (high usury & party tax fights) matrix is to simply remove the initial 'Hamiltonian' (usurious) pressures from a nation's monetary design-- i.e. to stop issuing new money with interest schedules. This 9th step of/towards freedom-- *freedom from war-debt usury* (and its resultant high taxes)- is yet to be achieved (perhaps because step 8 is a prerequisite), but nearly all of the American colonies had some experience with debt-free peaceful and prosperous monetary systems in the 18th century, prior to the British warring designs and post-war crackdown of the 1750s-'60s. See also "Montesquieu".

¹²²¹ Along with freedom from the debt-war-taxes (extraction) machine, achieving a debt-free, democratically accountable, public money system (with only one circuit or class of money, not two) will also bring *freedom from poverty and involuntary idleness (unemployment)*. It is a paradox today that so many people are not working, yet so many jobs and useful tasks in society go undone, year after year. There is no reason in the 21st century (other than political) for there to still be potholes, unanswered telephones, shoddy schools, unaccountable public sectors, and groupthink-dominated universities, yet alone petty crime and violence on the streets. Such unemployments, resentments, and (now) artificial scarcities are the lingering heritages of the (Early) 'Modern' usury system's warping of society towards bifurcation and unfairness. The 1600's-1900's will one day be looked back on as 'the adolescence of mankind'; and the 21st century as its age of majority or societal maturation. This has nothing to do with old Adam Smith or Marx-Engels fables, none of whom ever demonstrated that they even

[remove 15-19 blank lines↑]

1) “It’s better to be free than not to be free. However, the... shadow of freedom is that... [even with] all these freedoms that we get, we are still dependent on the system...[If] we’ve been given these freedoms...[by] the system, [then] the system also has the power to take them away” (Bjerg, 2021, mn.8). See also “Liberty”, “Provocation Op”.

2) In other words, “[f]reedom is something that we’re *given* by systems. Sovereignty is different, because sovereignty is not something that we’ve been given” (Bjerg, 2021, mn.13). See also “Sovereignty”.

Freedom, Declarations of- The Sumerian word “*amargi*, the first recorded word for ‘freedom’ in any known language, literally means ‘return to the mother’-- since this is what free debt-peons were finally allowed to do” (Graeber, 2012, 65). See also “Liberty Bell”, “Politics”, “Reform, 101”.

[“Occupy”-- California’s +100k homeless squatters are gaining rights]

Freemasons-¹²²² ([amateur] antecedent to [professional] Intelligence Communities) See Montesquieu, → Franklin, → de Tocqueville, → “Industrial Revolution, 2nd”, → “Intelligence Community”, → App.C: “1-2-3”. See also “Revolution...”, “Franklin, Benjamin”, “Washington, George”, “Salomon, Haym”.

Friedman, Milton (1912-2006)- (“perhaps the best-known exponent of monetary rules” [Selgin, 2016]). See “Full Reserve banking” [‘flip-flop], “Chicago Plan”, Chicago School”.

Full Reserve banking- (a.k.a. ‘narrow banking’, a UK-European term for ‘100% Reserve’ banking [20thc US usage] or even ‘limited purpose banking’ [Kotlikoff]; not to be confused with ‘Fractional Reserve Banking’ [FRB])

1) is simply an amplification of the already-existing practice of “forcing banks to hold reserves [RAB] against their deposits [TAB]... this doesn’t necessarily stop banks [from] creating [TAB] money... [because] banks create [TAB] money and [then] look for the [RAB] reserves later. [And] Central banks *always* accommodate private banks’ demand for reserves” (Van Lerven, 2017). ‘Full Reserve banking’ is hence an archaic, 1820’s-1930’s era term, which does not serve a purpose this century, except possibly to confuse would-be reformers.

2) The first proposal for ‘full reserve banking’ can be traced back to David Ricardo. In 1823, Ricardo drafted “a ‘Plan for the Establishment of a National Bank’, in which he argued that [new] money creation should be separated from [bank] lending by requiring the issuing department to hold 100% [of their outstanding loans] *in gold Reserves*. Ricardo’s plan was a full-reserve plan– but it accepted only gold as Reserves. The plan was published [post-mortem] in 1824” (Laina, 2015). The plan “provided for the national money supply to be re-established as the sovereign prerogative it used to be until the spread of private banknotes. Similar ideas were widespread in the USA...” (Huber, 2017, 46); where former president Thomas Jefferson often wrote things like: “Bank-paper must be suppressed, and the circulating medium must be restored to the nation to whom it belongs” (Jefferson, 1813b).

actually understood what money is. It has to do with our internet-’Information Age’ transforming into Knowledge. See also “Adolescence of Mankind”, “Boards/Board Systems”, Appendix C: “1-2-3”.

¹²²² The etymology of the (18thc) term is *free*-- from the pope/papal network + *mason*-architect or master (societal) builder. Charles de Montesquieu (1689-1755), one of the first Masonic grandees in France, once wrote of the politics there that the [2nd Estate] Pope (i.e. the Curia), [whom Montesquieu indexed as “a greater magician than the [1st Estate] king” (a.k.a. the Court)] “...will make the king believe that three are only one, that the bread he eats is not bread...and a thousand other things of the same kind” (Montesquieu, 1721, 376; 47). See also Weber, 1989i, mn.10.

3) In an attempt to remove “human influence” from “the credit system” (Laina, 2015), Austrian Ludwig von Mises took up on Ricardo’s pamphlet nearly a century later (1912), presenting a brief proposal for a full-reserve specie standard (not necessarily just gold).

4) In the early-mid 1930’s, inspired in part by British nobel chemist Frederick Soddy; Chicago economists Henry Simons¹²²³, Frank Knight, Jacob Viner, a young Milton Friedman,¹²²⁴ and others¹²²⁵ often collaborated in producing a number of essays and memos, directed to the new Roosevelt Administration, arguing for ‘100% banking’, which (collectively) came to be known as “The Chicago Plan”.

5) “The idea of 100 percent reserves for checkable deposits-- that is for the reserves of banks to be liabilities of the federal government-- was a natural extension of the manner in which the National Banking Act had required that the circulating notes of national banks be fully offset [backed], on the books of the issuing banks, by government bonds. Furthermore these circulating notes were fully guaranteed as to their face value by the United States Treasury” (Minsky, 1995, xxii).

6) The more-famous (and infamous) Yale economist Irving Fisher, however, already had the ear of Roosevelt in the mid-1930’s, (and probably after the original 1933-34 Chicago Plans had already been more-or-less dismissed by the Administration and Congress).

7) The primary distinction between the early (Knight/Simons) and latter (Fisher) ‘Chicago Plans’ was that the original Chicago Plan favoured *mechanical rules* for guiding monetary policy [through the slew of Washington], while Fisher wanted to entrust the money-issuing body (currency committee) with the freedom to conduct *discretionary policies*. If scholars today deal with 100% Reserve, they normally refer to Fisher’s ‘100%-money’, including the final version he published together with a number of colleagues in 1939” (Huber, 2015), that won the famous 400 or so written endorsements, even though (the debt-money grab bag of) World War Two had already pretty much commenced by the time many of those endorsements¹²²⁶ were collected.

See also “Ricardo, David (1772-1823)”, “Chicago Plan(s)”, “Sovereign money”.

Fundamental Attribution Error- (synon. ‘actor-observer effect’ [which is not ‘universal’])

1) “Thomas Hobbes wrote in *Leviathan* (1651) that ‘Ignorance of remote causes disposeth men to attribute all events to the causes immediate and instrumental: for these are all the causes they perceive” (Hudson, 2013). See also “Adolescence of Mankind”.

¹²²³ Although Frank **Knight** initiated the original March 1933 Chicago Plan to Secretary of Agriculture Henry Wallace, who dutifully passed it along to President Roosevelt, Henry **Simons**’ subsequent version (in Nov. 1933) went into more detail, adding a price-level target to be set by (our publicly accountable) Congress, arguing “that monetary policy should be subject to a rule [*mechanism*] instead of being *discretionary*. The [publicly stated] goal could be, for instance, price stability, steady growth of the money supply, or some other goal specified by Congress” (Laina, 2015).

¹²²⁴ Friedman **flip-flopped** on the issue (of disallowing banks to create the nation’s money supply). After initially supporting the notion (1953, 1960, and 1961), he apparently changed his mind [and the name of American monetary ‘big think’] in 3rd quarter of the 20th century. Hence the (full-reserve) ‘Chicago *Plan*’ of the 1930’s and ‘40’s resurfaced in the 1960’s and ‘70’s as a (polarly different) ‘Chicago *School*’ that argued for essentially no regulation of bankmoney/debt money creation. Friedman also flip-flopped on Keynesianism. Even though he had long been “highly critical” of Keynesian models, “late in his academic career...[Friedman] came up with...[a model] that closely resembled a modern, or neo-Keynesian approach” (Akerlof & Shiller, 2010, 178). Then later in life, apparently after Chicago School-type thinking was thoroughly entrenched (not just in Washington, but also nearly everywhere in the world), Friedman would sometimes return to his original (and opposite) position, officially endorsing neo-Chicago Plan type monetary reform proposals: “As you know, I am entirely sympathetic with the objectives of your [1995] *Monetary Reform Act*...You deserve a great deal of credit for carrying through... [and] I am impressed by your persistence and attention to detail...” (Friedman, 1995). He also returned to “his [original] support for full reserve banking in his preface to the 1992 reprint... [of]...*A Program for Monetary Stability*” (Ricks, 2017, 113). See also “Debt cycles”. Friedman “might well have remained a marginal figure had it not been that politicians such as Margaret Thatcher and Ronald Reagan were sold on his belief in the virtue of a free market. They sold that idea to the public, got elected, then remade society according to those designs.”

- <https://www.theguardian.com/news/2017/jul/11/how-economics-became-a-religion> See also “Reaganomics”, “Tobin, James”.

¹²²⁵ Non-Chicago early/original ‘Chicago Plan’ works included: Currie, Lauchlin (1934) *The Supply and Control of Money in the United States*, Harvard Univ. Press; and Hart, Alber (1935) “The Chicago Plan of Banking Reform”, in *The Review of Economic Studies*, Vol.2, pp.104-16 (courtesy of Huber, 2015).

¹²²⁶ Fisher claimed, in a Nov. 1944 letter to President Roosevelt that, up until then ““[f]our hundred other economists have endorsed the idea’... [and he] renewed his popular campaign for the proposal in 1945 (Phillips, 1995).

2) More than 3 centuries later, Richard Nisbett challenged some of these Hobbesian-universalist assumptions of his field (psychology). He found that indeed, “European thought [still] rests on the assumption that the behavior of objects-- physical, animal, and human...[should] be understood in terms of straightforward rules. Westerners have a strong interest in categorization, which helps them to know what rules to apply to the objects in question” (Nisbett, 2003, xvi). “East Asians”, however, “attend to objects in their broad context. The world seems more complex to Asians... and understanding events always requires consideration of a host of factors that operate in relation to one another in no simple deterministic way” (xvi). “I think the world is a *circle*, and you think it’s a *line*’.... ‘The Chinese believe in constant change... pay attention to a wide range of events... search for relationships between things; and...think you can’t understand the part without understanding the whole...’¹²²⁷ (Nisbett, xiii). See also “Long-term Orientation (LTO)”, “Japan model” [official truth].

2b) Such age-old qualitative (cultural) stereotypes have been supported by a growing number of more empirical experiments and studies, such as the finding that Western babies learn nouns “at a much more rapid rate” than verbs, but that Eastern babies learn verbs faster than nouns (xix). Of course even such basic or fundamental “cognitive processes can be modified by dint of merely living for a time in another culture” (Nisbett, 228). The majority of G20 economies trade more with China than the US

A G-20 Divided

Only half the bloc has imposed penalties on Russia for invading Ukraine

[Total trade volume for G-20 members (2021); only half of the G-20 submitted to Washington’s demand for sanctions (as of 7/22)]

Gallatin, Albert (1761-1849)- (the 3rd & longest-serving US Treasury Secretary [r.1801-14])

- 1) Born into a leading ‘merchant family’ in the Republic of Geneva, Gallatin (with the sponsorship of Ben Franklin [& others]) emigrated, at age 19, to Revolutionary America.
- 2) From “179[3] and serving until 1801, [Sen.-Congressman] Gallatin fought constantly with the independent minded first Secretary of the Treasury Alexander Hamilton [r.1789-95]. He was responsible for the law of 1801 requiring an *annual report* by the Secretary... and he submitted the 1st one later that year as [the Jefferson Admn.’s] Secretary. He [had] also helped [,when in Congress, to] create the powerful House Ways and Means Committee, [in order] to assure Treasury's accountability to Congress by reviewing the Department's annual report concerning revenues, debts, loans, and expenditures.”

- <https://home.treasury.gov/about/history/prior-secretaries/albert-gallatin-1801-1814>. See also “Federal Reserve audit”, ← “Central Bank”; “Powellism”.

3) “As Secretary [however], he followed a Hamiltonian course, establishing the independence [from Congress & politics] of the Secretary of the Treasury and institutionalizing the Department structures. Gallatin considerably reduced the federal debt... and...revived internal taxes to pay for the War of 1812, but they were not sufficient. Having failed to convince Congress to recharter the 1st Bank of the US in 1811, and foreseeing financial disaster, he resigned in 1814” (Ibid).

4) Gallatin’s 1830 “Considerations on the Currency and Banking System of the United States” analyzed how “state banks had multiplied during the war years, apart from any [BotUS or] governmental supervisory authority. In 1811, with... the Bank of the United States, there were 88 state banks in operation. Without the national bank, the number of state banks climbed to 208 in 1815, and 246 in 1816. This multiplication of state banks...[furthered] decentralization... and added to the...[financial instability] of the time period” (Morales, 2009, 195-196). Gallatin later added “that the war demonstrated American weakness... [because] the country’s citizens had become too preoccupied with loyalty to wealth and local government, rather than to their national identity” (Morales, 198).

[not a British collaborator]

Geithner, Timothy- (US Treasury Secretary, 2009-13)

1) From the Larry Summers-Robert Rubin-Citigroup line, i.e. what “the Japanese call...*descent from heaven*, when you take your rewards, having sold out the economy to...your backers, you get a nice job and wind up rich for life” (Hudson, 2016e, mn.10). 2) “After [a] history as a complete and total regulatory failure as president of the New York Fed, where you’re supposed to regulate the largest bank holding companies in America. [He] completely failed in that function” (Black, 2016c, mn.124). See also “M.I.T.”

3) In 2012, “carried out the order from fellow FSB member [UK Treasury head] George Osborne [regarding commutation for (uncontested) terrorist money-launderer HSBC. Geithner was an].... FSB member who *privately* warned the DoJ [against indicting HSBC, while], at the same time holding down a government moonlighting gig as the United States Treasury Secretary” (Titus, 2017, mn.30-31). See also “Financial Stability Board (FSB)”, “Sovereignty”.

See also “Japan model (asphyxiation), the”, “Princes of the Yen”, “Casino Capitalism”.

Generally Accepted Accounting Principles (GAAP)- (synon. ‘US GAAP’)

1) “the accounting standards forming the bedrock of the US financial reporting system... maintained by an independent standard-setter, the Financial Accounting Standards Board (FASB)” (White, 2016).

2) Accounting is not the reality, rather “it is the *recording* of the reality– it is a bunch of conventions thought up by men to help record financial positions...[T]hey are not laws of nature! The American Institute of Certified Public Accountants (AICPA)¹²²⁸ defines *accountancy* as: ‘the *art* of recording, classifying, and summarizing in a significant manner and in terms of money, transactions and events which are, in part at least, of financial character, and *interpreting* the results thereof’” (Jackson, 2012).

3) As of 2015, “nearly half of [US listed] companies report *pro-forma earnings*, which are **not GAAP.**”

- CPA Ron Baker (Lev, 2016b, mn.31)

4) In recent years “companies [have] just gone way, way, way, way, way out on a limb in terms of all the things that they are making up in order to try to report their earnings better. I reported, yesterday, on ConocoPhillips [which used GAAP for 2015], who doesn’t even put a revenue number in their press release

¹²²⁸ AICPA is “sometimes seen as representing the interests of the small auditors over the [mostly British] Big Four” (Ramanna, 2015, 16).

for their earnings... they focus on other kinds of metrics that they can manipulate, each quarter... as it meets their needs..." (McKenna, 2016, mn.18-19). For the required quarterly earnings press release, all the publicly-listed corporations "have to do is make sure that if...[they] include...*non*-GAAP metrics-- all kinds of... measures that the company *makes up*, in order to look better, that [they] also mention the GAAP ones, hopefully as prominently and on the same page... But you have to mention them" (McKenna, mn.19). SEC¹²²⁹ policy is currently just "going after the small guys... *not* after... banks or other large corporations, [who]...are just making things up out of thin cloth, especially the technology companies. They keep reporting number that are really not meaningful and not consistent, [even] from period-to-period within their own company" (mn.19-20). "What they are doing is they are making very risky loans-- to private equity, to hedge funds, and to oil & gas companies... The difficulty is on a bank balance sheet. It's really, really hard to see the total exposure that the banks have to these [2008-type] loans. They're saying that it's not as much as in the pre-crisis era" (McKenna, mn.20-21). Geoengineering- (carefully planned human-directed manipulation of the Earth's climatic systems); nearly a century-and-a-half of experimentation: <https://weathermodificationhistory.com/timeline/page/7>

1) After World War Two, Operation Paperclip's basic objective was attaining "the 'final frontier' of space", which "necessitated total command and control over global airspace, near-earth orbit (NEO), and atmospheric and space weather. While the military [NSA] researched weather control throughout the Cold War, mainstream media [CIA] and embedded scientists kept up a litany of dire warnings of a 'little ice age' [70's], 'greenhouse gases' [80s], and 'desertification'¹²³¹ [90's] that would later morph into [millennial-era] 'extreme weather', 'global warming' [2000's], 'climate change',¹²³² etc. [2010's]-- all to

¹²²⁹ The Security & Exchange Commission's Division of Corporate Finance is the group tasked with reviewing Wall Street's quarterly earnings filings.

¹²³⁰ GAAP standards for private, *unlisted* companies, since 2012, have been tasked to the newly created *Private Company Council* (PCC). Although the "creation of the PCC went unnoticed by most Americans... [such] private companies...make up about one-half of US GDP" (Ramanna, 2015, 16). See also "Accounting, 'Fair Value'".

¹²³¹ Hype or not, "*desertification*" affects approx. 46% of Africa, according to the USDA. It was defined, broadly, by a United Nations Convention as "land degradation in arid, semi-arid and dry sub-humid areas resulting from various factors, including [natural] climatic variations and human [environmental] activities" (UNCCD, 1994); such as "[c]ontinuous cultivation without adding supplements, over-grazing, lack of soil and water conservation structures, and indiscriminate bushfires.... Archaeological records claim that arid areas of Africa have been getting drier for almost 5,000 years.... [and] the desert is moving [in] at an annual rate of 5 km in the semi-arid areas of West Africa.... [In the east], around 80% of the land [in Kenya] is threatened by desertification.... Africa also suffers from inherently low soil fertility, as the bedrock consists of granites and gneiss. Most of the soils in Africa are [geologically old, and] characterised by a low proportion of clay, making them [both] easy to work and...easy to lose."- <https://www.downtoearth.org.in/news/natural-disasters/desertification-in-africa-10-things-you-must-know-54430> . Approx. 1/3rd of the continent already receives less than 12 inches of rain per year. (For Phoenix, Az., it is 9"). See also "Climate change".

¹²³² <https://www.youtube.com/watch?v=nEiiw223ZrM> [Mellonville parade, mn.3]; see also "Usury". Real scientists have known about *Holocene* periods (inter-glacial eras in the geological history of Earth) since the 19th century. Here, simply stated, is how (non-'politicized') science

keep the [stream of] dollars flowing”¹²³³ (Freeland, 2018), in a “democracy”. See also “Democracy”, “National Security Agency (NSA)”.

2) Of the various bankmoney ‘globalist’ policy shops, “the Club of Rome...was created in the 601 specifically to use the environment as an excuse to transform human society” (Icke, 2018b, mn.8). See also “Transhumanism”.

3) The political/propaganda side was also ‘carefully planned’, it would seem... to fall apart (in its hubris), perhaps sometime around 2020. “What was never mentioned at these showcase conferences was the *secret space program* and how the military-industrial-intelligence complex sought to turn weather into a ‘force multiplier’ for 7 military operations: a] weather modification, b] environmental / geophysical modification, c] electromagnetic manipulation, d] military full spectrum dominance, e] biological manipulation, f] intelligence / surveillance, and g] detection / obscuration of exotic propulsion technology. [With the resultant] infiltration and co-optation, compartmentalization, confidentiality agreements, backroom deals, threats, bribes, skewed research, packed peer review committees, [and] embedded international media [cartel], one can only marvel at the legerdemain and...deception it takes to steer international conferences, committees, publishing houses, news outlets, and university and elementary school curricula so as to construct a vast global house of cards built on turning carbons-- the building blocks of all of life-- into the culprit behind global warming” (Freeland, 2018). See also “Corporate Media Cartel”, “Great Extinction, 6th”.

4) Oversight? “The first congressional report on geoengineering in the US House of Representatives did not appear until October 2010, nearly two decades since geoengineering had been ramping up... [T]he congressional report’s appearance may have been due not so much to a sudden contrition of conscience as to the threat posed by the upcoming 10th Conference of Parties to the Convention on Biological Diversity (COP10) in Nagoya, Japan where 193 nations would ratify a moratorium against the geoengineering⁹ that the US Congress [officially] knew nothing about” (Freeland, 2018).

5) Go “to the Beijing Weather Modification office... This is really going on” (Fitts, 2022j, mn.107).

6) Geoengineering Updates: 10/22- <https://www.bitchute.com/video/Niaf3viKCI50/> [RR-WeatherWeaponization]

See also “Climate change”, “Dumb-downing”, “Academia”, “Black Budget”, “Conspiracy theorist”.

Geography- “The empire of climate is the 1st, the most powerful, of all empires” (Montesquieu, 1748, 299).

1) In “cold climates” men “have a certain vigor of body and mind, which renders them patient and intrepid, and qualifies them for arduous enterprises. This remark holds good, not only between different nations, but...in the different parts of the same country. In the north of China, people are more courageous than those in the south” (Montesquieu, 1748, 264). “[T]he spirit of Europe has ever been contrary... and in all ages, what the people of Asia have called punishment, those of Europe have deemed the most outrageous abuse. The Tartars who destroyed the Grecian Empire established in the conquered countries slavery and despotic power: the Goths, after subduing the Roman Empire, founded monarchy and liberty”¹²³⁴ (Montesquieu, 1748, 268). See also “Civilizations”.

states the present understanding: the Holocene era, which “over the past 10,000 years of reasonably stable and warm interglacial conditions...[has encompassed] the entire agricultural history of humanity” (Brooke, 2014, 6); it “can be roughly divided into 3 periods: an *early period* of maximum Northern Hemisphere summer insolation [heat]; [followed by a] *middle period* of weakening summer monsoons [and hence desertification] in the N. Hemisphere; and [finally, a pre-ice age]...*late period*, marked by periodic cooling, strengthening El Niños, and more restricted seasonal migration” of the Intertropical Convergence Zone (Brooke, 2018). The basic thrust of this knowledge is not really anything new (i.e. the present long-term climate trend is in the direction of cooling, in response to basic “orbital, solar, and volcanic forcings, as well as [some] internal variability” [Ibid]). See also “COVID”, “Intelligence Community” [I.I.C.].

¹²³³ Man-made or anthropogenic global warming-- at least in history-- “is not proven.... We’re in a situation where we want to be careful and not go too crazy with this argument” (Brooke, 2019, mn.44-45). See also “Climate change”. Brooke subsequently contradicts himself, however (in mn.111).

¹²³⁴ Was not “Western civilization” something (eventually, at least) of an improvement upon (the preceding) “Classical civilization”? “[T]hose valiant people who sallied forth and deserted their countries to destroy tyrants and slaves, and to teach men that, nature having made them equal, reason could not render them dependent, except where it was necessary to their happiness” (Montesquieu, 1748, 269); and that necessity wasn’t often. See also “Happiness”.

2) "Power in Asia... if... not severe, [then] they would make a division inconsistent with the [geographical] nature of the country" (Montesquieu, 269).

3) "In Europe [however,] the natural division forms many nations... in which the ruling by laws... [maintains] the state... [And] without this, the state would fall into decay, and become a prey to its [many] neighbors. It is this which has formed a genius for liberty that renders every part extremely difficult to be subdued and subjected to a foreign power, otherwise than by the laws and the advantage of commerce" (Montesquieu, 269). See also "Civilization, Western", "Liberal". See also "Climate change, global", "National identity/Nationalism".

Geo-politics (of the early-'modern')- (adjusting to the 1500's bullion-monetary bonanza took some time)

16thC- all things Spain-Spain-Spain & Spain, until the Dutch-Hanseatics, & eventually .En got 2xAccounting;

17thC- Dutch Rep.-Netherlands and English fighting for global trade primacy... to 1688-94 'Glorious' elite merger;

18thC- 'All things France & Fr. culture' (even though UK was in the monetary-political driver's seat);

19thC- 'All things German & De. culture' (even though UK was in the monetary-political driver's seat);

20thC- 'All things America & USA culture' (even though UKUSA was in the monetary-political driver's seat).

See also "Glorious Revolution", "Oligarchy", "Currency wars, the", "Pilgrim Society", "UKUSA Agreement".

Geopolitics (.21)- It's not the 2nd Industrial Revolution anymore, and citizens are not just "consumers".

3 major developments are probable over the next decade, even though (as of mid-2020) not a lot of people seem to be talking about them:

1) the notching down of the "G2" trans-Pacific special relationship; see also "World Par Economy".

2) the end of singular "Dollar hegemony". See also "Special Drawing Rights (SDR's)"; and

3) the removal of the long 20th century UK-USA knee from the neck of Russia and central-eastern Europe.

That is the real 'New World Order', and what it is to mean for currencies, reform, and the Bill of Rights hasn't been sorted out yet. See also "Big picture", "Cycles", "Technocracy", "Land Bridge", "Multipliers".

4) But if one "multiplier" is fake and the other real, then is not one the proverbial 'road to hell' and the other, a balanced and responsible way to manage planet Earth?

See also "Hell", "Super Imperialism", "Reserve currency" [DrSeuss]; "World Par Economy".

Georgism (& Land Value Tax)- (synon. 'location value rent'; a.k.a. 'the single tax', 'the spaceship'¹²³⁵)

Henry George (1839-1897), originally from Philadelphia, received an "ecstatic vision" overlooking San Francisco Bay¹²³⁶ in 1871. See also "Equilibrium".

"In the Middle Ages... no one owned the land. People had rights of usage in the land. But eventually some troublemaker-- and according to Rousseau he should have been struck dead or something-- asked 'Who owns this land?' The question should never have been asked. That is asking 'Who has *proprietas* in this land?' Instead they should have continued, as the Middle Ages did, [to ask] "What *dominia* exist in this land, and who owns them?" And that's what you'll find in the questions that William the Conqueror asked, in 1087, when he sent out people in the Domesday survey."- Carroll Quigley, "The State of Estates, 1576-1776" lecture (Quigley, 1976c-pt.2, mn.147).

1) A century earlier, Henry George had noticed¹²³⁷ (w/o the Latin/legal vocabulary-history) that: "[A]ll the advantages gained by the march of progress go to the owners of land, and [real] wages do not increase....

¹²³⁵ Although not 'owned' by Georgists, the etymology of the term 'space ship Earth' apparently reaches back no further than George's remark that "" (George, 1879,).

¹²³⁶ https://www.youtube.com/watch?v=eyT7weE_7PQ [instr.]. See also "G2".

¹²³⁷ George wasn't the first to notice, just 'the single tax's first serious scholar: the "elder Mirabeau, we are told, ranked the proposition to [his fellow 'Physiocrat' François] Quesnay, to substitute one single tax on rent (the *impot unique*) for all other taxes, as a discovery *equal in utility to the invention of writing* or the substitution of the use of money for [so-called] barter" (George, 1879, 433). See also "Physiocrats, the", "Barter". Also in George's hometown, a Pennsylvania Assemblyman argued (against chartering the Bank of North America in 1786) that: "Money which would have gone to build new houses and farms was now [instead] locked up in the bank, where it could increase free from taxes and without the labor of its owner; 'thus by discouraging improvements...[the Bank] prevents population, and with it [thus also] the rising glory and strength of the commonwealth'" (Wilson, 1942, 20). See also "Usury".

[and is] thus robbed of all the benefits of the increase in his productive power.... In all our long investigation we have been advancing to this simple truth: that as land is necessary to the exertion of labor in the production of wealth, to command the land which is necessary to labor, is to command all the fruits of labor, save enough to enable labor to exist"¹²³⁸ (George, 1879, 255; 308).

1b) This thesis, which became a national and international phenomenon from c.1880-1910's, was "that poverty amidst plenty resulted from *treating* the land as private property¹²³⁹.... [because] rent would [then] automatically rise to levels that kept labor on the edge of subsistence¹²⁴⁰...." (Zarlenga, 2001). In order to remedy this structural/archaic problem, in George's own words, "...it is not necessary to confiscate land; it is only necessary to confiscate *rent*... the simple yet sovereign remedy, which...[will] afford free scope to human powers, lessen crime, elevate morals, and taste, and intelligence, purify government and carry civilization to yet nobler heights, is- to [simply] appropriate rent by taxation... [and] to abolish all [other] taxation..." (George, 1879, 404-406). In the ensuing decades, many millions of literate-yet-non-academic Westerners came to consider this "Single tax proposal"¹²⁴¹ to be "a fair and painless tax, since the increasing value of land itself (not including improvements) results from *social* causes such as population increase, and [usually] not from the work of the owner" (Zarlenga, 2001); hence the present system's structural tilt towards freeloading and (eventually outright) parasitism. See also "Parasite", "Academia", "Progress", "Fin de Siecle", "Usury".

2) is more than a tax proposal if you actually read George. Today's Georgists start from just page 403... effectively ignoring the first 400 pages....[but] most of *Progress & Poverty* is actually an analysis of how monopoly works.¹²⁴² See also "Mill, John Stuart (1806-1873)".

3) "was a right-winger¹²⁴³...the antithesis of Socialism¹²⁴⁴, because he said that you don't have to nationalize the land [as was later done in China] to take it over. All you need to do is tax the Land Rent, and you can leave housing, commercial property in private hands. You can leave utilities in private hands. So whereas the European countries would takeover [nationalize] electric power utilities... in America, we left

¹²³⁸ The eloquent writer continued: "We have been advancing as through an enemy's country, in which every step must be secured, every position fortified, and every by-path explored...[because] this simple truth, in its application to social and political problems, is hid from the great masses of men, partly by its very simplicity, and in greater part by widespread fallacies [.academia] and erroneous habits of thought [.corporate media] which lead them to [first] look in every direction but the right one for an explanation of the evils which oppress and threaten the civilized world. And [at] back of these elaborate fallacies and misleading theories is an active, energetic power, a power that in every country-- be its political forms what they may-- writes laws and molds thought...[This is] the power of a vast and dominant pecuniary interest. But so simple and so clear is this truth, that to see it fully once is always to recognize It. There are pictures which, though looked at again and again, present only a confused labyrinth of lines or scroll work-- a landscape, trees, or something of the kind-- until once the attention is called to the fact that these things [are not bits & bytes of random nonsense, but] make up a face or a figure [or a policy]. This relation once recognized, is always afterward clear" (George, 1879, 294-295). See also "'Conspiracy theorist'", "British Empire(s)", "Imperialism", "Quigley, Carroll" [*la police*].

¹²³⁹ George was not for ending private ownership of land, and was not for confiscation (as happened, half-a-century later, in post-war China).

¹²⁴⁰ The take-away? "Take away from man all that belongs to land, and he is but a *disembodied spirit*. Material progress cannot rid us of our dependence upon land; it can...[only] add to the power of producing wealth from land; and hence, when land is monopolized, it might go on to infinity without increasing [real] wages or improving the [real] condition of those who have but their labor. It can but add to the value of land [price inflation] and the [socioeconomic] power which its possession gives" (George, 1879, 296). See also "Cycles", "Parity pricing (for the primary sector)".

¹²⁴¹ Although the term 'Single Taxer' "dropped out of the political field" in the early decades of the 20th century UK & US, many of the most sustainably successful economies of the century-- from Hong Kong, Singapore, and Taiwan, to Denmark and (more recently) Estonia-- have been based, at least in part, upon LVT principles (Bauwens, 2011).

¹²⁴² "Justice in men's mouths is cringingly humble when she first begins a protest against a time-honored wrong, and we, of the English-speaking nations still wear the collar of the Saxon thrall, and have been educated to look upon the 'vested rights' of land owners with all the superstitious reverence that ancient Egyptians looked upon the crocodile. But then the times are ripe for them, ideas grow, even though insignificant in their first appearance. One day, the 3rd Estate covered their heads when the King put on his hat" (George, 1879, 325-326).

¹²⁴³ Did George amount to an American version of Physiocracy? "The whole [Physiocrat] system operated naturally without government interference. This advocacy of a policy of *laissez-faire* was distinctly different from the [then-]commonly held viewpoint that governments should manipulate trade to their advantage. Development of these premises elevated [Physiocracy founder Francios] Quesnay to the rank of leading economic thinker in France at that time [the 1760's]" (de Yong, 1994, 7).

¹²⁴⁴ It "was" the Fabians-- more than any other group of reformers-- who spent the early years of the 20th century trampling on millenarians, revolutionaries, and vegetarians [in addition to 'Georgists'] they saw as sucking attention away from the true path of steady progress towards state socialism. (Boyle, 2002). See also "Keynesianism", "Bank welfare", "Hegelian dialectic".

the electric utilities, the gas utilities, [and] the most of the public infrastructure in private hands, but we taxed away the surplus, and we regulated the prices... to keep prices in line with cost value. [T]his is what [pre-'Fin de Siecle'] *Classical Economics* is all about" (Hudson, 2011, mn.3). See also "Equilibrium" [Walras].

4) David Ricardo, earlier in the century, had also concluded that a Land Value Tax, equivalent to a tax on the *land rent* [i.e. not just a 'property tax'], was the only form of taxation that was not inherently inflationary (Ricardo, 1817, ch.10,12).

5) "Socialism is not strongly avowed in the United States, but, thanks to Henry George, let no one question its virtue where the national parks, forests or public lands are concerned" (Galbraith, 1987, 169).

6) "I believe that eventually all absentee landlords need to be bounced. All land should belong to the community; and anyone who occupies the land should have a multi-generation tenure on that land, provided they do no harm" (Steele, 2017f, mn.32). Nov.21?

7) In terms of implementation (sometimes a.k.a. 'getting from point A to point B'), there's an old, pre-British saying: 'If you put salt on a bird's tail you can catch it'. Hmm; see also "Politics". 'Georgism' has mostly been implemented in (imperial-era) Hong Kong and Singapore, not so much, at least not yet, in democratic polities. What's the oriental connection? See also "Physiocrats, the" [single tax, China].

[Not likely;Meanwhile, over at the "Pilgrim Society", c.1908... See also "Imperialism".]

8) Along with a number of turn-of-the-century economists,¹²⁴⁵ George "believed economists were recasting the discipline [of Economics] to refute him" (Gaffney, 1994, 29). Today, George probably "seems too minor a figure"¹²⁴⁶ to have warranted such an extreme reaction. This impression is a measure of the neo-classicals' success: it is what they sought to make of him. It took a generation, but by 1930 they had succeeded in reducing¹²⁴⁷ him in the public mind. In the process of succeeding, however, they emasculated' the discipline, impoverished economic thought, muddled the minds of countless students, rationalized free-riding by landowners, took dignity from labor, rationalized chronic unemployment, [and] hobbled us with today's counterproductive tax" tangles (Gaffney, 31). See also "Neoclassical revolution".

9) Certainly in America and the UK, it was George, not Karl Marx, who "proved that a book could challenge an entrenched system of thought and open the door to new ideas, to social change" (Tishy,

¹²⁴⁵ Simon Patten, influential Chair of the Wharton School of Business, "expounded it succinctly. 'Nothing pleases a... single taxer better than... to use the well-known economic theories... (therefore) *economic doctrine must be recast*' (Patten, 1908: 219...." (Gaffney, 29).

¹²⁴⁶ Just "seven short years after publishing *Progress and Poverty* in remote California he nearly took over as Mayor of New York City, the financial and intellectual capital of the nation. He thumped also-ran Theodore Roosevelt, and lost to the Tammany candidate (Abram S. Hewitt)" in a corrupt election (Gaffney, 35). Although George was never elected to public office, he was as influential as any intellectual during the turn-of-the-century era. Historian and presidential advisor Eric Goldman, writing in 1956, "found George to have inspired most of the major reformers of the early 20th Century. '...no other book came anywhere near comparable influence... a volume which magically catalyzed the best yearnings of our grandfathers and fathers'" (Gaffney, 1994, 37-38).

¹²⁴⁷ In the 1880's and 1890's, George "became the 3rd most famous man in the United States, only surpassed in public acclaim by Thomas Edison and Mark Twain... [and] was translated into almost every language that knew print, and some of the greatest, most influential thinkers of his time paid tribute. Leo Tolstoy... stressed [that].... 'People do not argue with the teaching of George, they simply do not know it'.... And Bernard Shaw... wrote, 'Your father found me a literary dilettante and militant rationalist in religion, and a barren rascal at that. By turning my mind to economics he made a man of me....'" (de Mille, 1979). John Kenneth Galbraith concurred, that in "his time and even into the 1920s and 1930s, Henry George was the most widely read of American economic writers both at home and in Europe. He was, indeed, one of the most widely read of Americans" (Galbraith, 1987, 166). See also "United States, the".

2011, 72-73). Whereas *Progress and Poverty* (1879) sold approx. 2 million copies in its first 20 years, and was often said to be 'second only to the Bible' in sales in the 1890's (Baldwin, 2006, 116); Marx's *Das Kapital* (1867) took 5 years "to sell 1,000 copies in its original German. It was not translated into English for two decades, and this newspaper did not see fit to mention it until 1907"¹²⁴⁸ (Economist, 2014). 'Neoclassical', or university-endowed, Economics was largely cooked up in the (Georgist/anti-Georgist) latter 1880's-90's¹²⁴⁹; and Ivy League type "Economics" departments date from the Fin de Siecle and turn of the century, with their British equivalent departments running about a decade or two later. By that time, those who didn't like the new century's ('Neoclassical') spiel were left with the false alternative of "Marxism" (see also "Hegelian Dialectic", "Lender of Last Resort"). "The means of producing wealth differ at the root: some is thieved from the people and some is honestly earned. George differentiated; Marx [and the 'neo-classical's] did not. The consequences of our failure to discern [earned from unearned income] lie at the heart of our trouble. This clown civilization is [now] ours" (de Mille, 1979). See also "Debt cycles", "Cultural Calendar", "Unearned income", "Civilization, Western".
 10) Prior to the (see also) "Fin de Siecle", it was generally understood that, as Adam Smith put it, "" (Foldvary, 2006).
 See also "Economics", "Veblen, Thorstein", "American System, the", "Lobbyists (monetary & fiscal)".

(de Mille, 1979)¹²⁵⁰

German (industrial) banking- "The German nations that conquered the Roman Empire were certainly a free people. Of this we may be convinced only by reading Tacitus 'On the Manners of the Germans'" (Montesquieu, 1748, 163).

Nonetheless, according to Carroll Quigley, "[a]ll the subsequent experiences of the German people, from the failure of Otto the Great in the 10th century, to the failure of Hitler in the 20th...have served to perpetuate and perhaps to intensify the German thirst for the coziness of a totalitarian way of life"¹²⁵¹ (Quigley, 1966, 411).

¹²⁴⁸ Perhaps it is appropriately left to a children-juveniles book paraphraser to sum up for us here that Marx "was certain that *Das Kapital* would bring him...financial success, but the publication was not well received. Marx was paid 60 pounds, or \$88.41 for the first printing of 1000 books, which took 4 years to sell. In typical fashion, Marx did not blame the poor sales on the book's lack of organization or its erratic focus..." and after 1867 did not write much more (Cates, 2011, 79).

¹²⁴⁹ Economics as a discipline, however, predates both "Neoclassical"ism and official "university" departments. See also "Mythomatics", which reaches back to the 1870's (and perhaps earlier) with French economists, then housed in Departments of Law, at places like the Lausanne School of Theology (which was not made a "university" until 1890).

¹²⁵⁰ On thinking: "There are people into whose heads it never enters to conceive of any better state of society than that which now exists-- who imagine that the idea that there could be a state of society in which greed would be banished, prisons stand empty, individual interests be subordinated to general interest, and no one seek to rob or to oppress his neighbor, is but the dream of impracticable dreamers, for whom these practical, levelheaded men, who pride themselves on recognizing facts as the are, have a hearty contempt. But such men-- though some of them write books, and some of them occupy the chairs of universities [and other corporate media], and some of them stand in pulpits-- do not think" (George, 1879, 464). See also "Corporations (and corporate 'personhood')", "Neoclassical Revolution", "Industrial Revolution, 2nd".

¹²⁵¹ Richard Wagner's "only happy opera was placed in.... the guild-dominated life of late medieval Augsburg.... The [great] shift of world trade from [the] Mediterranean and Baltic to the Atlantic destroyed [along with Venice] the trans-Germanic commercial basis of German municipal guild life-- a fact which Thomas Mann still mourned in our own day. Almost immediately, the spiritual unity of the Germans was shattered.... Germany's misfortunes culminated in the disasters of the 17th century when [Cardinal] Richelieu, on behalf of France, used the internal problems of Germany in the 30 Years War (1618-1648) to play off one group against another, ensuring that the Hapsburgs would never unify Germany, and dooming the Germans to another 200 years of disunity. Hitler, Bismarck, and...Kaiser Willim II could well be regarded as Germany's revenge on France for Richelieu, Louis XIV, and Napoleon" (Quigley, 1966, 411-412). See also "Estates, 3", "France (and the EU)".

“German and Germany are simply shorthand for the [pre-1860’s] reality of 240 states, hundreds of semi-independent feudal lords, dozens of tough, active [trading] towns from the Baltic to the North Sea, and along the Rhine and Danube valleys, as well as the territories of the House of Hapsburg in Bohemia and Austria. And few of them got along.”- <https://www.youtube.com/watch?v=QuHoRgs9UkQ> [WT, pr.23, mn.3].

1) “had seemed to be capitalism’s financial future in the late 19th century” (Hudson, 2017p). See also “Fin de Siecle”, “[Currency Wars, the](#)”.

2) How did this position of power/utility develop? Even before the ‘Holy Roman Empire’ millennium, Tacitus (c.56-c.120) observed “that priests were held in great veneration by the Germans, and that they presided in the assemblies of the people. They alone were permitted to chastise, to bind, to smite; which they did, not by order of the [local] prince, or as his ministers of justice, but by an inspiration of that Deity ever supposed to be present with those who made war.¹²⁵² We ought not, therefore, to be astonished when... they acquire so large a share of property” (Montesquieu, 1748, 291). See also “[Charismatic Authority \(CHA\) & Charismatic Dependency \(CHD\)](#)”, “[National identity Cycle](#)”, “[Revolution, French](#)”.

2b) Not just Europe’s largest and most-strategically-located countryland (in terms of uniting all of Europe and linking up with Russia & the East), the German nations (politically-unified in the 1860’s-70’s [after ‘Mandarin’-like language standardization efforts from the 16th-19th centuries]), long before Bismarck’s paternalism, held a European moderate or *sensible* ground, philosophically. One doesn’t need Herder or Goethe to point out that (from no later than the 16th-17th century, when Europe’s kingdoms were 1st turning into sovereign nations [and hence national characters]):

liberal/Republican officially ‘Protestant’ & divine right’ conservative/monarchial not-to-be mentioned yet
Dutch Republic Church of England-Stuart England Bourbon France/Hapsburg Spain the East & Russia

Hence, for about 3 centuries (of formative Early Modern development), the Dutch revolutionary *wunderkind* was (more-or-less constantly) pitted against the [increasingly conservative] Catholic monarchies of Spain & France, with ([let’s face it] an often-duplicitous) English establishment¹²⁵³ trying to have it both ways. It was a trite [stubborn/stand-offish] state-of-affairs by the last quarter of the 17th century, creating something of a philosophical-political vacuum for something less partisan & more sensibly-balanced to emerge from the (mostly different dialects of German-speaking) heartland. The Treaty of Westphalia (1648) had started the unification ball rolling, but (language-customs tend to be stubborn, and) it wasn’t until after the upheavals of the Napoleonic wars ([2nd Currency War](#)) that Prussians developed the thirst for German ethno-political unification. See also “Adolescence of Mankind” [WarringStates], → “[Currency Wars, the](#)” [UK-USA’s final solution], [blaming it on German] “[Ethnic \(National\) Identity](#)”.

2c) Carroll Quigley had a more 20th century-take on German-ness. In “most [Western] counties”, standing democratic institutions were “achieved by the middle classes, supported by peasants and workers, in an attack on the monarchy supported by the bureaucracy and landed aristocracy. In Germany [however,] this combination never quite came off, because the various groups were reluctant to clash... in the face of their threatening neighbors [“France, Russia, and the Hapsburg dominions”]. Instead...[the German language family’s] exposed frontiers made it necessary for the various groups to subordinate their mutual antagonisms and [eventually] obtain unification at the price of a sacrifice of... liberalism, and nonmaterial values...[When unification] was achieved in the 19th century...[it was] not by embracing but by repudiating the typical [18thc Enlightenment and] 19th century values. Starting as a reaction against the assault of Napoleon in 1806, and [then] repudiating the rationalism, cosmopolitanism, and humanitarianism of the Enlightenment, Germany achieved unity only by the following processes:

¹²⁵² Montesquieu attributed this simply to the fact that the “priests of barbarous nations are commonly invested with [sovereign] power, because they have *both* that authority which is due to them from their religious character, and [also] that influence which... is the offspring of superstition. ... [And (lest we forget)] “the prejudices of superstition...[in general] have [had] the strongest influence on the human mind” (Montesquieu, 1748, 291; 279).

¹²⁵³ ...not to be confused, of course, with the (majority of) English *common-culture*. *Going Dutch* “demonstrates through compelling new research in political and social history how Dutch tolerance, resourcefulness, and commercial [accounting] acumen had effectively conquered Britain long before William [of Orange] and his English wife [Mary, a contested heir] arrived in London” with an army of 21,000 (Jardine, 2009). See also “Glorious Revolution, the (1688-91)”, “United Kingdom, the”.

- a) “strengthening the monarchy and its bureaucracy”;
- b) “strengthening the permanent, professional army”;
- c) “preserving the landlord class (the Junkers) as a source of personnel for both bureaucracy¹²⁵⁴ & army”;
- d) “strengthening the industrial class through direct and indirect state subsidy; but [nonetheless] never giving it a vital voice in state policy”;
- e) “appeasing the peasants and workers through paternalistic economic and social grants, rather than by the extension of political rights which would allow these groups to assist themselves”; (Quigley, 1966, 412-413). See also “China” [21stc strat.].
- 3) In the late-19th century, they originally “called it *State Capitalism*. There was a long discussion by Engels, saying, ‘wait a minute... *State Capitalism isn’t what we mean by [full-blown] socialism*’.... the German [industrial] banking was so successful that by the time...[that] World War One broke out, there were discussions in the English journals saying: ‘*We’re worried that Germany and the Axis powers are going to win, because their banks are more suited to fund industry; and without industry you can’t really have a military*’. Whereas the British banks only lent for foreign trade... [or] for speculation, and the [resultant] stock market is a hit-and-run operation. They want...quick in-and-out...profits; whereas the German banks don’t insist that their clients pay as much dividends. German banks owned stocks as well as bonds, and there was much more of a partnership. And that’s what most of the 19th century imagined was going to happen– that the world was on the way to socializing banking-- towards moving capitalism beyond the feudal level, getting rid of the landlord class, getting rid of the rent, getting rid of interest. Really it was going to be labor and capital, profits and wages, with profits being reinvested in more capital. And you’d have an expansion of technology. Around the early 20th century, most futurists imagined that we’d be living in a leisure economy by now” (Hudson, 2016d). But the race (1914-45) is not always to the swift, as British diplomatic superiority demonstrated. See also “[Currency Wars, the](#)”.
- 4) “large German banks... provided *equity* capital to their investors, as well as loans.... They took a long-term position. And the English [economists]...believed that Germany might win the war because of its superior banking.... [So] America [had to] entered the war, Germany was stripped...[but] it still retained the Industrial Banking tradition-- simply because it didn’t have much money. But then after WWII, the Americans said: ‘*Oh, that’s Nazi banking*’. Well it’s not Nazi banking; it’s Bismarck banking. It’s 19th century banking, and German banking was replaced with an Anglo-American...*instead of ‘ordo’ banking--* more or less-- and the Germans really should realize... how they had taken the lead in the 19th century... [with] a mixed economy that was [in fact] really working. Every successful economy has been a mixed economy.... Of course you should have checks & balances.... The Germans should go back to what they had, but the German history is [now] stripped out.... The Germans can say ‘*There is an alternative. We had it. It worked. We were not destroyed militarily by a superior economic system, but by the United States coming into the war against us*’” (Hudson, 2012c). See also “[Currency Wars, the](#)”.
- 5) Half-a-century later; “the middle [way] was [again] crushed.... A man who had a plan of re-organizing [central European] economic flows to the East, [to] Poland [and] Russia,¹²⁵⁵ [Alfred] Herrhausen, the master...[and] chief of [the now notorious] Deutsche Bank [r.1985-89]¹²⁵⁶...was assassinated [with an

¹²⁵⁴ The princes in Eastern Europe (without so much money, accounting, or urbanization), “used for their bureaucracy the younger sons (that’s where the word Junker comes from) or the nobility themselves & the gentry themselves... as their administrators. But... [these] were not paid officials, And... they would be administrating only in their own localities, where they would [often] systematically administer to their own benefit and not necessarily to the benefit of the ruler, the prince”, and a lot of German-speaking principalities were thus junk-heaped (Quigley, 1976c-pt.2, 154-155). See also “Deep State”.

¹²⁵⁵ “Recently...[in 1989, the headstrong Herrhausen] had sought to reduce Third World debt...[and was pushing] a plan to give financial aid to Poland. He also was talking about establishing banking links in the Soviet Union. On Wednesday night the bank had given a dinner for a delegation of high-level Soviet officials.... The 59-year-old executive, a personal friend of Chancellor Helmut Kohl [r.1982-98] and an economic adviser to Kohl’s government.... had strong ties to the Soviet Union and had recently made it clear that his bank was prepared to expand toward the East as a result of the decline in Communist power there.... The news of his death stunned the Frankfurt Stock Exchange. Trading was interrupted for a minute of silence.”- <https://www.latimes.com/archives/la-xpm-1989-12-01-mn-145-story.html>

¹²⁵⁶ Herrhausen (a member of Deutsche Bank’s Board from 1971) was also, at the time, on the [then secret] Bilderberg Group’s Steering Committee, a key proponent of European integration; and “a key advisor to...Chancellor Helmut Kohl” (Britannica, 1998). See also “Statism” [SCTV... ‘no understanding’], “Russiagate”, “European Monetary Union (EMU)”, → “Angry Birds”.

infrared-triggered bomb that ripped through his convoy of armored vehicles], because...for the planners in the 'West'...[it] was not very good that the [vassal] Europeans would [be formally plotting to] play an equal part [in the region's basic economic strategy]. No; finished... [Somebody said] 'It's good if the Europeans see that as a warning'.... [And 30 years later] We have no intact European middle." (Meyer, 2021, mn.31). See also "Russia", "Russiagate", "Deutsche Bank".

5b) During the four post-war decades, Germany's banking sector **doubled** in scale, from "only 2%" of the workforce, in 1950, to "1 million employees...[comprising] 4% of the former West Germany's work force" by c.1990 (Dziobek, et al, 1992, 46). See also "Financialization".

6) The German banking sector today is 70% comprised of "hundreds of locally-controlled, small banks, lending mostly to productive Small-Medium-Enterprises" (Werner, 2015b, mn.117), as opposed to the 'Big 5' banks of today's Anglo-American regions. "Many people don't know this, but... 70% [of banks] in Germany are not-for-profit institutions. There's no shareholders maximizing dividends" (Werner, mn.118). See also "Landesbanken and Sparkassen".

6b) Correspondingly, nearly "80%" of German employment is with "small firms", compared to more like "70%" in the other "successful" countries; and they actually "need bank lending" for "productive purposes" (Werner, 2021, mn.35). Germany has "1,500" Hidden Champions (unheralded >\$5 bn. revenue firms that are top 3 in global market share in a certain industry), compared to "320" in the US, and no one else above 50. "Germany has [almost] as many exports as China.... and almost half are...[from] small firms.... [corresponding to] 1,500...community banks.... most of them are not for profit... savings banks or cooperative banks... very professionally-run. And...[their main distinction is that] they only...[extend credit] to companies in their [guilds'] footprint area... They will not lend outside if there's no link to their geographical area.... [It's] good for them [that] they each have their own turf.... They know [that] they're in the same boat.... They make sure¹²⁵⁷ that these local firms become champions" (Werner, 2021, mn.40-44). See also "Equity financing", "Venice, Republic of".

7) "War is being made" on the 1500 German local community banks "by the [est. 1998] ECB... so their numbers are shrinking... Mario Draghi said that there are too many banks in Eurozone. Was he talking about Goldman Sachs? I don't think so... the largest number of banks...are in Germany. And they are those not-for-profit community banks. They don't lend for speculative purposes... because their reach is only geographically within the local area" (Werner, 2018b, mn.48).

8) Many people also do not recognize that, **at least in the first 2 or 3 decades** of bank liberalization, the "level of competition in the banking industry...increased considerably while profit margins have shrunk" (Busch, 2012, 29). See also "Finance Capitalism", "Industrial Capitalism".

9) Steve Keen adds that, today, private-debt bubble "charts can be created for every OECD country in the BIS.org database, except [for low-debt] Germany" (Keen, 2016i). "This comes down again to what the Germans do...They have a policy [strategy] which makes it possible for people to rent without paying an overwhelming proportion of their income to do so.... The Germans'...credit system generally...provides money for factories to *produce* things to sell to the rest of the world-- not [just] to drive up the price of houses..." (Keen, 2017d, mn.22-23).

10) Werner concludes, however, that the German Bundesbank has been "wonderful [but] not representative... [It will] constitute an unusual blip in the history of Central Banks" (2014c), in their refusal to play the boom & bust game. See also "Banking".

11) Is the (gradual) merging of government & large bank-corporations really what we want? "I see plans for public directors on the boards of all large corporations. I see plans for increased involvement of labor in the control and management of corporate structures [co-determination]. I see an eclipse of the freedoms this nation was founded upon-- all because the farmer" is being ripped off (Walters, 1982, 12). See also "Public Banking", "Corporate governance", "Corporate Personhood", "Feudalism, neo"; "Parity".

12) Germany Updates: 11/17- <https://euobserver.com/green-economy/140042> [GlyphosateSwingVote]; 2/19- "I have just returned from Germany and seen a remarkable split between that nation's [sensible] industrialists and their [?] political leadership" (Hudson, 2019). See also "Russiagate".

¹²⁵⁷ In other words, "[t]hey give them the funding to implement the latest technology" (Werner, 2021, 44).

8/22- <https://banned.video/watch?id=62ea942f9730eb418c5d1a4f> [DarkWinter'23? (Reese)]; more likely...

12/22- Germany is simply the primary fulcrum-swing vote of the 2020's

<https://publish.twitter.com/?query=https%3A%2F%2Ftwitter.com%2FTFL1728%2Fstatus%2F1598727752596586496&widget=Tweet> [Huawei.De]. See also "BRICs", "Angry Birds", "Reserve currency".

See also "State Theory of Banking", "European Central Bank (ECB)"; Goodrich & Hunt, 2014.

Gesell, Silvio (1862–1930)- (not just the 'Worgl demurrage' experiment) 1) Gesell builds upon Henry George, noting that the "problem of rent" cannot be solved by "land reform".

2) "" ().

See also "Local scrip & Complementary currencies", "Greco, Thomas".

Gini coefficient- the world's standard measure of economic inequality, developed by Italian statistician Corrado Gini, with 0 being perfectly equal and 1 being perfectly unequal. See also "Inequality".

1) Economic "inequality measures" in general can "greatly overstate" it because they "leave out the whole fiscal side which is [in some countries] engaged [for more than a half-century now] in this big business of trying to equalized...[and] we also.... are putting huge fractions of the poor into extremely high marginal tax rate brackets, to the point where they have no incentive to work" (Kotlikoff, 2021, mn.127).

Gini coefficient of gross income inequality, latest year available

[OECD, 2017 (not factoring in government)]¹²⁵⁸

Glass-Steagall Act (of 1933)- (a.k.a. the *Banking Act of 1933*) "...separated *commercial* banking (taking deposits and [so-called] 'lending' [i.e. creating] TAB-bank credits) based money) and *investment* banking (advising, arranging, underwriting, and trading securities). Regulation sought to prevent conflicts of interest where the same institution was...(granting [TAB] credit) and investing (*using* credit)" (Das, 2011, 66). See also "Investment banks", "Chicago Plan(s)".

Glass-Steagall Act, 'repeal' (1999)- (the coup de grâce of 1980's-90's financial deregulations¹²⁵⁹, the *Gramm-Leach-Bliley Act* de jure elevated the 'Federal Reserve'¹²⁶⁰ over the Treasury in FHC regulatory matters, hence the traditional view that it effectively completed the gutting of America's 20thc regulatory regime) See also "Financial institution Holding Company (FHC)".

"Now, commercial banks would be allowed to merge with investment banks and insurance companies, creating financial [F.I.RE. sector] megafirms" (Taibbi, 2014). See also "F.I.RE. sector".

1) The *Financial Services Modernization Act of 1999*, more commonly know as the *Gramm–Leach–Bliley Act*, or simply 'the repeal' of the *Glass-Steagall Act* of 1933 (which had separated the banking and brokerage industries, in order "to prevent conflicts of interest within the finance sector that had...[contributed] to the Great Depression" [Taibbi, 2014]) did not take place in 1 or 2 Acts or 2-3 years.

¹²⁵⁸ The US GINI is "inching closer to the level of inequality observed in India (0.495)...[G]lobally, the Gini coefficient...ranges from lows of about 0.25 in Eastern European countries, to highs in the range of 0.5-0.6 in countries in southern Africa" (Horowitz, Igielnik, & Kochhar, Rakesh, 2020). See also "Ethnic (National) Identity", "Imperialism".

¹²⁵⁹ "Wall Street had spent much of that [1980's] era arguing that America's banks needed to become bigger and badder, in order to compete globally with the German and Japanese-style financial giants, which were supposedly about to swallow up all the world's banking business" (Taibbi, 2014). See also "Bank, universal"; "American System, the".

¹²⁶⁰ According to the law's co-author, it "did not deregulate anything. It [simply] established the Federal Reserve as a *superregulator*, overseeing all Financial Services Holding Companies [FHC's]. All activities of financial institutions continued to [also] be regulated on a functional basis by the regulators that had regulated those activities prior" to the law.- Phil Gramm, in Wall Street Journal, Feb. 20, 2009.

Prior to 'Gramm-Leach-Bliley', there were many relaxations of *Glass-Steagall*. Years earlier [?], commercial banks were deregulated to pursue investment banking; and before that banks were allowed to begin stock & insurance brokering. By c.1999, *insurance underwriting* was the last large financial sector industry that they were still not permitted to do. See also "American Insurance Group (AIG)".

1b) *Gramm-Leach* specifically repealed portions of the both *Bank Holding Company Act* and the *Glass-Steagall Act*, in order to allow banks, brokerages, and (particularly) insurance companies to merge, thus making the CitiCorp/Travelers Group Insurance merger fully legal. See also "Bair, Sheila (& Citibank)".

1c) Banks and securities firms could now conduct activities in each others respective fields in the pursuit of fair competition in the larger financial services sector-- and were now to be **overseen** more **by the** (so-called) 'Fed', than by the Treasury-OCC. See also "**Money, 3 (contemporary) Tiers of**", "Regulation".

2) **When they allowed the investment banks like Goldman Sachs to create TAB-bankmoney (so they wouldn't have to borrow it with corporate bonds), that was the tip of the iceberg.** See also "Criminalization of Banking, the".

2b) It wasn't apparently to hardly anyone at the time, that-- 15 years on-- big banks would be "buying whole industrial processes. They're buying oil that's still in the ground, the tankers that move it across the sea, the refineries that turn it into fuel, and the pipelines that bring it to your home. Then, just for kicks, they're also betting on the timing and efficiency of these same industrial processes in the financial [& derivatives] markets-- buying and selling oil stocks on the stock exchange, oil futures on the futures market, swaps on the swaps market, etc. Allowing one company to control the supply of crucial physical commodities, and also trade in the financial products that might be related to those markets, is an open invitation to commit mass manipulation. It's something akin to letting casino owners who take book on NFL games during the week also coach all the teams on Sundays. The situation has opened a Pandora's box of horrifying new corruption possibilities, but it's been hard for the public to notice...[and] regulators have struggled...even...dent...Wall Street's older, more familiar scams" (Taibbi, 2014). See also "Monopoly", "Derivatives", "Investment Banks", "Big 4 **Accounting** firms" [global **consultants**], "Regulation".

3) Obviously, such a radical expansion of both banking sector prerogatives and terrains would also serve to further the consolidation of the sector. See also "Banks", "Big 5 banks", "Financial Holding Company (FHC)".

3b) ...like a super-nova? See also "Criminalization of Banking, the", "Cycles", "Revolution".

3c) "extended [large] bank privilege to create **vertical trusts**.... This privilege proved remunerative by legalizing financial fraud...the privilege of being exempt from the regulations that had been put in place over many generations"- Michael Hudson (Dotson, 2009). See also "Financial Crisis", "Banking, end of".

Global warming- See "Geoengineering".

Globalism- (synon. 'global financialization' or 'globalization' from 'the global financial regime'; a.k.a. 'globalists'/'New World Order', 'Mr. Global', 'flagless imperialism', the 'international Anglophile network', the 'rudderless international market system', or 'Empire of Debt'; euph. 'transnational class politics'; i.e. 'expanding¹²⁶¹ the Greek chorus')

"[M]erchants have no country."- Thomas Jefferson, letter to Horatio Spafford, Mar. 17, 1814

"Nothing can make...[foreign] stockholders¹²⁶² our enemies, but breaking our contracts with them."

- Robert Morris, arguing for the Bank of North America, before the PA. Legislature, Dec. 1786 (Wilson, 1942, 19). See also "G2".

¹²⁶¹ "Travel is [basically] fatal to prejudice, bigotry, and narrow-mindedness, and many of our people need it sorely on these accounts. Broad, wholesome, charitable views of men and things cannot be acquired by vegetating in one little corner of the earth all one's lifetime."

- Mark Twain, conclusion to *The Innocents Abroad* (1869). See also "German (Industrial) Banking" [Quigley], "Twain, Mark" [travel].

¹²⁶² Morris rejoined that "half of the bank's stock...belonged to persons living outside of Philadelphia" (Wilson, 19). See also "Corporations (and corporate 'personhood')".

- 1) “is not globalization of justice, or democracy¹²⁶³... it is globalization of [banks’] money-creation and predatory finance” (Mosley, 2017); a.k.a. (40-50 years of) “elites [always] win.... [a]cross all countries” (Feygin & Leusder, 2020). See also “Lobbyists (monetary & fiscal)”, “Debt cycles”, “Eurodollars”.
- 1b) But the goods (& services), of course, follow the numbers. “Since the 1950’s, international trade in farm products has grown twice as fast as agricultural production itself...[Circa 1990,] 12% of the world’s agricultural goods...[were] produced for the international market” (Dziobek, et al, 1992, 124).
- 1c) “simply the inter-connected computers, run by the banksters around the world.... a [increasingly] silly idea run by people who think they can run P.T. Barnum’s scam on *everybody* [sic]” (Cook, 2021, mn.115-16). But is it going somewhere? See also “Bankmoney”, →“Monetization”, →“Statistics”, →“Taiwan”, →“World Par Economy (WPE)”.
- 2) is often *rationalized* as such: languages and nations contribute “to the existence of fragmented capital markets, making...investment difficult and sometimes more risky than necessary. As few of the economies (notable exceptions being China, India, and Japan) are large enough to provide economies of scale in information processing, capital [i.e. bank credit] market development will be difficult. Given this situation, it would appear more rational to work towards a common set of basic structures and standards so that the regional development of equity markets becomes possible, and each economy can see the benefits from contributing to this process” (United Nations, et al, 2002, 19). See also “Estates, 3” [.political theory].
- 3) “Part of the thing... [is that] they’re trying to aggregate everything so that they can go up against China and compete on a global scale.... it’s so important to the leadership to have control and dominance in space, because that’s part of the global game. And a decision was made in the ‘90’s to rebalance the global economy. So they’re trying to suck as much capital out of our economy and shift it into [investments in] the economies which [they think] are going to be growing faster, which they can do, because they now have the satellites and the dominance from space” (Fitts, 2015b, mn.16). And part of it is “serious transhumanism-- crazy kind of [mad scientist] stuff here. Whether it’s the war on children, or any of the financial things we’ve talked about.... [make no mistake] James Goldsmith [called it]...in 1994... ‘*This is the Establishment against the rest of society*’” (Fitts, 2019s, mn.14). See also “Estates, 3”.
- 4) “Historically, the processes of *globalization* have always been the result of active state policy and action, as opposed to the mere passive surrender of state sovereignty to [so-called] market forces... [which, in actuality] are governed by man-made rules. Globalized markets require the acceptance by local authorities of established rules of the dominant economy. *Currency* monopoly of course is the most fundamental trade restraint by one single dominant government” (Liu, 2007). See also “Currency’ or Money”.
- 5) basically standardizing “each country under the Anglo¹²⁶⁴ monetary system... They know the scale of what they are doing is so big that they can get away with it, because most people won’t be able to tell what they are doing...” (Vrabel, 2011, mn.36-37). Nonetheless, “This [global] system eventually overpowers governments-- just due to the fact that it must continue to [monetarily] grow.... [As were most *state* powers in the 19th century], countries have already been eliminated at the capital level, as the global bond market transcends nations, and is...stateless, and...controls... most of the nations.... Everything’s been offshored and out-sourced, and companies operate across multiple countries... [without] national identity” (Vrabel, 153-54). When there is resistance, the scale of military force can also

¹²⁶³ “Philosophy reveals to man his knowledge with the All. It shows him that he is a brother to the suns which dot the firmament; it lifts him from a taxpayer on a whirling atom to a citizen of the Cosmos. It teaches him that while physically bound to earth... there is nevertheless within him a spiritual power, a diviner Self, through which he is one with the symphony of the Whole. Ignorance of ignorance, then, is that self-satisfied state of unawareness in which man [or “human”, sans “being”], knowing nothing outside the limited area of his physical senses, bumptiously declares [that] there is nothing more to know! He who knows no life save the physical is merely ignorant; but he who declares physical life to be all-important and elevates it to the position of supreme reality-- such a one is ignorant of his own ignorance” (Hall, 1928, 204). See also “Dumb-downing”, “Philosophy”, “Intelligence Community (IC)”, “Design”.

¹²⁶⁴ The Anglo and American monetary systems-- increasingly similar since the post-Civil War era-- more-or-less merged in the mid-20th century. Calling it the ‘Anglo’ system as opposed to the ‘Anglo-American’ system is somewhat quaint.

make it obvious. The US-NATO “military has frankly been used to bring the US debt-money system into [the rest of] the world” (Poteat, 2014b). See also “Monetization”.

6) **Waves of A-A Globaliz.** ‘Lest we forget’... (1789; 1914; 1944; 1991)

7) The most recent wave of globalism (mid-1970’s-2010’s) was once famously articulated by the Rockefeller Trilateral Commission’s Zbigniew Brzezinski as: “[The] nation state as a fundamental unit of man’s organized life has ceased to be the principal creative force: International banks and multinational corporations are acting and planning in terms that are far in advance of the political concepts of the nation-state” (Brzezinski, 1970). See also “Corporations (and corporate ‘personhood’),” “Foundations”.
7b) The “period since the turn of the [21st] century... has been...one of very high capital mobility-- in some sense even greater than that which prevailed before 1913” (Eichengreen, 2019, 1). See also “Capital controls”.

7c) By c.2020 even classically “independent” Switzerland, a non-EU member, is “now... run by all these global forces. There is no Switzerland anymore, I’m afraid to say.... [A]ll these puppet governments in Europe issue the same slogans” (Meyer, 2021, mn.27). See also “Corporate Media Cartel”.

8) What this has meant in practical terms, over the past half-century, is that “[i]t is the poor in the rich countries who are going to be subsidizing the rich in the poor countries” (Goldsmith, 1994, mn.43).

9) Was the 2008 Crisis and 2015-16 election only perceived as a hiccup? Foreign holdings of US securities have more than doubled since then, and US holdings of foreign securities have nearly tripled (SIFMA, 2018, 66; 61). This is what the crippling of money language leaves us with... a lack of meaningful alternatives. See also “Orwell, George (1903-1950),” “Monetary reform”.

10) “I was like *This is allowed?*”- CDO short-seller Steve Eisman (Lewis, 2011, 143). Eisman often “asked stock market salesmen at Goldman Sachs, Morgan Stanley, and the others to bring over the bond people for a visit, [whereupon] ‘We always asked the same question... “Where are the rating agencies in all this? And I’d always get the same reaction. It was a physical reaction... a smirk” (Lewis, 2011, 170). See also “Eurodollars”, “Casino Capitalism”, “Credit rating agencies”, “Debt cycles”, “Monetary reform”.

Glorious Revolution, the (1688-91)- (the est. of parliament’s sovereignty and ‘constitutional monarchy’ in England ended a century of religious conflict; more lastingly it was also ‘debt money’s 1st great conquest) “History is more or less bunk.”¹²⁶⁵- Henry Ford, *Chicago Tribune*, May 25, 1916.

1) Most people interested in Monetary Reform can trace today’s various bankmoney systems back to 1694 and the formation of the privately-owned Bank of England. What is typically overlooked (due to historical confusion) is that England was then only 3 years removed from its only capital-R “Revolution”.

Was this Revolution simply an inevitable continuation of trends from the Puritans’-Merchants’ victory in the English Civil War (1642-51), or maybe something more like the Norman Conquest of 1066 (albeit without the big battle [until a year-and-a-half after the conquest-- the Battle of the Boyne, Ireland [in July 1690)]?...

2) ...Some of both, but the Dutch sources are unambiguous that it was a planned invasion, in response to both the threat of French belligerence and the opportunity of England being politically divided. “Although bloodshed in England was limited, the revolution was only secured in [royalist (& bankless)] Ireland and Scotland by force and with much loss of life” (Vallance, 2011); London was under a fairly heavy military occupation for 18 months, and Dutch troops were not withdrawn from the (formerly) royalist regions until 1691 (Israel, 1992). The main point has long been that the GR “created” a new political

¹²⁶⁵ “History really began when profound and secret deal-making began. History was invented as a means of covering that up”- Jon Rappoport (2015b). What was then a new and ‘glorious’ development was that the (hitherto subordinate) 2nd Estate had both caught the 1st Estate bus (of State), and also constitutionally enshrined the new state of affairs. Months prior to their coronation in April 1689, William and Mary heard the Declaration of Rights read to them, whereupon William is reported to have replied: ‘We thankfully accept what you have offered us and promise to rule according to law and be guided by Parliament’. Even half-a-century after Henry Ford and “World War One”, however, essentially nationalist propaganda (a.k.a. not even considering foreign [language] sources) continued to rule to roost (in History and historicism). “The basic [age-old] assumption ...[was] that everything important in British history can be explained in terms of [simply] British causes.... [But to grasp the reality], you need to read Dutch to study William III and his intervention... [But] the need to read Dutch was not even perceived [by the British historians guild (for ages)] and... part of the truth can [only] be glimpsed from a [international] range of British, French and other sources” (Israel, 1992). See also “History”, “Revolution”.

construct-- that of “constitutional monarchy in England, in which there was a...new [constitutional-‘written’] balance between [1st Estate] Crown and [2nd Estate] Parliament-- with Parliament [at first gradually, and then increasingly] supreme. Parliament [a.k.a. merchant-oligarchs-- on both sides, but primarily in Holland-- basically took advantage of a succession crisis, and] remodelled the [English] monarchy” (Israel, 1992); as it was not really possible in the 17thc to “end” it. See also “Adolescence of Mankind”.

2b) Intellectually-culturally, the GR was undoubtedly a sea change (and also the 1st of a series of such Revolutions [analogous to cultural puberty] that would transform minds from the late-17th to late-20th centuries. “Look beyond 1688 and [everywhere, including the American colonies] you will see radical, even if unintended, changes. Soon there was legal toleration of different kinds of Protestant belief and the end of state control of the press” (Mullan, 2006); but also greatly expanded trans-Atlantic slavery, after the Royal African Co’s “monopoly on the trade [was ended] in 1698” (Vallance, 2011). See also “Revolution”, “Slavery”, “Debt cycles” [.SeaChange].

2c) Nonetheless tightly-held/controlled ‘sea change’s are prone to unfold (shall we say) ‘slowly, but surely’. The key institution of the GR was (and still is) the Bank of England. The Treasury was allowed to accept the Bank’s notes for taxes from 1698, but for many years, BoE notes circulated only in greater London. The Bank’s original 15 year charter was renewed with double capitalization and note issuance in 1709, but the BoE was not granted the monopoly on British currency note issuance until 1844. See also “Bank of England”, “Legal Tender”.

3) The keystone of the Whig history of Britain (Vallance, 2011); “at a stroke¹²⁶⁶... the government was in the hands of rich men. Parliament had become the supreme power: it consisted of the titled nobility and rich men elected by other rich men” (Mosley, 2013); i.e. [bribing the government ‘since time immemorial’](#). See also “Aristocracy (& nobility) [.violence]”, → “Parties, political” [.UK]. → “Whig” [.conspiracy].

4) When news of the GR reached the American colonies, in “Boston, the population rebelled and imprisoned [the authoritarian ‘Governor of New England’, Sir Edmund] Andros [in April 1689]... [A] new charter, [united] Massachusetts and Plymouth...in 1691... [and] other colonies that had come under the Dominion of New England [1686-89] quickly reinstalled...[largely ‘self-governing’] previous governments” (U.S. Dept. of the Army, 2021). See also “Revolution”.

5) Back in England, the *Bill of Rights and Toleration Act* of 1689 “affirmed freedom of worship for [all] Christians and enforced [statutory] limits on the Crown...[while] John Locke’s *Second Treatise on Government* (1690) set forth a theory of government based not on divine right, but on contract, and contended that the people, endowed with *natural rights* of life, liberty and property, had the *right to rebel* when governments violated these natural rights” (U.S. Dept. of the Army, 2021). See also “Natural law”.

6) But is moving from (the 1st Estate/Crown-defined) “common law” to (the 2nd Estate/Oligarchy-defined) “natural law”’s such a (positive-) good development? “As if the maddest of believers in the divine right of kings had ever fashioned in imagination a tyranny one-hundredth part as strong as that which was clamped upon us by the Revolution of 1688!” (Hollis, 1937, 34). See also “Central Intelligence Agency” [.% of the land], “Women”.

6b) When “...a corporation lends money at interest and [also via state-‘backing’] without risk, then re-lends the repaid loan and so on, never distributing more than a trifle of its profits either as wages or dividends, then, however small its original capital, however moderate its rate of interest, it is but a simple proposition in mathematics that in course of time it must necessarily become the possessor of the entire wealth of the country” (Hollis, 1934, 33), or world. See also “Compound interest”, “Debt money”, “Inequality”, “Kakistocracy”.

See also “History”, “Eras of (monetary) History”, “Bank of England”, “Estates, 3”, App.C: “1-2-3”.

¹²⁶⁶ It wasn’t actually ‘at a stroke’ that the English state worked out a new (and somewhat-codified) constitution. Things developed piecemeal over the next quarter-century: “The next 25 years saw a refashioning of the state that, by 1714, developed into a structure different from what anyone had anticipated in 1689” (Williams, 2017). See also App.C: “1-2-3”.

[There are always 2 sides to a so-called 'modern' (from c.1690) history-- that which the winners/publishers' wish to communicate, and (usually some time later) the actual money trail of what was transpiring.]

Gold market, the- 1) "a tiny market. If you don't count jewelry you're talking about a 3 trillion dollar market" (Fitts, 2019f, mn.13).

2) "The price of gold [however] is not [really] determined in 'the gold market'. It is [mostly] determined in the paper/futures market, where the big banks of... the Federal Reserve-- the bullion banks-- can create all the paper gold [that] they want, in the form of *shorts*; and they can *dump* these shorts in the market and drive down the price. And then they can go back in-- after they've driven down the price-- and cover their shorts, and make a lot of money.... These are naked shorts-- uncovered¹²⁶⁷ shorts. You can't do that in the stock market" (Roberts, 2018c, mn.32-33).

3) In summary, a hoax since 1694, and just the tip of the iceberg. There never was enough silver or gold 'back' the paper. It's highly regulated and set by the futures market... not at all a 'free' market. See also "Options and Futures".

Gold Standards/bullionism- (fixed redemption of modern/ fiat currency for real/physical gold; anything other than that is hot air from the Mark Twain era; a.k.a. [old school] plutocracy, deflation; i.e. international money in the pre-commodity-index days [see also "Graham, Benjamin"])

"[O]ne ox is not the same thing as another ox, the way [that] one piece of metal *can be* the same as another" (Montesquieu, 1748). See also "Eras of (Monetary) History".

1) "Gold-only money systems don't work.¹²⁶⁸ There is not a single example in the last 2000 years where it has worked for the common man and the middle class.... Yes, gold-only money systems can [in theory]¹²⁶⁹ impose spending discipline on the government; but at what cost? The cost of the very rich controlling the politics of the nation" (Still, 2010, mn.5). 'He who has the gold makes the rules'? See also "Del Mar, Alexander".

2) Although gold is a somewhat higher-minded (less violent) version of primitive (i.e. single-) commodity money, this ironic reversal of the traditional Golden Rule dates as far back as the Bronze Age-- and especially to the ensuing Iron Age-- when the most useful technology (the most useful/hardest metal) was, by happenstance, also the most commonly and easily corroded. What a bummer!

¹²⁶⁷ "Uncovered" or "naked" refers to selling shares without even borrowing them first, because one may legally buy or borrow the shares at any time prior to the contracted *delivery* date. Hence 'naked short selling' can reduce interest expenses, in addition to being a fast-acting tool (in driving something down).

¹²⁶⁸ The "Bretton-Woods and free floating [currency] eras generally exhibited lower...volatility than [did] the gold standard period" (Jorda, Schularick, & Taylor, 2016b, 27). So why do people keep falling for it? Stephen Zarlenga explains: "If you don't separate money [public currency] from [private] wealth, if you define money as wealth, then the wealthy are going to control not only their own money, they are going to control the monetary system-- which belongs under societal control. It should not be controlled by particular interest groups, or cliques, or so-called elites. So, the mistake is a psychological one. They are confusing their [private] investments with [public] money" (Zarlenga, 2007). See also "Credit money".

¹²⁶⁹ In actual *practice*, did the "gold and silver-backed monetary system" of the first third of the 20th century "prevent the hyper-inflation of the roaring '20's...[or] the crushing Great Depression of the...terrible 1930's? No!.... There are a million ways to print more money than there is [supposed to be] gold and silver" (Still, 2019e, mn.12).

[‘What a curse. Is there anything in the commandery that you hate more than brittle rust?’]

3) Obviously, of course, nature/providence had already provided a more-or-less reasonable solution to this ugly-crude rust issue... Why it’s very molecular metal **opposite--** the ancient world’s *least* corrodible metal (gold)-- was generally at least as plentiful, and, although useless as a hard military weapon, could (everyone agreed)¹²⁷⁰ serve another vital role (as iron’s polar equivalent)-- becoming the new king of physical/commodity money, while at the same time consolidating its role as the world’s leading *international* [a.k.a. reserve] currency (as international trade and empires increased with the advent of iron weapons). Did those who refused to accept gold (and/or its sidekick queen, silver) risk the eventual/inevitable wrath of its (more recently discovered) opposite-- smelted, super-strong iron? This is not a small matter, as the larger Iron Age¹²⁷¹ was also, not incidentally, the setting for the “Axial Age” (or philosophical hardening/codifying) of ‘Middle Eastern’, ‘Eastern’, and ‘Western’ civilizations. See also “Eras of (monetary) History”.

[‘Axial’ dichotomy: gold-peace ; iron-war (‘with a flick of the wrist?’)] See also “Hegelian dialectic’.

4) During the centuries-long decline of the Roman Empire-- and especially after its mid-1st millennium fall-- “fiat”/token-metal coins (based upon the public trust) lost ground to full-bodied precious metal coins, until there was **hardly any bullion in Europe worth coining, armies went unpaid**, and the coinage-based civilization broke down. Gold coins would not be minted in western Europe for the next 7 centuries (6th-12th) of civilizational retardation. With gold coinages’ unexpected revival after the duplicitous 4th Crusade sacked Byzantium, gold fever (or fetish) has been a strain of Western civilization ever since. In the 13th-14th centuries, gold coins symbolized the ruler’s divine providence or *sovereignty*-- that no man or emperor stood between him and highest class of metal coinage-kingship on earth, the ultimate and unsurpassed prestige-legitimacy symbol.

5) This power, particularly after the discovery of the New World, was widely abused. “Throughout the 17th century, for instance, [French kings like] Louis the 14th had constantly fiddled the currency in order to pay for his wars. So there [developed] a real reform movement.... In...the late 17th and early 18th century, [mostly English] theorists, including John Locke...argued that [money] simply being good for fulfilling your obligations to *the state* was not actually a valid [physical] basis on which to issue [all of an economy’s] money” (Spang, 2017, mn.24; 23). This was “the *beginning* of the idea that gold...[should be mostly just] a standard...that cannot be effected by the monarch¹²⁷²...[Plus arch-rival] France didn’t have much in the way of gold reserves” (Spang, mn.24); nor a navy to match the English at securing &

¹²⁷⁰ It wasn’t just durability, malleability, and its lack of other useful functions. Gold was also often “the easiest metal for primitive man to obtain... present in most mountain ranges... [and usually carried downstream] river beds.... Copper would have been the second easiest to obtain...[with] silver...[requiring] the most developed technology of the three” non-oxidizing options (Zarlenga, 2002, 17). “Unlike the organic [temple] donations which had to be consumed, the gold would remain. Over time, a large proportion of the existing gold...[accumulated] in the temples” (Ibid), essentially as rainy day/contingency fund, or ‘reserves’, at least until they could convince the state to directly ‘monetize’ it. See also “State capture”, “Estates, 3”.

¹²⁷¹ Although “the” Iron Age construct is so poorly and inconsistently defined-- in terms of its end dates-- that the term can be something of a misnomer, the so-called “Late Iron Age” in most of Eurasia generally ran through at least the first half of the 1st millennium A.D.

¹²⁷² And particularly an *absolutist monarch*, as England had just gone through a Civil War (1642-51) and then another Revolution of sorts (1688-94) in order to supersede that institution with Parliamentary [sometimes a.k.a. ‘City of London’] sovereignty over the national purse strings. See also “Glorious Revolution, the”, “City (of London), the”.

controlling foreign gold stores. He who has the gold makes the rules? See also "Money, 3 Types of", "Globalism".

6) Locke's views won favor in Parliament in the 1690's; and by the 2nd decade of the 18th century, the ancient bullion-*only* (unanchored) monetary operating system had critics on both sides of the English Channel: "Nothing can be more ridiculous than to destroy an innumerable number of men, to take out of the bowels of the earth gold and silver: those metals in themselves absolutely useless, which are only riches because they have been fixed upon for the marks of riches" (Montesquieu, 1721, 250). See also "[Corrosion-Cancer-Debt](#)".

7) Master of the Mint Isaac Newton (r.1699-1727) regularly reduced the silver content of coinage, because at the end of the 17th century, "gold was overvalued at the mint... [and, after 1717] full-bodied silver coins disappeared from circulation. That England had effectively gone onto...[a] gold standard was...[not really] acknowledged...[until] 1774, when silver's legal-tender status for transactions in excess of 25 [pounds] was abolished, and [further] in 1821¹²⁷³ when its legal-tender status for small transaction was revoked" (Eichengreen, 2019, 10).

7b) The California Gold Rush followed by the that of Victoria in 1851 "brought about a tenfold increase in in world gold production. See also "Counterfeiting" [decline]. The resultant monetization encouraged the adoption of steam power. "Why...did a procession of European countries pick the [1870's](#) to adopt the [new] gold standard?... Industrialization rendered the one country already on gold, Great Britain, [to be] the world's leading economic power and main source of finance..." which, in addition to steam technology, encouraged others to follow suit-- most notably Germany in 1871-- then the #2 industrial power. By the final years of the century Russia, Japan, and (even traditionally-silver) India had joined, leaving only China and "a few Central American countries" on silver by c.1900-- even though British prices had fallen by 18% from 1873-79, and then 19% in 1886, when silver was (fully) demonetized¹²⁷⁴ (Eichengreen, 2019, 16).

7c) Restoration in Europe "was widely expected after World War 1... [but it] never made a full comeback ...[because the UK] overvalued the pound... [and] France returned at a rate that overvalued the franc In principle, France should have allowed the resulting inflow of gold to expand its money supply, increase ...price level[s], and gradually...[moderate] its balance-of-payments surplus, but...[instead] preferred to 'sterilize' the inflow. The...[US] also accumulated large amounts of gold during this period that it also sterilized. The result was considerable pressure on the rest of the world to follow contradictory monetary policies. The Great Depression, brought on in some measure by the policies of France and the...[US], proved to be the deathbed of [any non-pseudo' version of] the gold standard" (Rockoff, 2015, 35).

8) Meanwhile in the USA, in 1834 Congress effectively "displaced" silver coinage with gold by increasing the old *Coinage Act of 1792* ratio, from (its traditional) 15:1 to 16:1 (Eichengreen, 2019, 11). After the mid-century Gold Rushes, America famously "omitted reference to silver in the *Coinage Act of 1873*...[and after] the greenback rose to par and convertibility [for gold] in [1879](#), the...[US] was effectively on gold" (Eichengreen, 2019, 16).

8b) "" (Zarlenga, 2002,).

8c) 1920? "After World War 2, the [so-called] Bretton Woods system provided a [shadowing] role for gold, but the [US] dollar was [obviously] the true anchor of the system. Thus the Federal Reserve [System] replaced the gold mines of the [British] Rand as the source of the world's monetary base"¹²⁷⁵ (Rockoff, 2015, 35). See also "Marshall Plan, the", "Base money".

¹²⁷³ From the 1780's to the 'Great Recoinage' of 1816, silver coins in Britain "were likely to have lost virtually all trace of design details... [and by then] the... war with France...[basically] ended...the Bank of England's needing to prepare for the resumption of redeeming its [paper] notes in gold" (Clancy, 1999).

¹²⁷⁴ "Post-1850 silver discoveries [had] focused attention on... silver coinage and inflation... [until] the 1880's" (Eichengreen, 17).

¹²⁷⁵ And the FRS's "performance in the 1960s and 1970s would not compare favorably with that of the gold mines of the Rand in the 1890s and 1900s" (Rockoff, 2015, 35). See also "Eurodollars", "Super Imperialism".

9) In modern times, gold is merely a “speculative asset, except during societal collapse” (Keen, 2016h). Nonetheless, for those who must know, the US “Treasury’s [‘public’] gold reserves are... [in theory, still]¹²⁷⁶ kept at Fort Knox ... [whereas] the *Federal Reserve*’s gold reserves, and those of more than 100 other central banks, governments, and organizations, are stored in vaults under the Federal Reserve building in...Manhattan... At roughly 5,000 metric tons... these combined reserves represent, according to the Fed’s own website, somewhere between 1/5th and one-quarter of all the gold that has even been taken from the earth” (Graeber, 2012, 362-63). See also “Forex”.

9) The USA’s **de facto gold standard of the last quarter of the 19th century, and the so-called (de jure) “gold standard” of the first third of the 20th**,¹²⁷⁷ were in reality a fractional-reserve fiat fraud (the same bankmoney wine with a new austerity label). Tying currency to its ‘intrinsic value’ is a myth that has never kept the participating currencies stable. Most recently, in the first third of the 20th century, the so-called Gold Standard was a deflationary, depressive, anachronism, playing into the hands of the international banker consolidationists. See also “Inflation/Deflation”.

9b) In other words, the “effect [of gold’s inherent scarcity, vis-à-vis national currencies, was simply] ‘to load the dice in favor of the bear [i.e. bond market] speculator’... and [the chronic] instability of the international monetary system... [was] the consequence” (Mehrling, 2007). See also “Bonds, government”, → “Reserve currency”, → “FASAB-56”.

10) State-level chicanery, monetary fraud & bamboozlement have been common in all eras of monetary history, and thus gold can always be used for settlements (particularly by central banks). Nonetheless, we are not headed back to a gold redemption regime. The Swiss and Chinese convert fiat into gold right in their banks. But this is just common ordinary gold sales, that float with international gold prices, not redemption. CBs have been toying with phrases like ‘gold-backed currencies’ for years, but it is just verbal fodder for the Austrians. See also “Special Drawing Rights (SDR’s)”.

11) The US constitution does not require gold and silver coins, as Ron Paul has claimed for years. Why does gold fetish persist? a) Political science is far from perfectly honest; and b) gold-backed rhetoric is like putting half-dressed women on cars for sale. Gold emits a special pheromone that drives people mad (with escapism), blinding them to the historical reality¹²⁷⁸ of it being direct government welfare for the creditor class. That is because it is a speculative asset (tied in with a lot of propaganda); not a standard.¹²⁷⁹ See also “Austrian School”, “Money”, “Gold stores”, “Cryptocurrencies and Stablecoins”.

Gold (bullion) stores- “Wealth [on Earth] is a flow, not a store... I can conceive no nation so barbaric as to regard gold as a store of value.¹²⁸⁰ Demonetise it and where is its value? Not a gold mine would be at work on the morrow” (Soddy, 1921). See also “Wealth”.

1) The Big Banks’ red-chips? “Central banks have long held their gold and other monetary reserves in the United States and London. Back in 1945 this seemed reasonable, because the New York Federal Reserve Bank (in whose basement foreign central bank gold was kept) was militarily safe, and because the London Gold Pool was the vehicle by which the US Treasury kept the dollar ‘as good as gold’ [from c.1945-c.1971] at \$35 an ounce. [Non-gold foreign] reserves... were kept in the form of US Treasury securities, to be bought and sold on the New York and London foreign-exchange markets, [in order] to stabilize exchange rates” (Hudson, 2019). See also “Forex”, “Eurodollars”, “UKUSA Agreement”.

2) In 2017, (at around the same timeframe that the Bundesbank officially admitted that bank loans create new money, and) 38 years after the US government seized all Iranian assets in the US, “Germany finally

¹²⁷⁶ According to researchers such as Bill Still, the Ft. Knox gold stores have long been diminished, to nearly nothing (Still, 2012). See also “Secrecy, cult of”.

¹²⁷⁷ Yanis Varoufakis (2018, mn.17) calls the British gold standard that ended in 1931 “the euro of the time.”

¹²⁷⁸ Another myth is that is “the gold standard” somehow reduced taxes and (see also) “Big Government”. It is simply the historical record, however, that taxation “cures were [through most of the 20thc] believed necessary in order to go back on the old gold parity” (Quigley, 1966, 285). See also “Market fundamentalism”, “Parity pricing (for the primary sector)”.

¹²⁷⁹ ...for anything other than the “fantasy of being able to anchor [no naval power/‘globalist’ pun intended] value in something outside social interaction” (Spang, 2017, mn.26).

¹²⁸⁰ See also “Mercantilism” [robbing bullion], “Smith, Adam (1723-1790)” [neo-mercantilism].

got up the courage to ask that some of its gold be flown back to Germany. US officials pretended to feel shocked at the insult that it might do to a civilized Christian country what it had done to Iran, and Germany agreed to slow down the transfer.... [O]nly recently...[have] foreign countries [begun] to feel queasy about leaving their gold holdings in the United States” (Hudson, 2019).

3) In January 2019, the Bank of England, under pressure from US neocons in the Trump Administration, froze the government of Venezuela’s \$1.2 billion in gold holdings there.

3b) In due course, . See also “Russia” [RCB].

4) Gold stores Updates: 6/22- <https://wallstreetonparade.com/2022/06/report-jpmorgan-chase-and-citibank-hold-90-percent-of-all-gold-and-other-precious-metals-derivatives-held-by-all-u-s-banks/> [JPMC-Citi-90%ofGold derivatives].

Goldsmith’s Tale, the- (of how ‘bankmoney’ came to be)

1) “It started¹²⁸¹ with [medieval and late medieval] goldsmiths [and accelerated (particularly) in the 16thc, after the discovery and popularization of New World bullion]. As early bankers, they initially provided safekeeping services, making a profit from vault storage fees for gold and coins deposited with them. People would redeem their ‘deposit receipts’ whenever they needed gold or coins to purchase something, and physically take the gold or coins to the seller who, in turn, would deposit them for safekeeping, often with the same banker. Everyone soon found that it was a lot easier simply to use the deposit receipts directly as a means of payment. These [de facto ‘goldsmith’] *receipts*, which [later] became known as [de jure ‘bank’] *notes*, were acceptable as money, since whoever held them could [supposedly] go to the banker and exchange them for metallic money...[B]ankers discovered that they could make loans merely by giving their promises to pay, or bank notes, to borrowers. In this way, banks began to create [new] money...[because more] notes could be issued than the gold and coin on hand...[since] only a portion of the notes outstanding would be presented for payment at any one time...” (Federal Reserve Bank of Chicago, 1992, 3). See also “Bankmoney”, “Glorious Revolution, the”.

Google- (the world’s largest company in terms of [2016] market value, Google-Alphabet was est. in 1998, at DARPA-Stanford’s computer science dept., by 2 PhD students and Silicon Valley honcho Andy Bechtolsheim [see Ahmed, 2015])

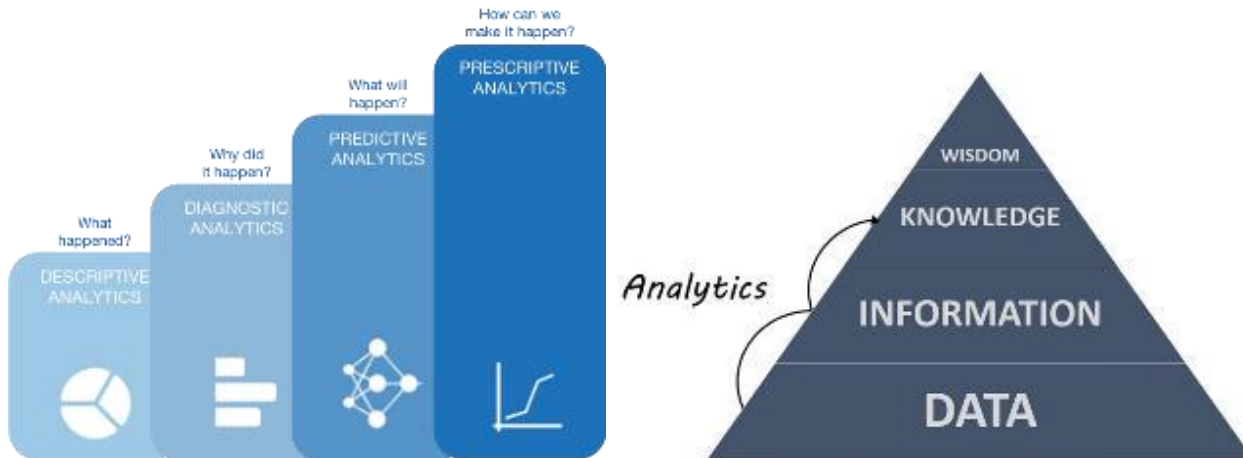

1) Less than two decades later, it was becoming obvious that “big tech media companies, and Google in particular, [were] engaged in political censorship... [even though] Google enjoys a special immunity from liability under section 230 of the *Communications Decency Act*. The predicate for that immunity was that Google and other Big Tech media companies would be neutral public forums. Does Google consider itself a *neutral public forum*?”¹²⁸²

- US Senator Ted Cruz, Commerce Committee hearings, questioning Google executives & functionaries, June 25, 2019.

2) From 2002 (the same year that William Binney was s.w.a.t.-teamed), “began using ads as a primary source of income, in the new financial universe that they were creating... an economy built on mining and ultimately controlling the raw materials of fixed human behaviors” (Boyd, 2020, mn.105); a.k.a. “predictive programi...analytics (modelling)”. See also “Advertising”, “Social media”, “National Security Agency (NSA)”.

¹²⁸¹ Academics concur that the great 13th century banks “which appeared in Italy... are generally believed to have evolved from money-changing operations... [and] the money-changers’ guild” (Dotson, 2004, 90); perhaps first (documented at least) in Genoa, where *bancherri* were accepting deposits and making [then full reserve] loans... [by] the last quarter of the 12th century” (Ibid).

¹²⁸² Google exec Maggie Stanphill dutifully answered: “Yes, it does.” Later in the hearing, Cruz cited “public records” showing that “in 2016”, a year in which Alphabet was the world’s largest company (in terms of market capitalization), “Google employees gave to the Hillary Clinton campaign 1.315 million dollars... [whereas candidate Trump got] Zero... not a penny.”

[Big Brother's Hierarchy of Needs. See also "Orwell, George" (the lower 3), "Montesquieu" ('wisdom')]

3) subsequently, however, bet the ranch on silicon, as opposed to *graphene*, and is, hence, already in the process of "[h]itting the energy wall and the light-speed barrier, the chip's architecture will necessarily fragment into separate modules and asynchronous and more parallel structures.... [C]arbon...is the original neural network.... In the future, computers will pursue the energy ergonomics of brains, rather than the megawattage of Big Blue or even the giant air-conditioned expanses of data centers.... That means that the AI movement, far from replacing human [beings] brains, is going to find itself imitating them.... It's not agglomerated in a few air-conditioned nodes, but dispersed far and wide, interconnected by myriad sensory and media channels" (Gilder, 2018, 71-72).

4) Google's mission-values assumptions are from the (collectivistic) 20th century; not the 21st. "Pushing any logical or mathematical argument to extremes... scientists impel it off the cliffs of Godelian incompleteness" (Gilder, 2018). See also "Mythomatics".

5) If there was one lesson to be learned from the 20th century (apart from "racism"), it is that "Centralization is not safe.¹²⁸³ Secure positions are *decentralized* ones, as human minds and DNA code are decentralized. Darwin's mistakes, and Google's today, is to imagine that identity is a [atheistic] blend rather than a [designed] code... that human beings are random outcomes" (Gilder, 46). See also "Human beings".

6) If "the truth can be found only by the centralized processing of all the data in the world, then all the data in the world must, by...[false] moral order...be gathered into one fold with one sheppard. Google may talk a good game about privacy, but private data are the mortal enemy of its system [assumptions] of the world" (Gilder, 2018, 22).

7) Google's predictive programming galaxy¹²⁸⁴ is based upon the "Markovian techniques" of Russian polymath Andrey Markov (1856–1922), "which pervade the science of information theory [and] are behind the dominant advances of the Google era, from big data and cloud computing, to speech recognition and machine learning" (Gilder, 2018, 76). Basically, the "Markovian [predictive] world of random wanderings among the states is governed by the probability weights.... All you need is a record of states and the probabilities between them. All else can be assumed to be random.... The [object's] history is assumed to be summed up by the current state and not by any past history of the chain... [which] greatly simplifies the computational process... [from] needing to factor in intentionality or plan" (Gilder, 78-79). See also "Dumb-downing".

¹²⁸³ And today, "[u]nder Google's guidance, the Internet is not only full of unwanted ads, but [also] fraught with bots and malware [as opposed to privacy]. Instead of putting power in the hands of individuals, it has become [like an aneurism] a porous cloud where all the money and power rise to the top. On a deeper level, the world [assumptions] of Google-- its interfaces, its images, its videos, [and above all] its philosophy-- is 2D.... And the Internet is cracking under the weight of this ideology" (Friedman, 2018, xv). See also "'New World Order'" [hacked].

¹²⁸⁴ The "Google regime of aggregate & advertise is [also] drastically reducing the income of musicians, journalists, and other [actual] producers of the content that Google['s algorithms] seek to monetize with ads and search" (Gilder, 2018, 183). See also "Parasitism".

8) Accordingly, one should not be surprised by now to learn that “the most impressive Markovian warriors and Siren Servers¹²⁸⁵ are not at Amazon, or Google, or Facebook.... The real Markovian [Skynet] masters of the universe run a [hedge fund] venture in...Long Island” (Gilder, 2018, 80); Renaissance Technologies began there “in 1978 as ‘Monometrics’, and was mostly devoted to trading currencies with...hidden Markov modeling techniques [which were then] still in formation at [the Inst. for Defense (i.e. guiding missiles/rockets) Analyses]” (Gilder, 80). The unique selling point was simple: with “clusters of supercomputers running at sufficient velocity, you could beat every short-term market [that] you could access and measure” (81); in other words, ‘measure it-own it’. Obviously such a basic strategy “comes in many costumes... Some run 1] financial schemes, such as high-frequency trading, and other run 2] insurance companies. Some run 3] elections, and other run 4] giant online stores. Some run 5] social network [new media] or search services, while others run 6] national intelligence services. The differences [between all these uses of the strategy] are only skin deep” (Gilder, 2018, 83). See also “Technocracy”, “Feudalism, neo”, “Stock buy-backs”.

8) “This very lack of concern with security, however, will be Google’s undoing.... Some thousands of companies you’ve never heard of are investing billions right now in that effort... whose most powerful architectural imperative...[is the] security of transactions as a [basic] property... rather than an afterthought” (Gilder, 43).

[It’s not just billiard balls-random-gravity forces¹²⁸⁶... except in dystopias.]¹²⁸⁷

9) ‘Alex Jones’ called it half a decade earlier: ‘Google is none other than [the US/out-first version of] Skynet’¹²⁸⁸ (<https://www.youtube.com/watch?v=dHVtUw5wToA> , mn.3). See also “Jones, Alex”. See also “Big 5 (on S&P 500)”, “Oligarchy, American”, Intelligence Community (IC)”, “Design”.

¹²⁸⁵ Gilder has adopted Jaron (“virtual reality”) Lanier’s term: “‘Siren Servers are usually gigantic facilities, located in obscure places where they have their own power plants and some special hookup to nature, such as a remote river that allows them to cool a fantastic amount of waste heat.... A Siren Server... outcomputes everyone else... and seems to grant its owners a guaranteed path to success at first’ -- thus its siren appeal. ‘But the benefits are illusory... and lead to a grand failure before long’” (Gilder, 2018, 82-83). Hence, to employ another classic metaphor, the Markov or Skynet world of super number-crunching presents us, inescapably, with both the winning “secret of Midas”, and the losing “lesson” of Midas. [‘Midas accent’: <https://www.youtube.com/watch?v=UsE5mysfZsY> (fry)] Or, as Gilder calls it, the “Markovian ride” (Gilder, 86).

¹²⁸⁶ The (level 1/base) “Markovian world of random wanderings among the states...” (Gilder, 78). See also “Homo economicus”, “Neoclassical Economics”, “Clark, John Bates (1847-1938)”.

Government, Big (growth of)- see “Big Government (growth of)”.

“Government-created” money- (a.k.a. ‘deficit spending’) 1) the preferred MMT/Post-Keynesian term for public-sector spending (fiscal stimulus w/o resorting to banks; complementary to bank money), regardless of whether or not such “new” money comes into existence through the usual process of selling bonds (issuing debt). According to Steve Keen, there are “two sources of money in a Capitalist economy. The banks can create money by extending loans. The [also] government creates money by running a deficit... back in the early ‘60’s, the ratio of government-created money to the overall money supply was about 15%. It’s fallen so far [now] that we’ve got an entirely debt-based system, which has driven [too much] speculation... [and] private debt” (Keen, 2011d, mn.12).

2) Nonetheless for sovereign governments to bypass the banks & bonds is easy (Keen, 2020c, mn.25). See also “Monetary financing” [direct], “Reaganomics” [deficit spending], “Sovereign money”.

Government, Hidden- (synon. ‘secret government’) 1) The ‘Hidden Government’ is Steve Pieczenik’s catch-all term (2017, mn.1) for unambiguously encompassing both the (pre-World War Two) bureaucratic “Deep State”, and the (post-World War Two) Intelligence Community-based “Shadow Government”, which were typically conflated prior to 2017. “The control that’s really there is the CIA [for CFR-CMC “buffoons”], the NRO, and NSA, and the fact that we [mil. intel., etc.] are...[no longer] in the forefront of cyber security” (Pieczenik, 2018c, mn.241). See also “Intelligence Community (IC)”.

2) a chronological continuum:

<u>19thc-pre-Civil War</u>	<u>1870’s-80’s</u>	<u>1880’s-1940’s</u>	<u>1940’s-90’s</u>	<u>21stc Transition</u>
‘spoils system’ patronage era	war econ. industrializ. Civil Service-‘Deep State’	Fin de Siecle/Great War ‘Roths.&Rockef.’/agents	Post-war Empire & Global I.C.	Knowledge Age Shadow Gov./DeepSt. ¹²⁹²

See also “United States”, “Deep State”, “Intelligence Community (IC)”, “Shadow Government”, “Glorious Revolution, the”, “Secrecy, Cult of”.

[In a simplified version, the Executive branch of the US government may be seen as 3) ‘wheels within wheels’: 1st) the day-to-day Bureaucracy, 2nd) the (post-Civil War) Deep State bureaucracy of key individuals (to keep the money/budgets flowing), and 3rd) the (post-World War Two) Shadow Government of select individuals within the Intelligence Community. The pedals are only operational for ‘strong presidents’, such as LBJ, who knew how to initiate churn in the Deep State. In 2016-17, open conflict surfaced for the first time between Deep State and Shadow Government.

¹²⁹² The Intelligence Community-based ‘Shadow Gov’t’ says no to traditional “Deep State” keep-it-flowing venality, whether or not “the swamp” in D.C. is sufficiently drained to the satisfaction of the citizenry-- which would be for the first time ever.

See also “Military-Industrial-Complex”, “Timarchy”.

Government money- see “National Money”, “Money”, “Coined money”, “Sovereign money”.

Government, role of- (primarily: a) ‘territorial integrity’ [vis-à-vis external threat], and b) straight-forward ‘weights & measures’ [vis-à-vis internal threat]¹²⁹³; secondarily: courts/justice system & economic safety)

1) In the 21st century now... Are they moving people off of the land or not?; and

Are they publishing useful & adequate statistics or not?

2) In terms of money, most currencies (our primary *measure of value*) have achieved credibility and circulation by 2 public mechanisms, *government taxing* in that currency, and *government spending* in that currency. Private money supplies (like gold, silver & their certificates from bullion banks, local & complementary currencies, and other credit systems [such as ‘bitcoin’]) have usually coexisted as supplements, but could never begin to compete in volume with national money, nor fill the total need for money, since they have no tax stream available nor large-scale means to be spent or lent into existence. ‘Intrinsic value’ is not a valid qualification for stable public currencies, which are supposed to circulate, not be hoarded. See also “Accounting” (de facto governance), “Currency”.

3) Governments today, however, don’t seem to “understand the monetary [currency] system” that they are allegedly in control of, and are “actually encouraging private debt” accumulation (Keen, 2016e, mn.42). See also “Economics”, “Neoclassical Economics”, “Academia”, “Federal Reserve audit”.

4) The “whole skill of [traditional, small] government... consists in the continual and judicious comparison of the sacrifice about to be incurred, with the expected benefit to the community” (Say, 1803, III.VI.15); not in public relations to (supposedly) obscure its roots in *gubernare mentis* (mind control)-- the age-old toxic mix of terror and lies from which 14 or so generations of Americans have attempted to escape. See also “Mind control”, “Keynesianism” [.all]; Still, 2013 (mn.5-6).

4b) The lies and infringements¹²⁹⁴ accumulate gradually, yet also (where vigilance is short) inexorably, because it is in the institutional self-interest. “To the extent that government power to revoke or aggregate rights is limited, the market for services of individuals in government is [also] limited” (Walters, 1982, 12). Chasing symptoms expands public sector budgets more reliably than actually resolving problems. See also “National Identity/Nationalism”, “National Identity Cycle”, “Integrity”

5) The governments sector has obviously played a significant role (besides just blowing things up and marshalling people around) in the economic productivity-progress of the past century. “When you go back to the previous period, from the 1830’s...to the beginning of the 2nd World War... government was no...more than 10% and often about 5% of GDP. To me, that’s like having a house [economy] with no air-conditioning [service]-- the temperature’s gonna be hot if it’s hot outside, and cold if it’s cold outside, and you gotta live with the swings... The air-conditioning system is there to attenuate” (Keen, 2020, mn.47). See also “Bankmoney”, “History”.

5b) It has long been observed that there usually manifests an inverse relationship between how much the public sector does and how well they do it. See also “Communism”, “Sovereignty”.

5c) As Hyman Minsky might say, national-imperial success does not exactly keep institutional corruption at bay, but rather, invites it. As recently as the mid-20thc, ‘underdog’ Americans had a rather popular (attitudinal) proverb: “the bigger they are, the harder they fall”. See also “Imperialism, American”, “Politics”.

6) Nonetheless, the underlying dynamic is that “the legal code, or rather the powers it conveys, is not scarce; it can be applied to different claims and [can] be transposed from one asset to another.... ”

¹²⁹³ As “a minimum morality, economics must surely insist on a system of honest weights & measures...yet the current monetary system with its fluctuations in purchasing power subverts honest measure and gives a false accounting of the physical realities underlying the production and distribution of wealth” (Daly, 1980). See also “Economics”, →“Primary Sector Economics”.

¹²⁹⁴ “[M]arketing campaigns designed to create the crises needed for government [or Departmental] expansion”; one ruse or stratagem for “predatory profits” after another (Walters, 12). See also “COVID”, “Corporations (and corporate ‘personhood’)”.

(Pistor, 2020b); whether we deny it or not. In other words, the law is where (propaganda aside) most of the fountainheads of capital reside. See also “Capital”, “Denial”.

6b) How much is enough? “Government is basically coming off the tail end of an era when it could be stupid without being held accountable. And we’re now moving into an era where stupid shows.... 3 quarters of the world economy is now routing around governments, okay?... manipulating all these things to avoid taxes” (Steele, 2012, mn.114-116). “No financial system can have integrity when the government system doesn’t have integrity and is run by force” (Fitts, 2017s, mn.15). See also “State capture”, → “Taxation of income”, → “Tax shift”, “FASAB-56”.

7) Because it has long been ‘Liberals’ primary tool (and has always seen an expanded role from the failure of debt-money systems [‘liberal’ or otherwise]), ‘Conservatives’ have developed the art of smearing the institution with various degrees and flavors of anthropomorphic-personification fallacy. In the millennialist era, perhaps the smear has become more of a science at times (Davies, 2015). The former have to always (within a bank-debt-money system) expand government, so the latter¹²⁹⁵ have to always smear it.

See also “Two sides of the same coin”, “Duopoly”, “Parties, political”, “Big Government (growth of)”.

[Competent? See also “Civil National Identity (CNI)”¹²⁹⁶]

Government Supported Enterprises (GSEs)- mostly 3rd-party loan securitizers such as Fannie Mae, Freddie Mac, and (formerly) Sallie Mae. Like the so-called ‘Federal’ Reserve, they are all privately owned, yet Congressionally-chartered agencies, created in order to provide public financial services and greater liquidity to certain parts of society. Some of these Non-bank Financial Institutions, “like the Federal Home Loan Banks...[also] have [RAB] deposits at the Fed” (Chabot, 2015). See also “Nonbank Financial Institutions (NBFIs).”

- 1) The Federal National Mortgage Association (*Fannie Mae*; est. 1938) primarily buys/re-sells mortgage loans from *commercial* banks. It was the 21st-largest corporation in the US (\$22 bn. in revenue) in 2018.
- 2) The Federal Home Loan Mortgage Corporation (*Freddie Mac*; est. 1970) primarily buys/re-sells mortgage loans for smaller, *thrift* banks.
- 3) The Government National Mortgage Association (*Ginnie Mae*; est. 1968)
- 4) The Farm Credit System (FCS; est. 1916); member-owned
- 5) The Student Loan Marketing Association (Sallie Mae; est. 1972) in the Dept. of Education. From 1997-2004, SLM Corp. was fully privatized and gave up its Congressional charter.

See also “Mortgage-backed securities”, “Federal Accounting Standards Advisory Board (FASAB)”.

Governments, US- 1) The public sector (local, state, and federal) spent approx. \$8.1 trillion in 2019, with Pension schemes, ‘Health care’, and Education at > \$1tn. each.

2) *Federal* spending for 2020 is budgeted at \$4.79 trillion, *local* spending is forecast at approx. \$2.14 trillion, and *state* spending is forecast to be nearly \$2 trillion. See also “Governance”, “Burien, Walter”.

Grades of Money- “Money, 2 classes (layers) of”.

¹²⁹⁵ “[I]f it doesn’t have its integrity, then it’s [actually] worse than [not] having a government.... What we have out here is an environment of information that is not making sense” (Steele, 2012, mn.118, 120). See also “COVID”.

¹²⁹⁶ CNI (sometimes a.k.a. ‘civicness’ or the [‘national’] tradition of questioning authority) needs to declare its independence [now that “Globalism” is over for the time being (see “Debt cycles”)] from (several centuries of) reliance upon banks & bankmoney. See also “Glorious Revolution, the”, “Finance Capitalism”.

Graeber, David (1961-2020)- (self-proclaimed anarchist [and fmr. communist] anthropologist, and primary Occupy Wall Street mastermind, often said to have coined the phrase 'we are the 99%'; popularly revealed finance to be a political & social issue.)

1) Graeber's "first and overwhelming conclusion.... [is that] violence [in history] may be invisible, but it remains inscribed in the very logic of our economic common sense, in the apparently self-evident nature of institutions that simply would never and *could never* exist outside of the monopoly of violence-- but also, [outside] the *systematic threat* of violence-- maintained by the contemporary state" (Graeber, 2009). See also "Violence", "Central Banking-Warfare model".

2) While seeing through many, if not most, of the outdated (and sometimes ridiculous [as in the case of "barter"]) institutions of the millennialist Western world (most of which are directly related to the monetary system), Graeber fails to diagnose a common ancestor to them all-- an institution that "99%" of learned types in the West have [been taught to] taken for granted, like the four seasons. Graeber also seems to take it as a given-- something (perhaps God has ordained to be as) less changeable than climate: "Graeber believes that money was [always/only] created from *credit*. He opines **that before [1st Estate] coins existed, [that] the world was divided into [mostly 3rd Estate] debtors and [mostly 1st-2nd Estate] creditors,¹²⁹⁷ and that the latter needed some sort of document** when necessary to recuperate the assets they had lent. That is why [according to Graeber] money had to be invented, and, that in its beginnings, it must necessarily have been *personalised* and linked a specific debtor with a creditor" (Sanahuja-Anguera, 2017, 60). See also "Market fundamentalism", "Credit money".

3) This is, ironically, the type of monetary thinking (i.e. "personalized"; "free"-for-all counterfeiting) that led to the horrific confusion (and hence bloodiness) of the French Revolution years (Spang, 2015, 144-47, 152, 164-66)-- not to mention France's ensuing military dictatorship and resultant subjugation to England and the British system. It was only ¾rs of a century later, in 1879, that French coinage was to be first unified in Paris with "a fully state-owned institution" (Spang, 248). See also "National Debt Economy", Ch.2.

4) Thinking that begets 'horrific confusion' is usually wrong. In addition to **overlooking** the coinage revolution of the 1st millennium BC (in which coins were typically spent into existence or gifted to local populations, in return for taxes and [faster] markets-- which was also typical monetary practice in the Roman Republic & Empire, and the Chinese Dynasties of the 1st millennium AD), Graeber also fails to grasp that **proto-money** (as a mnemonic tool for remembering IOUs) obviously predates state formation and the use of written contracts (to serve as mnemonic legal evidence for IOUs). *Proto-money*, as simply an understood (by more than 2 parties) mnemonic tool, existed long before writing-- long before an economy and society grew so large that government, and eventually some form of permanent state-- was necessary to officiate (and enforce) various claims of debtors and creditors, eventually with written symbols that at least some of the transaction parties were expected to understand. See also "Tally sticks", "State formation".

5) By using the same, incorrect definition of money (i.e. monetary standard) as do those whom he criticizes, Graeber is squarely in the tradition of not only the confused revolutionaries of France, but also of subsequent "pseudo-oppositions" (to the British/"debt-money" system)-- f.e. Marx (vis-à-vis Adam Smith), and (today's pseudo-reformist, so-called) 'Modern Monetary Theory'. See also "Hegelian dialectic", "Reform, false".

6)

See also "Barter", "Credit money", "Bullshit jobs".

¹²⁹⁷ The first known articulation of "1st" and "2nd" Estates, as distinctive (instead of hodgepodge/conflated) entities only goes back to the 11th century, and it seems reasonable to presume that "governmental" and "non-governmental" elites were by no means strictly segregated prior to the Iron Age and its widespread forging and dissemination of ["1st Estate"/governmental] coinage. This author has seen no evidence that Bronze Age societies were at all into separation of powers/estates.

Graham, Benjamin (1894-1976)- (the ‘father of value investing’, ‘Dean of Wall St.’ & ‘Einstein of Money’ was actually most proud of his common sense plan for international monetary reform; i.e. the ‘missing’ common numerator between ‘monetary reform’ and a [sustainable] ‘[world parity economy](#)’)¹²⁹⁸

“Cash is a public good. A world cash... is a [worldwide public good](#).”- *Financial Times*’ editorialist Martin Wolf (Wolf, 2022)

1) It’s not well-known that the mentor and “hero” of Warren Buffett-- and to millions of other stock market investors, too-- was thinking about bundled commodity currency plans through much of the 1920’s to 1960’s. It’s clear, however, from Graham’s *Memoirs* “that, in his own mind, the *Commodity Reserve Currency Plan* was his most important contribution to posterity” (Mehrling, 2007).

1b) Basically, the main point is: “If stabilization can be effected as regards [the basic] key [commodity] items, [then] it is [also] certain to have a powerful effect upon the balance of the economy. For the great disturbances in general business are largely tied in with wide fluctuations in the price level[s] for raw materials” (Graham, 1944, 31).

1c) So was this a ‘world government’ plan, or something more like its opposite? Even though “raw materials problems are international problems...[that] call for international solutions. Stockpiling can be carried out on a world scale without requiring either a world government or elaborate and closely knit economic cooperation among nations. While most other politico-economic devices can more readily be adopted on a national than an international scale, the commodity reservoir principle lends itself with relative ease to world application, and its effectiveness gains particularly from that wider scope”; “the commodity-unit holdings at the...[IMF] will function as the *equivalent of world currency*” (Graham, 1944, 31; 43), and are hence not ‘world currency’ per se or de jure. See also “Currency”, “[Money, 3 \(contemporary\) Tiers of](#)”.

1d) Why hasn’t it happened yet? See also “[World Par Economy](#)”.

2) Among Graham’s other points was distinguishing between singular or multi-variate ‘reserve currency systems’¹²⁹⁹;

is it not unlike deciding to fly across an ocean on either a single-- or multi-- engine jet?

3) In the early 1960’s, Graham slightly adjusted his 1940’s proposal, to including “probably...between 15 and 25 components, selected in accordance with objective criteria of aggregate [US] dollar value of production or exports, or both, as well as of storability” (Graham, 1962, 184).

4) (Graham, 1961,).

5) Hungarian-British economist Nicholas Kaldor (1908-1986) was “the most prominent and persuasive supporter of the proposal for an international Commodity Reserve...system... in the 2nd generation of its advocates” (Hart, 1991). .took up where Graham left off, writing in

6) A half-century after Graham’s proposed alternative to Bretton Woods, the Bonn-based “Group of Green Economists” proffered that “the stabilization of raw materials prices...should be founded on...[4] main points: ...A) stabilization... within a certain price range [that’s *not too high*]. If stabilization prices are consistently above market prices, [then] raw material agreements will fail.... B) control of supply via *export quotas* [instead of “buffer stocks”]-- this [allegedly] saves money on storage and over-production, but requires [political] discipline... C) [requiring] consumer countries to apply *protectionist measures* against... countries not party to the raw materials agreement. This is [allegedly] the only way to prevent the development of a parallel market... [and D (more political “agreements”, to provide)] *finance measures* for the processing of raw materials in [the] developing countries...” (Dziobek, et al, 1992, 122).

7) In 2022, “one of the most influential economists in the world”, Sergey Glazyev, Russian “Min. in Charge of Integration & Macroeconomics of the Eurasia Economic Union, announced that: “Over a decade ago, my colleagues at the Astana Economic Forum and I proposed to transition to a new global economic system

¹²⁹⁸ Was Graham the first ‘political economist’ type to seriously (and clearly) address “public credit’ since David Hume in the mid-1700’s? The then-budding Anglo-to-American empire, no matter how conservative, would eventually have a date with the public credit sand trap. How long does the process (if not wildly mismanaged) usually take-- about 2 centuries. See also “Economics”, “Political Economy”, “[NIInnies](#)”, “Cycles”.

¹²⁹⁹ This is basically the difference between a (rather powerful economic) gravitas towards ‘MonsterMonkey’-type stuff [https://www.youtube.com/watch?v=L67MwMFBbUIGlist=DLAK5uy_mDOPHZsnDBRtFXf9qzqKnBqlyhJRRPGteDkGindex=18], and ‘SmokeyLife’-type stuff.

based on a new synthetic trading currency based on an index of currencies of participating countries. Later, we proposed to expand the underlying currency basket by adding around 20 exchange-traded commodities. A monetary unit based on such an expanded basket was mathematically modeled and demonstrated a high degree of resilience and stability.”- <https://thecradle.co/Article/Interviews/9135> .

7b) Later that year, Mike Adams asked Monaco-based hedge fund trader Alex Krainer about a recent pan-conference in : “Was there a **general understanding** that new global reserve currency of the BRICS nations is rapidly becoming a reality. Is it going to be in the way that we understand-- like a *portfolio of commodities* backing the currency-- which would be a transactional Clearing House **that does not involve any demand for dollars whatsoever**. It’s [strictly] a parallel system, [of] China, Russia, Saudis, Turkey, you know. Is that generally understood-- that that’s all real and...happening?”; to which Krainer replied: “I think that [yes] this is all generally understood [at least in the region]. But this wasn’t discussed in the conference. I think that the new reserve currency and the new clearing mechanisms are probably being worked out at a fairly high level between the countries that are involved...[and] not a lot of this is going out public. What I understood-- but not from this conference... is that the Russian and Chinese diplomacy has been signalling other nations who are interested in joining their trading block.... Also what I heard is that they’ve signalled to all of these [potential member] nations that they will not be penalized if they decided to *default* on their debt obligation to Western financial institutions...Yea, that’s pretty huge. And that they would also not be penalized...[if] they decide to *re-nationalize* their industries and resources... [Hence] a big, juicy carrot on the one side, vs...[the usual] big stick on the other side” (Krainer, 2022b, mn.7-10). See also “**Powellism**” (driving those USD interest [sometimes a.k.a. default] rates up).

8) Graham Plan/’Commodity basket’ Updates: 1-

See also “**Primary Sector Economics**”, “Economics, Parity”, “**World Par Economy (WPE)**”.

Gramm-Leach-Bliley Act (of 1999)- See “Glass-Steagall Act, repeal (1999)”, “**Regulation**”, → “**Reform**”.

Grand theft state- (synon. ‘oligarchy’ [of/by what is essentially ‘organized crime’]; a.k.a. [in 21stc] ‘grand theft world’) See “State capture”; that which has, traditionally, differentiated ‘West’ from ‘East’.¹³⁰⁰

See also “Estates, 3”, “Glorious Revolution, the”, “Fin de Siecle”, “Lobbyists”, “Neocons”, “Provocation operation (Po)”, “Russiagate”, “United States of Lockheed-Martin”, “FASAB-56”; Appendix C: “1-2-3”.

Great Divergence (geographic-political), the- (between 11th-15thc Occident and Orient)

1) The respective terms for each other: *seres* (‘silk people’) and *da qin* (大秦, ‘great Qin’ [dynasty]) were in use from the Roman Republic (which was not actually a ‘dynasty’ at that time) and Han Dynasty, respectively; and the 2 Empires were-- not long after the turn of the 1st millennium anyway-- of roughly equivalent size, scope, and population. “2000 years ago, perhaps half the entire human species had come under the control of just 2 powers, the *Roman* and the *Han*”; both (per the 1st-2nd centuries CE) held approx. 4mn. sq.m of territory, and both may have been around 60mn. in population, out of a world total of “170 to 330 million” (Scheidel, 2009, 11). “Both... were run by god-like emperors... [had] 1,500-2,000 administrative districts... [and] laid claim to ruling the whole world, *orbis terrarum* or *tianxia*... Both even ended in similar ways: one-half...[of] the original political core-- the west in Europe, the north in China-- was first weakened by [CHA] warlordism and then taken over by ‘barbarian’ successor states, whereas the other half was preserved by a traditionalist regime. It was only from the late...[500’s CE] onward that the two trajectories of state formation began to diverge, slowly at first but more dramatically over time, between the cyclical *restoration* of a China-wide empire in the East...[vis-à-vis] the [further] decline of empire and central government in the West, followed by the slow creation of a *polycentric* state system that proved resistant to any attempts to impose hegemony, let alone unification...[which] eventually evolved into the now-familiar cluster of modern nation states” (Ibid, 11). See also “Civilization”, “Charismatic Authority (CHA)”.

¹³⁰⁰ whether or not to view it as a crime

1b) In other words, a “Great *Convergence*” had “spanned” much of “the 1st millennium BCE¹³⁰¹ and the 1st half of the 1st millennium CE”, until a (Wei-Sui dynasty) “1st¹³⁰² Great *Divergence*” began to unfold from about the 6th century, [a divergence] resulting from the basic/geographic fact that China could expand and unify to “a hotter and wetter southern periphery...[whereas] the Roman Empire centered [instead] on a temperate sea that was highly conducive to communication, the transfer of goods & people, and the projection of [constantly-threatening military] power. Moreover, whereas the main western rivers such as the Rhone, Danube, and Nile converge upon the inner sea core, Chinese rivers all flow eastward, thereby reinforcing regional separation¹³⁰³” (Scheidel, 2009, 12).
See also “Separation of Powers”, “Montesquieu” [Trichotomy].

Great Divergence (historical-economic), the- (between 19th-20thc Occident and Orient)

1) “European and Chinese” living standards (per Pomeranz [2000]), were still “broadly equivalent through the 18th century” (Brooke, 2014, 418), despite the 3rd Bray Cycle cooling and resultant Bubonic Plagues (from the 14thc in Eurasia, and then the 16thc in the Western hemisphere) striking places in western & northern Europe (like England) with much more demographic toll than occurred in the great Plagues’ incubators in the south of China. See also “Climate change, global” [Hallstall/Bray], “English constitution, the”.

2) Mark Elvin, a leading environmental historian of China, counters this, however, observing “a classic Malthusian crisis brewing in...[early Qing dynasty] population growth and progressive environmental degradation”... (Brooke, 421) dragging living standards down by the 1700’s. See also “Malthus, Thomas”.

2b) See also “Renaissance, the”.

Great Divergence (monetary; 2015-18)- (the simultaneous rising of interest rates in the US [from 2015-18], vis-à-vis falling/negative interest rates in Europe & Japan)

1) From 2012-15; “the Fed portrayed the desire, but not the action, to retreat from its policies of providing liquidity to world markets and major banks” (Prins, 2018c, 9).

2) The Fed then, however, in contrast to the ECB and Bank of Japan, belabored to create and raise interest rates “liftoff” and “normalization”, from 2015-18, actually hiking rates 4 times in 2018, while the latter two were still lowering rates. See also “Normalization”.

3) That (strategic policy?) suddenly changed in 2019, however, when-- rather than increasing rates further (after a rather steep “breakdown of the...[stock] markets at Christmastime, 2018” [Wolff, 2020])-- “the Fed cut them 3 times in 2019. Instead of reducing its balance sheet [i.e. downsizing its subsidies], the Fed expanded it by a greater magnitude during the last 4 months of the year than at any comparable period since the [Great Financial] crisis. And far from...[maintaining its mid-decade goal of] normalization of its rate structure, the Fed moved forcefully into a ‘lower-for-longer’ paradigm.... [crouching] its policy U-turn in terms of ‘insurance’... [against] even more acute monetary-policy intervention down the road” (El Erian, 2020). See also “Trump, Donald”, “COVID”.

3b) Ominous? According to some, “after [the liftoff was definitively aborted in December] 2018, everybody in the financial system knew that this system was doomed. And then the next [financial] catastrophe happened in September 2019, when the [US] Repo market” broke.- https://odysee.com/@Dryburgh:7/505rnt-wolff-hedge-funds-coronavirus-ccp-world-take-over:d?r=FK4Lfe3kq2QAbgu76DE67BEpTAc6Nmm8sunset=1br*v [Wolff, 2020, mn.3]. See also “Bretton Woods II” [system], “Repo (Repurchase) agreements”, “Zombie”.

¹³⁰¹ [Scheidel self-contradiction]: Although “Warring States Qin and Republican Rome started out [circa upper 400’s BCE] at opposite ends of the spectrum: Qin was [pretty much always] unusually centralized and bureaucratized, whereas Rome was run by a collective and greatly depended on private administrative resources.... [The convergence thus (actually)] began [in earnest only by] about 200 BCE in China and... [perhaps not until] the late 1st century BCE [a.k.a. the ‘civil wars and Fall of the Republic’] in Rome. It is [only] the...Roman Empire of the 4th century CE that most resembles the Han Empire in institutional as well as practical terms” (Scheidel, 2009, 17-18).

¹³⁰² The 1st Divergence-- as distinguished from “...the better-established (2nd) ‘Great Divergence’... that [Kenneth] Pomeranz 2000 applied to the technical and economic expansion of the ‘West’ during the last 2 centuries” (Scheidel, 12). See also “Great Divergence (historical-economic”.

¹³⁰³ “On the other hand, China is [geographically] more compact and self-contained” (Scheidel, 12), hence allowing-- if one can conquer both of the great rivers basins-- for much easier political unification.

4) **Great Divergence Updates:** Was the aborted 2015-18 US policy **re-implemented** in 2021-22? See also “**Powellism**”, “**Quantitative Easing (QE)**”, “**Negative Interest Rates (NIRP)**”.

Great Extinction¹³⁰⁴Event, 6th- (a.k.a. ‘the **late Holocene** extinction’, ‘**anthropogenic**’ **habitat destruction**⊗, ‘**6th Great Extinction**’, ‘**6th Mass Extinction**’)

“At some point, mathematical ambition must acknowledge physical existence.”- Charles Walters (Cook, 2022, mn.40). See also “**Monetization & entropization**”, “**Economics**”, “**Ontocide**”.

“Without parity [pricing for raw materials] we have a system that continually devalues nature's abundance, including human labor; and a few hundred years of that is [now increasingly] tearing the web of life apart.” - Howard Switzer, Sept. 19, 2020, AMI-Parity Group. See also “**Economics, Parity**”.

“A mass extinction is by definition a catastrophic economic collapse. It occurs [simply] when the logical pyramid overturns... [which is-- at least over the rather long term--] an inevitable natural process” (Gaede, 2008, mn.9). See also “**Ecological economics**”, **Orwell, George** [tyranny of poor definitions], “**Conditioning, classical**”.

1) It’s not just ‘**activists**’. “**What will collapse first, our ecosystem-- the Earth[’s biosphere]-- or... [bankmoney].**”- <https://www.youtube.com/watch?v=DFML1U93VXw> [*Oeconomia*, ’20, mn.1]. See also “**Capitalisms**”.

1b) Basically, populations “of wild animals have more than halved since 1970, while the human population has doubled. Only 5 times before in our planet’s history have so many species and so much biodiversity been lost so quickly. The 5th was when the dinosaurs were wiped out.”

- https://populationmatters.org/campaigns/anthropocene?gclid=CjwKCAjwslbpBRBNEiwAZF8-zGsY9auD3QFHtyWYISBH7oSIYIneDrJhKXCmvPwfyPIRabEfuCF-xoCjvgQAvD_BwE

1c) More specifically, since “the start of agriculture around 11,000 years ago, the biomass of [Earth’s] terrestrial vegetation has been halved (Erb, et al., 2018), with a corresponding loss of >20% of its original biodiversity (Díaz, et al., 2019)... There have been >700 documented vertebrate (Díaz, et al., 2019)... species extinctions over the past 500 years, with many more species clearly having gone extinct unrecorded (Tedesco, et al., 2014). Population[s]...of vertebrate species that have been monitored across years have declined by an average of 68% over the last 5 decades¹³⁰⁵ (WWF, 2020)... [And] out of an estimated 7–10 million *eukaryotic* species on the planet... perhaps 1 million [of the eukaryotic] species...[will be] threatened with extinction in the near future, (Mora, et al., 2011), with around [even] **40% of plants**...considered endangered (Antonelli, et al., 2020)” (Bradshaw, et al, 2021, 2). See also “**Malthus, Thomas (1766-1834)**”.

1d) Awareness of the Earth’s environmental Crisis is nothing new. “The energy which gave us the Industrial Revolution-- coal, oil, natural gas-- represented the accumulated saving of... 3 weeks of sunlight that managed somehow to be saved in the earth, out of the 3 *billion* [sic] years of sunshine. Because that's what the fossil fuels are. This is not income to be spent¹³⁰⁶; this is *capital* [sic] to be saved and invested. And we have now destroyed [it], into what we call entropy-- into a form of energy which is no longer possible to be utilized. We have now destroyed into entropy 11 or 12 days of that accumulated 21 days of sunlight ...We have wasted it” (Quigley, 1976c-pt.3, mn.346-47). And the half-century since then?

2) The illicit wildlife trade is the “world’s 4th most lucrative trafficking industry-- after the smuggling of drugs, weapons, and people-- with annual revenue of as much as \$23 billion, the illicit wildlife trade threatens hundreds of species, from tigers and rhinoceroses to birds and reptiles. The world’s most trafficked animal is

¹³⁰⁴ This (part of the) nomenclature is somewhat misleading, as it’s not just about ‘the extinctions’ (or not being able to find something in a zoo). “Dwindling population sizes and range shrinkages amount [in and of themselves] to a massive anthropogenic erosion of biodiversity and of the ecosystem services essential to civilization. This... [reduction is (at least) as much of a core part of] the seriousness for humanity of Earth’s ongoing 6th mass extinction event” (Ceballos, et al, 2017); i.e. “the Titanic”, compared to (so-called) ‘anthropogenic global warming’s lawn chairs upon its deck (regardless of whether or not the present inter-glacial Holocene era will expire sometime this century).

¹³⁰⁵ In “the Late Pleistocene... the global biomass of wild mammals...[was >25% higher than “today”] (Bar-On, et al., 2018)” [Ibid].

¹³⁰⁶ Actual environmental historian John Brooke points out that, from humble beginnings; **c.1820**, the United States was “by the 1840’s... probably a greater producer of greenhouse gasses than [was already mostly chopped-down] China” (Brooke, 2019, mn.102). Even as far back as the War of 1812, Thomas Jefferson had observed that the young Republic, even in his state, had recently been seized by a ‘*bank mania*’ (Jefferson, 1814). The term goes back to the Panic of 1792-- “Wall Street’s first crash” (<https://users.nber.org/~confer/2006/si2006/dae/sylla.pdf>). See also “Hamilton, Alexander”, “‘Free Banking (era)’”, “‘State Banking’ (era)”, “‘Corrosion-Cancer-Debt’”.

the... pangolin” (Alagona, 2020); not to mention shark fins. “Governments, universities, foundations, and conservation groups are working to curb the trade in exotic species... [but their work has] been underfunded and undervalued. But even if it were better supported, it would only begin to address the human health challenges of living through a mass extinction.... Habitat loss dredges up pathogens....” (Ibid), not just the ‘invasive species’ warp.

2b) The WWF reported in 2018 “that over the past 50 years, [Earth’s] wild animal populations have declined by a global average of 60%. In April 2019, the International Union for the Conservation of Nature announced that 1 million species are threatened with extinction. In May, a review of the scientific literature found that 40% of all insect species could soon disappear. In September, a study led by Cornell Univ. [found] that since 1970...[the US} and Canada have lost 3 billion, or 30%, of their birds” (Ibid). Australia and California are regularly on fire; and in late 2019 the “American Association for the Advancement of Science... [warned] that the Amazon Basin was approaching a ‘tipping point’, beyond which vast swaths of rainforest could disappear forever” (Alagona, 2020).

[Earth’s estimated animal mass, 10k years ago; c.2011]

[Mammals, birds, reptiles & amphibians, c.2016]

3) In terms of mammals, for “the 177...[species] for which we have detailed data, all have lost 30% or more of their geographic ranges, and more than 40% of the species have experienced severe population declines (>80% range shrinkage)” (Ceballos, et al, 2017).

4) “[F]reshwater fishes are in [perhaps the most] terrible trouble. Migratory populations have fallen by three-quarters in the last 50 years... [(c.1970), while] populations of larger species... have crashed by a staggering 94%. Nearly a third of all freshwater fish species are threatened by extinction.... [And freshwater fish] are an aquatic version of the canary in the coalmine for the world’s rivers, lakes and wetlands”¹³⁰⁷ (Hutton, 2021, 5; 8).

¹³⁰⁷ The report’s Overview adds that “more than half of the world’s wetlands have disappeared since 1900... [T]hese places serve as *nature’s water treatment facilities*-- cleaning water of chemicals and other pollutants.”- <https://www.worldwildlife.org/habitats/freshwater-habitat> See also “National Debt Economy (NDE)”.

And “only 13% of those present in 1700 [were] still in existence in the year 2000” (McGrath, 2019). Is this a genuine ‘Crisis’? “The scale of the threats to the biosphere and all its lifeforms-- including humanity-- is in fact so great that it is difficult to grasp for even well-informed experts.... The science underlying these issues is strong, but awareness is weak.... [Make no mistake, this impacts] Earth’s ability to support complex life” (Bradshaw, et al, 2021, 1). See also “Governance”, “Reform, 101”, “Dumb-downing”.

[Oceans & land mass summary status, c.2014... Terrestrial vertebrates' biomass: **livestock**, **'humans'**, & wild animals]
 4b) Out at sea, only "3% of the world's oceans were described as free from human pressure in 2014... with 33% of fish stocks harvested at unsustainable levels in 2015"¹³⁰⁸ In almost all cases, the negative trends for nature will continue to 2050 [i.e. a best-case-scenario] and beyond. The only ones that didn't continue towards ecological disaster involved what the scientists term 'transformative change'¹³⁰⁹" (McGrath, 2019). See also "Design" [.culture], →"COVID", (down with) "Gross Domestic Product (GDP)" [.gross].

5) They suggest moving away from *GDP* as...[the] key measure of economic wealth, and instead adopting more holistic approaches that would capture quality of life and long-term effects.... 'We need to secure half of the planet by 2050, with an interim target of 30% by 2030', said... the National Geographic Society" (McGrath, 2019). See also "Wealth" [not money], "Parity pricing (for the primary sector)" [not for bank credit].
 5b) "Then we must restore nature and drive innovation. Only then will we leave future generations a healthy and sustainable planet" (McGrath, 2019). See also "National Debt Economy (NDE)", "**Corrosion-Cancer-Debt**", "Ecological economics".

6) Great Extinction Updates: 10/22- "It's very hard to see the big picture on a jigsaw puzzle until you have all the pieces in place-- and that's what we now have. We have a much more substantial foundation to move ahead with a new era of ecosystem conservation and management policy."

- <https://www.sciencedaily.com/releases/2022/10/221012132516.htm> ["The entire planet's ecosystems classified."]. See also "Secrecy, Cult of".
 See also "Eras of (Monetary) History"; "Design", →"Local scrip & Complementary currencies" [.caterpillar].

[Metamorphoses, old & new. See also "Adolescence of Mankind", "**Corrosion-Cancer-Debt**", "East India Co."]

Great Financial Crisis (of 2008)- See "Financial Crisis (of 2008-)".

¹³⁰⁸ The Earth's biomass of large predatory fish has already been reduced to less than "33% of what it was last century (Christensen, et al.,2014)... [L]ive coral cover on reefs has [been] halved in <200 years (Frieler et al., 2013), seagrass extent has been decreasing by 10% per decade over the last century (Waycott et al., 2009; Díaz et al., 2019), [and] kelp forests have declined by...[approx.] 40% (Krumhansl et al., 2016)" (Bradshaw, et al, 2021).

¹³⁰⁹ It's not just 'save the owls' activists. "*Science*, one of the world's most prestigious academic journals, capped off 2019 with a chilling, feature-length article entitled 'Pervasive human-driven decline of life on Earth points to the need for transformative change'" (Alagona, 2020). See also "'COVID'".

'Great Leap Forward, the'- (the largest-scale famine ever and most disastrous economic experiment in recent centuries of world history) 1) From 1958-1962, 30-to-50 million Chinese (about 5-8% of the population) perished from starvation and/or political violence, as the Chinese countryside was force--collectivized into communes, as (their unitarist model at the time) the USSR had done from 1929-33 (at a cost of 6-to-12 million lives).

2) The monetary system was characterized, since the "mid-1950's" by "highly centralized monetary oversight mechanisms.. [And] by the late-1950's, all banks had been merged into the PBC [today's People's Bank of China], producing [only then] a *mono-bank financial system*...[wherein] the PBC wielded not only central bank administrative powers, but also commercial banking functions; through cash-flow audits, tight credit overhaul, and fiscal restraint on the part of the government, the PBC was eventually able to achieve price and money-supply stability and vest all monetary powers firmly in the hands of the state" (Horesh, 2014, 221). See also "Interest-free money", "Statism".

Great Poisoning, the (c.1980s-2020s)- See "Food", "Dumb downing".

1) Why play dumb? Even half a century ago, "[d]uring the 1970s, fears of a 'population bomb' were rampant, and warnings came from...[many] disparate sources... it was a common belief [that] humanity was breeding too much for the natural world's ability to sustain it."- <https://www.denofgeek.com/movies/soylent-green-predicted-2022-meat-substitutes/>. See also "Malthus, Thomas (1766-1834)".

2) "The issue now is 'if you don't have local food, you won't have real food'.... If I go to the store, I don't [really] know what's in it [anymore]¹³¹⁰..." (Fitts, 2022j, mn.53). See also "States rights".

3) 'The solution to pollution is dilution'.

'Great Reset, the'- (a.k.a. 'the Going *Direct*¹³¹¹ Reset' [Fitts]) 1) "from a home-owner economy to a rentier economy, [a.k.a.] a rent-economy-- time for Blackstone to be...[your] landlord" (Hudson, 2020c, mn.58); covered up with waves of (see also) "Technocracy", "Internet of Things (IoT)", "Transhumanism".

2) "What we're seeing now is like the Norman invasion of England-- taking over land and the infrastructure" (Hudson, 2020c, mn.58). See also "enclosure movement", "BlackRock".

3) "The actions taken through the [so-called] health care legal and regulatory system that started in March 2020 were [also] simply part of the *Going Direct Reset*¹³¹².... The little guys are basically shut down by Disaster Capitalism working through the health care system, whereas the big money players get massive amounts of money to go out and engage in... [buying] everything cheap" (Fitts, 2020e, mn.20). See also "COVID", "Capitalisms".

See also "Rentier", "Provocation operation", "Industrial Revolution, 3rd", "Equity financing", App.C: "1-2-3".

Great Schism, the (of 1054)- See "Patri" [.paraloi, pedieis], "Aristotle vs. Plato"; "Evil twins?", "Russiagate".

Greco, Thomas- (21st century's leading proponent of local & complementary currencies)

The "current money system [and of course over-reliance upon 'money' in general]) is dysfunctional. It militates against equity and justice as well as peace, and so we have to decentralise power, and the only way we can

¹³¹⁰ F.e., US regulators "don't test 'organic' [food] for nanoparticles."- Pete Kennedy (Fitts, 2022j, mn.54).

¹³¹¹ This terminology is apparently used because the largest (institutional) planner and director of the "Reset" is (at least according to alt. media) the *non-bank* financial institution (see also) "BlackRock". Hence (unlike as was the case with "Quantitative Easing" as decade earlier), the federal funds injections, from Sept. 2019 have been (in accordance with BlackRock Investments' 8/19 plan) injected 'directly' into the (see also) "Repo markets" (Fitts, 2021e, mn.20); **which has primarily** capitalized (see also) "Nonbank Financial Institutions (NBFIs)", in what is essentially "a consolidation of... the financial coup coup d'etat" that started 2 decades earlier (Fitts, mn.20). See also "Feudalism, neo", "Owners, the".

¹³¹² It's "the Central Banks, basically asserting control of fiscal policy... the consolidation of the [2 decades of] financial coup.... Everybody gets a credit at the [CB cartel's] company store... This is a very hi-tech, dystopic view of the world" future (Fitts, 2022n, mn.31-32). See also "Federal Accounting Standards Advisory Board (FASAB)", "Great Extinction", "Ecological economics", "Dystopia".

do that is by decentralising control of credit” (Greco, 2019b). See also “Central Banking-Warfare model”, “Statism”.

1) “So what I envision is a *mutual credit network* in which credit is locally-controlled & allocated... [W]e can take hundreds and thousands of local credit clearing exchanges and network them together so that they do what the banks do– they clear obligations amongst themselves, behind the scenes, so that I can take the credit that I have in my local exchange, and use it anywhere in the world, just as I take the credit that I have in my local credit union, and use that anywhere in the world.... I talk about reclaiming the credit commons” (Greco, 2019b). Why let **state-monetized credit institutions** have all the fun? See also “Local scrip & Complementary Currencies”.

2) “”

Greece- 1) Since 2010, has suffered the most shrinkage of any peacetime OECD economy since the Great Depression. 2) “The problem is that neither Greece nor other eurozone countries have a central bank to monetize their budget deficits.¹³¹³ So they need to borrow from bankers and bondholders, at interest rates that rise as the dysfunctional system grows more untenable.... *Neoliberals* are using Greece’s debt crisis as an opportunity to pry away whatever its government [public] owns.... Greece should tell its fellow Europeans that every government has a prime mandate to protect its people from catastrophe... Greece should annul its debts and begin again with a Clean Slate, like Germany enjoyed in 1948.... the reality in this financial war¹³¹⁴ is that Greece can do whatever it wants with regard to which debts get paid or will be written down or written off altogether. Greece has a wide array of options. It can re-denominate debts in its own currency and then devalue. Or it can simply repudiate the debt as being unpayably high.... If these debts are kept on the books– while the government lets banks foreclose– it will make the financial sector by far the most powerful actor. The economy would polarize between creditors and debtors as society falls into poverty.... The [European] central bank’s role should be to regulate commercial banks and their lending policies, not serve as their lobbyist...” (Hudson, 2012g).

3) “Should be a different monetary system to Germany, because if you have German technology generating many, many more patents-- much more technological development over time than Greek technology does, then unless the Greeks can devalue [their currency] against the Germans, [then] ultimately they’re gonna get wiped out. What’s happening now because the Euro has meant you *can’t* devalue...[is] you get to the situation where the only way to maintain some sort of parity is to drop your living standards-- cut wages, cut pensions, etcetera, etcetera-- which is what they are doing... [It’s possible to] fall into a black hole that way” (Keen, 2016q, mn.22-23).

4) In the political sense, this is called a lack of sovereignty. After the surprise capitulation of Greek Prime Minister Tsipras in the face of a 62% national referendum vote to *reject* the EU ‘bailout’, a European Politics professor at Oxford noted that “the EU has just created its third *protectorate*¹³¹⁵ in the Balkans. From now on Greece will effectively be run by the EU the way Kosovo and Bosnia-Herzegovina already are” (Zielonka, 2015).

5) “The first day I was [Greek] Finance Minister, I was told in no uncertain terms: If you don’t sign... [on to] cutting pensions further, of selling your railways for a pittance to...[some] bank company, and...[other]

¹³¹³ Steve Keen adds that “The only reason for the alarm [about Greece] is that the Maastricht Treaty limited the amount of money that their equivalent of the Federal Reserve...the E.C.B. only had to fund only 3% deficits [not 10%]-- ‘anything above 7% and you’re on your own’. Well, that’s just insane, because the Central Bank should be funding the activities of its government. So really, in a sense, Europe doesn’t have a central bank, and that’s Greece’s real problem” (Keen, 2011e). Paul Craig Roberts adds that the Greek people have been brainwashed, for decades, into accepting German-French bribes and E.U. domination, the object of which is the relinquishing of national sovereignty. Confusing? See also App.C: “1-2-3”.

¹³¹⁴ What is happening in Greece “...is what in the past you needed an army to achieve... [But now] simply... buy out the Socialist Party and tell them ‘*Look, just surrender. Give us your land...*’ [because Greece]didn’t realize that it was signing on to neo-feudalism, and that’s what the ECB is all about. It’s not a Central Bank... it doesn’t finance government budget deficits, which is what the Bank of England and New York Fed [do]” (Hudson, 2011b).

¹³¹⁵ “*Protectorates* are by their nature utterly inefficient. Parachuted external envoys do not understand local culture, have no access to local networks, and apply solutions ill-suited to local environments. *Cheating* is the rule of the game in protectorates. The metropolis cannot admit its failure, and it therefore pretends that things are moving forward” (Zielonka, 2015).

amazing requirements that dissolve[d] any sense of national sovereignty... 'Unless you don't do all that, we will close down your banks'... That's a coup d'état. Even the CIA was not doing that to banana republics in the 1950's, and it was happening in Europe in 2015" (Varousfakis, 2018, mn.39). See also "European Monetary Union (EMU)".

See also "International Monetary Fund", "[Freedom Continuum](#)".

Greece, Ancient- See "Coined money".

'Green accounting'- ('capital' must include natural resources; a.k.a. 'natural resource accounting' or 'environmental accounting')

1) incorporating the depreciation of natural resources and the environment into estimates of 'net domestic product' or 'net national product'.

2) prevalence?

Green Neocons- Michael Moon's term for individuals in government-- or its sub-contractors-- who are "looking to start wars that will cause maximum oil/gas price spikes and minimum dead people (if possible)"¹³¹⁶ (Moon, 2019q).

1) This is because war-- in addition to keeping the contractors' income flowing-- "raises oil prices and makes green breakevens competitive. Without war, oil and gas prices become way cheap and green production dies. Iraq and Arab Springs were important wars for green economics" (Moon, 2019p).

2) In a way, it's nothing new. "Liberal" socialist (and Wall St. scion) Franklin Roosevelt was one of the greatest pushers of England into war with Nazi Germany (Forrestal, 1951), and was also, according to Gen. Stillwell, completely indifferent, as was much of the State Dept., to a Communist takeover of China, at least as far back as 1944.

3) Environmental-Social-Governance (ESG) the most common term this century for attempting to quantify socially "responsible investment" (in a broader way than just claiming 'sustainable' or 'ethical' investment). Globally, "investments subject to these...[ESG] forms of responsibility screens" rose to \$30 trillion in 2018, including approx. *half* of aggregate "total managed assets" in Canada and Europe, 63% in Australia & New Zealand, 26% in the US, and 18% in (more material-minded) Japan, despite a concurrent trend of "continued growth in all sorts of [institutional-pecuniary] shenanigans: larger military expenditures, a new arms race in space, a move [towards] a zero-accounting policy with FASAB-56 for the US government and related [big] defense contractors and banks, wave after ['5G'] wave of invasive, invisible surveillance and mind-control media that is setting the stage for world-wide technocracy, [ongoing] assaults on health freedoms, and [continued] centralization and corruption of the food supply throughout the world.... These assaults are "often being done by corporations and banks that often [just like the 20thc Rockefellers] are well-represented in the top [volume] holdings of ESG...mutual funds... and the portfolios of money managers. Is 'responsible investing' simply a new form of multiple personality disorder and mind control, or do we [just] need greater transparency and less secrecy about how the real economy [and its public relations] works, so the ESG managers can apply criteria in an intelligent and successful manner? Can ESG investing help us finally overcome warfare and transnational organized crime in a profitable and wealth-building manner... or will it simply be used a tool to engineer a deeper and more invasive technocracy?" (Fitts, 2019q, mn.0-2). See also "Neoconservatives", "War".

Green New Deal- 1) "The specific proposals and political justifications for control vary from continent to continent, but it is clear we are facing a global effort to implement even greater central control of...aspects of our lives.... Just as the American deep state got a young, hip, African-American politician to market the giving and lending of more than \$25 trillion to the banking industry and private investors, now the deep state gets a younger group of hip politicians to justify giving the banks almost everything else-- including lots of

¹³¹⁶ It's not rare. Pretty much "[all] San Francisco based national pols: Feinstein, Pelosi, Newsome, Harris, Steyer, Sandberg, Brin, Powell, Dorsey, Omidyar, Mayer, Schmidt, Whitman, etc... [are] Green neocons" (Moon, 2019o). See also "Jones, Alex".

real estate-- under the pretext of saving the environment and ending injustice. Do you worry about central control and injustice? You ain't seen nothing yet. This effort *depends on* the maintenance of government and corporate secrecy" (Fitts, 2019g). See also "Malthus, Thomas Robert (1766-1834)".

2) This is because "leadership is floating proposals for massive increases in direct and indirect taxes and regulations, many justified by concern for the environment.¹³¹⁷ This time, significant increases in central control are necessary to keep the rich flow of resources into the deep state going, while also keeping a lid on inflation. These controls mean fundamental changes in governance systems, law, and resource allocation. With global debt ratios [across the board] surpassing 100% of...GDP and the US entering a debt growth spiral, the tactics of...[simply subsidizing] financial bubbles "and bailouts have run their course" (Fitts, 2019g). See also "Ecological economics".

See also "Industrial Revolution, 3rd", "Federal Accounting Standards Advisory Board (FASAB)".

Greenbacks- see "US (Treasury) Notes".

Greenspan, Alan- (Chairman of the US Federal Reserve Board [1987-2006])

"As best I can judge from feedback I'm getting from friends of ours... we're beginning to look like buffoons..."- Chairman Greenspan, FOMC meeting,¹³¹⁸ December 1989 (Auerbach, 2009, 76). See also "M.I.T.", "Monetary Economics", "Economics" [macro].

1) "When I knew Alan Greenspan, in the '60s... "He was a lobbyist for the banks. So his idea of 'free markets' is exactly opposite of the classical idea. The classical ideal was a market free *from* [not for] unearned income, free *from* landlords, free *from* exploitive banks... the idea was to bring prices in line with the actual cost value. For Alan Greenspan [however], it meant a market without government interference... So Greenspan was in favor of a central planning much more than the socialists. Greenspan wanted to centralize planning in the banks-- his clients¹³¹⁹... centralized planning by the banks-- and their objective is very different from government planning. Instead of trying to promote employment and growth, they simply try to extract as much as they can from the economy-- and that's the problem that we're left in today" (Hudson, 2012h). See also "Finance Capitalism", "Race-to-the-bottom".

2) "After he was as wrong as it is humanly capable of being wrong... he was appointed by President Reagan to run the Federal Reserve [titular Board in Washington], *because* he was willing to say whatever needed to be said, even if what he said was absurd" (Black, 2016c, mn.111). See also "Plunge Protection Team".

3) Chairman "Greenspan says 'Look... *we're stabilizing the economy, in a way that none of you have realized.... Because labor is afraid to go on strike, because it's one paycheck away from defaulting on its mortgage.... We've got 'em! We've stabilized it! We've killed the Labor force!*' That became the Obama program... the Clinton program.... Their job is to double-cross their constituents..." (Hudson, 2010b).

¹³¹⁷ "All of this 'climate change' ya-ya is basically keying up central control of land and real estate.... Everybody cares about the environment...so the way they found they're going to sell technocracy is 'climate change'". There's open land all over the place, and sea levels aren't rising anywhere (Fitts, 2019r, mn.23-25). See also "Geoengineering".

¹³¹⁸ 1989 was during the 17-year period (c.1976-1993) in which the Fed refused to submit "transcripts" of its (so-called) "Open Market Committee" meetings; so Chairman Greenspan's language back then was often not the guarded 'Greenspan speak' from the mid-90's to mid-2000's. Congressman Roth (R-Wis.) and Congressman Hamilton (R-Ind.) (Auerbach, 2009, 10-11). Something untoward going on? See also "Open Market Committee, Federal (FOMC)", "Federal Reserve Audit", "Imperialism, American".

¹³¹⁹ "When I was on Wall St. in the 1960's, banks were afraid to hire...[Greenspan] because he was known for saying whatever the client wanted to be said. So he [as with most of the Chairs since] is a public relations person, and the fact is that's what Economics is... public relations for the financial interests... It's a theory of how an economy would work... [while pretending that there is] no government" (Hudson, 2017q, mn.5-6). See also "Plunge Protection Team".

3b) “Greenspan’s anonymous [FOMC] voting scheme removed the Fed officials’ individual fingerprints from the vote to pull the plug on the recording of their meetings, for undefined reasons-- which means whenever they wanted to block to the public or anyone else [f.e., in the Legislative branch] from finding out what they were saying” (Auerbach, 2009, 104), in regards, of course, to what they were doing. See also “Federal Reserve Audit”, “Congress” [‘trend to end’].

4) Did Greenspan even know what he was supposed to be keeping track of? “The problem is that we cannot extract from our statistical database what is true money conceptually... One of the reasons, obviously, is that the proliferation of [near money & shadow banking] products has been so extraordinary that the...mix of money in our money and near money data is continuously changing... [Thus] a decision to base [monetary] policy on measures of money [M1, M2, M3] presupposes that we can locate money...[which] has become an increasingly dubious proposition” (Greenspan, 2000); a couple years before being knighted by Queen Elizabeth in London (yes, while still titularly in charge of all US monetary policy). See also “Money”, “Credit money”, “M3”.

5) simply one of the central banker’s clique that had “fallen asleep at the switch” (El-Erian, 2016, xvi).

5b) Sir “Allan Greenspan, I think...took all our breath away when he... admitted that he had assumed that bankers would have regarded it in their self-interest to be aware, at the most senior levels, of what their exposures and compositions of their assets & liability books were, and that, therefore, he didn’t see that the Fed...Board needed to carry out any inspection or analysis of what they [in fact] were. I think that took all our breath away, including his own”- David Scholey, <https://www.youtube.com/watch?v=aANly4Guy1E> (mn.144-45). See also “Federal Deposit Insurance Corp.”, “Gutfreund, John (1929-2016)”.

6) “If you want to prove something is wrong, quote Greenspan saying it’s right, okay?” (Keen, 2016o, mn.24). See also “Parliament, UK”, “Neoclassical Revolution” [2nd Industrial Rev.].

6b) Part of the widespread lampooning, in the 2010’s, of (the formerly ‘revered’) Greenspan was also due to an occasional public gaffe (a.k.a. flip-flopping) or “Senior moment”; at a 2011 “Fed conference... Greenspan...[then] 85-years old.... starts talking about.... capital...[being] worthless due to [the prevalence of] fraud¹³²⁰ (Titus, 2022c, mn.14-17). See also “Bernanke, Ben”. See also “Plunge Protection Team”, “Marx, Karl (1818-1883)”.

[see also “Imperialism, ‘modern’”, “Dutch Disease”]

Gresham’s law- (“People tried to get rid of bad [cheap] coins while keeping the good ones” [Huber, 2018d]).

1) Sir Thomas Gresham (1519-79), financial agent for Queen Elizabeth in the pre-paper money days, “was not the first to recognize this monetary principle [that commodity (intrinsic) money of actual value is hoarded, while worthless coins are passed on], but his elucidation of it in 1558 prompted the economist H.D. Macleod to suggest the term *Gresham’s law* in the 19th century” (Britannica, 2001).

2) Actually the first known example of such monetary advice is found in the ancient Chinese classic *Annals of the States (Gouyu)*, in which King Jing’s [r.544–520 BCE] minister Shan Qi argues, in opposition to the king’s plan to “replace the existing knife-shaped bronze [cheap] currency with larger and more valuable currency... that suddenly increasing the [intrinsic/commodity] value of money would be detrimental to the

¹³²⁰ Quote: “All capital that I see is the problem.... I think there’s rampant fraud in a lot [sic] of what was going on in these markets... [So] we need to get...adequate capital [secured by digital slavery collateral?], and [secondly] to get [‘best actor’ award here?] far higher levels of enforcement of fraud statutes-- existing [sic] ones... Things were being done which were certainly illegal and clearly criminal in certain cases... Fraud is a fact... [and] creates very substantial instability... If you cannot trust your counterparties...[then pretty much the whole thing simply] won’t work [sic]” (Titus, 2022c, mn.15-16). See also “Hegelian Dialectic”, “Capitalism”, “Communism”, “Slavery” [Fitts], “Regulation”.

people's livelihood"¹³²¹ (von Glahn, 1996, 43); presumably because there would simply be less circulation with expensive or "full-bodied" coins.

2b) Nicolaus Copernicus is also credited with the observation: https://en.wikipedia.org/wiki/Nicolaus_Copernicus

3) In the 'modern' paper money era, it may also be seen in "the wrong-headed development of the last hundred years, by which bankmoney [on account] has driven out sovereign money [in the form of physical cash] to about 90% now– so that what we have today is a ['globalist'/TAB] bankmoney regime, pro-actively led by the banks, while the central banks have [effectively] given up control over the stock of money" (Huber, 2016c).

4) However, as "far as safety of [so-called] modern money is concerned, [TAB] bankmoney [on account] is of the 'bad' sort because of its inherent risk in comparison to safe and secure 'high-powered' [RAB] central bank money [on account]. People could thus [in a 21st century RAB vs. TAB money competition] try to be paid in *digital* [Central Bank/RAB] currency, while making their own payments in *bankmoney* [getting rid of it; and] using the 'good' [RAB] currency also as a store of value. [The tradition of] Limited access to [a Central Bank/RAB] digital currency as well as [post-liberalization legal] limitations in its quantity and intended uses... [would] serve to keep down demand for [this liberalized (more widely available) RAB] digital currency... which, however... [would be] exactly what fosters a new Gresham situation, because it is that sort of *exclusiveness* of [the Central Bank/RAB] digital currency which... [would contribute] to its *appreciation* against [TAB] bankmoney" (Huber, 2018d). See also "Money, 2 classes (layers) of". See also "Commodity money", "Fiat currency", "Digital currency".

Gross Domestic Product (GDP)- (antec. 'national income'; in simplest terms, all spending w/ a certain period of time w/ a country; not to be confused with 'gross national product' [GNP], which is GDP + 'nonresidents' accrued or earned income, nor with 'gross domestic income' [GDI])

I.e. The 'gross out' stages/decades of a 'national debt economy' are bound to run into an increasing slew of insurmountable problems, after a number of imperialistic-cum-debt saturated decades wherein "that which seems to be wealth", does indeed become "a *gilded index of far-reaching ruin*", as John Ruskin predicted" in the 1860's, after "the economic limit of *optimal scale*"¹³²² point is surpassed (Daly & Farley, 2004, 21-20). See also "National Income" [net accounting], "Ninnies" [psychology].

1) Although GDP = the 'Money Supply' (M1) x the 'Velocity of Money' changing hands...

1b) ...the "fundamental thing that determines [(at least short-term) changes in] the level of economic activity is the creation of [new] money, in your national economy, whether that's by credit-created money by the banks, or [by] government with central bank-created money backing the government deficit... [This] is the main impact in whether the economy [GDP] is going to rise or fall in size" (Keen, 2016k, mn.20-21). GDP numbers "...are very badly collected... based on a survey. They have to be revised all the time. It's shoddy statistics.... [Whereas we could] get minute-by-minute calculations of...the total turnover of money in the economy [actually] is" (Keen, 2016o, mn.14). See also "Statistics", "Government, role of".

2) According to official statistics, US per capita GDP "output grew at roughly the same rate of 1.5-2% per year throughout the period 1820-2012... [G]rowth slowed...between 1930 and 1950 to just over 1.5%, then increased again to just over 2% between 1950 and 1970, and then slowed to less than 1.5% between 1990

¹³²¹ "Seizing upon the term *muzi xiangquan* [literally: "mutual balance between mother and child"-- a monetary metaphor that all subsequent dynasties would also use, into the 20thc, as a metaphor for balancing the exchange values of coins of different size and weight, [Shan Qi] urged the king to [instead] issue [both] large *and* small currency concurrently"; the term 'mother' originally "signified the primary or common [bronze] currency, while the 'child' was seen as...[the] derivative currency. Opinion...[on this could vary, however, and in] the Yuan Dynasty... these roles were [officially] reversed: *paper* money was regarded as the 'mother' and coin as the 'child'.... beginning in the Yuan, too, we [also] find silver assuming the role of 'mother' and both paper currency and coin relegated to the subordinate position... [And by] the mid-Ming period [some 2000 years after Shan Qi], *silver* had fully usurped the role of primary [mother] currency" (von Glahn, 1996, 43-44).

¹³²² This notion "is not strange to standard [E]conomists. It is [in fact] the very basis of *microeconomics*.... [W]hen the marginal costs (extra costs) equal the marginal benefits, then the [economic] activity has reached its *optimal scale*... [and] beyond...[that point] costs will go up by more than benefits. Subsequently, growth [in the activity] will make us poorer rather than richer. The basic rule of microeconomics, that optimal scale is reached when marginal cost equals marginal benefit (MC = MB), has been called the 'when to stop' rule... In macroeconomics, curiously, there is no 'when to stop rule', nor any concept of the optimal scale of the macroeconomy" (Daly & Farley, 2004, 16-17). See also "Ninnies"/"National Income", → "World Par" https://www.youtube.com/watch?v=_qEFdCh9dV4 [AllGoTogether].

and 2012”; for Western Europe, after a deeper stagnation from 1913-50 (at only 0.5% per year) GDP growth doubled that of the US at 4% from 1950-70, before falling sharply to 2% from 1970-90, and then more-or-less matching the US at “barely 1.5%” from 1990-2012 (Piketty, 2014, 97). The global population growth rate also peaked in the 1950-70 period, at “nearly 2%” per year and has since declined steadily (Piketty, 99).

3) Although GDP generally “does not include financial transactions... property transactions...[nor] housing market transactions...” (Werner, 2016b, mn.29); the broader statistical survey of National Income and Product Accounts (NIPA) does “neglect the distinction between productive activities and ‘zero sum’ transfer payments¹³²³... The NIPA duly report the revenue of the... FIRE sector¹³²⁴ and monopolies as ‘earnings’. These accounts have no category¹³²⁵ for what classical economists called economic *rent*- a free lunch in the form of income siphoned off without a corresponding cost of labor or enterprise...[A] rising proportion of... NIPA...’earnings’ actually derive from such rents” (Hudson, 2015, 16).

4) “The growth of wealth comes from new ideas, not from new debt; but [in a debt-money system] you need new debt to put new ideas into operation” (Keen, 2011b).

5) “It’s not [primarily about] the price of money [interest]. It’s the QUANTITY of money. And what is money [today]? It’s bank credit.... You can show this statistically, very clearly” (Werner, 2016b, mn.114). See also “‘Exogenous vs. Endogenous’ (money creation)”, “Interest rates”.

6) Is simply cultivating more bank credit (mostly for real estate) and the resultant debt-money actually benefiting an already bifurcated and debt-saturated society? No, it’s not the 1940’s anymore¹³²⁶. “Gross Domestic Product...and other metrics of economic activity don’t measure either broad-based prosperity or well-being. Elites [now] skimming financialization [usury] profits by expanding corporate debt and issuing more loans to commoners while spending more on their lifestyles boosts [aggregate] GDP...[modestly], while the security and well-being of the bottom 90% is [going nowhere]... Under the hood of ‘recovery’ and a higher GDP, life has gotten harder and more insecure for the bottom 90%.... How do we quantify the cost of the financial anxiety provoked by huge insurance deductibles or staggering healthcare bills?” (Smith, 2019b); both of which are significant drivers of GDP? “Small stresses add up, leading to chronic stress and a host of debilitating consequences. Consider the daily commute to work, which has become longer and more stressful, due to increasing congestion and the limits of public transport infrastructure that hasn’t been improved or expanded in decades” (Ibid). See also “Infrastructure”, “Bullshit jobs”.

7) “The US doesn’t publish the non-seasonally adjusted nominal GDP anymore, since 2005...which should make you suspicious. They publish fiddled figures, called *seasonally adjusted* figures” (Werner, 2015b, mn.37). Who doesn’t? See also “Euphemism”, “Financialization”, “National Debt Economy (NDE)”.

8) GDP Updates (a.k.a. ‘GDP, the End of’)- 11/22- “As workforces [continue to] shrink and opting out becomes increasingly attractive, Global Growth implodes on both the production and consumption sides. Toss in higher costs due to the depletion of the easy-to-exploit materials and the foundations of Permanent Global Growth crumble into dust” (Smith, 2022). See also “Baby-boom demographics”. See also “Vortex, monetary”; “National Income”.

¹³²³ Yes, automatic “late fees & penalties are considered ‘financial services’... [They’re] considered an addition to [US] GDP” (Hudson, 2020c, mn.26-27). See also “F.I.R.E. sector”, “Neoclassical revolution”.

¹³²⁴ “Financial debt-claims on the economy’s income and assets camouflage themselves as wealth”, even though they actually “strip” wealth (Hudson, 2013). The NIPA “need to recognize the magnitude of the F.I.R.E. sector and treat its revenue as eating into the economic surplus, not increasing it” (Hudson, 2012g). In other words, “financial lobbyists in the United States...re-defined GDP. For instance, when people fall behind on their credit card debt, and their interest rate goes up from 19% to 29%, all the added penalties and fees are counted in GDP as financial services” (Hudson, 2019c).

¹³²⁵ According to Hudson, the national accounts also fail to distinguish “between productive and unproductive investment...[or] credit” (Hudson, 2011c).

¹³²⁶ In fact the father of ‘national accounts’ & GDP, Simon Kuznets (1901-1985) attempted, in later years, “to show the US Commerce Department that the GDP isn’t always an authentic measure of a society’s well-being, sometimes upsetting opponents to his views and theories.”- https://en.wikipedia.org/wiki/Simon_Kuznets . See also “National Income”.

[Is there such a thing as (see also) "Evil"?]

Groupthink- 1) "They are very competent at their very narrow model of the world, and they reject any criticism as: 'It must be wrong-founded because it's criticizing our model'...[Economics today] is a belief system... like you had a department of religion which was run by the Vatican, and then you try to publish an article about Buddhism. It wouldn't get published. It would be rejected unrefereed. And that's fundamentally the nature of academic Economic departments" (Keen, 2018f, mn.19). Only now there's also big government funding at stake: "They [departments as well as individuals] get grant money ...and... They help each other get more *grant money*, get more promotions, get more publications in top-ranked journals, which feeds into everything else" (Payson, 2018, mn.19-20). See also "Academia", "COVID".

2) "The most insidious censorship is self-censorship.... So instead of having even an argument, even a discussion in an editorial meeting... even *that* [sic] doesn't take place anymore, because...[careerist journalists] don't put it forward, and you certainly don't ask questions that the [corporate media cartel] system...doesn't want people to ask" (Icke, 2018d, mn.2). See also "UKUSA Agreement". See also "Enlightenment, the", "Homogeneity", "Credit rating agencies", "Debt cycles", "Minsky, Hyman" ['.moment'].

Gutfreund, John (1929-2016)- (a.k.a. 'The King of Wall Street' in the 1980's¹³²⁷)

1) At the "end of 1981...when the mortgage market [first] exploded, he began a rapid rise to the top of Salomon Brothers.¹³²⁸ In 1983...his department (bond trading)...[generated] 40% of the firm's revenues, while no other department generated more than 10%" (Lewis, 1989, 137).

2) Earlier in 1981 Gutfreund "had done violence to the Wall Street social order... when... he turned Salomon...from a private partnership into Wall Street's first public corporation. In... [ignoring] the outrage of Salomon's retired partners... [and transferring] the ultimate financial risk from themselves to their shareholders.... From that moment, the Wall Street firm became a black box. The shareholders... had no real understanding of what the risk takers were doing.... All that was clear was that the profits to be had from smart people making complicated bets overwhelmed anything that can be had from servicing customers, or allocating capital to productive enterprise. The customers became, oddly, beside the point" (Lewis, 2011, 258), and Salomon was out of business by the turn of the century. "I doubt any partnership would have sought to game the [credit] rating agencies, or lept into bed with loan sharks, or even allowed mezzanine CDOs to be sold to its customers. The short-term expected gain would not have justified the long-term expected loss" (Lewis, 259). See also "Criminalization of Banking", "Bank welfare".

3) Sometime c.2008, Gutfreund advised Columbia business school students "to find some more meaningful thing to do with their lives than to go to work on Wall Street. As he began to describe his career, he had broken down and wept" (Lewis, 2011, 255).

4) Circa 2010, Gutfreund and Michael Lewis agreed "that the CEO of the large Wall Street investment bank had shockingly little control over his subordinates: 'They're buttering you up and then doing whatever... they want to do'. He thought the cause of the Financial Crisis was 'simple: greed on both sides... investors, and... bankers'" (Lewis, 256). "He was...tough, straight, and blunt as a butcher. He'd helped to create a monster, but he still had in him a lot of the Old Wall Street, where people said things like: 'A man's word is his bond'" (Lewis, 264). See also "Investment banks".

See also "Bonds", "Risk, socialized".

¹³²⁷ As late as 1986 the highest CEO salaries on Wall St. were approx. \$3 million, as opposed to the typical \$20 million-to-\$25 million range since the mid-2000's.

¹³²⁸ Actually Gutfreund was asked to head Salomon Bros. in 1978. After the partnership's merger-acquisition by (publicly-traded) Phibro Corp. in 1981, Gutfreund maneuvered to the top of the Phibro-Salomon board in 1984.

[King of New York, president of Washington, 1988]

Haiti- “the first poor country to be placed in permanent debt peonage... [They] had the temerity not only to rise up in rebellion, amidst declarations of universal rights and freedoms, but to defeat Napoleon’s armies... [Thus] France immediately insisted that the new republic owed it 150 million francs in damages... and all other nations, including the United States, agreed to impose an embargo on the until it was paid... [ensuring] that the name ‘Haiti’ has been a synonym for debt, poverty, and human misery ever since” (Graeber, 6). See also “Debt peonage”.

Hamilton, Alexander (c.1756-1804)- (ultra-federalist¹³²⁹ Secretary of Treasury [1789-94] & ‘Washington’s prime minister’; a.k.a. father of **both** [the American side of the] ‘national debt economy’ and [also, ironically] the ‘American System’ [of high tariff walls]; not to be confused with best friend “Morris, Gouverneur”)
 1) “[T]his most heterogeneous principle [the “national debt economy” (NDE)] was transplanted into ours from the British system, by a man [Hamilton] whose mind was really powerful, but chained by native partialities to every thing English: who had formed *exaggerated* ideas of the superior perfection of the *English constitution*, the superior wisdom of their government; and sincerely believed it for the good of this country to make them their model in every thing^{1330 1331}: without considering that what might be wise and good for a nation [that’s] essentially commercial, and entangled in complicated intercourse with numerous and powerful neighbors, might not be so for one [that’s] essentially agricultural, & insulated by nature from the abusive [legacy] governments of the old world” (Jefferson, 1816b). See also “Imperialism”, [vs.] “Common sense”.

1b) “[T]he basis for Hamilton’s 1st Report on the Public Credit...in 1790” was Robert Morris’ 1781 ‘Report on Public Credit’”. - https://en.wikisource.org/wiki/1911_Encyclop%C3%A4dia_Britannica/Morris,_Robert . See also “Morris, Robert”.

1c) Key to establishing this NDE or ‘British System’ in the US was, of course, Hamilton’s (much-maligned)¹³³² scheme for a ‘1st Bank of the United States’ (1791-1811)¹³³³. “Suppose that the necessity

¹³²⁹ In other words, Hamilton simply (i.e. whether still closely coordinating with the Morrises [the other 2 members of the 1780’s *Triumvirate*] or not), grafted the (see also) “English constitution” onto the fledgling US governments in New York and Philadelphia in the 1790’s (and then probably threw the election of 1800 to [the always diplomatic] Thomas Jefferson, to reconcile matters in the new environment of Washington).

¹³³⁰ This is not quite true concerning tariffs and ‘free trade’ (although the UK was still more ‘neo-mercantilist’ than ‘free-trade’ through [at least] the last quarter of the 18thc). See also “American System, the” [Hamilton].

¹³³¹ Earlier, on Feb. 20, 1782 (at a meeting where Jefferson was not present), Hamilton singularly vetoed what would have been US implementation of “one of Britian’s most lucrative sources of revenue”. The idea (as it re-appeared a couple months later, on the docket of the Confederated Congress) was simply to get “the states to alter the Articles of Confederation to enable Congress to levy import duties” for 25 years; but among the 6 men at the Feb. meeting, “Hamilton alone dissented” and hence “the state of New York alone [also] opposed...it”, and the non-unanimous proposal was defeated, even though “the request [then] seemed reasonable to almost all Americans” (Kirschke, 2005, 150). See also “Articles of Confederation”.

¹³³² “Yesterday the [Treasury] Secretary’s [Hamilton’s] report on the subject of a national bank was handed to us, and I can readily find that a [1st] bank will be the consequence. Considered as an aristocratic engine, I have no great predilection for banks. They may [as engines of debt] be considered, in some measure, as operating like a tax in favor of the rich, against the poor, tending to the accumulating in a few hands; and under this view may be regarded as opposed to republicanism.... Bank bills are promissory notes, and, of course, not money [i.e. state ‘currency’]. I see no objection in this quarter [i.e. the US Senate, to the BotUS]. The great point is, if possible, to prevent the making of it [too much or too obvious of] a machine for the mischievous purposes of bad ministers.”- Sen. William Maclay of Pennsylvania, personal journal entry, Dec. 24th, 1790. See also “State capture” [Conant], “Sovereignty”.

¹³³³ Although not literally the 1st Bank in the US (per the “Bank of North America (1781-85)”, the 1st BotUS was America’s second (large bank), and managed to stay up through its original charter of 2 decades. “Stockholders had chosen directors hailing from 8 states to run the bank.... [i.e. primarily] selling US Treasury bonds and issuing [the] paper currency, backed by [fiduciary] gold & silver coin [supposedly]

existed...for obtaining a loan;¹³³⁴ that a number of individuals came forward and said, we are willing to accommodate the government with this money (which we have or can raise) but in order to do this it is indispensable that we should be incorporated as a bank...and we are obliged on that account to make it a consideration or condition of the loan” (Hamilton, 1791, 128). In other words, Hamilton was saying that the private-corporate (chartered) bank would be more than happy to provide the government with loans, in return for the government authorizing the private/corporate bank the (sovereign) power to create the US currency. See also “National Debt Economy (NDE)”¹³³⁵, “Counterfeiting”, “Privilege”, “Sovereignty” [Quigley].

2) What might be called ‘[Hamilton’s footbinding](#)’ (that particularly American habit of conflating the term *money* with *currency*, as if they are the same thing when they are not) seems to have taken off from Sec. Hamilton’s numerous (official) pronouncements on the state of the new nation’s ‘money’ & ‘public money’ system, instead of simply referring to the US government’s ‘currency’. Most American monetary reformers, from Alexander Del Mar to (see also) “American Monetary Institute” (along with a number of prominent British, like Soddy) have followed in the fractured (and somewhat nonsensical) footsteps. See also “Estates, 3”, “Civilization, Western”, App.C: “1-2-3”, “[Currency’ or ‘money’ \(essay\)](#)”.

2b) How can people agree on any public reform agenda-- yet alone in the super-majorities required to get it through-- when they cannot even agree on the basic meaning of core, constituent terms?. Honest authors will confess (as did John Adams) that it is (2 centuries later, still) a heritage of confusion: “I’ve tried to group...[reformers] into broad themes, but I have to admit that every time I did so, it was clear [that] I could have done it differently again” (Boyle, 2002). See also “ConfUSURY” (public confusion); “[Money, 3 \(contemporary\) Tiers of](#)” (public clarity).

2c) The greatest philosopher of the Enlightenment, Montesquieu, a half-century earlier, kept the important things nice and clear (per Western Civ.). “Money” is simply “a sign that represents the value of all merchandise. A metal is used so the sign will be durable, will be little diminished by use”; and “currency” is “” (Montesquieu, 1748). See also “Montesquieu”.

3) 2nd PotUS John Adams (Adams, 1810).

3b) 8th PotUS Martin Van Buren added that “Hamilton’s Desire to build up in this Country a ‘Money Power’ similar to that of England”;

“I have in another place referred to the fact that Mr. Jefferson, in all my conversations with him in 1824, when he spoke of the course pursued by the Federal[ist] party, invariably personified it by saying ‘Hamilton’ did or insisted thus; and, on the other hand, ‘the [Democratic-]Republicans’ held or claimed so and so; and that upon my calling his attention to the peculiarity of his expression, he smiled and attributed his habit to the universal conviction of the Republicans that Hamilton [directed every thing](#)” (that the Federalists did, between c.1789-c.1800).- Martin Van Buren (Van Buren, 1867, 117).

3c) Hamilton was also “instrumental in developing the first conflict-of-interest law...[wherein] the intercourse between business and government...[found some] legal standards...put in place” (Kirschke, 2005, 330).

4) Contractual debts should be taken seriously and someone had to do something to get the chaotic, low-growth ([stagflation?](#)) economy of the 1780’s on a solvent and rational footing. Hamilton however-- perhaps rationalizing that Northerners had mostly initiated (& spilt more blood for) the Revolution than the

stored in its vaults...[In 1792,] bank branches...[were] established in Boston, New York, Baltimore and Charleston...to facilitate the flow of money [approx. 70% of it from (non-French) Europe] and [hence low-interest] credit to various regions of the country; 4 more branches would follow by 1805” (Davies, 2007). See also “Fiduciary money”, “China” [regional development, Estates]. . Secretary Hamilton had both proposed the Bank’s establishment to Congress and...[convinced] George Washington-- over the strenuous objections of [Secretary of State] Thomas Jefferson-- that the bank would not violate the Constitution” (Davies, 2007), that his best friend and collaborator Gouverneur Morris had got rolling in Philadelphia (only) 3-4 years earlier. See also “Constitution, US (of 1787-91)”.

¹³³⁴ In other words, that the ‘sovereign’ government was not really sovereign-- that its own currency or currency unit system was incapable of providing stability, vis-à-vis (going in debt to) the British System/NDE.

¹³³⁵ Hamilton (perhaps alone among his contemporaries) called the public debt “a public blessing” because of his belief that it would tie the wealthy (who would own the government bonds) of the country to the government, and they would, in turn, provide political support for (on ongoing cycle of) higher taxes, to make sure that there was enough money in the treasury..

South (particularly the deep [or real] South)-- essentially disregarded half of the new country in setting up his American copies of British institutions. "Many politicians... especially those from the agricultural South, scorned banks as corporate [privilege] monopolies that profited merchants and financiers, but defrauded farmers [a.k.a. 'creditors' & 'debtors', respectively]" (Davies, 2007). The unprecedented boldness of Hamilton and other Federalists; opened "a permanent schism in the halls of power"¹³³⁶ (Ibid) See also "Parties, political", "Banks", "Estates, 3".

See also "Monetization", "Legalism", "Central Bank", "UKUSA" (that they never rescinded).

Happiness- 1) "Seek happiness for its own sake, and you will not find it; seek for duty, and happiness will follow as the shadow comes with the sunshine."- Tyron Edwards (1891, 215)

1b) The wisdom is hardly new. "[H]appiness, whether consisting in pleasure or virtue, or both, is more often found with those who are most highly cultivated in their mind and in their character, and have only a moderate share of external goods, than among those who possess external goods to a useless extent but are deficient in higher qualities.... Let us acknowledge then that each one has just so much of happiness as he has of virtue and wisdom, and of virtuous and wise action.¹³³⁷ God is a witness to us of this truth, for he is happy and blessed, not by reason of any external good, but in himself and by reason of his own nature. And herein of necessity lies the difference between good fortune and happiness; for external goods come of themselves"; "happiness is activity, and the actions of the just and wise are the realization of much that is noble."- Aristotle, c.350 BCE (Book 7, ch.i; ch.iii).

[It's classic (Spinoza, 1677)].

2) "In vain do they talk of happiness who never subdued an impulse obedience to a principle. He who never sacrificed a present to a future good, or a personal to a general one, can speak of happiness only as the blind do of colors."- Horace Mann (Edwards, 1891, 215)

3) "The most happy man is he who knows how to bring into relation the end and the beginning of his life."- Johann Wolfgang von Goethe, (Edwards, 1908, 217).

4) "Happiness is a butterfly, which, when pursued, is always just beyond your grasp, but which, if you sit down quietly, may alight upon you.... Make it the object of pursuit, and it leads us a wild-goose chase, and is...[not] attained" (Edwards, 1891, 215).

5) "If one only wished to be happy, t^his could be easily accomplished; but we wish to be happier than other people,¹³³⁸ and this is always difficult, for we believe others to be happier than they [actually] are. - Montesquieu" (Edwards, 1908, 215). See also "Boards/Board Systems", "Bullshit jobs".

Head of State- (a.k.a. the marionette or puppet; 'politicians vs. the deep state' is nothing new:

<https://www.youtube.com/watch?v=V7a52pd7w1w> [Burn!, mn.58-102])

See "Glorious Revolution, the (1688-91)", "President of the United States (PotUS)", "Deep State".

¹³³⁶ And it wasn't just Southerners or agriculturalists. (Puritan stock) Vice-President John Adams-- himself a Federalist-- often spoke of bankers as "swindlers and thieves" (Ellis, 1993, 161), and of banks (at least in America) as constituting nothing less than "the Nurseries of Aristocracy" and "a System of national Injustice...[a] Sacrifice of public and private Interest to a few Aristocratical Friends and Favourites" (Adams, 1815; 1813f). See also "Homogenization", "Protestantism".

¹³³⁷ Otherwise, "we might as well say that a brilliant performance on the lyre was to be attributed to the instrument and not to the skill of the performer" (Book 7, ch.xiii).

¹³³⁸ This and other "Edwards" "quotes" were of dubious pedigree. Concerning the social nature of happiness, Montesquieu actually noted that the "good sense and happiness of individuals depend greatly on the mediocrity of their talents and fortunes. Therefore a republic, where the laws [and separations of power] have placed many in the middling station, as it is composed of wise men, it will be wisely governed; [and] as it is composed of happy men, it will be extremely happy" (Montesquieu, 1748, 49); maybe even 'extremely happy' enough not to notice (or even deny) some underlying structural issues with the money and political systems. See also "Denial", "Cultural Calendar", "COIVD".

Headless Horseman (essay)- (the USA's 1st international best-seller [from 1820]¹³³⁹; i.e. 'the Headless [bankmoney regime] Hessian')

"There is no 'federal government'... [What there is] is a budget."- Catherine Austin Fitts, Dec. 18, 2020. Australian dissident Brendon O'Connell agrees. "There is no Right-Left politics [in the Oligarchy]. It's just bankers, and privatized, corporatized, private intelligence... private military, mercenary companies. It's all privatized" (O'Connell, 2021, mn.14). See also "Oligarchy", "East India Co."

"The governments...no longer have information sovereignty or financial sovereignty"¹³⁴⁰ (Fitts, 2021f, mn.17). See also "Sovereignty".

It's not a new problem. "[W]hen people... [traditionally spoke of the] 3 aspects of government... [in] England, they tend[ed] to call ["administrative sovereignty"]-- as [did] the Lord Chief Justice of England, Lord Hewart...[in 1929]-- 'the *headless 4th branch* of government'" (Quigley, 1976c-pt.2, mn.123). See also "Sovereignty" [administrative sovereignty], "Deep State".

Ever wonder why-- indeed how-- there has been no significant change in strategic policy (a.k.a. the ship of state) since, say, the early 1980's?...I mean besides beginning the end of, the end of, starting again, ending again & then starting again of "the Cold War" (like an errant light switch-- I mean before they' decided that the real cold war was to be on more-or-less everybody, more-or-less all of the time)?

- gay marriage?
- 'genderless' pronouns and bathrooms?
- free 'smart'/slave phones?

Are we starting to see a pattern here?... something indeed 'strategic', indeed large-scale?

Speaking of (going on) half-a-century ago, c.1977, nearly all of the large nations of the world (including the USA & USSR) agreed to (and by the early 80's had officially ratified) a treaty [somehow subsequently made de facto secret] concerning the burgeoning industry of "Environmental Modification Techniques" (United Nations Office at Geneva, 1976). This is not conjecture; look it up. Basically each signatory agreed to things like not starting earthquakes or setting the sky on fire-- in (the 50 or so) fellow-signatories' countries; mind you not in regards to their own jurisdiction. That was nearly half-a-century ago. Flash Gordon-type stuff is now; fact, not fiction. See also "Geoengineering", "Mind control"; Shadow Gate (2020).

Now what does this (not very new) development have to do with the present political (& economic) Crisis?¹³⁴¹ "There is no 'federal government'.... There is a money mechanism. It...[creates Federal funds-RAB/base] money, and it spends money.... [In today's] Washington, all of the cashflows are controlled and operated by Defense contractors and [the big] banks. There is no government official who controls any of those lines of spending" (Fitts, 2020k, mn.25). See also "Military-Executive-Corprocracy (MEC)", "Federal Accounting" [FASAB-56].

Fitts is a brave woman, and what she says regarding federal accounting (a.k.a. 'fiscal rule of law') is not some theory.¹³⁴² In 1989-90, "both" when Fitts was the Asst. Secretary at H.U.D. and then also when she "was the lead Financial advisor...on repeated times, I would try to get the financial information from the [Department's payment] systems, and [the contractor] Lockheed wouldn't give it to me, and I couldn't make them.... I know I...[was] legally liable for its management, but apparently... [that didn't matter much]. I look at 'the government' and I see one database, managed by a group of defense contractors" (Fitts,

¹³³⁹ ...not to be confused with "the first classic of American literature" the *Autobiography of Benjamin Franklin* (Graebner, Fite, & White, 1975, 54); orig. title: *Mémoires de la vie privée de Benjamin Franklin* (1791). See also "Franklin, Benjamin (1706-1790)".

¹³⁴⁰ These are roughly analogous to Quigley's 'Administrative' and 'Monetary' sovereignty, respectively. See also 'Sovereignty'".

¹³⁴¹ "Crisis"? Yes, each decade has been worse (a bigger crisis) than the one before. In the early 90's, it was the new ('*pol. sci.*') 'normal' of cabinet undersecretaries being flatly denied access to their departments' real data (and hence the prospects for real audits; see "Federal Reserve Audit"). A decade later, it was the early '00's crime spree and high-profile anthrax attacks on publicly-elected public servants. From 2008-11, it was the great *financial* implosion & failure to achieve meaningful reform; and then there's this winter's 2020-21 ongoing *economic*-political implosion and de facto martial law. See also "Cycles", "Adolescence of Mankind".

¹³⁴² Does that compute? Since (at least as far back as) 1989-90, lawful public officials have been getting the 'access denied' message from prominent contractors. Fitts couldn't complain about it to her boss (fmr. Hollywood-east presidential candidate Jack Kemp), yet alone to his boss (Hollywood-east CIA honcho George Bush, Sr.). See also "Trump, Donald" [Binney].

2017t, mn.42-43). “The important thing to understand...is [that] government employees do not run the federal government. Private corporations [contractors] run the federal government, and they [since the 1980’s] run the information systems, the software, and the databases... You’ve basically [already] had a corporate coup d’état...behind the scenes, and it’s very important to understand that.... They’re paying private corporations to do classified things...[and (...or is it ‘so’ that)] they are not subject to *F.O.I.A.*” (Fitts, 2018o, mn.16-17). See also “Legalism”, “Parties, political”, App.C: “1-2-3”.

We’ve all heard puppet-president stories and corrupt cabinet-appointee stories. Even deputies and undersecretaries being denied access to the real numbers (which is the lifeblood of what real governments, at the end of the day, really do), however, is strong evidence that “we” (from no later than the 1980’s) have had in place:

- a) a “secret” or “hidden” federal government, that perhaps even the under-secretaries don’t really know about (or at least speak about ‘on the record’).¹³⁴³ See also “Government, Hidden”.
- b) and that this Hidden (‘secret’) government has access to, as do other countries, directed energy weapons and communication that can penetrate the **nature of physical reality**, at least in a destructive capacity;
- c) and that what we came to think of as ‘normal’ (or at least the usual) ostensible government & politics in the latter 2⁰th century have been (since the last quarter of the 20thc) visually-maintained-- per CIA-Mockingbird-Corp. **Media Cartel**-- at least up until the current Trump Admn. era. This is all sometimes a.k.a. “Hollywood east” (a term that was also coined in the 1980’s).

‘Conspiracy theory’? What significant changes have there been in US policy since the early 80’s-- or in (the broader construct) ‘Western’ policy since the early 90’s? Does anyone (who isn’t bribed, brainwashed, or blackmailed) really think that this is normal? Or that the no-change strategic policy-- for 4 decades now-- is just because everyone loves it so much? The 1970’s (arguably the last full decade before such “auto-pilot” policies) was not some Dark Age (though the latter 70’s was when some salient smattering of the intelligentsia first started to warn about it [f.e. de Mille, 1979]). Most people lived better back then (inefficient energy use & all). See also “Dumb-downing”, “Death Culture”.

Before rushing for the proverbial ‘Frankenstein pitchforks’ (a cliché that just passed its 20⁰th birthday), some sympathy for the devils might pose some cause for reflection:

- a) Earth’s “6th Great Extinction Event” (not ‘man-made climate change’) is the primary setting/context of this day & age. See also “Parity pricing” [6th Great Extinction Event], “Climate change”;
- b) the startling technology that has (probably from their perspective) fallen into their hands (which is again, like A, unprecedented).
- c) the “3rd Industrial Revolution” (per longterm, multi-continent ‘globalist’ guru Jeremy Rifkin) marries these 2 suigeneris developments [that’s spelled with 3 e’s (not 2)] in a strategy that is designed to end (not humanity in general, or even its civilization[s]) mankind’s age-old (and hitherto thought unresolvable) ENERGY problem, which is primarily a problem of energy inefficiency. See also “Industrial Revolution, 3rd”.

Of course there are (numerous) other ingredients in the “Deep State”’s soup “for us”, most of which have been stamped ‘classified’ or ‘top secret’ (and even the near-zero-cost energy promise is not widely propagated). And every country can-- and presumably does-- do it a bit differently.

‘Government-by-secrecy’ (whether admitted or not) is-- in and of itself-- intellectually indefensible in the (so-called) “modern” age of large populations, and should not be tolerated (or excused) for any other reason than simple stupidity & lack of perception on the part of the governed mega-majority. Of course there are formidable barriers to organization within any large-population and technology-dependent

¹³⁴³ The lack of ‘on record’ candor from fmnr. federal public servants and genuine ‘insiders’ is troubling (for all but outright anarchists [or secessionists], I guess). One fairly famous exception, along with Fitts, has been Paul Craig Roberts (Asst. Secretary of the Treasury for Economic Policy, 1981-82)-- who served 9 years prior to Fitts-- and has reported no such cases then of having “access denied” problems, thus indicating that the state of affairs which Fitts (has often) described developed over the course of the 1980’s. See also “National Security Agency (NSA)” [X.O. #12333].

polity. But where there's a will, there's a way, and (as some preachers have said) "If we can face it, God can fix it". See also "Parties, political".

Hence, again, we're back to (less-than-wholesome) technocratic governments' outright addiction to secrecy. Like severe alcoholism or other serious substance abuse, it (secrecy; government-by-secrecy) will either wind up terminating the parasite or-- if there is not an intervention by someone or some group that knows what they are doing. See also "Parasitism", "Parallel universe", "Secrecy".

1) In terms of running a (nationally-"sovereign") government (that does something other than lying, stealing, rigging, and P.R.), this means: Understanding money- (sometimes a.k.a. society's 'de facto governance')... I.e. a 95-100% (passing) mark, on a "5 W's & H", fill-in-the-blanks test.

2) What should accounting be in the 21stc & Knowledge Age?-

3) Ethics and the 3rd Industrial Revolution- 5 W's & H, fill-in-the-blanks

4a) Private or public?- what is (and should be) the difference between 'private sector' and 'public sector'?

4b) Public domain- knowing the difference between what is expected (per the 'imperialist' 20thc), and what is actually needed (to be placed in the public domain); what is a success or failure?

5) What role should voting & representation have in the 21stc & Knowledge Age?-

6) What is a civic or civil society?- 5 W's & H, fill-in-the-blanks

Make no mistake about it, adolescence (to include the "Adolescence of Mankind") can often be a tumultuous (if not to say crazy) time; and during the 2nd Industrial Revolution (i.e. Op. 'explodapedia') many people were indeed blown up. Likewise in the 3rd Industrial Revolution (i.e. Op. 'digitize everything'), some people will be 'transhumanized' into robots (bots). See also "Transhumanism", "COVID".

The sooner We (The People) learn to deal with and manage this stuff that cannot be un-invented, the better. See also "Big picture", "Truth serum".

See also "Evil twins" [appropriation], "Technocracy", "Dystopia", "Military Executive Corpocracy (MEC)", "Reform", "Madison, James" [invisible hand].

[(1974) commemoration of the first American book to be popular overseas; see also "Market fundamentalism"]

Health- "Behind the words, behind the [conscious] thought... fully energized... is [fully] breathing, doing. So get alive with your mind! Because the mind, we are shown, in brain scans...[is] able to reflex us into the *deepest* [sic] of the deepest of the brain, which was...[formerly] thought inaccessible. And now, it is there... 'the secret of the placebo'.¹³⁴⁴ A placebo... is you willfully being able to heal your self.... and your ancestral trauma" programming (Hof, 2021, mn.38-39; 104). See also "Design". See also "Industrial Revolution, 3rd".

Health care (US)- (a.k.a. 'Rockefeller medicine' [Rappoport])

1) A Health Maintenance Organization (HMO) is a company that blends (and then increasingly blurs) insurance functions and health care functions. The *HMO act of 1973* "unleashed the development of for-profit HMOs.... [even though] early prepaid group practice plans-- the prototypes for HMOs-- were all [actually] nonprofit...[said] Paul Starr.... 'So the industry as a whole has changed quite dramatically'.... Specifically, the 1973 act made HMOs [unconstitutionally,] exempt from state laws that kept medical decisions in the hands of doctors. As a result, the medical practice was subject to [much] more corporate

¹³⁴⁴ See mn.104; <https://home.solari.com/special-solari-report-cold-therapy-and-breath-the-wim-hof-interview2>

influence. ‘That could be characterized as making profit~~ing~~ legal in health care’...[Allison K. Hoffman said], even though the drug & device industries (within the sector) have always been for-profit.

- <https://www.politifact.com/factchecks/2019/may/01/blog-posting/no-it-was-not-illegal-profit-us-healthcare-nixon-e/> [Kruzel]

See also “Separation of Powers” [WesternCiv], “Regulation”, “Oligarchy”, “F.I.R.E. sector”.

1b) “as a percentage of our economy has gone from 3-4% of GDP in the 1950’s and 1960’s¹³⁴⁵ to almost 20% today... [and] it’s expanding on the federal budget balance sheet-- between Medicare and Medicaid-- at 9% a year, and has been for the last 30 years... [and] it’s expanding in the private sector, most years, by double digits. So you’re seeing...10, 12, 15% increases.... So, you can do the math on this any way you want. It’s going to destroy the country if we don’t stop it. I understand that this kind of lawlessness is sort of the way that America’s evolved into and what we’ve become. But there comes a point at which the people of this country need to stand up and say ‘Ok, look. We solve this problem, or you’re going to end up broke, sick, and dead’... That’s the fate you’re going to face unless we put a stop to this”¹³⁴⁶

(Denninger, 2017, mn.15-16). “The number of doctors has not gone up all that much over the last 20 years. The number of administrators has gone up at several multiples of that” (Denninger, 2017, mn.19). “It sounds eerily similar to the *prison business* in America.”

- Max Keiser (Denninger, mn.20). See also “Academia”, “Unearned income”, “Big Government”.

2) “There’s no other business in this country where you could get away with what they do, every single day, in a hospital, or in a doctor’s office. You know, if you tried to tell people that you weren’t going to tell them how much gasoline was going to cost as the gas station... [and] depended on what kind of auto insurance you had, [then] the people who ran that gas station would sell zero gasoline... These are all practices that are quite clearly illegal under both federal and state law... not only [under] the *Sherman* [Anti-Trust and] *Clayton Act*[s], but [also] consumer protection statutes... [which] consider ...[that] sort of thing [to be] a deceptive practice” (Denninger, mn.22-23).

3) Nonetheless, the “health care system is becoming more & more controlled. We’re seeing a move to try to mandate *vaccines*¹³⁴⁷ ... We’re seeing parents lose control of their children if they don’t...do exactly what the doctors say” (Fitts, 2019r, mn.20).

4) Other ‘developed’ countries have even less health freedom. “Canada or...England or Europe. There are many places in Europe where many vitamins are just unavailable, or at least in dosages that make any significant difference... We do have more freedoms than other countries.... They just don’t want competition [for their racket] is what it boils down to” (Mercola, 2020, mn.25-26); and it’s been going on for a long time. See also “COVID”, “Duopoly”.

5) ‘Efficient’...at what? The US system’s (notorious) Private Equity “ownership increases the short-term mortality of Medicare patients by 10%... This is accompanied by declines in other measures of well-being, such as lower mortality [in general], while taxpayer spending per patient...increases by 11%” (Gupta, et al, 2021). See also “Market fundamentalism”.

See also “Fascism, ‘Modern’ Hand of”, “Prison-Industrial Complex”, “Google”.

¹³⁴⁵ In addition to the drug and device industries (within the ‘health care’ sector), “insurers...[and] hospital chains have operated for profit since the 1950s & 1960s.”- <https://www.politifact.com/factchecks/2019/may/01/blog-posting/no-it-was-not-illegal-profit-us-healthcare-nixon-e/>.

¹³⁴⁶ “The Asian populations are considered to have i.q.s of about 5 to 10 points higher than ours. And if you look at what has been going on in this country the past 20 years, with nutrition, with fluoride, with geo-engineering... vaccines...[etc.], I think there’s been a really concerted effort to lower i.q.s here” (Fitts, 2018h, mn.35). See also “Long-term Orientation (LTO)”. The fluoridization is now stagnate or reducing in prevalence, and (with Israel’s reversal in 2014), only “11 countries in the world [or approx. 5% of the official world population; most-often in S.E. Asia-Oceania] have more than 50% of their population drinking fluoridated water” <https://fluoridealert.org/issues/caries/who-data/>. Who will be the last one out? See also “Chile”, or, (more simply) “Fascism, ‘Modern’ Hand of”.

¹³⁴⁷ At the World Health Organization-sponsored ‘Global Vaccine Safety Summit’ (Dec. 2-3, 2019) in Geneva, “Dr. Heidi Larson made a presentation about their marketing problem...[being] the fact that they couldn’t prove that any of the vaccines were safe & effective...[even over the long-term] yet [all] alone in one heavy schedule [administered] together...and that was a marketing problem.... And of course ... the biggest con yet, to get the global population” shot up, then immediately ensued; “the whole vaccine program, globally, had stalled” c.2019 (Fitts, 2022d, mn.27). “You can’t sue the [vaccine] manufacturers... since 1986”, and there’s also virtually no “chance of getting any compensation out of the government, for what amounts to life-long care”; the protests, by c.2019, were “all over the place” (Rappoport, 2022d, mn.28). Bill Gates had been upset about the “lack of vaccine coverage” for years (Rappoport, mn.29). See also “COVID”.

Hedge funds- 1) catch all term for unregulated, large-volume trading (usually institutional), typically involving either derivatives, leverage, and/or 'long-short' strategies.

2) "Explosive hedge fund growth has...been a notable feature of the US financial landscape over the past 20 years.... hedge funds 'rent' securities from balance sheets through prime brokerage relationships" (Ricks, 2016, 198). See also Baker, 2016b.

3) "...are like the sorcerer's apprentice: they created highly complex financial instruments which earned them a lot of money in good times, but now that the crisis has unfolded, they cannot stop the dynamic unleashed by them.... [although some] institutions appear to have had much better risk management in place" than others (Busch, 2012, 251).

See also "Securitization", "Shadow banking (SBS)", "Derivatives".

[Did Goethe (1797), Disney (1940) foretell the monetary future? See also "Currency Wars, the", "Bank welfare".]

Hegelian dialectic- (i.e. 'the political-epistemology dialect' or that which dominates the [so-called] 'modern' political world, which of course doesn't [or at least shouldn't] mean that much without an accompanying 'ontology' [see also 'Montesquieu']; not to be confused with "False dichotomy" [which is more 'organic' in nature, as opposed to planned]). See also "Ontology & Epistemology".

1) Based on a technique of statecraft as old as the State itself,... the [so-called] Hegelian dialectic... [brings] about change in a 3-step process: *Thesis*, *Antithesis* and *Synthesis*. The 1st step (*thesis*) is to create a problem. The 2nd step (*antithesis*) is to generate opposition to the problem (fear, panic and hysteria). The 3rd step (*synthesis*) is to offer the solution to the problem created by step one: a change which would have been impossible to impose upon the people without the proper psychological conditioning achieved in stages one and two" (Andre, 2010); f.e. arriving at (see also) "Socialism", via the "middle ground" fallacy, between "capitalism" and "communism". See also "Smith, Adam (1723-1790)", "Marx, Karl (1818-1883)", "Capitalisms".

1b) It's 'as old as politics or statecraft' itself because it works-- and is often so effective as to be a dangerous tool of herd management. In the (supplemented) words of academics, the "*epistemological spiral* [i.e. of what people are blabbing about] is [in turn actually] used to obtain [create] the [real/unspoken] ontologies that feed the *ontological spiral* [of actual being or existence]" (Fidalgo-Blanco, Sein-Echaluce, & Garcia-Penalvo, 2015). Words and public words (even if they may seem ridiculous or inappropriate at first) eventually comprise the dialogs that warp or morph the so^{ci}al reality worlds that we (the citizenry & people-- not just government or 'elites') create every day. It's our fish tank, not theirs. See also "Main point", "COVID", "Montesquieu (1689-1755)" (underlying political ontology).

2) This most stale of cliches has been widely noticed, since the mid-20th century-- that the present system of usury (or "financial") 'capitalism' is doomed, and, as such, that the usurists seek to maintain their power over the people through 'socialism' (Knupffer, 1963). See also "Democracy", "Capitalisms".

3) "Everyone who is not an anarcho-capitalist is a 'Marxist' to *anarcho-capitalists*. Everyone who is not an anarcho-communist is a 'fascist' to *anarcho-communists*. I don't worry too much about how either [falsely dichotomized] group defines me unless an Antifa mob is beginning to surround me" (Sullivan, 2019). See also "Orwell, George (1903-1950)", "Russiagate".

4) Meanwhile, "Usury and rising rents create the same problems as always with [the smoke screen of] 'capitalism': most people working like [surveilled] dogs and having nothing, [and hence being coerced into]

looking for [more surveilled]¹³⁴⁸ socialism” (Migchels, 2019e). See also “Usury”, “Creney”, “Scientific Management”.

5) The State “has the supreme right against the individual, whose supreme duty is to be a member of the State... for the right of the world spirit is above all special privileges”- Historian William Shirer, quoting Georg Hegel (1770-1831) in *The Rise and Fall of the Third Reich* (Shirer, 1990, p. 98).¹³⁴⁹ See also “Ontology & Epistemology” [Hegel].

5b) “I am in general trying to read Hegel¹³⁵⁰ materialistically: Hegel is materialism which has been stood on its head (according to Engels)– that is to say, I cast aside for the most part God, the Absolute, the Pure Idea, etc.”- V.I. Lenin, *Conspectus of Hegel’s Logic* (1914). See also “Statism”, “Government, role of”, “Mind control”, “Marx, Karl (1818-1883)”¹³⁵¹, “Adolescence of Mankind”.

6) “Dialogues and consensus-building are primary tools of the dialectic, and terror and intimidation are also acceptable formats for obtaining the goal... [for if] we remain locked into dialectical [f.e. ‘Left-Right’]¹³⁵² thinking, we [in fact] cannot see out of the box... [of] controlled and guided thought” (Raapana & Friedrich, 2005). See also “Violence”.

7) Does it ever end? <https://www.youtube.com/watch?v=zBd0tPFrckM> (O’Connell, 2022b, mn.7-8; <https://www.youtube.com/watch?v=l-xn-KNFZ64> [O’Connell, 22-12-4, mn.106-107].

Hegelian dialectic (example)- of long-term strategizing (Thesis + Antithesis = SYNTHESIS)
See “Corporate Media Cartel”, “Criminalization of Banking”, “Lender of Last Resort (LoLR)”.

¹³⁴⁸ “London is the 6th most surveilled city on the planet, with the top 5 cities all being in Communist China” (Watson, 2019).

<https://www.prisonplanet.com/study-the-only-place-on-earth-more-surveilled-than-london-is-communist-china.html>. See also “Cashless Society (War on Cash)”, “Digital cash”.

¹³⁴⁹ “How the heck did the Hanoverian Windsor monarchy survive the 20th century? Preparation. By training the best bullshitters and liars the world has ever known at Victorian Oxbridge. Spies. Why did they do that? Because the rise of the industrial age middle class across Europe freaked out aristocracy” (Moon, 2019s). See also “Fin de Siecle”, “State capture”, “Timarchy”.

¹³⁵⁰ “These parts of the work should be called: ‘a best means for getting a headache!’”- V.I. Lenin, *Conspectus of Hegel’s Logic* (1914).

¹³⁵¹ “Marx’s complicated (& incidentally hardly legible) theory only accommodated the [age-old] hostility to money that had been shaped and cultivated over millennia by philosophers, writers, sociologists and the Church, which [had] thoroughly prepared the ground for the ‘negative money fetishism’ that Marx [simply] topped” off (Dietz, 2020). See also “Usury”.

¹³⁵² “Sooner or later people will wake up. First we have to dump the trap of right and left, this is a Hegelian trap to divide and control...[It] is not between right and left; it is between us and them...”- Anthony Sutton. See also ShadowGate, 2020; “Social media”.

[a Millennialist dialectic... a half-century in advance? See Huber, 2013b, mn.42-43 (concerning Hudson-“MMT”)]

‘Helicopter money’- (formally: direct or ‘overt monetary finance’; colloquially a.k.a.: ‘basic income’ [EU], ‘Quantitative Easing for the people’ [UK], or ‘Citizen’s dividend’ [US])

1) “[E]conomists have long seen helicopter money as the most radical tool that central bankers could deploy to fight a weak economy”- Financial Times, Feb. 26, 2020. ‘Radical’?...

1b) ...remember that helicopter money is a *fiscal* policy of the *Treasury*, not a monetary policy of the Fed. The Federal Reserve is allergic to giving to the public, only to its cronies. See also “US (Treasury) Notes”.

2) Milton Friedman’s famous parable from 1969 is now, nearly half a century of debt accumulation later, being seriously considered. However, typically, the central bankers perverted the concept and dropped the money on the criminal bankers instead of their debtor victims who needed it.

3) The concept of ‘helicopter money for the people’ is a variant of ‘social credit’, ‘citizen’s dividend’, and ‘basic income’ ideas, often called welfare. “Milton Friedman is not exactly known as (a) left-wing, socialist, lover of inflation. And he ended up there because (helicopter money) is logically the policy which will always deal with deflation.... technically [i.e. sans politics] there is no reason whatsoever that we shouldn’t do an appropriately moderate amount of it, rather than too much” (Turner, 2016), if we are in fact interested in continued GDP growth. See also “Robotization”, “Monetization”, “Economics, Parity”.

4) A Helicopter money program “without having [Reserve/RAB] currency accounts available... [would simply continue to have] the banks [as] free riders [in] the arrangement” (Huber, 2018, 11). See also “Federal Funds (Accounts) for All”.

5) In Europe, “the legal admissibility of helicopter money under EU law– Art. 123 (1) TFEU, specifically– is questionable”¹³⁵³ (Huber, 2018). Ons Geld, however, points out a loophole: the TFEU’s “prohibition on monetary financing...[actually] does not stand in the way of the provision of cash to the government, provided that this is done *for free*. Today, this is not possible...[simply] because... money enters into circulation as (interest-bearing) credit... [and hence] needs to be financed”, which is of course not the case with direct sovereign money (Wortmann, 2019b, 13). See also “Ons Geld”.

See “Quantitative Easing (QE)”, “Citizen’s/national Dividend”, “Monetization”, “BlackRock”.

Hell- (the Vietnam War notwithstanding, generally a .9-sth. correlation with the lack of photosynthesis). See also “Great Extinction, 6th”, Gaede, 2008; “Ecological economics”, “Soddy, Frederick”.

High-powered money- (synon. “federal funds” [US]) See “Base money”.

¹³⁵³ The Article expressly forbids *direct* (i.e. non-bank) financing of public expenditure. See also “Japan model (asphyxiation)”, “Open Market Operations” [U.S.C.]

Historians, Great- (“Montesquieu” [ancient-medieval], “Quigley” [.medieval to mid-20thc], “Sutton” [20thc])

See “Cycles”, “National Identity/Nationalism”.

On the sea of (insert your favorite pronoun) emotional resonance,
the (economic) rudders of politics & State attempt to steer a dance.

See also “Hitler, Adolf” [.Sutton],

[<https://acegif.com/gifs-of-dogs-chasing-their-tail/>]

History- (elite studies¹³⁵⁴; and what that leads to¹³⁵⁵)

1) In the analytical (as opposed to the narrative¹³⁵⁶) sense, history is the (long-term significance) highlights (and lowlights) reel¹³⁵⁷ from all the other social sciences; albeit all-too-often only written by the (military) winners,¹³⁵⁸ who very often have substantial incentives to distort¹³⁵⁹ and to-- even more likely-- perceive selectively in ways that enhance the status of their particular group. See also “Groupthink” & “National Identity/Nationalism”; “Spotlight fallacy”.

2) In the US at least, only 8 schools account for “half of all history professors” (Warner & Clauzet, 2015), which is part of the reason why, for example, “[h]istorians of the [American] Revolution have always reflected the dominant view of their times” (Raphael, 2001, 318-n16). Tolstoy noted historians’ *group think* tendencies as far back as the mid-19th century.¹³⁶⁰ See also “Cycles”.

2b) The ‘nationalist’-group think blinders weren’t much better by the late-20thc. The “traditionally insular approach to so-called “British” history...is [still] rarely studied with anything like adequate reference to Scotland, Ireland and the American colonies, let alone continental Europe. The deeply-ingrained and undiminished segregation of “British’-- in reality English-- history from European history, which pervades its teaching and study in our schools and universities creates a narrowness of vision that has become a

¹³⁵⁴ “...the population at large plays only a marginal role in history, or at any rate in political and military history, which is the preserve of small elites: people do not make [design] history-- they make a living [judgement].”- Richard Pipes, Historian and Reagan Admn. “Cold War” architect (Siegel, 2004). “Decisions about goals requires [designing] values, meaning, context, perspective. They can [best] be set... only by people who have [at least] some inkling of the **whole picture**” (Quigley, 1966, 1,274). See also “Design”.

¹³⁵⁵ “Disobedience, in the eyes of anyone who has read history, is man’s original virtue. It is through disobedience that progress had been made, through disobedience and through rebellion.”- Oscar Wilde (1854-1900) See also App.C: “1-2-3”, “United States, the”.

¹³⁵⁶ It should be recognized, however, that History has not ever really been considered a “social science”, like (the equally troubled fields of) Sociology or Economics. In contrast, Historians are generally story-tellers from primary sources [literally “his story”]; and this narrative tradition of contemporary history “has its own [inherently *qualitative* (i.e. “what were they thinking”) and/or longterm, case study-based] characteristics” (Xiang, 2019). If this so-called ‘modern’ or contemporary history seems confusing, it may be because the field itself is in a long-term transition, from the past (hagiographic elite-studies) to the future (history-as-science). See also “Design”, “Design, human”.

¹³⁵⁷ “History...is an extraordinary tangle of causes and consequences, of human ingenuity and...accident, of environmental change and human response. Understanding requires...knowledge of both local events and of the wider world in which these events occur” (Mithen, 2004, 440). The field’s traditional elitism stems from this modern breadth, in addition to the fact that it initially developed in the early 19th century, to tell the stories (worth telling) of the various nations and tongues.

¹³⁵⁸ “The history of civilization is one of the success of people who figured out how to make exploration and growth *economic*, and the failure of those who did not” (Fitts, 2018d, 5). Would that be “macro” or “micro” (see also) “Economics”, “**Deceptive Banking Terms (d.b.t.’s)**”, “Political Economy, ‘classical’”.

¹³⁵⁹ He who distorts, wins? “The distortions that occur in the past will determine what happens in the future.”- Steve Pieczenik, (2018, mn.5). See also “Zionism”; and Boyd, 2020, mn.104 (for more contemporary ‘bad history’ attitudes), “Sabotage”.

¹³⁶⁰ “[M]odern history, like a deaf man, answers questions no one asks. If the purpose of history be to give a description of the movement of humanity and of the peoples, the first question... is: What is the power that moves peoples? To this [alas], modern history laboriously replies either that Napoleon was a great genius, or that Louis XIV was very proud, or that certain writers wrote certain books. All that may be so, and mankind is ready to agree with it, but it is not what was asked.... If instead of a divine power some other force has appeared, it should be explained in what this new force consists, for the...interest of history lies precisely in that force. History seems to assume that this force is self-evident and known to everyone. But... anyone reading many historical works cannot help doubting whether this new force, so variously understood by the historians themselves, is really quite well known to everybody” (Tolstoy, 1869, 931).

powerfully constricting cultural factor.”- Jonathan Israel (Israel, 1992). Nothing constricts, broadens, or generally keeps ‘the people’ in line like the H-factor, which is largely responsible for ‘the’ culture’s (see also) “[Nationality & National Identity](#)”.

2c) Hence, it was not until Liu Zhiji (661-721) of the Tang Dynasty, that “the first systematic treatment on historiography” was (even) attempted in China (He, at el, 2008, 279); or anywhere else¹³⁶¹! See also “Aristocracy (& nobility)”.

3) Is this a problem? A “small knowledge of history depresses one with the sense of the everlasting mass and weight of human iniquity: old, old dreary, endless[ly ignorant,] repetitive unchanging incurable wickedness.... And [yet] at the same time one knows that there is always good: much more hidden, much less clearly discerned, seldom breaking out into the recognizable, visible beauties of word or deed or face-- not even when in fact sanctity, far greater than the visible advertised wickedness, is really there.” - J.R.R. Tolkien, 1944 (Tolkien, 2000). See also “Orwell, George”, App.C: “1-2-3”.

4) Another, deeper problem is that historians generally “don’t understand money”, and have thus missed a lot of meaningful trends and long-term (determinant) developments (Vrabel, 2011, mn.9).¹³⁶²

“Historians, like the revolutionaries they study, have been slow to take an interest in how money is manufactured or even in what it looks like” (Spang, 2015, 103). “It is almost^as if historians, once they abandoned economic determinism as an explanation for class formation, were content to leave ‘the economy’ to function on its ‘own’ [personified] terms-- that is [in actuality], on *terms* defined and dictated by several generations of orthodox economists”; “Nonetheless... [20th century] monetary and financial histories [in turn]... tend to follow the chronology [*narrative*] established by political historians” (Spang,

214; 248).  See also “Economics”, “Monetary theory (historical)”.

5) This is how ‘Western Civ.’ (at least within a semi-literate context) should be chronologized: Prehistory- from no writing, to proto-writing (notches/scratches or art on sticks/shells [or walls]). See also “Tally sticks”.

Sumerian & Egyptian¹³⁶³ [riverine precocity]- from c.3600-c.1700 BCE; see “Jubilee”, “Credit money”. (1st Dark Age/anarchy, c.2200-c.2000 BCE)¹³⁶⁴

Bronze [pre-coinage] Age- c.3300-c.1150; see “Jubilee”. (2nd Dark Age/anarchy, c.1150-c.800 BCE)

Iron (Axial) Age- c.1100 BCE-c.200’s; see “Coined money”, → “Corruption”.

Late Antiquity [pre-development of mills]- 200’s-400’s; see “Usury”. (*slavery incr.?*)

Early medieval (3rd Dark Age/anarchy)- 500’s-900’s¹³⁶⁵; see “National Identity/Nationality” (cycle), “Freedom continuum”.

¹³⁶¹ According to Encyclopedia Britannica (21-5-26), Liu’s *Shitong* (“Historical Perspectives”), c.710, constitutes the 1st “comprehensive” work of historical criticism in any language.

¹³⁶² This absence has also been true, until very recently, in regards to History and Nature or climate. Historians have always been “extremely uncomfortable with the idea that natural forces in some way circumscribe human agency. Fearful of being labeled ‘environmental determinists’, we opt for a model of change in which all of the significant causal agents in historical processes are internal– or endogenous...[a.k.a. ‘downstream’] human culture, society, and economy.”- Historian John Brooke (Brooke, 2014, 1-2). What is “History” without due consideration of Nature (climate), “Money”, or even a decent understanding of the social phenomenon of “[National Identity/Nationalism](#)”? More like a high-paid/patronized “art” house than a “science” or even social science. See also “Economics”, “Academia”.

¹³⁶³ Although a unified Mesopotamian (‘proto-Sumerian’) culture-trade seems to have predated that of the Nile Valley (proto-‘Egyptian’) by as much as a millennium, in (the more specific) terms of the invention of *basic writing* and abstract monetary *units of account* (a.k.a. a *civilization*), the developmental time lag between the two is more like only a couple centuries (White & White, 2008f).

¹³⁶⁴ j (Brooke, 2014,).

¹³⁶⁵ Writing and history were, thanks to the monks, not entirely lost (to today) in this 3rd (or European) Dark Age (analogous to China’s preceding 4 centuries of political disunity & religious-cultural development from the 200’s-500’s). Unlike the Sui-Tang unifiers of the Middle Kingdom, however, the short-lived ‘Carolingian Empire’ of the 800’s quickly (and routinely) succumbed to violent political secession struggles (mini-civil wars), and central-western Europe wasn’t even culturally unified (with any sense of something approximating leadership) until the rise of “Latin Christendom” (a.k.a. the Papal Monarchy) and the “Peace of God” movement in the 11th century, when

High medieval (Christendom)- 1000's-1300's; see "[Great divergence](#)", "Western civilization".
Late medieval [[Warring States1](#)]- 1400's-1600's; see "Accounting, double-entry", "Civil National Identity".
Early Modern [[Warring States2](#)]- 1700's-1900's; see "Glorious Revolution", "Central Banking-Warfare model", "Revolution", "[Currency wars, the](#)". See also "Eras of (monetary) History".

6) "Revisionist history consists in the art of discerning fraud and the courage to strip illusion..."- Michael Hoffman, 2002. See also "Conspiracy theorist", "[Sutton, Anthoy \(1925-2002\)](#)".

6b) In the 20th century, at least, none was more courageous yet professional than the great Carrol Quigley: "The reality of the last 200 years of the history of Western Civilization, including... the history of our own country, is not reflected in the general brainwashing which you have received, in the political mythology which you have been hearing, or in the historiography of the period as it exists today" (Quigley, 1976c-pt.3, mn.241). See also "[Quigley, Carroll \(1910-1977\)](#)", "Foundations", "[Sutton, Anthony](#)", "Dumb-downing".

7) According to others, however, "it's quite possible that without such great illusions and great deceptions,¹³⁶⁶ too, no great [or at least greatly a-constitutional] nation can exist" (Weber, 1989h, mn.7). See also "Modernity", "Academia", "Civil National Identity" [Jefferson vs. Hume], "Morris, Gouverneur".

8) Hence like society, warts and all, it "is an organism, ever growing. History is the [written-published] self-consciousness of this organism."- "The Significance of History" (Turner, 1891). See also "Appendix C" [Montesquieu].

9) Does it matter? Humanity should not be constantly tricked. Nonetheless, "people forget and people die. And the memory and experiences are gone, and we go & repeat the same bloody mistakes all over again. You need some sort of long-term historical memory to...[avoid] that. And you can't do it with a market system. You have to have some **non-market system** which records that memory and knows what the hell's going on" (Keen, 2020, mn.45). See also "Academia", "Industrial Revolution, 3rd".

9b) This author is not sure if The (Carnegie, Rockefeller) Foundations are more 'market' or 'non-market', but They certainly knew 'what the hell was going on'. According to lead Reece Commission researcher Norman Dodd, after (see also) "World War One", the Carnegie Foundation (est. 1905) "decided that...[they] must control education in the [then-decentralized] United States... a...task... to big for them alone. So they approached the Rockefeller Foundation, with a suggestion that that portion of [US] education... considered 'domestic' be handled by the Rockefeller Foundation, and that portion which is 'international' should be handled by the [Carnegie] Endowment.¹³⁶⁷ They then decide[d] that the key to the success of these 2 operations lay in...an alteration of the teaching of American History. So they approach 4 of the...most prominent teachers of American History... [suggesting] to them would they alter the way...the teach this subject. And they [unsurprisingly] get turned down flat. So they then decide that it is necessary for them to...as they say 'build our own stable of historians'.... And...[their] group of 20 [Guggenheim Foundation-fellowshipped young]¹³⁶⁸ historians ultimately becomes the nucleus of the American Historical Association [AHA, est. 1884]" (Dodd, 1982, mn.28-31). See also "Usury" [cat-bird seat], "Pilgrim Society", "Foundations".

(not just monasteries, but) institutional discipline [via bishops] and eventually large-scale cathedrals sprang up across (what would come to be known as) 'the medieval' environment. See also "Eras of (monetary) History" [Christendom].

¹³⁶⁶ The State's proverbial oldest trick in the book ('divide & conquer') has sometimes been called "[t]he gigantic protection racket of political history...Accept my power, for I will protect you from worse violence-- of which I can give you a sample, if you don't believe me" (Mann, 1986, 100). See also "Statism"; <https://www.corbetteport.com/bioterror> [F.Flags], "[Deceptive Banking Terms](#)", App.C: "1-2-3".

¹³⁶⁷ The "Carnegie Endowment...and the Ford Foundation, and the Guggenheim, and the Rockefeller Foundation were all [c.1953] working in harmony towards the control of [the famously independent/non-centralized] education in the United States", and the Republican National Committee [RNC] leadership and White House were trying to stop the Congressional investigation (Dodd, mn.40-41). See also "Foundations", "Constitutions", "Fascism, Modern Hand of" [duopoly].

¹³⁶⁸ "[T]oward the end of the 1920's, the [Carnegie] Endowment grants to the American Historical Association \$400,000 for a study of our [American] history, in a manner which points to what can this country look forward to in the future... [The resultant] 7-volume...study... The essence of the last [conclusions] volume is [that] the future of this country belongs to 'collectivism administered with characteristic American efficiency'. That's the story that ultimately grew out of" the project, which was evident from the minutes of Carnegie Foundation meetings (Dodd, mn.31-32).

10) There has been (particularly in the UK) a revolution in the field of History since the 1960's and days of Carroll Quigley. "[S]ubaltern studies [or]... [w]riting history from below, rather than concentrating so heavily upon the rulers and elite who have determined the written record" (Stein, 1998, 36) might as well be called simply the New History (due to its radically different [see also] "Methodology"). See also "A.P. vs A.T. (Advanced Placement vs. Aversion Therapy)".

10b) When the "Adolescence of Mankind" has passed, history-as-Cycles will be more prevalent than (the old tradition of) history-as-'haloization'/demonization (of nations).¹³⁶⁹ See also "Teleology", App.C: "1-2-3". See also "National Identity/Nationalism", "Glorious Revolution, the", "Corporate Media Cartel", "Parties, political", "Usury cycles" [& 'knowledge'], "Design".

History, end of- (Fukuyama, c.1990-c.2002, was joking¹³⁷⁰; and Dodd, 1982 wasn't)

1) "In the Bible.... Redemption was a release from one's burden of sin and guilt, and the end of history would be that moment when all slates are wiped clean and all debts finally lifted, when a great blast from the angelic trumpets will announce the final Jubilee. If so, 'redemption' is no longer about buying something back. It's really more a matter of destroying the entire system of accounting" (Graeber, 82); or, rather, the '3rd Estate' attaining comprehension of how such systems of accounting create money, and how "authorities" have been lying (or believing/trusting liars) about it for centuries. See also "Freedom continuum", "K.J.B. (King James' Bible)/70 Year Plan", App.C: "1-2-3".

2) History, first and foremost, is political (which, in 'the West', means also monetary). But there are, of course, numerous other histories-- ever-more so in this time of easy documentation. Here are a few (and what this author thinks of them):

a) *World History*- pre-3000 BCE and especially pre-70,000 years ago, gets pretty boring & redundant.

b) *Monetary History*- pre-1500's or 14th century gets pretty boring & redundant.

c) *Womens' History*- pre-1850's pretty boring & redundant.

d) *US/Deep State electoral History*- pre-1948 pretty boring & redundant...

Thus: 'extra ("end of history") credit for linking up [some causality between] A and D; and of course one is not getting there without (at least)'some understanding of B and C.

See also "Historical illiteracy", "Adolescence of Mankind", "Freedom continuum (maturation)".

History, monetary- See "Eras of (monetary) History", App.C: "1-2-3".

Hitler, Adolf (1889-1945)- (a.k.a. the anti-Bismarck¹³⁷¹, per i.e. 'Operation Ninnyhammer' [from the 1920's])

1) Everybody knows that Germany had a spiky-head issue in the 1st half of the 20th century. But still the grand canyon gap between Bismarck and Hitler is still inexplicable without massive (international) financial intervention. Why are we supposed to believe that it was simply coincidence that the Land of Philosophy-- in its half-century of rivaling British dominance of Europe-- went from being led by a man who knew everything about British & Anglo-American diplomatic maneuvering, to Hitler-- a man so blinkered as to even deny the Pilgrim Society & UKUSA Agreements' existence? Even banal or basic stuff from the international poker table vanished from Germany public life with the rise of the well-oiled Nazi machine-- such as that Germany had come (deceptively) close to winning 'World War One' because the Americans could very easily sit around and watch Britain & its (over-extended) Empire get bled for 2-

¹³⁶⁹ This (welcome development) is simply the continuation (and expediting) of an ongoing trend in historiography-- away from elite officialdom & their occasional confessionals, and more towards (physically-evidenced) 'patterns of functional relationships'. In addition to the "constant output... [of 2nd Estate] ecclesiastics (particularly ecclesiastical rigorists [or page-turning fanatics])...only in *some* periods and places did lay [1st Estate] aristocrats commit themselves to writing... so it is only then that we get direct [primary] insights into the mind-set.... New texts [made available for historians] are rare; only archaeology will expand in the next decades, moving the balance steadily towards *the functional* (over the rhetorical), and] what can be said from the [*long-term*] material record" (Wickham, 2009, 16-18). See also "Lies", "Politics".

¹³⁷⁰ It is just beginning (to transform into more of a science). "The demise of communism...brought with it...the need to reassess our own constitutional [''] democracy..." (Lutz, 2006, 2). See also "Hegelian dialectic", "Orwell, George (1903-1950)", "'Democracy'".

¹³⁷¹ i.e. every bit as much of a blunderer of international diplomacy as Bismarck had been its master.

3 years, returning the favor of friendly national interest that had been visited upon America during (by Britain¹³⁷²) during the US Civil War.

2) "In 1933, Hitler sought to reassure Germany's business leadership that Nazi rule was consistent with the preservation of the [imperialists'] free-market system, because he **needed the support** of the industrialists. He could buy that support by keeping wages down during the recovery, but any rigorous effort to curb prices and profits would alienate the business community and slow down economic recovery. Instead, Hitler sought to restore profitability to German business through reduced unit cost achieved by increasing output and sales volume, rather than through a general increase in prices (*Mengenkonjunktur, niche Preiskonjunktur*-- output boom, not price boom).... Germany had no overall price policy until the 1936 Four Year Plan, which concentrated economic authority in the hands of Hermann Goering for war production and put an end to regulated free-market policies" (Liu, 2005).

3) But when the Nazi's (big bank) former Reichsminister of Economics (r.1934-37) and longtime Reichsbank President Helmar Schacht (r.1923-30; 1933-39) suddenly ordered the Reichsbank to stop renewing so-called 'MEFO bills' in January of 1939, Hitler immediately fired his long-term I.G. Farben man, and then tried to keep it secret for 5 months, even though the longtime Gov. of the Bank of England, Montagu Norman, was godfather to Schacht's grandchild (Zarlenga, 2002). Did such (would-be) deceptions work (in keeping the USA on its side of the Atlantic)? No. See also "Russiagate", "UKUSA".

3b) Needed their support for what? Hitler, contrary to some of the more extreme propaganda, did not invent ENI, chauvinistic German ethnic mythology, or the 'barbaric' idea that a larger German "nation" long predated any politically-unified German state. All of those theories and practices were from the preceding century.¹³⁷³ See also White & White (2008).

4) Hitler, stupid? The long-term planning for **would have been impossible without the formation of the Fed [1913], which financed** [(via the 'globalist' bankmoney network's)] **WWI and also backed the 1917 Bolshevik takeover of Russia**. The German-Prussian establishment (per Wilhelm II) was not oblivious (or in denial of the significance) of this (geo-political reality)¹³⁷⁴, but was marginalized **after Versailles**. See also "World War Two", "UKUSA Agreement".

4b) Herr Wolf, however, was certifiably insane¹³⁷⁵ from approx. the same day that the first American was conscripted in the winter of 1942 (and they always knew it would happen sooner or later). See also "Fascism" [.beauty].

See also "**Currency Wars, the**", "**Ethnic (National) Identity (ENI)**", "Hypertrophy".

British War Deaths- 3rd Currency War

¹³⁷² The British egging on of the Southern secession movement c.1860 could have cost about a million war deaths. Whereas America in the 1910's, as the ultimate inheritor of the British Empire, simply had a interest in Germany being prevented from completely stealing-- as opposed to merely *hastening*-- that picture. How stupid would a German national leader have to be not to know this? See also 'Sutton, Anthony (1925-2002)".

¹³⁷³ Austria (Osterreich) was pretty much always considered part of "Germany" from the 1100's up to the Prussians victory of 1866. Johann Herder (1744-1803; 'modern' Germany's founding philosopher) was East Prussian (in what is today eastern Poland), but even in his time books commonly listed Vienna (more than 900 kilometers/600 miles to the south) as being the "capital of Germany":

https://www.google.com/books/edition/A_New_Geographical_Historical_and_Commer/kbDtRkbn-YAC?hl=en&gbpv=1&dq=capital+of+germany&pg=PA495&printsec=frontcover [1810, p.16]

¹³⁷⁴ It was already common knowledge that "a fundamental paradigm shift of power...[had already occurred] between the 1870's and 1914, with the [initial stages of] decline of the British Empire, and the emergence of two rival empires to [further]...that... the German Reich, and... the United States" (Engdahl, 2008).

¹³⁷⁵ ...and on a "crazy" (de facto loser's) script from a year earlier (winter 1941), when planning for the "Barbarossa [barbarians'] Decree", issued in March, and further subsequent lawless "Guidelines for the Conduct of the Troops in Russia" in 1941. In late March, Hitler announced (according to the journals of Gen. Franz Halder) to the Wehrmacht that the war against the Soviets "cannot be conducted in a knightly fashion", because it was a war of "ideologies and racial differences" (Shirer, 1990); arguing that the international Hague Conventions of 1899 and 1907 were not applicable, since the Soviet Union had not signed them (even though both Germany & the Russian Empire had done so). See also "**Ethnic (National) Identity**".

[‘Fighting smart’: UK (& French) mil. casualties were less-than-half for Part 2.]

‘Hollywood east’- See “Statism”, “Orwell, George (1903-1950)”, “Plausible deniability”, “History”.

Homogenization- (what incentive do banks possibly have to loan for either risky or public purpose programs with no guarantee of profit?) See also “Finance Capitalism”, → “Bank welfare”.

1) “Organizational structure, which used to arise from the rules of efficiency in the marketplace, now arise from the institutional *constraints* imposed by the state [RAB] and the [dominant] professions [TAB]. The efforts to achieve rationality...[plus] uncertainty and constraint lead to homogeneity of structure ([a.k.a.] *institutional isomorphism*)¹³⁷⁶ (DiMaggio & Powell, 1983). See also “Groupthink” (the internal counterpart to external isomorphism), “Capitalisms”, “Tickbox”.

2) Monetized credit institutions’ “decision of 1] who gets the money & how much money they get, and 2] what are they going to use the money for...*reshapes* the economic landscape...” (Werner, 2021, mn.29). See also “Bankmoney regime”, “Race-to-the-bottom”; “Decentralization”.

[2010’s- high-homogenization mark?]

Homosexuality- At the end of the day, it’s not (even when defined liberally, f.e., as any/all forms of perverse sexual behavior) in big enough numbers to [directly] effect population. Zoom out with enough long-term perspective and what it’s really doing is driving the growth of Big Government, as do its siblings bankmoney & (the resultant) bank welfare. From men-in-robos running things to the ‘military-financial-intelligence complex’-- when does the trend stop? How much is enough? Or as Michael Palin would say, “Strange women lying in ponds... is no basis for a system of government.”

See also “Big Government (growth of)”, “State capture”, “Secrecy, Cult of”, “Transhumanism”.

Homo Economicus- 1) An axiom “is something that we know to be true, so much that we never have to check whether it [really] is true. And...if you’d check, you’d find out [perhaps that] it’s not true... [‘Modern’ Economics] fundamental axiom is that people are very selfish. They want to maximize their own satisfaction, and do not at all in the least care about other people. That is the axiom on which Modern Economics is based.... If you showed... the description of...this *homo economicus*... in their deductive model... to a psychiatrist or a doctor, they’d say ‘*Well, somebody’s seriously ill here*’. They...assume that what other people do and say will never affect you, will never influence you, which means that advertising, commercials...[and promotions] would never work.... [T]he reality is the opposite of what they tell you” (Werner, 2018, mn.1-2). “Mankind would have died out long ago, if these assumptions had been true” (Werner, mn.4). See also “Devil”, “Transhumanism”.

¹³⁷⁶ Isomorphism is a “constraining process that forces one unit in a population to resemble other units that face the same set of environmental conditions.... Organizations compete not just for resources and customers, but [also] for political power and institutional legitimacy, for social as well as economic fitness” (DiMaggio & Powell, 1983). See also “Globalism”, App.C: “1-2-3”.

2) Can “we abstract from man all but [his] selfish qualities in order to make, as the object of our thought on economic matters, what has been called ‘economic man’, without getting what is really a monster, not a man”? (George, 1898, 99). See also “Monstr.”, “K.J.B. (King James’ Bible)/70 Year Plan”. See also “Economics”, “Bankism”, “Human beings”, “Gesell, Silvio (1862–1930)”.

Homo sapiens- See “Human beings”.

Hong Kong- See “Central clearing counterparties (CCPs)”.

Housing & Urban Development (HUD), Dept. of- 1) “In 2000 I went to visit with the chief of staff to the senator who runs the appropriations sub-committee for the US Treasury, HUD, and a large group of [federal] agencies, including NASA...[which], whenever it came up short, they’d [just] strip the money out of HUD[’s budget].... [The appropriations chief] looked me dead in the eye, dead seriously, and said ‘HUD is being run as a criminal enterprise’. And I said ‘I don’t disagree’. The thing to understand about HUD is that it is a matrix structure, controlled by the Department of Justice, and the Department of Treasury, and the New York Fed member banks who do all the New York Fed servicing and transacting and other responsibilities” (Fitts, 2018o, mn.41-42). See also “Fitts, Catherine Austin”.
2) In FY 1999, “they said they were missing \$59 bn. in one year-- which is bigger than their entire budget” (Fitts, 2022n, mn.21). See also “Unsupported journal voucher adjustments”.

Housing prices- Believe it or not, the main source of society’s money supply today is new mortgage loans (banks’ primary business). More demand for housing and real estate increases the amount of loans and hence new bankmoney creation. See also “Bankmoney”.

1) “Asset markets”, such as housing, “tend to move ahead of the physical economy.... When the housing bubbles burst, as they did in America...in 2006, it’s sometime after that that the economy itself falls over” (Keen, 2017e, mn.50-51). See also “F.I.R.E. sector”.

2) “Mortgage debt drives house prices, not the other way around” (Keen, mn.52). See also “Mortgage bonds (subprime)”, “Asset inflation”.

[Bank lending (TAB-bankmoney) has not recovered from 2007-08, only various form of “bank welfare.”]

Huber, Joseph- (the 2¹st century’s leading monetary reform theorist and academic, per “economic sociology” at Martin Luther Univ. in Saxony-Anhalt, Germany)

1) “[T]here is a common understanding that ecological modernization will have to result in innovative structural change...[R]esearch... [has traditionally been] more focused on environmental innovations, or eco-innovations, and the interplay of various societal factors (scientific, economic, institutional, legal, political, cultural), which foster or hamper such [coming] innovations (Klemmer et al., 1999; Huber, 2004; Weber & Hemmelskamp, 2005; Olsthoorn & Wieczorek, 2006).”- wiki’s “Ecological modernization” page (accessed Nov 8, 2021). See also “Great Extinction, 6th”, “Economics, Parity”.

2) (Huber, 2021b).

See also “Monetary reform”, “Sovereign money”, “Bankmoney regime”; “Primary Sector Economics”.

Hudson, Michael – “One of 8 economists to forecast the 2008 crash”¹³⁷⁷.... (Hudson, 2015, 10).

1) “...Wall Street seemed more interested in my flow-of-funds analysis than [did] the Left”¹³⁷⁸ (2016, 6).

2) “I used to work for Chase Manhattan for many years. And I worked for other banks. I was a bank analyst, so I saw how it was done. While I was working for the bank, I was taking my PhD at New York University.¹³⁷⁹ And the courses had this fantasy about how banks work. I would say, wait a minute, this is not how—here’s how banks actually work” (Hudson, 2016s). “When I worked for banks, until about the 1970s, banks really had a research department. I did actual research & statistics. After I left the bank, they changed the name to research & *publications*. And it was all public relations.... Citibank¹³⁸⁰ led it all. It was all lobbying... all fictitious stuff.... Today, it’s all public relations from the bank, and you’re just not going to get anything. I think the Bank of England is the only really innovative central bank that I can think of” (Hudson, 2016s). See also “Central Banks”.

3) “You want to look at the economy in terms of who gets the income, and what do they do with it” (Hudson, 2017g, mn.101), as did “classical Economics”, pre-20th century. See also “Clark, John Bates”.

4) “[T]his is the same fight that has been going on for thousands of years, across civilization-- the attempt of society to cope with the [simple] fact that debts grow faster than the ability to pay” debts (Hudson, 2017s). See also “Compound interest”, “Leverage”, “Usury”.

5) The main point today, however, is “segregating the F.I.R.E sector from [devouring] the real economy” (Hudson, 2017b, mn.20-21). See also “Criminalization of Banking”, “Neoclassical Economics”.

6) ...Hudson’s prescriptions for this correctly-diagnosed problem, however, are, for some reason, straight out of the Bronze Age (Hudson, 2018e). Perhaps this is because Hudson fails to acknowledge that Iron Age (and **all** subsequent) coinage constituted ‘interest-free’ or ‘sovereign’ money (Hudson, 2019b); yet alone constituting a “coinage revolution” that sparked (what was once known as) “Western civilization”. See also “Coined money”.

7) Nonetheless, Hudson is one of very, very few economists **who** (more or less) **understand both land and money**. See also “Gesell, Silvio (1862–1930)”.

7b) “I started the first 3rd World bond fund in 1990 at Scudder Stevens [offshore], [when] Brazil and Argentina were paying 45% interest...on dollar debt.... And all of the debt was sold to the Brazilian [and Argentine] ruling class in the central bank... because the ‘Yankee dollar debt’ was owed to [sic] *themselves! They’re the Yankees [now]!*” (Hudson, 2020c, mn.122-123).

8) In the 21st; “[m]y books sell mainly in China, more than...in all the other countries put together.... I stopped publishing in orthodox [monetary economics] journals many years ago, because it’s talking to the deaf” (Hudson, 2020c, mn.102-103). See also “Super Imperialism”.

See also “Jubilee”, “Communism”.

¹³⁷⁷ “Why Some Economists Could See the Crisis Coming,” *Financial Times*, Sept. 7, 2009.

¹³⁷⁸ “It seems that almost everybody likes just a single enemy. In the 19th century the enemy [was] *landlords*...and then the enemy in the 20th century became *industrial employers*. But nobody realized that both the landlords and the employers end up paying most of their revenue to the banks as interest.... and all they [monetized credit institutions] do is load the economy more and more down with debt...” (Hudson, 2017l, mn.2). See also “Debt saturation”.

¹³⁷⁹ “...because all they [NYU] wanted was my money, not my brains” (Hudson, 2017n, mn.33).

¹³⁸⁰ According to America’s foremost bank investigator, Bill Black, Citibank was basically set up (like HSBC in the 19th century) as “a criminologic organization”. “That’s an example of the parasite taking over control of the brain... [via its] dominating the [US] Treasury and the financial regulatory systems” (Hudson, 2017g, mn.54). See also “Foundations (of totalitarianism)”, “Parasite”, “Regulation”.

Human beings- (synon. '*homo sapiens*'¹³⁸¹ -- ape [hardware/body] who knows/self-consciousness¹³⁸² [software/mind]; not to be conflated with simply 'humans'¹³⁸³/homos). See also White & White, 2008c.

1) The 2 "most formidable individual powers are logic and imagination. *Logic* is essentially grounding and stabilizing. It allows you to analyze any situation or cluster of information and see through to its validity or invalidity, beyond [emotional] deception. *Imagination* takes you soaring. It allows you to see your greatest vision for your life-- and therefore act toward its fulfillment.... [I]f you decide you want to help those you care about and lift them up, try doing it without logic and imagination and see how far you get" (Rappoport, 2021).

See also "Culture", "Anthropology & Evolution", "Homo Economicus", "Google", App.C: "1-2-3", "Design", "Consciousness".

Human rights- See "Sovereignty" [Bjerg].

Hume, David (1711-1776)- (Montesquieu's successor [& Adam Smith's best friend] was/is the father of Britishness¹³⁸⁴ [whom Anglophile Jefferson derided as a 'Tory'-imperialist (for Hume's characteristic 'wetness' & moderation)], at least when it is not being 'perfidious'.) See also "Whig".

1) "the man who destroyed the Lockean concept of the social contract theory"- John M. Werner, 1972, 1b) ...was also rather 'wet' (or weak-kneed, tepid) on "Natural law": "Hume certainly advocates the sort of constitution that [like Locke] protects the people's liberties; but he justifies it not based on individual natural rights or contractual [common law] obligations, but...[rather] on the greater long-range good of society."¹³⁸⁵ - <https://plato.stanford.edu/entries/hume-moral/#:~:text=In%20his%20political%20essays%20Hume.long%20range%20good%20of%20society.>

See also "Common law", "Natural law"; "Long-term orientation", "Imperialism", "Whig".

2)

See also "Locke, John (1632-1704)", "Smith, Adam 1723-1790)", "Jefferson, Thomas (1743-1826)".

Humor- "Once we understand the brain as a self-organizing information system, then we can understand creativity as 'lateral movement' across asymmetric patterns. It is the same process as humour" (de Bono, 1999, 278). See also "Design", "Unconstitutional".

See also "History", "Monty Python's Flying Circus", "Military leadership (of 20thc-millennial UK-USA)".

Hyperinflation- See "Inflation/deflation".

Hypertrophy (scale bias)- (a.k.a. 'blowouts', the leading cause of death for monster-scale/TBTF institutions that are resented by the majority) 'Debt-based monetary systems' are nothing new in world history, though both of these terms (which are strongly correlated) are rarely encountered in the pages of World History. See also "Numbers", → "Leverage".

¹³⁸¹ In the early 90's, "a series of papers established some basic parameters for...[relatively] modern origins. 1st, the effective population of reproductive women involved in the speciation even was extremely small, no more than 10,000 individuals. 2nd, genetic loci [also] indicated that all...[h. sapiens] populations had experienced an evolutionary bottleneck early in their history, followed by expansions" (Brooke, 2014, 97). See also "National Identity/Nationalism".

¹³⁸² "Thinking doesn't produce consciousness. Consciousness produces thinking, and all these computer [Markovian-mad] scientists are trying to explain away consciousness!" (Gilder, 2018b, mn.40); i.e. that which distinguishes 'humans' from sapient human beings. They "say 'Oh well. We don't know what consciousness is. But our computers are going to compute so fast that it won't matter'" (Ibid). See also "Dumb-downing", "Philosophy", "Google", "Parties, political".

¹³⁸³ "Occam's famous [empirical] razor...[has cut] the *spiritual vertical of being*" (Dugin, 2021). See also "Russia (& Ukraine)".

¹³⁸⁴ Usually a nay-sayer (from a strict Calvinist background which he resented), Hume seems to have published the proverbial 'first-est and the most-est' acclaimed materials that read neither 'English' nor particularly 'Scottish' in character, reflecting the 1710's merger-marrage of (the dominant) English 'radical' liberalism with (the defensive) Scottish conservatism.

¹³⁸⁵ Hence Hume was effectively elevating the (discretionary, 'long-term') 'common good' over both 'common law' and (to the extent that he even recognized it) 'natural law', hence earning the ire of Thomas Jefferson, who banned Hume's *History of England* as (pro-Tory-monarchist) "poison".

1) Rome's dominance of the Iron Age was based upon being "...the 1st country of the world not to cancel the debt... war in Sparta, in Greece, [was] to overthrow the governments and the kings that wanted to cancel the debts. The wars of the 1st BC ended up stripping these countries of everything they had..." (Hudson, 2012c). Apparently we are to conclude that the leaders of the Italian peninsula in the 2nd half of the 1st millennium BCE were committed to being larger and more ruthless than their civilizational ancestors; hence a hitherto unprecedentedly unbending attitude/ethos of (as Michael Hudson often says), "a debt is a debt, and all debts must be paid", and, at least by the 1st century BC, the resultant, incessant search for fresh, lower-debt societies and *natio*s to conquer. This (eventual death by) hypertrophy is how such a famously yang-like culture of the early Republic was transformed, gradually (over 7-8 centuries), into a yin-like bonanza of debt-saturated opportunity for barbarians. It's an old story.¹³⁸⁶ See also "UKUSA Agreement", "Cycles", "Debt cycles".

2) Does such an underlying debt dynamic still hold lessons for today? "The financial causes of crises have a common monetary cause: overshooting [new] money creation that does not stop until the game breaks down under its hypertrophic dynamics. Financial markets cannot work properly [for anything other than consolidation] the basis of a malfunctioning monetary system" (Huber, 2017, 1). See also "[Corrosion-Cancer-Debt](#)".

See also "Usury", "Compound interest", "Bonds", "Wall Street", "Violence", "Breakaway Civ."

Hypocrisy- (euphemisms: 'double standards', 'multi-tiered society') See also "Mediocrity", App.C: "1-2-3". "The more they try...[to] persuade you that the digital world is lacking in integrity, the more they try...[to] centralize everything into the digital world. The multiple personality disorder of their marketing... is quite extraordinary" (Fitts, 2021e, mn.14). See also "National Debt Economy" ('the mother of [contemporary western] hypocrisy'), "[Devil Game \(America's\)](#)", "Bank welfare", "[Deceptive Banking Terms](#)"; "[Methodology \(culture\)](#)".

See also "World Economic Forum", "CFR", "Oligarchy", "PR", ← "Bernays, Edward", "Mediocrity"; "Integrity".

Iceland- "adopted...[a] Latin American strategy... and they have now brought down three [corrupt] governments...[each] within days. And they got real prosecutors... It's the only place in the world where each of the CEO's that lead the major frauds have been imprisoned" (Black, 2016c, mn.40).

"" (Keen, 2017, mn.).

Identity politics- See "Politics, identity".

Ideas- (nothing travels faster) "Things are simple and concrete, and their effects on our lives are easily noticed. *Ideas*, on the contrary, are complex and subtle. They have a way of escaping us just when we think we have grasped them. Yet today it is increasingly evident that our lives are often shaped more by certain ideas-- whether for good or evil-- than by the material things that surround us" (Bodde, 2005). See also "Imperialism".

See also "Economics", → "Economics science".

Idealism, American- ('What profiteth a man to gain the whole world [or continent]'...just to lose it)

18thc- "Jefferson, Thomas"

19thc- "George, Henry"

20thc- "Wilken, Carl".

See also "Ecological economics" ('how the world actually works'); "[Freedom continuum](#)", "[World Par Economy](#)".

¹³⁸⁶ How 'bad' [or 'good', depending on ones' perspective] did it get (the transition from Usury to Anarchy)? "In the early Middle Ages when there had been no state and no public authority, political organization...[was] the feudal system...held together by obligations of personal fealty among a small number of people" (Quigley, 1966, 35-36); and typically enforced by violence. See also "Gold Standards/bullionism", "Violence".

Ideology- 1) “A set of assumptions so appealing that one looks at their abstract logic, rather than at how the world actually works” (Hudson, 2013). See also “Myths, Big 6”.

2) What is so appealing? “An ideology always exists in an apparatus and its practice or practices... [W]hat is represented in ideology is not the system of real relations... but the imaginary relation of individuals to the real relations.”- Louis Althusser, 1971, (Spang, 2015, 271). See also “National Identity/Nationalism”.

3) In the 21st century political sense, however, it has been, thus far, not much more than “...a complete divide & conquer tactic to divide people who [would otherwise] all agree that the money should be used lawfully” (Fitts, 2017f, mn.15). See also “False dichotomy”.

4) more ‘neuro-linguistic programming’; “getting lost in words” (Roberts, 2017d, mn.46).

See also “Public relations (PR)”, “Orwell, George (1903-1950)”, “Ontology & Epistemology”, “Hegelian”.

Ignorance, monetary- see “National debt economy”, “Deceptive Banking Terms (d.b.t.’s)”, “Myths, Big 6”.

Ignorance, rational- see “Democracy”, “Parties, political”.

Imperial decline- (any war machine, just as surely as the arc of the sun, is eventually pointed at the domestic population & marketplace) “Slowly [at first], the formal structures of the [local] councils weakened, above all in the 5th century, and by the 6th even tax-raising [power] had been taken over by central government” (Wickham, 2009, 24). “Big government (growth of)”; “Economics, Parity”.

1b) ‘Pride-before-fall’; see also “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”, “National Identity cycle”.

2) Local elites began to prefer rural living, “and...archeology...increasingly shows radical material simplifications after 400 or so on Western urban sites, and the tax burden on city councilors starts to look like a cause of urban abandonment, maybe in the context of the fall of the empire itself...[But such an] “over-negative.... interpretation... does not fit the East[ern Empire. There] city councilors were indeed marginalized... in ever more hectoring imperial laws...but provincial elites [nonetheless] remained firmly based in cities.... In the West, urban elites...had rural villas, lavish country houses where they spent the summer months (in the East, these were rare, or else concentrated in the suburbs...); but cities remained the foci... And where the rich went, others followed¹³⁸⁷” (Wickham, 2009, 25). See also “Hypertrophy”, “Accounting”.

3) “Did early medieval peoples feel insecure or [even] nostalgic about the Roman past? There is very little sign of it. Gregory of Tours [c.538-594], although of an aristocratic Roman family, seems hardly aware the empire has gone at all.¹³⁸⁸ His founding hero was Clovis [r.481-511], and all his loyalties [were] Frankish” (Wickham, 2009, 200). See also “National Identity/Nationalism” [NationalityCycle], “Dutch disease”.

Imperialism (classic)- (i.e. ‘the brontosaurus’¹³⁸⁹ of economic empire; not to be confused with ‘colonialism’, which is about migration [& is less-profitable than non-colonial imperialism])

- some obvious ‘tricks of the trade’ herein, beyond just ‘carrots & sticks’¹³⁹⁰

¹³⁸⁷ I.e. “...their servants and entourages...[and] merchants and artisans who wanted to sell them things, and the poor who hoped for their charity; the basic personnel of urban life” (Ibid).

¹³⁸⁸ The “population drop between the Roman Empire and the earliest Middle Ages [was] not reversed until the 10th century or in some places even later.... The slow demographic growth of the Carolingian period, conversely, went hand in hand with an increase in aristocratic landowning and in the intensity of exploitation of a tenant population” (Wickham, 2009, 217). See also “Aristocracy”, “Parties, political”.

¹³⁸⁹ How can a brontosaurus-- the biggest thing on land-- be invisible (and unheard)? See also “Intelligence Community”, “CIA”.

<https://www.youtube.com/watch?v=Ub1qw2MmVOM> [GiantLand]; what did the (imperial) brontosaurus die of? Lack of cartilage (3rd Estate) is somewhat Gross (painful). See also “Gross Domestic Product (GDP)”, “App.C: 1-2-3”.

¹³⁹⁰ The mid-19th century derived metaphor has “carrots” first, because economy is always the foundation of power on Earth (not the other way around). Ripping off the farmer and imperialism were born together and will die together. See also “Power”, “Main point”, “Parity”.

1) Usurious hypertrophy constructs [from Greece & Rome, to the UK & US] are only built upon, ironically, *anti-usury*, sovereign-money & egalitarian-citizenry foundations¹³⁹¹. See also “Numbers”, “Coined money”, “Hypertrophy”, “Dynastic cycle”, “Civilization, Western”, “Historical illiteracy”

1b) In the (pre-banks, pre-‘corporate personhood’) USA, the “government’s [big] idea was to create a dependency on American goods [in order] to keep the Indians friendly.... The Americans offered [what were then called] treaty goods (calico shirts, axes, knives, blankets, kettles, mirrors, ribbons, thimbles, and abundant wine and liquor casks¹³⁹²)... and promised additional shipments every year. In exchange, the Indians [eventually] ceded most of Ohio to the Americans” (Roarke, et al., 2012, 273). See also “Imperialism, American”, “Washington consensus”, “Food (and food-like substances)”.

2) It’s not just military spending (and unforgiven ‘debt-slavery’). Valid-path Empires need as many *carrots* as they do sticks. Principally this has always been through subsidizing cheaper/lower core commodity (a.k.a. raw material) prices-- principally agriculture (food). Rome and the US were able to do this more directly than the (longtime food-importer) UK; thus the latter depended more heavily upon its navy (and pragmatic propaganda/diplomacy) to deliver ever-lower commodity prices more indirectly (via the facilitation of trade-industrialization). See also “Free-Trade, theory”,

2b) It may sometimes be overlooked that the 20th century USSR was also an Empire, and an empire that relied upon over-abuse of the ‘classic’ imperial strategy. Alexander Solzhenitsyn famously attributed the USSR’s [gradual, then accelerating] demise to (the same old culprit) unsustainable over-subsidization of cheap food exports to its de facto colonies (i.e. Soviet-dominated areas where Russian was not the mother tongue), bleeding the economy’s core foundations, *slowly, little-by-little*, in a policy that was not changed after their victory in The Great *Patriotic War*. See also “Economics, Parity”, “USSR” [Solzhenitsyn], “Patri”.

3) The structural incentivizing of lies: <https://www.paulcraigroberts.org/2022/10/12/the-government-also-taught-us-to-lie/>

See also “Reserve currency”, → “Dutch disease”, “Evil” [.self-righteousness].

Imperialism, American (‘post-war’)- (a long half-century of ‘most of the people, most of the time’ social heuristics, until the [inevitable] Crisis¹³⁹³)

- pretty much a .9 correlation between the credulity of the US population and the percentage of (supposedly ‘US’) dollars held/owned abroad. See also “Eurodollars”. “It is a conqueror’s business to repair a part of the mischief that he has occasioned. The right, therefore, of conquest I define thus: a necessary, lawful, but unhappy power, which leaves the conqueror under a heavy obligation of repairing the injuries done to humanity.”- Montesquieu’s *Spirit of Laws* (1748, 137). See also “UKUSA Agreement”; “Reserve currency”, “Inequality”.

1) Until “the late 1870’s, the attitudes of judges toward corporations remained consistent with revolutionary era wariness of corporate [imperial] power. By 1900 [however], the prevailing judicial philosophy had shifted dramatically. A new generation of judges had embraced the corporation as the engine of American economic progress, and a series of cases had been decided giving corporations the right to challenge state legislation under [a fraudulent interpretation of] the 14th Amendment and [also] federal legislation under the 5th Amendment” (Nace, 2003, 86). See also “United States, the”, “Corporations (and corporate ‘personhood’)", “Reserve currency”, “Dutch disease”.

2) [--*Forming; Storming; Norming; Performing; Adjourning*--]

1917- de facto global Emp. (via Wilson Admn.); & world’s leading res. currency by 1920’s;

1934- de facto federal underwriting of all bankmoney (via FDIC insurance)

¹³⁹¹ National Identity gradually moving from heroic to villainous (social roles) is a very old trope in (monetary) history. See also “Dynastic Cycle”, “National Identity Cycle”.... and may well continue as long as the vox pop/masses/3rd Estate do not understand (see also) “Eras of (Monetary) History”, and App.C: “1-2-3”.

¹³⁹² “More of us have died since the Treaty of Greenville [1795] than we lost by the years of war before, and it is all owing to the introduction of liquor among us”, said Chief Little Turtle in 1800. ‘This liquor that they introduce into our country is more to be feared than the gun and tomahawk’” (Roarke, et al., 2012, 274).

¹³⁹³ It’s not rocket science. US aggregate debt levels have been doubling (1950’s-60’s), or more-than-doubling every decade since c.1970 (Walters, 1971, 203). See also “Compound interest”. Timing? See “Debt cycles”, “Cycles” [usury].

“[O]ur whole system is destroying communities. Much of the legislation of the last 40 years in this country has been aimed at the destruction of families, neighborhoods, ghettos, parishes, or anything else [deemed old]” (Quigley, 1976c-pt.3, mn.349-50). See also “Homogenization”.

1944- (+sticks=) *de jure* global Emp.

1952- (+carrots=) abandonment of (the decade of) Parity pricing (i.e. now more federal bank supports than farm supports; then food exports being used as a weapon from early 60's)

“In 1970, the last year for which I have any reliable figures, 2000 farms a week are going out of production” (Quigley, 1976c-pt.3, mn.350-51). See also “Imperialism (classic)” [FarmCrisis].

2020- *de facto* adjournment (see also “COVID”)

- with the cracking up of Bretton Woods II, basically all facets of the imperialism are “coming home to roost” (Titus, 2021, mn.1). See also “Dutch disease”.

3) ...and perhaps half of the surmised citizenry don't seem to realize the basic problem set. “[T]his really gets to a core problem in our country right now...the inability to recognize and address reality-- the inability to face a problem... [And for some], the worse it gets, the more we don't want to face it. That's called ‘Washington, D.C.’” (Binney, 2021, mn.101); and money is not wealth-- it is only chits for (see also) “Wealth”. See also “Cognitive dissonance”, “Man in the street, the”, “Economics, Parity”, “Reform”. What could go wrong? “Pyrite”, “USSR (1921-91)” [strip-farming], “Land Bridge”.

See also “Super Imperialism”, “Reserve currency”, →“Chicago School”; “Debt cycles”, “Jones, Alex”,

Imperialism, English (language)- It's not merely the (so-called “modern”) monetary-financial bamboozlement, or some primordial ‘bright eyes & bushy tails’, but also the (early medieval) development of a non-ridiculous grammar system that made English less objectionable (as a foreign intruder) than other Indo-European (or Afro-Asiatic, or Sino-Tibetan/pictographic) language systems.

See White, 2007 (<http://nationalityinworldhistory.net/LanguageandCulture.html>).

Imperialism, ‘modern’- (i.e. ‘your flag, our monetary-economic system’)

1) “The UK doesn't have finance. The City of London has [it], and it's not part of the UK” (Werner, 2017, mn.14). See also “Three Romes”, “Land bridge”, “City (of London), the”.

2) “...take [the] Constitution of the Jesuits if obtainable and insert ‘*English Empire*’ for ‘*Roman Catholic Religion*’”- Cecil Rhodes, 1888, instructions to Lord Nathan Mayer Rothschild, the trustee of his 3rd will (Quigley, 1981, 34). See also “Shell game, the”, “Conspiracy theory”, “English constitution”.

3) Is the (so-called) ‘modern’, global monetary-economic system based upon an inverted economic pyramid (or upside-down tree¹³⁹⁴) of the real world? If indeed so, it would be hard to see how exponential growth in both indebtedness and the State would not be the inevitable result. Some identified the (so-called) ‘modern’ trendline in America from the USA's nascent days. “A [successful] nation risks too much, by laying heaps of public wealth in the way of her servants, which they may take up, and put in their pockets, without being seen¹³⁹⁵, and without account.¹³⁹⁶ Such trials of integrity¹³⁹⁷, involve too serious and fatal¹³⁹⁸ consequences for national amusement” (Taylor, 1794, 27). See also “Empire (in the so-called ‘modern’ age)”, “Common sense”, “Monetary reform, big picture”.

4) “Slaves to some defunct philosopher?” In terms of money (the ‘modern imperialism’), Locke (in addition to Hobbes) was a bullionist.... ‘Tory’ Hume started, in the 1750's (the mindful & deliberate public) *flip-flopping* over what ‘money’ [that primary yardstick of first public life, and then nearly all social life] was and should be. Smith (perhaps recognizing the primacy of the American Revolution to a new ‘modernity’ and

¹³⁹⁴ See also “Primary Sector Economics”; the Primary sector is taken for granted (as something to run down) by ‘modern’ imperialism, but it usually wasn't by (longer-lasting) ancient and medieval Empires. See also “USSR”, “Race-to-the-bottom”; “Physiocrats, the”.

¹³⁹⁵ See “Secrecy, cult of”, “Military-Executive-Corporocracy (MEC)”.

¹³⁹⁶ Or without a public audit that means anything; see “Federal Accounting Standards Advisory Board (FASAB)”.

¹³⁹⁷ Also known as “a successful nation”. See also “Integrity”.

¹³⁹⁸ Unlike in the 19th or 20th centuries, this is no longer just some idle or theoretical threat. Aggregate “life expectancies” for US males has been headed in the wrong direction for 3 straight years now (Carroll, 2019).

trying to straddle both sides of what was essentially a monetary dispute) ran with it (i.e. the new ambiguity) in the 1770's, writing his pioneering magnum opus pretty much for the benefit of traders in **The City**. See also "Smith, Adam", "**Currency Wars, the**", "Reserve currency" [soon to be defunct], "Parity pricing (for the primary sector)".

[not a good trend for America to be leading; see also "Ideas".]

4b) Something like an Empire is rather big, is it not? So how on Earth can it-- the biggest thing on land-- be hidden? Where there's a will, there's a way:

4c) "9 Smokescreens of the (imperial) Brontosaurus":

& **ELEMENT**:

- 1) **Manichean** ('the god-devil thing')- is to **WATER** as "man prefers-to-be-ruled-by-that-which-he-cannot-see" is to ice. Perhaps the oldest of imperial tricks, 'the god-devil' mentality will peel off approx. .5 of the yobos from day 1. See also "Consciousness" (the conscious mind is no match for the subconscious fixation), "Devil".
- 1b) & **Team Sports mania** ('the devil game'; from c.1900)- the most prevalent 20thc variant of the ancient imperial ruse. An imperial-minded variant of 1a, it employs basically the same dichotomy, tailored to a more 'modern' and scientific/empirical age.
- 3) **Fake Economy** (or 'over-monetization'; from the 1920's-30's whipsaw)- **EARTH**
Go-go monetization bumps up the % of 'no-longer-(seriously) interested-in-that-sort-of-thing' parties or individuals, from approx. half to approx. ¾ths (.75). One can see where this (trend-objective) is headed now. See also "Monetization", "National Debt Economy (**NDE**)".
- 3b) & (blaming it on) '**Classic**' '**Anti-Semite**' ['uni-causal'] '**Conspiracy Theory** (or 'the road to nowhere'; from 1st half of the 20thc) The ready-answer for 'all' the 'modern'-type craziness (irrational exuberance & whipsaws) was in place prior to the crash of '29, and grew steadily in prominence over the next 2-3 decades. There are always both political and economic-financial 'frontmen' or richly-compensated employees. See also "Anti-Semitism" & "Dispensationalism", "Zionism".
- 5) **Fake Corporate Media Cartel** (a.k.a. 'CIA moves in' with many special privileges & prerogatives-- not to mention 'sources', for the 'inside scoop'; from the 1940's-50's)- **AIR**
'A quarter of the population is still too much' for comfort (given the USA's traditional *anti*-imperialism). 'If this secret (or "don't call it") neo-imperialism thing is going to work, we should cut the % of likely resisters in half [again]', (to around 12%). 'Making sure this new TV thing is in everybody's house should do it', & 'we'll control what leaks out to the press'; & 'yes, we'll visit the Jews out in Hollywood every now & then.... The parameters should be gradually broadening' (if possible). See also "Central Intelligence Agency", "**Corporate Media Cartel**", "Mockingbird") & **Control of publishing** (obviously an auxiliary of 5a; also from the mid-20th century decades). What's the difference between 'synthetic meaning' and (see also) "**National Identity/Nationalism**" (patriotism)? As with television's synthetic media, 'resistance' can be halved again (from approx. 12% to 6%) by simply ensuring that certain things (or lines of analysis) do not wind up being mass-printed by any publishing house that's big enough to provide some significant publicity or buzz for the idea, meme, or style. See also "History" [what is significant], "United States, the", "Imperialism, American".
- 7) **Warfare** ("When all else fails, they take you to war."; since the 1910's)- **FIRE**
Especially when there's conscription, there's no surer way of safely halving 'resistance' (or even the % of those looking into domestic imperialism), say from 6% to 3% [per 1942]. "That's unpatriotic!" See also "**National Identity/Nationalism**".
- 7b) & (the resultant) **Cult of Secrecy** (a.k.a. "There's no there, there.")- Although (like warfare itself) significantly moderated or toned-down since the 1970's (& the *Freedom of Information Act*), today's US gov't 'classifies' approx. 80 mn. documents per year. And 50-90% of the classifications, according to fmr. & current USG insiders, are unnecessary. In a society (traditionally) run by lawyers, such large-scale suppression, even with loopholes & leaks, can easily halve the percentage of (substantially) concerned citizens, from approx.

3% to 1.5%. "You know truth becomes treason when you have an Empire"- Ron Paul, 2017.
See also "Secrecy, cult of".

7c) & (the resultant) National Security State-Economy- (or 'the DARPA economy' & individuated PsyOp specs; from c.2000)- Financialization [debt] & militarization [enforcement] often go hand-in-hand. See also "Central Banking-warfare model", "Currency Wars, the". The resultant (see also) "debt saturation" can be papered-over or perfumed with over-monetization, but the basic extractive nature of the "National Debt Economy" remains, leaving only the military sector's hi-tech wizardry (in addition to the usual 'bread & circuses') for solace and entertainment in what is, at core, a bifurcating world (in crisis). It may be said that only the degree of its (increasing) extremity (this century) is something new.¹³⁹⁹ See also "National Security Agency (NSA)", "DARPA", "Industrial Revolution, 3rd", "COVID", "Transhumanism".

Nonetheless, the basic problem remains-- the Brontosaurus is starting to run out of things to eat. See also "Great Extinction, 6th"; "Parity".

8) "Our dawning new age, shaped by human-wrought conditions, has been called the *Anthropocene*, but historian Steve Pyne offers yet another name: the *Pyroxene*, the epoch of fire...the stupid monkeys who burn everything... Civilization finds forests and leaves deserts."- Howard Switzer, 22-7-29 email.

8b) ...(that is until...) Imperialism is going over the cliff. The only question is how many lemmings is it going to take along with it. Why? The real '1st World War' (for global imperium) was more than a century and a half before 1914-- the 'Austrian Succession...7 Years War' of 1740-63 (i.e. the 1st 23-Years War). Three decades later underdog France, inspired by the Age of Revolution, launched what was really the world's '2nd World War', the (subsequently belittled) 'Napoleonic Wars' & 'War of 1812' (i.e. 2nd 23-Years War) from 1792-1815, in which the British Empire Struck BankBack, demonstrating to all the superior organization & quartermastering of its (then state-of-the-art) "National Debt Economy" (via some-- but not too much-- "separation of powers"), which the rest of 'Western civilization' then tried to catch up with over the next century... until, by c.1914, it (striving for world economic-military primacy) was such a cliché that only the *scale* of (what was then called 'The Great War'; i.e. 1st half of the 3rd Currency War) was anything new or remarkable. This was really Western civ's '3rd World War', and it of course didn't end, but merely paused (or went underground for a while) after Versailles in 1919. By this point, whether one wishes to call "World War Two" (1939-45) the '3rd' or '4th' world war (and hence the ensuing global "Cold War" the '4th' or '5th' such affair) is a moot point. After 2 centuries, world wars for global imperium were a tired cliché by the mid-20thc, whether the Americans chose to dress it up in 'cowboy-culture' cum 'rock-and-roll consumerism' or not. The world (economy) has already been captured and there is no 'dominion', only "Par" or "Balance", whether that par-balance be sustainable or not. 'The Last War', so to speak, will end where the proverbial 1st charioteers of state conquest began-- the north shores of the Black Sea and Ukraine (i.e. 'those crazy Northerners' [to Southwest Asia/Eastern Mediterranean'ers], 'those crazy Westerners' [to Chinese], 'those crazy Easterners' [to Europeans], and 'those crazy Southerners' [to Finnic-Uralics]). See also "Currency Wars, the", "National Identity" [ENI], "Great Extinction, 6th", "World Par Economy (WPE)". .

[...& why?...]

¹³⁹⁹ Even US president Harry Truman questioned the reality of much Soviet spying during the war years... [because, according to Senator Moynihan] 'all [he] ever "learned" about Communist espionage' came not from solid US intelligence data [which was withheld from him], but [instead only] from his Republican adversaries' investigations and [public] speeches" (Weinstein, 1998). See also "Military-Industrial-Intelligence Complex".

[See also "Psychology" & (its ghost in the machine) "National Identity/Nationalism".]

9) Imperialism Updates:

See also (chronological→) "City (of London), the", →"Glorious Revolution, the", →"Debt money", →"Three Romes", →"Zionism", "Foreign aid", →"IMF" & "World Bank", →"Super Imperialism", →"Dutch disease".

["wrestling with a plate of pasta"-- another 'barbarous relic of the 1st millennium 2nd millennium'?)

Imperialist cycle, the- (how mindfulness eventually turns into mindlessness)

See also "National Identity cycle", "Dynastic cycle", "Imperialism, American".

Income taxes- See "Taxation of Income", "Tax shift".

Independent Treasury system, the- (federal and/or state-based-- as opposed to private cartel/voluntary [and insurance-scheme]-based-- 'regulation' of the US monetary sector: per 1840's-1910's).

See "'State Banking' (era)", "National Bank".

India- ("often by incorporating threatening outsiders" [Stein, 1998, 35])

"In religion, all other countries are paupers. India is the only millionaire.... It takes 80 nations, speaking 80 languages, to people her, and they number in the three hundred millions.... [U]nity of purpose and policy are impossible.... India had eighty languages, and more custom-houses than cats."

- Mark Twain, *Following the Equator*, 1899, pp. 72-73. See also "Culture".

1) "[A]s in China, two civilizations [and one large disruption] have followed one another.... Indic Civilization, which began about 3500 BC, was destroyed by [Persian-Indo/] Aryan invaders about 1700 BC... [forging] Hindu Civilization¹⁴⁰⁰, culminating in the [16thc-18thc] Mogul Empire, and was destroyed by invaders from Western Civilization in the period 1500-1900" (Quigley, 1966, 22).

1b) Historian Burton Stein's delineation of "the long conjoined history of states and communities¹⁴⁰¹ in the subcontinent":

a) 7000 to 800 BCE- "communities [common culture] without states";

b) 800 BCE to 300 CE- "communities as states ('great communities')";

c) 300 to 1700- "communities and states";

d) 1700 to present- "states without communities... when the historic concept of community has been reduced from what had been historically vital and changing community formations...[into] decorated shells of ideology" (Stein, 1998, 21-22).

'How the East was Won'

¹⁴⁰⁰ "The Indians believe that repose and non-existence are the foundation of all things, and the end in which they terminate. Hence they consider entire inaction as the most perfect of all states, and the object of their desires. To the Supreme Being they give the title of *immovable*" (Montesquieu, 1748, 225). To this day, India is the biggest under-achiever at the Olympic Games.

¹⁴⁰¹ The root of Indian "communitarian" movements, the word 'community' "is to be understood [here] in its usual English meaning as simultaneously a people and a place, rather than in its limited [and more recent] sense of subcaste or religious group...[The former usage, a.k.a.] shared sentiments and values... [means] also...shared rights and entitlements over... in particular...small, local spatial entities under conditions of pre-modern [control] technology.... [Such] segmentary political forms...[extended] into the 19th century" on the subcontinent (Stein, 21).

2) In the past Buddhist stronghold (and future British Raj capital) of Bengal, the “Mughal state [from c.1572]¹⁴⁰² actively supported the planting of Islamic institutions...and there, in eastern Bengal [a.k.a. Bangladesh] during the 17th century...[new] rural mosques and saint-shrines provided the focus for agrarian development and mass conversion of the peasantry. The Mughals granted land rights to both Hindu and Muslim groups, just as, some centuries before in Europe, Benedictine and Cistercian friars had been encouraged to open forested lands to the plough, and reap the benefits as [2ndE] landlords. In Bengal... where neither state institutions nor [even] powerful social ones-- such as ancient landed estates-- [had] had any presence ...the *mullah* [sic], the religious leader, became the authority in a locality... of a few hundred households ...[now] bound together as communities in a confessional body... Land [for the time being] continued to be [dominantly] held by the descendants of the founding mullahs” (Stein, 1998, 176).

2b) “As important as the spread of military capabilities in weakening the Mughal state was the crystallization of a new class of rural and urban families, a *gentry*, which relied less upon state employment and office than upon the property it had accumulated, and local political domination through wealth and influence over local administrative officials. When gentry interests could no longer be sustained by the Mughals [] or, later, [] by the Marathas... gentry allegiance shifted to those who stood ready to *protect property*. Europeans. The shift was gradual and involved few threats to the existing substructure of local community life; at the level of the north Indian parganas, the rise of new rural and urban classes did not destroy as much as it modified a rural order which had gradually emerged beginning in the 16th century...[B]y the 18th century the gentry stood to protect its interests and those of rural peoples against the pressures of the state” (Stein, 1998, 177). See also “Estates, 3”.

2c) A classic ‘divide & conquer’ ensued, and by the 4th quarter of the 18thc; “attempts to resist the rising power of the Company came to nought...[Often] at least part of the reason... [was that] other [Indian] rulers... greater fear of...[neighboring Indian states’] growing strength... [as well as (the usual) CHA] bitter struggle[s] for succession.... [In Mysore] the Company received substantial help from scribal, commercial, and gentry groups...[vs. Tipu (r.). Such].... loyalty the Company had succeeded in buying with promises to recognize and enhance their commercial and landed privileges...[and at least in] Punjab, the Company’s conquest was facilitated through connections with urban Hindu banking families... Ultimately, the collapse of Indian resistance to Company power owed much to the ‘subversion’ of indigenous regimes by the [new] dominant groups and ‘capitalist’ classes [that had been] thrown up by the social processes of the previous century... Europe’s grip on commercial wealth and military power was, by the last quarter of the 18th century, too firm to be dislodged.... Two other factors enhanced this tendency...[First] was the economic and social tensions created by the shift to more centralized state forms.... Rulers in the 18thc sought to fill their own treasuries first... [and] they had been known to squeeze local commercial groups until their eyes bulged.... [T]he transition from Mughal overlordship to the newer, tighter state forms was not smooth... Moreover... Muslim rulers who sought to increase taxation...or confiscate the substantial properties [that were] held in the name of Hindu temples or by high-caste groups risked facing resistance framed along religious lines. Indian states were [basically] slow to generate secure property forms” (Stein, 205-206). See also “East India Co.”, “Privilege”, “Adolescence of Mankind”.

3) “The urban population of India grew slowly during the 19th century.... In 1859, there were a mere 13 government colleges with around 2000 students in all of British India. Another 30,000 students were in secondary government schools. Yet, from this modest base rose the Indian middle and lower-middle classes that were to sweep Europeans from their hegemonic command of the subcontinent”; in “most of [Brahman] India what was more important than the relative size or security of the holdings of individual landlords was the manner in which those with substantial lands employed day laborers... engaged in

¹⁴⁰² The Mughals “were manifestly the culmination of India’s medieval age, a period in which regimes of all sorts strove with limited success for a greater *centralization* capable of exploiting the state-building potentialities of urbanization money-economies and [the new] international trade.... [Mughal regimes often had] marginal more military might than the Afghans could muster...[because their] military dominance was not limited by clan organization, as the Afghans were” (Stein, 195). See also “Charismatic Authority & Charismatic Dependency”.

grain trading, and usury to fortify their economic and social dominance... with leading groups in the towns and cities.¹⁴⁰³ Often what connected the countryside and towns was far more significant than what divided them” (Stein, 1998, 233; 234). See also “Oligarchy”, “Usury”.

4) And “[t]he legacy of the British goes on & on, doesn’t it?” (Cook, 2021, mn.54). In 2021, perhaps the largest-ever public protest erupted in India, because farmers & farm-related businesses couldn’t pay back loans, which were **predominantly** foreign, without substantially reducing crop prices. See also “Colonialism”, “Angry Birds”.

5) Some background: farmers in India are traditionally exempt “from income tax and crop insurance... [There] are guaranteed prices for 23 crops and debts are often waived when they are unable to pay off loans. But farmers have been on the boil for some years now. Although more than half of Indians work on farms, farming accounts for barely a 6th of the country’s GDP. India’s farmers are mostly small... 68% of them own less than one hectare [2.5 acres] of land. Only 6% of them actually receive guaranteed price support for their crops, and... [more than half] of the farmers, in the words of an economist, ‘don’t even have enough to sell’. From low productivity to fragmented landholdings, lack of storage infrastructure, and high indebtedness, there are several reasons for persistent agrarian distress in India. Declining productivity... [has] long hobbled progress. Plot sizes are shrinking, as are incomes from farming. Prices can be wildly erratic and middlemen form cartels gobble up much of the profits. ‘The anger over injustice to farmers was brewing. Now it’s getting channelized through this protest against the new laws’, says Devinder Sharma, a food and trade policy analyst. ‘Leaving farmers to the tyranny of the markets would be akin to putting the sheep before the wolf. There are leakages in the current system, and it needs to be reformed, but replacing one failed model¹⁴⁰⁴ with another is not the solution’, says Mr Sharma” (BBC, 2021). See also “India, Parity pricing”.

India, Parity pricing- 1) The government’s traditional “minimum support price policies”¹⁴⁰⁵ should not distract one from the fact that “there is no overall program to establish a marketable price that is in

¹⁴⁰³ The richest “urbanites consisted of 2 distinct groups. There were the grand households of rural magnates whose wealth derived from the rents they received as absentee rural landlords and from [their] holdings of valuable urban land, as well as from profits from usury & grain trading. The other patrician group consisted of bankers and big money-lenders with substantial rent and interest incomes...” (Stein, 1998, 232). See also “Bankmoney regime”, “Socialism”; ←“Hegelian dialectic”, ←“Adolescence of Mankind”.

¹⁴⁰⁴ According to many (including many in the BJP-led government), the mandi price-supports system, nearly a century on, is dominated by Punjab & Haryana, “these two states in which agricultural land is predominantly held by the large farmers, [where] the agriculturists are far better off than the other parts of the country.... Private traders buy through the [mandis, or] Arhatiyas in these states...earn on an average 1.5-3% in commission on the sales value. They are about a lakh [million] in number, and have an informal alliance with another one lakh state government staff in the [Agricultural Produce Marketing Committee] APMC mandis.... The APMC’s notable exclusions need mention. Kerala, Manipur, Mizoram and Sikkim.... [And] in fact, 22 states already allow direct procurement by private parties.... Except in Punjab, Haryana and the western part of Uttar Pradesh, where APMCs are well maintained, farmers in other parts of the country mostly face trouble with the APMCs.... [M]arginal farmers earn an unthinkable meagre 2.7% of the marketable surplus in wheat, while the medium and large farmers receive a relatively decent yet still low 30% of the same surplus. The middlemen operate in the APMCs by forming a cartel which the poor farmers are simply unable to match.... Thus the APMCs, so long nurtured by the state governments mainly as their arms, are under real threat from the new central law, unless they can prove their worth by offering locational proximity to the farmers with adequate storage facilities” (Gupta, 2020).

¹⁴⁰⁵ ?

balance with the costs, [or] the costs *structure* [sic] of either...[a] state's or the entire nation's production facilities" (Cook, 2021, mn.51-52). See also "Economics, Parity", "[World Par Economy \(WPE\)](#)".

Indirect Financing- institutions taking out loans from banks (Werner, 2015b, mn.50). There is also "Equity financing" (selling shares/ownership), "Direct financing" (selling bonds).

Industrial banks- (Utah-ese for [see also] "Industrial Loan Corps. [ILCs]")

Industrial Capitalism- (synon. 'industrial banking', 'labor capitalism'; a.k.a. 'co-determination')

1) A popular idea on both sides of the Atlantic a century ago was that: "Capital, not labor, should be treated by management as a commodity in industry, to be fairly compensated, in order to retain it in industry in competition with other forms of investment. As labor is so largely interested in, and is so largely responsible for industrial results, it should be given the authority of a liberal representation on the board of directors" (Brookings, 1929, x-xi).

2) Although "[m]ost economists a century ago expected industrial capitalism to produce an economy of abundance, and [also] democratic reforms to endorse public infrastructure investment and regulation to hold down the cost of living and doing business..." (Hudson, 2017r); by the 1950's, only Germany was known for such "*co-determination*" practices, and Anglo-American¹⁴⁰⁶ and German capitalisms resumed the divergence of Finance Capitalism from Industrial Capitalism, respectively. See also "Capitalisms".

3) "Industrial capitalism has been sacrificed [in the 1930's-40's?] to a form of Finance capitalism that is looking more *pre-capitalist* (or simply oligarchic and neofeudal) with each passing year" (Hudson, 2017p). See also "Financialization".

4) The Finance Capital "Western world is [now] getting down to [where only] about 10-15% [of the workforce] are actually involved in producing something that you can buy and that you can take home from a shop" (Keen, 2018, mn.18).

See also "German (industrial) banking", "Finance Capitalism", "Robotization", "Stock buybacks".

Industrial loan corp. (ILC)- (a [state-monetized credit institution](#) that can be owned by a NBF, in exchange for certain stipulations; synon. 'industrial bank' [in Utah])

1) "[E]xemption from the *BHCA* [of 1956 definition of a "bank"] means [that] corporate owners of an industrial...[Loan Corp.] do not necessarily have to be bank holding companies.... although an...[ILC] may not accept demand deposits if the bank has total assets greater than \$100 million" (UDFI, 2020). See also "Nonbank Financial Institutions (NBFIs)".

2) "Historically, this class of [financial] institution has been available in Utah and only a handful of other states. Most of the chartering activity in recent years has taken place in Utah... [where, in] 2004...state law was amended to rename this class of institution [as "Industrial bank"], to better reflect their legal status as fully fledged FDIC insured depository institutions. Outside of Utah, industrial banks are often still referred to as ILCs" (UDFI, 2020).

3) Utah Industrial banks can "offer a versatile depository charter for companies that are not permitted to, or that choose not to, become subject to the limitations of the *Bank Holding Company Act* or the *Glass Steagall Act*.... [T]he flexibility of an IB charter...[makes] it an attractive vehicle for some large and well-known corporations¹⁴⁰⁷.... [but the] IB mainstay has been the issuance of *credit cards* to consumers and

¹⁴⁰⁶ Around the turn of the century and up to World War One, it was actually Britain, not Germany or France, that popularized the 5 and a ½th day work week (then known as "the English Work Week"). By mid-century, however, the British had lost this distinction, and it was long-gone by the Thatcherite-Blair turn of the millennium. Did English also have this right in pre-Norman times? Archbishop Dunstan and Edgar the Peaceful & (r.959-975) "ordained that every Sunday should rightly be observed, and that the Sabbath should commence at three o'clock on Saturday afternoon and end at sunrise on Monday" (Clare, 1897, 1507). See also "English constitution, the".

¹⁴⁰⁷ In summer 2019, "Rakuten, which some have called 'the Amazon of Japan' and which already owns a major Japanese internet bank, applied for a Utah Industrial bank charter. Among those attacking the application were ICBA, the American Bankers Association, and the Bank Policy Institute" (Cocheo, 2019b). The application was withdrawn 13 months later. Edward Jones' application (as of 1/21) is pending.

businesses nationally. Utah has established a reputation for a positive regulatory environment.... Because the information requested in the FDIC application is similar to that...in the State application, the FDIC application can be filed in lieu of the Sta^{te} application.... [and the annual] IB examinations are usually conducted jointly with the FDIC” (UDFI, 2021).
See also “Credit cards”, “Federal Deposit Insurance Corp. (FDIC)”.

Industrial ‘Revolution’, 1st- (synon. ‘water-steam power’, ‘mills’¹⁴⁰⁸ & then ‘steam’; arose, very slowly at first, from the 11th century to latter 19thc, although steam engines were not commercially important until the early 1800’s; antec. Britain’s ‘Agricultural revolution’ of the 1720’s-50’s)

1) ended slave and serf labor¹⁴⁰⁹ (Rifkin, 2014). Actually “full steam ahead” (1st I.R. steam power) co-existed with “centralized electricity, oil, [and] telecommunication” (i.e. the 2nd I.R.), from around the turn of the 20th century until World War Two” (Rifkin, 2017, mn.44). See also “Slavery”.

2) According to Quigley, “the agricultural and [1st] industrial revolutions... [which substantially raised] living standards, occurred [in *Western Europe*] before [such mechanized] weapons developments...[as in the 2nd Industrial Revolution]. This made it possible for individual citizens [in the ‘West’] to have access to the same weapons [that were] at the disposal of the state” (Zarlenga, 2000).). Hence America’s most renown long-term analytical historian concluded that: as “...a result, governments in Europe in 1930 hardly dared to oppress¹⁴¹⁰ the people... but in the non-European world by 1930 (and even more by 1950) governments did dare to, and could, oppress their peoples...” (Quigley, 1966, 23). See also “Coined money”.

3) During the first ¾rs of the 19th century; “a constant stream of innovations led to the increasing efficiencies of the high-pressure [steam] engine. The key players in this 1st Industrial Revolution were an array of gentlemen of science, entrepreneurs, and gifted mechanics, first and foremost English, but also French and American. With the rise of the Prussian state in the mid-19th century [however], a *new sociology* of technological change emerged: the scientific laboratory established by a triad of...[national governments], corporations, and universities [in order] to accelerate industrial development through applied science. Thus was launched the 2nd Industrial Revolution” (Brooke, 2014, 481). See also “Civilization, Western”, “Public-Private Partnership (PPP)”.

Walmart “was forced to drop its 2005 application for a similar bank charter after a backlash and an FDIC moratorium on applications” (Oshima, 2020). See also “Bank, universal”, “Regulation”.

¹⁴⁰⁸ The first known water-powered mills date from the 1st and 2nd centuries in Roman Spain, and also (perhaps 2-3 centuries later) in China (according to Brooke, 2014, 321-322).

¹⁴⁰⁹ The “new methods” were basically “a change from... manpower (and thus slavery) to *animal power* in energy use, from the scratch plow... to the 8-oxen, gang plow and 3-field [rotation] system of the Germanic peoples... [The transition was] decentralized” (Quigley, 1966, 8), and hence rather gradual (prior to the 18th-19th century advent of steam).

¹⁴¹⁰ It was not of course just a relatively sudden appearance (and “late”, vis-à-vis China) of gunpowder and related military technologies that made the commoners/3rd Estate relatively more equally-armed and equally empowered in the West... nor merely that the 1st Industrial Revolution had been going on for 3 or 4 centuries prior to the development of firearms in Western Europe (which, half a millennium later, Americans like Samuel Colt would develop further into ‘The Great Equilizer’ of the mid-19thc western frontier). Other preceding-- and larger-- factors in ‘Western’ equality included: **a**] natural/geographical barriers to the formation of large states/empires (Diamond, 2000); **b**] substantially more monetization per capita (Scheidel, 2009); **c**] the heritage of Papal Monarchy restricting outright imperialism (Morris, 1991); and, last but not least, **d**] the Great Plagues of the 14th century- which halved most of ‘the West’s urban populations, leaving a pronounced ‘seller’s market’ for the surviving labor (and the ensuing rise of ‘capitalism’ in the national monarchies that financed the discovery of the ‘New World’ bonanza), all of which preceded, by centuries, the advent of any notion of a widespread guns or armaments culture. See also “National Debt Economy”.

[Flowing water was the Earth's main source for technologically harvesting energy (a.k.a. power), c.1000, the 1400's, & even the mid-1800's.]

Industrial Revolution, 2nd- (synon. 'industrial age', a.k.a. 'the age of total-mechanized warfare, 'the century of industrial warfare' [1860's-1960's], or 'the industrial warfare age' [1870's-1960's]; i.e. 'Explodapedia') "de-ruralized people are exposed to somewhat similar conditions of anomie"¹⁴¹¹ (i.e. normlessness) (Quigley, 1966, 1183). See also "Fin de Siecle".

1) The internal combustion engine revolutionized power and society (eventually the entire planet) starting from the 1870's; "dramatically shrinking agricultural and craft labor" (Rifkin, 2014).

2) "It is difficult [however] to get a man to understand something when his salary depends upon his not understanding it"- Upton Sinclair. "[P]rivate capital ran the game, at least in the United States" (Rifkin, 2014).

2b) Moreover in England, the "merchant bankers of London had already at hand, [from (no later than) the 1st I.R.] 1810-1850, the Stock Exchange [1600's], the Bank of England [early 1700's], and the London [int'l Reserve currency] money market, when the needs of advancing industrialism... which they had hitherto ignored" called (Quigley, 1966, 51). In the ensuing century (from the mid-19th to the mid-20th); "they brought into their financial network the provincial banking centers, organized as commercial banks and savings banks, as well as insurance companies, to form all of these into a single financial system on an international scale...[manipulating] the quantity and flow of money so that they were able to influence, if not control, governments on one side and industries on the other... [and were] at least as successful at... (establishing dynasties) as were many...[contemporary] dynastic political rulers" (Ibid). These international bankers, known as 'merchant bankers' in England, 'private bankers' in France, and 'investment bankers' in the United States.... dreaded public knowledge of their [currency-controlling] activities as an evil almost as great as inflation.... [T]hey were particularly concerned with questions of government debts... even in areas... like Egypt, Persia, Ottoman Turkey, Imperial China, and Latin America; [and] their interests were almost exclusively in bonds..." (Quigley, 1966, 52). See also "Finance Capitalism", "Bonds", "National Debt Economy".

3) "I am afraid that the ordinary citizen will not like to be told that the banks can and do create and destroy money. And they who control the credit of a nation direct the policy of governments, and hold in the hollow of their hands the destiny of the people."- Reginald McKenna, Fmr. Chancellor of the Exchequer [UK], President of The Midlands Bank, 1924 (Docker, 1933, 87).

4) "If you have an economy that needs to grow, to alleviate the profusion of problems, [then] you don't care if it's qualitative growth or its quantitative growth. You're gonna take the one where you get [gross] growth where there's a bigger pie to distribute" (Ehrentreich, 2019). See also "Gross Domestic Product".

5) "We built the whole 2nd Industrial Revolution economy on the automobile, correct?... Here's the problem. Millennials don't want to own automobiles anymore. That's grandma and grandpa-- two automobiles sitting in the driveway" (Rifkin, 2017, mn.39). According to Rifkin, the productivity and "aggregate efficiency [of all 2nd I.R. (non-renewable) energy sources] peaked, all over the industrial world, in

¹⁴¹¹ A.k.a., from a Jungian "perspective, the replacement of God with the state in a mass society led to the dislocation of the religious drive and resulted in the same fanaticism of the church-states of the Dark Ages-- wherein the more the state is 'worshipped', the more freedom and morality are suppressed; this ultimately leaves the individual psychically undeveloped with extreme feelings of marginalization."

- https://www.geneticmatrix.com/jung-carl_gustav-human-design-chart.html

the last two decades [since c.2000]. There's nothing more [efficient] that we can get out of it" (Rifkin, 2017, mn.46).

6) The 3rd Currency War (a.k.a. World Wars I and II) was not some great anomaly. The "years of incubation for World War 1 (1897-1914) included a] the imperialistic aggression and seizure of the South African republics; b] the imperialistic 'Boxer' war; c] the imperialistic Russo-Japanese War; d] the division of Africa to compensate France for British seizure of South Africa and e] Egypt; the f] Russo-British-Persian imperialistic division, and the g] Balkan Wars, in the interest of British Imperialism" (Knuth, 1944, 53). And by the conclusion of the 1940's it would nearly all be in the hands of *American* [i.e. corporate/multi-national or 'unflagged'] Imperialism. See also "UKUSA Agreement".

6) 1910's 'democracy' and (more direct forms of) 'fascism'

7) Nonetheless, the stage was set for much more. "As the corporate form of business organization combined with emerging large-scale technology, as in railroad, refining, and steel operations, the stage was set for substantial distribution of information [and the invention of computers→ transition to Knowledge Age]"- *Oxford Encyclopedia of Economic History* (2003), p.4.

See also "Hypertrophy (scale bias)", "Adolescence of Mankind".

[The invention of the internal combustion engine + petroleum put the premium on "big bangs", 1880's-mid-20thc]; ['creepy']

Industrial Revolution, 3rd- (a.k.a. the 4th, 'the **digital revolution**', or 'computer age' [starting from the latter 1970's], 'maturation', 'global 3.0' [Fitts]; the latter stages of which [c.2010's-2040's]¹⁴¹² may be characterized as operation 'Operationalize [digitize] Everything'¹⁴¹³)

"Almost all ex-colonial areas have an oversupply of cheap and unskilled labor with limited material and land resources, and are [hence] in no position to raise or utilize heavy capital investments. As a consequence, *quite different* technological organizations must be devised for these areas."

- Carroll Quigley (1966, 1183). See also "American 'Exceptionalism'".

1) The internet, from c.1990, is transforming power, society (and eventually the globe); by "sunsetting mass wage labor in the manufacturing and service industries...[in addition to] salaried professional labor in large parts of the knowledge sector¹⁴¹⁴... [thus] quickly reducing [the] marginal labor costs of producing and delivering a wide range of goods and services to near zero.... What we are seeing is [nothing less than] the

¹⁴¹² "Every industry is going to be involved in the build out of this 40-year infrastructure...the same scale as the 1st Industrial Revolution in the 19thc and the 2nd Industrial Revolution in the 20thc, and it's gonna be two generations-- the same amount of time-- 40 years" (Rifkin, 2017, mn.47). "Who's going to put in all the smart sensors to connect [all] the road, rail, water, and air in a seamless mobility internet? That requires millions of workers" (Rifkin, mn.49).

¹⁴¹³ https://www.youtube.com/watch?v=Bpu8k8ht_jw ['a funny kid']. See also "Culture", "Boards/Board Systems", "Scientific Management/Hawthorne Effect". In addition to (traditionally unthinkable) cases of oligarchic-groupthink overreach, the mission of '**digitizing everything**' can also, more obviously, pose a problem when perhaps half the data to be operationalized is 'garbage' (false, untrue, bad bricks). See also "Dystopia", "Academia". Errors or not, the Agenda is proceeding. If you "are looking for funds from the E.I.B., here are the priorities now: 1] digitalize communication, 2] digitalize energy, 3] digitalize mobility and transport, 4] digital education for the workforce, and [he said with an almost straight face] health care digitalized for quality of life" (Rifkin, 2017, mn.46-47). See also "Health care (US)", "Physics, New".

¹⁴¹⁴ Enrico Moretti's 2012 study claimed that each "knowledge job" supports 5 service jobs, some high paying (lawyers), some much less so (baristas).

unbundling of productivity from employment” (Rifkin, 2014); that has characterized the past half-millennium of ‘Western’ civilization. See also “Capitalism”, “Economics”, “Productivity”.

2) How so? When “the marginal cost of producing goods & services approaches zero-- and the price becomes nearly free-- the capitalist system loses its hold over scarcity and the ability to profit...[from] another’s dependency. ‘Free’ implies free in 2 senses of the term: free in price, and free from scarcity. When the marginal costs of producing a good or service is nearly zero, it means that scarcity has been replaced by abundance... [E]verybody can secure much of what they need without having to pay for it.... The notion of organizing economic life around abundance and use & share value, rather than scarcity & exchange value, [however] is so alien to the way we conceive of economic theory and practice, that we are unable to envision it. But that is [nonetheless] starting to emerge in wide sectors of the economy” (Rifkin, 2014, Ch.15, mn.1-2). See also “Race-to-the-bottom”, “‘Hundred-Year’ plans”, “Design”.

2b) Rifkin, an influential 21stc futurist in both Europe and China (in addition to the US since the 1980’s), is not out on a limb. “The digital technologies [also] tend to move things *out* of the market sphere-- by making communications, for example, basically a fixed-cost exercise [as opposed to metered]... This is something we need to come to grips with, because it reduces, among other things, the share of [capital] investment in GDP” (Galbraith, 2018, mn.5). “Much of what we’ve seen in the last... 10 years strongly suggests that this was the correct analysis” (Galbraith, 2018, mn.6). See also “Local scrip & Complementary Currencies”, “Money, ‘end of’”.

3) In terms of basic natural wealth and energy, the “Big Four power companies” in Europe “are producing less than 7%” of renewable energy, because “they can’t scale it... [T]he centralized energies [of the 2nd I.R.] required massive capital and vertical integration. There was no other way to do it... But with the *new* [3rd I.R./renewable] energies, you have to collect the sun everywhere, and the wind everywhere; that requires lots of small players coming together in *cooperatives*” (Rifkin, 2017, mn.35).

3b) And it’s not just on the other side of the Atlantic. Ostensibly only from having read Rifkin’s *The Third Industrial Revolution* [2011], Chinese Premier Li Keqiang () “instructed the central government of China to begin moving on this narrative quickly.... They don’t want to lose the 3rd (Industrial Revolution). They want to be among the players.... [Rifkin, who hadn’t been to China before, was] shuttling back and forth, [and] working with the [Chinese] leadership for...3 years [c.2014-16]”, which resulted in the Communist Pa^rty’s 13th 5-Year Plan (for 2016-20) featuring an injection of “\$82 billion dollars, over 4 years... to completely digitalize the electricity grid of China, so that millions of Chinese...with their own solar and wind technology, can produce energy locally-- go off-grid, go on-grid, [and] sell it back to the grid. Watch Europe; [and] watch China” (Rifkin, mn.37-38).

3c) The top-grade microchips necessary to power such transitions (in Russia,¹⁴¹⁵ China,¹⁴¹⁶ or anywhere) are all dependent upon what might be called a ‘*cincopoly*’ of the United States and its allies.

Semiconductor manufacturing is dominated by a Big 3: Intel (US), Samsung (Korea), and TSMC (Taiwan), and they, in turn, are dependent upon the latest in both micro-carving (per NXP, in the Netherlands) & purification technologies (per a number of firms in Japan). Basically, “ (Miller, 2022c).

4) The development of computers from the analog (Information age) to digital (Knowledge) age has *long* been foreseen. No more just exploding things. “Well now the whole game has changed...into a much... smaller, invisible entity, where this physical network of routers and synthesizers that go into everything

¹⁴¹⁵ “Russia’s dependence on foreign semiconductor technology has given the United States and its allies a powerful [negotiating] point” (Miller, 2022b, 342). Earlier, the old “Soviet Union’s effort to...invigorate its chipmakers failed completely. Neither the Soviets nor their socialist allies could ever catch up despite vast espionage campaigns and huge sums poured into research facilities” (2022b, 150).

¹⁴¹⁶ China also is “staggeringly reliant” (2022b, 245) on ‘importing chips from Taiwan, (and effectively) has no viable way to source advanced chip technology without the approval of the United States.... There is no tech that will be more crucial for the future of defense power than semiconductors and China is [now] investing more money than any other nation in trying to domesticate the technology that it lacks. The US in response [since the Trump Admn.] is restricting the transfer of highly valued chips to China, which are the chips mostly used for advancing artificial intelligence. As long as China fails to domestically replicate this technology, it will struggle to harness the transistors needed to process large amounts of data’- <https://www.strausscenter.org/events/chip-war-the-fight-for-the-worlds-most-critical-technology/> (Miller, 2022c). See also “Trump’s trade wars (with China)”, “Moore’s Law”, “Artificial Intelligence”.

that's 'more advanced' is gonna make sure that we don't get into a war. But [just as importantly]... we don't have any more jobs" (Pieczenik, 2019b, mn.1-2). See also "Robotization (and productivity)".

5) "Monarchy [elitism] doesn't work without info asymmetry which the internet kills. Lying harder just undermines leadership credibility faster" (Moon, 2020b). See also "Headless horseman", "Truth serum".

6) Although "not yet as proficient as the best translators... [computer programs are already] good enough to [basically] break the language barrier and bring 1/3rd of the human race [that] is already online together in the first truly shared global conversation in...history, speeding the transition into a...[global] commons¹⁴¹⁷ and collaborative age" (Rifkin, 2014). See also "Intelligence Community (IC)".

7) "We could all have [near zero cost] ...energy right now. We could **all** be having...de-salinated water across the Middle East and North Africa" (Steele, 2018b, mn.22).

8) Guru Rifkin agrees. "Many, but not all, of our basic material needs will be met for nearly free.... A half-century from now, our grandchildren are likely to look back at the era of mass employment in the market with the same sense of utter disbelief as we look upon slavery and serfdom... The very idea that a human being's worth was measured almost exclusively by his or her productive output of goods and services and material wealth will seem primitive-- even barbaric-- and be regarded as a terrible loss of human value to our progeny..." (Rifkin, 2014). One should notice, however, that Rifkin's basic terms (yet alone the '5 W's and H') are often hazy and lacking in definition.¹⁴¹⁸ Such a large bill of goods should not be short on detail. See also "Usury", "Compound interest", "Economics", "Parties, political".

9) People, moreover, are still getting environmental determinants mixed up with hereditary factors; philosophy mixed up with cosmology; Christianity¹⁴¹⁹ mixed up with Zionism; Protestantism mixed up with primogeniture; 'capitalism' mixed up with financial parasitism; 'money' mixed up with (always being either) 'credit' or 'currency'; micro-economics mixed up with macro-economics¹⁴²⁰; clumsy propaganda mixed up with history; skin color mixed up with eye color; scale [of data] mixed up with accuracy [of underlying assumptions], and indeed (even when surrounded by computer designs) judgement-thinking mixed up with design-thinking. See also "Design", "Land bridge", "**Creney**", "Academia".

9b) The underlying validity-- yet alone 'accuracy'-- of '**peer-to-peer**' data is still a big problem. As of 2020, distributed ledger or "dynamically-defined...value chains" basically don't know "what is real and [what is] fake.... If I cannot trust the [component] data, it's worthless. And all the enterprises that consume shit-loads...of data...today...have no instruments to check [even] the provenance of the data-- can I trust it?... Was it a real car... or a fake car... that confused the algorithm? Who knows? And that's exactly...a missing gap in the internet... They just cannot transact. They cannot establish trust.... We are [in fact] just beginning to sign the data on the internet" (Stöcker, 2020, mn.2-5). See also "Distributed ledger".

10) In terms of (what we use for) money, the oncoming "technological advance [enabling interest-free, direct, digital public money] will bring about a change similar to the one that occurred in the mid-19th century [and 2nd Industrial Rev.], when paper-money stopped being issued [purely] by private banks and all banknotes were [henceforth] issued...by the Central Banks" (Ordonez, 2018); a.k.a. the de jure nationalization of bank *Reserves* [**RAB**] (in the US from the 1860's to 1910's), and then (the de facto) nationalization of **TAB**/bank *credits*--"bankmoney" with (see also) "Federal Deposit Insurance Corp. (FDIC)" backing in the mid-20thc. See also "Bankmoney regime", → "Minsky, Hyman (1919-1996)".

¹⁴¹⁷ "Just 10 years ago, the European energy market was dominated almost exclusively by a handful of regional monopolies. 'Those days are gone forever... Now that some producers have become producers'... [There is, in both Germany and France, a] massive shift taking place in Europe, from centralized to distributed power....'Had anyone suggested 10 years ago that the big power and utility companies of Europe would begin to crumble, as millions of small, renewable energy micro players began to generate their own green electricity for the grid, it would have been dismissed as fantasy by the powers that be. [But] not now. It is a real revolution'" (Rifkin, 2014, cd6).

¹⁴¹⁸ One exception to this may be Rifkin's anecdote from the Picardy region in France (2017, mn.50-51).

¹⁴¹⁹ "The noblest treaty of peace ever mentioned in history is, in my opinion, that which.... stipulated in favor of human nature" (Montesquieu, 1748, 137), in a non-ethnicist way. 另见“儒家思想”?

¹⁴²⁰ Mixing up what's good for everyone with ('invisible hand' theories of) the 'supply & demand for widgets' has perhaps the most serious consequences (as Bill Gaede has shown concisely [Gaede, 2008, mn.6-]). The 'invisible hand' is for micro & adolescence, not for macro & (mental) maturation. See also "Needs, desires (& law)", "Steele, Robert David" [Gaede].

11) According to Rifkin, “overall aggregate energy efficiency...[once peaked at] 14% in the 2nd Industrial Revolution...[but should reach] 40% in the 3rd Industrial Revolution...[with] accompanying productivity gains” (Rifkin, 2014). See also “Internet of Things (IoT)”, “COVID”; “Freedom continuum (maturation)”.

[digital-- and anthropological-- reality] [mid-20thc depictions of Alpha, Omega sapience]

Inequality- “[T]he less luxury there is in a republic, the more it is perfect”¹⁴²¹ (Montesquieu, 1748, 96). “The advance of inequality necessarily brings improvement to a halt, and as it still persists or provokes unavailing reactions, draws upon even the mental power necessary for maintenance, and [the] retrogression begins” (George, 1879, 520). See also “Dumb-downing”, “Privilege”.

1) Prof. Keen (2018b, mn.58) has found that workers’ “income share falls precisely in reflection to the increase in the level of debt” that their organization has taken on. See also “Central Banking-Warfare model”.

2) As such, “there is no compelling empirical evidence to support the view that [so-called] modern economic development...narrows inequalities”¹⁴²² (Scheidel, 2017, 9). See also “Regulation”, “Reform”.

3) Indeed, “almost all of the of the [supposed] growth in income and wealth in the United States for the last 30 years has gone to the top 2 or 3%. The rest of the people have experienced [this century, at least] a *decline* [sic] in real income” (Roberts, 2020, mn.25). And for a generation of students, “the jobs aren’t there for them... but the [highest-ever student] debts [nonetheless] are” (Ibid). See also “F.I.RE. sector”.

3b) Historic inequality rates in the US:

	1910	1929	1937
richest 1/5 th -	46.2%	51.3%	48.5%
poorest 1/5 th -	8.3%	5.4%	3.6% ¹⁴²³

(Quigley, 1966, 459).

4) According to Catherine Austin Fitts, the “*rigged cost of capital*...has been [key to] advantaging the large guys tremendously. That’s what the... primary source of inequality is” (Fitts, 2019o, mn.14). “So while the New York Fed member banks are paying 0-1% for their capital... we’re paying 5% on our mortgages and even more on our auto loans.... It’s very important that the insiders look like they succeeded because they were smarter, more talented, worked harder, and were meritorious [or had more ‘big data’/spyware]. And the people who don’t succeed, didn’t succeed not because their cost of capital is 20 times higher than the insiders’, it was because they’re deplorables, and their losers, and they’re not as intelligent, and they didn’t work as hard, and they weren’t as creative and innovative. So *branding* is unbelievably important, to make the aristocrats look great-- the billionaires look great-- and the rest of us look like we’re just slugs...If you’re gonna rig a society with cost-of-capital, then you need the brand to

¹⁴²¹ Hence, republic’s traditional reliance upon...see also “Timarchy”.

¹⁴²² Inequality is measured in “Gini coefficients” and/or national “income shares”. *Ginis* “are usually derived from household surveys from which putative national distributions are extrapolated...[which] is not particularly suitable for capturing the very largest incomes... nominal Gini’s need to be adjusted upward to take full account of the actual...top incomes.... *Income shares* [in turn] are usually computed from [national] tax records, whose quality and characteristics vary greatly... and...are vulnerable to distortions motivated by tax evasion... and politically driven definitions of what constitutes taxable income introduce additional complexities” (Scheidel, 2017, 14). Nonetheless, in “western Eurasia, real wages, expressed in grain equivalent, have now been traced back as far as 4,000 years.... Recent years have witnessed considerable advances in the study of premodern tax records and the reconstruction of real wages, rent/wage ratios, and even GDP levels... much of this book could not have been written 20 or even 10 years ago” (Scheidel, 16).

¹⁴²³ Quigley adds: “This means that the rich... were getting richer relatively and probably absolutely, while the poor were getting poorer both relatively and absolutely” (Quigley, 459). See also “Financialization”, “Civilization”.

support that, or else your system is gonna be threatened. You want to keep the cost-of-capital game secret...” (Fitts, 2019t, mn.0-1). See also “Taxation”, “Big Government (growth of)”, “Monetary reform”.
 5) Since the last quarter of the 20th century, the monetary system is global, and hence subsidizes rising inequality everywhere. The OECD (in a 2016 study of 35 member countries) found that “although the richest 10% had rapidly bounced back [from 2008], long-term unemployment, low-quality jobs, and...job insecurity had disproportionately hit low-income households...[with] ‘incomes at the bottom of the distribution...still well below pre-crisis levels’” (Prins, 2018c, 9). See also “Usury”.

See also “Capitalisms”, “Debt money”, “Violence”.

5b) Part of the persistence of the problem is, in fact, the financing of it; locking “the poor into poverty by [for example] saying to them: ‘Look, if you earn money, you’re gonna lose 70 cents on the dollar, or more, from higher taxes or lower benefits’, then you’ve got a system that... is perpetuating poverty forever” (Kotlikoff, 2021, mn.128).

5c) It’s not just monetary policy. There are “deeper issues”; “[w]e have terrible inequality in labor income because of our terrible educational system, and...[also] because we’re locking the poor into poverty... We have to look at some of these more fundamental things.... We need a whole new tax system... [and] a whole new educational system, that leverages the internet¹⁴²⁴.... This country’s got deep problems; they’re not all connected to the Fed” (Kotlikoff, mn.129-31). See also “Reform”.

Inflation/Deflation- (money saturation/drought, vis-à-vis productivity)

- 1) in (overly) simple terms, just the ratio of the supply of products/services to the supply of money;
- 2) Wage demands are “actually the main source of inflation. So that’s why we’re ending up in [mild] deflation right now.... Inflation requires them to succeed at what they’ve been failing at for so long... The...way you’re gonna get inflation is to increase workers’ wages, which is the last thing conventional economists want to do, and increase the bargaining powers of workers, which is again the last thing they want to do” (Keen, 2016k, mn.58-59). Keen’s boiled down formula for inflation is: “*when money wage demands exceed labor growth and productivity*” (Keen, 2016y, mn.45). See also “Eurodollars”, “Petrodollar”.
- 3) Productivity also matters because “[w]hen bank credit is used for productive investments... (whose value is higher than the mere sum of their inputs, thus adding value), then such new money creation... will not result in any form of overall inflation– neither consumer price inflation nor asset price inflation.... This is how the East Asian ‘miracle economies’ of Japan, Taiwan, Korea and China, developed so quickly. By using...” what the Japanese originally termed ‘window guidance’ in bankmoney allocation, in order to avoid asset inflation (Werner, 2016c). See also “Window guidance”.
- 4) Employment also matters as the key driver of wage demands. “When there’s under-employment, it [monetary growth] is not inflationary” (Hudson, 2018d, mn.100); that is unless the British/monarchists are trying to counterfeit-away your ‘continentals’ or ‘assignats’ currency to the moon. See also “Currency Wars, the” (driving inflation in the 1770’s), “Eurodollars” (driving inflation in the 1970’s).
- 5) “...when people talk about money and prices, they’re referring to *consumer* prices [the Consumer Price Index], and not *asset* prices. In reality, the last 30 years, since 1980, have seen the greatest inflation in history. But what’s been inflated is not wages, not living standards, not consumer goods... it’s been the price of housing, the price of everything that’s financed on credit... housing, the price of education, anything that the bank will lend money for. So this is sort of pretended that it doesn’t exist. That’s part of the [CPI] fiction...” (Hudson, 2012d). See also “Inflation, unadjusted”.
- 6) The CPI includes some 80,000 items, but not asset prices like housing or stocks. In leaving these out, the government can cap its auto-expenditures (such as entitlements, the largest category of expenditures), which are all indexed to the ‘official’ CPI. See also “Statistics (warping of)”.
- 7) For most of history-- and perhaps as far back as the initial coinage monetizations of the Iron Age-- “inflation wasn’t really an issue. Prices... mostly were flat or only rose very gently over the very long term. And by long term, I mean centuries and even millennia. Then along came the 20th century, and the latter part of it in particular.... we’ve been living through a unique period of financial history.... For example, between 1800 and 1938, consumer prices in the UK were pretty much flat. Since then, they have risen 50-fold. In the US, from 1800 to 1913 [and the *Federal Reserve Act*], prices rose by about 52%. Since then, they’ve risen 24-fold. It’s a similar story in other nations, with Brazil being the worst-hit since 1900 and Switzerland the least inflationary...[But everywhere] inflation has positively exploded during all of our lifetimes” (Stepek, 2018). This is not surprising given what Prof. Huber has called the “bankmoney regime’s” underlying attitude towards the phenomenon: unless the “inflation is extremely runaway, banks...[now] live with it” (Huber, 2013, 4); better than most of us do, and also better than ‘free’-state banks did in the 19th century. See also “Central Bank”, “Free Banking”.
- 8) Since 2008, “[W]e’ve actually had the greatest [asset] inflation in history... the inflation of stock and bond prices. And the Federal Reserve has created \$4.3 *trillion* dollars of [RAB] credit to the banks; but this money has not gone into the economy.... It’s been given to the banks to help...bid up real estate prices again... We’ve had stock prices more than double...[and] the largest bond boom in human history... There’s never been an inflation of bond prices or stock prices like this... [Statisticians, for some reason] don’t talk about *asset price* inflation. They talk about *consumer* price deflations.”¹⁴²⁵ So while the

¹⁴²⁵ The basic dynamic-paradox is that (the past 4+ decades of) lower interest rates incentivize large-scale capital investment (i.e. “asset inflation” bubbles), while at the same time suppressing “GDP” or aggregate-common spending growth (Vague, 2020b, mn.27), with the combination of the 2 factors then, obviously, exacerbating inequality (Vague, mn.29). See also “Japan model (asphyxiation), the”, “Feudalism, neo”.

assets of the 1% are going up, the ability of the 99% to buy what they produce is [more gradually] going down...[due to a] diversion of income away from goods & services, into the stock & bond markets” (Hudson, 2016l, mn.10-11); another elephant in the living room that is not discussed by most economists today. See also “**Money, 2 classes (layers) of,**” “Asset inflation”, “Bonds”.

9) Most people are debtors; and *debtors*, in addition to (a lesser extent) *producers*,¹⁴²⁶ benefit from mild inflation. Hence, the traditional (20th century) focus of CBs upon delivering, first and foremost, “low and stable inflation” (El-Erian, 2016, xvii). A gold standard-deflationary (austerity) program would soon bring on another depression (contracting money supply); although mild deflation may benefit *creditors* and (to a lesser extent) *consumers*. See also “Debt-Deflation”.

10) An additional, and typically invisible, factor in currency losing its value is the “bank (credit) money” creation process itself, which creates more purchasing credit for the ‘borrower’ than is taken from the ‘lender’: i.e. “The decrease in purchasing power incurred by holders of money due to inflation imparts gains [in interest] to the issuers of money...” (Ruebling, 1975, 22).

11) Thus “bank (credit) money” is inherently inflationary. And when the actual rate of inflation exceeds the acceptable (government target) rate of inflation, it then serves as an indicator that the public sector needs to reign in its expenditure (and also the converse, in times of deflation).

The inflationary nature of “bank (credit) money” has driven both ever-increasing levels of extraction from all forms of *debt* (for the banks), and ever-increasing levels of extraction from *taxes* (for the public sector), in what might be called the “Big Government-Big Banks Complex”. One side cannot exist as it would like (on usurious auto-pilot) without the other.

12) It is hence axiomatic that, at some point in the future, given “direct control of a *transparent* [public] money circulation...[m]onetary policy can thus be focused on absolute price stability. That is not only a possibility, but...a requirement for the digital currency of the future.... An inflationary money system...[would] easily lose out to the plethora of [new] privately-issued liquid stores of value. The currency will be disciplined by the many alternatives [forms of liquidity] that...[will be] constantly available...[T]here is no room for inflation... let alone for an [“2%”] inflation target” in a bankmoney-less digital currency system (Wortmann, 2019b, 9). It will be, like TAB-bankmoney, mostly a relic of the 20th century. See also “Asset inflation”, “Housing prices”.

13) **Inflation Updates: 11/21-** “Since 2008, high-powered money [a.k.a. Reserves/RAB] has gone up by a factor of 6.... [while] the *velocity* of money, the speed of money...[turnover] has fallen in half, **relative** to its historic value” (Kotlikoff, 2021, mn.20). See also “Velocity of money”.

11/22- <https://wallstreetonparade.com/2022/11/an-economists-chart-goes-viral-shows-main-source-of-inflation/> [Bevins'22]

Inflation, unadjusted (raw price changes for 500 top items [after taxes] in US urban areas, 2013-17)

1) Since the mid-1990’s, “the government has been artificially deflating the CPI to keep figures as low as possible. The readings you see published today no longer represent the real out of pocket expenditures incurred by most Americans.... While the CPI was originally a measure to evaluate a pre-defined, *consistently weighted* basket of goods, over time, the basket of goods grew to an unreasonable 80,000+

¹⁴²⁶ Farmers are of course both debtors & producers, and are [or at least were] in large numbers concentrated in the American “midwest” and great plains states, from which the Populist parties and movement arose, after “greenbacks” and silver were demonetized in the latter 19th century (in deference to international gold).

items, muting dramatic price changes in [the most] common goods and services. [Furthermore, by] adding too many layers of complexity and algorithms you lose the organic, real results in a muddled mix of diluted data... the CPI is [now] calculated and...manipulated to keep government expenditures down and [to] mislead the public” (Butowsky, 2018b).

2) Ed Butowsky’s Chapwood “Index forces middle class Americans to recognize that their dependence on income increases pegged to the much-lower CPI virtually guarantees that they will run out of money before they die, because people are living longer and there is a huge difference between the CPI and the real world... [For] example, the CPI rose 0.8% in 2014. But in Boston, the Chapwood Index shows that the real cost of living increase was 10.7%. This means that if you work in the Boston area and got an 0.8% raise in your salary, it wasn’t nearly enough to cover the increase in...day-to-day expenses” (Butowsky, 2018).

3) According to Fitts, as of 2019, “we have been dealing with an [unadjusted] inflation rate of 8-13% for the past 15 years” (Fitts, 2019r, mn.18); and “it’s reached a point where that squeeze” from real (unadjusted/simple) inflation (a.k.a. cost of living) “is causing major, major dislocations” (Fitts, 2019o, mn.12). See also “Unemployment (statistics)”, “Gross Domestic Product (GDP)”.

4) With a sovereign money system, “it’s all about the inflation. The size of the money supply [not whom to bomb next] would become a huge campaign issue every federal election. [Question] What amount of inflation does our society want?” (Still, 2019f, mn.4). Answer: zero. See also “Inflation/Deflation”.

US City	CY 2013	CY 2014	CY 2015	CY 2016	CY 2017	5yr Avg

PEW RESEARCH CENTER

[Stagnant real US hourly wages, 1964-2018]

Information Technology (I.T.) cycle- 1) According to Tim Wu's *The Master Switch* (2010), "for the entire history of...the digital revolution and the Information Technology revolution, we start off with 1] the introduction of a new technology, we have 2] an incredibly wonderful innovation period, people get very excited, 3] products explode in value, and then, 4] wham, everything centralizes. It's almost as though the general population or the larger group prototypes the innovation, and then finally, when the government sees how it's all gonna work...they use it to centralize" (Fitts, 2017n2, mn.12). See also "Monopoly (and anti-trust)".

Infrastructure- 1) Throughout history "...most of the *capital investment* in every country in the world, even today, is in infrastructure. That's why the banks, and the corporations, and the rich people want to privatize it, because... this is like conquering a new country. You can take into your own hands, for your own profit, the largest capital investment there is. What used to be in the public domain, the roads, the railroads, the airline companies, the water and sewer systems-- everything the people [really] need-- the schools, you can somehow privatize... [and] make people pay 2 or 3 times as much.... [thus sucking] up more and more money to the very top of the economic pyramid" (Hudson, 2017c, mn.1-2). Simon Patten, 1st chair of the 1st business school in the US, the Wharton School, "said there were 4 Factors of Production... [not just Smith-Ricardo's] 3 factors of... land, labor, and capital... [The] 4th factor...is public infrastructure...The function of public infrastructure, Patten said.... is not to make a profit, like a private investor would do, but [rather] to *lower* the cost of living, and lower the cost of business, to make the [overall] economy more competitive... like the United States did...[financing] a vast public school system... low cost roads, low cost transportation, waters and sewers, parks, communications. If you provide all of this either freely, or at least at a very subsidized price, then you're going to undersell economies that don't socialize... Patten said" (Hudson, mn.2-3).

2) "Only since the 1980's, only since Thatcher and Reagan, has there been the idea that infrastructure should be... run...for profit [and for] economic rent, for...gouging whatever the market will bear, without...relationship to the actual cost of production" (Hudson, 2018-pt.2, mn.5). See also "Financialization".

[going on pretty much 4 decades of last place]

3) Particularly since the above revolutionary change; financing (interest) “is typically about 50% of the cost of infrastructure” (Brown, 2017). “If you privatize infrastructure through the banks, [then eventually] no Americans can afford to use it” (Hudson, 2018-pt.2, mn.6). See also “Debt money”, “Monetary reform”.

4) “We have built an infrastructure that doesn’t make economic sense, and we’re gonna have to change” (Fitts, 2017I, mn.5). See also “Financialization”, “Gross domestic product (GDP)”, “Parity”.

4b) What Hudson calls “Finance Capitalism” is basically “preventing” the recovery of infrastructure in places like NYC, so that it cannot “possibly take place” (Hudson, 2020c, mn.43-44); to which Pepe Escobar replies “what you just described is the process of turning the United States into a giant Brazil....¹⁴²⁷ This is a recipe that goes all across the global South as well” (Escobar, 2020, mn.44).

See also “Capitalisms”.

[NYC has ‘always’ had archaic infrastructure: 1980; 2018. See also “China”.]

Insider trading (& front-running)- (a 20thc SEC concept [Rule 10b5-1]¹⁴²⁸ that used to keep Wall St. in check)

1) The Securities and Exchange Commission (from the 1930’s) traditionally argued for an “equal access theory” for its Rule 10b-5-- i.e. that *anyone* with material, non-public information must either disclose that information or abstain from trading. The Supreme Court, however, rejected that interpretation in *Chiarella v. United States* (1980), holding that a person with no *fiduciary duty* to the shareholders had no duty to disclose information before trading on it. *United States v. O’Hagan* (1997) underscored this, putting forth a “misappropriation theory” of omissions, and the SEC’s amended 10b5-1 further codified the fiduciary duty stipulation in 2000.

2) “Even if...[insider trading] is illegal, access to private information is often key to one’s fortunes on the finance markets, and all the more so when there’s little chance of getting caught. [And it’s only increased with computerization.] *Hedge funds*, like the big merchant banks to which they are linked, are often in a

¹⁴²⁷ Hyperbole? The Texas Commission on Environmental Quality announced in Feb. 2021 that 13.5mn. residents (most of the state) were facing water disruptions, and that nearly 15mn. residents were on boil water notice. See also “Public-Private Partnership”.

¹⁴²⁸ 10b5-1 is the (currently standing) 2000 amendment of the original Rule 10b-5 from the 1930’s. Insider trading generally seems to have increased since then [Jagolinzer, 2008], to some extent based upon certain loopholes. For example, “canceling a planned trade made under the [Rule’s] ‘safe harbor’ [provision] does not constitute insider trading, even if the person was aware of the inside information when canceling the trade. The SEC [publicly] stated that, despite the fact that 10b5-1(c) requires trades to be [‘’] irrevocable, there...[can be] no liability for insider trading under Rule 10b-5 without an actual securities transaction, based on the Supreme Court’s holding in *Blue Chip Stamps v. Manor Drug Stores*, 421 U.S. 723 (1975). This...interpretation raises the possibility that executives can exploit this ‘safe harbor’ by entering into 10b5-1 trading plans before they have inside information while retaining the option to later *cancel* those plans” (based on inside information)-wiki (31-1-21).

position to benefit from exclusive access to information that allows them to beat the market” (Durand, 2014, 9).

2b) According to imprisoned former NASDAQ president Bernie Madoff (the infamous lone convicted financial criminal of the 2008 Crisis)¹⁴²⁹, insider trading “has been present in the market forever, but rarely prosecuted. The same can be said of front running of orders.... [Make no mistake] this type of asymmetry is found even in the most open public markets” (Durand, 2014, 9).

2c) Federal Reserve Board economist Fang Cai revealed in 2003 that the agents who were charged with executing the orders of [Madoff’s Long-Term Capital Management] “did not simultaneously place orders in their own name in order to profit...[Hence] there was no front running in the strict sense.... Conversely, however, there was indeed front running in the wider sense. Since the futures market was...[then] an open-outcry market, traders could [simply] interpret the noise, body language and hand signals of the agents in charge of LTCM operations and thus place orders for their own accounts *before* the LTCM orders were given” (Durand, 2014, 11). See also “Regulation”.

2d) This is known as front-running in “a wider sense.... In fact, this type of [information] asymmetry is found even in the most open of public markets”. The scandals of 2008-07 “confirmed that this problem was not limited to the market’s trading-floor operatives-- far from it. They showed how the big bank and hedge funds...exploited their informational advantages” (Durand, 11). See also “Market fundamentalism”, App.C: “1-2-3”.

3) “Finance markets radically differ from markets of goods and services. Whereas in normal times rising prices weaken demand in the real economy, the opposite is generally true of financial securities: the more prices increase, the more these securities are in demand. The same applies the other way around.... [A]gents take on more and more debt in order to buy the assets that the bubble is forming around...[The] self-sustaining price rise fueled by agents’ expectations is further exaggerated by credit. Indebtedness increases price, and since the [debt] securities can [via so-called ‘shadow banking’] serve as the counterpart to fresh loans, their increasing value allows agents to take on more debt”, and around-and-round we go; “[w]e find this same mechanism in most speculative episodes, from the 17th-century Netherlands to the [2008] subprime crisis” (Durand, 2014, 28). See also “Financialization”, “Adolescence of Mankind” [vs. Economics, Parity].

4) In Jan. 2021, the GameStop “Redditors were doing exactly what billion-dollar hedge funds do every day-- colluding to move a stock for fun and profit-- the notion that this should be the subject of a federal investigation is preposterous” (Taibbi, 2021). See also “Junk bonds” [1980’s], “National Security Agency” [2010’s]. See also “Regulation”, “Wall Street”.

[fiction/fact?]

Insolvency- See “Solvency/solvent”, “Pension funds”.

Institutional approval (in USA)- The corporate “media” (#7-last) works most directly at the beck and call of Wall St. (#6); whereas the “US military” (#1-first) probably has the least direct [or daily] exposure to the monetary alchemists, with the Legislature (#5) generally more pliable than the Executive and Judiciary branches, due to its members having to run for office [and hence incur television/advertising costs, and bribery pressures] more often. See also “Timarchy”.

¹⁴²⁹ “JP Morgan-Chase and their bankers knew, from the mid-90’s on, that Madoff had never once bought securities, and had no securities custodian.... JP Morgan was the senior partner in the relationship.... It was run by JP Morgan-Chase” with Madoff as the frontman (Fitts, 2018o, mn.43).

'Institutional investors'- (often code for 'government' or public sector-- usually state & local) (Burien, 2011).

Instrument in Support of Trade Exchanges (INSTEX)- (Germany, France, and the UK's financial clearinghouse for transactions with Iran; est. 2019)

1) In response to escalating US global sanctions on all dollar/SWIFT code trading with Iran, most western & northern European nations¹⁴³⁰ agreed, circa January 2019, to circumvent US threats by setting up a Special Purpose Vehicle (SPV). INSTEX's first actual transaction was in late March 2020.

2) Nonetheless, this would-be "euro alternative to [SWIFT] has been a disappointment... [and] 'hasn't worked at all'... because companies using [INSTEX] still risk being cut off from the dollar-based financial system" (Sandbu, 2019). See also "Stock markets", "SWIFT codes".

See also "Payment Systems", "SWIFT codes", "Angry Birds".

Insurance- See "F.I.RE. sector", "Federal Deposit Insurance Corp. (FDIC)".

Integrity- 1) "...honesty is the 1st chapter in the book of wisdom."- Thomas Jefferson (Jefferson, 1919).

2) is "the most important word in the English language...in any language" (Steele, 2017c, mn.15).

3) "When we lie, we create demonic beings. As we create them, we have the task to metamorph-- to transform them."- Thomas Meyer, 2018. See also "Lies", "Great Extinction, 6th".

See also "Separation of Powers", →"Debt cycles", "Slavery" [.21]; "Soddy, Frederick", App.C: "1-2-3".

Intelligence Community (IC)¹⁴³¹- (a.k.a. 'shadow government'-- which consists of a) the NSA-Pentagon-led 'IC-Shadow Government' [.mil], and b) the mostly CIA-led 'IC-Deep State' civil'ns)

¹⁴³⁰ Belgium, Denmark, Netherlands, Norway, Finland and Sweden had also joined INSTEX by January.

¹⁴³¹ World "intelligence" spending for 2008 was est. at \$107 bn., with the United States' I.C. accounting for nearly 2/3rds (\$75 bn.) of the global aggregate (Hippner, 2009, 35). The spying and spyware industry has been booming in the 'crisis' years since then. The USA's share of global GDP for the same period was only 23.5% (Ibid). Russia has had the largest number of government employees in intelligence, however- - 177,000 for c.2008, compared to 144,000 for the US (not including the unusually large number of private intelligence "contractors" in the latter. If these approx. 56,000 contractors are added, then America also has the world's largest number of intelligence employees (Hippner, 40). See also "International Intelligence Community (I.I.C.)", "Federal Accounting Standards Advisory Board" (gone black since 2015).

”Secrecy and compartmentalization are essential to intelligence work.... For someone who deals with highly sensitive intelligence information, group therapy is not likely to be the recommended treatment.”
- Steve Pieczenik, 1982 (Taubman, 1982)¹⁴³².

And also black budgets? “[T]he real answer for how big a share of national spending belongs to the intelligence community is probably ‘God only knows’” (Taibbi, 2019). See also “Timarchy”.

1) “No government in the *world* [sic] has any absolute control over any intelligence agencies [that] they create...because those agencies... create that secret environment, and they close the doors.... They can feed **whatever information** they want to their own governments” (Binney, 2018c, mn.31). Carroll Quigley wrote that the Money Power’s “dominance” of both “governments and business” had been eclipsed by **1931**¹⁴³³ (Quigley, 1966, Ch.5). See also “Conspiracy theorist”, “Bernays, Edward (1891-1995)”, “President of the US (PotUS)”.

2) And it was demonstrably¹⁴³⁴ the other way around by WW2 and afterwards. A “mechanism... [was created] coming out of World War Two, that basically put the Intelligence agencies in the position of being the most powerful bank in the world, and allowed to [continue to] run very secret operations. Then you merge that with the stock market and the corporate infrastructure in 1981, and...[then] you’re really off to the races, because you [then] have a way of both pumping the stock market, [and] pumping campaign contributions...Secrecy is addictive, financially. So you build this growing infrastructure that’s secret... to run a uni-polar world globally” (Fitts, 2019u, mn.30-31). See also “Secrecy, Cult of”, “Insider trading”.

3) The “Intelligence Community [is] hovering above the [post-WW2 American] discordance...I’m not gonna say they’re so brilliant at manipulating, but they **allow** it to occur, because there has to be some kind of tension in a [constitutional, or ‘procedural’] society like ours” (Pieczenik, 2020, mn.46). See also “Timarchy” [Montesquieu].

4) “The” Intelligence Community is also sometimes¹⁴³⁵ the **International Intelligence Community** (or **I.I.C.**)¹⁴³⁶. According to (1970’s-to-?? State Department-IC insider) Steve Pieczenik, for example, c.1999,

¹⁴³² In some “cases, psychiatrists said, work requirements push [IC] agents closer to the abyss of madness. One doctor said he had treated several agents who were confused about their identity whose condition bordered on schizophrenia.... most cases requiring prolonged treatment are referred to doctors in private practice who have received the necessary clearance. For severe cases requiring hospitalization, the CIA apparently uses selected hospitals and clinics.... The problems are familiar to a select group of Washington psychiatrists who have passed a rigorous security check... There is a Kafkaesque quality to some of the more severe disorders these doctors encounter: agents who have assumed so many identities that they have lost touch with their real selves, operatives so immersed in intrigue they have lost the capacity to trust anyone, employees who have a compulsion to make public classified information” (Taubman, 1982). See also “Grand Theft State”, “World Par Economy”.

¹⁴³³ ...And certainly by no later than “our new Age of Inclusive Diversity since 1945” (Quigley, 1222). And being (professional) spooks, henceforth covered it up for approx. half-a-century (not forever [just the mid-1930’s to the 70’s]). See also “Council on Foreign Relations (CFR)” (Rockefellers→Bushes). Unconvinced (of the *L.I.H.-M.I.H.* nature of US strategic policy)? See also “Central Banking-Warfare model”, “Estates, 3”.

¹⁴³⁴ See also, for instance, “Internet of Things (IoT)” [HSBC (comments)].

¹⁴³⁵ See Pieczenik, 2019n, mn.29. Any de facto relationship is sometimes-on, and sometimes-off. For example, Pieczenik, a Jewish-American “worked against the Israelis and they are dangerous. The Mossad is exceedingly dangerous to the United States.... In 2005, the Intelligence Community got rid of... a [the] head of the AIPAC committee, and...[Stephen Rosen was] indicted for espionage against the United States [as was Jonathan Pollard in the 1980’s]. That’s not something mild...That is literally breaking into our Intelligence capacity” (Pieczenik, 2019d, mn.2); to, supposedly, run the show. The charges against Rosen were subsequently dropped. Some years earlier, perhaps in the latter 1990’s, Rosen had famously remarked: “‘You see this napkin? In 24 hours, we [AIPAC] could have the signatures of 70 senators on this napkin’” (Goldberg, 2005). “Military Intelligence, of which I’ve been part of for over 4 decades, is the only institution that we can rely on that will not be compromised by the Mossad” (Pieczenik, 2019h, mn.1-2). See also “Israel”, “Zionism”.

¹⁴³⁶ Sounds ‘crazy’? “Our political organization, based as it is on an 18th-century separation of powers and on a 19th-century nationalist state, is generally recognized to be semi-obsolete.”- Carroll Quigley, *The Evolution of Civilizations* (1961), p.123. See also “Monty Python’s” [<https://www.dailymotion.com/video/x2ovimx> (“ConfUSURY”-Cat)], “Wise men”. Even in 1700’s England-UK, the “Anglican” Establishment tolerated-accepted (other) Protestants, Catholics, & (even) Jews **more-or-less** equally; in the US it was generally the 2nd half of the 19thc [not that far removed from the time that Germany & Italy were formed]; Japanese & Israeli equivalents from the 1930’s-40’s; ‘then’ [depending on **one’s view** of ‘communism’ and ‘fundamentalism’] the USSR & China no later than the 1980’s-90’s. This is not to imply that the “I.I.C.” consistently controls events in such countries where it is (simply) said to exist (as a significant political-economic-cultural factor). Quigley’s early 1960’s comment above was not so exceptional for the time, and occurred more than 3 centuries after Montesquieu [not exactly an anonymous or forgotten philosopher] identified the usury-wheel driving Anglosphere civilization (which he was in favor of), and also half-a-century after

Vladimir “Putin was placed in there by us [the US IC and/or the I.I.C.], because we needed somebody to control a [too] chaotic Russia... I made one mistake, and Putin... said: ‘I have allowed 23 million Russians to have no country and no sustenance’. And he was right, and I was wrong. Although I don’t regret taking down the Soviet Union, Russia is still a formidable country” (Pieczenik, 2019i, mn.3). “K.J.B. (King James’ Bible)/70 Year Plan”, “Freedom continuum (maturation)”, “UKUSA Agreement” [‘5 Eyes’], “Technocracy”, and (for video support) O’Connell, 2020b, mn.6-8; & 2021b, mn.18-19.

4b) The collapse of the USSR gave the (International) I.C. “the ability to really push the corporate model globally” (Fitts, 2019u, mn.31); not just in Russia and the former Eastern bloc states, but also in China and India. See also “Russia”, “Angry Birds, the”, “Land bridge”, “International Intelligence Community”.

4c) Uh, that’s not all the International Intelligence Community has been pushing (at least in the 21st century). See also “Great Extinction, 6th”, →“COVID”; “Secrecy, Cult of” [‘that’s the law’], “Reform, 101”.

5) Nonetheless, the “intel community specializes in releasing [publishing] their conclusions without telling you how they got there, and it does not inspire trust” (Carlson, 2018, mn.11). See also “Secrecy, cult of”.

6) “The list” of CIA ‘directors’¹⁴³⁷ reads “like an obituary column of political hacks who had been seconded [downgraded] to the civilian intelligence community.... Soon the... military will take over command and control of our disparate intelligence community and peace will finally reign over the realm” (Pieczenik, 2016d). See also “Revolving Door, the”, “Central Intelligence Agency”, “National Security Agency”.

7) “As I’ve told you before, we have had a CIVILIAN-MILITARY confrontation in the Intelligence Community. Much of what you’re seeing now in Vault 7¹⁴³⁸... [an I.C. data dump of] over 9,000 pieces of information, was forewarned several months ago to me.... This time around the reason why these leaks were given was to simply take down the CIA. The CIA, as I’ve said, for the 30 years since 9/11 [planning] and elsewhere... has been out-of-control.... [T]he NSA always had the mandate for cyber command and cyber warfare. The... institution that never had the command or the mandate was the CIA. [Now] it has to release its mandate, or it will be prosecuted for crimes against the state. And it has already committed crimes against the state.... The 9/11 issue was so embarrassing to our military, where they were literally Bush-whacked into a war... by none other than the civilian CIA.... They were criminals. In return, the Intelligence Community said: ‘We no longer want to be part of a Republic which dupes the American public’. And that was why I was used as the mouthpiece and the individual to relay it to the American public, as long as you and I and the American people understood that the Republic had to be paramount, and that the individual [is] supreme in this republic” (Pieczenik, 2017b, mn.1; mn.5-6). “Plausible deniability”, “United States, the”.

8) “This is the [domestic] 3rd coup and counter-coup that...we’ve been involved with.... Basically what’s happening is [that] the Deep State-- or as you call it the ‘CIA and others’-- will be cleaned out. [CIA ‘director’ Mike] Pompeo’s job...[was] to clean them out. [Defense Secretary James] Mattis’ job...[was] to clean it out. We will clean out the 16 different intelligence organizations”; despite a hiccup or two¹⁴³⁹ (Pieczenik, 2017b, mn.31-32). See also “Russiagate”.

9) “The real Intelligence Community that’s not beholden to [(civilian) CIA ‘director’] John Brennan will understand. Brennan is finished. The CIA is finished. The Presidential Daily Briefing... is finished. He [Trump] doesn’t want to read it... We’re talking about the elimination of thousands & thousands of sycophants who’ve been in the CIA and [also] the military establishment who are not professionals; who did not... have to fight, who were not on the ground... but were instead wasting our money.... We

“political economy” (a.k.a. making sense of society’s big picture) started being systematically removed from school and college curricula. See also “Fin de Siècle” [1890’s], “Debt cycles”, “Globalism”, “COVID”, “Provocation operation”.

¹⁴³⁷ “CIA was actually spying on its own director...And, sure enough, eventually Mike Pompeo [2017-18] requested to get out of there...[and] was moved over to the Department of State... So the CIA was actively working against its own director. I’ve actively witnessed operational directors lie to the director” (Shipp, 2018b, mn.11).

¹⁴³⁸ The CIA Vault 7 ‘leak’ “showed... [how] they could do an attack and make it look like the Russians or the Chinese, or the North Koreans, or the Iranians, or...Arab speaking countries were doing it” (Binney, 2019, mn.20). Now “all of these [frame game] tools are...pretty much known all around the world. They’ve been posted.... hundreds of millions of lines of code of different attacks are all known in the world”; only the “trace-route programs” are valid (Binney, mn.32-33).

¹⁴³⁹ ↑

couldn't care less what the CIA says, or the FBI.¹⁴⁴⁰ Their credibility has been de-legitimized.... Obama is irrelevant... Brennan is irrelevant... The CIA has become irrelevant. DNI will be knocked down... We don't need it... Please remember that the internet was cited by DARPA... The key word there is *defense*. It's not CIA. It's not civilian.... DARPA developed the internet. DARPA developed social media. I was trained in that [social media] in '73" (Pieczenik, 2016e, mn.15-17; mn.30).

10) "[I]n movie after movie after movie...is something called *pre-emptive programming*. The world they want to take us into is so fantastically different than the [agri-civ.] world we've been in, that there is a strong chance of people going: '*What's going on? What's happening?*' So what they've been doing is feeding us, through movies and TV series, the world [that] they [supposedly/according to some] want to introduce" (Icke, 2018c, mn.11). See also "Attitude inoculation", "Design".

11) "The power of the country is in the Pentagon, not at the CIA."- Greg Hunter; "Yep."- Kevin Shipp (Shipp, 2018, mn.33-34). The latter, in particular, has been budget bloated with contractors; and "contractors are *venal*... They do not have a loyalty to the constitution. They don't have a loyalty to the public.... There will be no contractors¹⁴⁴¹ in any intelligence community that I help[ed] build."- Marine Corps. Intelligence co-founder Robert David Steele (2017o, mn.17). See also ShadowGate, 2020.

12) In the mid-'90s, "28 billion [dollars was] the...accepted figure for the overall...[IC] budget¹⁴⁴², of which the CIA gets about 3 billion" (Agee, 1995, mn.51-52); this is compared to reportedly \$14.7 billion (or 28% of the overall I.C. budget) for CIA in more recent years (McGregor, 2013).

13) IC Updates: Essay on 'The Riddler' (3/22)

4/22- Another 'Riddler' (.CIA) quizzes 'PotUS Nixon' on the (c.1919-49 inception & birth of the) **I.I.C.**, as was deemed necessary, after the 'chaos' of [see also] "World War One", → "Israel".

<https://www.youtube.com/watch?v=JWRVyaKnGcA&t=2s> [Nixon (1995), mn.9-10]. See also "PotUS".

See also "Deep State", "Shadow Government", "Military leadership (of 20thc-millennial UK-USA)", "NSA", "CIA", "Jones, Alex".

Interbank loans- are in Reserve/**RAB** (interbank money). The three main sources are:

- 1) 'federal funds' (i.e. from other banks; see **d.b.t.'s**),
- 2) the 'discount rate' (from the Federal Reserve), and
- 3) 'eurodollars'. See also "LIBOR (London Interbank Offered Rate)", "SOFR", "Eurodollars".

Interbank market- (overnight unsecured loans of Reserves [**RAB**] between **state-monetized credit institutions** [banks]; a.k.a. 'the federal funds market' [US-only usage])

1) Banks can either loan their excess Reserves to each other in this market at the 'federal funds' (interbank) rate; or (since 2008) they can also collect bank welfare by parking their 'excess' Reserves at their district Fed bank. See also "Interest on 'Excess' Reserves (IOER)".

2) "90% of politicians don't understand" it (Bongiovanni, 2014).

See also "Interbank loans", "Federal Funds rate (FFR)", "Channel-Floor systems".

Interbank money- see "**Reserve Account Balance (RAB) money**", "**Central Bank/Treasury money**".

Interest- (the formal, numerated form of debt is more often associated with private money-issuers, since it is, traditionally, their primary form of revenue; synon. 'financial rent')

¹⁴⁴⁰ According to Paul Craig Roberts, the "FBI is supposed to be a federal investigative police [i.e. warrants, not fishing expeditions], but it now functions as an [internal] intelligence agency" (Roberts, 2018b, mn.33).

¹⁴⁴¹ President Eisenhower warned, decades before the advent of *privatization*, "that public policy itself could become the captive of a scientific, technological elite" (Eisenhower, 1961b, mn.10). See also "State capture", "**Military-Executive-Corpocracy (MEC)**".

¹⁴⁴² Two decades earlier, in the early 70's, Senators and Harper's Magazine guesstimated US annual "intelligence expenditures" at somewhere in the vicinity of (merely) \$6 bn. to \$9bn., but apparently no consensus was possible then "as to which costs should be assigned to intelligence functions and which...should be assigned to other budget categories. This...[was] *particularly* true in regard to the intelligence activities of the various armed services. See 117 Cong.. Rec. 42923-34 (1971)" (Yale Law, 1975, 635, n.143).

1) a private tax; *interest-bearing loans* predate writing and were “most likely” invented by “Temple administrators... as a way of financing the caravan trade” to alleviate Mesopotamia’s severe lack of basic materials like stone, wood, metal, and silver.... Interest was just a way for the Temples to take their [financier’s] share of the resulting profits.¹⁴⁴³ However, once established, the principle seems to have quickly spread... to consumer loans-- usury in the classical sense... By c.2400 BC it already appears to have been common practice on the part of local officials, or wealthy merchants, to advance loans to peasants” (Graeber, 2012, 64); the compound interest schedules always keeping them in place. See also “Jubilee”, “Coinage” (revolution).

2) The ancient Sumerian word for ‘interest’, *mas* (pronounced *mash*), “was also used to indicate a lamb.... In the agricultural system of ancient Iraq, in the distant past as well as in modern times, a tenant could graze animals on the fields he rented. As his herd expanded, partly because of the landlord’s investment in the land... this increase was taxed and the tenant had to hand over a small number of lambs. Similarly, an advance of silver or barley could be considered as the productive use of that capital, for which the creditor charged a fee, to be paid when the advance [loan] was returned. Interest thus originally resembled a grazing fee”, and rates¹⁴⁴⁴ could be quite high by modern standards; “a number of royal decrees” from the early 2nd millennium BC “...always proclaim a 20% interest rate for silver loans, and a 33.33% rate for barley loans” (Van de Mieroop, 2016, 24). After a thousand years of such practices (in some places alleviated by the institutionalization of regular state-wide jubilees for consumer debt), one may understand how Aristotle, in the 4th century BC, wrote that: ‘The most hated sort [of wealth], and with the greatest reason, is usury, which makes a gain out of money itself, and not from the natural object of it. For money was intended to be used in exchange, but not to increase at [automatic] interest’” (Ibid). See also “Usury”.

3) This is because “interest transfers money upwards” (Jackson, 2012), stretching society, if uncorrected, to a breaking point. See also “Armageddon”, “Breakaway Civ.”

4) “Antiquity had no distinct word to distinguish *interest* from *usury*. The distinction was drawn by medieval Churchmen to contrast commercially productive loans with personal usury” (Hudson, 2013).

5) Today “interest payments make up a bank’s income, and are redistributed” amongst banks and their friends as: “a) interest payments to depositors and savers; b) salary and bonus payments to staff; c) other payments to suppliers; d) dividend payments to shareholders and e) tax payments [and lobbying] to the government. For the UK, household income data surveys suggest that it is only the highest-earning 10% who receive more income from banks (including interest earned, salaries and/or dividends) than they pay in interest to banks” (Dyson, Hodgson, & van Lerven, 2016, 16).

6) According to Margrit Kennedy, in 2006 “the average interest burden contained in the expenditures of German households for everyday goods and services was 40%” (Kennedy, 2012, 23).

7) Low interest rates, however, typically correlate with lower real wages; not economic growth. See also “Usury”, “Discretionary (US budget)”.

Interest-free money- (conflated with ‘debt-free’ money) 1) since interest is a mutually agreed upon compensation for time and/or risk, an entire system of prevalent “interest-free money” would seem to be an overly-familiar (corrupt), or unenforceable (or doomed totalitarian) concept. **USSR** money was more similar to this (Garvy, 1966), than to “the Chicago Plan” for (so-called) ‘*debt-free*’ monetary injections to be initially spent into existence by government. The distinction between the two is often conflated-- knowingly or in ignorance-- by opponents of Monetary Reform. See also “Chicago Plan(s)”, “Debt-free money”, “Great Leap Forward, the”.

¹⁴⁴³ Mieroop (2002, 54) has also pointed out that early Mesopotamian interest charges could also have been (more flat) rental fees.

¹⁴⁴⁴ Van de Mieroop (2005, 29) has concluded that, at least in 2nd millennium BC Babylon, “the rates of interest stated” in cuneiform contracts “were applied for the duration of the loan, regardless of length. Since many of the loans were taken out for short periods... immediately before the new harvest, the [average] rate of interest per annum was substantially higher than the 20 or 33.33% stated.... Such usurious practices are not uncommon in peasant societies when people usually take out loans only as a last resort.”

- 2) Individual interest-free *loans*, however, are discretionary, non-compulsory, and not that uncommon between government entities or during times of very low interest rates. See also “Credit cards”, [Ch.7](#).
- 2b) Moreover, there’s no persuasive need for “interest to be charged on short-term credit” (Greco, 2019, mn.26). See also “Equity financing”, “Local scrip & Complementary currencies”.
- 3) Today’s digital technology, however, will eventually enable moving past 20th century limitations and middlemen. While legalist prohibitions on any charging of interest may still be very unfeasible, the key issue, in fact, is simply for the state to provide reliable access to interest-free credit, which is not at all unfeasible (double entry bookkeeping credits have been around for many centuries). Give people a choice: 5% at the Bank, or 0% at the Mutual Credit facility (Migchels, 2019d).
- 4) [I’m not interested in a bank that doesn’t charge interest](#). See also “Equity financing”, “Non Bank Financial Institutions (NBFIs)”. See also “Usury”, “Debt-free money”.

Interest on ‘Excess’ Reserves (IOER)- (from 2008-21, the Fed’s leading tool for controlling monetary policy in a low-interest-rate environment; this substantial subsidy has constituted a de facto ceiling for interbank [\[RAB\]](#) trading, in order to pull up overall interest rates [in the US]; a.k.a. ‘IOR’¹⁴⁴⁵, ‘B’)

- 1) The “Federal Reserve Board has long supported legislation that would explicitly allow interest to be paid on the [account] balances [at the Fed] that depositories are required to hold in reserve¹⁴⁴⁶-- though not on the cash they hold in their vaults...[see “Cash (War on), the”] Opposition has typically centered on the adverse implications such a move would have for Treasury revenue” (Feinman, 1993, 569-70).
- 2) In October 2008,¹⁴⁴⁷ however, the Federal Reserve started to pay a nominal rate of interest on all member banks’ Reserve account balances [\[RAB\]](#), both above and below the ‘required’ ratio (of [RAB](#) to [TAB](#) on member banks’ balance sheets). In Dec. 2015, the IOER rate was doubled, to 0.5%, increasing the Fed’s payments to banks to \$16 bn., 564pprox.m approx. \$7 bn. from 2009-15. Such IOER payments are subtracted directly from the Fed’s annual net profits, which are then remitted to the Treasury (\$92 bn. was remitted in 2016). Rates were subsequently further increased, to 1%, in March 2017, and 1.95% in June of 2018. [update](#)
- 3) “enables the Fed to retain control of interest rates¹⁴⁴⁸ when the system is flooded with excess reserves.... banks can [now] borrow from other financial institutions at a rate *below* the IOER rate and deposit those funds at the Fed, earning a spread.... think of IOER [as] pulling the Fed Funds [Rate] upwards” (Coppola, 2015). Chicago Fed blogger Ben Chabot agrees that banks “should have no incentive to lend excess reserves in the fed funds market at rates below the IOER” (2015, 2).

¹⁴⁴⁵ Whereas the original “Interest on Reserves” (IOR) policy plan from 2006-08 was aimed at securing banks’ [in [RAB](#)] so that they would lend more [\[TAB-bankmoney\]](#) into the economy; the concurrent “Interest on *Excess* Reserves” (IOER) was more about controlling the ‘federal funds’ (*interbank*) rate of interest, by effectively setting its floor (and preventing the negative interest rates that subsequently appeared in Europe). In subsequent years, reporters have mostly called the broader policy IOER because, from 2009, US banks’ “excess” Reserves have been about 10x-20x greater than their “required” Reserves. Moreover, both “excess” and “required” Reserves have been collecting the same rate of interest from the Fed ever since January 2009 (Federal Reserve Bank of San Francisco, 2013; Crawford, 2018), hence the 2 terms are often just used synonymously. Both IOR and IOER are governed by the Federal Reserve’s Regulation D (“Reserve Requirements of Depository Institutions”, 12 C.F.R. Part 204).

¹⁴⁴⁶ It wasn’t just bank lobbyists. “Most academics...[c.1957-66] usually supported retaining and even *increasing reserve requirements* to tighten the link between reserves and money, while [also] *paying interest on reserves* to eliminate the distortional effects of the reserve tax” (Feinman, 1993, 577).

¹⁴⁴⁷ Congress, in the *Financial Services Regulatory Relief Act of 2006*, amended the *Federal Reserve Act of 1913* to allow such hitherto forbidden interest payments (effective in 2011, which a panicked Congress subsequently moved up to 2008). Because of Quantitative Easing, as of 2015, approx. 93% of all such Reserve/[RAB](#) accounts were officially in excess of the 10% baseline, and thus received some welfare. According to Rep. Maxine Waters of the House Financial Services Committee, the Fed “paid about \$7 billion in interest to banks [in 2015], including more than... \$900 million to JP Morgan Chase” (Coy, 2016). In 2017 banks collected \$25 billion in IOER payments from the Fed.

¹⁴⁴⁸ “Without the IOER, it would be impossible for the Fed to engage in quantitative easing without losing control of interest rates altogether” (Ng & Wessel, 2018).

[IOER lead the (E)FFR]

4) Why has the growth/recovery this decade been so anemic? The answer that the financial talking heads give to the libertarians is that ‘the bankers are willing to lend, but public is maxed out on debt and just not in a borrowing mood’. The real reason is not given in the financial press. It is interest paid by the Fed on excess reserves (IOER). Historically the excess reserve is 1% of the Reserve, because the banks do not want to tie up Reserves unproductively. Since 2008, however, when the banking kleptocracy persuaded congress to implement IOER, it has shot up to [being paid on] 90% of Reserves-- a thing never before seen. Why should bankers risk their Reserve on loans to dodgy borrowers when they can collect interest from the Fed risk-free? There is nothing that bankers hate worse than risk that is not collateralized or rigged. See also “Usury”, “Risk”.

5) The Fed defends against such accusations of ‘bank welfare’ by pointing out that the (typical) 0.13% spread between the IOER and Fed funds (interbank) rates is no greater than the costs of FDIC insurance and capital adequacy compliance that any US state-monetized credit institution would have to take on, if it were to borrow at the FFR and then just park it at the Fed. The Narrow Bank’s James McAndrews calls IOR, “a very important achievement-- to allow the Fed to... remove this ‘reserve tax’ and improve banking efficiency significantly” (2018, mn.11). The ‘reserve tax’ logic asserts: that “forgone interest, or [the] reserve ‘tax’, directly affects only the...[banking] system and its customers, and not other parts of the financial system. Hence, it creates an artificial incentive for depositors and borrowers to bypass the...[banking] system...[and the] fashioning [of] new financial products” to evade it (Feinman, 1993, 571).

6) That is, however, not the case with *foreign* (unregulated) banks. “About half of all excess reserves are held by America’s 25 largest banks, with a third, to Congress’s horror, held by [also very large] foreign banks. The...[world’s largest banks thus] earn roughly 85% of the Fed’s interest payment” (Economist, 2017). In summer of 2017, Congress was just figuring out, more precisely, that “approximately 40%, or \$838 billion... in reserves parked at the Fed belongs to foreign banks” ; the obvious question [as in the days of the 1st and 2nd ‘Banks of the United States’] being: Why is the so-called ‘Fed’-- “supposedly an institution that exists for the benefit of the US population...directly... [subsidizing] foreign banks, who-- just like in the US-- then proceed to dividend...these funds, ‘returning’ them to their own shareholders

[owners], most of whom are foreign individuals” (ZeroHedge, 2017).

[Total Reserves held at the Fed, 2009-2017: 85% by Big Banks, 40% by foreign banks... and the annual Interest expense] 7) In the 7 years from early 2009 to late 2015, the fed funds effective rate (FFER) was generally 5 to 20 basis points lower than the IOER¹⁴⁴⁹ flat rate of 0.25%. In December 2015, however, the FOMC began the “liftoff” of its *normalization* (of interest rates) policy¹⁴⁵⁰, doubling the IOER to 0.5%, and was steadily climbing in the 2-3 years since then. See also “Great Divergence (monetary; 2015-18)”. 8) In Spring 2018, total ‘excess’ Reserves at the Fed reached \$2 trillion, 10 times more than required reserves, with total IOER payments for 2018 forecast at \$45 bn.-\$50 bn; and the **FFR had surpassed the IOER rate**.¹⁴⁵¹

See also “Federal Funds rate (FFR)”, “Quantitative Easing”, “Bank welfare”, “Negative Interest Rates (NIRP)”, “Reserve Requirement”.

Interest on Required Reserves (IORR)- (changed to ‘interest on reserve balances’ [IORB] in 7/21; prior synon. ‘interest on reserves [IOR]’)

- 1) The Federal Reserve also started paying interest on *required* reserves (not just ‘excess’ reserves) in 2008. Up until then, the expense of *uncompensated* reserve requirements had been passed along as “a modest *excise tax* on transactions deposits [demand/current accounts], and therefore gave banks a strong incentive to game them through the introduction of NOW Accounts, Money Market Deposit Accounts, Retail Sweep Accounts, etc. [The explosion of such] ‘near money’ de facto transactions accounts have left the concept of [the] M1 narrow money [statistic] hopelessly muddled” (McCullough, 2017).
- 2) Similarly, various Fed “governors”, when testifying before Congress for IOR/IOER, “foresaw [the] payment of interest being passed through [because of competition] to depositors... [Hence] they also [then] testified to get rid of the last vestige of Regulation Q... the prohibition of payment of interest by...banks to corporations... [which] was finally ended in the *Dodd-Frank Act* [of 2010]. The governors all pointed out [assumed] that banks would be able to pay interest on corporate accounts by virtue of earning interest from the Federal Reserve. They saw a direct pass through to corporate [large/institutional] customers. However...” in actual practice, “banks don’t pass on this” IOR (McAndrews, 2018, mn.11-12).

¹⁴⁴⁹ **One possible alternative explanation** for this (in addition to that of IOER being a tool to pull up the FFR) is that some nonbank financial institutions like Government Supported Enterprises (GSEs) still hold deposits at the Fed that do *not* earn interest. Hence the FFR often (though not always) “trades below IOER, because institutions such as the GSEs are ineligible to earn IOER” (Chabot, 2015, 5). From spring 2018, however, the FFR has moved marginally *higher* than the IOER rate, indicating that pulling up the FFR (c.2015-2017) is no longer needed; and usage of the Fed’s ON RRP (interest rate “floor”) facility has subsequently collapsed. See also “Reverse Repo agreements (ON RRP)”.

¹⁴⁵⁰ More specifically, on Dec.16, 2015, the FOMC (as implemented by “The Desk” at the New York Fed) “decided to increase [a.k.a. “liftoff”] the target range for the federal funds rate from 0-0.25% to 0.25-0.50%, with the discount rate [ceiling] at 1.0%, the IOER [bobber/float] at 0.50%, and the ON-RRP rate [floor] set at 0.25%” (Williamson, 2016). See also “Channel-Floor systems”.

¹⁴⁵¹ “With the Fed continuing to *normalize* [reduce] its balance sheet, a [ongoing] drop in Reserves was likely to keep putting upward pressure on the effective [federal] funds rate [EFFR] relative to the IOER rate” (ZeroHedge, 2018b).

3) In the Eurozone at least, the current policy of negative interest rates means that the banking sector has to pay the central bank (Huber, 2020c, mn.7). See also “Negative Interest Rates Policy (NIRP)”. See also “Narrow Bank, the”.

Interest on Reserve Balances (IORB)- (superseding both IOER & IORR, as of 7/21)

The Fed Board announced in June “the approval of a final rule amending Reg. D to eliminate references to [both] an interest on required reserves (IORR) rate and [also] to an interest on excess reserves (IOER) rate...[replacing] them with a single Interest On Reserve Balances (IORB) rate”, effective Jul 29, 2021. - <https://www.federalreserve.gov/newsevents/pressreleases/bcreg20210602a.htm>

Interest Rates- (the cost of borrowing money, either in Reserve (RAB) or TAB-bankmoney)

“And what other fair equivalent can be imagined for the detention of money, but a reasonable [rate of] interest?” (Hamilton, 1790, 13).

vs.

The “foundation of [so-called] modern [macro] Economics... Has it ever been empirically tested? No! Can you [laughing] believe this?... There is no evidence [from the past 6-7 decades of data] of a negative-inverse correlation.... [It is, rather, that] interest rates and economic growth are positively correlated.... higher growth leads to higher rates.”- Richard Werner (2021, mn.103-05). See also “Economics”, “Bankmoney Regime”.

1) Within Economics, interest rates are very often used for ‘confusing cause and effect’, a very common (and ancient)¹⁴⁵² logical fallacy.¹⁴⁵³ Joseph Goebbels said “‘If you want to tell a lie, tell a big lie’.... There is no evidence... not a shred of empirical evidence for... the...*theoretical proposition*” that interest rates affect GDP growth (Werner, 2015b, mn.36). In reality, “short-term interest rates...always follow [GDP] growth. They are the result. Now the result cannot be at the same time the cause, no matter what they tell you” (Werner, mn.39). Central banks “should say ‘*We’re lowering rates because we’ve noticed the economy has decelerated and we know [that] interest rates follow growth*’” (Werner, 2015b, mn.40). And if the price of money is not determining economic growth, then what is? “Maybe it’s the quantity of money” (Werner, 2015b, mn.41). See also “Personification fallacy”.

1b) CBs only “have the power to set their own interest rates on central bank money [Reserves/RAB]” (Huber, 2020c, mn.26); this does not directly affect the quantity of [TAB-] bankmoney; and today even the indirect effect “it is quite weak” due to Quantitative Easing (Ibid).

2) What low interest rates most reliably lead to is lower wages (Keen, 2017j, mn.7).

2b) And basically the oversupply of bankmoney has caused the 4-decade “trend of falling interest rates that has existed since about 1980... [and the] low interest rates, rather than stimulating real-economic activity, are boosting *non-GDP finance*. Instead of inflation, the money overhang is largely generating asset inflation, i.e. rising asset prices” (Huber, 2020b). See also “Debt cycles”, “Asset inflation”.

3) “Raising the Fed Funds Rate is not what raises interest rates. What raises interest rates is the market. The market is raising interest rates. The Fed is going to follow” that (Fitts, 2017, mn.26-27).

4) MMT founder Warren Mosler agrees that “It’s not so much that those interest rates cause anything to happen. They’re gonna be a *reflection* of conditions that other things are causing” (Mosler, 2016, mn.4). The US Fed incorrectly “...think[s] that the Federal Fund rate should be maybe 2% over the inflation rate” (Mosler, mn.2).

5) Even recent textbooks now admit that “[g]iven the existence of the [larger] Eurodollar market... it is easy to see why interest rates in the US *cannot* be insulated [independent] from those in other parts of the world” (Ehrhardt & Brigham, 2016, 728).

¹⁴⁵² In Latin it was known as *cum hoc ergo propter hoc* (“with this, therefore because of this”). See also “Logical fallacies” [‘post-hoc’].

¹⁴⁵³ Mixing up cause & effect (either deliberately or unintentionally) is sometimes a.k.a. “*correlation-causation fallacy*”-- f.e. ‘pilot fish cause sharks’ or ‘sharks cause red water’. See also “Logical fallacies” [‘post-hoc’].

6) “With the private debt level as high as we’ve got, you simply can’t have high interest rates. What’s been driving the...interest rates down is the rising level of private debt... The low yields are here to stay while private debt is still that high” (Keen, 2016x, mn.17).

7) Substitute *‘private debt’* for ‘interest rates’ as a primary/driving factor in business cycles (along with more recent eurodollars and other forms of deregulated shadow banking) and macroeconomic causality starts making more sense.

8) “In a liberated system, interest rates are no longer centrally managed but used as an indicator of the situation on the credit markets. If high interest rates frustrate much needed investments in the real economy, the monetary authority can [effectively] cap the interest rate by making extra money available for lending at that rate” (Wortmann, 2019b, 11).

See also “Compound interest”, “Private debt”, “Shadow banking (SBS)”.

Intergovernmental money- see “Federal Funds (FF)”, “Central Bank/Treasury money”.

Intermediation of Loanable Funds (ILF) Theory- (synon. “Exogenous Money”, the “intermediation paradigm”¹⁴⁵⁴, “Financial Intermediation Theory” [Werner], or ‘funds intermediation’ [Treasury-OCC]; a.k.a. the ‘household budget fallacy’)

1) Michael Kumhof’s (2015) term, subsequently picked up by Steve Keen, for the demonstrably false¹⁴⁵⁵ theory, dominant since the late 1960’s or 70’s,¹⁴⁵⁶ that banks simply intermediate between [good] savers and [bad] spenders, and are thus no different, in terms of their accounting practices, from other businesses. See also “Nonbank Financial Institutions (NBFIs)”.

1b) Although the theory is untrue and misleading, it does, nonetheless, have a certain ‘plausibility’, from a bank’s accounting perspective. From “the point of view of the bank, it has acquired the security without giving up any cash; the counterpart, in its balance-sheet [however], is an *increase in its liabilities*. There is [thus] expansion, from its point of view, on each side of its balance-sheet. But from the point of view of the rest of the economy, the bank has ‘created’ money. This is not to be denied” (Hicks, 1989, 58). See also “Plausible deniability”, “**Deceptive Banking Terms (d.b.t.’s)**”.

2) Such denial is basically a post-World War Two “American disease”, running since “the 1950’s”, in which “‘the new model’... said that ‘banks are just another form of intermediary. And this nonsense about them being intermediaries has been cemented into the minds of Neoclassical Economists, and they dominate the global profession...If we could go back to the earlier wisdom, we might get somewhere.... Capitalism... is an *out of equilibrium* system. And.... the fetish that Economists have for modeling everything as if it’s in equilibrium is simply a [medieval-like] fallacy, and that’s partly why...they’re stuck with the ‘Loanable Funds’ [model], because it is [another] equilibrium model.... It’s dangerously wrong and we’re paying the price for it now” (Keen, 2018h, mn.13-14). See also “Neoclassical Economics”, “Bank welfare”.

3) The (mid-century) “rise of finance as an economic discipline played a big role in the rise of the Intermediation paradigm” (Ricks, 2018c).

4) And generations of subsequent “Policy makers” often say that “they understand” (that transferring ‘loanable funds’ is not a ‘financial transaction’), when in fact, they don’t understand it. “They’re so marinated in this idea, that it’s impossible [for them] to escape from” (Kumhof, 2019b, mn.9).

See “‘Exogenous vs. Endogenous’ (money creation)”, “Narrow banking”.

¹⁴⁵⁴ “Loanable Funds are not ‘financial transactions’. I want to make that very, very clear.”- Kumhof, at the 2019 Future of Money Conference in Stockholm, mn.5. They are, like trading in physical gold or cash, “**fungible**”.

¹⁴⁵⁵ “Obsolete” in the words of Joseph Huber (2013, mn.13); see also Werner 2016.

¹⁴⁵⁶ ...as opposed to the 1930’s-40’s, when most learned folks knew darn well what banks (and even ‘Building & Loan’ associations) were. “*You’re thinking of this place all wrong-- as if I had the money back in a safe.*”- George Bailey, telling his skittish depositors how things work, in *It’s a Wonderful Life* (1946). See also “Banks”, “Goldsmith’s Tale, the”.

Internal Revenue Service (IRS)- the collection agency of the Federal Reserve; an independent agency, not part of the Executive, Legislative, or Judicial branches, with a constitutional status a murky as they can make it.

1) We “can presume the bulk of the funds paid into the US Treasury come from taxes and [the] proceeds of debt issued by the Treasury through a group of dealers” called the [see also] “Primary dealers” (Fitts, 2022i).

2) “The [t]wo individuals that went to prison that were in Congress [in recent decades, did so], for one major reason. They were both very, very strong[ly] anti-IRS, and wrote books against it...” (Paul, 2017, mn.14). See also “Federal Reserve System”, “Federal Reserve Audit”.

International Banking- is international exploitation, obscured by (their) economists’ ‘mythomatics’ and overly complex modelling programs, which is just a way to magnify error.

See also “International Banking Facilities”.

International Banking Facilities (IBFs)- (one bank; two sets of books) Since the initiation of Eurodollar futures contracts in 1981; “it has even been possible for non-US residents to hold [unregulated] Eurodollar deposits within the... [US] at financial institutions called International Banking Facilities” (Burton, et al,10, 257).

1) This is because IBFs “represent... separate sets of books within existing banking institutions” (Chrystal, 1984).

1b) Since “late 1981 non-US residents have been able to conduct business free of US banking regulations at International Banking Facilities (IBFs) in the United States. Eurodollar deposits may be owned by individuals, corporations, or governments from anywhere in the world... [but] only non-US residents can hold deposits at IBFs” (Goodfriend, 1998).

2) “The IBF concept was formally proposed in July 1978 to the Federal Reserve Board... by the New York Clearing House Association.... As of April 2007, there were 232 IBFs in existence, 137 in New York State. Of the total, 169 were opened by **branches and agencies**, 57 by banks and savings and loan associations and six by Edge Act corporations. Under Federal Reserve regulations, IBFs can be operated in any state.... [and] may extend [TAB] credit to foreign residents, other IBFs, or [to] the US offices of the IBF parent- subject to Eurocurrency reserve requirements-- and may [also] transact business in foreign currency.... The non-bank deposits at an IBF must be at least \$100,000 [however]. Likewise, minimum withdrawals are set at \$100,000” (Federal Reserve Bank of New York, 2007).

3) “It is true that the largest banks have the largest IBF’s” (Chrystal, 1984, 11). See also “Eurodollars”, “Offshore magic circle”.

International Financial Reporting Standards (IFRS)- (a.k.a. ‘non-GAAP’, the ‘International Accounting Standards Board [IASB], est. 2001 in London; antecedents: the ‘International Accounting Standards Committee [IASC]’, est. 1973 in London, and the ‘International Accounting Standards Foundation [IASF]’, est. 1920 in Delaware)

1) is “the global equivalent to the FASB”¹⁴⁵⁷ (Ramanna, 2015, 14), the private IASB/IFRS is predominantly funded by the banks and other large corporations, representing a “fundamental shift in accounting from its traditional *historic-cost focus* to a greater emphasis on *fair values*...[which] appears to be the result of a complex confederacy of interests and ideas, consistent with an ideology-enabled capture of the FASB on this issue” (Ramanna, 2015, 14). See also “Accounting, ‘Fair Value’”.

2) Although the idea of IFRS took hold in more than 100 countries between 2005 and 2015, it ran into substantial resistance in the US, where its “*principles*” as opposed to “*rules*”-based approach has often been associated with fuzziness, particularly in regards to (the reporting of) earnings-per-share (EPS) and

¹⁴⁵⁷ In 2002, “the FASB and the still nascent ... IASB signed a memorandum of understanding to harmonize their rules to facilitate eventual US adoption of... IFRS”; and 5 of the IASB’s original 14 board members were from the US (Ramanna, 2015, 35; 206, n56). See also “Globalism”.

net margins. For example, when excluding DuPont, 3rd quarter 2016 EPS numbers (for the remaining 20 DJIA companies) show an average difference between non-GAAP and GAAP [accounting systems] of 24.7% (ZeroHedge, 2016b). In 2015, 26.5% of “total non-GAAP...S&P earnings...[were] the result of accounting gimmicks. Just so there is no confusion: the [SEC-proposed¹⁴⁵⁸] GAAP to non-GAAP adjustment has nothing to do with the overall deterioration in corporate revenues and declining profitability. The two [trends] are parallel, because while both non-GAAP and GAAP EPS are clearly declining, what Wall Street is doing is using every possible contrivance to make the descent appear far less disastrous” (ZeroHedge, 2016).

3) Today’s 8-member “Monitoring Board” of the IASB/IFRS was initially comprised, in 2009, of 5 representatives from: the European Commission, the Japanese Financial Services Agency, the US Securities and Exchange Commission [SEC], the Emerging Markets Committee of IOSCO, and the Technical Committee of IOSCO. The Brazilian Securities Commission and the Financial Services Commission of Korea were added to the Board in 2015, followed by China’s Ministry of Finance in 2016 (Deloitte, 2018). See also “Accounting standards”, “Financial Accounting Standards Board (FASB)”.

‘International Intelligence Community’ (I.I.C.)- (i.e. ‘the ushers’; men also cooperate [White & White, 2008b]) See also “Intelligence Community (IC)”, “Secrecy, Cult of”, “National Identity/Nationalism”, “Adolescence of Mankind”.

“Western civilization gives abundant evidence of the mastery we have gained over physical matter. But the relations between nations today reveal how meager is their understanding one of the other. The greatest crisis before our country lies in this gap between our control of *things* and our understanding of other *peoples*. Somehow we must bridge this gap, and quickly. Otherwise, our mastery of things will simply provide us with irresistible force with which to bring about our own destruction. The future of civilization may depend on whether enough nations, and groups within nations, can acquire an understanding and appreciation of one another to the point where *world peace* is [economically] possible” (Bode, 2005). See also “Graham, Benjamin”, “*World Parity Economy (WPE)*”.

“In the course of a long administration, the descent to vice is insensible; but there is no reascending to virtue without making the most generous efforts” (Montesquieu, 1748, 47).

“[T]he federal [Deep State] government...is actually [often] the international government”¹⁴⁵⁹ (Iserbyt, 2001, mn.59).

1) America (with 5% of the land) is not the only game on the planet. The USA, however, was the ‘green thumb’ model of economic excellence (and hence “power”), bar none, in-- or at least increasing in-- the 19th century. But in the 20thc (from Day 1), it succumbed to the imperialism impulse¹⁴⁶⁰... America, nonetheless, found & summoned the constitutional wisdom to maintain that ‘green thumb’ economic base through (more-or-less) the 1st half of the century.¹⁴⁶¹ See also “Pilgrim Society”, “UKUSA Agreement”, “Economics, Parity”.

1b) But from the Eisenhower Admn. & 1960’s, however, it was (increasingly) clear that (what might be called) the nakedly-greedy Imperialists were calling the shots-- with America’s traditional ‘green thumb’ basis & economic foundation (increasingly) forgotten about. See also “Reserve currency”, “Economics”.

¹⁴⁵⁸ in 2008

¹⁴⁵⁹ And imperialism makes bridges. “[T]his community of man was potentially a very subversive thought in an age of rigid...[socio-political] restrictions”- <https://www.youtube.com/watch?v=QuHoRgs9UkQ> [Weber, 1989 pr. 23, mn.25]. See also “National Identity/Nationalism”, “Land Bridge”.

¹⁴⁶⁰ The core of any I.I.C. has been-- from sometime after the dust settled on the 2nd Currency War and US Civil War-- the *British-French* alliance (<https://www.youtube.com/watch?v=1XATkBETOjE> [LewisCarroll,1865]) and *Anglo-American* financial elite; in France from no later than the 1870’s & the US from no later than the 1880’s or 1890. In addition to dominating nearly all the world’s seas, these 3 ruled nearly half the world’s land through most of the 1st half of the 20th century. Success breeds replication. See also “Pilgrim Society”, “UKUSA Agreement”, “Intelligence Community (IC)”.

¹⁴⁶¹ Not many are aware that both presidential candidates (and parties) were involved in something of a bidding war over “Parity” pricing (for the primary sector) as late as 1952 (Yeager, 1956) https://etd.ohiolink.edu/apexprod/rws_etd/send_file/send?accession=osu486392916696374&disposition=inline. See also “Parity pricing (for the primary sector)”.

[1963-64; see also "Imperialism, American".]

1c) Are we to believe that nobody in Russia, China-- or in the City of London (or Israel)-- could glean this? I.e. that, simply in terms of basic Energy-economics, the life-expectancy of any T-Rex (of such 'super-imperialism') could only be 5 or 6 (perhaps 7) decades?-- that is before it inexorably dissolved from its own internal exploitations, injustices, and strategic abuse of the Land, its farmers, & the Earth itself. Who, from across an ocean (of zoomed-out objectivity) could not see this eventuality? Not everyone was taken in, to the point of intoxication, on the Keynesian-Samuelson-Tobin "economic" (myopia) kool-aid.¹⁴⁶² See also "Reserve currency", "Super Imperialism", "Dutch disease" →, "Inequality"; {over-} "Monetization", "Great Extinction, 6th"; "Keynesianism"; ← "COVID" [op].

1d) It's not just Sun Tzu-like long-term military Intelligence & a grand theory or two (that is on-the-mark). It's also everyday economics & detail. Even in the 1990's, Federal Reserve "secret meeting...visitors have included members of foreign central banks from Russia and China, as well as [select] academics" from the US (Auerbach, 2009, 75). Is the primary impetus for 'real' monetary reform in the 2020's to come from Russia and/or China? See also "Graham, Benjamin".

2) And if one IC could (& did) glean strategic reality (over the course of several decades), then could not more than one? Every human being has needs to communicate-- whether that communication is published or unpublished, 'official' or unofficial, formal or on-the-sly. The next matter (which has already been decided) is whether such people, or 'men' (i.e. presumably starting from an all-military-elite-type institutions, numerous decades ago) would wish to communicate beyond their native language (again be it formally or informally).

2b) Hence we have the Anglophonic "UKUSA" & "5 Eyes"¹⁴⁶³ Agreements (from the 1st half of the 20thc). And then, (is one to believe that) nothing happened in the next couple decades after that? Of course, France was 1st; circa 1966 [<https://www.youtube.com/watch?v=bZlxRzKrRjg> (MoodiesFrench'68)], or was it closer to 1856 [everything has to start somewhere: <https://www.youtube.com/watch?v=1XATkBETOjE> (Carroll 1856)]?

3) In any event, "the technology transfer *out* [sic] of the United States" may not be as old as the Great War, but it is nonetheless a long-term and tenured phenomenon; "arming enemies, [thus] creating [armed] enemies which you then have the excuse to go and fight and disrupt, and bomb-- and put your central banks in-- in the great game that goes on; the great Right-Left game-- Communism vs. Capitalism, black vs. white, man vs. woman, fat vs. skinny, transgender bunny vs. straight... whatever dialectic it is, whatever dialectic they're pushing this week. If it's Corn Flakes vs. Wheaties, if it's Coco Puffs vs. Cheerios, whatever...dialectic, they've got to build up enemies. They built up the Soviet Union [& Nazis (at the same time), before WW2]. Remember Professor Anthony Sutton.... *Wall Street and the Rise of Hitler* [1976], *National Suicide: Military Aid to the Soviet Union* [1973]... the spy ring transferring all the atom bomb secrets...Ethel and Julius Rosenberg executed [in 1953]...the bottom rungs... sacrificed to keep the rest of the network in line-- to tell them to shut their mouths.... Where...[are] all the CEOs of Intell and Microsoft, and God knows who else, who are handing...[technology] to Israel [that then] ends up in

¹⁴⁶² Honest, objective history (a.k.a. long-term analysis) & cultural imperialism (propaganda) don't mix. Does one need to look any further than the UK (or Lennon) to see how this (contradiction) rips up the foundations of a nation, country, or society? Strip-farming for weaponized food exports (sometimes paraphrased as 'carrots') undermines the physical foundations, just as special interest-serving political-economic lying & secrecy (sometimes paraphrased as 'sticks') undermines the mental & intellectual foundations of a healthy or functional society. See also "Economics", "Imperialism", "Secrecy, Cult of".

¹⁴⁶³ As of c.2013 the 'Five Eyes' had grown to (something more like at least) "14 Eyes". See also "Industrial Revolution, 3rd", "NSA".

China?¹⁴⁶⁴ We don't hear about¹⁴⁶⁵ those...[technology transfers. The publicly ballyhooed things are] just them keeping the Network in line...[with a few] sacrificial lambs.... [Per the Israel-US] Binational Industrial Research and Development Foundation-- the B.I.R.D.-- it's just one big technology transfer" (O'Connell, 2022, mn.8-11). See also "Cartel", "Hegelian dialectic".

3b) Even during World War Two, "files show that American insurance premiums almost certainly wound up in Nazi banks, and German brokers were secretly covering London establishments [that were then] under attack by the Luftwaffe" (Fritz, 2000). See also "American Insurance Group (AIG)", "Oligarchs".

4) See also "United States, the" [.synchronicity], "World Par Economy (WPE)".

[secret history of the "Secrecy, Cult of"; see also "Constitutions" (.greatness)]

International Monetary Fund (IMF)- (est. 1945, international bankmoney collection agency [& sometimes relatively independent research org.], based mostly on H.D. White's WW2 plans for an 'international' counterpart for the US [see also 'Exchange Stabilization Fund']

1) US Treasury agent Henry D. White's plans at Bretton Woods "reflected the concerns that much of the financial resources of...[J.M. Keynes' proposed International] Clearing Union envisioned... would be used to buy American goods, resulting in the United States holding the majority of bancor. White proposed a new [smaller] monetary institution called the *Stabilization Fund*. Rather than issue a new ['Bancor' or SDR] currency, it would be [simply] funded with a finite pool of national currencies and gold of \$5 million that would effectively *limit* the supply of reserve credit."

- <https://www.federalreservehistory.org/essays/bretton-woods-created> [11/13]

1b) The "IMF... [was] designed to operate along the ESF lines that [Henry Dexter] White [had] proposed" 13 years earlier (Bordo & Schwartz, 2001, 1). See also "Exchange Stabilization Fund (ESF)".

1c) "White transferred from the ESF to the IMF the [obscurantist] form of exchange of currencies of the 2 contracting parties and not loans [per se]... This rhetoric falsifies the actual transaction... [T]he rhetoric states that a...[client gov't] buys currencies of other members (or SDRs), paying the equivalent in its own currency.... The fiction¹⁴⁶⁶ fosters the idea that the borrower has not assumed a debt.... The [resultant] culture encouraged the piling up of indebtedness in some countries and the extension of IMF credit year after year in others...[which] may reflect the fact that until 2000 the IMF had no formula for forgiving loans. This obscurantism is reflected in the balance sheet of the IMF, which does not provide usable information on the actual transactions between the IMF and the member country¹⁴⁶⁷...." (Bordo & Schwartz, 2001, 23). See also "Federal Reserve Audit".

2) "Washington uses the... IMF as a *foreign-policy slush fund* (a term coined by *The Economist*) to promote neo-liberal or market fundamentalist policies... known generally as the Washington Consensus" (Liu, 2002c). Established at Bretton Woods as a debt-collector for US¹⁴⁶⁸, European, and other member

¹⁴⁶⁴ Bill Gaede give a more detailed (and 1st person/primary source) account of such matters (Gaede, 2022, mn.24-44).

¹⁴⁶⁵ One also doesn't hear much about (per Gaede, 2020) "world population" eventually stabilizing "somewhere around 9 bn."; although the UN's estimate of the relative flatline is (as of 7/22) at "10.4 billion...during the 2080s" is not radically divergent (<https://news.un.org/en/story/2022/07/1122272>). See also "Chinese statistics", "COVID", "COVID Op."

¹⁴⁶⁶ Possibly, "the fiction was created to win approval of...Bretton Woods by...Congress... [H]ad the IMF been set up [straightforwardly] as a lender on commercial terms, it...[may] have been opposed by US and foreign commercial banks. However, there was virtually no private international lending when Bretton Woods was established" (Bordo & Schwartz, 2001, 24). See also "Usury" [.veiled].

¹⁴⁶⁷ "What it shows is the total amount of member country currencies that the IMF owns" (Bordo & Schwartz, 23).

¹⁴⁶⁸ "Basically, the IMF is a tool of the US State Department and the US Defense Department; just like the head of the World Bank is traditionally...an American Secretary of Defense... McCloy, McNamara, Zellick... So that the IMF now basically is an office operating out of the Pentagon, as part of the new Cold War.... the exact opposite of everything that Gorbachev and Reagan were trying to achieve in the

nations' private banks, the IMF also has developed a (sometimes independent) research capacity. For example, despite "the fact that the IMF was pushing for a [Greek sovereign] debt write-down [in 2011]-- the head of the IMF at that time, Dominique Strauss-Kahn, wanted to run for president of France, and he was told by [fellow UMP party member] French President Sarkozy, 'Well, wait a minute, if French banks hold most of Greek debts, [then] you can't-- at the IMF-- say that we're going to write down the debts'. So they [the IMF] didn't (Hudson, 2015c)." See also "Washington Consensus", "Exchange Stabilization Fund (ESF)".

2b) Although its sister organization, the World Bank, is more outwardly a US puppet, the IMF (at least until very recently) has always been a marionette also. The "Americans' insistence on a system of pegged [to the gold dollar] exchange rates to be changed by substantial amounts only with IMF approval was intended to avoid the kind of international monetary turmoil that...[could] hinder reconstruction..." (Eichengreen, 2019, 92). See also "Reserve currency".

3) "The idiotic policy of monetary restraint and social-spending reduction to balance government budgets in order to pay foreign debts [to foreign banks] is still being advocated by the... (IMF) in debtor nations around the world-- except for the United States, the world's largest debtor nation" (Liu, 2005). See also "Propaganda".

4) Most IMF loans "were taken on to subsidize trade dependency, not [to] restructure economies to enable them to pay. IMF 'structural adjustment' austerity programs... make the debt situation worse... selling off public infrastructure... to rent-seeking monopolists" (Hudson, 2015, 7).

4b) *Perestroika*? When "Gorbachev began to plan to... restrain private capital, the IMF said: 'We're not gonna make any loans to stabilize the Russian currency until you remove Mr. Gorbachev'. The US said 'we won't deal with you until you remove him'" (Hudson, 2020c, mn.110). See also "Russia".

5) The IMF "has this *Austrian* theory that pretends that money began as *barter*, and that capitalism basically operates on barter. This always is a disinformation campaign. Nobody believed this in times past, and this is a very modern theory that basically is used to say: "Oh, debt is bad." What they really mean is that *public* debt is bad...[that] the government shouldn't create money. The government shouldn't create deficits, [and] you should leave it all to the banks... [which] should run and indebt the economy. You're dealing with a... public relations mythology that's used as a means of deception for most people. You can usually ignore just about anything the IMF says.... The precondition for being hired by the IMF is not to understand finance.... That's why they impose austerity programs that they call 'stabilization programs' that actually are *destabilization* programs almost wherever they're imposed" (Hudson, 2016g, mn.6-7). The "successful error of [Washington Consensus] monetarism is to force countries to have such self-defeating policies that they end up having to privatize their natural resources, their public domain, their public enterprises, their communications, and transportation, like you're seeing in Greece... So when you find an error that is repeated, it's deliberate. It's not insane. It's part of the program, not a bug" (Hudson, mn.8). See also "Washington Consensus", App.C: "1-2-3".

6) "Giving a country a voice in the IMF is like telling an ambassador: 'You can go to Times Square, and you can get a microphone and yell to Times Square.... Only the US has veto power within the IMF" (Hudson, 2010c). See also "World Bank", "Bretton Woods", "Super Imperialism", → "Angry Birds".

7) IMF Updates: Summer 2022- USA's "16% voting share" proved sufficient to pressure all foreign countries using Russia's MIR payment system (except Belarus and Tajikistan) into dropping it (by Sept. 2022).- <https://www.youtube.com/watch?v=bLT9IZPw8Nc> [JoeBlogs, 10/22, mn.13-14].

See also "Special Drawing Rights (SDRs)", "International monetary reform", "Graham, Benjamin".

International monetary reform- See "Graham, Benjamin (1894-1976)".

International trade, theory- "...the silliest... of all the subdisciplines of economics... Gunboats and military spending make no appearance in this theorizing, nor do the all important 'errors and omissions' [see

1980's.... The IMF doesn't have competent financial analysts.... They've been firing the staff whenever the staff tries to raise a tone of reality..." (Hudson, 2016b). See also "Central Intelligence Agency (CIA)".

“Balance of Payments”, capital flight, smuggling, or fictitious transfer pricing for tax avoidance. These elisions are needed to steer trade theory toward the perverse and destructive conclusion that any country can pay any amount of debt, simply by lowering wages enough to pay creditors... what is mainly devalued is the cost of labor” (Hudson, 2015, 5). See also “Free Trade theory”, “Race-to-the-bottom”.

Internet, the- (a.k.a. ‘world wide web’; <https://historyofcomputercommunications.info> [ef history])

1) “The highest activity a human being can attain is learning for understanding, because to understand is to be free.”- Baruch Spinoza¹⁴⁶⁹ (1632-1677). See also “Libertarianism(s)”.

[(a half-century now of) *parallelism* training? See also “Tickbox”.]

2) In February 2015, the FCC reclassified broadband Internet access as a *telecommunications service*, thus subjecting it to ⁵⁷⁴approx. 574 II [?] regulation, although several exemptions were also created. The reclassification was in order to give the FCC a legal basis for imposing [so-called] ‘net neutrality’ rules, after earlier attempts to impose such rules on ‘information services’ had been overturned in US courts. See also “Deep State”, [vs.] “Judicial branch”.

2b) “now is perhaps at the 4th grade level in its development. It doesn’t have the tools for thinking.... We have a long ways to go” (Steele, 2017c, mn.38).

3) now “is a remarkably efficient medium for making materialism less aspirational” (Moon, 2019k). See also “Design (Knowledge Age)”, “Big 5 (on S&P 500)”, “Internet of Things (IoT)”.

Internet of Things (IoT)- (a.k.a. ‘the 3rd Industrial Revolution running on [so-called] ‘5G’)

1) In the digital world today, “you have two tsunamis coming at each other. One is... *cyber-warfare*; and the other tsunami is called the *Internet of Things*... [even though] all the systems you’re depending on to do the *Internet of Things* have zero integrity. And I keep watching these two tsunamis...and saying ‘*How is this gonna work?*’”; it isn’t (Fitts, 2017k, mn.40-41). “Where’s the technology that doesn’t have a harmful impact on the physical body... [or our] electro-magnetic intelligence?” (Fitts, mn.42-43).

2) To more optimistic visionaries, the IoT will be like a capstone to the Internet-led sector’s rapidly diminishing costs in: harvesting solar & wind/renewable power, 3D printing, and online university courses- energy, manufacturing, and formal education, respectively: the “Internet of Things is the first general-purpose technology platform in history that can potentially take large parts of the economy to near-zero marginal costs”¹⁴⁷⁰ (Rifkin, 2014).

3) To anti-statism realists, however, the IoT means “that all devices in... new housing developments, will, if you don’t resist it, contain a connection to the internet.... Whatever is electronic in your house will be connected to the internet, which means that not only will these devices be [capable of] recording you and spying on you... They will be able to measure down to a very fine point your use of energy-- which is the bottom line as far as the Technocracy¹⁴⁷¹ is concerned, and actually has been since the 1930s [and A. Huxley]. They spoke about this, in America, in the 1930s... [about attaining] the ability to measure the use of energy down to the level of the individual, for the planned society of the future, meaning that people up the line, at some point, would be given energy quotas...” (Rappoport, 2018b, mn.7-8). “Cars at some point in the future, will be entirely driverless, because cars are also [going to be] connected. They will talk

¹⁴⁶⁹ Yes, it’s (then-‘revolutionary’) *Parallelism*. (“Father of Psychology”) Wilhelm Wundt (1832-1920) also “accepted Spinoza’s metaphysics of *parallelism*, and spent a great deal of effort refuting [dualistic] reductionism.” See also “Zionism”.

- <https://webspaceship.edu/cgboer/wundtjames.html>

¹⁴⁷⁰ I.e. when more-or-less everyone (every ‘prosumer’) can enjoy the economies-of-scale (cheapness) that only the giants like Amazon and Walmart had 2 or 3 decades ago.

¹⁴⁷¹ “...this web of electronics which controls their brains, and brainwashes them into thinking that technology is everything” (Rappoport, mn.27).

to each other...[and] to a central distribution and control point. So... the car will take you there, according to its own ever-changing plan to modulate all traffic flows, etcetera... And then eventually... cars are extinct. We don't need them. If all you are doing is sitting in a car and being taken somewhere, then everything must occur as public transport. Cars are out of the question, and so people will be herded into public transport... and cars will be an extinct species of the past. All of this is the technocratic plan for considering every human [being] as an energy-consuming unit that has to be monitored, spied on, regulated, and controlled.... [If] your home is completely regulated and controlled... [then] *all* of the devices operate as they will-- not as you want them to... So what is the psychological effect of this over time? People become more and more passive. Why learn anything about anything? [beyond your (assigned) program]... Of course, eventually there is no switch [option]. You are on the grid, and you can't get off [of it]. That's the plan" (Rappoport, mn.9-12). Over "time, in some cases gradually, in some cases suddenly...people will begin to say 'Well, you know... All I have to do is talk to Alexa and ask questions and get answers, and uh you know, what's the next step? Well I guess it's hooking my brain up to a supercomputer that downloads, supposedly, information into my mind, the very best information. And then where is being [a] human [being] at that point? It's gone away" (2018b, mn.15).

4) A more immediate concern with many researchers is the IoT's current dependence upon "5th Generation" (5G) wireless connectivity. It is no secret that the electromagnetic spectrum was effectively weaponized over the last quarter of the 20th century, that that is where the Internet (as well as smart phones) originated from in the first place, and that the (more intense) *microwave* portion of the spectrum is **more disorienting and harmful to cellular life** than is the *radio wave* portion of the spectrum.

5) The (so-called) 5G "network of sensors and routers...allow[s] us to get into more automated... [things, and also] into areas that are far more complex in terms of artificial intelligence....[which] allows us one day to make sure that we don't have any people working, because we can have a complex system of softwares which will allow everything to work" (Pieczenik, 2019b, mn.0) at radically increased energy efficiency; at least that's the official gameplan according to the 2019 Davos oligarchs' convention (Pieczenik, mn.4).

6) With "5G, we are talking about 24/7 real-time complete surveillance...[like] Isaac Asimov's *Foundation*.... I'm not saying [that] they can't wipe out the minds of 95% of the population, but... you know there's always 5 to 10%-- [that] they can't" (Fitts, 2018t, mn.36).

7) "They're trying to get people to [like robots, further] resonate with the machine, instead of with living things... It's coming down to whether you resonate with the divine intelligence, or you resonate with the [anthill/artificial] machine" (Fitts, 2018n, mn.137). See also "Great Extinction, 6th", "COVID".

8) Bill Binney would seem to agree that "the Internet of Things...is just more opportunity to see different aspects of your life.... I mean...[government, subcontractors, telecoms] can start to see how people *think* [sic].... [And politically], you find out who they're involved with through the social network, and then you [start to] slow-roll 'em" (Binney, 2019, mn.33-34). See also "Jones, Alex", "Mind control".

9) Are you also a "thing"? "Remember-- the winner in the AI superpower race is the AI system with access to *the most* data. Accessing your body... on a 24/7 basis generates a lot of data. If the Chinese do it,¹⁴⁷² the Americans will want to do it, too [?]. In fact, the rollout of human 'operating systems' may be one of the reasons why the competition around Huawei¹⁴⁷³ and 5G telecommunications has become so fractious. As Frank Clegg, former President of Microsoft Canada has warned us, 5G was [initially] developed by the Israelis for [the purpose of] crowd control" (Fitts, 2020d). See also "Mind control", "Health care (US)" (vaccines), "G2", "Land Bridge".

10) '5G Updates: Spring 2021- "Russia, (28 March): The Russian Ministry of Defense refuses to transfer frequencies for 5G, which effectively delays any 5G rollout there for several years.

¹⁴⁷² By 2020, "digital payment systems, including wallets called WeChat and Alipay, have become so widespread in China, and increasingly other Asian countries... [over the past decade] that many businesses now *have to* use them to stay in business" (Huber, 2021). See also "Great Extinction, 6th", →"Intelligence Community" [*I.I.C.*], →"COVID" → Internet of Things..

¹⁴⁷³ "China did not" invent & install the initial "internet & social media...What China did over the 10-15...20 years [from the latter 90's]-- which we allowed them to do-- was to steal our technology and to take it. In turn...[eventually] Trump just said 'That's enough'" (Pieczenik, 2018c, mn.241). See also "Land Bridge".

Belgium, (31 March): The Belgian Environment Minister announces that Brussels is halting its 5G rollout plans, saying, 'The people of Brussels are not guinea pigs whose health I can sell at a profit'.
Germany, (4 April): Germans sign a petition to force the German Bundestag to debate 5G.
Netherlands, (4 April): Members of Parliament in the Netherlands insist that radiation research must be carried out before any approval of the 5G network.
USA, 5 (April): California Supreme Court Justices unanimously uphold a 2011 San Francisco ordinance requiring telecommunications companies to get permits before placing antennas on city infrastructure.
Switzerland, (9 April): The Canton of Vaud adopts a resolution calling for a moratorium on 5G antennas until the publication this summer of a report on 5G by the Swiss Federal Office for the Environment."

[Electromagnetic spectrum]

See also "Industrial Revolution, 3rd", "Scientific Management", "Mind control".

Interstate banking- Thrifts were actually the first to allow interstate banking, in 1992, five years prior to commercial banking organizations (Roussakis, 1997, 45). Credit unions were apparently left out of the scheme. See also "Glass-Steagall Act".

Intrinsic value- see "Gold standards/bullionism", "Backing".

Investment- (i.e. a 'time loan', short-term or long-term) a speculative loan or purchase in hopes of a financial return (ROI) later or at least to preserve equity.

Investment Banks- (a.k.a. 'bank holding companies'; underwrite/put deals together, that 'investment companies' then sell; hence they are still sometimes also referred to as 'broker-dealers' [see also "Glass-Steagall"]; archaic: 'merchant banks' [UK])

"merchants of such unbounded credit would monopolize all [significant commerce] to themselves" (Montesquieu, 1748, 51). See also "Quantitative Easing", "Bank welfare".

1) "buy newly issued stocks and securities from corporations and resell them to the public... playing a key role in marshalling capital [for] corporations" (Allen, 2009, 165); on a larger scale than do 'merchant banks' or venture capital firms. Since the repeal of *Glass-Steagall* in 1999, IB's have also been enabled to become (like commercial banks or bank holding companies) state-monetized credit institutions. Traditional IB's Goldman Sachs and Morgan Stanley took nearly a decade to grasp this opportunity, however, because 'independent' investment banks were, by tradition, lightly regulated, compared to commercial banks and their holding co's.¹⁴⁷⁴ See also "Glass-Steagall Act, repeal (1999)", "Big 3 (Asset managers)".

¹⁴⁷⁴ Goldman Sachs and Morgan Stanley, the last 2 'independent' investment banks, become bank holding companies in 2008. John Titus (2021b, mn.23) says that made the leap, in 2008, because BHC laws are not what they used to be. See also "Bank, universal", "City (of London), the".

- 2) At the top of the financial services food chain, they also consult. A typical IB is “a firm that underwrites securities (that is, buys newly-created securities from businesses and sells them to the public [via investment/fund companies]), and [also] advises corporations on strategic and financial matters. Not all investment banks do both things, and...well-known investment banks do a lot of other things as well. But the defining work is still underwriting & advice” (Brown, 2017). See also “Gutfreund, John (1929-2016)”.
- 3) The deregulated “holding company format that now allows commercial banks and mutual funds to be under the same corporate umbrella, and which we can expect will be to allow commercial and investment banking to co-exist under a **holding company** format, has [already] virtually erased the functional segmentation of commercial and investment banking” (Minsky, 1994, 22). See also “Bank, universal”, “Criminalization of Banking, the”.
- 4) “Investment banks have further expanded their asset share in the financial industry due to a little noticed decision of the... SEC (Appendix E to Rule 15c31 in 2004) that deregulated investment banks by permitting a substantially higher leverage through the use of private risk management techniques. Just 2 of the 5 biggest broker/dealers who benefitted from the SEC decision survived, by restructuring themselves as financial *holding companies* and being funded by government money” (Phillips & Roselli, 2009, 6-7). See also “Public-Private Partnership (PPP)”, “Bank welfare”.
- 5) “[Y]our business is really to sit on assets and hope...[or ensure that] their value rises, rather than... [actually] risking your money”- *Capital in the 21st Century*, 2019, mn.123. See also “Asset inflation”, “Financialization”, →“Big 3-4 (Asset managers)”.
- 6) In 2017, US investment banks’ \$40.4 bn. in aggregate net revenues comprised nearly half of the global total for investment banking¹⁴⁷⁵ (SIFMA, 2018, 59).
- 7) Generally, the big 5 American banks (in terms of IB’s: Chase, Goldman, BoA, Morgan Stanley, Citi) comprise the top of the global big 9 “*bulge bracket* investment banks”:

["the powerhouses of the financial industry"]

- 8) “And some states are [actually] more like corporations: If...[such states] issued their debt under foreign law and in foreign currencies” (Pistor, 2020). See also “Confusury”, “**Deceptive Banking Terms (d.b.t.’s)**”. See also “Bank, universal”, “Leverage”, “Usury”, “F.I.R.E. sector”, “Bankmoney regime”.

“Finance is, like, done. Everybody’s bought everybody else with low-cost debt. Everybody’s maximised their margin. They’ve bought all their shares back... There’s nothing there. Every industry has about three players. Elizabeth Warren is right.”

[- Jeff Ubben, activist investor & hedge funder, *Financial Times* (6/2020); See also “Asset inflation”, “Jubilee” (.Wortmann)]

Investment company- (synon. ‘fund company’, ‘fund trader’, ‘commercial lend companies’)

- 1) a NonBank Financial Institution (NBFI)-- most often a *Mutual fund*, *Closed-end fund*¹⁴⁷⁶, or *Unit investment trust*-- that parks the pooled capital of its investors in tradable securities. At more than a certain amount of assets, they are regulated by the Securities & Exchange Commission (SEC). See also “Mutual Funds”.

¹⁴⁷⁵ This figure includes mergers & acquisitions, “debt capital markets, equity capital markets, and syndicated lending net revenues” (SIFMA, 2018, 59).

¹⁴⁷⁶ Closed-end funds and Mutual funds (which are open-ended) and are both also classified as *Management Investment Companies*.

Investment management- hodge-podge between 'investment *bank*' & 'investment *co.*' [nonbanks]?

Investment services-

Islamic civilization- "culminated in the Ottoman Empire... 1300-1600, and has been in the process of being destroyed by invaders from Western Civilization since about 1750" (Quigley, 1966, 7). See also "Nasserism", "Dispensationalism" & "Zionism". See also "Usury", "Eras of (monetary) History".

Islamic Finance- See "Sharia Finance".

ism (suffix)- (a.k.a. "ity") any belief system, in congruence with varying internal and external consistency (a.k.a. laugh-proofing)

Israel (and Al-Qaeda-ISIS)- (formerly 'British Palestine'; a.k.a. 'Rothschilds' flag'; i.e. 'Soviets-south' or 'the I.I.C.'s sieve'¹⁴⁷⁷ [since the 70's])

"Israel is the innovation center of the world."- Li Guofu, Director of the Center for Middle Eastern Studies, CIIS (O'Connell, 2022, mn.36). See also "[International Intelligence Community \(I.I.C.\)](#)".

1) 'Neo-con' insiders have long referred to Israel as "the unsinkable Middle East aircraft carrier" of their dreaming and scheming (Wilkerson, 2016, mn.11)... except that the US really doesn't need it, except perhaps in a *bad cop* role.¹⁴⁷⁸ "The largest US Air Force complex on Earth, for example... is in Qatar. The most powerful fleet headquarters in the US arsenal...is in Bahrain... [and] The land-based aircraft carrier, if there is one, is Kuwait not Israel, as both Gulf Wars have proven.... In all my years in the military and beyond, I've never heard a serious suggestion of using Israel to help defend US interests in the region. Instead what I have heard, many times is advice... to stay totally away from such use...Each...of those [US] hard power interests... is threatened... by the US' unbalanced role as Israel's lawyer and [ever-more] unquestioning great power supporter" (Wilkerson, mn.12).

2) Within the Truman Admn., de facto campaign manager (and future State Dept. honcho) Clark Clifford defeated George Marshall & the State Dept. in favoring the Israeli-Askenazi state. Eisenhower **didn't** change things much, Kennedy tilted away somewhat, and Johnson was almost radically pro-Israel; then Nixon was more like Ike, Carter tried to be balanced (anti-imperial), Reagan reverted back to the US-Israeli norm, and Bush Sr. (unexpectedly) tilted¹⁴⁷⁹ away somewhat... but Republicans have generally been the pro-Israel party since the 1980's. In 1987, the US officially designated Israel a "major non-NATO ally"; that **means** they get to see "**classified**" items-- at least via DoD contractors-- that you and I (supposed 'US citizens') do not. See also "UKUSA Agreement", "NSA" [.Israel].

2b) Does this matter? The 'Israeli' elite have always taken the computer and hi-tech [a.k.a. spying] sector very seriously. Unit 8200 (est. 1952) is *the* largest unit in the Israel Defense Forces, comprising several thousand soldiers, and is comparable in its function to the US National Security Agency [also est. 1952].

¹⁴⁷⁷ According "to the US intelligence community, Israel's motivations appear to be...to strengthen its industrial base, to sell/trade the information to/with other countries (**especially China**) for profit, and to sell/trade the information to/with other countries [in order] to develop favorable political ties and [still more] alternative sources of arms and intelligence" (Clarke, 1998). See also "Land Bridge". "There is little evidence that the United States has conducted economic espionage against Israel, but the agreement has been flouted repeatedly and flagrantly by Israel. Israeli economic espionage has infuriated the US intelligence community, especially the FBI and the Customs Service, and has left a legacy of distrust.... [Nonetheless] US-Israel strategic ties are closer today than ever before" (Clarke, 1998).

¹⁴⁷⁸ "No other country is more frequently said to have a unique 'special relationship' with the United States" (Clarke, 1998)-- and also with the USSR-Russia at the same time? In any event, the millennialian-era 'special relationship' of 'good cop, bad cop' subsequently started breaking down in the 21st century. See also "Imperialism, American".

¹⁴⁷⁹ Bush Sr. at least gave the *appearance* of trying (with a number of verbal statements) to buck the trendline. Initially the trend was of 'pro-Israeli' Democrats, from the 1910's (Col. House) through 1960's (Clark Clifford); which was then flipped (with the Nixon Admn. & Henry Kissinger) into 'pro-Israeli' Republicans (from c.1980-2020) and [at least supposedly] 'anti-Israeli' Democrats... despite the DNC being founded & initially built by August "Rothschild" Belmont in the 1860's-70's.

Peter Roberts, Director of Military Sciences at the Royal United Services Inst. even says that Unit 8200 “is probably *the* foremost technical intelligence agency in the world, and stands on a par with the NSA in everything except scale. They are highly focused on what they look at-- certainly more focused than the NSA-- and they conduct their operations with a degree of tenacity & passion that you don’t experience elsewhere”¹⁴⁸⁰ (Roberts, 2015). See also “Ethnic (National) Identity”, “Anti-Semitism”.

3) Demographics matter in ENI societies. In Israel (c.2019), 74% of residents are “Jewish”, 21% “Arab”, and 4% “other”. Within the Jewish ¾ths, 45% “identify as either Mizrahi or Sephardi, [and] 44.2% identify as Ashkenazi...[with only] 7.9% as mixed or other” (Lewin-Epstein & Cohen, 2019).

4) “The Israelis want to extend their territories. They want to take Southern Lebanon, because of the water resources. But twice they have sent in the Israeli army, and twice Hezbollah has driven them out. Who supports Hezbollah? Syria and Iran. They’re the one who provide the weapons [and] the financial support. And so Israel wants to use the US [and hence (Sunni-Wahhabist) Saudi Arabia] to get rid of [moderate] Syria and [Shiite] Iran. And this...[in turn] is a threat to Russia, because if the jihadists take Syria and take [less likely] Iran, then the next step is the Russian federation... [after] the [moderate Sunni] former Soviet central Asia... and that [also] borders the Muslim province of China. So [in] this way, the United States can extend the destabilization into the Russian Federation and into China” (Roberts, 2017c, mn.9-10).

5) But the Israelis are, of course, (whether the US *publicly* acknowledges it or not) working *with*-- not against-- their homeland nest [Russia, Ukraine, Eastern Europe], and the Chinese CCP, in constructing nothing less than a Pan-Eurasian economic union (officially called the Belt & Road Initiative or ‘New Silk Road’ [which also includes most of Africa, thus making it, in fact, more of a *Pan-Eastern Hemisphere* economic union]). Hyperbole? In 2017, the Director of Middle East Studies at the Chinese Inst. of International Studies, seconded statements by Israeli PM Netanyahu, saying (on international television) that: “Israel is the innovation center of the world.... [and that thus the two economies are] very complimentary”¹⁴⁸¹ (Li, 2017, mn.32). See also “Land Bridge”.

6) “If Israel went away tomorrow... or if we had not assisted Perfidious Albion is setting up an [millennialist] experiment that would result in ethnic cleansing,¹⁴⁸² akin to our own Indian wars, in the heart of Palestine.... [and] even if all had gone swimmingly since 1948 with regard to Israel, the region in question, Southwest Asia, the Middle East... would still be a boiling cauldron of instability.... But the United States would not be painted with the broad brush of favoritism and prejudiced policy that it is [now] everyday...impacting its security and foreign policy” (Wilkerson, 2016, mn.17-18).

See also “Military spending”, “Nasserism”, “Super Imperialism”, “International Intelligence Community (I.I.C.)”, “Zionism”.

‘Jacob’s Ladder’- (or parole officer; a.k.a. the scaffolding project) the root word of ‘money’ is ‘*monēre*’, to warn or advise; to remind. See also “Debt cycles”, “Cultural Calendar”, “Democracy” [scaffolding]¹⁴⁸³.

¹⁴⁸⁰ “We have a *tremendous sunk* [sic] investment”, in Unit 8200 and all things ‘cyber-power’, “whether we like it or not... [W]e need a very big head.... We take our brightest people... We...[thus examine] the entire population. We go into the High Schools...[correcting himself] We’re gonna go into kindergartens very soon, okay? So we need the smartest people...[to] put them in this” (Netanyahu, 2019, mn.10-11). See also “‘New World Order’” [cloud], “Transhumanism”; Shadowgate, 2020 [privatization of ‘security’ sector].

¹⁴⁸¹ Israel-Asian Fund CEO Lionel Friedfeld then replied that Israel was supplying China with “innovation to catch up with...[its] competitors-- American competitors, Japanese [and] South Korean competitors” (O’Connell, 2021c, mn.34-35).

¹⁴⁸² “Israel is in defiance of more United Nations Security Council Resolutions than all the other countries in the entire world put together.... There are... hundreds of international laws that Israel has been convicted of breaking... [in addition to perhaps 10 times more international offenses] where the conviction was prevented by the veto of the United States” in the UNSC (Galloway, 2012, mn.43-44). See also “Zionism”, “K.J.B. (King James’ Bible)/70 Year Plan”.

[See also “International Intelligence Community (I.I.C.)”, “Three/3”.]

Japan model (asphyxiation), the- In Japan, banks have traditionally been owned “not by shareholders, but by other companies in the same *keiretsu* or industrial group, in a circular arrangement in which the companies basically own each other” (Brown, 2012), and not much is supposed to leave the circle (even dividends and capital gains).

1) “Just as Mitsui became the greatest industrial monopoly of Japan on the basis of its political connections with the prevalent Sat-Cho oligarchy, so Mitsubishi became Japan’s second-greatest monopoly on the basis of its political connections with the opposition groups of Tosa-Hizen.... Both of these firms... were completely dependent for their profits and growth on political connections.... In a [resource-]poor country like Japan, coming late into the industrial era, both of these requirements [“enormous capital” and “stable markets”] could be obtained from the government, and in no other way... [So] business enterprise became organized in a few very large monopolistic structures... [cooperating] in a docile fashion with those who controlled government expenditure and government contracts” (Quigley, 1966, 202-203).

1b) This system was, despite losing World War Two, still threatening to ‘globalist’ Finance Capitalism, until the late 1980’s-early ‘90’s debt money blowout, from which the vigor of the traditional Japanese economy has never recovered. See also “Princes of the Yen”.

2) In the 1940’s, General¹⁴⁸⁴ MacArthur “put...criminal organizations in Japan, armed them to fight against the Socialists, to fight against the Communists, and had enough colonels in charge of Japanese industry, so that they would be completely dependent on the Americans. The Americans could always go to the Japanese and say ‘*If you don’t do what we want you to do, we are going to expose who you are*’-- and they had a hold over them” (Hudson, 2010b) ever since.

3) Japan “was highly regulated with [window] guidance and cartels.... [More recently, however] under US pressure, since the 1970’s, [Japan] deregulated, liberalized, privatized-- massively. Today it is...[a] different economy...more free market than the United States itself. There is absolutely no doubt” (Werner, 2015b, mn.120). See also “Industrial Revolution, 3rd”.

3b) As in 1870 and in c.1940, the Japanese proved useful for US strategic policy in the early 80’s. In “1982, the Justice Department relaxed standards for mergers, citing the need to allow American corporations to compete internationally, especially against [those] large Japanese companies” (Nace, 2003, 82).

4) Asphyxiation? “Japan, of course, got mired in this private debt-trap long [18 years] before the rest of the [OECD] world succumbed... its private debt bubble peaked in 1995, and since then it’s had either weak or negative credit growth.... [B]y shifting Japan’s credit growth data forward 18 years, since its crisis began in 1990 while the rest of the world landed in the trap in 2008... the result of that exercise... predicts an average growth of credit [for “the rest of the OECD”] from now till 2035, of [merely] 0.5% of GDP a year” (Keen, 2016); with also perhaps a commensurate stagnancy in public life and culture.

5) Because when profligate private debt “has to de-lever, [then] the government sector has to continually rise...That’s the situation Japan’s now in¹⁴⁸⁵, and I think America’s approaching the same situation for the

¹⁴⁸⁴ “Japanese Civilization, which began around the time of Christ, culminated in the Tokugawa Empire after 1600, and may have been completely disrupted [captured-wrecked] by invaders from Western Civilization in the century following [US Commodore Perry’s mission of] 1853” (Quigley, 1966, 6-7). Japan’s monument and statue to Perry, erected 1901, survived World War 2 to the present day.

¹⁴⁸⁵ I.e. the “creeping socialism” inherent in *any* debt-money system/rubric (see above chart). Both Keen and Hudson seem to agree that the Japan pilot is serving as a model for general paradigms that banksters would like to see transpire in the UKUSA as well (no comment on what they may be trying to accomplish with current policies in Europe). See also “European Monetary Union”, “Transhumanism”.

same reason: they didn't have the courage to shoot the zombie banks" (Keen, 2011b). "The banks are insolvent right now, and we've been trying to pretend that they were not for the past 4 or 5 years...[which] is exactly what Japan did back in the 1990's... [with] Ben Bernanke [then] advising the Japanese that they should shut down their zombie banks, write-off the debt, and start the system all over again" (Keen, 2011e). "If we go through the same dynamics of having a private debt bubble that then bursts, without knowing why it bursts, with the mainstream not understanding it, [then] we'll 'turn Japanese'. And that is exactly what has happened¹⁴⁸⁶.... They're keeping us in this trap, well after we could have been out of it"; "This is...[like] a case of a bunch of astronomers who don't understand the universe-- but had a theory about it all the same-- being struck by meteors, that they believe can't happen, and then puzzle about the event..." (Keen, 2016d, mn.4-5).

6) In Japanese culture, the "people can't really lie to you... because there are [always] 2 truths... official truth and the real truth"; if an official, 'you have to embody OFFICIAL TRUTH. Only OUTSIDE... after 6 [pm]...with a bit of sake does one get the Zen truth'; then "they'll tell you what's going on" (Werner, 2014c). See also "Confucian".

6b) F.e., that Japan's debt crisis roller-coaster ride, c.1980-90, was basically about the (private-globalist) Bank of Japan taking over helmsmanship of economic policy from the (public-nationalist) M.I.T.I. See also "Princes of the Yen", "Debt cycles".

7) The 1990's Japanese debt crisis seems, in retrospect, to have been a pilot study for pretty much "every other country on the planet... England [in particular] did exactly the same thing... [where] the level of leverage drives up house prices, drives up asset prices, [which] works while the [private] debt continues growing, because that's adding to demand; but then the [private] debt stops growing, demand [not to mention monetary growth] disappears, and the economy tanks" (Keen, 2017d, mn.16); and government (public debt) is called in to alleviate, however temporarily, the crisis, basically kicking the can of debt down the road, until they run out of runway (i.e. societal and/or currency breakdown).

8) Or, in statistical terms, "Japan has the highest [public] debt to GDP ratio in the world,¹⁴⁸⁷ and they have been fighting deflation for over 25 years" now (Mosler, 2017b). Private debt (saturation/zombification) typically leads public debt. This (chart below) is the Neoclassicalists/dysfunctional model: See also "Princes of the Yen", "Debt-Deflation". "Zombie", "Serfdom, neo".

(<http://www.theatlantic.com/business/archive/2014/09/government-debt-isnt-the-problem-private-debt-is/379865>)

["Japan Crisis of 1991: GDP, Public Debt, and Private Debt (in Millions of Yen)"]

¹⁴⁸⁶ Japan "was the canary in the coal mine. We should have learned form Japan 25...30 years ago. But we didn't, because again we were ignoring the role of private debt" (Keen, 2018h, mn.25).

¹⁴⁸⁷ In 2019-20, Japan's public debt to GDP ratio was approx. "238%" (Vague, 2020b, mn.24). "There are still folks that think that the amount of debt we're issuing... is going to cause inflation or hyperinflation... [But] we can't find examples of that when we study [actual] economies... [in our] database of 47 countries"... More debt actually causes interest rates to go lower [as they have for 4+ decades now]. (Vague, mn.25-26), which typically exerts deflationary pressure. See also "Inflation/deflation".

Jefferson, Thomas (1743-1826)- (the most 'democratic' of America's 'founding fathers' enduring legacy 'is to be hostile to legacies' [Appleby, 1993]¹⁴⁸⁸, 'councils', and other 'elite' institutions [except slavery])

"The founder of the idea of nationhood in America.... [was] intellectually chiefly responsible for articulating [what would be] the...[most enduring] American idea of nation"¹⁴⁸⁹ (Onuf, 1998, mn.7-8). And in the 21st century, "we are still speaking...[that] language of American nationhood" (Onuf, 2000, 17); i.e. 'a nation of (not too many) laws, not judges'. See also "United States, the", "Legalism", "Lobbyists".

1) "The question Whether one generation of men has a right to bind another, seems never to have been started either on this or our side of the water. Yet it is a question of such consequences as not only to merit decision, but [to] place also, among the fundamental principles of every government.... I set out on this ground, which I suppose to be self evident, 'that *the earth belongs in usufruct to the living*': that *the dead have neither powers nor rights over it*.... Then no man can, by natural right, oblige the lands he occupied, or the persons who succeed him in that oc582pprox.n, to the paiment [sic] of debts contracted by him. For if he could, he might, during his own life, eat up the usufruct [a.k.a. primary sector] of the lands for several generations to come, and then the lands would belong to the dead [past], and not to the living [present], which would be [closer to] the reverse of our [revolutionary/democratic] principle."¹⁴⁹⁰ Letter to James Madison¹⁴⁹¹, Sept. 6, 1789. See also "Radical", "National Debt Economy", "United States, the", "Usury", "Ecological economics", "Georgism".

1b) This Jeffersonian attitude was not a no-brainer at the time. In "fact, the positions of power in the newly constituted United States [conducted when Jefferson was in France (c.1785-89)] were held by men who were socially conservative and intellectually unadventurous"; Jefferson's "idea of freedom did not accord with that of America's many evangelical Protestants or of the secular conservatives who made up the Federalist party. Both classical and Christian political theory viewed the state of nature in the unkind light that Hobbes [had] made famous (Appleby, 1993, 3; 5) more than a century earlier."¹⁴⁹² See also "Design", "National Debt Economy".

2) In "the years before the election...[of] 1800, Jefferson and his allies had to create an image of a society that **had never existed**-- one in which the unbounded area of *voluntary* association took precedence over the formal realms defined by public policy. The Jeffersonians' assertions about a natural ordering mechanism¹⁴⁹³ prompted skeptics to ask why this spontaneous order had not manifested itself

¹⁴⁸⁸ More than anyone else, Jefferson "invented the United States of America."- Willard Sterne Randall (1993). "How can his ideas continue to hold their buoyancy in...[almost any of the] fluctuating currents of...public life? Why is Jefferson the **only** president whose name [still] forms an adjective of [both original & unambiguous] general meaning? Only *Jeffersonian* circulates in contemporary conversations.... Jefferson distinguished himself from his contemporaries in [steadfastly] opposing the mindless transfer of laws, ideas-- even words-- from one generation to another.... Freeing the human [beings'] spirit was Jefferson's lifetime crusade. His felicitous expression of a *natural rights* doctrine crystallized the yearnings of many ordinary Americans... stirred by the double entendre of self-government for which the Revolution was fought.... Jefferson's framing of an American political creed is largely [however] invisible, because he [usually] offered his opinions as propositions about *nature*" (Appleby, 1993, 1-3). See also "Natural law", "Enlightenment, the", "Lexicon Test", "**Primary Sector Economics**".

¹⁴⁸⁹ Jefferson's "wide-ranging collection [of books] became the foundation for today's comprehensive Library of Congress."

- <https://www.smithsonianmag.com/history/the-10-things-you-didnt-know-about-the-war-of-1812-102320130/> . "I deem no government safe which is under the vassalage of any self-constituted authorities, or any other authority than that of the nation, or its regular functionaries. What an obstruction could not this bank of the United States, with all its branch banks, be in time of war! It might dictate to us the peace we should accept, or withdraw its aids. Ought we then to give further growth to an institution so powerful..."- Letter to Treasury Secretary Albert Gallatin, Dec. 13, 1803. See also "Bank welfare", "Sovereignty" [incorporation].

¹⁴⁹⁰ Jefferson needed no tutoring on (see also) "Leverage", "Compound interest", and the oligarchical side of Whiggish Britain and the European aristocracy. See also "Whig", "Central Bank", 'Hegelian dialectic".

¹⁴⁹¹ The letter seems-- not very cryptically-- to be implicitly reprimanding (or at least reminding) the then-Federalist Madison on what it means, essentially, to be an American. See "Debt money"; "United States, the" (we're not Blighty), "Idealism, American", App.C: "1-2-3".

¹⁴⁹² ...i.e. back when Europe was still enduring (its 4th century of) 'the Little Ice Age', England's revolutions & civil wars were still far from "Glorious", and nobody had heard of "Enlightenment", "Separation of Powers", or "Montesquieu" (yet alone 'Rule-by-Virtue'). Jefferson's legendary correspondence (380 letters) with his sometimes-foe John Adams underscores a futuristic historian's respect for the past-- as long as it was honest, straightforward, and not subversive of or to the American spirit (per Lutz, 1998). He wrote to Adams more than to any other non-administration colleague. See also "Founding fathers".

¹⁴⁹³ According to independent Jefferson and G. Morris biographer William Adams, a "Jeffersonian fog" persists in America (2008, xvi); despite the USA's 3rd president having been proved dead wrong on a number of (non-trivial) occasions, such as his depression-causing

earlier. The [standard] riposte to this...was to point out how the overbearing hierarchies of church and state had worked in tandem to suppress human [beings'] potential" (Appleby, 1993, 5). See also "Estates, 3" [.theory], →"Enlightenment, the" [.revolution], "Civic National Identity" [.Jefferson vs. Hume].

2b) "George Washington [had] reacted viscerally to the unprecedented phenomenon of ordinary voters forming [communism!] political clubs to discuss state affairs...dismissively...[speaking] of them as 'certain self-created societies'; in response, the Jeffersonians turned the whole nation into a political club... [catalyzing] voters so effectively that Americans ever since have talked about politics in Jeffersonian terms" (Appleby, 1993, 5-6). See also "Founding fathers (of USA)", "Articles-to-Constitution (transitional riots/rebellions)".

3) "The candour with which you have viewed the manners & condition of our citizens, is so unlike the narrow prejudices of the French & English travelers preceding you, who, considering each the manners and habits of their own people as the only orthodox, have viewed every thing differing from that test as boorish and barbarous.... An honest man can feel no pleasure in the exercise of power over hillellow citizens.... There has never been a moment of my life in which I should have relinquished for it the enjoyments of my family, my farm, my friends and books."- Letter to John Melish¹⁴⁹⁴, Jan. 13, 1813. See also "Civil National Identity", "Montesquieu, Baron de (1689-1755)".

3b) After the War of 1812, during which the British had "burned the Capitol and with it all the volumes of the Library of Congress, Jefferson offered his own collection to Congress, which they purchased in 1815. The former president... was paid \$23,950 for nearly 6,500 books, almost twice the number lost in the fire."- <https://www.loc.gov/exhibits/treasures/tr66003.html>

3c) "I know no safe depository of the ultimate powers of the society but the people themselves: and if we think them not enlightened enough to exercise their controul with a wholesome discretion, the remedy is, not to take it from them, but to inform their discretion by education. this is the true corrective of abuses of constitutional power" (Jefferson, 1820). See also "Democracy", "Estates, 3".

4) "Let's skip over the 19th century [monetary history], which is chaos, because of the state banking structure" specifically in regards to charters; the status of which was "really a battle over the shape of federalism" that the constitution had left unresolved, for the states and Washington to fight out (Desan, 2013, mn.135). See also "Sovereignty" [.Quigley].

embargoes of 1806-09, his compromises & hypocrisy over slavery**, and (perhaps most famously [among peers]) his "unrequited love affair with the French Revolution", regardless of its [ever-increasing] blood toll (Adams, 2008, 264). Contemporary critics of his administration called "Jefferson's 'cloak of humility...a flimsy veil to the internal evidences of aristocratic splendour'"; while non-hagiographic biographers have pointed out his "peculiar ability to hide his true feelings and thoughts, playing a shell game with himself to avoid facing his inner conflicts and contradictions" (Adams, 244; xiv). See also "Politics" [.fog].

** - It has often been noted that, unlike (fellow Virginians) George Washington and (his own 2nd cousins) Richard Randolph & John Randolph, Jefferson manumitted only 8 (a lucky [if not to say blood-related] 4% of his approx. 200) slaves (Langeland, 2021); which is still better than James Madison (who had more and didn't free any). Moreover, even though the Sage of Monticello publicly stuck with his (mid-1770's) scheme for a gradual-- or 4-step-- 'abolition' of sorts, "the reality [in fact] was that slavery was becoming *more* entrenched [after the UK started trying to stamp out the trans-Atlantic slave trade (from c.1807-1820's)]. The slave population in Virginia skyrocketed from 292,627 in 1790, to 469,757 in 1830. Jefferson had assumed that the abolition of the slave trade would weaken slavery and hasten its end...[But instead] slavery became more widespread and profitable."- <https://www.monticello.org/thomas-jefferson/jefferson-slavery/jefferson-s-attitudes-toward-slavery/>. "Influenced by the Haitian Revolution [1791-1804] and [also by] an aborted rebellion in Virginia in 1800, Jefferson [also] believed [to his last years] that American slaves' deportation-- whether to Africa or the West Indies-- was an essential followup to [any salient] emancipation" (or even manumission) of African slaves- <https://www.monticello.org/thomas-jefferson/jefferson-slavery/jefferson-s-attitudes-toward-slavery> [7/ 2022].

Was Jefferson inherently confused on the matter (and/or inherently hypocritical)? As late as 1814, he personally scolded Edward Coles (a young family friend and would-be manumitter) for even having even (privately) raised the question of "'abandoning this property, and your country with it'.... [But] Coles...spurned Jefferson's advice and freed his slaves" anyway (Goodheart, 2005). See also "Slavery".

¹⁴⁹⁴ The books and personal correspondence of Scottish mapmaker John Melish (1771-1822) were instrumental in differentiating what might be called the 'young Jefferson' (1770's-1810's) from ex-President Jefferson. Melish's detailing of the development of American manufacturing influenced Jefferson to adopt a point of view favoring domestic manufacturing over shipping raw materials to Europe (). Yes politicians-- or at least former politicians-- used to actually read back then. See also "Wilken, Carl (1895-1968)".

4b) Mythology, history, and universities don't always mix smoothly; an ominous vignette from 1825: https://www.youtube.com/watch?v=P-UjOg9_8M4 [ViolenceU?]; <https://www.jstor.org/stable/1922407> ["Jefferson vs. Hume"]¹⁴⁹⁵. See also "History", "Hypocrisy".

4c) a Ghost in the Machine (essay):

Monticello's son of Saxon England is sometimes said to have 'shook hands with the Devil'.¹⁴⁹⁶ Is such a mythical construct good or bad business? Would only an Aristotelian daredevil (as opposed to Orthodox Platonist) undertake such a scheme in the first place? How 'English-squared', or even 'Englishness-cubed'. See also "Plato vs. Aristotle", "Civilization" [Western, Orthodox]. Why not? What's the worst thing that could happen? The answer to that depends on what one thinks or (what mythical-mythological constructs one) believes.

What mythological constructs did young, middle-aged, or old Jefferson believe in? The super-English, super-Angle, or super-Anglo-Saxons (per then-standard garden variety 'Whiggish history)? Remember, Jefferson was a pamphleteer-politician [if ever there was one], was not a historian. But his England had been displaced by that time, with the (significantly more imperial-sounding) United Kingdom, and the (then-newfound) 'Britishness' addition to the national identity construct was pretty much straight-out imperialism, predicated (3 decades before Adam Smith became famous) upon the long-developing (1710's-60's) 'Whig oligarchy' of the London-Dutch trader-banks, and its new (de facto) constitution of (what Jefferson would later call) "bank mania" (sometimes a.k.a. "monetization")¹⁴⁹⁷.

The change from (Whig-romanticized) Englishness to (more utilitarian) Britishness was duly noted by Jefferson-- who then went about constructing¹⁴⁹⁸ (what some subsequent historians have called) a 'Jeffersonian fog' (of romanticized agrarianism¹⁴⁹⁹) to equal or best that new 'London fog' (of Whig oligarchy & 'bank mania'). It wasn't a fair fight, monetarily (even as far back as the 1820's). "While [the] capitalism [of 'bankmoney'] crushed the agrarian society¹⁵⁰⁰, a fog of romanticism enveloped the liberal tradition...[Post-Civil War, the] scattered fragments of Jeffersonian philosophy were blown into ecstatic and nebulous idealisms. [Then an] over-reaching Utopianism in the liberal tradition [of expected progress]... caused it to forget that the Constitution [of 1787] was [in fact] a Whig frame of government,

¹⁴⁹⁵ Why was Hume's *History of England* the only (known) exception to Jefferson's renowned non-censorship? "Jefferson did not care for David Hume's lack of faith in human nature and emphasis on commerce and the king" (Morales, 2009, 27). See also "[National Identity Cycle](#)".

¹⁴⁹⁶ Where was Jefferson in 'the Grand Scheme of things' (then also sometimes known as the 'City of London'?) See also "Deep State, UK", "[Whig](#)".

¹⁴⁹⁷ See also "Bankmoney regime" (BMR). Hume (whom Jefferson thought of as a regressive [1stE] 'Tory'/Royalist) wasn't for BMR; his successor Smith tolerated it, as did (the Smith-influenced) Madison for some time, until he realized the nature of the BMR in 1788; see also "Privilege" [private law]).

¹⁴⁹⁸ The mature "[Jefferson's philosophy](#)...was... 'an amalgam of [both] English and French [traditional] liberalisms, supplemented by the conscious influence of the American frontier'. The frontier, with its simple [3rdE] freedoms, was bred into Jefferson [and his]... 'philosophy of a new age and a new people-- an age and people not yet come to the consistency of maturity, but feeling a way through experiment, to solid achievement'" (Peterson, 1960, 324; citing Parrington, 1927). See also "Civilization, Western", App.C: "1-2-3".

¹⁴⁹⁹ Sometimes 'pamphleteer-politicians' don't go deep enough (in their explanations of things that matter). Although Jefferson's economic understanding was (both) archaic (and, ironically, also futuristic++ at the same time)**; America's 3rd president was, by no means, "so foolish as many of his [future] disciples have been"... Inspiring, hopeful, and humane, [American] liberalism was [nonetheless (despite all the nice adjectives)] foredoomed [to be scooped up into the 'Whig oligarchy'-imperialist machine of the PTB] by its innocence of the realities of power.... The conception of the state as determined by economic forces...[Parrington] wrote, underlay the thinking of the English school and was [simply] accepted as axiomatic by the [US] 'Founding fathers'. 'It was the main-travelled road of political thought until a new highway was laid out by the French engineers [f.e. Rousseau; certainly not Montesquieu or The 'Physiocrats'] who, disliking the bog of [the new 'Neoclassical'] economics, surveyed another route by way of [romantic](#) [sometimes a.k.a. 'anti-economic'] [equalitarianism](#). ... [This] divorcing [of] political theory from contact with sobering reality ... gave it over to...treacherous romanticism. In seeking to avoid [or run away from] the bog of economics, it ran [instead] into an arid desert" (Peterson, 1960, 326) of less & ever-less relevancy. See also "Power", "Quigley, Carroll (1910-1977)", "Reality & Facsimile"; "Neoclassical Economics", "Hegelian dialectic", "Parallel universe". "Statism".

+- See also "Monetary reform, big picture". **- The ('back to the future') [archaic-futuristic duality](#) is (of course) not unique to (what might be called) the [Franklin-Jefferson-Jackson-Georgism-"Parity" approach](#) to economic reality (in the USA). Search also 'ancestor', 'animate' (. "China", "Africa"); see also "Design", White, 2007 [animacy].

¹⁵⁰⁰ Urbanization & the "Central Banking-Warfare model" were just how the 18th-20th centuries were run-- on (ever-) increasing amounts of planning, (see also) "monetization", and "globalization". See also "World Wars", → "Intelligence Community (I.C.)" [I.I.C].

and drowned it in the honeyed rhetoric of equalitarianism, which, all together, left [this] liberalism ill-equipped to battle [the new] plutocracy” (Peterson, 1960, 326) and imperialism (of banks & other [legally-privileged] ‘corporate persons’). See “Parties, political”, “Madison, James”, “Corporations (and corporate ‘personhood’)”; “Parity pricing (for the primary sector)”, “Idealism, American”.

See also “English constitution, the” [Wilkes], “Whig”.

5) Was the Jeffersonian Republic “destroyed” in the Civil War, as top Jefferson scholar Peter Onuf often says; or do its roots still persist and resonate? <https://www.youtube.com/watch?v=S2hJLaOT-Sw>

5b) “Pardon me, Sir, for this difference of opinion. [M]y personal interest in such questions is...extinct; but not my wishes for the longest possible continuance of our government on it’s [sic] pure principles. [I]f the 3 powers maintain their mutual independance on each other, it may last long: but not so [however] if either [executive or legislative] can assume the authoritie’s of the other” (Jefferson, 1820). See also “Montesquieu” [SeparationofPowers], App.C: “1-2-3”.

5c) Hence, according to the rubric of *separation of powers* (something that all of the founding fathers and theoreticians could agree on), the Jeffersonian Republic was crippled in the Civil War, mortally wounded in World War 1, and more or less finished off in (the imperial triumph of) World War 2. Americans have henceforth been revering a ghost or wall-shadow¹⁵⁰¹. Because the trappings were still there, its expiration could be ‘plausibly denied’, as “CIA” would say, right up to Christmas 1992 and the “Bush-Clinton Dynasty”, Sept. 11, 2001, and the FASAB-56 ruling of 2018. See also “PotUS”, “Plausible Deniability”.

6) Was ([at least] President¹⁵⁰²) Jefferson economically-deranged? Yes and no. See also “Wilken, Carl (1895-1968)”.

6b) Nonetheless, “Jefferson’s economic ideas... profoundly influenced the early national period of American history. Although historian Robert Shalhope considered Jefferson remarkable for his consistency, William Grampp...in 1946, identified some issues on which Jefferson[’s thought evolved. There were 3] distinct periods of Jeffersonian economic thought. To 1790, Jefferson expressed his emphasis on an agrarian...self-sufficient society. From 1790 to 1805...[he] discussed a laissez-faire policy, and [then] after 1805, Jefferson reversed course to promote protectionist policies and national government intervention” (Morales, 2009, 27). See also “Physiocrats, the”, “Monetary reform”, “Freedom continuum”.

See also “United States, the”, “Estates, 3”. “Idealism, American”, App.C: “1-2-3”.

Jevons, Stanley (1835-1882)- See “Neoclassical Economics (NCE)”, “Neo”.

JP Morgan Chase (JPMC)- See “Big 5 (High St.) Banks”.

Jones, Alex- (synon. infowars.com, prisonplanet.com¹⁵⁰³; i.e. approx. .5 substratosphere IC leaks, to .5 ‘TSA pedophile spirit-cooking at Hillary Obama’s bunker’-type stuff¹⁵⁰⁴ [with those who know the difference gradually increasing]). Although Jones hasn’t interviewed someone talking sense about money since c.2010; the platform’s basic Ontology is line with [founding father] Montesquieu’s big picture of political development. See also “Montesquieu, Baron de”, “Constitution, US (of 1787-91)”.

1) “Submitting to the incremental bending of our will, until we’re more akin to [‘politically correct’-cum-‘simon says’] silly putty than men and women must be resisted. This [c.2020] is not a social contract, where there’s

¹⁵⁰¹ Jefferson and Gouverneur Morris biographer William Howard Adams calls it “the Jeffersonian fog” (Adams, 2008, xvi). See also “Politics” [LondonFog], “Nationality Cycle” [Jefferson vs. Hume], “Imperialism”.

¹⁵⁰² Per Jefferson then initiating (and persisting with) the wrecking of most of the US economy, with the various embargos of 1806-09.

¹⁵⁰³ A.k.a. “Panopticon” (Bentham, 1791) <https://www.youtube.com/watch?v=Zp2nAHVawb0> -from mn.2 (travel agent)]. See also “Philosophy, national” [UK-].

¹⁵⁰⁴ Others (in the field) take the concept of truth more seriously, or at least literally. The 2020’s have thus far proven beyond simply citing things that are kind of maybe “in-the-ballpark or something like that” (Corbett, 2021, mn.24-27). See also “Attitude Inoculation”, “Democide”.

a neighborhood pool [call it 'government'] and everybody agrees not to take a dump in it.... That's what decadence is.... [And when it's in charge, eventually everyone is subjected to (some degree of) the phenomenon of].... turning into bifurcated people, where they have this evil side...[or even] this devilish side, that is into total degeneracy. And the [so-called] 'Left [in the 21st century, has been selling] this argument [that:] 'Oh, you gotta *feed* [sic] that side'. No, you don't want to feed that side. You want to... realize what it is [i.e. basically, destruction]... and that it's not part of your real system. And that you have all these other destinies..."¹⁵⁰⁵ (Jones, 2020, mn.22-23).

2) "That's what people need. They need...[an adequate] map and they need [some] good Intelligence on what's really going on, so that they can't get played¹⁵⁰⁶... That's why you don't want to suck into the 'divide & conquer' ...you want to turn off corporate media. You want to get those banks, you want to get the media, you want to get all these folks *out of your life* as much as you possibly can, because they are ['scientifically'] draining you. And the more you let them in, the more they are going to drain [enserrf] you" (Fitts, 2016, mn.39-40). Things have changed a little at Infowars/PrisonPlanet since then, however. See also ("COVID"), "*Corporate Media Cartel/6 Sisters*", "Investment Banks", "Usury".

3) "...that a little radio show [in the 2000's] out of Texas grew into this...because other people won't do it... necessity is the mother of invention... They [corporate media] won't do their job, so it's Alex Jones doing it.... They just took what they were told... by the government and [their own] corporations, as a bunch of yes-men & women, and got us [Infowars] in this position" (Jones, 2018, mn.16). See also "Journalism (standards)", "Mockingbird", "Media, B".

4) "You [Jones, will] have support within the so-called Deep [Shadow] Government... [which] needs an access point, in order to go to the Right, in order to go to the Center. This was not something [that] I made up. This was not something [that even the] Nixon [admin.] made up. It was an old [pre-1970's] strategy,¹⁵⁰⁷ that we would come in from the Right¹⁵⁰⁸ in order to get to the middle. Roger [Stone] knew about it. Nixon knew about it... and [Henry] Kissinger knew about it" (Pieczenik, 2017, mn.5-6).

5) In September 2018, Congress "was discussing the fact that Google and Apple and others have turned against the United States [moving strategic divisions to China]. We built the internet. We built these companies. The CIA [and] the NSA funded them"; nonetheless, Infowars "is the first major, multimedia news organization to be banned by corporate racketeering blockade.... They are making their authoritarian move, as we warned everyone" (Jones, 2018b, mn.0; mn.5-6).

6) Alex Jones Updates: 9/22- <https://www.bitchute.com/video/P4KiXenBZ9ri/> [RR-AbominationJustice] 12/22-

See also "*Corporate Media Cartel (CMC)*", "Central Intelligence Agency (CIA)", "Fitts, Catherine Austin", "Intelligence Community (IC)", "Debt cycles".

¹⁵⁰⁵ I.e. Jones, c.late 1990's-2020's, has been a long, slow climb (of growth) out of the madness (of control) that he was born into. See also "Imperialism", "*Corporate Media Cartel*", "Mockingbird", "Reform, 101".

¹⁵⁰⁶ The post-WWI and 3rd *Currency War* "change [in philosophical attitude] from *good men & bad society* to *bad men & good society*...[and its sub-tenet, that] Thus man is capable of great evil, but ['only'] society can prevent this... [has also fed] a [increasing, if not snowballing] reaction from optimism to pessimism, and from secularism to ['fundamentalist'] religion" (Quigley, 1966, 28), sort of like Edward Gibbons' bumper-sticker characterization of the Fall of Rome. If you're in a hole, stop digging.

¹⁵⁰⁷ Pieczenik has often claimed, c.2017, to have participated in strategic discussions concerning the internet in 'the 1970's'; Robert David Steele adds that: "There is absolutely no question that a whole bunch of technology became available in the '50's and the '60's, and [that] it was locked up" (Steele, 2012, mn.22). See also "Montesquieu, Baron de", "Timarchy".

¹⁵⁰⁸ Did the Anglo-Americans conquer the world in the mid-20th century, just to lose their own soul? Probably not. J.R.R. Tolkien wrote to his proofreader in the mid-1950's that: "The story is [will be] cast in terms of... moderated freedom with consent against compulsion that has long lost any object save mere power... but [nonetheless] both sides in some degree, conservative [of freedom] or destructive, want a measure of control. [B]ut if you have, as it were taken 'a vow of poverty' [or at least not being an oligarch], renounced control, and take your delight in things for themselves without reference to yourself, watching, observing, and to some extent knowing, then the question of the rights and wrongs of power and control might become utterly meaningless to you, and the means of power [i.e. parties, bankmoney] quite valueless [Lex. "Design"]. It is a natural...view.... Ultimately only the victory of the West [i.e. separation of powers] will allow Bombadil [pre-'history, lying & warfare' man] to continue, or even to survive [in the 21stc, post-farmers environment; <https://www.youtube.com/watch?v=cHi09OrUrXM> (tuck)]. Nothing would be left for him in the [totalitarian technocrats] world of Sauron" (Tolkien, 1954). See also "Common sense", "Tolkien, J.R.R. (1892-1973)", "Big Government (growth of)", "Parity pricing (for the primary sector)".

Journalism (standards)- 1) Back in the 20th century, it used to be “always...true that any publication that reported on you would [actually] call you and give you an opportunity to comment. You didn’t... have to even return their call, although good manners would indicate that you would” (Stone, 2020, mn.156-157). Today, however, it’s more like they’re all¹⁵⁰⁹ London Fleet Street tabloids; that “just print whatever they want... without any opportunity for you to respond” (Stone, 2020, mn.157).

1b) Today “there’s no more correction...[or] clarification.... The way the [pre-consolidated] media used to work is: something is said, you would disprove it, and everybody would move on. Now something is said, you disprove it...[and even if] your rebuke is widely publicized...three months later...[they] recycle the same garbage yet again, like it has never been addressed. It is very scary” (Stone, 2020, mn.158).

2) “There’s no clear origin story for the non-disclosure agreement, no Edison or Franklin... But a search of newspaper databases informs us that mentions of such agreements began popping up in the 1940s in the context of maritime law... [And N.D.A.s] kind of make sense. Tech companies have trade secrets to protect, proprietary algorithms they want to keep to themselves... [But by] the 1970’s, NDAs were popping up in new and surprising places..[D]uring the House Select Committee on Assassinations’ investigation of the Kennedy and King assassinations in the late 1970s,¹⁵¹⁰ The *Washington Post* reported that consultants working for the committee were asked to sign an NDA that forbade them to ‘indicate, divulge or acknowledge’ that they even worked on the investigation while it was ongoing. It also asked these consultants to report to the House any efforts by a reporter to obtain information about the investigation.... [and] in general the terms seem to have been accepted as necessary for the preservation of national security” (Dean, 2018).

See also “Secrecy, Cult of”, “Russiagate”.

3) “It was only in the 1980s that the concept of non-disclosure began to creep into contracts of all kinds. It became a de rigueur provision in employment contracts for a certain kind of white collar job. And perhaps most crucially, it became a regular feature of legal settlement agreements. It was then that these ‘contracts of silence’, as one law review article termed the whole spectrum of NDA/non-disparagement/confidentiality clauses, really began to pose a problem for journalists” (Dean, 2018).

4) Since then, pretty much the bigger the organization & salary, the longer the NDA contract (Ibid); until the coloring lines/groupthink have become so narrow that...

See also “Robotization (and productivity)”, “Democracy”, “Corporate Media Cartel/6 Sisters”, “Big 5 (on S&P 500)”.

¹⁵⁰⁹ According to Stone, “the only 2” sure “exceptions” are “Bloomberg news and ABC...[which still] makes it a ritual of checking with you for comment. The rest of them are off-to-the-races... publishing or broadcasting anything they want” (Stone, 2020, mn.157). See also “Corporate Media Cartel/6 Sisters”.

¹⁵¹⁰ In 1978, the (outside of the Executive branch) Committee famously concluded, “on the basis of the evidence available to it [from the Executive branch], that President John F. Kennedy was probably assassinated as a result of a conspiracy. The Committee [however] is unable to identify the other gunman or the extent of the conspiracy.”- <https://www.archives.gov/research/jfk/select-committee-report/part-1c.html>
See also “Separation of Powers”, “Civilization, Western”, “Conspiracy theorist”.

Newsroom employment at U.S. newspapers dropped by 51% between 2008 and 2019

Jubilee- (a.k.a. ‘people’s Quantitative Easing’ [Keen]; the ‘tool of the “demagogue”’ [Socrates])

1) The term *gospel* (literally: ‘good news’) “was used specifically to refer to *debt*¹⁵¹¹ *cancellation*” (Hudson, 2017s); because in the Ancient world, “there was a general understanding that the debts tended to grow faster than the means to pay.... A Greek general in the 3rd century BC... wrote [in] a manual...: ‘If you want to conquer a town, say “*I want to cancel your debts*”; and you’ll get the people on your side. If you want to defend a town, say “*I’m going to cancel the debts as soon as we win*.” That’s what [inaudible name] did in Rome. But the Romans were mafiosi and he went back on his word... That’s what makes the 1st millennium BC very different from the [preceding] Bronze Age” (Hudson, 2012f).

2) With more attention to detail, however, it may also be said that there “have been no ‘debt jubilees’ in history” that involved 100% write-offs of private-contractual debts; “so, NO history [there].... Our national debt-saturation [today] involves private people, households, and businesses owing [pretty much] all to private...[banks &] corporations. *That’s* [sic] what needs fixing... The debt-Jubilees of Hudson History [however] are all state actors, kings, monarchs, sovereigns that forgive their citizens their *tax and fee obligations* [always in grain-- the peasants’ tax-- never in gold/silver] to the Crown. So, thanks but no thanks, Michael Hudson” (Bongiovanni, 2020). See also “Coined money”, “Sovereign money”, App.C: “1-2-3”.

3) “People say it¹⁵¹² couldn’t have happened. But it did happen again and again and again and again....[as the norm]. For 2000 years...” in all of the Sumerian and Babylonian dynasties (Hudson, 2018d, mn.56). In “the first speech [Jesus] gave when he returned to his hometown... he unrolled the scroll of Isaiah and said that he’d come to *proclaim a Clean Slate*. But the Bible doesn’t say a ‘clean slate’, because when it was translated into English, they didn’t know. What the words meant-- the ‘*Year of the Lord*’.... The ‘Good News’ meant [a] Clean Slate. But in the... 17th century, the translators of the Bible [simply] didn’t know cuneiform at that time...[and not until the 1870’s]... Only now do we understand that the whole Near East functioned for 2000 years [by] wiping out the [barley] debts, and that [that] could be done when the debts were owed to the government... cancelling debts that were owed to themselves, to the temples they controlled, and to the collectors in the royal bureaucracy.... [But] today, only China can... The United States government [and all of its dependencies and vassals] cannot annul the debts owed

¹⁵¹¹ What Hudson (and his friend Prof. Keen) likes to call or portray as a “debt jubilee” (implying that all Bronze Age debts-- public and private-- were substantially slashed, across-the-board, does not appear to be the actual case. *Taxes*, which were paid in barley & other grains/crops, were in fact systematically written off every number of years or decades. *Private* business (creditor-to-debtor) debts, however (beyond the level of tallsticks and other crude mnemonic devices), were typically in (gold or silver) bullion or shekels, which, as far as we know, were never written-off or forgiven in a so-called ‘debt jubilee’. (Bongiovanni, 2020). Hudson here, as is often the case, is failing to distinguish between ‘private’ and ‘public’. See also “Reform, false”, “Hegelian dialectic (example)”.

¹⁵¹² i.e. more public-private conflating by Hudson. See also “ConfUSURY”, and “Coined money” [which Hudson denies was ‘sovereign money’] (Hudson, 2019b).

to Wall St., because Wall St. runs the government...That basically is the... [crisis] that we're in" (Hudson, 2018d, mn.57-58). See also "Public Banking (idea)", "Clean slate".

4) "For the American young, the 1940's, not 2,500 BC, is the ancient past. A time so long ago that it predates the Old Testament by 2,000 years is probably imagined as a brutal and politically incorrect time of inhumanity and human sacrifice. In short, a script for a horror fantasy movie or a video game. In actual fact, these civilizations were more advanced and more humanitarian than our own.... the rulers understood that *compound interest* resulted in debt growing faster than the economy. The consequence would be foreclosures on agricultural land, which would shift riches and power into a small oligarchy of creditors. The ruler and the society would be deprived of a self-supporting population on the land which provided tax revenues, soldiers for the military, and corvee labor to maintain public infrastructure. Disaster would follow. A grasping oligarchy could overthrow the ruler or the dispossessed population could flee to a potential invader offering their military services in exchange for debt forgiveness. To protect their societies from dissolution by unpayable debts, rulers periodically cancelled agrarian debts owed by the citizenry at large, but not mercantile debts among businessmen. The reason for debt forgiveness was stability, not egalitarianism" (Roberts, 2019b). See also "Common sense".

5) "In the end, the creditors always win, and that's why every society since Sumer and Babylonia have had to either cancel the debts; or you come to a society like Rome that *didn't* cancel the debts, and then you have a Dark Age-- everything collapses" (Hudson, 2016d). See also "Feudalism, neo".

6) After the most recent (post-Roman) 'Dark Ages', money almost completely vanished for much of the 7th century, and thereafter 'usury'¹⁵¹³ was rigorously condemned until (what was humbly termed [by those who write the history]) 'the Renaissance'. "Today's [Roman-influenced] world believes in the sanctity of debt. But from Sumer and Babylonia through the Bible¹⁵¹⁴, it was debt *cancellations* that were sacred" (Hudson, 2017s). See also "Liberty Bell".

7) The most recent large-nation-scale example was the German "economic miracle", which kicked off with cancelling all domestic debts (except pay due to employees) in 1948.

8) "the big-rollers would lose... They'd have to go back to their historical proportions... [and] you'd have a much more normal economy..." (Hudson, 2011e).

9) "In America today the population is drowning in unpayable debts-- student loan debt, credit card debt, home mortgage debt, state and local government debt, and business debt-- but policymakers have reserved forgiveness only for the debt associated with the bad and irresponsible investments of the big banks and financial institutions. The Federal Reserve [in response to the Financial Crisis of 2008] printed \$4 trillion to buy up the banks' bad debt, while permitting ten million homeowners to be foreclosed.... [M]odern day economics has no prescription for preventing our society from failing from debt overload" (Roberts, 2019b). See also "Debt saturation".

10) Since 2008-09, "the Federal Reserve has given Wall St. 4 and a half trillion [RAB] dollars. Now that... could've been used to write *down* the debt; and then we wouldn't have a problem... The [\$4.5 trillion] could've been spent into the [TAB] economy..." (Hudson, 2016e, mn.9).

11) "...And the banks wouldn't have lost a dime. "Because what they'd lost in loans, they'd gain in loan repayment. Their assets wouldn't change" (Keen, 2011d, mn.16).

12) Hudson has subsequently cooled somewhat to the jubilee idea. Numerous jubilee proposals "say that this can prevent a debt crisis, in a way that is *politically feasible*. It's indeed politically feasible because the 1% is going to clean up and make a huge amount of money. Anything we give to 50% of the population will be given to the 1%, so it's politically feasible because the 1% will gain. My point is, yes it will defer the crisis. But do you really want to create yet more money for the 1% at the top of the pyramid?...Steve [Keen] has an elegant *mathematical* solution that would work, but...[it's not a] political

¹⁵¹³ Actually, what the Church called "*usury*" was, by the High Medieval era, (Cashill, 2009, 44). See also "Usury".ytrg

¹⁵¹⁴ Although condemnations of interest and usury are about 6 times more frequent in the Old Testament, the New Testament's 1st and oldest book, subsequently subtitled as "according to Matthew", features the first known citation of the Lord's Prayer, exhorting: "*And forgive us our debts, as we forgive our debtors*" (Matthew, 6:12). Matthew, one of the four original evangelists, had earlier worked as a tax collector in Capernaum, and is still known as the patron saint of bankers [money], accountants, and tax collectors [currency].

solution.... If you leave the post-1980 gains with the creditors, you're going to have a ruling class much like the feudal landlords. You're going to have financial feudalism, if you leave all of this financial wealth intact, while the rest of the economy has so little wealth.... [I]t's really [just] overhead" (Hudson, 2019c). See also "Reform, 101".

12b) Nonetheless, "[t]he way we wrote the debts off" the last time around (i.e. a 7-8 decade debt-cycle) "was [that] we called it a World War.... The scale of government spending was so enormous [in WW2] that the private sector's debts were basically paid *down*, because a) there was so much money being generated for the war effort, and b) [because] spending was rationed. The only thing you could do with your money was pay your debt levels down" (Keen, 2018h, mn.31).

13) At least 9 times out of 10; it's "not about the [short-term] money for them [large creditors]. It's about the [long-term] power-- that if somebody doesn't pay this...[federally-usurped] debt back, [then] it'll encourage everybody to; and they're scared to death of having to [simply] forgive a debt that you can't collect"- Tom Asbridge (Cook, 2019e, mn.5). See also "Debt cycles", "Violence".

14) Internationally, it has long been observed that, f.e. the "5 countries-- Brazil, Peru, Columbia, Zaire, and Indonesia-- that together have 60% of the remaining tropical forests are [also] among the largest debtor nations. Debt cancellation is an important prerequisite for preservation of their natural resources" (Dziobek, et al, 1992, 22). See also "Great Extinction, 6th", "Ontocide".

15) Of course the ultimate "debt jubilee" occurs after money is made safe "outside of the banking system", and the central bank is liquidated; "then... you can ask yourself 'what to do with all those assets that a central bank has'... [Y]ou can use those assets of value to lower the debt levels in society. A way to do that is...[to] issue vouchers to the public...[where] every citizen gets a voucher, for instance 25,000 Euros per capita.... so that the private debt in society goes down.... So the money stock remains the same, but debt levels are reduced" (Wortmann, 2020, mn.22-23). And for those without debt, they can bring their voucher "back to the central bank and...[get] shares in the central bank. So...[they] will be a shareholder in the remaining [CB] assets, and that will provide an income for the coming years, maybe 30 years... [But] at a certain time, that will stop, and then the whole CB issue-- the whole central bank thing-- will be over" (Wortmann, mn.24). See also "Citizens' Dividend", "Central Bank (CB)". See also "Freedom, Declarations of", "Reform, false".

Jubilee Year- 1) "In Judaic Law (*Leviticus 25*) a *Clean Slate* [was] to be proclaimed every 50 years, annulling personal and *agrarian* [tax] debts, liberating bond-servants to rejoin their families, and returning lands that had been alienated [confiscated] under economic duress. Long thought to have been merely a *literary* religious ideal, the policy has now been traced back to *royal proclamations*, issued as a matter of course in Sumer and Babylonia, in the third and second millennia BC; (See Bronze Age)" (Hudson, 2015b). 2) "That was what Jesus' first sermon was all about, wanting to restore the Jubilee Year" (Hudson, 2016p, mn.22).

3) The jubilees were typically for only the *barley* currency; not for the silver (international) currency. Hudson calls these "personal" or "consumer" (agricultural, corvee) debts, vis-à-vis "business" debts, which is somewhat misleading in today's context. See also "Jubilee".

4) Since the Romans and John Locke, however, debt contracts can only be forgiven by *force majeure*. See also "Imperialism", "Debt cycles".

Judicial branch (US)- (was never seriously intended as a 'co-equal branch' of government¹⁵¹⁶, at least until the Marshall Court in the 1810's-30's, and it typically allied with the [usually 'national'] Executive

¹⁵¹⁵ See also "Usury" (Hebrew: *neshech*).

¹⁵¹⁶ See, f.e. Van Buren, 1867, 330.

branch in any struggle with the [usually 'state'-based] Legislative branch)¹⁵¹⁷. See also "Congress", "Deep state".

1) In a 'free' or democratic republic at least; the "judiciary power ought not to be given to a standing senate; it should [instead] be exercised by persons taken from the body of the people at certain times of the year, and consistently with a form and manner prescribed by law, in order to erect a tribunal [jury] that should last only so long as necessity requires...[so as to render] the judicial power, so terrible to mankind, **not being annexed to any particular...profession**, [and] becomes, as it were, invisible" (Montesquieu, 1748, 153); in other words, like a good monetary system-- a nonfactor or non-squeaky wheel.

1b) This seems not to have happened for some reason (perhaps simply expediency). In "providing that state judges be appointed by the chief executive [not unlike the King had appointed them all just a couple years earlier] 'and...Council', New York's constitution [of 1777] to some extent prefigured the US constitutional procedure by which [all] federal judicial appointments are [to be] made by the President and approved by the Senate" (Kirschke, 2005, 60), neither or which were, by any stretch of the imagination, directly elected (or lotted) by the citizenry at the time. See also "Democracy".

3) Federalist Justice John Marshall dominated the US Supreme Court through the first 1/3rd of the 1800's, and this most-famous jurist's "defense of vested private rights [such as usury] was almost as controversial as his exaltation of federal [national/unitary] power" (Graebner, Fite, & White, 1975, 224).

3a) *Marbury v. Madison* (1803)- est. judicial review;

3b) *Fletcher v. Peck* (1810)- further est. the power of the Court to void state laws;

3c) *McCulloch v. Maryland* (1819)- initiated the 'necessary & proper' regulation of interstate commerce, in deciding that Maryland could not tax the 2nd Bank of the US.

3d) *Gibbons v. Ogden* (1824)- further est. the right of Congress, not states, to reg. interstate commerce

3e) *Grove v. Townsend* (1835)- est. that the US Constitution didn't necessarily apply to the Democratic Party of Texas as a private, voluntary organization. See also "Parties, political".

4) There have been exceptions to the general rule. Was agricultural, primary sector, and hence pretty much US macroeconomic policy, in the 1930's-40's, pretty much decided by the Hughs Court? See also "Agriculture" [.1933, 1938].

5) Free legal advice: "If anyone, anywhere, wants to file any lawsuit in any court, 1st do your 'due diligence' and research to the best of your ability, the arguments for and against your assertion of your rights in the situation. Marshal your facts, document your claims and write your 'complaint' as though you are arguing your case to... your State or the federal level. If you receive an 'adverse' decision from the first court you enter, then you will be...well prepared for appealing your case... Of course any appeal depends on the findings of the decision rendered in your case, but if you have begun your effort with an idea that you will be denied (at first hearing) then you will be as ready as you can be to move your arguments to the next level of 'due process.' Always argue the law, not the statute. Most lawyers don't know the law. They learn statutes and procedures. Trial lawyers learn to read people and make or lose their cases by manipulating peoples' perceptions rather than 'winning or losing on the law'. Just my observations from watching what happens in courts and reading cases and decisions."- Randy Cook (22-7-19 em). See also "Common law".

See also "Separation of Powers".

Junk bonds- (a.k.a. 'highly leveraged debt') 1) "basically when you issue credit without increasing the means of production at all, but [rather] just transferring ownership out of the hands of equity owners and workers, and into the hands of creditors" (Hudson, 2017i, mn.32).

¹⁵¹⁷ Hence this (mostly inadequate) fulcrum between the favorite hangouts of the 1st and 2nd Estates (the Executive & the Legislature, respectively) has-- at least in the United States-- an inherent skew (or 'not particularly enlightened self interest') towards the central-unitary, pretty much ever since the 'Federalists' and John Marshall. See also "Corporations (and corporate 'personhood')", "Unitarism". Elected judges offer some bulwark against the skew.

2) “High-interest bonds, developed in the 1980s, primarily by Michael Milken at Drexel Burnham, to finance *corporate takeovers*. Mr. Milken was sent to jail for securities fraud, and Drexel was *disbanded* as a result of insider trading scandals, for which Ivan Boesky was convicted. The damage caused by junk bonds included widespread bankruptcies of Savings-and-Loan associations (S&L’s) and other creditors who bought such bonds. The fiscal ruling that made junk bonds possible was that interest-payments to bondholders and bankers were tax-exempt, whereas stock dividends had to be paid after first paying income taxes. At a 50% income-tax rate, this meant that companies could pay out twice as much pre-tax income as *interest* than they could pay as *dividends*. The government lost an equivalent amount of taxes, contributing to [a] sharp rise in US public debt in the 1980s... Junk bonds were economically destructive for a number of reasons. Bondholders were paid off not so much by operating companies more efficiently, as by [rather] *downsizing* the labor force, *outsourcing* it, and breaking up the company, and selling its parts off piecemeal. Even companies that were not taken over suffered, as prospective target companies were obliged to resort to *poison pills*, loading themselves down with *debt* (or undertaking mergers on their own) to make it uneconomic for raiders to take them over” (Hudson, 2015b). See also “Derivatives”.

2-4. Net Issuance of Risky Business Debt

[US Corp. debt junk bonds, 2004-2019]

Junk Economics- 1) “...euphemisms, an Orwellian vocabulary of using words that actually mean the opposite... [F.e.] a ‘free market’ actually means the road *to* [not from] debt peonage” (Hudson, 2016p, mn.20). 2) The “whole intent is to create what is called a *methodology*... a way of looking at the economy [and] of making national income statistics that make it appear as if...Goldman Sachs is productive” as opposed to a parasite (Hudson, 2016q, mn.3-4). “This is just the opposite of what was believed a hundred years ago” (mn.5). See also “Georgism”, & “National income”. See also “Neoclassical”, “Clark, John Bates”, “Industrial Revolution, 2nd”, “Parity pricing”.

Junk science- 1) “A theory or postulated relationship pretending to be scientific, but sponsored by a special interest group to divert analysis *away* from reality. See... *Neoclassical Economics, Neoliberal, Neoconservative, Monetarism, Parasitism... Science of Assumptions, Washington Consensus...*” (Hudson, 2015b). See also “Mythomatics”.

2) For example, the “tendency for Chicago School, Austrian and neoclassical economists to take markets and business behavior out of their social [political], institutional, and historical context, so as to exclude the effect of finance” (2015b). See also “Scientific Management”, “Technocracy”, “Methodology”.

Justice- See “Economics, Parity”.

Kakistocracy- ‘rule by the worst’ people in society. “In the dark age of Kali Yuga,¹⁵¹⁸ [increasingly *undefined*] money rules; and it is through banks that the moneyed interests have gotten their power. Banking in an

¹⁵¹⁸ “We developed...at our conference...at our conference in Basel, [that after approx.] 5,000 years of Kali Yuga-- which trained us to look at the physical-- to develop natural science...This has...been done. Now we have [another] 5,000 year span to get interested in the spiritual *underlying* [sic] the physical.... We are now in the darkest spot of the light age... [when] it is tempting to annihilate everything [that] we have achieved so far” (Meyer, 2021, mn.38). See also “Lying”, “Money”.

age of greed is fraught with usury, fraud and gaming the system for private ends” (Brown, 2012). See also “Lies”, “Lying”, “COVID”, “Self destruction”.

See also “Usury”, “Money”; “Debt cycles”, → “Dystopia”; “Timarchy”, → “Mind control”, → “Headless Horseman (essay)”, “Steele, Robert David”, “Great Extinction, 6th”.

Keen, Steve (& “Post-Keynesians”)- (as Ricardo was to Adam Smith, Keen is to Hyman Minsky)

1) In addition to being one of a handful of or so or economists to (publicly) predict the Financial Crisis of 2008, Keen has been, for decades, “one of the group of non-conventional Economists who argue that you can’t model the economy without including the role of *banks, debt, and money*... [T]he economic establishment, for 30 or 40 years, has got away with arguing [that] you can model a capitalist economy as if it had no banks in it, no money, and no debt” (Keen, 2012b, mn.5); “I’d rather have engineers... [in charge of] Economics than Economists any day. So that’s my level of respect for the [so-called] ‘Federal’ Reserve.¹⁵¹⁹ Inside the Bank of England, there are some sensible people who have grown up and learned through the whole Crisis-- not all of them-- but there are a few” (Keen, 2020, mn.35). See also “‘Exogenous vs. Endogenous’ (money creation)”.

2) While not addressing the bank credits-bankmoney (‘debt-borne money’) issue per se, Keen, the highest profile “*Post-Keynesian*”, consistently prescribes the following, in order to reduce (the primary economic problem of) private debt accumulation: “Limit the capacity [of] the banks to finance speculation. Reduce the private debt that’s outstanding; admit that we made a mistake and cut it back by using the government’s money creation capacity. And then after that we can re-set ourselves to get back to something like 1950s and ‘60s America, where the vitality of that economy came partly from its patent-generating and innovation and so on; but largely from the growth in demand that was coming out of rising private debt-- when it was rising from a very small level” (Keen, 2015). Private debt needs a ‘haircut’; not people’s savings-accounts.

2b) “To many post-Keynesians, [only] partial chartalism [a.k.a. ‘State Theory of Money’] and [acceptance of the dominance of] bankmoney even seem to have become unshakable matters of faith, too” (Huber, 2017, 93). Why? See also “Censorship, academic”, “Economics”.

3) “I focus on the role of credit... [which] matters because it’s part of [aggregate] demand” (Keen, 2016o, mn.11). 3) “It is such a pain... [being] seen as critics of capitalism.... what we’re really trying to say is [that] unless you control the financial sector, the financial sector will bring capitalism down.”

- Steve Keen (Hudson, 2016s). See also “Debt, private”.

4) According to Michael Hudson after Keen “absolutely crushed” New York Times (Neoclassical) Economist Paul Krugman in an online argument over endogenous vs. exogenous money creation, “the response in Australia was so furious-- that here was somebody who said that money [creation] matters-- that they... [tried to] get rid of... Keen... So they closed the... [entire] Economics department” at Keen’s University of Western Sydney (Hudson, 2017i, mn.27). Hudson adds that “Australia, more than almost any other country, is letting banks control the economy.... And when I was there... the central bank [effectively] said: ‘*We don’t care. We don’t need industry*’” (2017i, mn.7-8). See also “Canada”, “France (and the EU)”.

5) “Basically... what we need to do is what the Ancients used to do, which is have regular Debt Jubilees”¹⁵²⁰ (Keen, 2016o, mn.29). Although Keen would also “...like to give banks the capacity to lend and not take a *loan* position... but an *equity* position.... That venture capital transformation of banking would mean that banks would actually have to work. They’d have to actually understand what entrepreneurs are doing... [and] evaluate them sensibly... [So] banking would become creative again, rather than what it has become, which is a [bureaucratic] parasite on the system. But it has only become a parasite courtesy of Economists not understanding the economy, and those people being in charge of

¹⁵¹⁹ The “Federal Reserve, which could have prevented this [latest manifestation of the] psychology of riding the bubble, is now maintaining it” (Keen, 2020, mn.36).

¹⁵²⁰ “Let’s do Jesus’ work and campaign for a debt jubilee” (Keen, 2018b, mn.55). See also “Violence”, “Monetary reform”.

our [supposedly public] Central Banks”¹⁵²¹ (Keen, 2016m, mn.42-43). On a more positive note, the “accuracy of meteorology has improved *dramatically* over the last 5 decades” (Keen, 2016p, mn.24). See also “Post-Keynesianism”, “Government-created’ money”, “Hudson, Michael”, “Jubilee”.

Keynes, John Maynard (1883-1946)- (the 20th century’s most influential Economist; a.k.a. ‘the British’) “The 19th century carried to extravagant lengths the criterion of what one can call for short ‘the financial results’, as a test of the advisability of any course of action sponsored by private or by collective action. The whole conduct of life was made into a sort of parody of an accountant’s nightmare. Instead of using their vastly increased material and technical resources to build a wonder city, the men of the 19th century built slums; and they thought it right and advisable to build slums because slums, on the test of private enterprise, ‘paid’, whereas the wonder city would, they thought, have been an act of foolish extravagance, which would, in the imbecile idiom of the financial fashion, have ‘mortgaged the future’-- though how the construction today of great and glorious works can impoverish the future, no man can see until his mind is beset by false analogies from an irrelevant accountancy. Even today I spend my time-- half vainly, but also, I must admit, half successfully-- in trying to persuade my countrymen that the nation as a whole will assuredly be richer if unemployed men and machines are used to build much needed houses than if they are [instead] supported in idleness. For the minds of this generation are still so beclouded by bogus calculations that they distrust conclusions which should be obvious, out of a reliance on a system of financial accounting which casts doubt on whether such an operation will ‘pay’. We have to remain poor because it does not ‘pay’ to be rich. We have to live in hovels, not because we cannot build palaces but because we cannot ‘afford’ them. The same rule of self-destructive financial calculation governs every walk of life. We destroy the beauty of the countryside because the unappropriated splendors of nature have no economic value. We are capable of shutting off the sun and the stars because they do not pay a dividend. London is one of the richest cities in the history of civilization, but it cannot ‘afford’ the highest standards of achievement of which its own living citizens are capable, because they do not ‘pay’. If I had the power today, I should most deliberately set out to endow our capital cities with all the appurtenances of art and civilization on the highest standards of which the citizens of each were individually capable, convinced that what I could create, I could afford-- and believing that money thus spent not only would be better than any dole but would make unnecessary any dole. For with what we have spent on the dole in England since the war we could have made our cities the greatest works of man in the world. Or again, we have until recently conceived it a moral duty to ruin the tillers of the soil and destroy the age-long human traditions attendant on husbandry, if we could get a loaf of bread thereby a tenth of a penny cheaper. There was nothing which it was not our duty to sacrifice to this Moloch and Mammon in one; for **we faithfully believed that the worship of these monsters** would overcome the evil of poverty and lead the next generation safely and comfortably, on the back of compound interest, into economic peace.... But once we allow ourselves to be disobedient to **the** test of an accountant’s profit, we have begun to change our civilization.”- “National Self-Sufficiency” (Keynes, 1933). See also “Accounting” [end of], “Transhumanism” (beginning of?), “Monstr.”; “Physiocrats, the”, App.C: “1-2-3”.

1) “In the 1920s, Keynes became the major critic of the World War 1 legacy of international *Inter-Ally debts* and [excessive] German reparations. Against the monetarist ideology that market prices and incomes would fall in debtor countries, supposedly enabling them to pay virtually any given level of debt, Keynes explained that there were structural limits on the ability to service debts. Accusing Europe’s arms and reparations debts of exceeding these limits, Keynes provided the logic for the debt *write-offs* based on the *ability to pay*” (Hudson, 2015b).

2) On “monetary reform”, however, “Keynes ideas... come close to contemporary conditions of fractional reserve banking in combination with the ‘reserve position doctrine’, i.e. the flawed assumption [from the

¹⁵²¹ “The main problem is getting rid of [see also] ‘Neoclassical Economics’” (Keen, 2020, mn.48). See also “Industrial Revolution, 2nd”, → “Fin de Siecle”.

1920's] that central banks are capable of controlling banks' credit and deposit creation by setting minimum reserve requirement and base rates thereon" (Huber, 2013, 9). See also "Reserve 'Requirements'".

3) Keynes also served as director of the British Eugenics Society from 1937-44. As late as 1946, Keynes declared eugenics to be "the most important, significant and, I would add, genuine branch of sociology which exists" (Keynes, 1946). See also "National Identity/Nationalism"¹⁵²².

4)

Keynsianism (Abba-ism)- (ironing out the old vicissitudes of [19thc] bankmoney "debt cycles" with new [20thc] fiscalism, supposedly without overdoing it on the [see also] "monetization"-- a condition which is sometimes a.k.a. 'bastard Keynesianism' [since the 1960's]; i.e. 'demand-side' economics is structurally flawed, because it is unsustainable)

Economists "were victims of...delusion. Keynes seemed to believe that wealth-- and not [merely] debt-- increased according to the rules of compound interest" (Martinez-Alier, 1987, 128). See also "Compound interest", "Debt mone "Monetization".

1) the dominant economic ideology of the (so-called) golden age (1940's-mid-'70's) was basically counter-cyclicalism-- using government intervention to offset both the booms and busts of (bankmoney) economics. In a nutshell, "[a]n unbalanced [government] budget will be inflationary; a budget with a surplus will be deflationary" (Quigley, 1966, Ch.5). See also "MMT", "Post-Keynesianism", "Ricardo, David (1772-1823)", "Debt cycles".

1b) Keynes "reworked the determinants of employment levels... [arguing] that demand, not supply, was the factor driving employment levels. This was known as the '*Keynesian revolution*'"¹⁵²³ (Neil, 2020). The so-called 'revolution' had many well-known precursors. Intellectual 'Keynesian'esque *underconsumption theories* go back to the notorious John Law (1671-1729)¹⁵²⁴, and (the also notorious) Thomas Malthus (1766-1834). The ('demand side') Birmingham School of Thomas Attwood (c.1815-to-mid-19th century), and the (early 20thc) American economists William Trufant Foster & Waddill Catchings¹⁵²⁵-- were already influential in the 1920s (Laider, 1999).

2) "From roughly 1933¹⁵²⁶ to 1979, every major capitalist government reversed course and adopted some version¹⁵²⁷ of [demand-side] Keynesianism... [which] started from the assumption that capitalist markets would not really work unless capitalist governments were willing, effectively, to play nanny: most famously, by engaging in massive deficit 'pump-priming' during downturns. While in the '80's, Margaret Thatcher... and Ronald Reagan... made a great show of rejecting all of this, it's unclear how much they really did" (Graeber, 53). See also "Tax shift".

3) "*I am now a Keynesian in economics*'...[President Nixon said] to broadcaster Howard K. Smith off-camera after a televised interview on January 4, 1971. It was repeated shortly thereafter... [Earlier] economist Milton

¹⁵²² National identity & nationalism, per se, do not necessarily have anything to do with 'racism' (in non-ethnic [ENI]-based societies). It is-- or was-- simply due to classical conditioning that (in the 'West'), per latter-19th & turn-of-the-century US & UK, that the 2 distinct phenomena managed to get mixed up/conflated. See Webber, 1989l, mn.26, "Conditioning".

¹⁵²³ The term is basically a misnomer. "[W]hat came to be called 'Keynesian macroeconomics'... [at its core] did not represent a radical change in economic thinking, but rather was an extremely selective synthesis of themes which had [already] permeated the preceding literature" (Laider, 1999), mostly from Keynes' General Theory (1936); 'Keynesian' by 1937 (around the time, ironically, that America, after at least a decade of public wrangling, finally got the Agriculture/Primary Sector question right. See also "Parity pricing (for the primary sector)".

¹⁵²⁴ 'Keynesianism' or 'Lawism'? Two centuries earlier, John Law's "writing indicated that a highly elastic commodity supply curve would allow for an increase in prices to be accompanied by a large increase in goods offered. Labor that was previously idle would [then] be employed to produce this increased quantity of goods, giving rise to [the main point] new consumer demand" (de Yong, 1994, 3).

¹⁵²⁵ Foster & Catchings' influential books included *Money* (1923), *Profits* (1925), *Business Without a Buyer* (1927), *The Road to Plenty* (1928), and *Progress and Plenty* (1930). They were among the leading pre-Keynesian economists (in the demand-side or 'under-consumptionist' tradition), emphasizing the paradox of thrift and 'economic interventionism', but are now forgotten in 'contemporary economics texts'.- wiki (22-9-22).

¹⁵²⁶ According to more specific sources, 1933 is about 5 years too early, at least for "what came to be called the 'Keynesian Revolution'.... just before World War II" (Laider, 1999, xi). See also "Central banking-warfare model", "Monetization" [it's won many a war].

¹⁵²⁷ Once "full employment was achieved", Keynes "thought the classical economics of the free market system might come into its own" (Galbraith, 2017). Keynes could also be ambiguous on the very nature of money creation in 'modern' economies (Werner, 2016).

Friedman..[had famously] said. 'We are all Keynesians now'¹⁵²⁸... in an interview with TIME magazine in 1965" (Barnett, 2006, 155). Reagan-Bush Administration senior policy analyst Bruce Bartlett also notes, as have many others, that the Reagan Admin. policies in particular were "textbook Keynesian economics" (Barnett, 2017b). See also "Chicago School" [for foreigners], "Reaganomics" [for US].

4) "In becoming consciously a science of human behavior, economics will lay less stress upon wealth and more stress upon welfare."- Wesley C. Mitchell, (Kirzner, 1960, 20). See also "Homo economicus", "Big government (growth of)".

4b) This development, in turn, further "...degenerated into an all-seasons interventionist deficit and debt doctrine, *rather than* focusing the government's role" in providing a "coherent legal framework and regulation for the economy" (Huber, 2017, 7). See also "Government, role of", "Monetization".

5) Hence it has proven to be, over a half-century of practice, *inherently inflationary*: "always issuing the ley [tokens] before the [actual] wealth...[This] common Keynesian thought process...has been inculcated into us... [But, as with junk food] it is the thing that we have to train ourselves not to do" (Cook, 2019b, mn.9). It is not necessary to put the derivative moon before the genuine sun. "The wealth comes first, not [its symbol] the money" (Cook, mn.10). See also "Wealth", "Lunatics", "Monetization".

5b) Daniela Gabor@DanielaGabor [26-2-21]

jaja, brilliant Eurozone language games time: *unconventional* fiscal policy!!!! we heterodox economists call it Keynesian fiscal policy, but ECB Board Members have a contractual clause forbidding them to pronounce that word See also "Economics" [.monetary], "Orwell, George".

In essence, *unconventional fiscal policy* comprises measures that go beyond traditional automatic stabilisers, which tend to be too small to offset the effects of an adverse demand shock at the lower bound. These unconventional measures are only activated when the economy heads into a deep recession.

6) CHRONOLOGY of demand-side/'Keynesian' labels:

pre-1930's- 'Demand-side';

latter 1930's- 'Keynesian';

1940's- "Neoclassical-Keynesian synthesis";

1950's- "Neo-Keynesian" (synon. for above);

1970's- "Post-Keynesian"/"Cambridge Keynesians" (& '*heterodox* approaches')¹⁵²⁹;

1980's- "New Keynesian" (basically a 'new' [more *microeconomics*-based] NCE-Demand-side synthesis)

7) According to still others, the idea of "linking the value of an international reserve currency to a broad index of...commodities, weighted in terms of their value in international trade... was [actually] Keynes' *ideal* long run vision for anchoring the international monetary system, even post Bretton Woods" (Ussher, et al, 2018). See also "Graham, Benjamin" [.Kaldor].

See also "Lerner, Abba (1903-82)", "MMT", "Reaganomics" (military Keynesianism), "Inflation", "Ontocide".

[See also "National Debt Economy (NDE)", "GDP", "Central Banking-Warfare model"]

Keynes' Treatise on Money (1930)- "a theory of money and credit as debt, and [then] in 1936... [Keynes'] *General Theory of Employment, Interest and Prices*-- which pointed out that Say's Law had ceased to operate, as savings were not spent-- diverting payments away from markets for goods and services....[T]his book's theorizing about *saving* did not address the tendency for debts to grow exponentially, in chronic excess of the economy's ability to carry this financial *overhead*. He came to view

¹⁵²⁸ Keynes "had somethings wrong. He had a couple of things wrong. But most of the things he had [in his writings] were what people actually do, and that's what you're [supposed to be] interested in" (Davidson, 2019); in the social 'sciences'.

¹⁵²⁹ *Post-Keynesianism*-- basically a trans-Atlantic, anti-NCE uprising-- was first referenced in 1975, and is probably the most prominent of the "Heterodox" (another word for 'unorthodox' [as in anti-Neoclassical Economics]) approaches. See also "Primary Sector Economics".

savings simply as *non-spending* on goods and services, not as [also] increasing the economy's debt overhead by being lent out" (Hudson, 2015b). See also "Compound Interest", "Say's Law".

King James' Bible- See "K.J.B. (King James' Bible)/70 Year Plan".

K.J.B. (King James' Bible)/70 Year Plan- (see what happens when you say it three times quickly¹⁵³⁰) "Oh, my God. It's just like in the Bible" (Fitts, 2021, mn.126). See also "Plan, the (old)".

1) Have you ever noticed that... (since 1944-45) UK-USA, 'Western', and 'Capitalist'-cum-World history seems pointed and geared towards a (seemingly 'final') destination: "...*that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name.*"- Revelation 13:17... the communist & socialist consolidations; the pseudo "cold war" and (de facto) giftings-dissemination of technology?... the almighty USD c.1970, free-floated into a free-trade free-for-all c.2000... resulting in a highly inter-connected world of (structurally flawed) commercial bank credit currencies, all of which, like a cancer (once the debt-saturation point is reached), desiccate and further consolidate all of a society's resources (natural, intellectual, technological)? It is the monetary system (hamster wheel) that is driving this process, leaving us, and our humane human instincts, at the end of the day with something of a choice-- that of furthering totalitarian techno-feudalism or a renewed republic (via reformed money). The (apparently universally agreed upon) final destination point above was first widely propagated in print, four centuries ago, in the 1610's. There are numerous other corresponding developments between what might be called the (Intelligence Community's) 'historical script' of today (c.1950-2020)¹⁵³¹ and what was written to have transpired in Renaissance England, 4 centuries prior. Was (the alleged) William Shakespeare prescient that "All the world's a stage"¹⁵³² throughout all 'modernity',¹⁵³³ or is it only in an *early modern era*-- that we are in the process of burning off and jettisoning¹⁵³⁴ this decade? See also "Jones, Alex", "Lunatics"; "Dispensationalism" & "Zionism".

2) "I was just at the Aspen Institute last year, having a bit of a squabble with a venture capitalist who looked at me and basically said '*Look, we can replace every human employee in America with A.I. and robotics, and that's exactly what we're gonna do*'... And...make no mistake about it, the money that's financing this is our tax dollars and our pension funds" (Fitts, 2018h, mn.40-41) being churned on Wall Street. See also "Big Government (growth of)", "Capitalisms", "Stock Markets".

¹⁵³⁰ Speaking of the unspeakable, see also Binney, 2019, mn.29 [eye of Sauron]; "National Security Agency (NSA)".

¹⁵³¹ ...the approx. '70 Year Plan', compatible-congruent with "Debt cycles"; "And the woman whom you just saw is that great city [“peak Yin” in The (2nd Estate) City] which reigns over the kings of the earth"- New Testament (Revelations, 17:18). See also "Debt cycles", Appendix C: "1-2-3".

¹⁵³² 'To these corporate person (groupthink) Boardrooms, you defer' <https://www.youtube.com/watch?v=fhITvG2gOL4>

¹⁵³³ Did Thomas Jefferson write this in 1813, 1913, or 2013? "It is a litigated question whether the circulation of paper, rather than of specie, is a good or an evil. in the opinion of England and of English writers it is a good; in that of all other [already excessively cynicized] nations it [paper fiat] is an evil: and excepting England, and her copyist the US. there is not a nation existing, I believe, which tolerates a paper circulation. the experiment [Here Jefferson conflates the American colonies' experiments with public paper notes, with the UK's (at that time purely) private bank fiat notes.] is going on however, desperately in England, pretty boldly with us, and at the end of the chapter [i.e. this now-unified monetary flim-flam experiment (UK-USA)], we shall see which opinion experience approves. [F]or I believe it to be one of those cases where mercantile clamor [for ever-more private bank notes in circulation] will bear down reason, until it is corrected by ruin" (Jefferson, 1813c). See also "Debt cycles" [particularly: 1780-1860], "Modernity", "Sovereign money" [Edison].

¹⁵³⁴ Post-feudal England (a.k.a. the 'K.J.B.'s author/context' [UK], and hence also the US monetary 'ghost in the machine') was a traditional realm of common law (common sense), that had also, fairly recently, been given an additional lesson in realism, to a degree that is perhaps difficult for people today to understand. This realism context was due not only to the fact that England was Europe's premier 'market' economy in the 15th-16th centuries, or that King James' committee had to work by candlelight, but also because, at a deeper level, the realm's pioneering market economy was brought about in the 1400's, two centuries before King James' super-committee, by simply the demographics and social context of plague-- the greatest, most destructive, and most recurrent plagues that anyone had ever heard of. The elephant in the living room there, in addition to the Tudor's confiscation of the Bishop of Rome's priests in the 1500's, was that there were still about 20% less English than (c.1610) as there had been in the early 1340's. See also "English constitution, the", "Internet of Things (IoT)".

3) "...the *Book of Revelation* is the one book of the bible that I never understood [laughing].... But here's what I think¹⁵³⁵... For 500 years, we've been on a *central-banking-warfare* model.... But...[after bankmoney] globalization, you have to move to a new model [or just be extracted to death by debt]. The question is what's that model gonna be? And that sounds like a simple job. But working out a whole new global governance and financial model is a very tense process [requiring provocations?]. I'm reminded of my favorite line from Tina Turner: '*We can do this nice or rough*'..... I don't know how far the breakdown has to go before we breakthrough to a new global model. But that's what we're sorting out... will it be human [beings] or will it be...[just] a [non-sapient] technological nightmare..." (Fitts, 2018p, mn.35-37). See also "Timarchy", "Teleology".

4) J.R.R. Tolkien's work is also "not an entertainment. It has to take itself seriously-- which explains why Tolkien had no time for his friend CS Lewis's Narnia. Narnia was a world that characters could [just] drop in or out of.... [Tolkien's] work is ultimately...about how desire for power-- the kind of power that will make us safe, reverse injustices and avenge defeats-- is a dream that can devour even the most decent.... the whole story is haunted by... above all, skepticism about anyone's fitness to wield...[such] power"- Rowan Williams, Archbishop of Canterbury, 2002-12 (Williams, 2018). See also "Separation of Powers", "Power".

5) "When the U.N. signs a treaty with almost every nation on Earth in 1992 to-- by 2020-- be in full swing for a post-industrial world that causes an 80% population collapse¹⁵³⁶ by 2050. If you look at the numbers and what that would do, its *Road Warrior*...[zombie apocalypse'-type] stuff...Revelations says [that] the Anti-Christ kills, what is it, 2/3rds of the Earth[is population]?... you know, die during [the 'Tribulation']. The U.N. says 80%! What do you think this is going to be like? Do you think this is going to be *fun* [sic] ...that you're just going to silver surf through the whole deal, and it's gonna be cakes and lions and teddy bears?.... They say [sic] they're collapsing everything! The U.N. admits 130-something million are gonna starve to death under a year of 'COVID' lockdown... They just die in their sleep, folks, and...[then the public servants] just say 'malnutrition'" (Jones, 2020, mn.0-1). See also "Internet of Things (IoT)", "COVID"¹⁵³⁷.

Kuznets, Simon (1901-1985)- (the father of ‘national income’ measurement [in the 1930’s-40’s])¹⁵³⁹
“Kuznets’ influence on the measurement of national income cannot be overstated.”¹⁵⁴⁰

- <https://apps.bea.gov/scb/index.htm> [Neil, 2020]

1) Although standing bureaus of the US federal government collected data from c.1865, before “World War I, measures of [national income &] GNP were rough guesses at best. No government agency collected data to compute GNP, and no private economic researcher did so systematically, either”.

- <https://www.econlib.org/library/Enc/bios/Kuznets.html>. See also “‘Free Banking’ (era)” [early data].

1b) By “the 1920’s, much of the business and economic data released by the federal government originated from the...Commerce [Dept.’s] Bureau of Foreign and Domestic Commerce (BFDC)...[With] the Great Depression, the lack of data... became [an] evident [problem]. In 1930, [Wesley Clair Mitchell’s] NBER¹⁵⁴¹ put [NBER researcher] Kuznets in charge of a study using new methods for generating [what they decided to call] *national income* estimates. This project led to his seminal publication *National Income* [1941]”; but almost a decade earlier Kuznets had made the “first official estimates of GNP for...1929–

¹⁵³⁹ Physiocrats founder Francios Quesnay seems to have made the 1st systematic effort in the 1760’s. His “*net product*” construct was simply (a Kingdom’s) agricultural [real] “surplus”, minus necessary “costs”. The “theoretical system of the [P]hysiocrats used the word ‘productive’ only in the context of ‘productive of a net product’. By contrast, manufacturing and trade were called nonproductive or sterile, because they created no new net product but simply transformed” the net product into something else (de Yong, 1994). See also “Sterile”.

¹⁵⁴⁰ “Although Kuznets was not the first economist to try this, his work was so comprehensive and meticulous that it set the standard in the field.”- <https://www.econlib.org/library/Enc/bios/Kuznets.html>

¹⁵⁴¹ The NBER was chartered in 1920; “a private, nonprofit research organization, alongside its founder”, original director of research, and steward Wesley Clair Mitchell (1874-1948), a former “star student” of (original Economics iconoclast) Thorstein Veblen. Kuznets’ autobiography acknowledges his “great intellectual debt” to Mitchell (Neil, 2020; Rockoff, 2019b; Cartwright, 2016)..

1932...[and his] report was sent to the US Senate in January 1934 (Neil, 2020). See also “National Income”.

2) The “6 segments of National Income as defined by [founder] Kuznets [are, the 2 expense categories] *wages, salaries & supplements, and net interest*¹⁵⁴²; and the 4 revenue sections are (pre-tax) *corporate profits... unincorporated business income...([a.k.a.] small business income), rental income* (which includes things like trademarks, patents, and royalties), and *net farm income*” (Cook, 2022b, mn.83). 2b) (Walters, 1991, 49-50).

3) Kuznets was also a founder of developmental economics, and is credited with the “discovery of the inverted U-shaped relation between income inequality and economic growth (1955, 1963)”.

- <https://www.hetwebsite.net/het/profiles/kuznets.htm> See also “Development, economic”.

4) Kuznets’ publications also “fueled”, (Neil, 2020).

[Kuznets was/is to America's 20thc crisis what Sun Yat-Sen was/is to China's¹⁵⁴³

Labels- only effective to the extent that the object(s) buy into [acquiesce to] them. See also “Politics”.

‘Labor capitalism’ (new)- (reducing labor costs; because labor [@ somewhere between 20-30% of aggreg. costs] is often the most fluid and/or large of the expense lines; not)

1) “*Industrial capitalism* is based on employing labor to produce goods to sell at a profit. The essence of ‘*labor capitalism*’ [however] is to extract money from labor by *deducting payroll income* for the purpose of inflating stock-market prices. First used by the Chilean dictator Augusto Pinochet, the term was adopted by British Prime Minister Margaret Thatcher as a populist label [and euphemism for *finance capitalism*] for her policy of channeling labor’s paychecks into the stock market, while at the same time breaking the backs of unions and pursuing sharp anti-labor policies designed to increase profits and reduce labor’s share of [the] national output and wealth. In nearly all such cases, labor representatives are by law not permitted to vote their share ownership on management policies, but are obliged to remain *passive investors*– unthinkable for any other class of shareholder” (Hudson, 2015b). See also “Finance Capitalism”.

2) Most Britons, including famous financier Sir James Goldsmith, saw through the Orwellian euphemisms at the time. “The average company has about 25% of its costs on labor costs, including the welfare costs and social costs... When you move [overseas], you can all of the sudden save over 20%. So your profits go leaping up. But you’re destroying-- totally destroying-- not only the number of people who’ve got jobs-- but also their salaries.... [In] real dollars... there’s already been a massive decline [19% in 20 years].... People’s salaries have gone down.... And... it’s only just beginning.... All of a sudden, by creating a global marketplace for labor... you are *shattering*... the way you share the value-added, and that means that you are destroying *the basis* on which we’ve been able to create... a stable society.... I am entirely

¹⁵⁴² This is “a net interest component... that...[does] not [include] interest on financial instruments... [It is mostly just about] interest charged between businesses. It’s not [interest] on corporate bonds...[or] public debt. It’s not even all of the interest charged on private debt ” (Cook, 2022b, mn.127-128).

¹⁵⁴³ If you want it down to one name, Kuznets, in the West, was the progenitor (or at least the statistical-foundation enabler) of “*both rivers*” of mid-century ‘modern’ economic *approaches*. His “national income” (mid-1930’s) was the bedrock for the USA’s “Parity” pricing era (1941-52), while his (slightly different) “(NIPA)” [subsequently simplified into “Gross National Product”-“GDP”] served as the quantitative foundation for (so-called) ‘Keynesian Revolution’ of the mid-20thc (and the subsequent “bastard Keynesianism” from the 1980’s-present). In China a couple decades earlier, Dr. Sun Yat Sen (1866-1925) *was*...

for free-enterprise.... [But] I'm not for the destruction of one's society" (Goldsmith, 1994, mn.8-10). See also "Globalism", "Productivity".

'Labor capitalism' (old)- (see "Industrial Capitalism")

1) In the US, World War One era "union-led 'labor capitalism'" efforts were "hit hard" by the depression of 1920-21, and were soon overshadowed by a "new narrative about the promise of mass investment [that] emerged in response to the [deep] recession, anticommunist hysteria, labor strife, race riots, and [general] xenophobia that plagued the nation after [the] Armistice" of 1919 (Ott, 2018, 71). See also "Thatcher, Margaret (1925-2013)".

Labor Theory of Value- (a useful concept for the primary sec; not to be confused with 'cost of production') See "Value", "Primary Sector Economics"; "Marx, Karl (1818-1883)".

Labor unions (in US history)- (Like political parties, labor unions, as a representative institution, are often/eventually subject to infiltration and varying degrees of co-optation... some of it by design; some of it-- more simply-- by short-sightedness.)

1) Uriah Stephens (1821-82), founder of the Knights of Labor, wrote in 1879:

"You must not allow the Socialists to get control of your assembly. They are simply disturbers, and only gain entrance to labor societies that they may be in better position to break them up. You can not fathom them, for they are crafty, cunning, and unscrupulous. I detest the name of socialism on account of the actions of the men who profess to believe in it. They rush to every gathering and attempt to man or officer it. Having done that, and having driven all decent men away, they are supremely happy in the delusion that they have spread their ideas still farther. I have had an experience with them that you could not possibly have had, and I warn you against having anything to do with them either individually or as a body. They tear down and very seldom even attempt to build up. They do nothing for the cause of labor, save to do it harm. If the Socialists ever gain control of the.... they will kill off the work of years. If they were sincere they would build up their own societies" (cited in Powderly, 1889, 534-535). See also "Attitude inoculation", "Marx, Karl (1818-1883)".

2) Stephens' successor, Terence Powderly (1849-1924),¹⁵⁴⁴ calmly added to the assessment that: "THE [sic] feeling of discontent which became apparent among the working people of the United States in 1886 presented an opportunity to a class of men who affected to be "leaders of thought and action" to come to the front and take a part in directing the current of industrial affairs into a course which they hoped would bring about a revolution, destroy the governmental structure, and reduce the political affairs of the nation to a condition bordering on chaos [the Haymarket bombing]. For years prior to 1886, whenever a labor meeting was called in any large city a number of men, calling themselves Socialists, would flock to the gathering and either attempt to officer it or cause it to break up in disorder. To do either one was considered a victory by the "RADICAL ELEMENT" [sic] as they were pleased to term themselves.... [1889, 526-528]For the most part the meetings of Anarchists are held under the roofs and influences of saloons, and it is only when exhilarated that they ever accomplish anything. There is no instance on record where they have ever done anything in the interest of reform, but in many places they have DESTROYED THE HOPES OF MEN [sic] who were sorely tried, and who had almost gained what they were contending for when the incendiary speech of some Anarchist turned public opinion, often very fickle, in an opposite direction.... [Powderly, 535]Not only have Anarchists of their own volition entered the order for the purpose of tearing it down, but they have been hired by monopolists to become members for the purpose of giving an anarchistic turn to the doings of assemblies, so that public opinion

¹⁵⁴⁴ Terrance Powderly "said that if we didn't have banking monopolies, we wouldn't need labor unions" (Sullivan, 2017, mn.7). "Prohibit child labor if you will, but give me the land, and you[r] children will be my slaves. Make your currency of what material you choose; but if I own the land you can not base your currency upon the *wealth* of the nation, for that wealth is the *Land*. You may make the laws and own the currency, but give me the land and I will absorb your wealth and render your legislation null and void" (Powderly, 1889, 173).

might be turned against the order. This is no stretch of fancy, for a lawyer an official of Utica New York, while sitting by my side in a car coming from Washington in the early part of 1887, made this statement to me:

“We have succeeded in heading off your order, Mr. Powderly. We do not fear it any longer, for its power is killed through the foolish actions of its members. You may preach to them to be guided by wise counsels, but we have paid Anarchists to become members of your assemblies that they might stir up the devil and bring discredit upon your whole movement.” [540]....

Through the actions of the Anarchists, the Knights of Labor were well nigh destroyed on the Pacific coast. They lost no opportunity to introduce some new element of discord at every meeting, until the members who were not connected with the I.W.A. withdrew in disgust, and severed all connection with the K. of L. An ex-officer of one of the Anarchist groups made this statement to me over his own signature:

“I and many others know as a fact that it was the intention of the heads of the I.W.A. to capture the K. of L., as it was a powerful organization, ready-made to their hand, and would save them considerable labor in organizing if they could achieve their desire. Anyhow, it could be and was used as a recruiting ground for their purposes.” [540-541] (Sullivan, 2019).

2) “They are enormously rich, they are not democratically run, and they have increasingly taken on the characteristics of great corporations: irresponsibility, anonymity, and undemocratic procedures” (Quigley, 1972b). See also “Corporations (and corporate ‘personhood’), “Duopoly”.

3) Nonetheless, “a well-organized [labor] union has adequate wages to buy our stuff.... Do you want to sell stuff to people who don’t have any money, or to people who do have money?”- Tom Asbridge (Cook, 2019e, mn.6). See also “Fin de Siecle”, “Hegelian dialectic”, “Parties, political”.

3b) Labor today “is not directly enslaved anymore, but it’s indirectly harmed by these other monopolies” (Sullivan, 2017, mn.19). “Production, factors of”, “Greenspan, Alan” [.strike].

[the right to Party and/or 'right to Work?']

Land- (that which is real) “Everywhere, in all times, among all peoples, the possession of land is the base of aristocracy, foundation of great fortunes, the source of power” (George, 1879, 296). See also “Aristocracy (& nobility)”.

Nonetheless, “the [bankmoney] age seems to have conceived the preposterous notion that money, which can buy land, must therefore itself have the same revenue-producing power” (Soddy, 1926, 106). See also “Statism”, “State capture”, “Hell”; “Soddy, Frederick”.

1) “It is not sufficient in a well-regulated democracy that the divisions of land be equal; they ought also to be small, as was customary among the [republic-era] Romans. ‘*God forbid*’, said Curius to his soldiers, ‘*that a citizen should look upon that as a small piece of land which is sufficient to maintain him*’. As equality of [real] fortunes supports frugality, so the latter maintains the former” (Montesquieu, 1748, 45). See also “Constitution, US”, “Congress” [.Senate], “Common sense”.

2) was typically “...expected to be the tax basis [until] 100 years ago.... because [political economists knew that] if you tax wages or industry, this will [just] add to the cost of production” (Hudson, 2012c); hence fostering (despite whatever 20th century-type eco-political rhetoric says) the development of inflation and bubbles... See also “Clark, John Bates (1847-1938)”, “Bankmoney regime”, “Georgism (& Land value tax)”.

2b) “In the evolution of property rights it is difficult to find a case where the dispossessed were the primary beneficiaries of zoning and titling programs (the land reforms in Taiwan and Japan after World War II being one of a few examples)” (Pistor, 2020b). See also “Confucian”.

3) With the digital-era demise of 20thc regulatory regimes, the above dynamic has indeed been freed up-- as someone like Henry George would have seen sooner. “Almost everywhere in rural America ...[land price inflation] is going on.... [I]n the inter-mountain region [of the US, land inflation has] far out-stripped anything that I ever imaged could take place”, sometimes at 15x-16x (Asbridge, 2019b, mn.37-38). “The underlying thing that’s happened in agriculture, *especially* [sic] since the late 80’s... [is] an underlying financing by mortgaging real estate... The bulk of their financing is a mortgage on the land” (Asbridge, 2019, mn.44-45), which contributes to bubble cycles “even worse” than the US housing market (mn.46). See also “Rent (land rent)”, “National Debt Economy (NDE)”. See also “Inflation/Deflation”, “Wealth”, “Food”, “Primary Sector Economics (WPE)”.

[...Still Report #2;

See also “Monetary Reform”, “Georgism”, “Graham, Benjamin”.]

Land bank- (worked better in PA., NJ, NY, and MD. than in the colonies to the N. or S.)

“For as bills issued upon money security are money, so bills issued upon land are in effect coined land.”
- Benjamin Franklin (Franklin, 1729)

1) “Land banks were established in most of the American 1st half of the 18th century¹⁵⁴⁵... [A]ll the banks that actually functioned were public institutions created and operated by ...Colonial governments. [They lent] out provincial paper money to citizens on the security of their land, farms, town houses, or other forms of real estate... [I]n the absence of hard money they were to provide a paper currency.... [I]n 4 colonies-- Pennsylvania, New Jersey, New York, and Maryland-- the system was on the whole successful and is deserving of more attention than it has been given.... Certainly an ill repute was well earned by the New England and Carolina banks, but their failures should not be permitted to obscure the success of the land-bank system in the middle colonies” (Thayer, 1953). See also “Public banking”.

2) “In our colony of Pennsylvania, the land itself, which is the chief commodity, is coined, and passes into circulation. A planter, immediately [after] he purchases any land, can go to a public office and receive *notes to the amount of half the value* of his land, which notes he employs in all payments, and they circulate through the colony by convention. To prevent the public being overwhelmed by this representative money, there are two means employed; first, the notes issued to any one planter must not exceed a certain sum, whatever may be the value of the land; secondly, every planter is obliged to pay

¹⁵⁴⁵ “South Carolina established a land bank in 1712, Massachusetts in 1714, Rhode Island in 1715, New Hampshire in 1717, Pennsylvania in 1723, and New Jersey in 1723. These [Land] bank notes were also exchanged as currency...Theodore Thayer has commented on the important role that land banks played in providing financial stability. He indicates that land banks were a powerful monetary authority within the colonies, comparing their influence to the modern Federal Reserve System.... The most common form of paper currency was *bills of credit* in anticipation of tax revenues, but land bank certificates, bills of exchange and specific commodity paper such as tobacco warehouse receipts were also important. *Bills of exchange* were issued by merchants and businessmen and were pegged to [the] number and value of the commodities that the receiver of the paper owned... [and were] widely accepted and used as money” (Morales, 2009, 38-39). See also “Bills of exchange”.

back into the public office every year, 1/10th of his notes. The whole is of course annihilated in ten years, after which it is again allowed him to take out new notes, to half the value of his land.”

- David Hume, Letter to Abbe Morellet, July 10, 1769 (Twells, 1867, 3). See also “Bills of credit”.

Land bridge (from Occident to Orient: or Orient to Occident?)- (‘America’ as simply an imperial-‘globalist’ tool, for the purpose of [and being used for] connecting ‘far west’ with ‘far east’) See also “Imperialism”, “Empire”, “Zionism”, “Revolution” [Akkad].

1) Columbus set sail in 1492, looking for India, but landed in the Bahamas (which he then mistook for [somewhere in] “India”). It’s not common knowledge, however, that his French counterpart, Jacques Cartier, similar to Columbus, named his expedition’s 1st (interior Canadian) landmark-- or at least two-day camping area-- “Lachine” (China), after the so-thought Ichine Rapids”¹⁵⁴⁶ [on present-day Montreal Island] prevented the expedition from proceeding further up river, in October of 1535.

1b) It’s nothing new. See also “Globalism”.

2) All of “the private and public individuals and groups that transferred wealth and technology to ‘Communist Revolutionaries’ can trace immediately back to the City of London & International Banking House[s]... [A main] base where the international crime syndicate operates from is a state called ‘Israel’ [est. 1949]-- which is currently laughing at the United States, as it prepares to return to ‘business as usual,’ with building up [Communist] China [est. 1949] and [husking, if not] destroying the United States, turning it into a welfare state” (O’Connell, 2020e, mn.15-16); of the (see also) “Bankmoney regime”, “Great Extinction, 6th”, “Inequality”, “Conditioning”, “Google” [.predictive analytics].

3) “” ().

4) In actuality, however, the real/new Land Bridge has already moved on; a.k.a. the Belt & Road Initiative (BRI, or “New Silk Road”), it has been [officially, since 2013] economically integrating (nothing less than) most of the Eurasian powers, including of course ‘Russia/Israel’,¹⁵⁴⁷ China, and even Germany...

4b) ...with China (i.e. China/Germany [since no later than 2012] at the fulcrum, because:

1] “Israel” (although initially bankrolled by The City-Rothschilds) and Soviets-Commies-Russia have always been one-and-the-same thing [the “Bankmoney regime”’s primary “controlled Op.”];

2] the ‘US’ (hostage to BMR regime?++) has been actively ‘making [so many] enemies’ of: (in addit. to Ru. [& Ge.]) Iran, Iraq, Egypt, Libya, Syria, Yemen [and also, arguably] Arabs-in-general & the Eurozone-in-general... that the ‘1 Belt’ can [& does] officially reach all the way to Germany-Netherlands. See also “Russiagate”, “Bankmoney regime”.

3] China, as the biggest trader-economy in the world, is, ostensibly, at the diplomatic head of it... along with Ru. mil., Isr. spy-tech, and Ge. [REAL] productivity & [‘FAKE’] BMR-insider status (since the 90’s). See also “German (industrial) banking”, “China”.

= Goodbye “Super Imperialism”, ‘I hope you can remember those JKF speeches, a half-century ago or whenever it was!’. See also “Reserve currency”, → “Dutch Disease”; “Statism”.

See also “Super Imperialism”, → “Intelligence Community” [I.I.C.]; “G2” [vis-a-vis] “Angry Birds”.

5) What’s bigger than “the Land Bridge”? See also “Usury cycles”, “Cycles”, “Reform, 101”.

See also “United States, the”, “Capitalisms”, “City (of London), the”, “Accounting, double-entry”.

¹⁵⁴⁶ Whether today’s “Lachine Rapids” were so-‘named’ in 1535 (as was “Mount Royal”/Montreal), or perhaps sometime after, is not entirely clear from historical records. But everyone agrees that, like Columbus & India, Cartier was certain that he had found somewhere in northern China or whereabouts. (The French, however, had subsequently given up on that theory by no later than the early 1540’s [a.k.a. the oldest-known maps of Quebec]). The Iroquoian name for their settlement at the river’s bottleneck was probably “osheaga” (simply “big rapids”, which could easily be altered to “Lachine Rapids”). And Cartier was stopped cold for some time by the bottleneck, and also met with the local Iroquois, prior to ascending Mt. Royal (& christening it, with the name that has stuck).

¹⁵⁴⁷ See O’Connell, 2020b, mn.7-8; mn.21 (<https://www.brighteon.com/4e38e243-39f9-41c2-9d7f-5c952e05dd58>).

[See also “Neoconservatives”, “G2”, “I.I.C.”]

Land rent- see “Unearned income (rent)”.

Landesbanken & Sparkassen - “In Germany, about half the total assets of the banking system are in the public sector, while another substantial chunk is in cooperative savings banks. Germany’s strong public banking system includes 11 regional public banks (*Landesbanken*) and thousands of municipally owned savings banks (*Sparkassen*)¹⁵⁴⁸. After the Second World War, it was the publicly owned Landesbanks that helped family-run provincial companies get a foothold in world markets...[because] Landesbanks... [specialize] in loans to the *Mittelstand*, the small-to-medium size businesses that drive the country’s export engine. Because of the Landesbanks, small firms in Germany have as much access to capital as large firms” (Brown, 2012). See also “Public Banking (idea)”, “German (industrial) Banking”.

Landlord- “The original term for administrators of land set aside from the rest of the community. After the *Norman invasion* of Britain in 1066...[nobles] were called *lords* and [were] assigned the realm’s land, to administer as their source of *groundrent*, in exchange for military & fiscal obligations to the palace. The term ‘landlord’ now refers to real estate proprietors in general, of whom Adam Smith said of their economic rent: ‘Landlords love to reap where they have not sown’” (Hudson, 2015b). See also “Aristocracy (& nobility)”, “F.I.R.E. sector”, “Violence”, “Georgism (& Land Value Tax)”.

Language- see “Culture”, “Imperialism, English (language)”, “Lexicon Test”.

LaRouche, Lyndon (1922-2019)- (i.e. ‘American Schillerism’ and/or ‘attitude inoculation’?¹⁵⁴⁹)

1) Lyndon Johnson’s Attorney General Ramsey Clark described the US government’s (late 1980’s) case against independent political activist Lyndon LaRouche as “being, in all of his experience, the most meticulous process of planning to get somebody that he had ever seen.... [It] began with a British government demand for LaRouche’s head in 1982...[but] We didn’t know that until long after the appeals in the case had actually taken place. We suspected it, most certainly. And then it was orchestrated through the George H.W. Bush administration... as Roger [Stone] speculates, there was open hostility...as... Bush held [that] LaRouche’s intervention in [the] New Hampshire [primary in 1980] played a significant role in Ronald Reagan [defeating Bush there,¹⁵⁵⁰ and] assuming the presidency. And George H.W.

¹⁵⁴⁸ *Sparkassen* “are basically separate trusts, and there’s an arm’s length relationship... [not ownership] by local authorities, although most of the funding comes from local authorities... [And] loan officers... can’t make the decision on their own” (Werner, 2018, mn.49). *Sparkassen*, as of 2019, accounted for 1/3rd of the German banking market (source: Monetative).

¹⁵⁴⁹ In 1984, LaRouche filed a [unsuccessful] libel suit against the A.D.L. and NBC television’s *First Camera* series, after the show broadcast (in March) rumors of an alleged LaRouche organization “scheme to assassinate Jimmy Carter [in 1977] by remote-controlled radio bomb... [Several days after the NBC broadcast]... White House spokesman Larry Speaks, responding to a question about LaRouche... [saying] that the Administration’s policy is to talk to ‘any American citizen’ who might have ‘helpful’ information” (King & Radosh, 1984, 16). The suit was rejected after the judge found that NBC did not have to reveal its anonymous sources for the allegation.

¹⁵⁵⁰ After LaRouche had a discussion with Reagan “at one of the [early] primary events... [w]e played a leading role... in that fight...[putting] out a leaflet for mass-circulation entitled ‘If You Like Cater, You’ll Love Bush’, and this had a devastating effect... [And]

Bush was not someone who could forgive...that... [as] Seymour Hersh has documented” (Boyd, 2020, mn.52-53).

2) Well-known in Washington for a half-century (c.1970-2020), the oddly-named movement peaked in terms of ‘insider’ influence in the early 1980’s and Ronald Reagan’s first term. “As soon as...Reagan took office, LaRouche’s [economic nationalist] well-educated, articulate followers fanned out to various executive departments and to the offices of leading Republican Congressional figures... [obtaining] direct access to many high-level persons.... [Even] [g]overnment scientists, in some instances, have found the support of LaRouche front groups for fusion energy and star wars weaponry to be helpful in making...[the] subjects known to a wide audience” (King & Radosh, 1984, 15-16).

3) The “CIA has confirmed that LaRouche himself... [visited] the inner sanctum of Langley. According to Bobby Ray Inman, CIA deputy director...[1981-82], his office received a ‘flow of materials’ from the LaRouchians, and he met once with Lyndon and Helga.... [And LaRouche’s] electoral...group, the National Democratic Policy Committee, which operates within the Democratic Party.... [was] an impressive electoral machine... [especially] in grass-roots elections... In 1983 it fielded over 600 candidates... [and then, in] 1984... over 2000 candidates in at least 30 states, most of them qualifying for the ballot with no trouble” (King & Radosh, 1984, 23). See also “Trump, Donald”, “Opposition, controlled”.

4) The year of near-misses. In 1984, in an Ohio congressional primary, the “N.D.P.C. candidate... achieved 47% of the vote... In Oregon, the N.D.P.C...[in the Dem. senate primary] gained 24%”; and in Pennsylvania, 12 congressional seats were contested, with one LaRouche candidate attaining 46% of the vote, and in California’s 45th district primary, another won “49%”; LaRouche’s “total spending...[on] his political and apparatus in 1984 may top \$15 million” (King & Radosh, 24).

4b) ...topped-off with LaRouche’s 30 minute prime-time “paid political broadcast on...CBS... on Oct. 23 ...[in which he announced that Reagan’s Democratic Party opponent]: “Walter F. Mondale is an agent of influence of the Soviet secret intelligence services... [in what he claimed was] a matter of plain, straightforward, documented fact” (King & Radosh, 1984, 25). See also “Russiagate”, “Attitude Inoculation”. See also “Central Intelligence Agency (CIA)”, “Jones, Alex”.

Latin America- Honestly, the “Spaniards have been in all ages famous for their honesty. Justin mentions their fidelity in keeping whatever was entrusted to their care; they have frequently suffered death rather than reveal a secret.... All the nations that trade at Cadiz trust their fortunes to the Spaniards, and have never repented it. But this admirable quality, joined to their indolence forms a mixture.... Laziness is the effect of pride... The pride of a Spaniard leads him to decline labor; the vanity of a Frenchman to work better than others. All lazy nations are grave; for those who do not labor regard themselves as the sovereigns of those who do” (Montesquieu, 1748, 297-296).

The “greatest bane of Latin American life... is the self-indulgence of the rich that allows them to waste their large incomes in luxury and extravagances without any feeling of obligation to improve (or even utilize fully) the resources they control... [T]he disastrous ideological patterns that lie behind this attitude...[were] man606pprox.in the fact that approx.] two-thirds of Latin Americans...[were, as late as the 1960’s] illiterate, and those who may be classified as literate have very inadequate schooling.”¹⁵⁵¹ - Carroll Quigley (1966, 1110-1111).

1) Mexico (and much of Central America) “had always experienced a great deal of resource inequality, going back to the Aztec period. In the 16th century, Spanish conquerors received huge grants of land and forced labor.¹⁵⁵² The war of independence from 1810 to 1821 merely replaced rich peninsulares with

when [President] Reagan came in, he was [originally] committed to the idea of avoiding war... ‘Peace Through Strength’” (Schlanger, 2020, mn.124).

¹⁵⁵¹ In 1960-61 “only 38% of the population had finished 2 years of school, while only 7% had finished primary school, and one out of a hundred had attended a university.... [and] infant mortality varied between 20 and 35% in [the] different countries.... [I]n some areas, such as northeast Brazil, men are worn out from malnutrition and disease at age 30” (Quigley, 1111).

¹⁵⁵² In addition to the imperial encomenderos and religious taxes, a “*commercial repartimiento*...[system extracted] wealth from the Indians ... [from] the late 16th century...continually (increasing) in importance until, by the middle of the 18th...it...had become the most important mechanism for extracting a surplus from the Maya... [It] was a system of business transactions...[wherein] Spanish government officials...

Creole and Mestizo elites, and [the] *concentration* of landownership kept growing in the later stages of the 19th century” (Scheidel, 2017, 241).

2) Part of this is due to a (16th century-derived) “cultural taboo...[against] commercial accounting”; the (Latin-wide intellectual vanguard) “Jesuits¹⁵⁵³ were famous [even in China, by the 17thc] for teaching applied geometry, navigation, astronomy [a.k.a. the (now world-dominant) solar calendar], and even military engineering, yet their official curriculum did **not include accounting**. They would become the teachers of kings, but kings could do *no reckoning* on their own kingdoms.... Noblemen fought [i.e. 1st Estate], prayed [i.e. 2nd Estate], lived in luxury, and even administered. But they...[were] not [to] count money”¹⁵⁵⁴ (Soll, 204, 57-58). See also “Estates, 3”, App.C: “1-2-3”, “Primogeniture”.

3) “Napoleon’s invasion of Spain in 1808...terminated Madrid’s effective control of the Spanish empire. Provisional *juntas*, established by Spain’s ruling classes, claimed jurisdiction over Spanish America, but by 1812 their New World influence was purely nominal. Freed of Spanish commercial [mercantilist] restrictions, the now-independent regions of Latin America opened their commerce to the world. Yankee shippers entered South American ports in large numbers. When war broke out again after 1814 between Spain and the rebellious colonies, struggling South America looked to the United States for economic, moral, and military support. Strong pressure arose for American guardianship of Latin American ‘independence’. [House speaker] Henry Clay¹⁵⁵⁵, in particular, denounced the American government for neglecting the cause of liberty. But [presidents] Monroe and Adams [in the 1820’s] would not be stampeded... [by] the preference of the people of the United States”, as then-represented in Congress, recognizing that the forces of Spanish imperialist politics were still more organized & salient at that time than anything emanating from “the people of Latin America” (Graebner, Fite, & White, 1975, 228-229). See also *Burn!* (1969); “Spain”, “Banking School” [‘Liberalization’], “City (of London), the”.

usually an *alcalde mayor* (high magistrate), a *corredidor* (magistrate), or a governor would either sell [or buy] goods to [or from] the Indians at prices favorable.... [The] most important form of repartimiento...consisted of...payment in advance... at low prices, for goods that the Indians produced. Most commonly, the...[official] would loan money to the Maya so that they could pay their tribute, and then [the official] would collect the debt in cotton or woolen textiles [cloth], raw cotton or wool, wheat, cacao, or wax...then resell the goods at market prices, which were much higher than the value of the credit given to the Indians... (allowing) the magistrate to make a “large profit.... [N]ew economic activities that might have been disruptive, such as silver mining, did not have to be introduced” (Patch, , 8). “for most of the colonial period...this system... was [actually] illegal.... The [commercial] repartimiento existed and survived numerous edicts against it because it enabled the poorly paid colonial magistrates to earn extra income and thus was an unofficial encouragement to take up an office with a low salary... tolerated...for it permitted the government to... keep administrative costs down... [while allowing] and even (encouraging) the Maya to continue what they had been doing for millennia” (Patch, 9).

See also “Public Banking (idea)”, “Primogeniture”.

¹⁵⁵³ If one ever wondered how it was that the Society of Jesus-- which was actually founded by Spaniards (1 Basque and 6 Catalans)-- wound up being so much more associated with the Kingdom of France, please see Quigley, 1966, 1119-1122 [‘Pakistani-Peruvian axis’]. Prof. Quigley, a lifelong Irish Catholic, (it may not need to be pointed out) was writing from his position at the premier Jesuit university in the western hemisphere [and also, according to some, seat of the Washington, D.C. intellectual establishment]. http://www.carrollquigley.net/biography/American_Historical_Review-Quigley_Obituary.htm

¹⁵⁵⁴ The (so-called) ‘modern’ philosopher ‘alternative’ to such medieval primitivism, Jean-Jacques Rousseau (1712-78), should also share some of the blame for the ongoing French & Latin refusals to seriously contemplate “money” and its role in society in their ‘political’ reforms, for he generally set the tone of ‘modern’ ‘romantics’ not knowing anything about (the structure or architecture of) money systems. It should be noted that Rousseau’s predecessor, Montesquieu, corresponded with Hume concerning the nature of money; and also that he reserved particular opprobrium for France’s less-liberal rival: “Never should I have finished, were I to recount all the good they [Spain] might have done [in Mexico], and all the mischief they committed” instead (Montesquieu, 1748, 137). See also “Spain” [Del Mar], “Philosophy, national”, “Hegelian”; and “Religion” [for the Spanish language-- even today-- still has one word (*moneda*) to designate *both* abstract public “currency” and (physical/countable) “coinage”].

¹⁵⁵⁵ Henry Clay, by then a fm. Senator, was Speaker from 1811-20, and then 1823-25 (prior to being Pres. J.Q. Adams’ Secretary of State), appears to have switched from anti-Bank to (being henceforth) pro-Bank sometime during the War of 1812.

4) Economic concentration grew particularly acute during Gen. Porfiriato Díaz's era of military dictatorship ("the Porfiriato"¹⁵⁵⁶). After his military coup of 1876 had removed the preceding "liberal-nationalist"¹⁵⁵⁷ regime of Benito Juárez & Sebastian Lerdo, the "wealthy colluded with the state to acquire more land... from... commercialization... [The resultant disparities] on the eve of the [1910] revolution were... quite extreme... 6000 estates, controlled by 1000 families and corporations, comprised more than half of all land in a country of 16 million, 2/3rds of whom worked in the agricultural sector... almost or completely landless, half... [were] smallholders who had precarious rights to land and the other half [was] employed on large estates where they owed heavy rents... Debts tied peons to the land. In the central state of Mexico, only 0.5% of household heads owned property... [E]conomic wealth and political power were concentrated within a tiny ruling class" (Scheidel, 241). The Revolution "began as a struggle among competing elite factions, and did not originally... [have] plans for land reform [yet alone monetary reform. This prompted]... the mobilization of rural [armed] forces that pursued their own [land] redistributive agenda" (Scheidel, 241-42). See also "Dynastic cycle, the". Local "violence rather than top-down legislation was the [Revolution's] key driver of redistribution... [and] proceeded only slowly in the 1920's.... Up to 1933, less than 1% of all land was reallocated per year, and less than a quarter of that land was actual cropland.... [But] the rate of redistribution increased under the more radical [Great Depression]"¹⁵⁵⁸

¹⁵⁵⁶ Mexico's original 'period of relative prosperity and peace' (over the last quarter of the 19th century, to the Revolution of 1910) is known as "*the Porfiriato*". During this period infrastructure improved greatly (f.e., linking Mexico City to the northern border), mostly due to increased foreign investment. Viewed "dialectically, the Porfirian formula of a military dictatorship, recruited from the liberal army, backed by foreign [much of it US] investment and Positivist intellectuals, was the direct outcome of both the popular strength and the [underlying] intellectual weakness of Mexican liberalism [a.k.a. 'liberal nationalism']" (Brading, 1985, 98); as had been represented by the ousted Juárez-Lerdo regime of 1858-76. The Porfiriato was also characterized by rising social inequality and discontentment among the working classes. Indicative of Díaz's social policies was the fact that he was of mixed indigenous Mixtec ancestry, yet was known to dye his dark skin lighter.¹⁵⁵⁷ (As [somewhat more hazy] knowledge of the 'Magi Cards' in the latter 19thc [see Richmond, 1893] preceded [the more exact] knowledge of 'Human Design' in the late 20thc & millennial era [see Parkyn, 2009]), The Porfiriano-era reaction, though often disguised as such, was anything but 'nationalist'. The Díaz era was, obviously, a globalist (international trade) administration, characterized also by significant and growing *state*-based regionalism, in accordance with the neo-imperial trends of [yes, it's still top secret] the British & American banks/Intelligence network's then-relatively-new basic fashion calendar: alternating (increasingly vivid) eras of preponderant Globalism [latter 20thc & Millennial era; latter 19thc & Fin de Siecle era] with eras of preponderant Nationalism [the middle quarters of the 20thc; the 1st half of the 19thc; see also "Trump, Donald"]. See also "Debt cycles", "Cultural Calendar". Historians R. Buffington and W. French characterized The Porfiriato's (then-new) "Culture of Modernity": manufacturers linked their "products to nationalism, progress, and modernity. The illusion of a... consumer paradise was yet another aspect of modernity in which all could participate as long as they had the money" (Buffington & French, 425). "The penny press consistently asserted the respectability of the working class... [and] to a large extent, workers constructed their view of the world and of themselves in response to the disparaging view of the gente decente.... [N]ot-so-modern Mexicans... the great majority, continued to gather in pulquerias (one author has estimated that there was 1 alcohol outlet for every 149 inhabitants in the federal district), billiard halls, brothels, and similar establishments, where... they continued to set their own rules and mores... Other popular entertainments included various genres of theater, circuses, and puppet shows, where, as in traditional popular celebrations such as Judas burnings... laughter, language games, and carnivalesque inversions of social and sexual roles teased out official values for inspection and provided a means to deflate the pretentious airs of the gente decente.... That becoming modern also seemed to require a stronger dose of traditional gender roles... was only one of the many contradictions... another was that the famed Porfirian public administration... was actually driven by the politics of clientage and the camarillas, the dirty secret behind Porfirian order and progress... [T]he old oligarchy in Mexico was strengthened rather than weakened... its goal being, as one observer has aptly put it, to become 'as modern as possible while remaining as traditional as ever'. For this group, modernity clearly meant maximizing its own interests and portraying them as identical to those of the nation... [A]lthough Porfirian publicists could point proudly to railroads, docks, modern city spaces, and the beginnings of industry, much of this growth was premised on foreign investment and the external control that implied. Other contradictions abounded: while the rich got richer, the poor got poorer... [and] while industries produced new consumer goods, wages remained so low and the cost of food so high that few could afford to purchase it, thus limiting the industrialization process... 'Order and Progress' [was] the defining cliché of the Porfirian regime... [meant, effectively, to] preserve old privileges, hierarchies, and values, while hoping to mold citizens and suitably motivated workers around new notions of time, space, abstract knowledge, and the nation-state... [deeply contradictory] tasks... [which] left the regime open to harsh criticism... By 1910, for most Mexicans the honeymoon with the Porfirian version of modernity was over, it had ever begun at all" (Buffington & French, 2000, 429-32). See also "National Identity/Nationalism", "Debt cycles".

¹⁵⁵⁸ Up until the 1930's depression (and advent of the US Roosevelt administration), "fear of political intervention [had] prevented more sweeping seizure of large estates" (Scheidel, 2017, 242). The US had recently invaded northern Mexico in 1916, in a failed search for (the Mexican Revolutionary general and fmr. governor of Chihuahua state) Pancho Villa. As would be the case with subsequent rouge revolutionaries, Villa had been originally supported by the US. Earlier in the decade, "Villa's increasing dependence on arms from the US made it more and more imperative for him to gain American recognition and thus not to antagonize the Americans by radical social changes [such as land grabs]. The financial backing of American companies allowed him to print large amounts of *paper money* whose values depended

government of Lazaro Cardenas, who also nationalized the oil industry...40% of arable land was expropriated between 1934 and 1940... [due to] peasant mobilization[s] on the ground... [B]y 1940, half of all arable land had been covered by land reform, and half of the rural poor had benefited...[And by 1950] the share of landowners had increased to more than half...the population, up from 3% in 1910", and with further increases up until c.1968. "Similar developments can be observed in 1950's Bolivia" (Scheidel, 242-43). See also "Debt cycles", "Chile", "Georgism (& Land value tax)".

5) At recently as 1901 at least, it was noted (by P.C. Kauffman of the Washington Bankers Association) that 90% "of the total banking business between the United States and the Orient, and [the] South American countries, is [still] done through *London* bankers...[with an] average commission of...[of] 0.75%...made by these London houses with scarcely a penny of expenditure.... [citing Conant] almost all our trade with Latin America is settled by bills' of exchange on London" (Kauffman, 1901, 142-43); which didn't change much until Europe started destroying itself in WW1. "" (Eichengreen, 2019,). See also "London (City of), the".

6) Then there was another "globalization" era. "I know that, historically, we have tried for...[decades] to make sure that the Mexican peso is worth no damn more than 5 cents! Why? Why would we [UK-USA p.t.b.] take that attitude? We even set up-- when the peso failed [in the winter of 1994-95, a program of 'loan guarantees']... to do what? To try to redeem the Mexican peso-- well supposedly... How come it's still at a nickel? Because we want it that way¹⁵⁵⁹... the international banking interests wanted that rate. That's our...[US monetary system], folks-- people using our money to accomplish their ends, with our silent [ignorant] consent..." (Cook, 2019d, mn.46-47). See also "Debt cycles", "UKUSA Agreement".

7) From 2002-11, 'debt-repudiating' Argentina "chalked up the fastest growth in the Western hemisphere (94% in nine years), reduced poverty and extreme poverty by 2/3rds, and reduced inequality by half, with a thriving productive economy... The rest of Latin America has similarly...[been awakening from the foreign/banks' imperialism]. Brazil...Bolivia, Ecuador, Peru, Uruguay, Paraguay and...Columbia... [and] Cuba, [along with the microstates of] Dominica, Antigua & Barbuda, [and] Saint Vincent & the Grenadines. Honduras's elected government... [also] joined the [continent-wide] turn away from transnational... [usury]-- that is, until the [traditional] US-supported military coup and death squads returned the country to...[a reenactment of its] past.... " (McMurtry, 2013b). See also "Imperialism, 'modern'", "Free trade", "Eras of (monetary) History" [Axial Age].

7b) Although Venezuelan GDP has nose-dived since 2013; the Chavez governments (1999-2012) "used Venezuela's national oil wealth, formerly predated by transnational corporate oil corporations, to multiply investment in health, education, housing, food and equality ([reaching] the lowest inequality index in Latin America), reduced poverty rates by more than half...cut extreme poverty by over 70%, [and] instituted 100,000 worker co-operatives...[while pioneering] cooperative international trade and financing across the continent" (McMurtry, 2013b). See also "Inequality".

more and more on the attitude of these companies... [making] him extremely vulnerable to any loss of confidence of American financial interests. On the other hand...[such American corporate support] gave him the necessary means to transform his army... [thus making] it less imperative for him to carry out immediate social reforms. The result of all these factors... spelled Villa's defeat by making him [first] lose the support of the peasantry... Woodrow Wilson's policies of aligning himself with the revolutionaries had in fact achieved far-reaching results" (Katz, 1981, 575). German conspiracy theories aside, perhaps the most prevalent explanation for Villa's attack on the border village of Columbus, New Mexico has been the "suspicion" that Villa was "harboring an almost pathological hatred of the United States after the Wilson administration had...[double-crossed] him for his initial support of US aims and [for] his refusal to interfere with US business interests by aiding his rivals.... [According to Friedrich Katz, however, the] documentary evidence suggests that Villa was neither as irrational nor as irresponsible as is commonly suggested. The reasons and circumstances usually adduced to explain his decision to attack Columbus were at best secondary in importance. The primary motivation was Villa's firm belief that Woodrow Wilson had concluded an agreement with [principle Revolutionary leader, and soon-to-be president Venustiano] Carranza that would virtually convert Mexico into a US protectorate. Although such an agreement never existed, Villa had reasonable grounds for supposing that it did... [Thus] his actions can no longer be construed as the blind revenge of an unprincipled bandit. They must be viewed as a calculated effort" (Katz, 1978, 102).

¹⁵⁵⁹ The Crisis was from the Mexico borrowing in US "dollars, because the (New York) banks said...'Trust us...[you'll] have a lower interest rate than if you borrow in Pesos. The [dollar] loan is cheaper for you'. This was a trick!... [And when] they're export earnings couldn't service the loans, and...Mexico had to [face] default... [then US so-called] 'Brady Bonds'...amounted to a write-down of the Mexican debt... [to] maybe half [its] value..." (Roberts, 2020, mn.21).

8) Less “income inequality in [many parts of] Latin America in the early 2000’s might be...[a] promising candidate for [further] nonviolent equalization, [but] this trend has remained relatively modest in scope, and its sustainability is uncertain” (Scheidel, 2017, 8).

8b) This is primarily because-- some 2-3 centuries after the Church-dominant and Rousseau-revolutions era-- the age-old ‘cultural taboo’ against examining commercial accounting or *moneda* very seriously persists. “[I]n the Spanish-speaking world [apart from Spain itself], the project of monetary reform is little-known. Unlike other parts of the world... Latin America...[doesn’t] have those organizations. Our general comprehension of the topic...[is] stuck in [the] pre-2008 era-- we all know that there is something very wrong in the financial system [and its ‘cartels’], but nobody can tell exactly what it is...yet alone proposing a realistic solution” (Suaste, 2020, mn.5-6). In, f.e., Mexico, “neither the left-wing nor right-wing politicians are aware of the importance of this topic”¹⁵⁶⁰ (Suaste, mn.15). See also “Deceptive Banking Terms (d.b.t.’s)”, “Economics”, “Academia”, “Spain” (‘doesn’t have those words’).

See also “Chile”, “Democracy”, “Modern Monetary Theory’ (MMT)”, “Reform, false”.

Laundering, money- see “Money laundering”, “Flags of Convenience”.

Law- (one of those things better left to ‘the [proactive] ants’ than to ‘the [reactive] grasshoppers’) Is money, in fact, central to economics? If “so”¹⁵⁶¹ [then] it stands to reason that the law of money *should* be central to law and macroeconomics” (Ricks, 2020, 67); instead of in the boondocks. See also “Capital”, “Tools”, “Academia”, “Oligarchy”, “English constitution, the”; Titus (2017).

Lawful money- (the *Federal Reserve Act*’s adaptation¹⁵⁶² of [what was hitherto known as] ‘legal tender for all purposes’, in order to also include ‘lawful money reserves’ [RAB]; prior synonyms. ‘demand notes’, ‘old demand notes’, ‘US notes’, ‘Greenbacks’).

“In the USA, due to its special monetary history, there is a peculiar distinction between *legal tender* [a.k.a. Federal Reserve-issued ‘base money’ (cash + RAB)] and *lawful money* [a.k.a. US “Treasury or Congress-issued coins or notes”]... Neither includes [TAB-] bankmoney” (Huber, 2017, 39, n.8).

1) Not everyone agreed with the move. “Our medium of Exchange for the future. Shall it be legal tender, *lawful money* issued by the government, and administered without private profit, as a public utility; or shall it be, as at present intended, and administered, *bank ledger* [TAB] *credits*, wholly controlled by the bankers as to amount of credit, and rate of interest charged...” (Loucks, 1916, 5). See also “Credit money”, “Legal ‘money’”.

2) Seventeen years later, in 1933, congress amended the *Federal Reserve Act*, so that all US-marked coins and currency (including Federal Reserve notes), regardless of when issued, constituted ‘legal tender’ for all purposes.... *Milam v. U.S.*, 524 F.2d 629 (9th Cir. 1974), was “typical” of most subsequent court challenges: the US Court of Appeals “for the 9th Circuit reviewed a [typical] judgment denying relief to an individual who sought to redeem a \$50 Federal Reserve Bank Note in ‘*lawful money*’. The United States tendered Milam \$50 in Federal Reserve notes, but Milam refused the notes, asserting that ‘*lawful money*’ must be gold or silver.”¹⁵⁶³ The 9th Circuit, noting that this matter had been put to rest by

¹⁵⁶⁰ Banks were “smaller” and Mexican-owned before the 1982 Crisis, “nationalized” for a half-decade or so, until c.1990, and then pretty much sold-off, particularly to “foreign banks” from the mid-90’s (Suaste, mn.27-28). Among Mexico’s big banks c.2020, there’s “only 1” US bank subsidiary (Banamex [as of 2001]). “Most of our banks are...Spanish firms.... Most of our banks were acquired by their banks” in the 1990’s ‘neoliberal’ era (Suaste, 2020, mn.21-23). HSBC (22k employees) and [to a lesser extent] Deutsche Bank (500 employees) are also significant. See also “Bank welfare” [Ordonez].

¹⁵⁶¹ This is not a joke or misprint. See “Neoclassical Economics”, “Economics” (on ‘money, banks, and debt’ not existing in academic modeling), hence the [increasingly] lawless (or lacking *jurisprudence*) state of money, finance, and economic reality today. See also

¹⁵⁶² *Legal tender* and *lawful money* in the US are not synonymous terms. The former (older term, from the 18th-19th centuries) denotes public transactions in cash (i.e. physical US treasury notes or coins). The more recent, latter term (as adapted from the *Federal Reserve Act*), also includes ‘lawful money reserves’ [RAB].

¹⁵⁶³ The US government has not ‘redeemed’ bills or notes in gold since January 30, 1934, when “Congress amended Section 16 of the *Federal Reserve Act* to read: ‘The said (Federal Reserve) notes shall be obligations of the United States.... They shall be redeemed in *lawful*

the...Supreme Court nearly a century before in the Legal Tender Cases (*Juilliard v. Greenman*), 110 U.S. 421 (1884), rejected this assertion as frivolous...” (Federal Reserve Board, 2011).
See also “Legal tender”, “Cash”.

Learned ignorance- 1) “A term coined by the medieval philosopher Erasmus [1466-1536] to describe unworldly or gullible book-knowledge. Moliere elaborated the idea in *Les Femmes savantes*: ‘A learned fool is more foolish than an ignorant one’. Thorstein Veblen called this phenomenon *educated incompetence*, the quality of being trained not to recognize the important causal factors at work... [E]conomics show[s] that observers can be *trained to overlook* what colloquially is called the elephant in the room– in this case, financial and property relations. (See *Nobel Prize*)” (Hudson, 2015b). See also “Groupthink”, “Academia”, “Veblen, Thorstein (1857-1929)”.

2) Is much of ‘modern’ “hard” science itself (not just the [more famously] fundamentally-flawed ‘social sciences’¹⁵⁶⁴) structured on a number of (rather) questionable assumptions? For more on the Uncertainty Principle & Observer Effect... See also “Scientific Management/Hawthorne Effect”.

Left brain, Right brain- (formal: lateralization; sometimes a.k.a. the new, and the old)¹⁵⁶⁵

1) Actual monetary reform (as opposed to political cheerleading for it) tends to be *Left Brain* kind of work. After all, at the end of the day ‘money’ is just [supposedly legally-defined] numbers and their [supposedly open-accountable] accounting protocol. (Are the definitions honest & consistent or not? Is the accounting clear & consistent or not?) See also “Federal Reserve audit”, “Money”.

2) But ‘money’ is also, by nature, a public measure, and hence inherently a matter of public debate (in any honest, straightforward society [see “Industrial Revolution, 2nd”, “Fin de Siecle”])...And most politician ‘types’ (whom we supposedly rely upon for all salient public business) tend to be more *Right-Brain*-broader, yet artistic and mushy, prone to flip-flops. See also “Politics”.

3) Can the 2 ever be reconciled¹⁵⁶⁶-- Left & Right, narrow & broad, numerical clarity & artistic justice, technical competency & mass public support? “The Right side of the brain comes up with the best [inclusive] *questions*, but the Left side of the brain comes up with the best [incisive] *answers* to those questions-- [that is] if it ever *gets* the questions” (Sullivan, 2019c).

See also “Monetary reformers”, , “Reform, 101”.

Legal “money”- (synon. currency; i.e. clearly, formally & publicly-defined measurement of value)

money [i.e. more federal reserve notes] on demand at the Treasury Department... or at any Federal Reserve bank’. Federal Reserve notes have not been redeemable in silver since the 1960s” (Federal Reserve Board, 2013).

¹⁵⁶⁴ The 20thc full divorce of macro Economics & Political Science (formerly united in “Political Economy”) left both [academic] fields hopelessly narrow, *as if* ‘the only picture [that mattered]’ was EITHER 100% yin/female (economics) OR 100% yang/male (political science), and ‘never the twain shall meet’. Sociology, in turn, is crippled by its failure to (even hardly acknowledge, yet alone seriously) consider nationality & national identity (the ‘elephant in the living room’ of “social identity” [See White & White, 2008]). History (publishing; like “monetary economics”) is controlled by a tiny (if not also State-controlled) guild, who circumscribe what should be the most open & inclusively discussed subject (because it is [supposedly] what matters most & is to be passed along to successive generations; see also “Groupthink”). Psychology, which has perhaps the best reputation of any of ‘the social sciences’ (or has at least been the most expansive), is also blind to a certain ‘800-pound gorilla’ factor-- as it has yet to even acknowledge the soul. See also “Human beings”, “Design, human”, “Academia”.

¹⁵⁶⁵ Lateralization-- at least in terms of right-handedness/LB dominance-- has increased with civilizational forces and the prevalence of writing and verbal articulation. Left-handedness/RB dominance or ‘ambidexterity’ and is often more prevalent in those with high musical and/or mathematical abilities, and slightly more common in males (11% to 9%); despite men typically having less corpus callosum connectivity between the 2 hemispheres; particularly if “consistent right-handers” (Tanaka-Arakawa, et al, 2015). Meta data twin studies have found that (only) 24% of handedness is attributable to “genetic effects” (Medland, et al, 2009).

¹⁵⁶⁶ The rift between the 2 hemispheres is typically more pronounced in males, both from life-long greater permeability of the *blood-brain barrier* (which worsens, for both sexes, with age) and also, moreover, from having less *midsagittal Corpus Callosum* pathways. Girls & women have [from at least mid-childhood] always had more extensively-interconnected cerebral hemispheres (and that ‘refinement gap’ between the genders is more likely to increase, rather than decrease, with aging). Rates of growth in the aggregate CC start “to flatten out at around 192 months (16 years) for females and 204 months (-17 years-) for males. This deceleration of [CC] growth [often noted in 2nd-language learning] might correspond to the age at which the myelination process tends to subside” (Tanaka-Arakawa, et al, 2015). See also “Women”.

- 1) Is politics the real (de facto) governance system today, or is money (those who control it) controlling politics more than politics is controlling money? See also “Governance”.
- 2) Where is what everyone has in their bank account defined in the U.S. Code? It isn't. Is this because there was too much controversy over the issue, throughout the 19th century, and actually reaching back to Philadelphia and the 1780's? See also “Money” [currency].
- 3) If it is not (at all clear) in the U.S. Code, then what about the US constitution? It has long been pointed out that the basic law's national monetary clauses-- Art.1, Sec.8, Cl.2 (the '*borrowing clause*') and Art.1, Sec.8, Cl.5 (the '*coinage clause*')-- are contradictory... as also was monetary policy [the oldest flim-flam in the world] at the time... Hence it should then be up to the Court system to clarify.
- 4) First of all, Hamilton's bankmoney (1:8:2) got into conflicts. Once the concept of “judicial review” was established in *Marbury v. Madison* (1803), the US Supreme Court ruled in *McCulloch v. Maryland* (1819) that the federal law trumped state law, and that Congress would not necessarily be condemned for undertaking actions that it deemed “*necessary and proper*”, under Art.1, Sec.8, Cl.18, to include the establishment of banks [and hence bankmoney].¹⁵⁶⁷ The political drift of *McCulloch* was furthered in *Osborn v. Bank of the United States* (1824), which ruled that Congress and the federal government could legally delegate such monetary and banking practices [only] to *private* institutions, including the emission of bank notes & bills of credit, regardless of governmental ownership of the issuing institution.
- 4b) Seven decades [and one “debt-cycle”] after *Marbury*, a newly prevalent kind of (what was used for) money was being called into question in the US. The “Legal Tender Cases”, cap stoned by *Julliard v. Greenman* (1884), upheld the lawfulness of US Treasury notes (a.k.a. “greenbacks”), as stipulated in the *Legal Tender Act[s]* of 1862-63, hence deciding beyond any reasonable doubt that Washington may “emit bills of credit” (a.k.a. ‘fiat currency’) during either wartime or anytime (i.e. it was no longer just an ‘emergency’ option; see also Madison, 1787, 68). See also “Sovereignty”, “Legal tender” [obsolete].
- 5) So it was pretty much (in terms of the law) anything goes in the ensuing *fin de siecle* era and 20th century, and undeniably so after the *Coinage Act of 1965* decoupled any US money from metallic content,¹⁵⁶⁸ and the US officially stopped pretending to back the dollar with gold, 6 years later, in 1971.¹⁵⁶⁹ See also “Imperialism”, “Globalization”.
- 6) Now in the 21stc, the US (and like-minded economies) finds itself a monetarily libertine society awash in (pretty much all the symptoms¹⁵⁷⁰ of) debt-saturation and middle-class-destroying bifurcation. Is it not time to examine where the roots of such monetary practices and ideas have originated? For US basic law 1:8:5 see “Coinage”, “Legal tender”. For US basic law 1:8:2 see “English constitution, the”, “Banking School/Bank Teachings”. See also “Money” (for U.S. Code), “Debt money”, App.C: “1-2-3”.

Legal tender- (shorthand for [the formal term] ‘US currency & coin’; it mostly arose [& has subsequently declined in significance] with the prevalence of *paper* money currencies, from the mid-18th to mid-20th centuries)

- 1) is what public vendors (at least in theory) *may not refuse*¹⁵⁷¹ as payment for public sales of goods and services, if they have previously advertised the price. Financial experts often pretend that Transaction

¹⁵⁶⁷ This needs to be qualified. Justice Marshall actually refrained from making “arguments to sustain the 2nd Bank [of the US] under the Commerce Clause, or any other...enumerated power, thus avoiding the need to construe any enumerated power broadly. He also...[simply refused to comment on] the argument that the national government had an implied power to impose a uniform national currency and regulate the money supply. In discussing congressional power in *McCulloch*, Marshall [also] assiduously avoided saying anything that would imply support for internal improvements legislation” (Schwartz, 91). It was a judicious, not one-sided, decision, and was “perhaps even more supportive of...[the] view that an implied constitutional power *expired* with the passing of the *emergency*” (Schwartz, 2015, 92).

¹⁵⁶⁸ More specifically, the 1965 *Act* removed silver entirely from silver from US dimes and quarters, while also reducing the silver content of half dollars from 90 to 40%. Silver was not entirely removed from the half dollar until a subsequent 1970 law.

¹⁵⁶⁹ In the Netherlands, the official silver backing of coinage was “until 1984” (Wortmann, 2018b, mn.15).

¹⁵⁷⁰ See also “‘Creney’”.

¹⁵⁷¹ In actuality, however, there is “no federal statute mandating that a private business, a person or an organization must accept currency or coins as payment for goods and/or services” (Treasury, 2011); in spite of the stamp on all FRNs (since the 1963 series) that clearly reads: “*this note is legal tender for all debts, public and private*”. Therefore what might be called *de jure* ‘legal tender’ is mostly just a traditional stamped phrase for government supported paper money; whereas de facto legal tender is when the national/sovereign government accepts a

account (TAB/'deposit') money is legal tender because it is accepted everywhere. But any merchant who is willing to forgo some revenue may refuse to accept checks or debit or credit cards.

2) "We have a legal tender paper money today, and it works because all the prices are quoted in that [one] legal tender. We don't have prices quoted in multiple monies¹⁵⁷² out there" (Grubb, 2013, mn.44).

3) Bankers didn't like Congress issuing its own 'greenback' US notes after the war was won in the 1860's, so they brought up James Madison's comments at the constitutional convention (1787) about not making 'bills of credit' (a.k.a. state-issued paper money) legal tender, leading to 15-16 years of court battles and half a dozen Legal Tender cases.¹⁵⁷³ The matter of government-issued paper money is moot now. In *Juilliard v. Greenman* (1884), the final Legal Tender case, the Supreme Court ruled that not only does Congress have power to issue its own US notes, but that it also has power to make them legal tender, under the 'necessary and proper' clause (Art.1, Sect.8, Cl.18), in times of peace as well as exigencies of war. See also "US (Treasury) Notes".

4) TAB deposits "created by commercial banks...should by no means be confused with [legal tender] currency" (Yamaguchi & Yamaguchi, 2017, 7). They aren't, and never have been (Huber, 2017, 19)¹⁵⁷⁴. Nonetheless, the Internal Revenue Service (itself an institution of quasi-constitutionality) actually only accepted payment in such bank credits (either directly by check, or [since 1999] indirectly by credit card), for decades, prior to adding a small feature for verifying/enabling cash payments in 2016.¹⁵⁷⁵ And in the UK, cash/legal tender payments for taxes are no longer accepted (Werner, 2018, mn.28). Do these recent precedents of rejection (or at least ongoing suppression) of legal tender cash from the government's own revenue office mean that legal tender is now obsolete, a paper relic of the 18th-20th centuries? Legal tender laws pertain to the laws pertain to the payment recipient, not to the payer. Taxpayers everywhere¹⁵⁷⁶ must generally pay with a Transaction account, not with cash, even though cash is legal tender and TAB accounts are not. But the IRS is not a vendor, and thus legal tender laws, ironically, do not apply to the government itself.

5) Since a much greater amount of (TAB) bank 'deposits' exist than do Central Bank Reserves (RAB) and physical cash to cover them, the system will fail (drowning in debt, and/or unstable currency) at sometime. The *Dodd-Frank* law (2010) has already planned for that failure. In a future cashless society planned by the banks, Transaction (TAB) accounts may become defined as legal tender, if bankers are allowed by a gullible public to get the upper hand.

6) Legal tender, however, only applies to some forms/units of currency and only became prominent with the rise of *paper monies* (from multiple and/or dubious sources) in the 18th and 19th centuries. The vast majority of payments today do not involve any form of legal tender,¹⁵⁷⁷ although that could change in a future economy in which there are many forms of digital currencies to choose from.

7) Legal tender Updates: De facto obsolete in the 2020's (countless shops/chains refusing to accept it)

form of physical cash for taxes and other debts owed to the government (regardless of any stamp). Bank of England notes now have the irony of de jure but not de facto "legal tender" status, as they are not accepted by the Revenue & Customs office for taxes.

¹⁵⁷² ...as the British succeeded in imposing on the American economy from the mid-18th to mid-19th centuries.

¹⁵⁷³ According to Supreme Court justice Harold Burton (1945-58), from 1862-69 the Court had not "intimated that it doubted the validity of the [Legal Tender] Act and it had been widely relied upon by the public" prior to Justice Chase's ruling in *Hepburn v. Griswold* (Dec. 1869), which declared the *Legal Tender Act* unconstitutional, "at least [in regards] to debts incurred before its passage" (Burton, 232). After President Grant filled two vacancies on the bench, *Knox v. Lee* (1871) and *Parker v. Davis* (1871) promptly overturned *Griswold*. 13 years later *Juilliard v. Greenman* (1884) reinforced and clarified that the Act applied to private debts as well as public, regardless of peace or war. The cases of *Broderick v. McGraw* (unspecified), *Latham's and Deming's Appeals* (1869), and *Deming's Appeal* (1869) were also supported these judgements on the issue (Burton, 1956, 231).

¹⁵⁷⁴ "[B]ank money, although...[it] is not legal tender...is still [de facto] used that way" (Huber, 2012).

¹⁵⁷⁵ Americans may now arrange to pay federal taxes at select 7-Eleven stores in 34 states, subject to a \$1,000 daily limit and 5 to 7 days processing time (Internal Revenue Service, 2017).

¹⁵⁷⁶ Huber notes that "ever more state agencies, especially the revenue office, demand to be paid in [TAB-] bankmoney and refuse to accept cash. This is not without irony considering that the major financial state authority rejects what is left of the state's [own] sovereign currency" (Huber, 2018).

¹⁵⁷⁷ Hence the legal tender 'issue' is sometimes a red herring to monetary reform (there hasn't been meaningful constitutional case law on the subject since the 19th century).

See also “Cashless Society (War on Cash)”, “Digital Cash/Currency”, “Government, role of”.

Legalism- (hierarchical statism & [the requisite] folderol; not to be confused with [traditionally ‘grassroots’] ‘common law’)

“studying the art of fleecing my neighbors.”- Alexander Hamilton, on his legal training, Nov. 3, 1782

1) typically the most hated¹⁵⁷⁸ of (political) philosophies throughout history, East and [to a lesser extent] West, North and [to a greater extent] South. See also “Culture” [Hofstede dimensions: high/low-context¹⁵⁷⁹], “Dynastic Cycle, the”¹⁵⁸⁰.

1b) “[C]an any good be effected by taking from the states the moral rule of their citizens, and subordinating it to the general authority, or to one of their corporations, which may justify forcing the meaning of words [per Orwell], hurting after possible constructions, and hanging inference on inference, from heaven to earth, like Jacob’s ladder?... [Should it all really] be left to the sophism of Advocates, whose trade it is, to prove that a defendant is a plaintiff, altho’ dragged into court, torto collo; that a power has been given, because it ought to have been given, et alia talia” (Jefferson, 1823). See also “Jacob’s Ladder”, “Common sense”.

1c) Critics and observers of the early USA, such as Hegel and Tocqueville, indeed often commented on its shyster-like “reputation for practicing deceit under the protection of the law” (MacGregor, 2014, 80).

2) Solon “used to say... that laws are like spiderwebs: for if something light and weak falls on them they bear up against it; but under the weight of something larger they break up and are gone” (Diogenes Laertius, 2018, 29-30). And when asked “if the laws he had given to the Athenians were the best, he replied, ‘I have given them the best [that] they were able to bear’-- a fine expression that ought to be perfectly understood by all legislators!” (Montesquieu, 1748, 305). See also “Natural law”, “Lobbyists”.

2b) There “should be a code of laws of a much greater extent for a nation attached to trade & navigation than for people who are content with cultivating the earth. There should be a much greater for the latter than for those who subsist by their flocks & herds” (Montesquieu, 1748, 275). See also “Parity” [for what?]

3) Law is, nonetheless, still the primary; “tool for social ordering and, if used wisely, has the potential to serve a broad range of social objectives... [Y]et ... the law [and its esoteric jargon] has been [during the 2nd half of the 20thc]¹⁵⁸¹ placed firmly in the service of capital” (Pistor, 2019). See also “Orwell, George”.

4) Hence like weeds, it is both often eradicated and always growing back. And the costs are real. “Typical of the [early 21st century] folderol that makes it [now] prohibitively costly and treacherous to be a public company is the ‘fair disclosure’ lawyerization of all... [corporate] communications. If you have to pass it by the lawyers, you probably won’t say anything of interest.... For 9 months in 2016, there were no US IPOs at all. Instead, venture capitalists kept hundreds of ‘unicorns’-- private companies valued at more than a billion dollars-- in the corrals.... Most [of them] were less interested in going public than [in] merging with a mammoth like Google/Alphabet or Facebook.... [with the] returns (and burn rates) [flowing] mostly to the venture capitalists who held them and the leviathans that bought [i.e. consolidated] some of the best of them” (Gilder, 2018, 167). See also “Charismatic Authority (CHA)”, ‘National Identity Cycle’. “Cycles”.

5) Underlying this all is the fact that the “masters of the code” have their own trump cards: legal provisions that are enforced by courts against all comers, making them impervious by design to all counterarguments... [Over the course of the 2nd half of the 20thc], “lawyers have built a veritable ‘empire of law’, [now] stretching across the entire globe, one that follows a logic and evolutionary dynamic that

¹⁵⁷⁸ It is an inherent hatred in the hearts of most men, that has not been turned around or somehow dismissed with (so-called) ‘modern’ times. “When [Martin] Luther said... ‘Law men are bad Christians’ he was talking about a kind of religious sterility in the Church, [which was overly] formalized and legalized... [It] was not the kind of theology that was suited to the new men of the [trading] cities... [who] grew in number and importance... [developing] a taste for clarity and lucidity, by reading the [newly available] ancients...” (Weber, 1989c, mn.4-5).

¹⁵⁷⁹ “Low-context” (literal) cultures, although typically more egalitarian & democratic, can also be more susceptible to (or at least respectful of) “Legalism” (‘by the book’ stuff) that doesn’t necessarily always make sense.

¹⁵⁸⁰ ... what the cycle of legalist exemptions has (for 3 millennia) most often been called in the Far East.

¹⁵⁸¹ Some might complain that the esoteric jargon of Economics is (almost as) ‘Orwellian’ in character; but without its ossification into Law, the beast wouldn’t have its bite. See also “Money” [Bindewald], “Central Bank”.

can be understood only by those who have mastered the code. (Apparently, I am out of luck.)” (Mehrling, 2019). See also “Lobbyists”, “Globalism”, “Legalism”, “COVID”, “Transhumanism”.

6) No “one [individual or group] deliberately set out to construct...[this] ‘empire of law’. Rather, it is the result of a decentralized, unplanned process [a.k.a. ‘the market’]¹⁵⁸² in which individual private lawyers helped individual clients protect their assets through the use of preexisting [& ever-growing] legal constructs: contract, property, and collateral law; trust, corporate, and bankruptcy law. By transforming mere assets— successively land, firms, debt, and know-how— into [legal-privileged] capital, these lawyers endowed them with the crucial properties of priority and universality, durability, and convertibility” (Mehrling, 2019). See also “Capitalisms”, “Conspiracy theorist”.

6b) “Of course, this spontaneous [‘long half-century’] project worked only because the state, operating mainly through the courts, was willing to use its coercive power to enforce each successive legal module. The empire [basically] was built with private law on a public foundation. Specifically, it was wrought from English common law and the laws of New York State, and enforced by British and New York courts, respectively” (Mehrling, 2019). See also “Pilgrim Society”, “UKUSA Agreement”, “Cycles”.

[M.I.H.]

[L.I.H.]

6c) This (latter-20thc/‘Globalist’) system “grew bit by bit as these 2 bodies of law were exported worldwide by masters of the code, whose [new] clients were operating under foreign law...[Foreign] governments allowed this because... they saw standardization as a means of enhancing national wealth [a.k.a. GDP]. In hindsight [sans propaganda], we can now see that [over the long-term] it was always about enhancing [if not to say ‘laundering’] private wealth, by securing assets [that were immune] from any possible state claim, such as taxation” (Mehrling, 2019). “Shell game, the”, “Lobbyists”, “Market fundamentalism”, “Tax shift”.

7) “Before you play [with your monopoly money], you need to know the rules of the game. Learning the law related to US federal finances is challenging [even] if you have...gone to law school” (Fitts, 2018v). See also Bindewald, 2018; “Federal Accounting Standards Advisory Board” [FASAB-56].

8) Nonetheless, there’s “no investment if there’s no law... We can’t grow our way out of this without the law...” (Fitts, 2019o, mn.34). See also “Dynastic Cycle”, “National Identity Cycle”.

See also “Statism”, “Zionism”, “Common sense”, “Tickbox”.

[substitute ‘the People’/‘democracy’ for ‘Simon’ (state) in so-called ‘modern’ times]

Lender of Last Resort (LOLR)/Too Big to Fail (TBTF)- (a.k.a. dotcommunism)

1) It actually wasn’t *The Communist Manifesto*, but rather Marx’s contemporary (and fellow Londoner¹⁵⁸³) Walter Bagehot “who championed this [now essential] function of central banks in... 1873.... This advice has been influential... Kindleberger’s history of financial crises says that ‘the role of the lender of last resort was not respectable among theorists until Bagehot’s *Lombard Street*...’ [which Milton] Friedman and [Anna] Schwartz referred to... as ‘the *locus classicus* of central bank policy’. More recently, a leading financial journalist has written that ‘to an astounding degree...[it] remains the basic guide for central bankers... [who] refer to it with the same reverence that ministers and rabbis use when quoting the Bible” (Ricks, 2016, 184). See also “Banksters”, “Bank welfare”.

2) Perry Mehrling agrees, that it was “Bagehot in 1873, [who] rose to [the] consciousness of everyone that the [British] central bank was acting as a Lender of Last Resort-- that it did this every time there was

¹⁵⁸² See also “Market fundamentalism”, App.C: “1-2-3”.

¹⁵⁸³ Both Bagehot (1826-77) and Marx (1818-83) resided in central London through most of the 1850’s-1870’s, developing *The Economist* and *Das Capital*, respectively. The former’s father-in-law (from 1858) was James Wilson, founder and owner of *The Economist*. See also “Hegelian dialectic” (with *The Economist* as “Thesis”, *Das Capital* as “Antithesis”, and Bagehot’s ‘Lender of Last Resort’ as the eventual convergence/“Synthesis”).

a crisis, even though it always said it wasn't going to...but it [nonetheless] was. That was the beginning of MANAGEMENT-- explicit management [technocracy]. But it was only [at first] crisis management. But once you had a central bank that was committed to 'crisis management', it then became committed to...*preventing* crises...and then, ultimately, to some kind of 'monetary stabilization', and... we were walking that [technocracy] path, since 1873" (Merhrling, 2018, mn.136-37). Since 2008, CBs have demonstrated their ability "to put a floor [subsidy] under..." [the bankmoney regime]. But what "is next? Monetary stabilization? I don't think we know how to do" that-- at least not with [inherently unstable bankmoney]. "We're [still] working it out. And that's not gonna happen in 6 months. It's a hundred-year project" (Mehrling, mn.137-38), to achieve a 'monetary stabilization' with [TAB] bankmoney. See also See also "Technocracy", "Scientific Management/Hawthorne Effect", "Dystopia".

3) Is this starting to sound like "communism" yet? "The State...[should] not tell private companies how they must manage their business... [This attitude] only existed in Communist systems... what they had to produce, and how they had to do it... But if we let the banks create money... with their...financial activities...[then] it is essential to apply this kind of Soviet regulation" (Ordonez, 2019, mn.9-10). See also "Capital Adequacy Requirements".

4) Although there has been some knowledge "that since 1932 the Fed has had the power to lend to nonbanks (entities lacking a deposit banking [i.e. money-creation] charter) under 'unusual and exigent circumstances' (Ricks, 2016, 197); it wasn't until 1991 that Congress "did away with the long-standing collateral limits on Fed loans to nonbanks" (198); a change that has proven "just as consequential" as the latter Glass-Steagall repeal (Ricks, 2016, 199). See also "Glass-Steagall", "Repo (Repurchase) agreements", "Central clearing counterparties (CCPs)" [risk].

5) LoLR generates too many "subsidies and troubling incentive effects."¹⁵⁸⁴ These problems are not solved by layering on [ever] more regulation, nor can they be adequately managed by creating special resolution tools..." (Ricks, 2016, 199). See also "Regulation", "Financialization", "Central Bank".

[.com]

6) The "US government is already playing the *Too Big to Fail* game.... The US is already the primary enforcement body... That's the purpose of the State Department, the CIA, along with Britain's MI5 and MI6 being in nearly every country in the world...ensuring global conformity and compliance. And when nations don't comply, well the Defense Department comes in.... The US military is in 75% of all countries.... And we're supposedly a free Republic!.... It's quite clear [that] we're building a global empire" (Vrabel, 2011, mn.107-08). See also "State capture".

7) The obvious problem with "central banks is [that] their mandate now includes propping up ALL asset markets globally"¹⁵⁸⁵.... Central banks have inflated the markets to such high valuations that no central bank can possibly buy enough to keep the [global] bubble intact...But having succeeded in blowing [up] another unprecedented global bubble in assets, central banks have backed themselves into a corner of direct asset purchases to prop up markets" (Smith, 2015). See also "Quantitative Easing (QE)", "Monobank".

8) For example, from the Financial Crisis of 2008, the US extended "lender of last resort support to investment banks and to insurance companies" (like AIG) as well (Phillips & Roselli, 2009, 22); as to numerous foreign central banks and large banks.... See also "Debt saturation", "Bank welfare".

¹⁵⁸⁴ According to Thomas Philippon & Ariell Reshef (2012, p. 1551), "Workers in finance earn[ed] the same education-adjusted wages as other workers until 1990, but by 2006 the premium [was] 50% on average."

¹⁵⁸⁵ "I don't agree that the market is making these [Wall St.] decisions. The Fed has the biggest trading desk in the world. Why? They can trade anything. They're not supposed to be doing that. They're supposed to be buying & selling [only] bonds.... The Fed has built this massive trading desk.... Most of the examples they give of why something happened [on Wall St.] don't make any sense."- Assistant US Secretary of the Treasury (1981-82) Paul Craig Roberts (Roberts, 2016b, mn.23-26). See also "Market maker".

9) ...including Attorney General Eric Holder's famous dismissal, in December 2012, of the US government's *uncontested* cases against HSBC and UBS global Cartel banks, because, in the AG's words: "the impact on the stability of the financial markets¹⁵⁸⁶... is something that we take into consideration" in 'white collar' law enforcement (Titus, 2017, mn.3). With this official announcement (at a press conference) "that big banks get special dispensations... the Justice Department openly repudiated the rule of law, which had stood for centuries without challenge. The principal that no one is above the law's authority or beneath its protection....[had, since the 1960's anyway] stood as America's undisputed king" (Ibid). "What keeps happening is [that] the cabinet members, including the [US] Attorney General, enforce foreign legal immunities, instead of US law, so that a global banking cartel can commit crimes on American soil without" serious prosecution (Titus, mn.6-7), because both banks were on the 2011 BIS list of "systemically important financial institutions"-- or SIFIs¹⁵⁸⁷ (mn.17). This means that, since 2011 at least, such global Cartel banks, like HSBC, are "special, and enjoy a separate and higher legal status" than do individuals or non-FSB mega-bank institutions. It's assets [unlike President Nixon's failed 1974 'executive privilege' argument] are immune" from unilateral court seizure; and SIFI "cartel banks strictly control [in addition to the 'developed' world's money supply] what information they disclose" to (supposedly 'sovereign') governments (Titus, 2017, mn.41-42); which is rather unconstitutional¹⁵⁸⁸. See also "Parallel Universe", "Financial Stability Board (FSB)", "Mafia", "Secrecy, Cult of", "Market maker". See also "Sovereignty", "Big 5 (High St.) Banks", "Privilege", "Feudalism, neo".

Lerner, Abba (1903-1982)- (American co-founder of what would come to be known as Keynesianism¹⁵⁸⁹)

1) Lerner was "among the first to recognize the implications of the Keynesian system for government macroeconomic policy: by appropriate fiscal and monetary policies, a government could 'steer' the economy away from extremes and thus smooth out the business cycle. This policy-effectiveness was given an enormous boost by the new econometric model-building techniques."

- <https://www.hetwebsite.net/het/schools/synthesis.htm> See also "Kuznets, Simon (1901-1985)".

2) "...Lerner says if there is any unemployment at all, it can be eliminated by the government spending more. Now the problem is that you can get inflation. Lerner thought you can get inflation only when you go beyond full employment. Now in the 60's he changed his mind on this. But writing in the [anything goes] '40's, his prescription was: 'Just spend more'" (Wray, 2015, mn.106).

See also "Modern Monetary Theory" (MMT), "Keynesianism (Abba-ism)".

[What's The Name of the Game?]

Leverage- (a.k.a. 'liens'¹⁵⁹⁰; man's original 'power tool')

¹⁵⁸⁶ Conspiracies or not, TBTF was, by then, reality. "Winding up a complex financial institution is...*incredibly* [sic] difficult.... the mind just starts to go crazy"; the bankruptcy proceedings for Lehman Brothers, "not a particularly big institution" (by today's standards), took more than a decade to complete (James, 2020, mn.243). See also "Dodd-Frank Act of 2010".

¹⁵⁸⁷ In 2019, the BIS's 30 globalist "SIFI" (TooBigToFail) banks were [in order of size class, then alphabet]: JP Morgan Chase, Citigroup, HSBC; Bank of America, Bank of China, Barclays, BNP Paribas, Deutsche Bank, Goldman Sachs, Industrial and Commercial Bank of China, Mitsubishi, Wells Fargo; Agricultural Bank of China, Bank of New York Mellon, China Construction Bank, Credit Suisse, Groupe BPCE, Groupe Crédit Agricole, ING Bank, Mizuho, Morgan Stanley, Royal Bank of Canada, Santander, Société Générale, Standard Chartered, State Street, Sumitomo Mitsui, Toronto Dominion, UBS, and UniCredit.- <https://www.fsb.org/wp-content/uploads/P221119-1.pdf>

¹⁵⁸⁸ Have "SIFI" global Cartel bank executives, since 2011-12, been above the law? Both current and even ex-Cartel bankers are supposedly "immune from prosecution", effecting thus far "every Cartel case in its wake" to date (Titus, 2017, 47). See also "LIBOR".

¹⁵⁸⁹ Colander, 1984; a.k.a. (Abba's 1940's term): "*functional finance*". Lerner's "propositions initially shocked even John Maynard Keynes himself-- although he eventually embraced them fully... [writing that Lerner's] 'argument is impeccable, but heaven help anyone who tries [to] put it across to the plain man at this stage of the evolution of our ideas" (Keynes to Meade, April 1943).

- <http://www.hetwebsite.net/het/profiles/lerner.htm> . See also "Keynesianism (Abba-ism)", "Development", "Monetization".

¹⁵⁹⁰ Etymology: from the Anglo-French *lien*, or *loyen*, meaning a "bond", or "restraint" on the owner; further back from the Latin *ligamen*, or *ligare*, meaning "to bind".

“Give me a place to stand on, and I will move the Earth.”- Archdes of Syracuse, 3rd century BCE.

1) They are naked head-bangers without this oldest of the classic ‘simple machines’. See also “Tools”.

	<u>military ‘arms’</u>	<u>economic ‘leverage’</u>
Prehistoric-	wedges	& levers
Ancient-	swords	& usury (individual debt slavery)
Medieval-	guns	& banking (national debt)

‘Modern’- Pentagon/DARPA & New York Federal Reserve/LIBOR/ShadowBankingSector’

2) Without it, money bears “...precisely the same relation to the revenue of wealth as a food ticket bears to the food supply or a theatre ticket to a theatrical performance” (Soddy, 1921).

3) Those who are serious about ‘capitalism’ know the difference (and may even articulate it). Profits (without risk) “that merely reflect borrowing power [or compound interest] do not usually contribute to the learning process” (Gilder, 2018, 87). See also “Risk”, “Compound interest”, “Usury”.

4) “The big problem is the leverage” that is allowed (Kotlikoff, 2021, mn.149).

See also “State capture”; “National debt economy”, → “Debt cycles”.

Leverage ratios- See “Capital Adequacy Requirements (CARs)”.

Lexicon Test, the- (Have there not been, already, cultural referenda [on words added to the language]?)

1) One-word Philosophers- “Confucius”, “Aristotle”, “Montesquieu”.

2) Economists-- pretty much any of the dominant ones-- from Smith-to-Keynes. See also “Economics”.

↓

2b) Psychologists-- pretty much ‘any of the dominant ones’-- from Wundt-to-Skinner. See also “Psychology”.

↓

2c) Statesmen (rare)-- f.e. ‘Jeffersonian’¹⁵⁹¹; or [more ambiguously] ‘Napoleonic’, ‘Jacksonian’, ‘Nixonian’.

3) American novels-- “Regular surveys of the most significant novels of the 20th [c]entury, whether chosen by literary critics or the book buying public, tend to “produce the same set of” titles: Joyce’s ‘Ulysses’, Fitzgerald’s ‘The Great Gatsby’, Salinger’s ‘The Catcher in the Rye’, ‘100 Years of Solitude’ by Gabriel Garcia Marquez. But only **1** of the titles regularly appearing in...critics and readers’ top tens [has] *introduced a phrase* [cultural metaphor] to the English language that...[has gone] on to have a life of its own, and which sums up a concept that seems to have been around forever.... Using satire, black humour and seemingly undefeatable logic...[*Catch 22* (c.1960)] argues that war is insane, that the military is insane, and that, quite probably, [so-called] modern life itself is insane too” (British Broadcasting Corp., 2002). See also “Economics”, “Sovereignty”, “Imperialism”.

See also “Central Banking-Warfare model”, “Great extinction”, “Economics, Parity”, “NInnies” (i.e. ‘economics’-as-‘psychology’).

Liability- an outstanding [promise to pay or to repay](#).

1) “a present obligation as a result of past events...[in which] settlement is expected in an outflow of resources (payment)” (Schemmann, 2015, 26).

2) Accounting for liabilities is (pretty much always capable of) turning into more of an art than science; hence the traditional financial “Panic”. The scale doesn’t matter. Unclear liability conditions such as dealing in futures or [debt] securities of questionable worth (like junk bonds), as well as insufficient functioning investment protection and supervisory systems, could bring financial ruin to the majority of the population [even in Germany] in a matter of seconds” (Dziobek, et al, 1992, 46). See also “Risk”, “Lender of Last Resort (LoLR)/”Too Big to Fail (TBTF)”, “Debt securities”.

See also “Accounting, double-entry”, “Federal Deposit Insurance Corp. (FDIC)”.

¹⁵⁹¹ See also “Jefferson, Thomas (1743-1826)” (for the suigenerisly-enduring adjective ‘Jeffersonian’).

Liability, double- (i.e. pre-FDIC) 1) was traditional for any bank's shareholders, prior to the establishment of federally-mandated 'deposit' insurance in the 1930's. "Under this approach, if a bank failed, its shareholders would not only lose their initial investment, but they could be required to kick in an amount equal to that initial investment to cover creditor losses. Bank shareholders, not taxpayers...[were to] fund bailouts. One benefit of double liability is that it...[used to] scare bank shareholders into *alertness*. Scared shareholders have an incentive to [actually] monitor what their companies are doing or [to at least] make sure [that] someone else is watching closely. This monitoring would not be the superficial, *check-the-box* [type] approach that regulators [today] sometimes use, but would look deeper [beyond 'Wall St. says' superficialities]. As a beneficial consequence, banks would be forced to be more *transparent* about their activities. Shareholders would [also] look beyond [a singular focus on] profits, [in order] to [also] understand how much risk the bank is taking on...."

2) In other words, "auditors [answering] first and foremost to investors"; as opposed to managers of the firm they are 'consulting' with (Soll, 2014, 195). Does this not sound like common sense?

3) "If the [Dodd-Frank Act's] Volcker Rule and its hundreds of pages of regulatory interpretation make[s] one thing clear, it is that regulators have no idea how to discern whether banks are taking inappropriately risky gambles with their downside covered by deposit insurance.... A regulatory system that counts on regulators to be smarter and more alert than the companies they regulate will fail us every time.

Shareholders, by contrast, bring to the job diverse perspectives and an ability to send an immediate message to errant bankers by dumping their shares. Putting bank shareholders back on the hook is more likely to moderate reckless bankers and strengthen our financial system than [is] directing regulators to stop J.P. Morgan from losing money" (Peirce, 2012). See also "Regulation".

See also "Conservatorship", "Bank welfare".

Liability, pseudo- (items listed as "liabilities" on ledgers and other accounting statements that, unlike all other liabilities, are [and were] *not ever intended to be paid* to another party [because they were created, *ex nihilo*, with the sovereign monetary magic wand, in the first place])

1) **Federal funds and cash (a.k.a. 'federal reserve notes outstanding')** are *pseudo-liabilities of the Federal Reserve*; i.e. they are unilateral¹⁵⁹² and **don't have costs**. **Some** think that it is better to account for 'sovereign' money creation in this ('double-entry') way.

2) Others, like Joseph Huber (from 2018), claim that it is better to account for 'sovereign' money creation as an "asset". See also "Asset money".

3) 'Redeeming for gold' in the gold standard days was a *de facto* 'pseudo liability', because hardly anyone actually **ever** went through with it (from 1915 to March 1933).

See also "Ex nihilo", "Equity", "Federal Accounting Standards Advisory Board (FASAB)", "National Debt Economy".

Liar's (NINJA) loans - for people with "No Income, No Jobs, and no Assets"; "...everybody on Wall St. called these *liar's loans*" and knew "that they were made for NINJAs-- for people who can't pay... that it was fraud", in contrast to Hollywood's (typically false) portrayal in *The Big Short* (Hudson, 2016e, mn.6).

Liberal (classic usage)- (from the Latin *liber*, 'free'¹⁵⁹³)

"[T]he difference between the british Constitution and other Constitutions of [other] Government...[is] that Liberty is its End."- John Adams, 1766 (Samuelson,96). See also "Libertarianism(s)".

¹⁵⁹² I.e. genuinely *ex nihilo* or one-party/unilateral. See also "Ex nihilo".

¹⁵⁹³ 'Free' from what? "The essence of the liberal position...is the denial of [& hence freedom from] all [state] privilege...[when] *privilege* is understood in its proper and original meaning of the state granting and protecting rights to some which are not available on equal terms to others" (Hayek, 1956, 46). 'Let's just have a nice, level, and not-to-hypocritical playing field here'. See also "Privilege", "Leverage", "Usury" [..thefield].

1) The original (18th century) usage was for "...an advocate of free trade or *laissez faire* from government regulation. [However, as] governments were democratized...in the United States, [mid-20th century] *liberals* came to endorse a policy of active *public welfare* spending and hence government intervention, especially on behalf of the poor and disadvantaged. By the 1960's-- American 'liberals' such as Vice President Hubert Humphrey became more aggressive, and supported arms spending and foreign wars in Southeast Asia, leading to budget deficits and [eventually] *stagflation*. This helped inspire a countervailing *neo-liberalism*, which sought to return to the original tax-protest spirit of Adam Smith's day-- and also [contrary to Smith's original intent] to restore the centralized aristocratic and oligarchic *rentier* control of domestic politics" (Hudson, 2015b). See also "Mill, John Stuart", "Aristocracy (& nobility)", "Neo".

2) Outside of post-1950 US usage¹⁵⁹⁴, liberal (adj.) and *liberalization* (n.) still mean, simply, that "profits and losses are allocated to those who made the decision to take [actual] *risks*" (Ordonez, 2018); which is the opposite of usury, hedges, compound interest, politics-socialism, and computerized number-crunching. See also "Usury", "Socialism".

3) Actually *both* (traditional European & 'modern' US) usages of *liberal* share that basic condition of amalgamating 'everything to the highest bidder' (be that the big Corp. and/or the big State)...¹⁵⁹⁵

See also "English constitution, the", "Bankruptcy", "White-collar crime".

Liberalization- (in European/classic usage) 1) becoming "subject to undistorted market processes and...no longer dominated.... Market processes... can then function properly, improving [both] allocation and mitigation of risk... [with] more divers[ity] and more focus...on the productive economy" (Wortmann, 2019b, 11). See also "Liberal", "Smith, Adam (1723-1790)".

2) "is [most often] successful only when a technology...[becomes] available that makes it... feasible.... Think, for example, of what is happening with car transport in cities. It is not changing because politicians have decided to deregulate the monopoly of taxis, but because the possibilities offered by new technologies to provide better services... are forcing politicians to accept transitions" (Ordonez, 2018). See also "Offshore", "Technocracy".

3) Still relevant? "[G]enerally stated, elevating new claims by bestowing on them [like a Knighthood] legal protection of the kind that capital has enjoyed for centuries does not change the system; it reproduces it" (Pistor, 2019, 230). See also "Industrial Revolution, 3rd", "Parties, political", "Privilege", "Whig", "Design".

Libertarianism(s)- (political-economic beliefs centered around either fostering or propagating a 'volitional [non-arbitrary] society)

¹⁵⁹⁴ What happened (apparently via the traumas of the 2nd Industrial Revolution)? "The liberal of 1880 was anticlerical, antimilitarist, and [also] antistate because these were, to his immediate experience, authoritarian forces that sought to prevent the operation of the Western way. The same liberal was for freedom of assembly, of speech, and of the press, because those were necessary to form the consensus that is so much a part of the Western process of operation. But by 1900 or so, these likes & dislikes...[had started to become] ends in themselves. The liberal was prepared to force people to associate with those they could not bear, in the name of freedom of assembly, or he was, in the name of freedom of speech, prepared to force people to listen. His anticlericalism became an effort to prevent people from getting religion.... Most amazingly, his earlier opposition to the use of private economic power to restrict individual freedoms took the form of an effort to increase the authority of the state [the biggest corp. of the all] against private economic power and wealth... Thus the liberal of 1880 and the liberal of 1940 had reversed themselves on the role and power and the state... In the process, the upholder of the former 'liberal' idea that the power of the state should be curtailed came to be called a 'conservative'. This simply added to the intellectual confusion of the mid-20th century, which arose from the Irrational Activist reluctance to define any terms, a [dangerous] disinclination that has now penetrated deeply into all intellectual and academic life" (Quigley, 1966, 1231-1232). See also "Civilization, Western", "World War Two"; "Dumb-downing", "Orwell, George", "Academia" [those who are supposed to provide (consistent) definitions, not war propaganda].

¹⁵⁹⁵ ...that is, until 'Sargon shows his hand', so to speak, towards the end of one "Usury cycle"; that's why nobody can 'stop it' (at least not in ignorance of the basic trend, condition, and terms) until then...or until widespread-prevalent humor (f.e.. <https://www.youtube.com/watch?v=Rko4ywDj03Q> [Zacherley 'Coolest'], <https://www.youtube.com/watch?v=vEaXAsbvHV4> [TradingPlaces]). See also "Usury cycles", "Cycles", "Jubilee", "Reform".

1) in the sense of *anarchism*-- the lack of any governmental authority; “conspiracy theorists... are good at identifying symptoms, lousy at identifying causes and also solutions” (Keen, 2016u, mn.31). See also “Conspiracy theorist”, “Breakaway Civ.”

2) in the sense of a “*constitutional republic*”-- of consensually agreed upon rights and privileges, to be protected in public. The best government is that which governs least and ‘gets it right the first time’, from the design. Liberty “is to the state what health is to the individual”- Denis Diderot; and “[p]olitical liberty... is there only when there is no abuse of power. But constant experience shows us that every man who has power is inclined to abuse it; he goes until he finds limits”- Montesquieu (1748, Book XI, ch.4); either for himself, or-- as was demonstrated in 2020-- for his particular little tribe or (in the ‘modern’ sense) institutional budget. See also “COVID”, “Corruption”.

3) Liberty, like health, hence requires some degree of attentiveness. “It is the common fate of the indolent [and the intellectually indolent] to see their rights become a prey to the active. The condition upon which God hath given liberty to man is eternal vigilance; which condition if he break, servitude is at once the consequence of his crime and the punishment of his guilt”- John Philpot Curran (Curran, 1790, 94-95). See also “Civil National Identity (CNI)”.

4) Colonial Americans took liberty seriously, realizing that it was only realized, yet alone sustainable, “when the citizens were virtuous-- that is, willing to sacrifice their private interests for the sake of the community, including serving in public office without pecuniary rewards. This virtue could be found only in a republic of equal, active, and independent citizens. To be completely virtuous, men... had to be free from dependence and from the petty interests of the marketplace. Any loss of independence and virtue was corruption.... All men of genius and leisure, all gentlemen, had an obligation to serve the state.... Public service was far more important than science... [even with inventors like] Franklin... [I]ndividuals...were expected to suppress their private wants and interests and develop *disinterestedness*-- the term the 18th century most often used as a synonym for civic virtue” (Wood, 1993, 194).

5) Hence John Taylor of Caroline, Virginia (1753-1824)-- not ‘Austrian’ theoreticians like Murray Rothbard (1926-95) or Friedrich von Hayek (1899-1992)-- “was considered by some to be the father of American libertarianism” (McConnell, 1951).¹⁵⁹⁶

6) Does this still matter in a high-tech world? One of the more obvious (i.e. recurrent/unavoidable) lessons from history is that “personal liberty” is the exception, not the rule. It is, arguably, “the rarest state of affairs in human history. The normal state-- even right now-- is [some degree of] arbitrary abuse and control by others” (Williams, 2019, mn.15). See also “National identity/Nationalism”, “Lunatics”.

7) Such pitfalls can be avoided if rights are stipulated, clearly, consistently-- and concisely-- enough to have salient resonance. The US constitution of 1787 would never have been ratified by a sufficient number of states, if not for: **a)** James Madison making it crystal clear, in Federalist #45, that “the powers...[enumerated] to the federal government...[were to be only] few & well-defined, and restricted mostly to external affairs. Those [governmental powers] left with the people and the states are [the ones that are supposed to be] indefinite & numerous”¹⁵⁹⁷ (Williams, mn.16-17); and then also **b)** the Bill of Rights etching the spirit of such promises into the amended basic law-- not on page 2,033, but more like page 20-- so that anyone who could read would be able to fully comprehend it all, and hence carry around with them the main points (of freedom, at least as it was understood at that time).

See also “Freedom continuum (maturation)”, “Political parties”, “Democracy”, “Usury”, “Liberty Bell”.

Libertarians (US millennialist political faction)- 1) Libertarians have been taught to think that money is just any old means of exchange, which is a large part of the patently false *barter theory* of pseudo-anthropology-based economics. So they expect money to be a commodity or somehow ‘commodity-

¹⁵⁹⁶ McConnell cited for this, as have other sources, the “*Dictionary of American Biography*, [undisclosed year] Vol. XVIII, pp. 331-333” (Ibid).

¹⁵⁹⁷ “Now if you turn...[those stipulations] upside down, you’d have what we have now” (Williams, 2019, mn.17). See also “Communism”, “Politics”.

backed', however tenuously or symbolically. But for most people, money is what settles their obligations for bills and purchases. It is an accepted form of *payment* (not exchange), whether the accepted form of payment is (supposedly) 'commodity-backed' or not. Society 'as gotten a lot richer since fiat currency than before it. Inflation is bad, but getting richer with inflation is better than getting poorer without it. See also "Barter", "Smith, Adam (1723-1790)", "Monetization".

2) Though only a small percentage of the citizenry, Libertarians form a large part of those interested in monetary reform. 'Federal Funds for All' (opening central bank accounts) is designed to teach Libertarians how their leaders have deceived them about fractional reserve and Central Bank/RAB money and commercial bank/TAB money. The basic truth obstacle of the Libertarians is that their narrative is incapable of imagining a *private, international* protection racket that is bigger and more evil than national governments, and controls them. All Libertarians confuse their opinions with facts. It is inherent in their nature. Whereas it is self-evident that the government should not be trusted and needs a short leash, Libertarians are totally blind to the real invisible global government puppet master (which they worship as private enterprise) over the visible governments, whose job (when they're not being puppeted¹⁵⁹⁸) is to provide law and order and *some degree* of equality of opportunity. See also "Deep State".

3) I think most Libertarians are terrified to look at reality, and so they go around in circles, because they don't want to face the fact that they're scaredy cats" (Fitts, 2017u, mn.120). See also "State capture".

4) "We honour Liberty in name and in form. We set up her statues and sound her praises. But we have not fully trusted her" See also "Georgism (& Land Value Tax)".

5) The fact that the international corporate courts of the Trans-Pacific Partnership and Trans-Atlantic Partnership had already bypassed congress and were (before president Trump's executive order of Jan. 23, 2017) was in the process of reducing the United States to a mere administrative district of the international corporate police state that spies on us is something the Libertarians' narrative cannot accommodate. The governments that the Libertarians focus all their animus against are toothless puppets against the real enemy of the people, thanks in part to Libertarians. The fact that a national government is the only entity on earth big enough to regulate the crimes of international bankers and destroy the central crime in the world-- the unnecessary extraction perpetrated by the debt money system-- is something that the Libertarian narrative cannot accept, because the Libertarian leaders work for the banks and the majority of libertarians are deluded dupes. Libertarians pretend to be for freedom, but everybody is for some kind of freedom.¹⁵⁹⁹ Libertarians are for the freedom of the creditor class, the international financial sector, their class, to plunder the ordinary people without interference from government regulators. All the banksters want from them is anti-regulation of banker crimes, and they have been totally successful in that department. Offending Libertarians with the truth is not detrimental to monetary reform, because Libertarians as they exist now are a net negative to real monetary reform.

5) Expropriation & confusion over even the base-term (*liberty*) is nothing new. "There is no word that admits of more various significations, and has made more varied impressions on the human mind, that that of liberty¹⁶⁰⁰.... Some have annexed this name to one form of government exclusive of others: those who had a republican taste applied it to this species of polity' those who liked a monarchial state gave it to monarchy... [A]ll [have] applied the name of liberty to the government most suitable to their own customs and inclinations.... A certain nation for a long time thought [that] liberty consisted in the privilege of wearing a long beard" (Montesquieu, 1748, 149). See also "Privilege".

¹⁵⁹⁸ Or in the latest parlance, "wet-ware"d.

¹⁵⁹⁹ In order to become useful monetary reformers, they will need to change so fundamentally that they will no longer be Libertarians, although they should continue to promote fiscal responsibility, bless them. If only they could learn that their heroes, the private bankers, are actually the biggest welfare queens on the planet, they could redirect their anger at the right target and become useful citizens. They will need to renounce their deceptive leaders and their Adam Smith religion of the perfection of unregulated selfishness and corporate profits. And the alternate is not communism, which the bankers also created.

¹⁶⁰⁰ This is mostly because base "Liberty itself has appeared intolerable to those nations who have not been accustomed to enjoy it. Thus pure air is sometimes disagreeable to such as have lived in a fenny country" (Montesquieu, 292). And sudden exercise can do more harm than good.

See also “State capture”, “Feudalism”, “Libertarianism(s)”, “Truth serum”.

Liberty Bell- “America’s Liberty Bell is inscribed with a verse from Leviticus 25: ‘Proclaim liberty throughout all the land, and to the inhabitants thereof.’ The biblical Hebrew term was *d’r’r* (deror), cognate to [the] Babylonian *andurarum*, used by rulers to annul the population’s personal and agrarian debts, liberate bond-servants, and restore self-support lands to citizens who had forfeited them to foreclosing creditors or sold them under distress conditions. These royal Babylonian proclamations evolved into the *Jubilee Year* that Judaism placed at the center of its religion, in an epoch when rulers had come to protect rather than check the power of creditors and absentee landlords” (Hudson, 2015b). See also “Libertarlism(s)”, “Freedom continuum” (maturation).

[‘Proclaim liberty throughout all the land, and to the inhabitants thereof.’]

LIBOR (London Interbank Offered Rate)- (synon. ‘ICE LIBOR’ [Intercontinental Exchange LIBOR]) simply the average rate of interest charged on (mostly unsecured) Eurodollar financing between banks [in **RAB**]. “major international banks gaming world interest rates” (Taibbi, 2014). See also “Forex”, “Derivatives”.

- 1) As the volume of these essentially black market Eurodollars has surpassed that of US dollars, LIBOR is the largest bellwether for interest rates in the world. See also “Eurodollars”.
- 2) “That’s why they’re gimmicking LIBOR...to change the interest rates... that are used to price these [controlled derivative] instruments” (Black, 2016c, mn.130). Whether “you make a good bet or a bad bet on interest rates doesn’t matter [when] you can just change the interest rate, by falsely reporting¹⁶⁰¹ a fictional number!.... I mean these are people that you would never want to marry your most collateral relative, who you hated desperately” (mn.131). LIBOR is “the largest cartel... in the history of the world... over 1000 times larger than any cartel we’ve ever seen before” (Black, 2016c, mn.125). See also “Cartel”.
- 3) “Six Cartel [SIFI] banks...admitted to criminally rigging the LIBOR rate [in 2012].... But the DoJ has yet to convict even a single trader from the Cartel” (Titus, 2017, mn.47). See also “Bank of International Settlements (BIS)”.
- 4) As of 2017, the 17 international LIBOR cartel banks were: Citibank NA, Bank of America, JP Morgan Chase; HSBC, Barclays Bank, Lloyds Banking Group, Royal Bank of Scotland; Bank of Tokyo-Mitsubishi UFJ, Sumitomo Mitsui Banking Corporation Europe Ltd, Norinchukin Bank; Société Générale, Credit Agricole CI; Credit Suisse, UBS AG; Deutsche Bank; Rabobank; Royal Bank of Canada.
- 5) the “mythical” and “academic playacting... money market [interest] rate upon which some 50+ trillion dollars of assets¹⁶⁰² are priced at any given time” (Lew, 2017); from the City of London/offshore world. The “emperor of money markets is walking around in his underwear... LIBOR is the bastion of Too Big to Fail (TBTF)...[And the] TBTF banks... fund themselves at a lower cost than the other banks that report LIBOR... Nonetheless, the reporting banks are collectively charged with the impossible job of producing a single mythical rate at which the 17 or so banks fund themselves. These reporting banks are charged with providing the unknowable answer to the question:

‘At what rate could you borrow funds, were you to do so by asking for and then accepting interbank offers in a reasonable market size just prior to 11 am London time?’” (Lew, 2017).

¹⁶⁰¹ Part of the problem with LIBOR is that it is not actually “derived from actual unsecured loan transactions in the interbank...[RAB] market. Instead, LIBOR is calculated [or ‘rigged’] based on responses to a daily market survey by the British Bankers Association (BBA)... of large banks” (Fabozzi, 2015, 628).

¹⁶⁰² Including “derivatives and other financial products”, however, “[a]t least \$350 trillion...[is] tied to the LIBOR” (Kim & Kim, 2015, 174).

6) So LIBOR is in the process of being replaced by SOFR. “Work has begun in multiple jurisdictions to select an alternative rate and... a transition to those rates. In the United States, this work is being led by the Alternative Reference Rates Committee (ARRC), which is comprised of major over-the-counter (OTC) derivatives market participants as well as regulatory bodies. In June 2017, the ARRC announced its preferred alternative to USD LIBOR: the *Secured Overnight Financing Rate* (SOFR)...[which] beginning April 3, 2018, is now published each business day by the...[New York Fed] in cooperation with the... Treasury Department’s Office of Financial Research. **SOFR is a measure of the cost of borrowing cash overnight collateralized by Treasury securities**”¹⁶⁰³ (Klein, 2018). See also “Secured Overnight Financing Rate (SOFR)”.

6b) Yes, “the Federal Reserve Board and the New York Fed...[are] guiding the [away from] LIBOR transition”; and by “the end of June 2023, [US] banks won’t be required to submit the information that’s used to calculate USD LIBOR” anymore.- <https://www.capitalone.com/commercial/solutions/libor-sofr/>
See also “Powellism”.

7) It’s not just in the US. “The countries below are expected to transition to **various alternatives** by the end of 2021: [the] United Kingdom’s leading option is Sterling Over Night Indexed Average (SONIA), [the] European Union’s leading option is Euro Short-Term Rate (ESTR), Canada’s leading option is Canadian Overnight Repo Rate Average (CORRA), Japan’s leading option is Tokyo Overnight Average Rate (TONAR).- <https://www.capitalone.com/commercial/solutions/libor-sofr/>
See also “Eurodollars”, “British Banking Association”, “Primary dealers (23)”, “Prime rate”.

Lies- (‘post-hoc justifications’; almost always more complicated than truth, yet resorted to [by the over-burdened] for expediency)

As any parent (or former child) knows, narratives of truth are simple in spirit; of lies & deception are complicated & distractive. See also “Japan” [official truth].

1) “Humans [beings] are hard-wired to assume that what they hear is true-- and therefore... hard-wired to be duped... [because] evolutionary pressures have adapted people to assume that others are telling the truth... [in order] to keep communication efficient” (Economist, 2019f). And then, there was slavery. See also “Eye color”.

1b) It’s sometimes said by poets that ‘Every prison is built out of lies’, and vice versa, too; most liars (unless gleefully experimenting with the joy of lying) feel that they are mentally imprisoned, to include the ‘prison’ of hunger and other ‘basic’ material wants. See also

2) “Why are there so many liars in American [duopoly] politics¹⁶⁰⁴ today?

a) they have *always* been there;

b) the internet makes it easier to *check* the lies;

c) the internet makes it easier to *spread* the lies;

d) *Citizens United* has made lying more lucrative;

intel [IC] people who [used to] lie abroad are lying at home now;

f) out of work actors are lying for DC;

g) out of work journalists are lying for DC;

h) out of work lawyers are lying for DC;

¹⁶⁰³ “[I]ndustry experts have started seeking LIBOR alternatives, due to changes in the rate’s transparency and reliability. Over time, the underlying market that determines LIBOR has stopped having a significant transaction *volume*. This means LIBOR is often based on the judgement of a panel of banks rather than on robust market data, impacting its credibility. For those reasons, LIBOR is being phased out over the next few years. After December 31, 2021, ICE Benchmark Administration (IBA) will stop publishing all non-USD LIBOR rates and some USD LIBOR rates.”- <https://www.capitalone.com/commercial/solutions/libor-sofr/>

¹⁶⁰⁴ A 2004 study at Emory Univ. “put partisan Republicans and Democrats into a magnetic-resonance-imaging scanner and found [the obvious] that lying or hypocrisy by the *other side* [as in “divide & conquer”] lit up areas of the brain associated with rewards; [whereas] lies by their own side lit up areas associated with dislike and negative emotions. At no point did the parts of the brain associated with reason show any response at all. If voters’ judgements are rooted in emotion and intuition, [then] facts and evidence are likely to be secondary... [Hence] the dominance of [such] intuition [processes] is [mostly] the pervasiveness of confirmation bias” (Economist, 2019f). See also “Confirmation bias”, “Duopoly”, “Democracy”.

i) out of work finance people are lying for DC;
j) out of work marketing people are lying for DC;
k) out of work [indebted] college grads/faculty are lying for DC;
l) CFR Soros has a \$20 billion fund for political lying;
m) the Queen [MI6] is old but not dead;
n) nobody is being penalized for lying;
o) breakdown of [monetary] society” (Moon, 2019). See also “Reserve currency”, “Debt cycles”.
2b) ...In other words, ‘late stage imperialism’. See also “Imperialism, American”.
See also (in a word) “Imperialism”, → “Big Lie, the”, “Fin de Siecle”, “Integrity”, “Truth serum”, (in 3 words)
App.C: “1-2-3”.

‘Limited purpose banking’- See “Narrow banking”.

Liquid- an asset is liquid if it is easily and quickly salable for national money. Liquid is a relative term, a gauge or spectrum between 100% public ‘money’ (cash) and 100% private ‘credit’.
See also “Credit money”.

Liquidity- (a.k.a. ‘moneyness’ or viable on the payment system) sufficient money or near-money assets to be able to pay financial obligations (a.k.a. ‘money contractual commitments’) on time, or to engage in business opportunities. Hence *illiquidity* is simply ‘inability to pay’. See also “Solvency”.

Liquidity crisis- failure to pay debts

Liquidity guarantees- (a.k.a. ‘liquidity swaps’) the Central Bank’s *lender-of-last-resort* function (Dyson, et al, 2016b).

Liquidity swaps- (‘central bank liquidity swaps’) “there to enable European central banks to turn around and bailout their Too Big to Fail... Deutsche Bank...Credit Suisse...”,etc. (Titus, 2020, mn.18-19).

‘Liquidity trap’- See “Debt saturation”, “Deceptive Banking Terms (d.b.t.’s)”, “Normalization”.

Liquify- The “English term ‘liquidate’ means to destroy, not to make alive and flexible. The strategy of corporate raiders is to carve up companies and force them to liquidate their holdings in order to ‘liquify’ their assets– and pay them out to the raiders, who then move on to the next killing” (Hudson, 2015b).

Lisbon Treaty (E.U. ‘Constitution’)- (synon. ‘Treaty on the Functioning of the European Union’ [TFEU])
1) The European Council’s legal team just copied the “...original draft constitution[s]...[and] then attached them, one by one, to existing treaties. The Treaty of Lisbon is thus a [nearly 400 page] catalogue of amendments... *unpenetrable for the public*” (d’Estaing, 2007). See also “Constitutionalism”.
2) set in stone prior Eurozone targets for all member states’ budgets to be within 3% of GDP, thus preventing the signatories from running any sort of “...counter-cyclical, Keynesian type policy.... And because of the deficits that they’ve been running up in *past* years, more and more of the budget of Greece, Portugal, Spain, and Ireland all has to be paid for interest; and the interest payments and the subsidies to the wealthy are crowding out social payments... The [inexorable] result is an economic polarization” (Hudson, 2011e). German bankers have been “pointing out...that in Europe, in Germany, and all of Europe, it’s *illegal* for the central bank to finance government debt. All of Europe is being subjected to austerity now because of the way in which their constitution is written. So they’re saying: ‘*Wait a minute. When we run a deficit, we have to raise interest rates and impose austerity. And in the United States, they are doing just the opposite... [in order] to buy us out?*’ (Hudson, 2010c).
3) Article 123 expressly prohibits “direct monetary financing” (Huber, 2018d). See also “‘Helicopter money’” [TFEU].

4) “looks like a 19th century marriage contract. You’re in there, and if your husband bashes you up, try to convince him not to do it occasionally. It really is. There’s no possibility to extricate yourself. It was actually designed that way.... You’re locked in as a crash dummy, into an [experimental] crash test vehicle” (Keen, 2016l). See also “European Monetary Union (EMU)”, “Helicopter money”.

Loan securitization- See “Mortgage-backed securities (MBS)”.

Loan swaps (“the paradox of banking”)- 1) When a **state-monetized credit institution** makes a ‘loan’; “it has, in essence...[monetized] an asset: a contractual claim to future cash payments from the” ‘borrower’ (Crawford, 2018, 10).

2) Most ‘modern’ money, whether **TAB** or **RAB**, is created by a loan swap. In a loan swap, there are two creditors and two debtors, two borrowers, two debts, two IOU’s and two loans. The division into a ‘lending’ bank and ‘borrower’ is deceptive. The lender is also a borrower, and the borrower is also a lender. All commercial bank [**TAB**] or even central bank [**RAB**] money-creation requires 2 partners.¹⁶⁰⁵ A commercial bank never creates money ‘out of thin air’ by itself. In any loan swap, the 2 parties trade IOU’s. An IOU is valuable asset, because it promises future revenue, although like all future expectations, it involves some risk. Assets (such as bank credits/**TAB**) may become money if they have a Payment System (for account money) or a Legal Tender law (for cash) to circulate them.

The conditions of the 2 IOU’s, however, are unequal. There are advantages and disadvantages on both sides. The bank’s IOU is monetized by a monopoly privilege granted to Federal Reserve member banks (**state-monetized credit institutions**). But the private partner’s (customer’s) IOU is not monetized.¹⁶⁰⁶ The bank has monetized its debt by providing a Payment System, but the partner’s IOU is not money, because the partner has provided no Payment System for the other IOU. The partner promises to make payment installments of the principal and interest in a fixed time schedule. The bank promises to make payment (**access to the Payment System**) on demand. The partner must repay from earned income. The bank hardly ever makes a payment from its equity, but mainly transfers its debt from one creditor to another in the national Payment System, thus incurring costs that are far smaller on average than the **partner’s cost**. Thus it may be said that a ‘fractional reserve’ banking system structurally “steals with one hand what it lends with the other”- Eduardo Galeano, in an overall larger process of economic consolidation. See also “Debt saturation”, “Zombie”, “Big government (growth of)”.

3) “Modern banking was developed in the UK... and the legal facts are very clear, but not very well known. [Commercial] Banks do not take ‘deposits’ and banks do not ‘lend’ money.... Legally they do not take deposits. They borrow from the public, because your money at the bank is not on deposit. It’s not held in custody. It’s not a bailment. What is it legally? You have [legally] *lent* money to the bank. So the expressions in banking are meant to mislead [from] what’s really happening. Who is the owner of this money? It is the banks. You’re just a general creditor.... No bank has ever ‘lent’ any money.... Banks purchase securities, and they don’t pay up..... Your signature creates the money supply... because the bank considers the *loan contract* to be a *promissory note*.... The bank purchases this contract... [and] a bank account is a record of the bank’s debt to the public... This is how [90-97%¹⁶⁰⁷] of the money supply is created” (Werner, 2015b, mn.52). See also “Loans, bank”, “Money creation”.

‘Loanable funds’ theory of banking- See “Intermediation of Loanable Funds (ILF) Theory”.

¹⁶⁰⁵ With central banks, however, the recording of a liability (which creates “base money”) is, **in effect**, just a purchasing of *its own* backing (whether the purchase is of everyday Treasuries or of more exotic ‘Quantitative Easing’-type assets). See also “Liability, pseudo”.

¹⁶⁰⁶ Or, as Perry Mehrling puts it, “[t]he essential banking transaction is a swap of IOUs, in which a non-transferable IOU is swapped for a *transferable* IOU... [i.e. a bankmoney] deposit at the bank. The *non-transferable* one is the mortgage. Each of us say to the other ‘I owe you a million dollars’... [W]hat Minsky was trying to say... was that *anybody can issue an IOU...*” *the trick is to get that IOU accepted as money* (Mehrling, 2018, mn.21).

¹⁶⁰⁷ Up “to 97%” (Werner, 2017, mn.7). (See also **Mortgage Refinancers**).

Loans, bank- 1) Almost no one understands 'modern' bank (**state-monetized credit institution**) loans, including the lenders and borrowers. Most bankers think they are just creating credit, not money; but all bank credit is (TAB-bankmoney) money ("M1") according to the Federal Reserve. The credit that bank loans create for the borrower is debt. Credit and debt are two sides of the same coin. They are two ends of the same stick. There is no such thing as credit without debt, or debt without credit. Bank loans do not intermediate savings. (See "Exogenous vs. Endogenous", "Banks"). How can such a basic point be missed by so many? See Mehrling, 2016.

2) When an individual takes out a loan, there is generally only *one* set of account books, the bank's, where the borrower has a credit balance in the bank liability account, which reflects the borrower's asset. But the full picture only becomes clear when there are *two* sets of account books. [diagram] Both debtor and creditor trade promises. They both lend and both borrow. They are both debtors and both creditors. They each create two new accounts on their account books that they did not have before. They each create a promise asset and a promise liability. The liabilities are debts with credit balances. The credit stands for the creditors. If all this sounds like gobbledygook, you are beginning to grasp *the depth* of contemporary currency creation deception. It is legal fact. If sovereign money (DFNM) were enacted, none of this deception would be possible. The bankers would be forced to only intermediate between savers and borrowers (like any other finance sector corporation), as they currently pretend to do, instead of being US currency creators (on license from the federal government). See also "Privilege", "Nonbank Financial Institutions (NBFIs)".

3) Setting up the bank account costs the banker virtually nothing; and making the transfer payments costs the banker little. The reason that the controlling bank stockholders and their favorite executives are so rich is because bank income far surpasses its costs, unless they squander it on bad loans or financial gambling. Does the 'borrower' really 'loan' the bank money? Yes. When a depositor deposits cash in a Demand [TAB] Account, it is [also, effectively] a loan to the bank. The depositor gets a supposedly safe store of value and a convenient payment system to spend and receive money. He is an *unsecured creditor* to the bank. If he has his money in one of the 5 or so big banks that are too big for FDIC to cover and it goes bankrupt and the Fed cannot find a buyer, then he goes to the end of the creditor list and loses all or most of his money. This has long been legal fact; it is obvious.

4) The borrower thinks the bank has lent him currency money and that it is in his account ready to cover the check he is going to write to pay for something. But the account is just *a promise* to pay money-currency (i.e. a liability of the bank). Via the magic of: A] the clearing process and B] the banking franchise (to put the 'US' name on the 'bank debt'), the *promise* to pay money is now actually used as a *currency* payment-- it becomes 'real' or useful money (i.e. on the Payment System)-- in a fiendishly crooked sort of way. This privileged access to the national money name (**stamp**) and clearance (payment) system is what makes *bank debt* [TAB] into *bank money* (on the Payment System), while *nonbank* debt does not have such (state-granted) privilege.... Nice monopoly position if your industry can bribe the government into granting it. And banks might get away with it if they (**the larger ones, anyway**) were not gamblers and **rarely took** risks. But a lot of them are gamblers. And there are (increasing) risks for the public. The parasite can in fact debilitate the host to the point of collapse. See also "Parasitism", "Financial Crisis (of 2008-)", "Debt saturation", "Zombie".

5) Bank (**state-monetized credit institution**) loans (a.k.a. TAB/bank credit extensions¹⁶⁰⁸) are creating only *the principal* of the new loan, not the interest. The banks are paid in interest payments, which they don't create, and which continue to circulate upon repayment. The principal of a loan, however, is **just a wash** for the **monetized credit institution**, because it is extinguished (as a removed liability) upon repayment. See also "Money creation (in the UK-US today)", "Financialization".

¹⁶⁰⁸ With so-called bank (TAB) "loans", they're not loaning anything. What is actually created is a *credit limit*, just like when you apply for a credit card. See also "Credit cards".

[‘monetized credit institutions’ consumer credit [TAB] extensions, by gross accounts; by gross volume, c.2019 (Tatham, 2019)]

Lobbyists- (private interests paying for access to writing the public laws & regulations; euph: ‘self-regulation’).

[Post-Buckley v. Valeo (Jan. 1976) Congressional approval ratings... sometimes a.k.a. ‘one dollar, one vote’ (or just ‘vote for money’)¹⁶⁰⁹

1) The US today has approx. “11,000 registered lobbyists.... Unless it’s a full-time job, you don’t have to register.... Broadly speaking, year after year after year... the finance industry [sector] is the top spender... [on lobbying, and] they would not be spending the money if they were not getting a larger return... probably at least 10:1, if not more” (Kortsch, 2017, mn.5-6). See also “Statism”, “Kakistocracy”.

[‘No insurance or Obamacare scheme? Go to jail’.]

2) Because the US is so large, “the amount of arbitrary income that I can gain through a very tiny blip in the law is huge [sic], in comparison to say Canada, or even Germany, or...Italy, or France or... England. Those economies are so much smaller that it is simply not worth it for me-- as a company¹⁶¹⁰-- to attempt to lobby the politicians to create an act that favors me. But in *this* country-- oh my goodness. This

¹⁶⁰⁹ The ‘11%’ represents Congresses deliberative-collective function (on behalf of its [ever-watered-down] number of *constituents*); vis-à-vis the ‘96%’ representing its pecuniary function (for an [ever-increasing] number of *contributors*).

<https://www.youtube.com/watch?v=WpmRnueVUEs> [Nero’s]. See also “‘Modern Monetary Theory’ (MMT)”, “Inflation”.

¹⁶¹⁰ See also “Corporations (and corporate ‘personhood’)”.

[lobbying industry] is *really* worth it” (Kortsch, 2017, mn.5). See also “Oligarchy, American”, “National Identity/Nationalism”, “Congress (US)”.

3) One example of lobbyists’ influence on (the increasingly large and influential scope of) government seems to have been the EPA’s decision, in 1991, to de-list Glyphosate as a suspected carcinogen, which cleared the way for the introduction of “Round-Up Ready” genetically modified (to resist Glyphosate toxicity)¹⁶¹¹ corn and soybeans, in 1996. Thus far this century GMO ‘ Frankenfoods’ are almost unavoidable in US supermarkets,¹⁶¹² and numerous reports have found Glyphosate [the primary key to their profitability] all over the place (Hooker, 2018), as overall chronic disease rates have increased.

4) “It may not surprise you to learn that **drug** companies spend more...lobbying the Congress than any other industry-- a *lot* [sic] more.... And they do it because it pays off. So the government uses your tax dollars to buy billions worth of their products, and then in some cases forces you to use those products.” - Tucker Carlson (Still, 2023b, mn.2-3). See also “COVID”, “Corporations (and corporate ‘personhood’)”. See also “Rentier”, “State capture”, “Food”, “Dumb-downing”.

Lobbyists (monetary & fiscal)- “Something there is that does not love a bridge between the [real] *world of goods* and the [abstract] *world of money*”¹⁶¹³ (Mehrling, 2007). See also “Monetization”, “Great Extinction, 6th”.

Local scrip & Complementary currencies- (a.k.a. ‘localized credit-clearing exchanges’; **usually** initially issued as ‘company paper for the company store’?) more power to them; “...something that works quite well in a downturn” [Keen, 2010];). See also “Money, ‘end of’”.

There “are at least 7000 local currencies circulating around the world. Will they succeed in making changes in the way money works? It... depends as much on the [macro] economic climate as anything else” (Boyle, 2002). The key, as **always**, is attaining the critical mass of circulation (which any sovereign government can easily bestow). See also “Macroeconomics”.

1) “Historically, some...[large-scale circulating credit] has been voluntarily adopted, usually due to either a lack of government, a lack of government money, or a government with a terribly unsound currency” (Sullivan, 2018d).

2) “If you think the demand for crypto-currencies is high, you can’t imagine how high the demand is for local currencies. At the end of the Great Depression, there were [approx.] 3,100 *local* [actually just “complementary” (non-\$-creating)] currencies for 3,100 [US] counties” (Fitts, 2017n2, mn.28).

3) *Local scrip* and ‘complementary currencies’ are **not the same construct**. *Local ‘scrips’* may or may not introduce new money into circulation (but ‘complementary currencies’ never do). Latter 20thc-type *military scrips*¹⁶¹⁴ are economically significant, but usually are not creating new money. Some local currency “scrips” during the Great Depression of the 1930’s went further than this, when “several towns in Europe

¹⁶¹¹ Glyphosate is the main ingredient in Monsanto’s 1970’s-created herbicide Roundup, which “they always have assured us... has no effects on human beings...Now we realize that it does...in 2 ways. First of all it kills our gut flora; [and] we [now] know that we are completely dependent on healthy gut flora-- to digest our food, to keep toxins out, to produce feel-good chemicals, to do all kinds of things.... [And] 2ndly...Glyphosate--... when it gets into your body it substitutes for [natural] Glycine. Let’s say you have a...[god-given] enzyme that has Glycine in it, when the Glyphosate takes its place, then the enzyme [simply] won’t work, and there are all sorts of pathways that depend on Glycine... that are not gonna work if you’re eating a lot of Glyphosate” (Morrell, 2021, mn.55). See also “Devil”, “Great Extinction, 6th”.

¹⁶¹² Despite rising awareness of its toxicity, Glyphosate in foods has been “increasing and increasing... [and it now also] used [heavily] as a desiccant for things like [what was formerly known as] wheat, [in addition to] oats, lentils, and soy beans.... [T]he most serious [heavily desiccated]...is wheat” (Morrell, 2021, mn.56). And “gluten intolerance” has pretty much been “in parallel increase” with Glyphosate use in recent decades (Morrell, 2021, mn.57). See also “Food (and food-like substances)”.

¹⁶¹³ ...as futurist-visionaries like Henry George, conservative traditionalists like Friedrich von Hayek, and even hard-core bankmoney ‘bond men’ like Benjamin Graham all spent their lives trying to build. For *The Intelligent Investor* (Graham, 1949) “himself, the disconnect between the *world of money* and the *world of goods* was fundamentally a source of macroeconomic investment risk that could upset any amount of careful security selection by the conservative value investor” (Mehrling, 2007). See also “Academia”, “Orwell, George”, “State capture”, “Macroeconomics”, “Monetary Reform”, “Wilken, Carl”.

¹⁶¹⁴ The US Army in Korea, like other ‘company towns’, used to “pieces of paper that... could be used to buy things in the company store... G.I.s.... overseas... [were formerly] paid in military scrip.... The Korean contractors [even] entered into contracts that were paid in [US] military scrip, not in Korean Won” (Davidson, 2019, mn.22-23).

and [also in] the US tried using ‘free money’ or ‘*stamp scrip*’ to... stimulate the economy and reduce unemployment ...[And] in cases such as at Worgl in Austria [1932-33] they seemed successful”; based on the theories of monetarist Silvio Gesell (1862–1930), the Worgl ‘*Stamp Scrip*’, instead of “relying on price inflation... used ‘*demurrage*’¹⁶¹⁵ [to spur consumption; i.e.]. A stamp had to be purchased and fixed to the note every month [in order for it] to maintain its value [if it was not used], so the incentive was to spend or invest money... The local government issued the notes and paid employees some of their wages in the new money. Municipal works were [in contrast to the rest of the country] carried out, and unemployment was dramatically reduced.... [But] central banks believed it encroached on their monopoly¹⁶¹⁶ to create money” and put a stop to it after some months (Gabor, 2017b). See also “[Currency wars, the](#)”, “Gesell, Silvio (1862–1930)”.

4) ‘*Complementary currencies*’ such as the contemporary Bristol Pound, however, do not create “new money”-- because they depend on being backed at 1:1 by the national currency¹⁶¹⁷; and they are also not propelled by a “demurrage mechanism [as had been] used in Worgl... [so they do not have] the same drastic effect on economic growth...” (Gabor, 2017b) as do local currency/scrips. In the wake of the Financial Crisis (of 2008), France, for example, registered about 40 complementary currencies, and they “can only be used in a limited [geographical area never bigger than a town or region](#). They are ‘*complementary*’... [which means ‘dependent upon’, or strictly-] indexed to the Euro” (Watson, 2018, mn.1). Thomas Greco calls such constructs that are simply “sold for the...[national] money... really...[nothing] more than a gift certificate...if you buy a gift card at Target” (Greco, 2019, mn.34). See also “[National Money](#)”.

5) Greco forecasts, however, that (in the next downturn), “*Mutual Credit Exchanges* [formerly known as scrips]...will proliferate around the world... [eventually standardizing], which will allow the exchanges to network together, just like our computers are networked together... [W]e will see a world-wide web of exchange that’s free of interest and free of bank control...[W]e can maintain control of credit at the local level, while having a means of payment that’s globally useful. That’s the ultimate objective”¹⁶¹⁸ (Greco, 2016, mn.14-15). See also “Criminalization of Banking”, “Fitts, Catherine Austin”.

5b) Basically, a local “*credit clearing system*” involves “a ledger account, in which we simply keep track of [all participants] purchases and sales.... Every account starts at zero.... When I sell something, I get a credit to my account. When I buy something, I get a debit to my account. This is simply called ‘credit clearing’-- your purchases are paid for with your sales”¹⁶¹⁹ (Greco, 2019, mn.37). “If banks can go through that clearing process, producers and sellers can do the same thing. I call it *direct credit clearing* amongst traders. We don’t need to use [TAB] bank-created money in order to pay one another.... In [such a] mutual credit [system], instead of calling a negative balance a loan, we simply accept it as a necessary feature of doing business.... We no longer need [TAB-bank] money; [but] we [do] simply use [the RAB/base] monetary units as a measure of the amount of credit given” (Greco, 2019b). See also “[Debt-free money](#)”, “[Civilization](#)”, “[Eras of \(monetary\) History](#)”.

5c) However, “if we had a [basic/stable] measure of value that was *independent* of the [RAB] currency, then we would have everything we need to rebuild the exchange system in a more equitable way.... I’ve laid out a *market-basket of commodities* as the most promising measure of value. If we take a [wide enough] basket of basic commodities, and define our [‘federal funds’/RAB] unit of account based on those

¹⁶¹⁵ The idea’s demise was not just due to the Powers That Be. “Gesell’s depreciating currency was unworkable, because it was impossible to tell what a dollar was worth without...[having to look] the date up on a depreciation table” (Sullivan, 2020). “Gesell, Silvio (1862–1930)”.

¹⁶¹⁶ When Irving Fisher examined Worgl and other scrip currency experiments, “he concluded that ‘the correct application of *stamp scrip* would solve the depression crisis in the US in three weeks!’. [However] Roosevelt’s government, aware that such [money-creating] currencies could invoke a massive loss of federal power, promptly banned it”, as Germany and Austria had already done (Monbiot, 20015). See also “[Chicago Plan\(s\)](#)”.

¹⁶¹⁷ There are many such “complementary” schemes throughout the world; and they all depend upon the so-called ‘currency’ being first purchased (at 1:1) with the national currency. See also “[Mobile phone payments](#)”.

¹⁶¹⁸ Fanciful? See also “[Money](#)” [state credits], →“[Great Extinction, 6th](#)” [caterpillar].

¹⁶¹⁹ Greco continues (with an unsupported claim): “manage it properly, and basically we’ve [done away with \[TAB\] money](#).... [even though] We [\[still\] use the existing \[nation-based\] money](#) as...[the underlying, RAB] measure of value, as...[was exemplified] with the [1930’s, New York] Larsons [] Merchandise Bond. So we [always] keep...[these] accounts in dollar units” (Greco, 2019, mn.37-38). [It’s not clear which ‘\$ unit’ is more appropriate here]. See also “[Monetary reform](#)”, “[Georgism \(& land value tax\)](#)”.

commodities, then we [will also] have an independent measure [in which] to keep our records and measure our credits” (Greco, 2019b, mn.19). See also “Parity ping for raw materials”, “Graham, Benjamin (1894-1976)”.

[no more soup lines in Wörgl by late 1932]

[Brixton Pound (tied to £), c.2016]

Locke, John (1632-1704)- (in England’s [still somewhat chaotic] post-Civil War & Revolution environment, articulated [in contrast to Hobbes] the basics what gov’t should & shouldn’t do)

- 1) Established sacrosanct property-land rights; i.e. that (legitimate) gov’ts cannot confiscate property, even of debtors, without due course of bankruptcy law.
 - 1b) A non-tyrannical gov’t observes and protects these rights-- as they would life, limb, and liberty from very-- or it is the *duty* of the citizenry to overthrow it.
 - 2) Locke is also widely regarded, along with Copernicus (a century earlier), as a ‘father’ of the “Quantity Theory of Money”. See also “Gresham’s Law”.
- See also (‘natural law’ of) “Oligarchy”, “Oligarchy, American”, → “Lockheed-Martin”, “Montesquieu”.

Lockheed-Martin- (a.k.a. ‘the United States of Lockheed-Martin’; i.e. the generals & admirals’ revolving door’, with gross revenue > all state & local revenue in 32 US states [.7-of which is from USG contracts])

- 1) The world’s largest defense contractor (since the 1990’s), LM has been particularly leading in Information Technology systems (read: DARPA) and (increasingly) aerospace; not to be confused with RAND Corp. (est. 1946), the granddaddy of US military/private (“revolving door”) ‘think tanks’.
- See also “Black Budget (US)”, “Military-Executive-Corpcracy (MEC)”, “Fitts, Catherine Austin”.

Logical fallacies- (a.k.a. mankind’s most-common/prevalent slip-ups)

- 1) “[P]eople’s beliefs and convictions are in almost every case gotten at second-hand, and without examination, from authorities who have not themselves examined the questions at issue, but have [also] taken them at second-hand from other non-examiners, whose opinions about them were not worth a brass farthing. It is an odd and curious and interesting ass, the human race.”- Mark Twain (Twain, 1924b, 253). See also “Common sense”, “Dumb-downing”, “Cognitive Dissonance”.
- See also “Strawman”; ‘Appeal to Authority’ (‘origin’ fallacy), ‘False dichotomy’ (fallacy), ‘Post-hoc’ (fallacy), ‘Spotlight’ (fallacy), ‘Fallacy of composition’, ‘Personification’ (fallacy-- f.e. ‘market fundamentalism’); “Attitude inoculation”, “Cognitive Dissonance”; “Hegelian dialectic” & “Bernays, Edward (1891-1995)”; “State capture” & “Oligarchy”.

<p>ELEMENTS OF ETHOS:</p> <p>Personal Examples, Providing Credentials, Leadership Roles, Responsibilities, Expertise, Life Experiences, Education, Allusions (References), Writer's Identity (e.g., a mother, an immigrant, etc), Decorum (adhering to expectations), Establishing Goodwill, Connecting through Common Values and Experiences, Practical Wisdom, Concessions to Opposing Views, Humility, Diction, Syntax</p> <p>beware: "Appeal to Authority", "Attitude inoculation" "Cognitive dissonance"</p>
<p>ELEMENTS OF LOGOS:</p> <p>Expert Testimony, Authorities (citing others), Facts, Statistics, Numerical & Scientific data, Charts, Graphs, Qualifying & transitional language (often, perhaps, on the other hand), Addressing Opposing Views, Convincing and Relevant Examples, Clarifying Definitions, Logical Reasoning (deductive & inductive), Categorical Thinking, Universal Truths, Restatements</p> <p>beware: "Strawman" "False Dichotomy"- "Hedelian Dialectic" "Spotlight fallacy" "Personification fallacy"</p>
<p>ELEMENTS OF PATHOS: (EMOTIONS)</p> <p>Personal Experiences, Storytelling, Loaded Language (words with strong emotional connotations), Voice, Humor, Irony, Human Interest Stories, Appealing to Values & Emotions, Emotional Images, Appealing to Humanitarian Causes and Social Justice, Inflating Emotions like Fear, Pity, Injustice, Patriotism, Blame</p>

[basic constructs-- appeals of argument]

Long-term orientation (LTO)- (5th & most telling of the 6 Hofstede Dimensions; i.e. 'ants & grasshoppers') "An obsession w the true versus false leads us to artificial solutions as reassuring as the old certainty that the world was flat. An obsession with [quarterly] efficiency as a value in itself has driven large parts of our...[societies] into chaos.... Reason[ing] now has a great deal in common with the last...[years] of the ancient regime."- John Ralston Saul (1992, . See also "China", "Land Bridge".

1) After being influenced by survey data from "Chinese scholars", in 1990-91, Hofstede was motivated to add "a dimension that we didn't have yet"; LTO surveys "pragmatic virtues oriented to *future* rewards, in particular: perseverance... thrift/saving, and adapting to changing circumstances" (Hofstede, 2015, mn.0-1; mn.2). Short-term orientation is basically "virtues related to the past and the present, such as national pride, respect for [any] tradition, preservation of face, and fulfilling [pre-existing] social obligations" (Hofstede, mn.2-3). See also "NInnies".

1b) Via the classic World Values Survey, Hofstede could also see that LTO correlated with "the feeling ...that good and evil are relative, they can change over time... whereas on the short-term side, the feeling is that good and evil are absolute and always the same" (Hofstede, 2015, mn.2-3). Thus with LTO, "which norms apply depends on the situation' whereas...[with] short-term orientation... fixed norms always apply, whatever the circumstances.... In the long-term orientation, we should be humble about ourselves; whereas in the short-term orientation we seek positive information about ourselves. In the long-term side, we want' to learn from other countries. On the short-term side, we are [perhaps only] proud of our own country" (Hofstede, mn.3). See also "National Identity/Nationalism".

2) Hence, "on the long-term side, when 2 truths oppose each other, they may be integrated into something new. In the short-term orientation, there is always a contradiction between A and B if they are not the same.... In the short-term side, we see more fundamentalism... [not just] religious...also ideological...political fundamentalism" (Hofstede, 2015, 4). See also "Common sense".

2b) In terms of capitalism, LTO companies "seek market share and long-term profits...[and] short-term ...companies report [since the 1600's] quarterly results, and very important is the bottom-line... [financial] results in that particular period" (Hofstede, mn.7-8). See also "Finance Capitalism", "Capitalisms".

2c) Obviously; LTO "plays an important role in the economic development of poor countries. Poor countries with a long-term orientation develop economically faster... [and do not] stagnate" (Hofstede, mn.10). See also "Belt & Road Initiative", "Washington Consensus".

3) Qualitative science is valid and these Hofstede Dimensions & World Values Surveys have been changing and fluid. See also "China" (losing LTO), "Russia" (gaining LTO), "Free trade" (US losing LTO)".

See also “China”, “International Intelligence Community (I.I.C.)”, “Land Bridge”, “Work”.

[The long-term trend is to ‘Rule-by-Virtue’ (Montesquieu).]

Luddites- See “Labor Theory of Value”, “Mind control”, “Faraday cage”.

Lunatics- (a.k.a. “Everyone’s Gone to the Moon” [20thc], ‘zombie apocalypse’ movies [21stc])

1) traditionally followers of the (derivative)¹⁶²⁰ moon, rather than the (original/primary source) sun¹⁶²¹, were [as with canines’ well-known weakness thereof] at some substantial risk of species domestication [a.k.a. enslavement/enservment], as arbitrary measures (be they of time, money, or anything else) are open invitations for abuse and abusive cycles. See also “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”.

2) In the (so-called) ‘modern’ sense, this threat is primarily from the (unaccountable-arbitrary) control of currency and language (the circulatory & speech systems, respectively). For instance, during the Great Depression (a.k.a. deflating debt bubble), Frederick Soddy observed that “[t]he ruling passion of our age is to convert [real] wealth into [abstract] debt in order to derive a permanent future income from it-- to convert wealth (that perishes) into debt (that endures)-- debt that does not rot, costs nothing to maintain, and brings in perennial interest” (Soddy, 1933, 25). See also “Wealth”, “Monetary policy”, “Parity” (for what)?

3) More than half-a-century ago now, a hauntingly (or ‘intriguingly’) prescient hit song was prominently featured on the BBC Establishment’s “Top of the Pops” program. No one seemed to know what it was about at the time-- just that it was somehow ‘beautiful’ and perhaps also oddly ‘ambitious’:

<https://www.youtube.com/watch?v=73ks2TPPyho> [moon]¹⁶²²

See also “Statism”, “Derivatives” [or, better yet, ‘derived statism’, better known as “Conspiracy theory”, “Cultural Calendar”], “Offshore banking centers” (est. from the 1960’s).

Lunacy (in [institutions of] time, money [or religion]) → Arbitrariness → CHA/CHD¹⁶²³ (and/or Socialism/ Communism)

Luxembourg (legal address)- 1) what having a (no questions asked) Swiss bank account was in the pre-E.U. days, having Luxembourg (E.U. postage stamp) residency is for the millennial era. “You have a one-on-one meeting with.... the Treasury minister.... and it’s: ‘Let’s make a deal!’. And they can literally cut your [tax] rate to 2%... [which], for Luxembourg, is huge!” (Black, 2016c, mn.51). The “person [who] started all of this...[was] the Treasury minister [1989-2009]...[who] then on the strength of that became the Prime Minister [1995-2013]... and then on the strength of that became the head of the European

¹⁶²⁰ Politics should be a derivative of the will of the citizenry, not the other way around.

¹⁶²¹ King and the BBC (Establishment) were not exaggerating (with the song’s title). After the human catastrophe of WW2, Economics became (pretty much through the 1960s) not much more than pseudo-scientific boosterism for [the almighty] Consumption (as had been enabled by the 1930’s-40’s “national accounts”→“Gross National Product” scorecard or national→international measuring stick of [it eventually came to be assumed] all things ‘modern’ and ‘progressive’). *Consumption*, of course, is but a derivative of production; as the *moon* is a derivative of the sun. See also “Economics”.

¹⁶²² alternatively: https://www.youtube.com/watch?v=_cP-baAETnI [+captioned]. If King and Savile provided ‘the’ (mysterious) question there, in 1965, The Moody Blues provided, ironically, the basic answer to such mysteries, 5 years later:

<https://www.youtube.com/watch?v=NP9iOqdxS8c> [Question]. See also “Secrecy, Cult of”, “Debt cycles”, “Monetization”.

¹⁶²³ CHA/CHD is an abbreviation for the social phenomenon of (see also) “Charismatic Authority (CHA) & Dependency (CHD)”, as identified by White & White, 2008. See also “National Identity/Nationalism” (specif. the ‘National Identity Cycle’).

[Commission, in 2014]" (mn.52). "The godfather of all of this... [is now] at least titular head of Europe" (Black, 2016c, mn.53). See also "Brexit".

2) The infamous BCCI (a.k.a. 'the Bank of Crooks & Criminals'¹⁶²⁴); was "a prime responsibility of the Luxembourg supervisor"- David Scholey, <https://www.youtube.com/watch?v=aANly4Guy1E> (mn.121). See also "City (of London), the", "Greenspan, Alan", "Estates, 3".

Lying- (...about the neutrino/data flow [of intent] has always been a cardinal element of predation)

1) "If you tell the truth you don't have to remember anything [except truth]"- Mark Twain, 1894; "Barring that natural expression of villainy which we all have, the man looked honest enough" (Twain, 1870). See also "Philosophy", "National Identity/Nationalism".

2) "[B]ig-time liars always want to censor their opponents. It's the only leg they have to stand on" (Rappoport, 2021d). See also "Orwell", "Hegelian Dialectic".

3) The non-liar is true friend to everyone. See also "Lies", "Integrity". See also "Long-term orientation (LTO)", "Steele, Robert David (1952-2021)".

M0 (UK term for 'base money')- See "Base money" (all circulating cash, plus Reserves [RAB] and federal funds [FF] at the central bank/Treasury)

1) all *national monies* except for current/bankmoney accounts (TAB).

2) The main use of this configuration is for the (d.b.t.) 'money multiplier', which is patently false.

3) The "M0" measure, like "M3", is used in the UK, not in the US. See also "Base money".

M1- (checkable/demand accounts [TAB], + cash [base money minus reserves]; synon. 'current money'; 'narrow money' [UK])

\$4tn. (2019)

1) aggregate US or UK money supply in physical cash and coin, plus current/checking accounts (TAB), in domestic institutions (both M1 & M2 are counted by bank 'deposits', not by bank loans). Frequently bankers pretend that they only create credit, not money, but Federal Reserve practices expose this falsehood-- simply by counting the Transaction (current/checking) Accounts created by any bank as an increase in the (official) M1 money supply. The purported 'loan' of 'existing money' would not increase the M1 money supply if banks were merely intermediaries, as they often pretend. Finally, after two centuries, bankers at the Bank of England (2014-15) and the Bundesbank (2017) are starting to admit this obvious fact (and also Standard & Poor's in 2013, the Reserve Bank of Australia in 2018, and the IMF in 2019), but not yet at the so-called 'Federal' Reserve. See also "Federal Reserve Bank of New York (FRBNY)".

2) The "share of cash is now down to about 5-15% of the...M1... [which] is why the banks can manage with a cash reserve of just 1.4% of their [TAB-bankmoney] liabilities" (Huber, 2017h). See also "Cashless Society (War on Cash)".

3) The "first empirical definition of a money stock that came very close to what the...[Federal Reserve] still defines as M1 nowadays can be found in Currie (1934)" (Macro & Siebenbrunner, 2019, 7).

4) In a deeper sense, however, the traditional 'Money Supply' "formula = [the aggregate] Principal [on all demand accounts] created, minus [the aggregate] Principal repaid...[has been] an accepted maxim even among monetary reformers for over a century... [But this is not] so much about the *actual* money supply, but [rather] about how we 'count' our money, according to the techniques of banker-borne double-entry bookkeeping" (Bongiovanni, '2019b'). See also "Accounting, double-entry".

See also "Base money", "Bankmoney", "Transaction Account Balance [TAB] credits".

¹⁶²⁴ Founded in 1972 & registered in Luxembourg (despite the head offices being in Karachi and London), within a decade of opening, BCCI had over 400 branches in 78 countries and was the 7th-largest private bank in the world, prior to catching the attention of international regulators 'and intelligence agencies' in the late 80's, and subsequently being liquidated as 'hopelessly insolvent' in 1991, forfeiting \$550 million of its American assets-- then the largest-ever forfeiture obtained by US federal prosecutors.

M2- (synon. 'broad money'; simply M1 plus all USD savings accounts, savings investments of less than \$100,000, and MMFs;¹⁶²⁵ counted in the US from 1959-2020; now 'UK-only')

\$15tn (2019); \$19.4tn (year-end 2020)

1) This "money supply" that bankers invented includes savings accounts or secure investments (d.b.t. 'time deposits') of <\$100k, such as: certificates of deposit, money market deposit accounts, or money market mutual funds,¹⁶²⁶ all of which represent deactivated bankmoney; in addition to "overnight repurchase agreements, and certain overnight Eurodollar deposits" (Hester, 2008, 76,n39).

2) Since savings investments are just debts from banks to their lenders [d.b.t. 'depositors'] and do not have access to the Payment System, they are more like near-money, than money, and are not covered by required Reserves [RAB]. ('Near-money', unlike 'savings investments'/'time deposits' is a somewhat more imprecise or inclusive term [closer to 'M3'], and should not be conflated with 'M2'.)

3) M2 is a mixed money-normoney category (M1 money, plus secure 'savings investments' ['time deposits']), it is fooling people into thinking that there is more money than there is. In other corporations, it is illegal to issue excessive debt against the same collateral, but the privileged bankers are so rich that they have different laws. See also "Savings investments", "M3".

SOURCE: TRADINGECONOMICS.COM | FEDERAL RESERVE [Discontinued in Feb. 2021 See also "COVID"]

M3- (M2 + SBS; counted in the US from 1959-2006; now 'UK-only') includes all 'savings investments'/'time deposits' and also-- presumably-- all quantifiable near monies, & derivatives.

1) It was discontinued in the US in March 2006,¹⁶²⁷ because the bankers had thought of so many ways of inventing near monies that the Federal Reserve couldn't keep up with them all; but the British still want to keep up the appearance that they know¹⁶²⁸ what the (City of London) bankers are doing. See also "Sovereignty", "Eurodollars".

2) US M3 was mostly about money market funds, and "they decided to abandon it because they decided [that it], like most quantity measures, was pretty useless in forecasting [TAB/M1 (conventional)] inflation. However.... it was very interesting... as a [broader] financial stability...[measure], because it was picking

¹⁶²⁵ Formal definition: "Before May 2020, M2 consists of M1 plus (1) savings deposits (including money market deposit accounts); (2) small-denomination time deposits (...[savings investments] in amounts <\$100,000), less [not including] IRA & Keogh balances at ...[monetized credit] institutions; and (3) balances in retail money market funds (MMFs) less IRA & Keogh balances at MMFs" (Federal Reserve Bank of St. Louis, 2021).

¹⁶²⁶ <https://fred.stlouisfed.org/series/M2> (June 11, 2018).

¹⁶²⁷ The Fed's Washington board also then stopped "publishing information on its [other] non-M2 components, repurchase agreements and eurodollar holdings.... Information about repurchase agreements...[at least] continues to be available in the Federal Reserve's Flow of Funds Accounts" (Hester, 2008, 100). See also "Eurodollars".

¹⁶²⁸ From circa 1979, "macroeconomic changes made life extraordinarily [sic] difficult for policy-makers trying to control inflation... [because] interpretation of the money supply figures [particularly M3] became almost impossible... [which made the UK's monetary] policy...too tight in the early 1980's" (King, 2020, mn.21). The comments of Ian Plenderleith, a long-time Executive Director at the Bank of England, echo those of Gov. King: <https://www.youtube.com/watch?v=aANly4Guy1E> [BoE panel, mn.135-37]. "Actually, you do begin to kind of get some idea of what's going on... some way of trying to help it [?] find...a basis for orderly conduct of business... But... of course it's never perfect. You're always a bit behind the game... [T]he art of financial supervision is always to be one step behind the market, but [hopefully] only one step behind" (Ibid, mn.151). See also "Regulation", "Derivatives", "Bank welfare".

up all this...*shadow banking*.... If you [just] care about [M1] inflation, it's...[better] to just think about the interest rate... [But] if you care about [overall] *financial* [sector] stability, [then] the [M3] quantity stuff is very interesting... exactly who is doing the creating of the [derivatives & other forms of SBS] money” (Stein, 2018, mn.116-117). See also “Near monies”, “Shadow banking (SBS)”.

3) Indeed, Shadowstats.com, a decade ago, “noted the oddity of the [Fed’s] announcement, opining that M3 was probably the most important statistic produced by the Fed and the best leading indicator of [aggregate] economic activity and inflation. The Fed’s lack of interest in the components of M3 can be directly linked to its inability to foresee the 2008 collapse of the financial system” (Sekar, 2010).

4) Today’s American “credit-money system starts with the Fed-supplied monetary base [M0], and pyramids upward through commercial banks, investment banks [M1]; offshore banks, nonbanks, and other [near-money] credit providing entities [M3]... [constituting the] different tiers of the credit pyramid... Here is a synopsis of each of these metrics...[as of] November 2005:

		Money Included	November 2005 Level
M0	Monetary Base	Deposits at Fed and currency	\$0.8 trillion
M1	Liquid Money	M0 + demand deposits	\$1.4 trillion
M2	Near-Liquid Money	M1 + savings accounts + retail money funds + small CDs	\$6.7 trillion
M3	Shadow Money	M2 + institutional money funds + Eurodollar deposits + repurchase agreements (“repos”)	\$10.0 trillion

[Sekar, 2010]

[Base (real/direct) money; TAB-bankmoney (supported on the Payment System); Near ‘monies’ (conventional ‘time deposits’); and (the largest classes of) Shadow ‘monies’. Since the primary characteristic of money is state-accepted liquidity, the latter 2 are not “money”, but rather “widely-accepted forms of credit”].

5) With the Fed’s 2006 decision, “\$3.3 tn (the difference between M3 and M2) effectively disappeared off ...the market’s radar screen[s]. The Fed...stated [further] that it would cease publication of Eurodollar, Repo, and institutional time-deposit data, though some intrepid analysts reconstruct this data by taking snapshots of the Fed’s balance sheet. The 2 n636pprox.636d636s[primary] components of M3, eurodollars and repos, are [nonetheless, still there as] the ‘Wild West’ of the...[credit-money] supply” (Sekar, 2010). See also “Eurodollars”, “Repo (Repurchase) agreements”.

5b) According to *Forbes*, in order to attain “superior, broader measures [of US ‘money’ supplies], one must go to The Center for Financial Stability...[http://www.centerforfinancialstability.org/amfm_data.php] ...founded in 2009... [in conjunction with] William...Barnett, the world’s leading expert on Divisia monetary aggregates.... [Barnett’s online] report contains a broad money measure M4...[which] includes 5 more components than M2: institutional money-market funds, long-term deposits, repurchase agreements, commercial paper, and T-bills” (Hanke, 2018).

See also “Credit money”, → “Globalization” [its 4th-quarter blowout], → “Financial Crisis (of 2008-)”.

M4 (UK-only) like M3 [large/inst. MMMFs, + ‘eurodollars & repos’]; but also includes corporate paper, T-bills, and many more forms of derivatives. See also “Imperialism, ‘modern’”.

M-Pesa- see “Mobile phone payments”, “Money Service Businesses (MSBs)”.

Macroeconomics- (not to be confused with microeconomics [as with ‘theory’ and ‘practice’])

“Men are born soft and supple; dead they are stiff and hard. Plants are born tender and pliant; dead, they are brittle and dry. Thus whoever is stiff and inflexible is a disciple of death. Whoever is soft and yielding is a disciple of life. The hard and stiff will be broken.¹⁶²⁹ The soft and supple will prevail.”- Lao Tzu
See also “Physiocrats, the”.

1) The “sharp ‘buy cheap, sell dear’ trader enjoys a temporary prosperity, but pays in the end when the shortage of purchasing power erodes markets, and creates *overstuffed warehouses*. Businessmen have always thought like businessmen-- meaning, they have never looked down the road more than a few years at a time.... a businessman can get in there and get his-- and get out-- before prosperity tops out. The tragic figure of our times, [Carl] Wilken pointed out, is not the businessman, but the [macro] economist” (Walters, 1971, 367). See also “Economics” [macro], “Economics, Parity”, “Wilken, Carl (1895-1968)”, & “Peek, George”; “M.I.T. (Massachusetts Inst. of Technology)”.

1b) Were even the good ones ever ‘respected’ (in terms of issuing policy prescriptions, instead of ex post facto justifications)? “You are not here to tell us what to do, but to explain to us why we have done it’, [Bank of England] Governor Montagu Norman told Henry Clay, the Bank’s first professional economist, in 1933” (Skidelsky, 2017). See also “M.I.T.”, “National Debt Economy (NDE)”.

2) The “rhyme of history teaches something else. The empty countryside in South America has manufactured no great prosperity for the several nations, either before or after the people were squeezed out. In...[the USA, the] excess squeezing was offset to some extent by free land¹⁶³⁰ on the frontier” (Walters, 1971, 387). See “Latin America”, “United States, the”, “American System”.

3) Basically (because the 3rd Industrial Rev. is fundamentally different from the 2nd Industrial Rev, and the planet’s biosphere is now also in a different state of condition), “Political Economy” needs to be put back together, and (macro) “Economics” broken up-- the former taking the place of ‘macro’ and the latter being relegated to ‘micro’. See also “Great Extinction, 6th”, “Science of assumptions”, “National Debt Economy”. See also “Economics, Parity”, “World Par Economy (WPE)”.

Madison, James (1751-1836)- (‘The [General] Secretary’, 1st: of ‘The [1780’s] Gang of 5 [R.Morris, G.Morris, Hamilton, Washington, & Madison; then (like a true good [public-spirited] Secretary), changing his strategy to 2nd: Gen. Secretary of Jefferson’s Democratic-Republican Party [1789-1820’s]; i.e. the ‘sorcerer’s apprentice’)

¹⁶²⁹ Do supply chains and food (quality, sourcing) have much to do with conflicts & warfare? The ‘Taoist master’ successor to the legendary [a.k.a. apocryphal] Lao Tzu (c.7th-6th century BCE) thought so. *The Art of War* ‘by Sun Tzu’++ (c.544-c.496 [& also likely an amalgamation of sources]) advises to “impose your will on the enemy. Remove the enemy’s food supply. Appear at places where they must hasten to defend. Attack at places which are undefended. Be invisible and inaudible, as much as possible. Distract them by throwing something odd and unaccountable. Divide the enemy...”. +- *The Art* was 1st translated by French Jesuits and published in 1772 (in French; & not in English for more than a century later); and ‘Sun Tzu’s name (孫武) does not appear in the main ancient primary source-- the *Zuo zhuan* (左傳)-- or in any known text prior to Sima Qian’s *Records of the Grand Historian* [司馬遷史記], circa 90 BCE. The term/name may have been a made-up descriptive *cognomen* meaning “the fugitive warrior”; and the surname “Sun” can be glossed as the related term “fugitive” (*xùn* 遜); while “Wu” is the ancient Chinese virtue of “martial, valiant” (*wǔ* 武)... The only historical battle attributed to the teachings of Sun Wu-Tzu, the Battle of Boju in 506 BCE, has no record of his participation (Mair, 2007). See also “Physiocrats” [China], “Food”, “Priorities (‘national’)”.

¹⁶³⁰ The ‘free land’/frontier offset of (of America’s reckoning with macroeconomic reality) was pretty much good through the 19th century, and was then replaced by the ensuing “offsets” of both the hyper-inventions of “2nd Industrial Revolution” and early decades of the (motorized-electrified) 20thc, followed of course by the mid-century “Reserve currency” status & ensuing/resultant “Super Imperialism” of the 2nd half (and rest of) of the century. See also “American ‘Exceptionalism’”, “Economics”.

1) Hailing from a landowning family of decidedly less wealth than the Washingtons or Jeffersons (or most other VA politicians of the day), young Madison, after being tutored by Scottish instructors from age 11-16, was idle for a year or so before enrolling at the small Presbyterian College of New Jersey, outside Trenton (now known as Princeton Univ.). He originally contemplated either entering the clergy or practicing law upon graduation, but instead remained as a post-grad for an additional year (until 1772), to study Hebrew and political philosophy under the college's president, John Witherspoon (1723-94), a recently-recruited Minister from Scotland of dour¹⁶³¹, Calvinist outlook (chosen for his anti-'Moderate' views); and Witherspoon seems to have influenced young Madison in the 1770's-80's (see Zarlenga, below).

2) In the 1770's, Virginia's "delegation in Congress was often divided, but the addition of James Madison in 1780 introduced a persuasive new voice for a vigorous and effective central government" (Rappleye, 2010, 228).

2b) It has long been known, but not prominently published, that young Madison (Stagg, 2c) was a key member of the 'Nationalists' (a.k.a. **Morrisises' or creditors'**) gang in Philadelphia (while also serving as Virginia delegate to the Confederation Congress [from 1781-83; 1786-87]). Madison was also apparently Gen. Washington's 'federal' secretary (along with Hamilton) from c.1785-88.

3) In Federalist #10 (i.e. **Madison's "Invisible Hand"**)¹⁶³², the general secretary of the 1787 Convention argued that larger states-- not smaller-- would better protect republican liberty. Madison conjectured that (what might be called) the big 4 "interests" of his day-- "a landed interest, a manufacturing interest, a mercantile interest, [and] a monied interest"-- in addition to the "many lesser interests [that] grow up of necessity in civilized nations", would somehow be prevented from becoming dominant (either individually or in [conspiratorial] tandem) by (some unspecified invisible hand) of pluralism¹⁶³³-- a theory which he seems to have invented for the occasion, perhaps bearing in his mind an image of the (also not-yet-extant) "Supreme Court" and US Court system officiating better (with more impartiality and independence) than other Olympians, despite all federal judges being appointed by the Executive. How long would it take for the Executive deep state interests (not even factored into #10) to devour such a construct? It's debatable whether James Madison's Federalist papers were even thinking so far ahead as to the 19th century, yet alone the 20th or 21st. Alternatively, Madison's implicit construct that the big 4 interests-- or even all interests-- are created equal is ludicrous, if not solipsistic. See also "Hamilton" [**Hamilton'sFootbinding**], "Lobbyists".

2b) "The first hundred years of our nation's history were racked with scandalous corruption as a result of the notorious [public sector] spoils system" (Bodde, 2005), due in no small part to 'invisible hand' theory of pluralism. See also "Parties, political" [.spoils], "Conditioning, classical" [.USA].

3) According to Stephen Zarlenga, a "curious book on money" subsequently showed up in the newly-independent states in , "written anonymously by...John Witherspoon-- the only clergyman [or college president] signer of the Declaration of Independence. The book attacked government money and promoted...[the traditional European] view that only gold and silver are money...[failing to mention the American colonies'] hard won...[paper] monetary experience. The power for government to...create...[currency], long considered as a necessary part of sovereignty, was [in those days] contained in 5...words-- to emit bills of credit. This provision was already in the Articles of Confederation, but the Federalists-- the merchant/commercial interest [that was] largely responsible for calling the Constitutional Convention in order to strengthen the national government-- fought to exclude this monetary power from the new government, arguing that it could not be trusted with it! Some of them intended to get hold of the

¹⁶³¹ Min. Witherspoon owned slaves and lectured against the abolition of slavery in New Jersey- <https://slavery.princeton.edu/stories/john-witherspoon>. Madison, more than any other of the well-known 'Fathers', appears never to have remitted even one.

¹⁶³² I.e. an attempt to overturn Montesquieu's 18thc orthodoxy that a "republic" should (at least preferably) "have only a small territory; otherwise it cannot long subsist" (Montesquieu, 1748, 120). See also "'Democracy'" [.Senate].

¹⁶³³ The Secretary's (Publius') 5-page essay, published in a New York paper just a couple months after the Philadelphia convention had concluded, did not list any sources whatsoever, but was almost certainly influenced (in its attempt to overturn the conventional wisdom of the century's greatest political economist) by Adam Smith's then-trendy *The Wealth of Nations* (1776), which perhaps Madison did not have time to read closely until after the Revolution. .

power privately, as had been done [decades earlier] in England” (Zarlenga, 2005, 57). What seems a lot like ‘conspiracy theory’ to some is often simply “incipient national pride...[and] dissatisfaction” with weak national status (Graebner, Fite, & White, 1975, 140) to others; and Robert Morris and George Washington were on the same team in (that pivotal decade of) the 1780’s (and the broader-based teams tend to win). See also “National identity/Nationalism”, “Politics”.

3b) Nonetheless, subsistence farmers and “backcountry” residents, more numerous in the South and West, “could expect little from a stronger national government other than increased taxes. They neither knew nor cared how Americans were regarded in Europe” (Graebner, Fite, & White, *Ibid*).

3c) ‘The father of the Bill of Rights’ he was not. “To blunt [Patrick] Henry’s demand for the addition of a bill of right before ratification [of the US Constitution of 1787], Madison ultimately pledged to work for such amendments after ratification, ‘not because they are necessary, but because they can produce no possible danger, and may gratify some gentleman’s wishes’” (Graebner, Fite, & White, 1975, 156-157).

4) By some time in 1789, Madison (alarmed, it seems, at some of the details and excess of Hamilton’s national debt economy¹⁶³⁴) had switched over to Secretary of State Jefferson and the (so-called) ‘anti-Federalist’ proto-faction: On June 8, 1789, Madison told Congress that (Gouverneur Morris’) Preamble itself needed (an additional) “‘pre-Preamble.... First: That there be prefixed to the Constitution a declaration, that all power is originally vested in, and consequently derived from, the people’” (NCC Staff, 2021b); despite G. Morris’ “We The People” draft of the Preamble saying, less stridently (or explicitly), the same thing. See also “Aristocracy (& Nobility)”, “Constitution, US (of 1787-91)”.

5) It was mostly “Madison, even more than Jefferson, who gave the initial guidance in the formation of the...[Democratic-Republican Party], the first political party” in the US (Graebner, Fite, & White, 1975, 203). See also “Parties, political”.

6) It has long been “a conventional view” of “Madison’s presidency (1809-17)” that he “mismanaged an unnecessary war”, and was often an “incapable” President; primarily because “he was less forceful... Madison was less successful in overcoming...[his own Party’s] dogma, which affirmed that the President should merely execute policies fixed by [the sovereign] Congress” (Graebner, Fite & White, 1975, 203). See also “Sovereignty”, “Constitution, US (of 1787-91)”, “Senate”; “Jefferson, Thomas (1743-1846)”.

Mafia (organized crime)- 1) a hundred years ago, each ethnic group/community that was allowed to branch banks had its own mafia. They progressed something like this. Step 1: guns-- to keep competitors at bay; step 2: their own bank-- to reduce bloodshed and dependence upon larger banks/mafias [such as JPMorgan-Chase (Pilgrim Society), Goldman Sachs (Zionists-Jews), Citigroup (Ivy League-W.A.S.P.s), Bank of America (Knights of Malta-Catholics), etc.]; step 3: judges-- to keep sheriffs, FBI & NSA (dragnet snoops) at bay; step 4: politicians-- to keep the CIA (blackmailers) at bay. Big government usually represents a big target for them, even (& increasingly often) the deciding factor in their internecine races against each other. Thus the long 20th century (cycle) of Big Government - Big Crimes; Big Crimes - Big Government has perpetuated itself (at least in the pre-internet era of monetary disinformation).

2) “...the intelligence agencies squeezed the mafia out...they used them and they squeezed them out.... *The Godfather I, II, and III* is a training film on the US economy as of 1979.... It sort of ends in the period in which the mafia is being squeezed out...” (Fitts, 2015b, mn.17-18). See also “Offshore banking centers”, “White-collar crime”.

3) “[T]he old Jewish-Italian alliance that really arose from the mob days in the [‘fat cat’] 1940’s & 50’s, when the Jews, Meyer Lansky, [Lucky] Luciano...took...over [a lot of] politics... Those days are gone”¹⁶³⁵ (Pieczenik, 2020e, mn.29). See also “Intelligence Community (IC)”.

¹⁶³⁴ *sadf* (Zarlenga, 2002, 402-403).

¹⁶³⁵ According to Whitney Webb & C.A. Fitts, however, for “a very long time...[the] marriage of the Jewish mob and the Italian mafia...[that] got in bed with the Intelligence agencies [in the 70’s, resulted in] an *alliance* [sic] that never ended.... This continues to operate” (Webb, 2021, mn.36). Fitts adds that “organized crime and the different syndicates have evolved...[to] become part of the Deep State, and literally taken control [of it]. We’re dealing [everyday] with a criminal model” (Fitts, 2021e, mn.37). See also “Deep State”, “Israel”.

4) Nonetheless, (as anyone thinking about visiting Mexico could tell you) when “you see this kind of breakdown in the rule of law, as we’re seeing the FASAB-56 and the [US] treasury market...[it will] eventually work its way into your neighborhood.... [T]he dependency of [even] this country on organized crime [today] is very significant, and it’s in every county. Whether it’s the mortgage fraud or the drugs, it’s in every county in America.... The reality is when cashflows dip...the fraud rises... [Whenever] you get into a kind of situation where there’s a decline in the rule-of-law, the organized crime guys go to work and take advantage” (Fitts, 2019v, mn.10-11). See also “Cartel”.

5) In Mexico, they are generally referred to as the “Cartels”, and “[n]ormally systematic crime is the work of mobsters and terrorists. But... unlike the Mob, the [global] banking Cartel [today] possesses sovereign powers [f.e. money-creation, immunity] that exceed the [US] president’s. There’s a word for systematic crime by a [more-or-less] sovereign power against...[a] whole country-- and it isn’t ‘crime wave’ or ‘terrorism’. The correct term [for such a circumstance] is war. The fact that no one went to jail [or was even financially damaged] after HSBC confessed to crimes on behalf of terrorists and drug dealers shines a very bright light on both enterprises” (Titus, 2017, mn.53-54). See also “Parasitism”, “Offshore magic circle”. See also “Savings & Loan Crisis”, “CIA”, “Deep State”, “Statism”, “Banksters”, “Debt cycles”.

Magna Carta, the- See “English constitution, the”, “Separation of Powers”, “Bankruptcy”.

Main point- How and “why we can, as Joseph [Farrell]...often says, ‘own the culture’” (Fitts, 2018g); and money (the reality of monetary-economic mechanics) is still the primary driver of that. See also “Primary sector, the”, “Ecological economics”, “Needs, desires (& law)”, “Privilege”, App.C: “1-2-3”. See also “Governance”, “Setting (assumptions)”.

1) “The threatened collapse of Western civilization has nothing to do with the political issues between [the media-party concoctions of] capitalism and communism, but is the consequence of its false money system.”- 1921 Chemistry Nobel Laureate Frederick Soddy (Soddy, 1926) See also “Deceptive Banking Terms (d.b.t.’s)”, “Secrecy, Cult of”, “Civilization, Western”, “Soddy, Frederick”.

1b) Of course it (transitioning to Knowledge Age) is a time (even a never-before time) of controversy, confusion, contradictions all over the place, and (the revelation of) historic distortions. Oligarchs and (moreover) oligarchical institutions continue to lie, cheat, and steal (either individually or collectively) from the bulk of humanity and future generations (via churning up the finite biosphere in general), sometimes pretending that it can all be papered-over & made good by weird science (including transhumanism) and/or discovering some new barren rocks in space... It is nothing less than the stuff of classic dystopian novels, brought to life by mankind’s (or at least its institutions’) strategic misdiagnosis (and ensuing denial) of the real problems & crises that it and the planet (are failing to) face. See also “Dystopia”.

1c) Was Orwell right-- that humanity is not even capable of naming the problems that surround it? See also “Academia”, “Dynastic cycle”.

It’s not “man-made global warming”. It’s Earth’s 6th Great Extinction Event. See also “Ecological economics”, “Geoengineering”.

It’s not some ‘COVID’ thingy. It’s (see also) “Transhumanism”, “Provocation operation (Po)”.

It’s not “capitalism”. It’s (see also) “Usury” (the extraction of money-for-nothing), combined with “Statism”, & the fall of “Separation of Powers”.

It’s not “democracy”. It’s simply (centuries of over-privileged) “Parties”.

2) “If we rely on the united integrity and wisdom of America, we shall reject overstrained constructions... and seek for the plain and consistent meaning” (Taylor, 1794, 48). See also “Common sense”.

2b) “The biggest thing that we need to do, culturally.... The most crucial point to address legally and culturally is the problem of corporate personhood.... This is the root of their attempts to gain sovereignty” (Farrell, 2022, mn.1). See also “Corporations (and corporate ‘personhood’)” [deification], “Sovereignty”, “Civilization”, “Culture”.

See also App.C: “1-2-3”, “History”, “Separation of Powers”, “Crisis, the”, “Big picture”.

‘Mainstream’ (20th century) Economics- See “Neoclassical Economics (NCE)”.

'Mainstream Media' See "Corporate Media Cartel/6 Sisters".

'Make-It-Happen; Let-It-Happen'- (abbrev. 'M.I.H.' & 'L.I.H.'): any intelligent organism has 'executive function'; and pretty much any military in a democratic society will deny it) See also "Denial".

1) Everybody thought that the banksters had been put back in their box or crypt in the mid-20th century. But they climbed up out of it in the 4th quarter of the 20thc, to wreak havoc (almost like a bad zombie movie) on the 1st quarter of the 21stc. See also "Criminalization of Banking, the", "Banking, end of".

[inverted] 'he said, she said'; <https://www.youtube.com/watch?v=Iss9xKyqAeA>

2) The UK-USA etc. "Intelligence Community" Let-It-Happen because of, basically¹⁶³⁶, having a go at¹⁶³⁷ (see also) "Imperialism, American" (and blaming it [if push came to shove] on the former villains [of the mid-20thc]-- the formerly 'fat cat'-- but now digitalized/offshore-- 'banksters'). See also "Intelligence Community (IC)" [1931]. Of course it (the practice of "Banksters" fronting for "Timarchy") was bound-- as before-- for self-destruction land, but not before (providing cover for) quantifying & digitalizing one helluva lot of (newly useful) data. See also "UKUSA Agreement".

3) Good job, go-fers. Now the decision & calling is what to do with it 'all'.

1970's- creating the parallel galaxy of "eurodollars" and sexual unleashing (see "Liberal");

1980's- CIA and Wall Street unleashing (see also "Neoliberalism");

1990's- Banks ↓ & "Shadow banking" ↑↑ unleashing ("neoliberalism" + see also "Neoconservatism");

2000's- + TotalInformationAwareness (TIA) & unleashing Digital Age revolving door of contractors, as the "IC" (often) goes "*International I.C.*" [I.I.C.] (see also "Industrial Revolution, 3rd");

2010's- 'Black PotUS' cheese goo vs. DT wrecking ball (cover for) biometric 'surveillance capital' unleashing

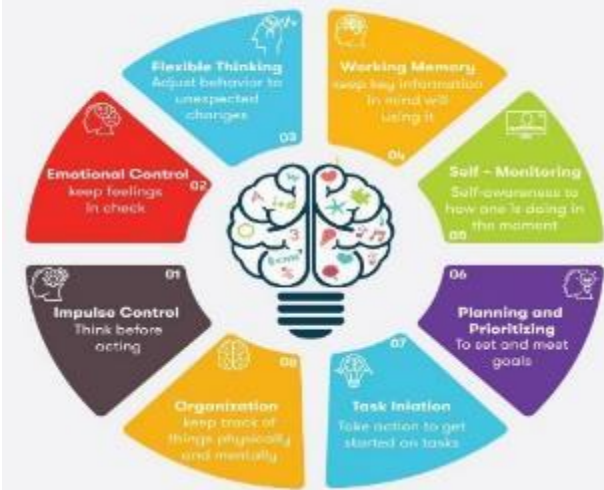

2020's- See "Government, role of".

See also "Intelligence Community (IC)", "*Military-Executive-Corpocracy*", "NSA", "Shadow government".

¹⁶³⁶ And also, of course, because there was no implementable alternative (long-term strategy) at the time (1940's-50's); most of the ('1st' and '2nd') world then had to simply rebuild (*Gross*-style). The computer (and all its implications) was still in its infancy. See also "Graham, Benjamin (1894-1976)", "*World Par Economy*" (requirements), "Gross Domestic Product (GDP)".

¹⁶³⁷ It should be added here that 'the alternative' to such age-old, traditional Reserve currency-Imperialism-- i.e. a "*World Par Economy*"-- was not even feasible in theory at that time (the mid-20thc). See also "Graham, Benjamin (1894-1976)".

EXECUTIVE FUNCTIONING

[to let-it-happen or not to let-it-happen?...] ['banksters' & Intelligence Community, since the mid-20thc]

Malthus, Thomas Robert (1766-1834)- 1) British political economist “and [pretty much official] spokesman for its landlord class. His *Principles of Political Economy* (1820) countered Ricardo’s critique of groundrent, by pointing out that landlords spent part of it on hiring coachmen and other servants and buying luxury products (coaches, fine clothes and so forth), thus providing a source of [trickle-down] demand for British industry.... Most notable in *Malthusian population theory* was his contrast between compound and simple rates of growth, borrowed from earlier debates over the expansion path of interest-bearing debts. Malthus shifted the focus away from finance, blaming the poor for their poverty, by warning that they would respond to higher wages simply by having *more* children,¹⁶³⁸ thereby keeping their wage levels down. However [in actuality], the normal response to rising incomes has been for fertility and reproduction rates to *slow*, as families spend their [additional] income on elevating the educational and living standards of their children” (Hudson, 2015b).

2) Not just ‘*mal* theory; Malthus (in addition to favoring national self-sufficiency in food), was, in 1827, “the first economist to explicitly organize, define, and publish his terms...[in] a coherent glossary of defined terms; and...his definitions were for the most part well-formed definitional statements” (wiki-Malthus, 2020). In naming numerous contemporaries [and also Ricardo] for practicing (deliberately) sloppy definitions, however, Malthus was subsequently defrocked by (criticized Ricardian leader) John Ramsay McCulloch’s personally “scathing review” of *Definitions in Political Economy*, and the Reverend’s reputation never recovered. See also “ConfUSURY”, “[Deceptive Banking Terms \(d.b.t.’s\)](#)”.

3) More recently, however, it has been found that countries “with higher population growth rates [have] experienced more social conflict since the 2nd World War (Acemoglu, et al., 2017)... even after controlling for a country’s income-level, independence, and age structure” (Bradshaw, et al, 2021, 3).

3b) Monetary appearances can be misleading. “While summary statistics of the global economy suggest a global pattern of unprecedented [monetary] growth, there is a very dark lining to this silver cloud. First, this [GDP] growth slowed during the 1970’s and has not advanced at a comparable pace since [then]. Secondly, the global statistics mask an accelerating divergence between haves and have-nots. There is clearly a severe economic divergence between a rich North and a poor South, if...[recently] complicated by... China...[etc.]... While the significant decline of mortality and the signs of a general controlling of fertility seem to point to a demographic convergence in the coming decades, the enormous demographic

¹⁶³⁸ Malthus insisted on this, despite Montesquieu’s (well-known) classic-- published 2 decades before Malthus was born-- indicating quite the opposite phenomenon: that Chinese “women are the most prolific in the whole world. The most barbarous tyranny can put no stop to the progress of propagation” (Montesquieu, 1748, 123).

expansion has [still] left large populations with very limited economic prospects. The prospects for the...century are grim, because these least developed countries will be the last to finish the [lower birth rate] demographic transition, and...[were, c.2010] projected to grow in population by more than 60% in the next two decades, compared to about 35% for the 2nd World, 11% for China, and about 7% for the developed world (including the 4 Asian Tigers), while the population of the former Soviet Bloc is expected to...decline"; "[c]oming to terms with the reality and potential consequences of the... [environmental] impacts for which they are responsible has been an even more profound struggle, because the evidence [not to mention sensible macroeconomic theory] is less immediately visible, and the economic costs [from environmental degradation] are even higher" (Brooke, 2014, 542-543), whether or not they immediately show up in the (see also) "GDP" and other "Statistics". See also "Monetization", "Great Extinction, 6th", "COVID", "Economics, Parity".

4) Malthus has made a comeback over the past half-century. See also "Great Extinction, 6th". See also "Dynastic cycle", "Neoclassical Economics", "Ricardo, David (1722-1823)".

'Man in the Street', the- is not going to read this book for more than one minute. Most people hate the subject, and it'll never be any different. Even if we are told that all other reforms depend on it, 99 out of a hundred of us will feel an intense desire to change the subject after less than a minute of discussion on monetary reform.

See also "Deceptive Banking Terms (d.b.t.'s)", "Attitude inoculation", "Madison, James", "Marx, Karl".

'Management' vs. 'leadership'- What is a blind spot for?

...to take advantage of/exploit?

...to overcome/educate against?

1) (The scale of this issue ain't what it used to be in the 20th century)

1b) The Kinks' (anthropological) Anthology on this (declining state):

2) lemmings...(in the 21stcentury); see "Imperialism, 'modern'".

3) ...cliff; see "Democide", "Methodology".

See also "National Identity Cycle", "Debt cycles", "Cultural Calendar", "Reform, 101", App.C: "1-2-3".

Manager- ("anybody who has... responsibility for the work of anybody other than himself" [Hollis, 1949,]; except in the education sector)

1) All "but the smallest-minded and most foolish among managers are the first themselves to insist that the most important of all their tasks is that of creating among their workers a full sense of partnership in their work" (Hollis, 1949, 100). See also "'Management' vs. 'leadership'".

Marginal cost- (*marginal*, in Econospeak, 'means the last unit...of something obtained, produced, or consumed') 1) Marginal cost "is the cost...of a very small increase in some activity" (Daly & Farley, 2004).

Marginal utility theory- "In the 1870s, *classical political economy* began to be replaced by a predominantly *British* and *Austrian* theory focusing on small changes in psychological pleasure or 'pain' resulting from small units added or subtracted from [an isolated individual's] consumption. As such, *marginalist analysis* is a synonym for asocial analysis, viewing economic relations in terms of individual psychology, based on a crude supply-and-demand schedule of satiation, [and] ignoring the wealth addiction that characterizes rentier income" (Hudson, 2015b). See "Rentier Income".

Mark-to-Market accounting- See "Accounting, 'Fair Value'". [not to be confused with (self-reported) 'mark-to-model' listings, which are based on 1 person/institution, as opposed to MTM's 2 or 3 parties.]

Market Bolshevism- 1) “The coup by Yeltsin’s oligarchic ‘family’, so-called because the intolerant and covert means by which financial operators seized power are reminiscent of Lenin’s coup in 1917. *Financialized* ‘free markets’ require as much centralized planning as does a Keynesian or socialist state, but it is done by large financial institutions. Rather than generating profits in the traditional classical sense of a rate of return on the costs involved in productive investment, the economic surplus takes the form of economic *rent*– extortionate pricing– as public utilities and natural monopolies are turned over to insiders” (Hudson 2015b). See also “Public-Private Partnership (PPP)”.

2) Apparently China avoided this (outright oligarchical looting) development [in the quarter-century since the 1990’s], by employing a strategy of (what most would term) “liberalization” + strict governmental control over the basic numbers and statistical reporting (This is one interpretation of Ziang Zemin’s famous “3 Represents”¹⁶³⁹ reform of 2000-02).

2b) “In most economies, inventories are valued at market prices, while in China they are valued by the authorities and adjusted [crafted] later. Constant methodological and base changes also lead to doubts regarding annual [GDP] growth, despite the evident increase in transparency [a.k.a. simply more reporting] in recent years.... [& also an increase in the number of China’s notorious] ghost cities and white elephant uneconomical projects”, c.2019-20 (Lacalle, 2020). See also “China”, “China- statistics”.

Market economy- 1) It “is very clear that markets did spring up around ancient armies” (Graeber, 2012, 50). “[S]ince kings usually controlled the gold and silver [‘international money’] mines, what exactly was the point of stamping bits of the stuff [into coins] with your face on it, dumping it on the [domestic] civilian population, and then demanding they give it back to you again as taxes? It only makes sense if levying taxes was really a way to force everyone to acquire [the necessary] coins, so as to facilitate the rise of markets”, which generally made things easier for everyone (Graeber, 2009). “Early markets often followed armies or royal entourages, or formed near palaces or at the fringes of military posts” (Ibid). See also “Coined money”.

2) “[E]very economy is a market economy in one form or another” (Hudson, 2015b). “There are 3 major modes of market relationships, and they typically co-exist: 1] gift exchange in a system of reciprocity; 2] redistributive exchange at allocated prices; and 3] flexible price-setting markets. Anti-government ideologues usually try to limit the definition of ‘market economy’ to the latter form, claiming that attempts to regulate prices are inherently futile. But the earliest documented prices are found in Mesopotamia in the 3rd and 2nd millennia BC, in a remarkably stable set of price equivalences among key commodities, salary rates, and interest rates, [which was] administered initially by the palaces and temples...[then] spreading to the economy at large. Standardization [of ‘weights and measures’] always has been primarily a public regulatory function; (See Mixed Economy)” (Hudson, 2015b). See also “Money”.

3) “Markets are money-borne, rather than money being market-borne” (Huber, 2017, 2). See also “Barter”.

‘Market forces’- euphemism/passive voice smoke screen for “Boards/Board Systems”. See also “Market fundamentalism”.

Market fundamentalism- (sometimes a.k.a. the ‘financial market efficiency hypothesis’¹⁶⁴⁰)

¹⁶³⁹ President Jiang (r.1993-2002) promulgated (in 2000) and formalized (11/2002) the de jure acceptance of ‘capitalists’ and (supposedly, or mostly) non-governmental elites into the Chinese Communist Party (CCP), on an equal footing. ‘Hardliners’ at the time criticized Jiang for overwriting the CCP’s official ideology from “protecting the *interests of the peasantry & workers*” to simply that of protecting “the overwhelming majority of the people”, in order to placate the growing bourgeoisie-entrepreneurial class. Jiang replied that attaining the communist mode of production (formulated by earlier communists) was more complex than had been realized. “By doing this [‘reform’], the CCP...[was] in fact strengthening its orthodox ideology, so as to increase its authority and legitimacy”, as opposed to letting the capitalists get out of hand (Hepeng, 2004). See also “Estates, 3” [.represents], “Communism”.

¹⁶⁴⁰ For instance, that “the role of the big investment banks and hedge funds is...limited to correcting market distortions... [instead of something much more like] creating these distortions” (Durand, 2014, 12).

- 1) “The belief that the optimum common interest is only achievable through a *market equilibrium*, resulting from individual decisions by market participants seeking to maximize their own private gains. Epitomized by Margaret Thatcher’s declaration that ‘there is no such thing as society’, its policy conclusion is that ‘*free markets*’ should not be distorted by public regulations enacted in the name of the common good. Hence, it has become...[synonymous with a] *rentier economy*... (See *Chicago School and Deregulation*)” (Hudson, 2015b); i.e. central planning by the banks that controls (and also largely directs) the money supply. See also “Equilibrium”, “Investment banks”.
- 2) In the years preceding the Financial Crisis, “markets” were often “given a sacred character: *Omnipotence*: Don’t try to legislate against the market; market forces will crush your laws. *Omniscience*: Don’t try to instruct market behavior; it has inputs from millions of participants and knows more¹⁶⁴¹ than your regulators ever could! *Benevolence*: Do the right things and the market will reward you; misbehave and you will be punished! Omnipotence, omniscience and benevolence are attributes of a god, and Senators don’t often fight with God!.... holding those beliefs requires ignoring loads of evidence: ignoring the damage done to the airline passengers by deregulation, the damage done to society by media concentration, the continuing damage done to America’s middle class, etc.” (Zarlenga, 2011). See also “Zombie”, “Finance”, “BlackRock”.
- 3) “The doctrine of central bank independence...is truly a religious matter” (McCulley, 2012). See also “City (of London), the”. 
- 4) “Theirs is a world we have lost. To understand it, you had to believe that global markets, like the seasons, were givens. You had to *believe* that markets had a logic by which they ruled and that the outcome of their rule was, on the whole, benign” (Tooze, 2018). This is personification fallacy. See also “Personification”, “Logical fallacies”.
- 5) ‘The market’ is ‘The Wizard of Oz’. That’s how they deal with America. See also “Hegelian”, “Duopoly”.
- 6) Actually “‘the market’ [just] reflects the status quo of property ownership and credit-creation privileges at any given moment of time, without consideration for what is fair and efficient or predatory. Vested interests claim that such a market is an immutable force of nature” (Hudson, 2017p); like the seasons.
- 7) Over the decades, this ideology can develop to a serious problem; when citizens “...believe that wealth is always counted in terms of money [or in more precipitous/derivative ‘credit’]... [I]n truth, they should understand that all ‘new wealth’ originates in the natural world, and that all of Man’s subsequent activities simply ‘add value’ to the Earth’s products” (Cook, 2017). See also “Ponzi scheme”, “Imperialism”, “Parity pricing (for the primary sector)” [not bank credit], “Common sense”.
- 8) Within a (more pluralist or pristine) market, however, such as with Monetary Reform and a clarified monetary system, “the government can [then] treat banks and non-banks equally and refrain from market disruption” (Wortmann, 2019b, 4). “[I]f...[a public] safe account is generally adopted, [then] it becomes possible to liberalise [deregulate] lending. The safe account offers an alternative to deposit guarantees, which can then be phased out. That makes it less easy for banks to finance themselves with [other people’s] savings, and encourages them to finance themselves, as non-banks [already] do” (Wortmann, 5).
- See also “Free market”, “Economics”, “Myths, Big 6”, “Industrial Revolution, 2nd”, “Lender of Last Resort (LoLR)”, “Design (Knowledge Age)”.

¹⁶⁴¹ “Under...conditions of [the theorized] ‘perfect information’ that are assumed for markets to ‘clear’, where the quantity supplied meets the quantity demanded, people ‘automatically’ exchange goods and services, without delay or friction, according to the production costs of the commodity and people’s ‘marginal utility’-- that is, the balance between the convenience obtained and the risk avoided from its possession” (Greenham, Ryan-Collins, Werner, & Jackson, 2012). See also “Economics” [micro (not macro)]. “If you take the assumption of perfect information to its logical conclusion, there would be no need for money or indeed any other kind of intermediating financial service in the economy at all” (Ibid). See also “Money, ‘end of’”.

The fall of Wall Street is for market fundamentalism what the fall of the Berlin Wall was for communism. Interview with Nathan Gardels, The Huffington Post, September 16th 2008
(Joseph Stiglitz)

["the' other shoe?]

Market maker- (a.k.a. 'a buffer system') 1) "a firm that continuously provides prices to both buyers *and* sellers in the market, and stands ready to transact at those prices in various market environments" (Federal Reserve Bank of New York, 2017). See also "Primary dealers (23)", "Desk, the".
2) Because "other durables that have some degree of liquidity, but not complete liquidity. For example, [liquidity for] stocks & bonds.... [require] a re-sale market... which is organized and orderly.... It moves in an orderly manner.... because all orderly markets have a *market maker*-- that is an institution or an individual who buy when everybody wants to sell...[& vice versa]. So the market-maker steps in and maintains orderliness...And unless you have an orderly market for re-sale, you do not have a very liquid asset. The more orderly a market is, the more liquid the asset is" (Davidson, 2019, mn.12-13).
3) How has that been working, in practice, in the 21stc thus far? Because "liquidity in the gilt [bond] market did deteriorate during the [Great Financial] crisis, [the primary] dealers [i.e. the monetary 'market makers' today] appear to have been restricted in their ability to [in fact] make markets by [their] balance sheet constraints and by [certain] frictions in the interdealer segment. On top of this [apparently intra-guild or intra-Cartel 'frictions'], instances of concentrated dealer activity appear to have contributed further to [even more] illiquidity"¹⁶⁴² (Benos & Zikes, 2016, 24). See also "Primary dealers", "Bank welfare". See also "Central Bank", "Lender of Last Resort (LoLR)", "Forex".

Market price: 1) "For sure, markets in good [amount of competition] order are a mechanism of self-organisation and mutual readjustment. Many...markets, though, are oligopolistic and corporatist power structures, and this certainly applies to contemporary big banking and finance..." (Huber, 2013, 8). As with any herd (presuming that such a 'market' is not in fact controlled by a few [usually opaque] individuals), genuine "markets' judgement on risk and opportunity is often subject to serious mistakes. Markets normally do not foresee major events. Markets often follow rumours and hypes and follies. They often rationalise afterwards what they are doing, rather than having had solid reasons for doing it. Markets quite often exaggerate over long periods of time and readjust only with great delay, when all of a sudden they go into breakneck reverse..." (Ibid). For some time in late September 2008 there was no "market price" on Wall Street. See also "Finance".
2) "What the Native Americans sold Manhattan for to the Dutch traders. A power relationship masquerading as a voluntary exchange, as in 'Your money or your life'" (Hudson, 2015b). See also "Market fundamentalism", "Equilibrium".

Market socialism-'All "suppliers attempt to set prices, the main question to ask is who sets them: monopolies, financial managers, or government. Market socialism is a system in which public agencies regulate or administer prices and incomes, rather than leaving this function to private suppliers and monopolies. The public objective is to ensure that prices reflect necessary costs of production, rather

¹⁶⁴² For example, in some "instances of QE activity... [UK primary] dealers and other market participants were constrained in their ability to deploy capital to the extent required to eliminate [market or monopoly] mispricings... [O]ur paper sheds [new] light on the complex relationship between dealer balance sheet constraints, competition, and liquidity... Given that several of the market-making institutions have been [according to the BIS, since 2011] systemically important [or "SIFI"] banks" (Benos & Zikes, 2016, 25). See also "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)". **Distortion? "" (Mehrling, 2020).**

than watered costs, interest or rent; or (in the case of public infrastructure) to subsidize prices for key products or services” (Hudson, 2015b). See also “Window Guidance”.

Marx, Karl (1818-1883)- A 19th century labor organizer and (neo-‘political economy’) polemicist, whose 1) “popular image... [today] arose in part from later propaganda¹⁶⁴³... [as his] intent was to show that the principles of ‘political economy’...led inexorably to socialism”¹⁶⁴⁴ (Zarlenga, 348). Translator Terence McCarthy noted that “Adam Smith was the overwhelming influence upon the mature Marx. Marx’s approach to economics, although deeply rooted in Ricardo, was basically Smithian” (Marx, ix)... i.e. “theoretical” and “internationalist (cosmopolitan) rather than nationalist” (Zarlenga, 348). What Zarlenga’s *Lost Science of Money* (2002) found most “striking” between the two founding ideologues of ‘Capitalism’ and ‘Socialism’, respectively, were their “common views on the nature of money... [shared] virtually the same primitive commodity concept of money; they were both essentially ‘metallists’” (349). “Like Smith, Marx began his magnum opus [*Capital*, vol.1] with a discussion of money.... Regarding paper money, Marx wrote: ‘Paper money is a token representing gold, or money... only in so far as paper money represents gold...’ These views are repeated often¹⁶⁴⁵ in the first sections of Vol. 1” (349). There are 4 volumes to *Capital*. Marx wrote only the first volume. Then Engels did the second, from Marx’s notes, in 1885 (2 years after Marx died), and then Vol. 3 in 1894. Before dying, Engels asked Kautsky to write Vol.4, but that proved impossible, as directed, with McCarthy noting that: “Marx’s material... was disorganized and disjointed,” citing “Marx’s none to clear wishes” (Zarlenga, 348, n17). With all volumes and authors, however, the “lack of reform proposals in *Capital* is noteworthy. [French economist Suzanne] De Brumhoff writes: ‘Marx is obviously no more a monetary reformer than he is a Saint-Simonian reformist’ (p. 120). Marx doesn’t require reform, for he is postulating an inevitable progression toward his desired outcomes” (Zarlenga, 352). See also “Hegelian dialectic”.

2) Marx falsely “...believed that the financial system was evolving in a way that reflected the needs of industrial capital formation” (Hudson, 2011d). See also Poteat, 2014b.

2b) “I have nothing against Marx[’s theories], except the fact they do not explain what happened, which, to me, is a fatal defect” (Quigley, 1976c-pt.3, mn.330).

3) Was Marx an outright stooge for the banksters of the mid-19th century and Fin de Siecle? Leaving aside his career-long sponsorship by ‘capitalist’ Engels, it “is clear that the *Manifesto* was a curio, noted [only] very occasionally, and not a point of reference-- and *certainly not* a ‘theoretical’ point of reference-- for anyone... [Marx & Engels themselves] quickly moved on to other things, notably [propagating] mass-media revolutionary journalism-- [and] did not look back very much” (Carver, 2015, 69). “That kind of activity-- polemical intervention into ongoing political situations-- was really where Marx’s heart was. Such brief notoriety as Marx had at the time during the 1850’s and 1860’s was [merely] due to his *guilt by association* with the convicted revolutionaries,¹⁶⁴⁶ but among the exiles of course it was [henceforth] a *red badge of*

¹⁶⁴³ “I have never met an official from any Marxist country that has ever read Marx.... [In the mid-20th century, US Socialist leaders] all had *Capital* on their bookshelves. Not a single one had...read it” (Hudson, 2010b). See also “George, Henry (1839-1897)”.

¹⁶⁴⁴ Alexis de Tocqueville, writing before (the well-funded) Marx was famous, could not have disagreed more: “a...trait... which, in my eyes, best describes socialists of all schools and shades, is a profound opposition to personal liberty and scorn for individual reason, a complete contempt for the individual. They unceasingly attempt to mutilate, to curtail, to obstruct personal freedom in any and all ways. They hold that the State must not only act as the director of society [“Dirigism”], but must further be master of each man [“Socialism”], and not only master, but keeper and trainer [“Communism”]. For fear of allowing him to err, the State must place itself forever by his side, above him, around him, better to guide him, to maintain him, in a word, to confine him. They call, in fact, for the forfeiture, to a greater or less degree, of human liberty” (de Tocqueville, 1848, 540-541). For more on Marx vs. de Tocqueville, see also “Socialism, political”.

¹⁶⁴⁵ “Marx’s views on money were even more out of date.... Marxists seem to have been the last to abandon their primitive belief in gold as a currency medium and in the gold standard” (Soddy, 1934, 11). See also “Gold standards/bullionism”.

¹⁶⁴⁶ It was during the “post-revolutionary show trials of the early 1850’s in Cologne... [that] ironically the King of Prussia and other members of a conservative and frightened readership” scape-goated [the rather Jewish-named] Marx, by putting his curious pamphlet “into the public domain” and public court records (Carver, 69); which was apparently just enough notoriety to get Marx effectively exiled from German-speaking lands. There were initially only 2 translations from the German, a Swedish one (later in 1848), and a serialized English translation, in a British socialist magazine “which hardly had any readers” (in 1850), both of which “sank without [a] trace” (Hobsbawm, 2012, 5). “Nobody” in the ‘50s or early 1860’s, “would have predicted a remarkable future for the [little publicity stunt] Manifesto.... [and] by “the middle 1860’s, virtually nothing that Marx had written in the past was any longer in print” anywhere (Ibid). After the aptly named Paris

courage. But famous, or a 'theorist', he was not.... For Marx the exposure of a police spy... was of the utmost importance, and it fits with his previous form as a pamphleteer. He moved from cause to issue to personalities to critique... and had been doing so since the early 1840's.... In the special preface to the 'feature' edition of the *Manifesto* in 1872-- which [both] Marx and Engels were pressed into writing-- they sound really rather bemused about the re-publication of the somewhat scrappy little work.... this long-forgotten flash-off-the-press..." (Carver, 2015, 70). All of Marx's family¹⁶⁴⁷-- eight siblings, one wife, seven children-- were dead long before the outbreak of the Russian Revolution; of his 3 children that had survived to adulthood, 2 daughters killed themselves, childless. See also "Violence".

4) "Marxists bury themselves trying to solve the insoluble [falsely premised] problem of Labor Theory of Value"¹⁶⁴⁸ (Keen, 2018b, mn.25), while continuing, like neoclassical economists, to ignore the role of banks, money, and debt, preferring instead polemics.¹⁶⁴⁹

4b) "Marxists never did understand land, or money either, because they keep conflating both with capital and wealth" (Sullivan, 2015).

5) Why? See "'Opposition', controlled", "Mediocrity".

See also "Hegelian dialectic", "Lender of Last Resort", "Smith, Adam (1723-1790)", "Communism", "Corporate Media Cartel", "Protocols of the Learned Elders of Zion", "Fin de Siecle".

Marx Bros.¹⁶⁵⁰

Three Stooges

Marxists- [often deep-budgeted] non-historians trying to explain 'why' 1) "It is impossible completely to understand Marx's *Capital*, and especially its first Chapter, without having thoroughly studied and understood the whole of Hegel's *Logic*. Consequently, half a century later **none** of the Marxists understood Marx!!"- V.I. Lenin, *Conspectus of Hegel's Logic* (1914).

2) Perhaps this is because: Hegelian "Dialectics is the teaching which shows how Opposites can be and how they happen to be (how they become) identical,-- under what conditions they are identical, becoming

Commune's (Civil War's) wanton bloodiness of 1871, however [during which 'the Commune' suffered a 'cannon fodder' 3:1 casualty ratio], Marx-X, or Marx's name gained "considerable notoriety in the press as a dangerous [30-year-old, macabre] leader" of sorts, and subsequent show-trials of Social-Democrat political leaders further propelled Marx-X, or Marx's name, to where "Marxist influence rapidly increased in the 1880's" (Hobsbawm, 6). Speaking of materialistic determinism, the entire "Marxist" (neo-Macabee) episode was pretty much congruent with a parallel rapid rise in (and eventual fall of) the 2nd Industrial Revolution [a.k.a 'the internal combustion engine' & 'explodapedia' intellectual justifications]. See also "Industrial Revolution, 2nd", "Protocols of the Learned Elders of Zion" ('controlled opp.?), "Fin de Siecle", and Weber, 1989, mn.17-18 (for "Macabees/macabre".Fr).

¹⁶⁴⁷ ...with the exception of one grandchild, French Socialist-Zionist newspaper publisher Jean-Laurent-Frederick Longuet (1876-1938).

¹⁶⁴⁸ See also "Bitcoin".

¹⁶⁴⁹ "In the US, the early progressives went after both the landlords and the bankers, and Marxists [then] attacked them for that, beat down the movement, and hijacked the name 'progressive'. When I was young, Marxists were calling themselves 'liberals' because people had forgotten what liberals originally stood for. Now that the people have forgotten what progressives originally stood for, they use that name as well. They would never get anywhere if they were openly Marxist"; "This [typical 'mainstream' media cartoon] is neo-Marxist good-vs.-evil nonsense. It won't advance anything other than the level of rancor"; "I've had lots of conversations with Trots. They have all been very sincere and well meaning but seriously out of touch with how the world actually works" (Sullivan, 2019). See also "Hegelian Dialectic".

¹⁶⁵⁰ "Marx was...the first [political economist] to focus his analysis on ['resistance' via] *ad hominem*s. Those prior to Marx [had] limited *ad hominem*s to [only those scenarios] where the situations had effects on the people who suffered or benefited from those situations.... Marxists (including Marx) tend to be fond of saying that things are [somehow] '*transformed*' [passive voice] from one economic factor or return to another, when in fact they are *exchanged* for one another. They are like the children who are fooled when a magician puts a rabbit into a hat and pulls out a bird" (Sullivan, 2018). For more on meta-physical winner and loser scripts, see also Icke (2018, mn.11-12).

transformed into one another,-- [and] why the human mind should grasp these opposites not as dead, rigid, but as living, conditional, mobile, becoming transformed into one another.”
- V.I. Lenin, *Conspectus of Hegel's Logic* (1914). See also “Hegelian dialectic”, “Capitalisms”.

Matrix, the- See “Atlantis (essay)”, “Industrial Revolution, 3rd”.

Maturation- see “Freedom Continuum (maturation)”, “Adolescence of Mankind”.

M.I.T. (Massachusetts Inst. of Technology)- (progenitor of ‘New Keynesianism’, most Fed heads, and John Bates Clark medalists)

1) “Even I didn’t fully appreciate how tiny the intellectual gene pool behind these ideas was.... not merely were the ideas coming from a single perspective, most of the major proponents of these ideas came not only from the same University (MIT), and even the same seminar (Class 14462, conducted by Stanley Fischer). Think of the dominant names in Economics and there are a few obvious entries: Ben Bernanke; Larry Summers; Paul Krugman, Olivier Blanchard; Ken Rogoff. Summers acknowledged all of them (bar Krugman) as classmates from Stanley Fischer’s seminar, while Krugman did his PhD at MIT (as did the other dominant macro textbook author-- and ex-advisor to George W. Bush and Mitt Romney-- Gregory Mankiw). This goes well beyond the dominance of economics by a single school of thought, and I felt that ‘*in-breeding*’ was a nasty but evocatively accurate way to express just how narrow the so-called ‘*economic debate*’ had become-- and therefore how justified were student calls for pluralism in economics. Hell, we don’t simply need pluralism: we need to hear opinions from people who didn’t attend Stanley Fischer’s lectures” (Steve Keen, 2015c). See also “Fischer Stanley”, “Krugman, Paul”, “Bernanke, Ben”, “Politics, macro” [Summers].
See also “Neoclassical Economics (NCE)”, “Mythomatics”, “Plan, the (old)”.

Media, A- (a.k.a. ‘mainstream media’, ‘legacy media’, ‘Mockingbird’) see “Corporate Media Cartel (CMC)”.

Media, B- (a.k.a. ‘the’ alternative media, ‘alt media’, ‘limited hangouts’)

See “Jones, Alex”, ←“Deep State”, ←“(EIC)”.

1) A ‘controlled dialog’ necessitates controlling ‘both sides’, via controlled ‘talking points’ agenda.

<https://www.youtube.com/watch?v=gTK6UAOHrGs> (O’Connell, 2022c, mn.15). See also “Hegelian Dialectic”.

See also “Imperialism, ‘modern’” [Brontosaurus].

Mediocrity- 1) “The belief that one is doing a very good job, when in fact the performance is short sighted, self-defeating and hence incompetent. Psychologists have found that the more intelligent [and conscientious] test-takers tend to question their answers and worry that they might have done better. The more mediocre people imagine that they have done an excellent job, thanks to the narrow scope in which they frame their thoughts. Prime *economic* examples [of mediocrity] include monetarist ideas that the way to increase prosperity is to impose austerity, shrinking markets. Self-serving double standards usually are a sure sign of [chronic] mediocre thinking...” (Hudson, 2015b). See also (macro) “Economics”.

2) “Mediocrity is self-inflicted, and genius is self-bestowed.”- Walter Russell.

See also “Middle class”, “Methodology”.

[Stooges? See also “Great Extinction, 6th”]

Member banks (MB's)- see "Banks" (synon. 'commercial banks'; i.e. constituents of the Central Bank).

Memory- (in [see also] "Human beings") See "Lying", "Reverse psychology".

Menger, Carl (1840-1921)- See "Austrian School".

Mental illness- See "Devil", "Design, human".

Merchant banking- (synon. 'private equity funding') specializes in international financing and joint ventures, and/or securities underwriting, on a larger scale than *venture capital* firms, but a smaller scale than *investment banks*.

1) "This means managing money in venture investment by starting and growing new companies or taking *controlling interests* in existing companies, including leveraged buy-outs. Rather than serving companies who needed to raise money by issuing securities, or...[making] markets in existing securities, we were going to start raising money so [that] we could create, buy and trade [our own] companies. A company was no longer a customer. They were now a target."- Catherine Austin Fitts, 2006;

<https://dillonreadandco.com/brady-bush-bechtel-the-boys> . See also "Big 3 (Asset managers)".

2) specializes in a) "*private equity investments*...[made] by financial institutions in the unregistered securities of either privately or publicly held companies. Both investment banks and commercial banks engage in merchant banking, and the type of security in which they most commonly invest is common stock.... Other investment bank services-- b] raising capital from outside sources, c] advising on mergers and acquisitions, and d] providing bridge loans while bond financing is being raised in a leveraged buyout (LBO)-- are also typically offered by financial institutions engaged in merchant banking" (Craig, 2002). See also "Investment bank".

Mercantilism- (primitive bullionism attitudes prevailed- from c.1500-c.1750, motivating the pursuit of trade surpluses; a.k.a. 'economic nationalism')

1) In the 18th century, international payments were still only made in specie or bullion, as no one had yet established any standard of international trust beyond that. All the major powers of the era thus coveted-- at times single-mindedly-- the bullion & specie that could only come from either a) new finds (mines) or b) trade surpluses... or outright theft & war [as Spain, France, & Britain were most renown for, respectively]. A "trade surplus in gold permitted the surplus country... to invest in more factories at home, to manufacture more for export, thus bringⁱⁿg home [still] more gold" (Liu, 2007).

2) "Supremely jealous with respect to trade...[the English] bind themselves...little by treaties, and depend only on their own laws.... The tariff or customs of England are very unsettled with respect to other nations; they are changed, in some measure, with every parliament" (Montesquieu, 1748, 320-321).

Hmm. But everybody could (by the 2nd half of the 18th century) do that? A new rub was needed...
...& Mercantilism, neo- (Adam Smith and/or Ricardo-type hypocrisy, as identified by Friedrich List)

3) Adam Smith-- walking a tight rope between liberating (resourceless trading nation) Scotland and overly-offending the (ultra-Imperialist grabber) United Kingdom/London-- is father of the (philosophical) tree. See also "Philosophy trees".

See also "Smith, Adam (1723-1790)", "Ricardo, David (1772-1823)".

Methodological Individualism (M.I.)- (an addendum to the post-agriculturalist "Fin de Siecle"-era's initial envisionings of an urban, bankmoney world, directed by (the newly sanctified/empowered) corporate Boards and the needs of Industrial Capitalism, M.I.)

1) "amounts to the claim that social phenomena must be explained by showing how they result from *individual* actions, which in turn must be explained through reference to the intentional states that motivate the individual actors. It involves, in other words, a commitment to the primacy of [determining] what Talcott Parsons would later call '*the action frame of reference*'... It is also sometimes described as

the claim that explanations of ‘macro’ [mass] social phenomena must be supplied with ‘micro’ [individual leadership] foundations” (Heath, 2015).

2) From this reasonable foundation, formally originating from Max Weber’s *Economy and Society* (1922), this Weberian concept was subsequently captured by another Weberian concept-- bureaucracy-- and gradually perverted, over many decades of academic & publishing groupthink, into tunnel-visioned, ‘Western’ cartoon-like caricatures of (what was originally just supposed to be going ‘one step further’) scientific empiricism. See (for example): “Homo economicus”, “Fundamental Attribution Error”.

3) a common denominator or thread running through the Fin de Siecle-era’s envisioning of the Rockefeller & Carnegie-controlled Foundations and special interest-serving pseudo Economics (a.k.a. “Finance Capitalism”, “State Capitalism”) that would come, after the Great Wars, to dominate the 20th century.¹⁶⁵¹

See also “Finance Capitalism”, “Neoclassical Economics”, “Chicago School”, “Homo economicus”.

Methodology (culture)- (what will separate the 3rd from the 2nd millennium, relegating the barbaric see-saw of Imperialism-Feudalism to the dustbins of history)

“US universities fairly consistently blitz world rankings, often taking seven of the top 10 positions in the world, as well as swags of Nobel Prizes, even as their students face record levels of graduate unemployment” (McLaren, 2013). This is a crisis¹⁶⁵² of detail or hods. See also “Hypocrisy”, “Foundations”

1) What’s the difference between a ‘commune’/communism and a ‘co-op’/locally co-owned institution? An absentee-‘capital’ (or political) owner vis-à-vis local-active (i.e. real people with a real face) who actually own an equity share in the enterprise-- not just a unit-- can make all the difference in the world (i.e. de facto closed books or open accounting/accountability). See also “Civil National Identity”.

1b) There is no valid excuse for any person, institution or thing concealing or refusing to fully reveal, publish, or upload its methodology (of any/all findings) in the 21st century. This is not complicated; it is just a necessary change in attitude (if public society is to be **valid**):

https://www.youtube.com/watch?v=M2o2FRwn_hg [*The Thing*]. See also “Scientific method”, “Communism”.

2) Once Upon a Time, there was a major studio horror flick that flopped at both the box office and with ‘the’ critics (pulling in mostly poor reviews & <\$20 mn. from theaters). Decades later, however, it resonates with RottenTomatoes’ meta-surveys (of >100k viewer reviews) as being squarely in the top 10 best horror movies ever made, surpassing, according to this comprehensive methodology, even such all-time classics as *JAWS* (i.e. ‘JustAccountingWorldScam’), *Frankenstein* (i.e. ‘Corporate personhood’), and any of the million-and-one zombie movies released since the 1960’s (except for 2004’s comedy *Shaun of the Dead*). Clearly, something about the **storyline** has aged well.

From Alexander Del Mar, we know of the English Stuart [r.1603-1714] Dynasty’s new King (Charles II)’s strategic scheming with the East India Co. in the 1660’s (Titus, 2019b, mn.3-6). This was a couple of decades before the “Glorious Revolution” & Dutch-UK merger, (what some still call) ‘the birth of the Modern Era’ (most often listed as c.1700--). Post-“free coinage” in 1666, it didn’t take long for the following (so-called) ‘modern’-defining chain of events to take place (expedited of course by the advent of trans-Oceanic [see also] “World Wars”):

3) ‘The Thing’ was a novel villain in the early 1980’s; not anymore. It is now a rather commonplace tactic (actually more like a strategy) of “*a ceaseless shape-shifting, that is unstoppable, because it is*

¹⁶⁵¹ Age of (coke bottle-glassed) Projectors

¹⁶⁵² The US “consistently spends far more money per school age student than any other country in the world, something like \$11,800 per child compared with \$4,000-\$5,000 in comparable countries. Excluding the huge sums spent on the 10% of children who go to private schools, the United States spends something like \$8,000 of public money per child per year. Yet, in 2012, the United States was 27th on the list of world rankings for school educational achievement, well below Cuba, below even Mexico and Brazil. Social critics regularly blast American public schools as little more than mind-deadening factories designed to propel working class white students into brain-dead jobs and minority students straight into the arms of the prison-industrial complex. From the other side, public schools are excoriated as retirement parks for lazy unionized teachers to indulge their habit of force-feeding the innocent on Marxist propaganda” (McLaren, 2013). See also “Marx, Karl (1818-1883)”, ←“Hegelian Dialectic”, “Devil’s MVP”.

undefinable” - <https://www.youtube.com/watch?v=l-xn-KNFZ64> [mn.20];
<https://www.youtube.com/watch?v=8mkrY9hL-qo&t=81s> [The song that asks the question: ‘Who?’. See also “Hegelian dialectic” (both sides), “Orwell” (undefinable), “Secrecy, Cult of”, “Reserve currency”/”Super Imperialism”, →“*Word Par Economy*”].
See also “Imperialism”, “Federal Reserve audit”, “Democracy”, “Parasite”; “Accounting”, “Design” [culture].

Middle class- (that which governs best, or [at least] least-badly)

1) “Thus it is manifest that *the best* political community is formed by citizens of the middle class, and that those states are likely to be well-administered in which the middle class is large, and stronger if possible than both the other classes, or at any rate than either singly; for the addition of the middle class turns the scale, and prevents either of the extremes from being dominant. Great then is the good fortune of a state in which the citizens have a moderate and sufficient property; for where some possess much, and the others nothing, there may arise an extreme democracy, or a pure oligarchy; or a tyranny may grow out of either extreme-- either out of the most rampant democracy, or out of an oligarchy; but it is not so likely to arise out of the middle constitutions”- Aristotle, c.350 BCE (Book 4, ch.xi). See also “Separation of Powers”, “United States, the”, “Democracy”, “Parties, political”.

2) “Again, the middle class is least likely to shrink from rule, or to be over-ambitious for it; both of which are injuries to the state. Again, those who have too much of the goods of fortune, strength, wealth, friends, and the like, are neither willing nor [perhaps even] able to submit to authority. The evil begins at home; for when they are boys, by reason of the luxury in which they are brought up, they never learn, even at school, the habit of obedience. On the other hand, the very poor, who are in the opposite extreme, are too degraded. So that the one class cannot obey, and can only rule despotically; the other knows not how to command [things like, f.e., reading] and must be ruled like slaves... and nothing can be more fatal to friendship and good fellowship in states than this” (Ibid). See also “Aristotle”, “Common sense”.

3) In other words, Aristotle augured modern ideals by linking the middle class to *virtue* itself.

3b) How much of the (original European) Renaissance was due to the (13thc) unearthing of Aristotle’s works? https://www.youtube.com/watch?v=1Vac50_uUhl [WT, pr.24, mn.1-4]. See also “Central Banking-Warfare model”, “Accounting, double-entry”, “Methodology (culture)”.

4) “As equality of fortunes supports frugality,¹⁶⁵³ so the latter maintains the former. These things, though in themselves different, are of such a nature as to be unable to subsist separately; they reciprocally act upon each other; if one withdraws itself from a democracy [or democratic republic], the other surely follows it” (Montesquieu, 1748, 45). See also “Bankmoney regime” [.estates], “United States” [.1980’s]. See also “Montesquieu” [.Rule-by-Virtue], “Women”, “Dumb-downing”, App.C: “1-2-3”.

‘Middle East’, the- See “Nasserism”.

Middle-man-

¹⁶⁵³ ”True is it that when a democracy [or democratic republic] is founded on commerce, private people may acquire vast riches without a corruption of morals. This is because the spirit of commerce is naturally attended with that of frugality, economy, moderation, labor, prudence, tranquility, order, and rule. So long as this spirit subsists, the riches it produces have not bad effect. The mischief is, when excessive wealth destroys the spirit of commerce, then it is that the inconveniences of [structural] inequality begin to be felt” (Montesquieu, 1748, 46). See also “Accounting” [.’end of’].

[Braun, Krampf, & Murau, 2020]

See also “State capture”, “Technocrats”, “Deceptive Banking Terms (d.b.t.’s)”, “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”, “Industrial Revolution, 3rd” [doing away with], “Monetary reform”.

Migrant Crisis (Mediterranean)- “Almost all the Europeans know where the immigrants are coming from... the Near East. And they’re aware of the fact that most of the immigrants are coming as a result of the NATO policies promoted by Hillary and by the Obama Admin.... Once Hillary pushed Obama to destroy Libya... she turned over the arms-- and Libya was a very heavily armed country--... to ISIS... to Al-Qaeda, and Al-Qaeda used these arms to attack Syria and Iraq”, forcing millions to “immigrate or get killed.... [Today] The Europeans, the French, the Dutch, the English are all aware of the fact... that Brussels is really NATO, and NATO is really run by Washington” (Hudson, 2016i, mn.1-2). See also “Brexit”.

Military-Executive-Corpocracy (MEC)- (a.k.a. ‘the executive branch’ & the broader galaxy of their ‘contractors’; more-or-less steered by the ‘intelligence networks’ [Icke, 2019]; basically ‘the Data Beast’) “What looks like many different government agencies with diverse purposes, is really a few large defense contractors and banks, building and maintaining vast databases that are easily aggregated in powerful ways.”- Catherine Austin Fitts (Solari Rept., 22-1-8). See also “Power”, “Design”.

This covers what might be called the ‘command sector of the economy’, consisting of the armed services, the executive branch of governments, and the larger corporate pyramids of the private sector. See also “Corporations (and corporate ‘personhood’), “Big...”

“I do know, as a historian, that whenever weapons become difficult to use and expensive to obtain, democracy as a functioning political system is in grave danger. How can we avoid the danger? I believe internal restraints are the only solution, in the long run. And how you build those? I don’t know.”¹⁶⁵⁴ - Carroll Quigley, “Mythology of American Democracy” presentation, to the Industrial College of the Armed Forces, August 17, 1972. See also App.C: “1-2-3”, “Military leadership” [sense].

1) If it’s in the Executive, it has a head; it’s like the army, it’s hierarchical. George Bush, Jr.’s ‘friendly CEO’ rhetoric aside, there aren’t any democracies in the executive, or the corporate world, or the military. See also “UKUSA Agreement”, “Timarchy”, “Industrial Revolution, 2nd”.

1b) “Americans [still] think that there are 24 different [Executive branch] agencies at the US federal government. There’s not. There’s one data beast” (Fitts, 2021e, mn.10). See also “Deep State”, “PotUS”, “Separation of Powers”.

2) “The planning system gives us our peculiar devotion to modern higher education, with the emphasis on *generalized* business arts, and the devaluation of higher *technical* skills (science, mathematics, engineering) as well as of older talents such as design, music, draftsmanship, and the fine arts. These we [now] import... the technostructure... needs flexible young men and women willing to be molded to the goals and mores of the organization, and to do whatever it may ask.¹⁶⁵⁵ Here the corporation resembles the foreign service, or the army... education does not impart skill; it imparts *acceptability*” (Galbraith, 2017). See also “Mediocrity”.

¹⁶⁵⁴ Quigley then proffered a guess, that the “crime rate of the largest city in the world, Tokyo, is approximately one-seventh of the crime rate of a city like New York. Why? Internal restraints” (Ibid). See also “National Identity/Nationalism”, [vs.] “Hypertrophy”.

¹⁶⁵⁵ “The Future the US Military is Constructing...[is] a Giant, Armed Nervous System” (Tucker, 2017); via geo-spatial engineering.

3) The “US government is morphing into a top-down control system based on the Chinese model.... Despite the P.R. and marketing... [new/21st century structures in the US gov’t exist] to clamp down on American citizens, shifting the US government from one that gets its power from the *consent* of the governed, to one that gets its power from *controlling* the governed-- and we’ve seen this kind of shift around the world.... The [public] government [here] is really just a secondary power...compared to the real [private] power in the system-- the most senior financial [and I.T.] interests...” (Vrabel, 2011, mn.108).

4) 1980’s-90’s Washington insider Catherine Austin Fitts has described, succinctly, how things work in a typical D.C. bureaucracy of the Bush-Clinton dynasty: “In the trenches... [it] is very complex and messy, because you have a *layer of civil service* who are operating under written instructions. And then you have a *layer of attorneys*, who... behind attorney-client privilege are trying to do funny-business.¹⁶⁵⁶ Then you have a group of *Defense contractors and I.T. contractors*, who are really running the systems, and a lot of stuff is rigged, through the [contractor] systems, so that the civil service doesn’t see it, or at least doesn’t have to take responsibility. And then you have the *political appointees* that are turning over so fast that they have not a clue as to what is really going on” (Fitts, 2015b, mn.31-32). And all US (ostensible) government accounts are at the New York Fed, so “You’re dependent on them, operationally, for thousands of different things; and they’re controlling the Payment Systems with all the other countries and everything else. They are the [technical] platform on which you stand. They control you” (Fitts, mn.32-33). I.T. control middlemen (a.k.a. ‘contractors’) have been elbowing in on the place traditionally held by financial middlemen (a.k.a. banks) since at least the 1990’s.

5) Contracts lawyer Carolyn A. Betts “learned while employed at Hamilton Securities, then [the] FHA’s lead financial adviser, that [the] FHA’s complete second mortgage portfolio was available only on a Lotus spreadsheet kept on a *single* HUD employee’s hard drive. These observations form just the tip of the iceberg of financial management loopholes available, at least at that time, for hanky-panky by those having an interest in manipulating numbers for the benefit of third-party interests” (Fitts & Betts, 2019).

6) “I sometimes think that it’s the *United States of Lockheed-Martin*¹⁶⁵⁷.... Both when I was the Assistant Secretary [at H.U.D.] and then when I was the lead Financial advisor...on repeated times I would try to get the financial information from the [Department’s payment] systems¹⁶⁵⁸, and Lockheed wouldn’t give it to me, and I couldn’t make them.... I know I...[was] legally liable for its management, but apparently...” that didn’t matter much. “I look at ‘the government’ and I see *one* database, managed by a group of defense contractors” (Fitts, 2017t, mn.42-43). “The important thing to understand...is [that] government employees do not run the federal government. Private corporations [contractors] run the federal government, and they run the information systems, the software, and the databases... You’ve basically [already] had a corporate coup d’état...behind the scenes, and it’s very important to understand that.... They’re paying private corporations to do classified things...[and] they are not subject to *F.O.I.A.*” (Fitts, 2018o, mn.16-17). See also “Lobbyists”, “Lockheed-Martin”, “Timarchy”, “Sovereignty”.

¹⁶⁵⁶ A.k.a. “the best of the servant class”, as Robert David Steele might say, for expediting the designs of the financial (and I.C.) class that has comprised the real investment and strategic planners.

¹⁶⁵⁷ Lockheed-Martin “is the #1 contractor to the US government, by about 25-50%, on any given year...[and] the lead weapons manufacturer selling things to the Department of Defense” (Fitts, 2018o, mn.13), that the DoD often then sells on to Saudi Arabia, etc. And “they are also running the Information-Payment systems.... [In the early years] we used to work like crazy to get the Department of Defense or the GAO to produce their [supposedly public] contract budget...[which] should be available as a matter of public record. And they fought for years to make sure that you couldn’t get a breakdown of who was running the country-- the payment systems and the information systems, and the software.... [Congresswoman] Cynthia McKinney... nailed them, demanding to know [who] the contractors...were running the Information Systems, and they weasel, weasel, weasel, and...as far as I know would never report the contracting budget... So, anyway, after the 6.5 trillion went missing during fiscal 2015, Lockheed *spins off its information technology division*... I call it a cut & run because I figure...[by then] they had swept and stole everything...they could.... Information-Payment systems...[are] a very powerful position. You don’t spin that off unless you really want to get rid of the liabilities...[from the 1998-] Financial Coup is what I think.... [The] new company is one of the leading companies running contracts for Antarctica” (Fitts, mn.13-15). See also “Lockheed-Martin”.

¹⁶⁵⁸ “...Lockheed..[was, until spinning off that division in 2015] running the Information and Payment systems-- certainly at [the] DoD” (Fitts, 2018j, mn.37). Although generally, US government computer systems “basically have 2 components: one is the Defense contractors running the *IT* systems...[and] the other is the New York Fed running the bank [*payment*] systems. The New York Fed [more than Lockheed-Martin] is the depository for the US government” (Ibid). See also “Empire”.

[See also “Black Budget”; “Big...”, “NSA”, “Cartels”.]

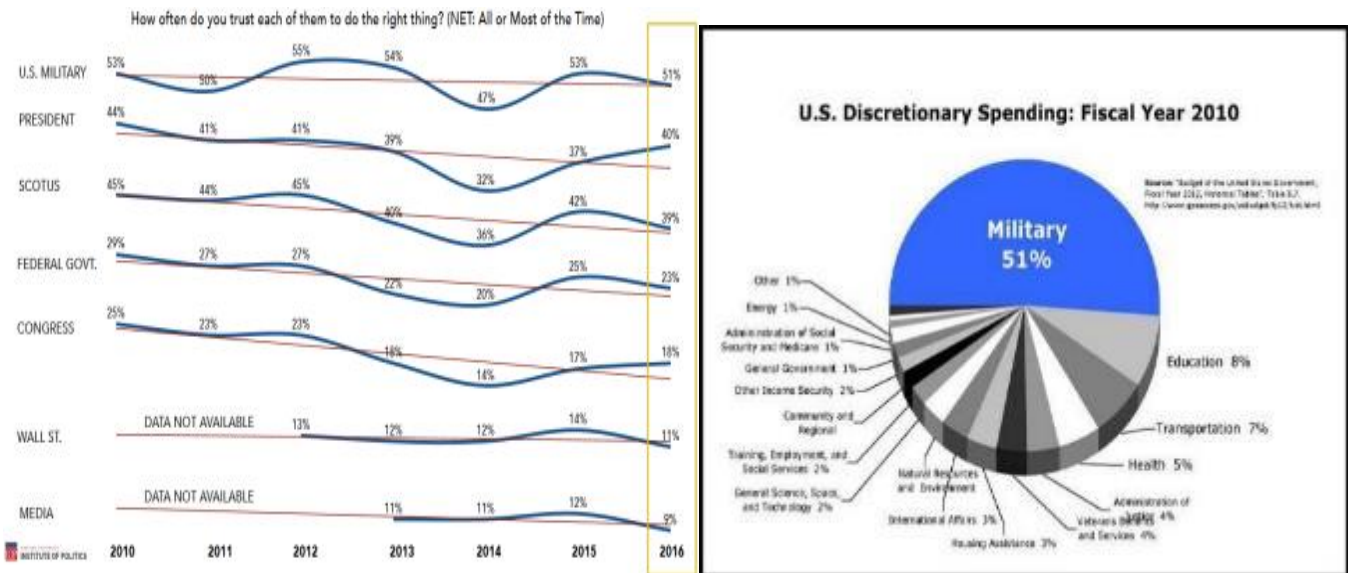

7) Like Fitts actually trying to do her job in Washington, Michael Lewis’ protagonists in *The Big Short*, upon returning to New York from Las Vegas, “set out to pester the ratings agencies... for more information. ‘We were trying to figure out what, if anything, would make the credit agencies downgrade’” (Lewis, 2011, 169). What they found was that the rating agencies, all 2 or 3 of them, were “working the same rough information available to traders like Eisman. This was insane. The arbiter of the value of the bonds lacked access to relevant information about the bonds. ‘When we asked her why...she said the issuers wouldn’t give it to us. This is when I lost it. “You need to demand to get it.... Who’s in charge here? You’re the grownup. You’re the cop.”.... Eisman concluded that S&P was worried that if they demanded the data from Wall Street, [that] Wall Street would just go to Moody’s for their ratings” (Lewis, 170-171). See also “Credit rating agencies”.

8) The Pentagon culture still seems to be, as it was (more famously) in the late 1980’s, that “nobody’s held accountable for inoperability...affordability, relevance, [or] utility.... The Pentagon is [still] a spending cesspool.... [and] the US Navy... [now has] more admirals than they have ships” (Steele, 2017o, mn.24-25). “[O]ne of the reasons...[that] war is not opposed by the public... is [that] we...treat the military as a safety valve for unemployment.... as a way of siphoning off unemployed, angry young men.... Most people don’t realize it, but [now nearly half] of America is poor-- at or near the poverty line. The banks have... hollowed out our country” (Steele, 2017j, mn.151-152).

9) Although current US Dept. of Defense “budgets are around \$700 billion annually, the United States is actually spending closer to \$1.2 trillion annually on the military when all of the nation’s military spending (such as for military retirements, which are paid by the Treasury Department not by the Defense Department) are factored in.... The DOD is the only unaudited federal Department... almost all of the ‘waste, fraud, and abuse’ in the US federal government is at the Defense Department. It has never been auditable.... [Nonetheless the] DOD is consistently, year after year, and decade after decade, the federal Department...or local governmental function that Gallup’s polling has shown to be more respected by the US public than is any other. (...[usually listed] there as ‘The military’. It beats, for examples: ‘The Supreme Court’, ‘Congress’, ‘The public schools’, ‘The presidency’, ‘The police’, and ‘The criminal justice system’.) The most corrupt isn’t...despised... it is the most respected” (Zuesse, 2019).

10) Steve Pieczenik agrees. “Which General have we held accountable for Afghanistan? None. We’ve got McChrystal lying...Petraeus lying... I’ve got all these generals who lied [in public] and are now on the boards of Military-Industrial Complexes. Not one of them has been in jail. Where’s Cheney, or Bush, or anyone involved in 9/11 in jail?... There’s no accountability.... We have a system of totally incompetent people. They can’t execute well. We have *no* [sic] outcomes. And at the same time we promote them-- the Peter Principle” (Pieczenik, 2019n, mn.100-101). See also “CIA”.

See also “Timarchy”, “Three Romes”, “Black Budget”, “Shadow Government”, “Make-It-Happen; Let-It-Happen”.

[Popularity, and the favoring, of certain US institutions, 2015; see also “Discretionary (US Budget)” (.FASAB-56)]

‘Military-Industrial Complex’- President Eisenhower’s original term for what would soon become the “military-industrial-intelligence complex”, was originally, in 1960, the “military-industrial-congressional complex”; but speech editors in 1961 thought that Eisenhower’s original term was too long.

1) During and after World War 2 (as both the scale and lethality of weapons went through the roof), “it was no longer possible to have true civilian oversight of the military and military actions, because you don’t have time to call the Congress into session and debate your response when the nuclear missile is on its way... You have to make a decision...right now” (Smith, 2021, mn.7). See also “NSA” [NoSuch].

2) More than half-a-century later, it’s still “the war machinery that has to be taken down, and the congressmen who represent it-- the porters who want an M1-A1 tank because they’re [so] busy. That has to be re-configured. We have to re-configure our entire economy away from the military-industrial-complex-- the Raytheons, the Lockheeds, the L3 Communications-- all that nonsense has to be taken down and not given money... We have a 2.2 million standing army [that is] useless-- useless! Most of the people that fight in skirmishes are probably Special Forces units that we hire on out-source services. It’s the same thing with the CIA” (Pieczenik, 2019n, mn.58-59). See also “Central Banking-Warfare model”, “Reform, 101”.

3) “Where do...[you] have no consequences? [In] the Military, the Intelligence, [and] the Government. I get my pension, and I get my salary, and I live a very happy life without any consequences” (Pieczenik, 2019n, mn.115).

See also “Military-Industrial-Intelligence-Comp”, “Black Budget (US)”.

Military-Industrial-Intelligence Complex- (i.e. ‘keep the budgets flowing’; more commonly known as the ‘military-industrial complex’ [Eisenhower], a.k.a. the ‘military-security complex’ [Roberts], the ‘IC-Deep

State', the 'military-financial complex' [Keen], or even the "financial-intelligence-military¹⁶⁵⁹ wing, of the alervasive cabal" [Hellyer, 2015, mn.11])

1) "Our military organization today bears little relation to that known of any of my predecessors in peace time, or indeed by the fighting men of World War Two or Korea. Until the latest of our world conflicts, the United States had **no** armaments industry.... [but c.1960] 3-and-half million men and women are directly engaged in the Defense Establishment.... [and its] total influence-- economic, political, even spiritual-- is felt in every city, every state house, [and] every office of the federal government. We recognize the imperative need for this development, yet we *must* [sic] not fail to comprehend its *grave* [sic] implications.... [This is about] the very structure¹⁶⁶⁰ of our society."- President Eisenhower, Jan. 1961 (1961b, mn.6-8). See also "Industrial Revolution, 3rd", "**Cultural Calendar**", "Transhumanism"¹⁶⁶¹.

1b) 15 years later, historian Carroll Quigley observed of this post-WW2, "mid-century" era that: "the drafted army of citizen-soldiers...[was being] replaced by a smaller army of professional specialist soldiers, and [following the technology] authoritarian government began to replace democratic government" (Quigley, 1966, 35). See also "Dictatorship", "Duopoly".

2) Eisenhower's mid-20th century term ("Military-Industrial-Complex") and Steve Keen's adaptation of it for the millennialist era (the "**Military-Financial Complex**"¹⁶⁶²) are both good starts at getting a handle on what has been happening circa 1960-2020 (i.e. transitioning from the 2nd Industrial Revolution to the 3rd Industrial Revolution) within which a "**Military-Executive-Corpocracy (M.E.C.)**", or modern-day "command sector" of the economy has been essential. However, the Intelligence Community's increasingly ostensible role in the process should not be overlooked. Hence, the "**Military-Industrial-Intelligence Complex**" term is most suitable for the tech-giants world of the young 21st century.

3) Although it is the latter 20th century's broader **M.E.C.** that got society to that 'millennialist' point. See also "Timarchy", "Revolving Door", "Google", "Industrial Revolution, 2nd", "UKUSA Agreement", "Industrial Revolution, 3rd", "Geoengineering", "Intelligence Community (IC)", "Democracy".

[1957-59 (covers)]

Military junta- "A regime usually associated with [see] Client Oligarchies, by which 'free' [open] markets are imposed on...[countries] that reject the *Washington Consensus*, e.g. in Chile under General Pinochet and elsewhere in Latin America..." (Hudson, 2015b). See also "Globalism", "Secrecy, Cult of".

¹⁶⁵⁹ This author would add (in agreement with Eisenhower, 1961 [at least in regards to the US]) that World War Two-- the maddest spasm of violence in the history of this planet-- changed things.... from the traditional "financial intelligence" of the (rather calamitous) 1st half of the 20th century, to the "military intelligence" [based on UKUSA Agreement signals intell sharing] of the (smaller-scale-disastered) 2nd half of the 20th century. The 'banksters' and financialists, high-profile though they are these days, have been (at least in the US) 'little brother' to the Pentagon & National Security agencies for at least a number of decades now. See also "Central Banking-warfare model", "Hypertrophy (scale bias)".

¹⁶⁶⁰ Is it to be (built upon) truth or lies? Post-currency wars; "we must learn how to compose [our] differences not with [lying and] arms, but with intellect and decent purpose. Because this need is so sharp...I confess that I...[retire] in my official responsibilities in this [political] field with a *definite* [sic] sense of disappointment.... [S]o much remains to be done" (Eisenhower, 1961b, mn.12-13). See also "Currency wars, the", "Integrity", "Parties, political", "Big picture" [lying].

¹⁶⁶¹ President Eisenhower continued: "The potential for the disastrous rise of misplaced power exists [https://www.youtube.com/watch?time_continue=1882&v=F5TYOqu3TI0&feature=emb_logo&fbclid=IwAR0pZ6wEpkDTBy-bF6F6JCEUfdZprcKwI1JBgePdmpM3Ee7PaNO4SIEDFt8 (Truthstream Media)], and [it] will persist.... We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military [and financial] machinery of Defense with our peaceful methods and goals, so that security and liberty may prosper together" (Eisenhower, 1961b, mn.8-9). See also "Design".

¹⁶⁶² The Anglo-Americans (then championing "Finance Capitalism") won World Wars 1-2, not the Germans or Japanese (who were championing *Industrial Capitalism*). This is the distinction between 'usury-world' fantasia and industrial bosses 'putting their pants on one leg at a time'. See also "Bernays, Edward", "Industrial Revolution, 2nd".

Military leadership (of 20thc-millennial UK-USA)- The following chronology is a way to make sense of the (above) plethora of 3-5 military-associated 'Complexes':

1. World War 2-to-1960's- the "Military-Industrial-Complex" (M.I.C.);
2. 1960's-to-millennium (fading/blending to the Intelligence Community)- the "Military-Executive-Corpocracy (M.E.C.)", underscoring, without ambiguity, that no politician can 'stop it'. See also "Sovereignty", "Reform, 101".
3. (Not coming to the fore until the millennium, though salient since the 1950's)- the "Military-Industrial-Intelligence Complex"¹⁶⁶³ (M.I.I.C.).

See also "United States, the", "Montesquieu", "UKUSA Agreement", "Democracy", App.C: "1-2-3".

[Do 'they' have a sense of humor? USAF Academy brass h'sting Heller (1986).¹⁶⁶⁴ See also "Monty Python's", "Hell".]

Military spending- (sometimes a.k 'military Keynesianism', 'R&D')

1) for what President Eisenhower termed "the Defense Establishment", "[w]e annually spend on military security alone more than the net income of all United States corporations" combined (Eisenhower, 1961b, mn.7). See also "Reaganomics", "DARPA", "Google".

Defense outlays vs. gross domestic product from fiscal years 1940 to 2019

[US mil. expenditures (as % of GDP) more-than-doubled from 1950-55. Why? See also "Industrial Revolution, 3rd".]

¹⁶⁶³ This is probably the best term for today's (data-mining) manifestation. As mentioned above, the terms 'IC-Deep State', 'military-financial complex', or even 'financial-intelligence-military wing, of the all-pervasive cabal' are basically synonymous with the broader network of 'the' Intelligence Community (which is also a global I.I.C. to some extent). See also (simply) "Intelligence Community (IC)", "UKUSA Agreement", "International Intelligence Community (I.I.C.)".

¹⁶⁶⁴ More specifically, at the 1-day symposium for "the Air Force's favorite book.... [author Joseph] Heller,,heard his book [*Catch-22*] likened to such enduring cultural symbols as the statues on Easter Island, and heard himself nominated to the... likes of Sophocles, Hemingway, Shakespeare, Pascal, Eliot, Hobbes, Twain, William James, Swift, Nathanael West, Seneca, Melville, Gogol and...Ecclesiastes.... Lt. Col. Steve Staley said he had read '*Catch-22*' on 5 separate occasions. 'It's kind of a Bible around here'.... Lt. Col. Tom Coakley... [added:] 'for us, essentially...[the conference] started as a way of getting together some people and enjoying the fact that it has been a book [that] we have been enjoying for 25 years'" (Mehren, 1986). The first (audible) question from Col. Kiley (https://www.youtube.com/watch?v=tKVJaz_BCQ8, mn.0-1) centered on (presumably, how to research) "déjà vu" experiences. See also "Philosophy" [.determinism], "Physics, new".

2) This is because; “Under a nominally ‘free-market’ regime, military spending under a national-security umbrella is the major way for governments to subsidize high-technology *research & development*. The *cost-plus system* of billing severs the link between profit-seeking and economic efficiency, by maximizing costs rather than minimizing them; (See Pentagon Capitalism)” (Hudson, 2015b). See also “Military-Industrial-Intelligence Complex”.

3) It follows that the “US payments deficit was entirely military in character throughout the 1960s” (Hudson, 2015, 4). See also “Super Imperialism”, “Reserve currency”.

4) “The defense industry is completely out of control and non-productive.... Somebody has to walk into a culture that has had a zero cost of capital and introduce the... unique notion of ‘real cost of capital’” Fitts, 2017c, mn.59-60). For “fiscal year 2015, the...[most recent] reported statements from the federal government, the Dept. of Defense was missing 6.5 trillion [dollars]. That’s 10 times their [official] budget.” (Fitts, 2017i, mn.12). “My attitude is that if the Dept. of Defense wants...a \$50 billion increase, then they can go back and find the 50 billion dollars that disappeared.... Some of it...disappears using securities fraud¹⁶⁶⁵ that we’re liable for. Some of it, instead, goes to the Black Budget, and it finances very powerful technology that ends up being owned by private companies” (Fitts, mn.13). “So you’re putting the debt on the [public] balance sheet, but you’re saying [that] the assets aren’t on the balance sheet, and that is a very serious, structural, systemic problem” (Fitts, 2017g, mn.14).

5) Including the private contractors, the aggregate “*Military-Security-Complex*” budget is approaching \$1 trillion per year, according to former Asst. Secretary of the Treasury Paul Craig Roberts. “Huge power comes with this budget. Well, they need an enemy.... When the Soviet Union Collapsed, it [the MSC] didn’t know what to do. And they finally created the Muslim threat, but it’s not a big enough threat. And so they have [since 2015] re-created the Russian threat... It doesn’t mean so much [that] they’re planning to nuke Russia and China. But they’re planning to keep them in the position of being a threat.... [so that] the money will continue to flow.... How do you oppose that? We saw that Trump thought he could, but found out [that] he couldn’t” (Roberts, 2017c, mn.8-9). This Military-Security-Complex “web...[penetrates] into every aspect of American life.... It’s just a vast [Deep State] interest, and...nobody wants to disrupt it. What state wants to lose a military base? They fight to keep them. What state wants the Defense contractor to move out?” (Roberts, 2018b, mn.34-35).

6) “The National Security state in the United States has just gotten more and more expensive and unproductive... we’ve had 50 years of ‘cost-plus’-- more and more expensive/unproductive-- and it’s unbearable...the waste is unbearable” (Fitts, 2017i, mn.29). See also “COVID”.

See also “Black Budget”, “Secret Space Program”, “*Military-Executive-Corpocracy (MEC)*”, “Timarchy”.

Mill, John Stuart (1806-1873)- (a stronger case than Marx for ‘the father of socialism’; Mill-- the most influential British philosopher of the 19thc-- grew up a philosophical protégé and 2nd-generation executive for the East India Co. [1823-58], before dabbling in Parment and [increasingly] liberal¹⁶⁶⁶ causes)

1) Most renown for “the harm principle” of (what is now classic) Liberalism, “Mill despised and feared conformity. He deeply feared a future in which people lived their life based upon nothing but custom and habit.... Mill believed that a new form of social tyranny was emerging, one that was in some ways worse than actual tyranny as it has ‘fewer means of escape, penetrating much more deeply into the details of life, and enslaving the soul itself.... The despotism of custom is everywhere the standing hindrance to human advancement.’” - <https://www.libertarianism.org/columns/introduction-john-stuart-mills-liberty> (citing Mill, 1859) See also “Liberal (classic usage)”.

2) More specifically, Mill’s “*Principles of Political Economy* (1848) has been called a half-way house to the [“Ricardian”] socialism¹⁶⁶⁷ of Karl Marx and Henry George. Mill went beyond Ricardo’s critique of

¹⁶⁶⁵ “With securities fraud, you can lose a near infinite amount of money, every year, no matter what your budget is” (Fitts, 2017i, mn.9).

¹⁶⁶⁶ “There was never anybody less buttoned up against alien influences than Mill.”- Richard Paul Anschutz’s Ency. Britannica entry

¹⁶⁶⁷ Hudson (2017p) characterizes both Mill and George as “Ricardian socialists”, with *Ricardian* apparently meaning pro-bankmoney [2nd Estate] & anti-landed aristocracy [1st Estate]... Hence, ‘bankmoney socialists’ (or bank-run socialism [i.e. ‘dad & mom’]), the largely unquestioned common denominator or assumption of the past approx. 200 years (Ricardo through Keynes, to the current crisis; i.e. nearly 3

landlords, by urging that the state take over landownership,¹⁶⁶⁸ on the ground that landlords enjoyed rising land prices ‘in their sleep’ as an ‘unearned increment’” (Hudson, 2015b). In 1844, Mill was perhaps also the first to “describe how paying foreign debts depreciates the currency, and [that] when a currency falls, what really is lowered is wages” (Hudson, 2016c).

2b) George did not approve of Mill’s ‘state’ land ownership, claiming that it is not “right that there should be any concern about the proprietors of land... Mill...attached so much importance to the compensation of landowners as to have urged the confiscation merely of the future increase in rent, [which] is only explainable by...[Mill’s] acquiescence...[to] the current doctrines that wages are drawn from capital and that population constantly tends to press upon subsistence. These [teachings] blinded him as to the full effects of the private appropriation of land... entangled by the toils of the Malthusian doctrine, he attributed, as he expressly states... the want and suffering that he saw around him [in England] to ‘*the niggardliness of nature, not to the injustice of man*’, and thus to him the nationalization of land seemed comparatively a little thing, that could accomplish [little or] nothing towards the eradication of pauperism and the abolition of want-- ends that could [instead] only be reached as men learned [through state education systems, I guess¹⁶⁶⁹] to repress a natural instinct. Great as he was and pure as he was-- warm heart and noble mind-- he yet never saw the true harmony of economic laws” (George, 1879, 363). See also “Malthus, Thomas (1766-1834)”, “Happiness”, “Economics, Parity”.

2b) Incorrectly “believed [that]...the cost of production determined the value of gold and silver” (Zarlenga, 2002, 327).

3) After “feminists gathered signatures on multiple petitions... to be included in the proposed electoral reforms. In May 1867...Mill [then a] Radical Liberal M.P. for Westminster introduced an amendment to the bill... that would omit the word ‘man’ and substitute the word ‘person’... [the] amendment was defeated by a vote of 196 to 73. Out of the failure of Mill’s amendment came the organized campaign for women’s suffrage. By 1868, women’s suffrage organizations in Manchester, Edinburgh, London, Bristol, and Birmingham had federated to form the National Society for Women’s Suffrage” (Mayhall, 2003, 15); although women in Britain didn’t get the vote until 1918.

See also “National debt economy (NDE)”, “Statism”, “Separation of Powers”.

(i.e. see also Gray, 1979; He, et al, 2008, 480)

Millennials (generation)- See “Baby-boom demographics”, “Student loans”, “Conditioning”.

Millennium, 1st, BCE- ([in ‘Western’ history, anyway] ‘woke up on the wrong side of the bed’, per “Climate change, global” [& Bronze Age Collapse].

Millennium, 1st- “National Identity Cycle”, → (slowed down by) “Religion”.

Millennium, 2nd- “Reserve currency”/“Imperialism”, → (drives) “Central Banking-Warfare model”, “Fool”.

Mind control- (a.k.a. ‘ment’ + ‘govern’; broad: [any systematic] ‘brainwashing’; narrow: ‘directed energy weapons’) “Before you can effect legal and financial control [extraction], you’ve got to get cultural control. You’ve got to get control of their minds” (Fitts, mn.41)ee also “Statism” (& ‘state capitalism’).

1) a decent intro./overview is provided by Fitts (2017k, mn.49-54). According to the NGOs Stopeg and ICATOR, approx. 70% of electronic harassment victims are female.

“debt cycles”). Although Marx was certainly a ‘bankmoney socialist’ (statist) who did not question the underlying dogmas of (what society uses for) money, George was critical of both constructs and certainly did not support the (Frankenstein-like) combination of the two. See also “Fin de Siecle”, “Statism”.

¹⁶⁶⁸ ...as transpired, albeit crudely, in China, c.1949. George didn’t find the error amusing. “In the name of the Prophet--figs! If the land of any country belong[s] to the people of that country, what right, in morality and justice, have the individuals called landowners to the rent?” (George, 1879, 363-364). See also “Georgism (& land value tax)”.

¹⁶⁶⁹ See also “Monty Python’s”, “Oligarchy”.

1b) Is “mind control”, as Fitts said in 2017, “the number one problem in America”? “I’ve always said that in America, there’re two kinds of people-- targeted [mind control experimentation] individuals, and people who do not yet understand [that] they’re targeted. And I think we have ignored this phenomenon at our peril” (Fitts, 2022, mn.48). “Watching each other and fiddling with each other is the biggest global industry. You know they’re automating [& digitizing] everything, but...[what might be called ‘behavior modification’] is where they’re creating all these [public sector or ‘public-private’] job programs. I think part of it is just to keep us all busy¹⁶⁷⁰” (Ibid, mn.56-57). Via the widespread dissemination and availability of such (*Matrix*-like) technology, it’s gotten to the point where “most” covert ops. “are not dangerous. They are [basically] a job program. But there are [still] some that are dangerous” (Fitts, mn.57). See also “[Corporate Media Cartel](#)”, “[Cultural Calendar](#)”, “Intelligence Community (IC)”, “War”.

2) “The patents are all there. Over the last 60 years...microwaves, radio frequencies, extremely low frequencies [ELFs], millimeter wave laser[s], acoustic weapons-- all of these...They have weaponized the electro-magnetic spectrum” (Karlstrom, 2018, mn.31-32). See also “Headless Horseman”, “COVID”.

3) “Brainwashing [especially in its ‘modern’ sense (of invisible technology)] is a system of [befogging](#) the brain, so [that] a person...[may then] be seduced into acceptance of what otherwise would be abhorrent to him. He loses touch with [the older] reality...However, in order to prevent people from recognizing the inherent evils in brainwashing, the Reds (Communists) pretend that it is only another *name* for something already very familiar and of unquestioned respect, such as education or [the all-time favorite buzzword:] *reform*” (Rappoport, 2020g; citing E. Hunter’s: *Brainwashing*, Pyramid Books, 1956). See also “Conditioning, classical”, “Dumb-downing”.

3b) Basically, “in various [weaponized] modalities...the brain locks on to these external signals, and then you begin to follow it, begin to mirror...[it]. So you can change an emotional state relatively easily. You can jack a person up... or you can calm him down and get him to be very passive. You won’t effect everyone, but you’ll effect a big enough percentage” to control, f.e., a crowd (Begich, 2021, mn.12). “For 30 years we’ve been talking about it!.... There’re over 1650 source documents cited” in decades-old books on the subject; and “in the last decade...They’ve jacked up the fear model, to absolute insanity. And that’s the point, because that’s what it does” (Begich, mn.16). See also “Provocation operation”, App.C: “1-2-3”.

3c) “I’m not talking about [20thc-type] propaganda. I’m talking about [technological] entrainment that comes from digital mechanisms... very serious hi-tech manipulation of people’s minds” attitudes (Fitts, 2022, mn.222-23). See also “Bernays, Edward (1891-1995)”, “Attitude inoculation”.

3d) Then again, what’s worked best through the ages has simply been state-sponsored objectives (subsidies, vis-à-vis taxation). The US federal government allocated at least \$148 bn. for “Social Emotional Learning” (SEL) programs in FY 2022 (Lynn, 2022). See also “Statism”, “National Identity”.

4) “*Centralization of political and economic control* [policies] and *mind control* technologies are my votes for the leading cause for the US being dropped from the [list of] top 10 most innovative countries” (Fitts, 2018d, 63). See also “Design”, “Empire”, “Kakistocracy”, “Truth serum”.

4b) Israel appears not too troubled by the relationship between the 2. “What’s the [principle] new industry that’s being formed?... the cyber security industry: [simply] Big data, [+] A.I., [+] Conductivity, okay?” (Netanyahu, 2019, mn.5). See also “UKUSA Agreement”, “Industrial Revolution, 3rd”.

5) Perhaps the most famous CIA ‘whistleblower’ (in Q1 of the 20thc) is Kevin Shipp, who was a loyal officer and even bodyguard for the director, before he “exposed the vulnerability to our agents, and the CIA was publicly embarrassed to [sic] the Intelligence Community” Shipp was transferred from Langley, in 1999, to “a classified CIA base [Camp Stanley, outside Boerne, Texas]. They ordered me to move my family into the house, and within 3 months everybody was sick [with mystery illness]. My wife was bleeding out of her gums, her nose. She had bruises all over her body. She lost her short-term memory, and her headaches were so bad they had her on morphine. And the doctors...said...‘We don’t know what it is’. I secretly flew my son to a well-known immunologist, and after 3 days of testing, he sat us down and said,

¹⁶⁷⁰ “The [resultant] waste of time” (from such busy work, wool-gathering, conditioning, & self-defense), Ulrike Granogger added, “is unbelievable” (Fitts, mn.56), vis-à-vis (the opportunity cost of) “figuring out productive ways of life” (Granogger, 2022, mn.56). Is it ‘all’ madness? See also “Design”, “Philosophy”, App.C: “1-2-3”; “Productivity” [service sector].

'Mr. Shipp, based on your son's immune system, it's the same as being exposed to a burst of radiation'. So they had [radiation] poisoned my entire family. So I decided to file a suit and stand up against it [in 2001]. And that's when they issued a blacked-out gag order.... The evidence was so strong, [that] a federal judge ordered the CIA to...mediate its settlement in Washington, DC... We went through 4 hours of deliberation with the CIA legal team, and they agreed and signed the settlement agreement, which is also now on my website... Three days later [however], the CIA... called my attorney and said: 'If Mr. Shipp doesn't accept a fraction of the [signed] settlement agreement, we're gonna invoke the state secrets privilege and seal all the evidence'.... [And] about a week later, sure enough, they invoked...[it, and] sealed all the evidence that I collected-- even from [the supposedly public] Congress-- and threatened me with prison if I talked about the evidence with anyone" (Shipp, 2018b, mn.31-33).

6) 'Mind control' techniques and strategies, of course, also have a long history of effectiveness-- in both military and civilian spheres-- prior to the technological patenting of the electromagnetic spectrum. For example, US Secretary of Housing and Urban Development (1989-93) Jack "Kemp is furious and he's screaming, and the California [HUD] minister says 'But Mr. [HUD] Secretary, I had to do it. It's the law'. And Kemp just exploded. You could see steam coming out of both sides of his head. And he said, 'The law? The law-- I don't have to obey the law. I report to a higher moral authority'. And he was dead serious... and I [then] literally realized: 'Okay, you know he's talking about the *Eyes Wide Shut*¹⁶⁷¹ guys'. And you could see, at that moment, he felt such disdain that anybody would think that he had to obey the formal laws. And he and his group were like that... that they had authorization to do all these different things tha^t were completely in violation of the law" (Fitts, 2018r, mn.33). See also "Central Intelligence Agency (CIA)", "Conditioning", "Deep State", "Civil-Military Operations".

7) In recent decades, however, "[m]y theory is [that] a lot of what...['gang stalking'] victims have experienced is prototyping. From 1994, the Department of Justice created a Memorandum of Understanding with the Department of Defense, where they agreed to take...'*non-lethal weapons*', which include some of these electronic techniques, and *prototype* them domestically. And what began was an explosion of use of these kinds of [mind control] technology" (Fitts, 2022l, mn.0). See also "Real Estate".

8) Scary click-bait aside, however, most 'mind control' is still simply as it ever was-- the art (and, to some, a science) of befuddling human beings. See also "Orwell, George", "Cognitive Dissonance" [Ellis], "National Identity", "Cultural Calendar", "Social media" [domestication]. See also "Dumb-downing", "Kakistocracy", "Internet of Things (IoT)".

Minsky, Hyman (1919-1996)- (the 20th century's leading 'post-Keynesian' and somewhat dissident Economist, his 'Financial instability hypothesis')

¹⁶⁷¹ See also "Conditioning, operant" (& <https://www.youtube.com/watch?v=PF5go3QMpWw> [Emo's Demonstration]).

1) one of the inspirations for “Post-Keynesian” economics; most renown for ‘The Minsky Moment’¹⁶⁷² of systemic danger, when “success breeds a disregard for the possibility of failure”¹⁶⁷³. Unlike his contemporaries, Minsky realized that “...you must have models in which crises can actually occur” (Keen, 2018b, mn.31). See also “Keen, Steve”, “Securitization”.

1b) Perhaps this was due to the fact that Minsky, as “an undergraduate at the University of Chicago...studies under the 3 main...distinct leaders of the Chicago...[Plan¹⁶⁷⁴]. The primary one was Henry Simons...[who] was a large influence on [young] Minsky” (Phillips, 2021, mn.4).

2) Minsky, in the 1970’s, was “the only person who really made sense in putting it all together” (Keen, 2016u, mn.2). “Minsky argued...that there was a tendency for capitalists to borrow more money during a boom than they were able to repay during a slump, and you [therefore] got a ricketing up of private debt until a crisis occurred. That was his explanation for the Great Depression. We went through a similar process in 2008” (Keen 2017e, mn.18). “Minsky’s perspective was to say that capitalism is inherently *cyclical*... [and] that *banks, money and debt* are crucial” in determining these cycles (Keen, 2017e, mn.41). See also “Neoclassical Economics”, “Market fundamentalism”, “Cycles”.

3) In recent years, Minsky has more-or-less been proven right by (real world) longitudinal metadata. In tune with global bankmoney “financialization... advanced economies have become more synchronized, perhaps lessening the ability to hedge financial risk internationally... as asset prices have become more volatile... [H]igher leverage [typically] generates... lower consumption volatility in normal times, at the cost of endogenous systemic financial risk” over the longer term (Jordà, Schularick, & Taylor, 2016b, 49; 48).

4) Richard Werner and others have pointed out that, nonetheless, two decades now after Minsky, (neoclassical) economists’ models still fail to include banks, money, and debt (Werner, 2018, mn.12).

5) “...was a vehement critic of the policies of the Kennedy and Johnson administrations, and played a major role in developing an alternative...[insisting] that the high investment path chosen by postwar fine-tuners would generate macroeconomic instability, and that the [1960’s] War on Poverty would never lower poverty rates significantly” (Wray, 2007, 1).

6) Minsky also maintained from “the ‘60’s” that “it must be the government’s responsibility” to be “the employer of last resort” in order “to maintain full employment... just as the New Deal jobs programs did.... 13 million people were employed in the New Deal jobs program.... They built public buildings all over the United States.... They made America a developed nation.... Minsky argued that *this* [building] path to full-employment will not cause inflation; whereas just having the government [blindly] spend more could be inflationary.... We need to stop saying that ‘we can’t afford things’.... We can always afford to spend... on things that make sense... in a way that is not inflationary” (Wray, 2015, mn.106-109).

7) One of Minsky’s papers “that we never talk about... [is] #127-- ‘Financial Instability and the Decline of Banking’...” (Bongiovanni, 2018’b’, mn.10), in which Minsky called for a National Monetary Commission: “In the past, serious changes were the result of serious public inquiries. I suggest that enough is amiss in our financial and banking structures that it is time to go back to the drawing board and determine what the monetary, financial, and financing arrangements should be in the 21st century. A late 20th century *National Monetary Commission* should be on the public policy agenda” (Minsky, 1994, 24). Harvard University’s Law School (2018-20) is taking small steps towards this direction, but 90-sth.% of the participants (2018) didn’t even seem to comprehend what the 2-classes of money are.

See also “[Money, 2 classes \(layers\) of](#)”, “Economics”, “Academia”.

¹⁶⁷² This author is of the opinion that a more profound “Minsky Moment” in economic determinism, also (effectively) coined by the anti-Economist (c.1995), is that time in which bank Reserves/RAB systemically dwarf TAB-banmkoney, and monetary reform becomes prescient. See also “National Debt Economy” (as a 3-century transition to restored public money), & “Monetization” [Hamilton].

¹⁶⁷³ “Ironically, many of these technologically driven shifts in the operational approach...of banks...[such as derivatives] had their origin in efforts to *decrease* levels of risk in an increasingly volatile marketplace” (Busch, 2012, 29). Maybe some day other fields, like Physics, will pay more heed to the ‘laboratory of the real world’, instead of unexamined assumptions-based & mythomatics-propped modelling: <http://youstupidrelativist.com/08Ext/00SumExt.html> (Gaede, 2008). See also “Equilibrium”, “Mythomatics”, “Physics, new”.

¹⁶⁷⁴ They were (in order) Henry Simons, Lloyd Mints, and Frank Knight. This troika “formulated the original [Chicago Plan, and] Chicago School of Economics” (Phillips, 2021, mn.4). See also “Chicago Plan”, “Chicago School”.

8) From c.1994-95, Minsky, although subsequently claimed as the patron saint of “Modern Monetary Theory”, was actually writing more items in favor of what he called 100% (full-reserve/sovereign money) banking.

9) If the 1970’s “Minsky moment” is that point at which the crowd realizes that “stability [particularly in (TAB) bankmoney] leads to instability”, it might also be noted that his more mature “Minsky prophecy” of the 1990’s was that: “We now have in place institutional prerequisites for a successful 100% money scheme. These are: [first and foremost] 1. A large government debt that can be monetized...”¹⁶⁷⁵ (Minsky, 1995, xiii). **Yea, I think it has been** (for centuries) building up to that; and whether it’s totalitarian or not **is up to the details... money and politics cannot be isolated**. See also “Parties, political”, “Adolescence of Mankind”, “Freedom continuum (maturation)”, “Industrial Revolution, 3rd”.

10) Will this reform be achieved before or after the ‘stylized Minsky Moment’, c.2022-25, when all US debt issuance will be used to fund (>\$trillion) annual net interest expenses? See also “Bank Welfare”.

See also “Business cycles”, “Debt cycles”, “Debt, private”, “Monetary reform”.

‘Missing money’- See “Black Budget (US)”, “Undocumentable Adjustments”.

Mixed Economy- In the latter 19th century, across “the political spectrum, from ‘state socialism’ under Bismarck, to Marxist theorists, bankers were expected to become the [‘Western’] economy’s central planners, by providing credit for the most profitable and presumably socially beneficial uses. A three-way symbiotic relationship emerged to create a ‘mixed economy’ of government, high finance and industry.... 19th-century economists [still] sought to free parliaments from control by the propertied classes that dominated their upper houses.... Parliamentary reform extending the vote to all citizens was expected to elect governments that would act in society’s long-term interest. Public authorities would take the lead in major... [infrastructure] investments.... The alternative was for infrastructure to be owned in a pattern much like absentee landownership, enabling rent-extracting owners to set up tollbooths... Such privatization is contrary to what classical economists meant by a free-market” (Hudson, 2015, 14). World Wars I and II both increased governments’ prominence in the *mixed economy*’s symbiotic relationship, up to where government spending accounted for 1/3rd to 1/2th of Western nations’ GDP by the 1980’s, around the time of the (alleged) Thatcher-Reagan ‘rollbacks’ of the UK-USA public sectors. See also: “Reagan, Ronald”, “Thatcher, Margaret”, “Tax Shift”.

¹⁶⁷⁵ More specifically, “We can now have a banking system in which the banks hold interest-bearing reserves at the Federal Reserve Banks equal to 100% of their deposits, subject to check, and the Federal Reserve Banks [can] hold government bonds to offset their currency [cash] and bank reserve [RAB] liabilities. This would give us a monetary system in which currency [cash] and [TAB] deposits are fully equivalent [matched] in the assets by which they are offset on the books of commercial and Federal Reserve banks. The conditions for 100% money are [thus] satisfied” (Minsky, 1994, 18-19). Patrizio Laina is also of this position, because the US “banking system today has more [RAB] Reserves than there are [TAB] deposits, so moving to this type of [‘full-reserve’] sovereign money system might be *easy*. At least the transition phase would [given a stipulation or two] be easy”. In “the aggregate” there are, simply, more Reserves [RAB] than [TAB] deposits in the US monetary system today (Laina, 2019b, mn.5). That ratio (of RAB:TAB) is now 157%; thus at least that prerequisite for “the transition [from debt-money to sovereign money] has already happened” in the suigeneris US (Laina, mn.7). See also “National Debt Economy”, “Central Bank” [Hamilton].

2) “Every economy is a mixed economy, with public and private sectors co-existing much like the intertwining spiral strands of the DNA molecule.... The ‘private’ individualistic or family-based sectors tend to be more entrepreneurial, but also short-term in outlook. A wide range exists for ‘potential imbalance’ between these 2 sectors, depending on which ideology or political constituency [of teleprompter readers] is in power... ranging from Stalinist Russia to financialized neoliberal regimes. When the private sector becomes centralized [i.e. today], it typically is in the hands of the [notoriously myopic] financial sector. When the government bureaucracy becomes overgrown, it tends to work in its own self-interest” (Hudson, 2015b). See also “Financialization”, “Deep State”, “Federal Accounting Standards”.

‘MLW’¹⁶⁷⁶- Why is not the constitutional brontosaurus doing things correctly? See “Nine key (entries)”. More specifically, Q1) Why is everybody crazy? See also “Cultural Calendar”;

1b) & 2008? <https://getyarn.io/yarn-clip/999fae31-7cd3-4ae1-8ade-b92252eefc3d> [Ellis¹⁶⁷⁷ (‘your own good’)].

Q2) Why is the tree upside down? See “Economics, Parity”, [.vs]. “Debt money”.

3) ‘There is no surpassing Montesquieu, only realizing’. See also “Montesquieu” [trichotomy], App.C. See also “Secrecy, Cult of” [‘because your head’]; vis-à-vis “Estates, 3”, “Separation of Powers”, “Montesquieu”, “World Wars”, “Debt cycles” [Bretton Woods], “Reform, 101”, App.C: “1-2-3”.

Mobile phone payments- (the primary component of ‘money service businesses [MSBs]’)

1) As of 2015 (w/i 8 years of its introduction), 90% of Kenyan adults use ‘M-pesa’ mobile money, for everything from taxes to taxis. No bank account, credit card, or smartphone is required. Just transfer cash into credits that can be transferred as easily as text messages (plus a PIN number). Salaries are now being sent directly to phones, with no middleman. “The most effective barrier to the success of mobile money around the world is the banking lobby.... Banks have looked at what has happened in Kenya and decided that they don’t want to see that happening in their own countries” (Collymore, 2015, mn.11). India, Egypt, Afghanistan, and Romania also have experimented with the idea, more conservatively. See also “Money Service Businesses (MSBs)”, “Internet of Things”,

2) M-Pesa “is subject to a 100% backing reserve requirement. The Central Bank of Kenya requires M-Pesa balances be held in a trust account, segregated¹⁶⁷⁸ from [its parent company, the UK-based] Vodaphone’s balance sheet”; Alipay & WeChat Pay in China are run the same way (McAndrews & Menand, 2020, 13). See also “Custodial accounts”, “Nonbank Financial Institutions (NBFIs)”.

3) M-Pesa was an initial member of the Libra-Diem consortium, but backed out in Jan. 2020, See also “Payment service providers (PSPs)”, “Local scrip & Complementary currencies”.

Mockingbird, Operation- (“taking deception programs that we typically use[d] overseas on foreign citizens and...using them against our own citizens...It is kind of sick” [Moon, 2019j]). See also “Mind control”, “Attitude inoculation”, “Provocation operation (Po)”, “Adolescence of Mankind”.

1) “[P]erhaps the most disturbing” of the Deep State control nodes, is (now as much as ever) “the national news media”; wherein, from the 1950’s “up until 1976, Operation Mockingbird... was a program amongst other unconstitutional programs... where they [CIA] brought journalists in, and they paid them money to seed false stories into the major news media outlets in the United States. Name one-- they were in all the top outlets, seeding pro-CIA stories, seeding stories against their enemies, creating false bogeymen so the CIA would look like heroes when they went in and destroyed something [f.e. “Nasserism”] that really

¹⁶⁷⁶ ‘first half’ ontological; ‘2nd half’ epistemological’ (Gordian). See also “Ontology & Epistemology”. <https://www.youtube.com/watch?v=iXrnKVyqweM> [St.L].

¹⁶⁷⁷ a.k.a. “Michael Ellis” (Monty Python, 1974b) <https://getyarn.io/yarn-find?text=%3A%22Michael%20Ellis%20-%20Monty%20Python%27s%20Flying%20Circus%20%5BS04E02%5D%22>; not to be confused with “sille” (silly) “Leachim” (the voice bot: [https://en.wikipedia.org/wiki/Leachim_\(Robot\)](https://en.wikipedia.org/wiki/Leachim_(Robot))). See also “Monty Python’s” [Establishment], “UKUSA Agreement”, “Imperialism” (to be heroes or villains, hosts or parasites?; & the “Parasitism” paradox in history).

¹⁶⁷⁸ In other words, the customers’ “funds are held in trust [and are thus] separated from the funds of the service provider, the service provider [is] unable to use the funds, and the money [is thus] safe from claims by creditors in the event of insolvency” (McAndrews & Menand, 2020, 13).

hadn't done much of anything. That was Operation Mockingbird, and.... the word 'conspiracy theory' was invented by the CIA to kind of overshadow some of these things.... [So] after a fire-storm of Congressional investigation-- after of course the usual document destruction, [then CIA Director] George Bush, Sr. came out and said: 'Ok, *Operation Mockingbird is going to be hearby dismantled. The CIA is going to stop paying journalists to plant information in the US news media. That program is over*'. Well what you don't hear is that yea, they did stop paying journalists, but that the program continued 'as a *voluntary program*'... for those news outlets that want to continue to do this for the CIA. And they do.... The worst-kept secret in Washington is that the *Washington Post* and the CIA communicate back and forth all the time" (Shipp, 2017b, mn.9-12). See also "Conspiracy theorist".

2) Prior Mockingbird confidentiality contracts (and relationships) were not voided by the ostensible termination of the program in 1976. So "although the program has been discontinued in its original form, they [grandfather-claused Mockingbird people] are still there, they have still signed that ['patriotic'] agreement, and... [Moreover, of greater importance now] is the *quid pro quo* thing: '*We'll feed you this, if you just stick with what we want you to report*'. That is Mockingbird without the [direct] dollar signs.... That's why we're seeing these...insane stories that come out that aren't...true. And that's how they're doing it" (Shipp, 2017b, mn.17-18). See also "CIA", "Deep State", "**Corporate Media Cartel**", "Bernays, Edward", "Media, A" [.Legacy], "Media, B" [.Alternative].

[propaganda: east & west

]

Models- (extrapolate's of assumptions) In real science you don't operate like that. They're like voting machines, one little tweak and they're **off to the moon**. They are very fragile, so there's only so much stock that one can place in them. See also "Scientific method", vs. "Science of assumptions". See also "Equilibrium", "Mythomatics".

'Modern Era', (the conventional)- See "Sin"; "Philosophy", "Design".

'Modern', Early (the 'Early Modern' era of history)- 1) In 1474, with double-entry accounting promoter Luca Pacioli (1447-1517), "[h]ere was the height of Italian humanism; a Franciscan monk [Pacioli], with a prince, calculating the way to understand and represent human proportion through mathematics" (Soll, 2014, 50). See also "Mythomatics", "Economics", "Google".

1b) ...and the [non-Early] Modern? "[T]he money of the people...is the agent by which modern nations will recover their rights."- Thomas Jefferson (Jefferson, 1788). See also "National Identity", "Statism".

'Modern Monetary Theory' (MMT)- (a.k.a. 'functional finance', 'Mosler economics', 'neo-chartalism'-- i.e. "an elaborate mechanism that winds up apologizing for the private issuance of **money**" currency [Titus, 2020g, mn.11-12], via "kind of a silly, cocktail party wisdom notion" that "all money is debt" [Titus, 2021, mn.39]) See also "Credit Theory of Money".

1) "The basic argument they have is that the government doesn't need to tax [in order] to spend¹⁶⁷⁹.... [that] in fact...its **spending creates**¹⁶⁸⁰ the need for it to tax-- to take what it creates back out of the system

¹⁶⁷⁹ Politically, the "term MMT is often thrown around by 'the Left' without understanding. It is shorthand for saying, 'We can pay for it-- MMT says so'" (Lebow, 2019). See also "Reserve currency".

¹⁶⁸⁰ Specifically, **according to MMT**, the initial federal funds-RAB creation is found in "the very act of running a deficit. [It is that which] creates [new federal funds] money. The creation is [thus] actually the deficit itself, not whether you [subsequently] sell [it into government] bonds" (Keen, 2020b, mn.7)."Running a deficit [usually] creates Reserves, on the asset side of the bank... [But] the banks...don't necessarily

again. The real function of taxation, in that sense, is redistribution of income.... to keep it circulating” (Keen, 2016d, mn.30).¹⁶⁸¹ See also “National Debt Economy (NDE)”, → “Neo-Keynesian”.

2) “Americans like a small government. I’m not necessarily arguing for a bigger government... We need to preserve a large private space. But it doesn’t make sense to leave resources unemployed. If the private sector doesn’t want to employ them, A] we should be employing them. And there are things that the private sector [should] not do, such as public infrastructure... much of that is [simply too long-term oriented, and]...unprofitable... The 2nd implication is B] we need to stop talking about the Central Bank as if it were completely independent of government. It’s not; and it should not be. It’s a branch of government... every department of government has some independence... [from] the day-to-day political games that can be played... But they are not independent of Congress. They were created by Congress... and Congress can change the laws if they don’t like what the Fed is doing” (Wray, 2015, mn.109-10). Thirdly, C] “You can’t have the **government sector** of the overall economy **“running a surplus, without the private sector running a deficit.** If we understood this, a lot of [government as ‘household budget’] nonsense would disappear from debates” (Wray, mn.111). See also “Federal Reserve System” [FRBNY], “China” [PBoC].

3) **MMT can sound valid unless you read it critically. MMT is not pure to us in the way it is to Randall Wray.**¹⁶⁸² It is, rather, **part of the (debt-money) extraction machine**, by being another apologist for 20th century-type Keynesianism and continued (further) blurring of the distinction between Public and Private sectors. See also “Hegelian dialectic”, “Separation of Powers”.

4) China today “is the classic MMT economy, and it’s basically: ‘*spend, spend, spend, because we can create the money. People will [always] accept RMB’s internally*’.... And- bang!...That gives them a tremendous capability to get out of the private [bank] credit dud...bubble trap that we [in the West] are definitely in, because all they have to do is [easily] switch over to government spending, which they are doing on a fairly large scale. And it looks like a lot of their so-called ‘aid projects’... [like] building the Silk Road again, that is effectively a way of guaranteeing full employment back in China, because they’re doing it using Chinese goods and Chinese workers.... There’s no reason to have unemployed labor” (Keen, 2017k, mn.16-17). See also “Unemployment”.

5) Joseph Huber finds MMT’s “positioning” in this Public - Private debate to be “rather ambiguous, if not... contradictory at times. For example, MMT says that even... [today] we do have a ‘sovereign currency’ system, and that Fractional Reserve Banking [FRB] is basically a benign implementation of a sovereign currency system.¹⁶⁸³ And this of course...creates some...misunderstanding and talking past one another from the beginning” (Huber, 2013b, mn.11). “They say there are credit & debt bubbles, but the primary cause for the credit & debt bubbles-- fractional reserve banking-- is... blinded out... That’s why I say it’s half-hearted. And accordingly, MMT does not really recognize the need for Monetary Reform, and... contemporary reform approaches aimed at replacing bankmoney... are not even discussed, so far, by

want these Reserves, because they can’t lend them out.... And [hence] if there’s no interest being paid on Reserves by the central bank [as was the case in the US, until 2008],.... then it’s a dead asset for the banking sector. So what then happens [since the 18thc] is that...the Treasury [then] says: ‘*We will issue bonds, to finance that [deficit spending in federal funds]*’...[So] the banks [then] have a choice, do you want to hold your assets in Reserves...[@] no interest, or do you want to hold your assets in Treasury bonds which...[have] an interest rate?... They use the Reserves that have been created by the [gov’t] deficit to buy the [Treasury] bonds...[swapping] a non-interest-earning asset... for an interest-earning asset” (Keen, mn.11-12). See also “Quantitative Easing”.

¹⁶⁸¹ Keen does not consider himself to be ‘MMT’, mostly “because the MMT crew... argue that exports are a cost and that imports are a benefit” (Keen, 2020d, mn.32).

¹⁶⁸² MMT proponents, for example, often still insist that the privately-owned Federal Reserve System is ‘part of the government’, when every legal ruling on the subject has held that it is not. “For the purposes of the simplest explication, it is convenient to consolidate the treasury and the central bank accounts into a ‘government account’. To be sure, the real world is more complicated” (Wray, 2012, 98). Whose interest is this conflation (as opposed to separation) of powers ‘convenient’ for? “[W]e have two different words: ‘money’ and ‘debt’.For some reason, Randall Wray, like many others, is resistant to the uniqueness [breadth] of *money* and wants all money to be a *debt*.... A false equivalence is presenting two things as being the same when in fact they are different. One way to do this is to attribute two [very] different meanings to the same word” (Loneragan, 2016). See also “Dumb-downing”, “Orwell, George”.

¹⁶⁸³ “The so-called ‘modern money theory’ even misrepresent[s] the present bankmoney regime as a *sovereign* currency system under government control, while in actual fact it has long since been a privatised money system, backed [without question] by the central bank, and warranted [stamped off] by the government” (Huber, 2018).See also “Bankmoney regime”.

MMT” (2013b, mn.16-17). Moreover MMT “says that [the I government is creditor... a creator of its own money, and thus is a creditor rather than debtor to others... [assuming] that by issuing government *debentures*, [that] the government [thus] issues its own money,¹⁶⁸⁴ which is to say that government debt equals *sovereign money*.... It is said, over and again, that ‘*government debt should not be seen as debt*’... [but that it is, rather] a special kind of debt that is not debt... all the more puzzling, as MMT otherwise insists on all money being debt” (Huber, mn.19). See also “Debt, private”.

6) Most importantly, MMT assumes “that Treasury spending equals [new] money creation.... [which is] completely misleading,¹⁶⁸⁵ because [today].... the biggest part of government expenditure is funded by taxes, and tax revenues represent transfer of already existing money. And the money that serves for paying taxes is neither extinguished upon paying taxes [as MMT-Mosler also claims], nor is it created or... re-created when government spends its tax revenue... [Rather] this is all simple circulation of existing money” (Huber, 2013b, mn.20). Also “selling government IOU’s to non-banks” means “*secondary unending* of already existing money.... This is secondary credit... of already-created money. Primary credit and debt creation *only* [sic] happens when government takes up additional debt with banks. And this-- it should be noted-- this happens as long as the banks want it to happen; not as long as government wants it to happen. And if banks and the bond markets turn thumbs down, then the would-be sovereign money game is suddenly over. MMT probably thinks that this could not happen in America, but it happens again and again and across the world” (Huber, 21-22). Whereas today “we may-- *pro forma*-- still have a 2-tier [2-classed], mixed system of sovereign paper currency and bankmoney; **de facto**, however, this has turned into a **near-complete** Banking [TAB-bankmoney-based or derived] system. De facto, there is a **monopoly** of bankmoney... That’s our [TAB] money. That’s ‘what the entire economy¹⁶⁸⁶ operates on. And the banking industry...determines the process of [TAB] money creation”; except for coins (mn.26). The matter of “Whether or not banknotes are [to be] issued...[is] decided by the banks”, not the Central Bank printers and engravers (mn.27). In fact, MMT only subscribes to the first of the 3 determinants of a “*state’s monetary prerogative*” to measure a stable currency (Huber, 2013b, mn.29).

See also “State Theory of Money”, “Bankmoney regime”.

7) Adam Smith “in his efforts to keep the monetary power within the Bank of England...[also] glorified the Bank and obscured¹⁶⁸⁷ its private ownership calling it as a great engine of state” (Zarlenga, 2004, 544).

8) What is different, except the size & reach of the State, 2 centuries later? In the early years “of MMT, the writings of Mosler and Wray did not include...[any] systematic element of monetary and financial crisis theory and they did not, and still do not, see any need for monetary and banking reform. They portrayed the present bankmoney regime as a marvelous credit-and-debt machine run as a sovereign currency system. A credit-and-debt machine it certainly is, although it is neither marvelous nor a sovereign currency system. In spite of MMT’s self-image to represent new [see also “Neo”] chartalism,

¹⁶⁸⁴ Washington’s deficit spending doesn’t ‘create’ [either TAB or RAB] money, because it is first financed by issuing bonds, via the New York Fed’s ‘Federal’ Open Market Committee (FOMC). [The selling of government bonds is what has ‘created’ most money \[currency\] in the US \(ever since the civil war Greenbacks were phased out in the second half of the 19th century\), and the MMT leadership must know this.](#)

¹⁶⁸⁵ In an interview later that day, Huber added that MMT writings often remark upon “the strange situation that... the [US] government first has to make a detour... First it has to 1] sell its bonds to private banks, and then 2] the banks *re-finance* [those bonds] at the Central Bank and [then] 3] transfer just a small part of...[those] government bonds to the Central Bank-- which is *seen* [sic] by them [MMT] as another government body--...a problematic assumption in itself, particularly in the US.... But that’s the way that MMT looks at that...thing... Of course, an obvious question is ‘*Why [are you] making that detour?.... Why not directly issue government money, instead of being in debt... with the Central Bank?*’” (Huber, 2013c, mn.9-10). In other words, [government spending is ‘money creation’. Government spending is a target for money creation- through](#) [see also “[Open Market Operations](#)”]. See also “[Deceptive Banking Terms](#)”.

¹⁶⁸⁶ With today’s debt-money system, “debt [debt money] generates all the corporate spending and government spending in the system.... The pyramid governs both the private sector economy and the public sector. These aren’t...two different systems, but 2 components of one monetary vortex... The versions of Socialism and Capitalism that we live under today are actually part of the same [debt-money] system.... [i.e.] mega-empire-level [of whatever the next stage of] Capitalism [is to be], controlled by Wall Street and imperial corporations. These aren’t 2 different systems, but 2 sides of 1 financial dictatorship that runs everything out of Wall Street and DC” (Vrabel, 2011, 126). For a detailed (if sometimes contradictory) description of the old USSR’s monetary system, see Garvy (1966). See also “Lender of Last Resort (LoLR)”, “Hegelian dialectic”, “Vrabel, Damon”.

¹⁶⁸⁷ Has this always been the point of (so-called) ‘MMT’s serial sloppiness in describing anything outside of its tent?
<https://rwer.wordpress.com/2015/12/21/randall-wray-attacks-debt-free-money-cranks-based-on-sloppy-arguments/>.

MMT is in fact apologetic about fractional reserve banking, belittling the system-dominating role of the banking sector, and thereby defending– as a matter fact– the banks’ neo-feudal privilege of money creation by way of extending credit...” (Huber, 2019c). See also “Feudalism, neo”.

9) I’m not an MMT’er. That’s [another shell game, i.e.] the Federal government debt consuming the Federal Reserve debt. I don’t think it’s all bad. Like cattle¹⁶⁸⁸ rustlers weren’t all bad either.

10) Why– “if what we have is supposed to [already] be a sovereign currency system– [is there] that strange ban on the government to create money, leaving the sovereign monetary prerogative mainly to the banks. MMT reacted [to such inquiries] by profiling their thesis that government incurring debt allegedly equals money creation, whereby the central bank is in the role of a *partnering government* body, while the banks appear to be little more than helpful executors of the government’s monetary will. To most economists, even heterodox ones, this sounds upside down... It may generally be maintained that what is valid in MMT stems from Postkeynesian¹⁶⁸⁹ money theory, while what is *specifically* MMT turns out to be untenable” (Huber, 2019c). See also “‘Government’-created money”.

11) In accounting terms, MMT sticks to re-interpreting debt as not to be debt, [but] rather money creation to the lasting benefit of the ‘private sector’. The over-aggregate MMT-model of sector balances simply conceals the fact that the lasting beneficiaries of public debt are of course the financial sector and its significant shareholders, the (already wealthy) upper 1–5% of society, with a lion’s share of that benefit going to the upper 1% of the upper 1%, and a lion’s share *within that* going to the 1% of 1% of 1%-- e.g. about 300 out of 300 million people.

12) (Huber, 2014; Zarlenga).

See also “Reform, false”, “Corrosion-Cancer-Debt”.

[Early “Modern” Age monetary-games¹⁶⁹⁰]

Modernity- 1) When ownership/rights and citizenry is the societal norm, as opposed to enserfment or slavery. It is an attitude (distinct from the ‘Early Modern’).¹⁶⁹¹ For those of us accustomed to taking a longer look, however, there is very often a 3rd category (or sub-category) between sparkling “Modernity” and oppressive “Feudalism”-- that of the “*Early Modern*” (training):

“Now about 75 or 80 percent of Americans...and Europeans own their own homes. **The** problem is that ‘democratization’ is [still] on credit¹⁶⁹²... People say ‘*Here’s a much better financial system that we can design.*’ But the problem is you can’t fix it until you get rid of the existing debt” overhang (Hudson, 2016k, mn.6-7). See also “Debt saturation”, “Hegelian dialectic”, →“Modernity’ (so-called)”.

¹⁶⁸⁸ See also “Capitalism(s)” (etymology).

¹⁶⁸⁹ Most “post-Keynesians” would seem to agree with this assessment. See Palley, 2014; “Keen, Steve (& ‘Post-Keynesians’)”.

¹⁶⁹⁰ “I think of the miraculous effects that we ascribe to Modern Monetary Theory as really being a function of having the Reserve currency.”- Lee Sheppard of Tax Analysts’ *Tax Notes* (2017, mn.3); i.e. ‘We’ve got the funny-money yardstick’. See also “Reserve currency”, “Imperialism”.

¹⁶⁹¹ In the 16th century Dutch Republic, tax “receipts were sometimes managed in double entry [accounting], but even more, they were legally subject to public scrutiny... the very [theoretical] *possibility* of *accountability* engendered *trust*” (Soll, 2014, 71). See also “Federal Accounting Standards Advisory Board (FASAB)”. The famous “Gandhi quote” that Western civilization “sounds like a good idea” is fake. See also “Civilization, Western”.

¹⁶⁹² Like *training* wheels for learning to ride a bicycle (which was only invented about a century and a half ago, by the way. Before which was the world lit only by fire, and expedited only by horses).

2) Aggregate debt levels (from issuing [what society uses for] the currency as interest-bearing debt), however, have been a taboo-topic ever since Thomas Jefferson & John Adams gave up the ghost in the 1820's. See also "Industrial Revolution", "Capitalisms", "Usury cycles".

2b) And here is the *early* "modern" era that we got (from deferring back to Britain) instead. "Jeremy Bentham wrote a series of 13 Letters addressed to Adam Smith, published in 1787 as *Defence of Usury*. Bentham's main argument against the restriction is that [usurious monetary alchemist] 'projectors' generate positive externalities. G.K. Chesterton [1874-1936] identified Bentham's essay on usury as the very beginning of the [so-called] 'modern world'. Bentham's arguments were very influential" (Winton, p.8)¹⁶⁹³; i.e. the City-'merchants'-Parliament loved it. And Betham had earlier taken care (before his chastising of Smith for not being usurious enough¹⁶⁹⁴) to publish a "Short Review of the Declaration" (of 1776)-- an attack on America's Declaration of Independence. Lest anyone doubt that the madman knew where it was all going to be headed, his final work was *Panopticon* (1787, 1791). See also "Neoclassical Economics (NCE)", "Philosophy, national", "Sin".

See also "Modernity" (so-called)", "Reform, 101", App.C: "1-2-3".

[old tech: fire,horse]

[modernity]

[Mortgage society, like the bicycle, was made operational in the c.1880's.] See also "Fin de Siecle", "Baby-boom demographics" (ponzi.)

Monarchy- See "Timarchy" [.Montesquieu].

Moneō- the Latin root word for *money* (from the Proto-Indo-European *monéyeti*, and its root base *men*- "to think") means, literally, "to **warn**, to **remind**, to **advise**, to **instruct**"; as if a second government (with interest payments as private tax). The American Revolution was formed in opposition to such special private privileges and imperialism (Maclay, 1790). See also "Money", Conspiracy theorist", "Estates, 3".

'Monetarism'- 1) most generally an economic perspective that focuses on the macroeconomic effects of the supply of money (f.e. this book).

1b) It is more often, however, about "the broader idea that monetary policy works solely through asset prices.... Although [Milton] Friedman for a time had some success in convincing his fellow monetary economists to focus on the *stock of money* rather than on interest rates, in the long run the profession returned to the view that monetary policy was identical with short-term, low-risk *interest rates*" (Rockoff, 2015, 39). See also "Asset inflation", "Interest rates", "Monetary Reform, international".

1c) most specifically, however, an ideology associated "mainly with Milton Friedman at the University of Chicago; their theory **is** basically... [from] the '*Banking School*' [of the early-mid 19thc], so called because their views were useful to bankers who claimed that *only those with hard money*-- the banks-- should create [montized] credit, not the government. (...in contrast to the State Theory of Money). In thus serving the financial sector's predatory incursions into industry and government, Chicago School monetarists

¹⁶⁹³ http://www.bahaistudies.net/neurelitisim/library/jeremy_bentham.pdf

¹⁶⁹⁴ Smith's position [on usury] was ostensibly in "support of the prevailing opinion on usury, which was that there should be a ceiling on interest rates 'somewhat above the lowest market price'.... One would think then, that Smith's support of the status quo would be accompanied by a robust...[or at least long-winded] argument. Yet such is not the case.... I suggest that Smith's position on usury... [was merely] a **cursor**y justification, all the while quietly intimating an attitude more skeptical of the [traditional] restriction. Usury policy is arguably one of the most controversial policies that Smith addresses. Smith was a revered public figure and intellectual who engaged members of all walks of life including the church, state, bankers, merchants, and manufacturers. Smith's ultimate goal was instituting a liberal [free-for-all] society, and he understood that certain aspects of such a society would be *difficult for his audience to accept*, such as the social tumult associated with [monetary-alchemy] growth and the [resultant] increasing power and influence of a merchant [banking] class. Smith intentionally *distanced himself* from [his purported supporters in] the merchant class, so none could call him a shill for...[the] group" (Diesel, 2018). See also "Smith, Adam (1723-1790)", "Usury", "King James' Bible/70 Year Plan".

thus are essentially free-market economists; (See Neo-serfdom)” (Hudson, 2015b). Confusing? Remember the distinction between “Money” [anything that circulates] and “Currency” [state-authorized money], f.e. “the Chicago School” vs. “the Chicago Plan”. See also “Estates, 3”.

2) In conventional usage, however, the term only goes back to the 1960’s [and ↑eurodollars]. “Already a monetarist [long] before Karl Brunner...[actually coined] the term in 1968.... [Clark] Warburton’s extensive work on...[monetary-“business downturns”] was... followed in 1963 by Friedman and Schwartz’s detailed [monetary history] project.... Warburton was [only] implicitly [of course] proposing steady money-supply growth” (Yeager, 2015, 1). See also “Gross Domestic Product (GDP)”, “Monetization”, “Monetary Economics”.

3) “Quantity theory is the centerpiece of... monetarism.... The theory holds true most...[obviously], but not only, in a fiat-money system.... [It] asserts a correspondence... which need not be tight except in the simplest of models. The theory is [the most] simply supported by historical and statistical evidence... [and] does not [necessarily] imply that causation always runs from money to prices.... [It] illuminates decentralized as well as centralized monetary systems” (Yeager, 7-8).

4) Davies & Connors’ 800-page, multi-edition *History of Money* even introduces the fiscal policy ‘reforms’ (i.e. “tax shift”) “of the 1980’s and 1900’s [which was, at that time] under the banner of *monetarism*...[as] what we now refer to [since the 1990’s & c.2000] as the [political] Washington Consensus, [predicated upon pretty much the entire] post-war Keynesian [economic] orthodoxy” (Connors, 2016, vi). See also “Tax shift”, “Washington Consensus”, “Keynesianism” [Nixon].

5) Those few Economists “even who *do* talk about money, like the monetarists, don’t talk about debt” (Hudson, 2016s). This is because, since the 1960’s, ‘Monetarism’ and its mis-named ‘Chicago School’ have been false opposition to the (20th century’s) governing paradigm of Neoclassical Economics, wherein ‘banks, money, and debt’ are not to be included in any ‘serious’ discussion or models. See also “Neoclassical Revolution, the”, “Chicago Plan(s)” (“currency school”), “Chicago School” (“banking school”), “Deceptive Banking Terms (d.b.t.s)”, “Macroeconomics”, “Money, 3 (contemporary) Tiers of”.

Monetary (adj.)- has long been the adjective form for both ‘money’ & ‘currency’, presumably because the alternative would be having to resort to using the word ‘currency’ as both a noun and its own adjective. See also “Money”, “Currency”, “Hamilton, Alexander (c.1756-1804)” [gordian].

Monetary Authority (theoretical)- 1) If we are to accord with the US constitution (Art.1, Cl.10, Sec.8) on this matter, this authority to regulate the quantity and value of money in the USA is to reside in (a committee of) the US congress. See also “Constitution, US” (Art.1:10:5).

2) Any public guardian “of a currency and stock of money...ought to be independent and impartial, similar to the courts, bound by a detailed legal mandate, but [also] discretionary in pursuing policies on that basis, irrespective of the particular political and financial interests of the day” (Huber, 2017, 6). This is about the separation of powers in the 21st century. See also “Separation of Powers”.

3) “The basic benchmark for extending and perpetually readjusting the stock of **money** would be the growth potential of the economy at full capacity, also taking into account interest rates, [and] inflation, as well as asset inflation” (Huber, 2017, 6). See also “‘Currency’ or ‘money’ (essay)”, “Monetary”.

4) According to Miguel Ordonez, in “the new system, the attribution of the...[new] money created, that is, the decision *to whom* the money created is transferred, must be fixed through *stable rules*, with very broad consensus such as laws requiring a highly qualified [*super*] *majority*. These laws will establish whether the money is transferred directly to *citizens*...[to the *public sector*] or [to] both. As regards the ‘seigniorage’ granted to the State, as is normal in a democratic system, its specific purpose (public investment, tax reduction, subsidies, reduction of public debt, etc.) must be decided by...[the Legislature] just like any other public revenue, and not by the issuing entity”, which must have sound structural independence from the (Executive) government (Ordonez, 2018). See also “Congress”.

Monetary Authority, the- (synon. ‘Monetary Commission’, ‘Public Money Administration’; a.k.a. ‘Monetary Policy Committee’ [UK])

1) “If you want to equally hand the [new] money to everybody, you do it through the government... [and] banks [then] become true intermediaries, just like an investment fund is today” (Kortsch, 2017b, mn.24-25). See also “Sovereign money”, “Monetary reform” [MoneyMarketFunds].

2) This, of course, requires some clarity. However, “up to the present time, Congress has merely given our monetary agencies [such as the Fed] certain broad powers, with *no explicit directions* as to *how* those [monetary] powers should be used. Today we have no clear and definite standard by which to measure success or failure and, consequently, there is no way by which we can tell clearly and definitely whether the diverse agencies are giving us the best service they can” (Fisher, et. al, 1939). See also “Federal Reserve System”, “Monetary Economics”.

3) “There should be constituted¹⁶⁹⁵ a ‘Monetary Authority’ clothed with carefully defined powers over the monetary system of the country, including [-only-] the determination of the volume [quantity] of circulating medium. That is, the ‘Monetary Authority’ would become the agent of Congress in carrying out its function as set forth in the Constitution, Article I, Section 8,-- ‘to coin Money, regulate the value thereof, and of foreign Coin’.... It should [must] be kept free from any political or other influences and interests which might tend to interfere with the performance of its functions. Its primary [only] concern should be the maintenance of the monetary standard as [lawfully] defined by [a publicly accountable] Congress. This [single] standard and the means of maintaining it should be so narrowly defined by Congress as to leave *only a minimum of discretion* to the Monetary Authority” (Fisher, et al., 1939, 18). See also “Nineteen-thirties (1930’s)”.

4) More specifically, this “discretion” of the Monetary Authority to issue aggregate monetary targets could be governed by 1 or 2 standards: a simple per-capita standard, and/or a more detailed cost of living standard, whereby “the Monetary Authority would have to observe closely the movements of other more sensitive indexes¹⁶⁹⁶... [in other words, this is a] reference to Parity economics” (Bongiovanni, 2019d, mn.29 [citing Fisher, et. al, 1939]). See also “Wealth”, “Parity pricing”.

5) Make no mistake, “the purpose of any [honest] monetary standard is [simply] to standardize the unit of value-- just as a bushel standardizes the unit of quantity, and an ounce standardizes the unit of weight. To furnish a *dependable* standard of value should therefore be the *only* requirement of monetary policy. It would be fatal if the public were led to believe that the Monetary Authority, solely through monetary manipulations, were [somehow] able to assure the maintenance of prosperity, and should therefore be made responsible for it. Any such assumption would probably mean the demise of the Monetary Authority in the first period of adversity” (Fisher, et. al, 1939).

6) will be solely tasked, as Congresses’ agent, to set money supply targets, based on Congressionally [legislative] approved inflation targets, directing the Treasury [executive] to issue fully constitutional debt-free sovereign money [DFNM]. See also “Debt-free National Money (DFNM)”, “Currency”.

6b) The Constitution does not provide for a 4th or independent branch of the federal government. The extra-constitutional (‘independent’) Federal Reserve Board, for example, is now titularly within the Executive branch, although the rest of the FRS is not. Congressman Kucinich’s (2010-11) *N.E.E.D. Act*, per 20th century custom, also suggested placing the new monetary construct under the Executive, within the Treasury department. We believe that that would be a serious flaw, contributing to more Executive branch bloat, the ‘imperial presidency’, and the growth of government in general (as evident from the Federal Reserve’s implementation in 1914 to today), that-- quite the contrary-- a successful Monetary

¹⁶⁹⁵ That means in accordance with the United States constitution. “Neither the President nor the United States Treasury [Citibank/Goldman Sachs] nor any other agency of the [Executive] Government should have power to alter the volume of circulating medium” that they have been granted by the People, via Congress, to work with (Fisher, et al., 1939, 19). It is not a proper purpose of Monetary Reform to discard what the Glorious Revolution of 1688-94 established-- that is that the Legislature (not the Executive) is to have power over the purse strings (in any society that is not a ‘dictatorship’). See also “Separation of Powers”.

¹⁶⁹⁶ It is just common sense that the primary sector (raw materials) leads prices in the 2ndary and tertiary sectors. In the 1930’s, it was known that the “retail prices involved in [calculating] the [government’s] cost-of-living index... do not afford all the information necessary for regulating the volume of money. The Monetary Authority might therefore... include in its standard some [raw material] *commodities* having “sensitive” prices, in order to make its [monetary] actions respond more quickly...” to economic resource reality (Fisher, et al, 1939). See also “Parity pricing”.

Reform should be ceasing. A properly designed sovereign federal government need no longer be ever-expanding from its own failures and redundancies. See also “Deep State”, “Big Government (growth of)”.

7) A correctly designed M.A. would have less than 10 members, with less than 90 research and administrative staff, and be housed within (and yet fully independent of) the Legislative branch (Congress), to which it is required to deliver its recommendations and findings on the US money supply, in full accordance with Article 1, Section 8, Clause 5 of the US constitution. See also “Separation of Powers”.

8) aggregate targets and calculations must be stipulated as transparent,¹⁶⁹⁷ objective, and predictable (like a high school student could follow). It is imperative that the Congress fully understands that-- although it decides *how* its budget will be spent, how taxes are appropriated, and to what extent there may be a deficit-- [that] it is not within the law for them to deviate from the planned *aggregate of debt-free national money (DFNM)* to be spent **or lent** into circulation each fiscal year.

9) Any viable Public Money system must demonstrably separate the supply side of money (a.k.a. creation) from the demand side (a.k.a. allocation). According to Joseph Huber, the most “important thing is that the Monetary [supply/creation] Authority is not subject to [Executive] government directives... [and] is accountable... to parliament... the public... [and] is law-based... with a well-elaborated [understood] *legal base...* [that is] *entirely independent...* from the:

a) banking industry, b) executive, and c) **parliament**” (Huber, 2014c). See also “Economics, Parity”, “Graham, Benjamin”.

10) “Unlike a central bank, the **monetary authority** does not need to engage in private business to implement its policies. It can manage...[a] virtual euro system directly, with a new class of monetary management tools, based on real-time insight in both stock, flow and allocation of virtual euro. That renders monetary management much more precise, effective and predictable [& accountable] than it currently is, without any [more of the traditional] need for moderate inflation. It also improves the structure of the monetary system, by strict demarcation of [what should be] public and [what should be] private affairs” (Wortmann, 2017b). See also “Separation of Powers”, →“United States, the”, →“‘Currency’ or ‘money’”.

Monetary Authority

Central bank

Provides liquidity to society.
Is not involved in the business of banking.
Supervises from an independent stately position.
Monitors liquidity throughout society.
Directly supplements liquidity for real-economy investment, if needed.
Does not provide short term credit.
Is not exposed to counterparty risk.
Has no self-interest in money creation.
Administers the money system ‘off-balance sheet’
Insulates the currency from market and credit risk.
Has direct control of the money supply.
Is bound by a zero-inflation policy.
Does not set a ‘risk free’ interest rate.
Sets a ceiling for interest rates, if desired.
Is insulated from both commercial and political interests.
Does not fund public nor private deficits.
Is part of a single system for financial oversight.
Contributes to transparency and a level playing field.
Applies regular insolvency procedures to banks.
Operates under democratic control.
Applies the power to create the general currency in the public interest.

Provides liquidity to banks.
Is deeply involved in the business of banking.
Supervises from an actively implicated position.
Monitors liquidity of banks.
Supplements liquidity to financial institutions, potentially triggering asset price inflation.
Provides short term credit.
Is exposed to counterparty risk.
Has self-interest in money creation.
Administers a money system on its balance sheet.
Exposes the currency to market and credit risk.
Has weak and indirect influence on the money supply.
Needs inflation to implement its policies.
Sets the ‘risk free’ interest rate.
Sets a floor for interest rates.
Is insulated from political interests.
Does not fund public deficits.
Is part of a dual system for financial (and prudential) oversight.
Obscures and levels bank credit risks.
Applies special insolvency procedures to banks.
Operates beyond democratic control.
Applies the power to create the general currency in the interest of the banking system

[Wortmann, 2017;

¹⁶⁹⁷ “Transparency on the decision process of public money issuance has to be fully guaranteed to the public” (Yamaguchi & Yamaguchi, 2017, 18).

¹⁶⁹⁸ Because “the vast majority of money is bank deposits, money can only be truly *single* if confidence in the safety of bank deposits is the same, irrespective of the Member State in which a bank operates. This requires *single* bank supervision, *single* bank resolution and *single*

Monetary Base- see “Base money”, “Currency”.

‘Monetary Branch of Government’- (i.e. taking over the governance role traditionally held by ‘credit money’) The credit money (sometimes a.k.a. ‘monetary’) branch has always been the 4th ‘branch’ of government (since before there were even acknowledged to be 3 branches), independent of the (state’s ‘hard currency’) mint. See also “Money”, “Currency”, “Money, 3 (contemporary) Tiers of”.

1) Both this (presumed public takeover of what has long been a private, credit money function), and the century-long bloating of the Executive branch, can be avoided by educating Congress on its monetary-currency responsibilities, and passing legislation that holds them and their constitutional ‘monetary authority’ accountable for the (supposedly ‘sovereign’) nation’s monetary currency aggregate. See also “Sovereignty”.

2) The US Congress has not, however, for at least a century, proven itself capable of meeting its constitutional currency duties¹⁶⁹⁹. See also “Congress”, “Monetary Authority”, “Imperialism, American”. See also “Monetary reform”, “Economics, Parity” [USDA]; “Local scrip & Complementary currencies”.

Monetary Economics- (i.e. @FederalReserve.org) 1) “The study of money, above all other fields in economics, is the one in which complexity is used to disguise truth or to evade truth, not to reveal it” - J.K. Galbraith’s *Money, Whence It Came, Where It Went*, 1975. See also Still, 2013 [mn.5-6]; “Censorship, academic”, “Tobin, James”.

2) “For the economics profession that came out of the [2nd world] war, the Federal Reserve was not a very important place as far as they’re concerned, and their views on monetary policy were *not* framed by a working relationship with the Fed. So I would date it to...the mid-1970s.... The generation that I grew up under... were independent of the Fed. They sent students to the Fed and they influenced the Fed, but there wasn’t a culture of consulting, and it wasn’t the vast network of professional economists working there.... Try to publish an article critical of the Fed with an editor who works for the Fed.”- James Galbraith, 2013. See also “American System, the”, “Neoclassical revolution”, “M.I.T.”

3) “The refereed journals are all controlled, essentially, by Chicago School censors” (Hudson, 2020c, mn.). See also “Censorship, academic”, “Hudson, Michael”, “Groupthink”.

3b) The Fed sending boatloads of money “to anyone in the country that was interested in money and banking” also bothered Robert Auerbach’s friend Milton Friedman, who said to Reuters that “this [over-concentration] is *very detrimental* to having good analysis of what the Fed is doing-- having them all on the payroll” (Auerbach, 2009, mn.12).

See also “M.I.T.”, “Economics” [Still], “Truth serum”, “Politi economy”, “Monetary theory (historical)”.

Monetary financing¹⁷⁰⁰ (singular d.b.t. for different ways of creating new CB money [via the ‘primary’ or ‘2ndary’ markets]; a.k.a. ‘direct’/primary mkt. monetary finance, or simply ‘going direct’; i.e. the CB buying bonds directly from the Treasury; not to be confused with O.M.O.s or ‘quantitative eas’ [CB bond or asset purchases via the ‘2ndary markets’])

1) “transmission of money to...the public [not only to banks (and then ‘the public’)] from the central bank” (Wolf, 2020), via direct purchases of government/Treasury bonds.

1b) “[E]lements of monetary system reform are missing in...[the] approach, [so what] it comes down to [is basically] government deficit spending” (Huber, 2019f). See also “Money creation (in the UK-US today)” [Keen].

deposit insurance.”- July 2015 Joint Statement from the “5 Presidents” of the European Union (J.C. Juncker [Commission], D. Tusk [Council], J. Dijsselbloem [Eurogroup], M. Draghi [ECB], and M. Schulz [Parliament]). See also “European Union”.

Juncker, J-C. (2015), D. Tusk, J. Dijsselbloem, M. Draghi, M. Schulz, Completing Europe’s Economic and Monetary Union, European Commission.

¹⁶⁹⁹ ...with the possible exception of (see also) “Economics, Parity”.

¹⁷⁰⁰ “Financing” always involves debt. The creation of new money, however, need not. See also “Sovereign money”.

2) One “sleight of hand hinges on the...[deceptive] word ‘*permanent*¹⁷⁰¹.... If they do not intend it to be ‘permanent’, then it is not ‘monetary financing’. This is how the Bank of Japan pretends that it is not engaged in monetary financing, despite the huge scale of its holdings of government bonds.... ” (Wolf, 2020). They’re only supposed to do it “through a crisis” (Ibid); but the crisis is permanent. See also “[Deceptive Banking Terms \(d.b.t.’s\)](#)”.

2b) “*Direct* [a.k.a. “overt” or ‘primary market’] monetary finance”, is simply when the CB buys government bonds directly (hence bypassing the [see also] “Primary dealers” (& big banks). The practice is expressly forbidden by the (see also) “Lisbon Treaty (E.U. ‘Constitution’)”.

2c) Such prohibitions (formal or informal) are “first and foremost [obviously] in the interest of primary-dealer banks, pension funds, and the like... [but do] not exist everywhere. The Bank of Canada directly absorbs 1/5th of the Canadian government’s bond issue, thus bypassing banks and institutional investors. This works smoothly and no one finds it particularly remarkable” (Huber, 2021). See also “Canada”.

3) The term, however, is also used as a synonym for (so-called) “*Helicopter money*”, which may or may not be created/issued through bonds & interest. Providing new cash to a sovereign government need not involve (interest-bearing) credit, which can of course be by-passed altogether. See also “Monetary reform”.

3b) BlackRock’s famous 2019 plan outlined the gradations (from tepid to “extreme”):

1] (conventional) “fiscal stimulus”-

2] “Going direct” or “direct monetary financing”- cutting out the interest

3] “Helicopter money” or “explicit/permanent monetary financing”- pretty much full sov. money

4] (Titus, 2021c, mn.45).

4) Nonetheless, “I expect monetary financing to stay for a... long time; that’s because of the large amount of debt in general and... the [thus] need to keep interest rates low. So it’s [now] not very important if monetary financing is done [more] indirectly, as it is right now, or...[more] directly.... [I]t is what is actually happening ...[and] is already practiced... CBDC...[already] dominates what is going on in money and banking and central banking.... It is a significant step in that [Monetary Reform] direction” (Huber, 2020c, mn.19-21). See also “Digital Cash/Currency”.

See also “Helicopter money” [.Wortmann], “Sovereign money”.

Monetary History- See “Eras of (monetary) History”, “History” [.WesternCiv].

Monetary institutions- See “Fractional Reserve (monetary) institutions”, “Free Banking (era)”.

Monetary policy (public)- (public weights & measures, including of course the measure of a state’s currency, should always be clearly understood, consistent, and posted/transparent; anything less is of dubious civility) See also “Public-Private Partnership” [.Adams].

The “money system is merely a means to an end, and if it doesn’t work, we can change it. There is no wealth but life, wrote Ruskin in 1860¹⁷⁰². It is, at one level or another, the battle cry of all the [centuries] of [monetary System] critics in this book” (Boyle, 2002). See also “Politics”, “Political Economy”.

1) It’s not a recent insight; but goes back (at least) to Solon, the Qin-Han dynasty, and also nearly a millennia of monetary policy in medieval England. This history cannot be (totally) erased. Nor can the fact that many-- if not most-- of America’s Enlightenment-era ‘founding fathers’ concurred with this (mother of

¹⁷⁰¹ This is the definition proffered by Andrew Bailey, Gov. of the Bank of England (r.2020-): “‘monetary financing’ [is] a *permanent* expansion of the central bank balance sheet [a.k.a. buying up assets] with the *aim of funding the government*” (Bailey, 2020). He thus demarcates the term by time, instead of (as others do) by markets (i.e. the ‘2dary’/indirect or ‘primary’/direct). Perhaps Bailey attempts to construe the term in that way (as does, also apparently, the Bank of Japan) because his primary task is to ~~defend~~ expand the “independence” and autonomy of the BoE: “This type of reserve [a.k.a. ‘federal funds’→ RAB] creation has been linked in other countries [Argentina?] to runaway inflation. That is because it could undermine a central bank’s ability to control monetary condition” (Bailey, 2020). See also “Princes of the Yen”, “Bank of England”.

¹⁷⁰² Ruskin’s resultant *Unto This Last* book version (1862) was read by the “young Mahatma Gandhi in 1904...[during] his train journey from Johannesburg to Durban, by the end of which, it had changed his life and decided him [sic] to live by its principles” (Boyle, 2002).

all) structural clarity, including even the Liverpool-born 'Financier of the American Revolution' (against British economic exploitation & tyranny). "Whenever such things require much labor, time, and reflection, the greatest number, who do not know, are made the dupes of the lesser number who do."

- Robert Morris, Superintendent of Finances for the United States, arguing for a consistent decimal standard (which did not exist in any other country of the world at the time), 1782 (Allen, 2009, 111). See also "Enlightenment, the", "United States, the".

2) Today, however, "the side effects prevail, and the effectiveness of monetary policy is [highly] questionable" (Wortmann, 2019b, 4), thus far in the 21st century. See also "Quantitative Easing (QE)", "Repo (Repurchase) agreements", "Bank welfare".

See also "Two sides of the same coin", "Government, role of", "Monetary reform", "Parity" [for what?].

Monetary reform (international)- See "Graham, Benjamin (1894-1976)"¹⁷⁰³, "World Par Economy (WPE)".

Monetary reform (national)- (i.e. 'currency reform'; To some, the main problem has long been monetary "centralization"; to others, it is currency "privatization". Both usually agree, however, on the need for separating the *creation* of currency from its *allocation*.¹⁷⁰⁴ It is thus, at core, about "ending the issuance of fragile [& hence state-backed] money by...banks" [Ordonez, 2018.] See also "Separation of Powers", "National Debt Economy (NDE)", "Banks".

1) The "last big-name [E]conomists concerned about *what form* [institutions of] *money should take* were Keynes, Fisher, and Simons in the 1930's. But there is something stirring out there..." - English author David Boyle (Boyle, 2002). See also "Debt cycles", "Economics".

1b) ...and it has been (stirring up. slowly) since the 1980's (not just from the [somewhat apocalyptic] 2000's). Because banks are afforded "a [state] financial safety net...[in order] to insure the soundness of the payments system...[they are] special business entities."¹⁷⁰⁵ The developing trends of banking [post-S&L Crisis] denote the shift...away from the 'on-balance sheet' toward the 'off-balance sheet' banking...[which] has sparked the ongoing debate regarding the need to reconstitute the financial structure so as to address...questions about the [public] safety net extending to banks' [private] activities...beyond those assumed to need [large-scale] government protection" and regulation; the "1980's S&L crisis, which ultimately cost [US] taxpayers half a trillion dollars, gave rise to various [reform] proposals including...the institution of 'narrow banks' that would be insulated from market and default risks, thus insuring the safety and soundness of the payments system, and eliminating or substantially reducing the need for deposit insurance. The idea of narrow banks gained substantial currency when it was originally suggested (Litan 1987), and continues..." (Papadimitriou, 1998, 446). See also "Eurodollars" [.1970's], "Savings & Loan Crisis [.1980's]", "Moral hazard", "FDIC"; "Narrow banking".

1c) The financial system "is a public good."¹⁷⁰⁶ It cannot operate" like a private "gas station system" instead of a public highway system (Kotlikoff, 2021, mn.142). See also "Privilege", "Chicago Plan(s)".

¹⁷⁰³ "It ought to be self-evident that no business can function properly with such fluctuations in prices... [the key to which still remains] our farm price structure" (Wilken, 1947, ch.14). See also "Economics", "Bretton Woods" [imperialism], "Big Government (growth of)"; "American System".

¹⁷⁰⁴ In what have been euphemized as "'market economies', [banks are] the decision-making control center of the entire economy...because they [both] create the [aggregate] money supply and they decide *who* gets money for *what* purpose.... [a power which can] completely reshape the economic landscape in just a few months or years" (Werner, 2018b, mn.32).

¹⁷⁰⁵ See also "Privilege", "Lobbyists", "Public-Private Partnership (PPP)".

¹⁷⁰⁶ Currency should "be treated as a publicly owned resource, like the atmosphere or the electromagnetic spectrum. But... [the] money supply is loaned into existence at interest" (Daly & Farley, 2004, 253). See also "Debt saturation", "Bank welfare". "Money is the [big] problem precisely because it leads us to think that wealth behaves like its symbol, money; that because it is possible for a few people to live on interest, it is possible for all to do so.; that's because money [symbol] can be used to buy [real] land, and land can yield a permanent revenue, therefore money can [and 'should' also] yield a permanent revenue"; "money has become less a means for facilitating exchange, [and] more an end in itself" (Daly, 253; 256). See also "Wealth", "Rentier", "Monetization & entropization".

2) “The question today is whether a *new* ideology and political reform program¹⁷⁰⁷ will emerge to complete the task of classical *political economy*: to free markets from unproductive debt overhead and unearned *rentier* income [a.k.a. interest]. The alternative is a Counter-Enlightenment that would roll back the democratic era that industrial capitalism promised to inaugurate” (Hudson, 2012g). See also “[World Par Economy](#)”; “Parties, political” [a.k.a. ‘vote for money-- A & B’], “Local scrip & Complementary currencies”.

2b) This is because, despite the monetization of everything; we “have barely begun to understand money as a medium of constitutional decision. It awaits our commitment to make it the medium of a just legal order” (Desan, 2019). See also “Economics”, “Political economy”, “Reserve currency” [Dr. Seuss], “[‘Currency’ or ‘Money’ \(essay\)](#)”.

3) “The basic idea... is money [today] is like a horse which has become wild. It has torn itself off from the real production of values-- be it physical or even [from] cultural values. Now you have to tame this horse and rebind money to real value-creation processes¹⁷⁰⁸.... It...[should be] only mirroring [not warping] the production of goods [and services]....” (Meyer, 2018, mn.58-59); and also, hence, not warping the downstream-Pavlovian values that such (and so many) economic decisions inexorably foster. See also “Conditioning”, “Transhumanism”.

4) In other words, the post-1970 “emergence of an immensely highly regulated... yet cosseted, notionally private, but [de facto] publicly-backed financial system is a perversion of a market economy. If you’re on the ‘Left’ or the ‘Right’, you should both agree [that] this makes absolutely no sense whatsoever.... [because] the banking system is... since the Central Banks were created...the private beneficiary of a public function, guaranteed by a public institution... which is the creation and management of money....

There are quite a number of options we could now pursue which would reduce or eliminate, in substantial measure, the fundamental problem created by the fact that ‘money’ [today] consists of the liabilities [IOU’s] of unsound financial institutions....” (Wolf, 2017, mn.26). We will “have another monstrous financial crisis. The question is not if, but when” (Wolf, mn.27). See also “Bank welfare”, “Monstr.”

5) “the most urgent of all essential reforms” (Hellyer, 2015, mn.6); as the circulatory system is to the body. “Whatever power wishes to subjugate a person will have to exert an influence that imprints itself in his blood... That which possesses a person’s blood possesses that person, and possesses the human ‘I’ – Rudolf Steiner, “Blood is a very Special Fluid” (Steiner,). See also “Governance”, “Physiocrats”.

6) This is because (for many, many decades now) the primary “loose screw in our...American money and banking system is the requirement of only fractional reserves [RAB] behind demand [TAB] deposits. Fractional reserves give our thousands of commercial banks power to increase or decrease the volume of our circulating medium by increasing or decreasing bank loans and investments. The banks thus exercise what has always, and justly, been considered...[the primary] prerogative of sovereign power. As each bank exercises this power independently without any centralized control, the resulting changes in the volume of the circulating medium are largely haphazard. This situation is a most important factor in booms and depressions” (Fisher, et al., 1939, 20). The task of meaningful reform “would be much simplified if we did away altogether with the fractional reserve system; for it is this system which makes the banking system so vulnerable” (Fisher, et al., 22). It is also sometimes overlooked that the “fractional reserve system distorts the rate of interest, making it sometimes abnormally high [1981] and sometimes abnormally low [2014]” (Fisher, et al., 39). A *single-circuit* (or even a ‘100% Reserve’) system, would substantially moderate the often pernicious effects of interest rate (and monetary) swings. See also “Debt cycles”, “Sabotage”.

7) Do we really want anonymous people, from who knows where, gaming the monetary system in the 21st century? The money supply will be “separated from [dependence upon commercial] banking activities, money

¹⁷⁰⁷ “[T]he general truth [for thousands of years, is] that steps towards political unity and steps towards stable and unified currency coincide” (Loyn, 1991, 125). Currency and territorial integrity have always been the first tasks of governments. The late 20th century ‘forgot about’ the former, and the early 21st century is now suffering from the latter-- at the same time that both the scope and scale of governments has been continuing to expand. This is undeniable testimony to the philosophical depth of the current (since 2008) Crisis.

¹⁷⁰⁸ This is not a trivial concern. “The question is...is the leadership capable of envisioning an economy that isn’t dependent on the promise of war without the actuality of war” (Fitts, 2018n, mn.101). “The system doesn’t have integrity, and we need to face that” (Fitts, mn.106). See also “‘Debt money’”, “Central Bank”, “Evil”.

is safe, and banking activities can [then] be liberalized.... Stability is the most important [in any public currency], and then is the Monetary Reform” (Ordóñez, 2018, mn.1). The main point is *unbundling*-- “to separate the activities that can be provided by market, and the activities that have to be supplied by money. And that happens in all structural reforms.... because if you have them [all] together [then] of course it is impossible to introduce competition, no?... [The basic task is to introduce] competition, liberalization; eliminate subsidies...privileges...[state] protections... [and] monopolies.... You have to change the regulation from protecting businesses, to protecting citizens [and] to protecting market...” (Ordóñez, mn.5-6). The 10,000 pages of the Dodd-Frank legislation have, instead, “the flavor of the Soviet regulations.... how to do the tomato sauce...[W]hat we tell to the managers of banks is how they should manage the bank” (Ordonez, 2018b, mn.11-12). “Why is banking reform the only reform that hasn’t been applied” in recent decades? Because “you don’t have an alternative to banks’ money” (mn.14). But “anti-market regulations” are simply “not necessary” in order to have “safe money.... It is possible to deregulate banking without fear” (Ordonez, mn.15). “In fact the Central Bank is converted just into a register.... [like a] real estate register... The Central Bank produces and registers, but the money is from the citizens” (mn.16-17). The “successors to the banks, all of the platforms... will be subject to market discipline” (mn.18). “Money reform and banking reform must be simultaneous.... It is not wise to reform money without liberalizing banking¹⁷⁰⁹... take out all the protections” (Ordonez, 2018b, mn.21-22). Veteran central bankers Ordonez and White agree on the necessity of comprehensive, global-systemic-- not piecemeal-- reforms. Ordonez (2019) is for eliminating “all” *suigeneris* state protections for (TAB)-bankmoney (let it die). Kumhof (2019), in contrast, is for only eliminating a lot of them. See also “Federal Funds (Accounts) for All”. 8) “Put a stop to commercial banks’ practice of creating [TAB] deposits out of nothing [but promissory notes], and things become simple and clear without the complexity, without reserve requirements, without deposit insurance (except to cover malpractice, but not [to cover] systemic fault), without supervisory stress tests, without business cycles of booms and depressions, and most of all without bank failures” (Schemmann, 2015, 8); sucking out ever-more resources from ‘the rest of society’ (a.k.a. ‘the non-F.I.RE. sector’). See also “Parity”. 9) “There are basically 2...approaches to bringing about a system where the money is under public control-- on the one hand a variety of *100%-reserve* systems (full reserve systems) dating from the 1930s; [and] on the other hand a number of variants of the newly developed approach of a... *single-circuit* [or] sovereign money system. Full reserve systems retain the split between demand deposits [TAB] (bankmoney) used in nonbank public circulation, and Reserves [RAB] (central-bank money) used in interbank circulation, thus representing a double-circuit system. A plain sovereign money system abandons the split-circuit structure¹⁷¹⁰ [that is] based on a mixed money supply of Deposits and

¹⁷⁰⁹ Ordonez’ written version: “It is true that the creation of money would cease to be a private activity and would become fully public [in the name of accountability]. But at the same time the reform supposes an *enormous boost to the use of market mechanisms* in the financial system. Perhaps the most attractive aspect of this reform is that it clearly differentiates public from private tasks. On the one hand, it allows the State to give ‘security’ to Money, and on the other hand it allows the Market to adopt [its own] risk decisions. The State stops telling economic agents the decisions they must adopt when taking risks, and private companies stop offering [their credit] money as an asset whose security they are unable to guarantee. The State will only deal with the regulations of markets, consumer protection, defence of competition, etc., making sure that the market operates properly and does not [systemically] defraud [and leech] citizens, but will refrain from telling anyone what risks they can take, with what capital [requirements], [and] with what liquidity requirements, [or] how you should pay your employees, etc. The first effect of reducing State intervention in the banking system is that...[the] whole battery of harmful incentives and subsidies would disappear” (Ordonez, 2018). See also “Separation of Powers”.

¹⁷¹⁰ Moving all ‘Deposit’ bankmoney (TAB) into the ‘Federal funds’ or Reserve (RAB) money circuit, thus having one circuit or tier of money instead of two, and mothballing much of the heavy (and time/resource consuming) insurance and regulatory requirements of the 20th century (and recurrent bank failures, panics, and civilian-targeting wars of the 19th-20th centuries).

Even in the 1930’s, it was known that with the *manufacturing* of new “money...made exclusively a Governmental function and the *lending* [allocation] of money...left to become exclusively a banking or non-Governmental function, some of the vexatious regulations to which bankers are now subject could be abolished. Moreover, the Government could withdraw from the banking business and again leave this field entirely to the bankers... there would no longer be any need of deposit insurance on demand deposits... [And] the principle argument in favor of [interstate] branch banking, which is often regarded as a way to stabilize banking...by eliminating the small [local] banker, would be removed.... Under the 100% [or a single-circuit] system, the demand deposits of both the smallest and the largest banks would be absolutely

Reserves, in favour of a single circuit on the basis of sovereign money only, issued by the central bank (in Europe), or by a comparable monetary authority (in the US)” (Huber, 2017e).

10) Either way (‘gradualist’ or ‘overnight’), meaningful reform “ain’t gonna come from the mainstream. It ain’t gonna come from the universities.¹⁷¹¹ It has to come from rebels like myself, and Michael [Kumhof], and from the public” (Keen, 2019b, mn.20).

11) “Monetary reform is not an abstract[ion-based] ideology or a cult.¹⁷¹² Monetary reform is a practical approach to an improved society founded in moral principles. Of course, morality is an abstract human invention, as is money. In nature there are no prohibitions against deception, theft, and mayhem, and there is no money. The culture of bank-created-credit [TAB] used as ‘money’ which results in growing unrepayable debt is a culture of immoral, amoral deception, theft, and war” (Poteat, 2018)... See also “Design (Knowledge Age)”, “Provocation operation (Po)”.

12) ...And also [at its core] a culture of consolidation-- of over-consolidation. Monetary Reform, for nearly a century now, has always been about strengthening small banks, not consolidating them. In the 1930’s breakdown, they spoke of this as saving “the banks from [eating] themselves”; “small banks would be strengthened...[to] better perform their important function of directing the flow of circulating medium into [locally] appropriate channels” (Fisher, et al, 1939, 37; 39).

13) Monetary reform is thus about “making a transition from the present [almost completely secret and/or obfuscatory] regime to a... [public, accountable] sovereign money system-- which we are *supposed to* [already] *have*, but do not” (Huber, 2017, 1). It’s “about renationalizing money, not about nationalizing banking and finance... [in other words, simply] separating money creation and banking... establishing a thorough [i.e. accounting-based] separation of monetary [creation] and fiscal [spending] powers, and of separating both [of these] from the wider financial functions that are left to...banks, financial institutions, and markets” (Huber, 2017, 6). See also “Accounting standards”, “Huber, Joseph”.

13b) “The relevant dividing line does not run between the real economy and the financial economy, [but] rather between the 2 hemispheres of the financial economy: on the one hand those areas that [actually] contribute to financing the real economy, [and] on the other hand those areas that do not contribute to financing economic output. In... [other words] between GDP finance and non-GDP finance” (Huber, 2020b). See also “Interest rates” [‘non-GDP finance’], “Asset inflation”.

14) The idea is not at all weird. Nor is it particularly new, nor necessarily ‘socialist’¹⁷¹³. “The acute bishop Tillotson [in the early 1800’s] has said, ‘*If the appearance of any thing be good for any thing, the reality must be better*’. The appearance of virtue may be useful to the guilty; but it is less useful than virtue itself, and is frequently a snare to others. The appearance of money [a.k.a. ‘bankmoney’] may be used to transfer property, like the appearance of virtue; and to an interest which monopolizes this appearance, it may be, according to Lord Sheffield, more beneficial in a pecuniary view, than the reality; but to a nation, the [direct] money itself, or a [debt-free] national currency, will, in conformity to Tillotson’s maxim, be better than [TAB] credit or [merely] an appearance of money” (Taylor, 1814, 312). See also “Money”, “Crenney”, “Libertarianism(s)”.

14b) It’s also-- unbeknownst to hardly anyone (prior to 2020-21 that is)-- *already happening*; hence allowing one to move on to the next side of the “Reform, 101” triangle. See also “Money, 2 classes (layers) of” [2003].

secure. The pressure toward the concentration of banking and [for] the establishment of branch banking would thus be greatly reduced” (Fisher, et al., 1939, 38).

¹⁷¹¹ “Why? Because they’re using models that ignore money and credit. We’re not” (Keen, 2019b, mn.20). Katrin Assenmacher from the ECB admitted this at the preceding Future of Money conference in Frankfurt, 2018.

¹⁷¹² Cults are typically based upon (or at least have an inescapable relationship with) *flip-flops* & self-contradictions. “The cult is...[always] insisting... First they say you don’t need a mask. Then they say you do need a mask. And they are insisting on you insisting on whatever they say today is true, even though it’s the...opposite of what they said yesterday” (Fitts, 2021, mn.25). It is simply the nature of a cult. See also “Mind control”, “Secrecy, cult of”, “Money”.

¹⁷¹³ A condition that is, ironically, necessitated by the bifurcating extractions and war-prone nature of bankmoney. See also “Hegelian dialectic”.

15) Monetary Reform has also been a traditional cause for American farmers. “[P]ay the debt out of the system without shrinking the money supply, restore the purchasing power of our money, Economic Justice, Honesty and Freedom! Save your property. Stop a few from unfairly owning everything. Restore the just, moral and enjoyable principles of living to which agriculture once proudly laid claim.... [by helping] return economic freedom to America through a debt-free medium of exchange-- Spent not Lent into circulation!” (Dale, 2019b). See also “Parity pricing”, “Economics, Parity”.

16) Monetary Reform should not be slandered as (yet another) centralization power-grab. “National money... [is] just nationalizing [new] *money* [creation], not nationalizing *credit* [its allocation]... [It’s only about] “the *quantity* [of new money creation]... The allocation would be completely up the private sector” (Kumhof, 2019b, mn.18). Moreover, it will promptly lead to “/less [sic] centralized control, because you don’t need that control [for a fragile system], anymore... Secondly... you could also... [control the quantity of new money creation, by] issuing it under an interest rate rule... the banking system could [only] attain this money at a certain interest rate and [then re-] lend it out.... [So a] ‘*Here’s your money; now deal with it*’ [attitude]...is not necessarily even a design feature of this system. So ‘centralized control’ is very misleading. It’s not that centralized, and not that much control” (Kumhof, 2019b, mn.19).

16b) Furthermore, an economy that is in (some valid approximation of) “balance” between the foundational primary sector and (its derivative) 2ndary and Tertiary sectors need not be dependent upon (that old 20th century extraction wheel of) ‘ever-increasing debt → ever-increasing government’. “Parity pricing” schedules for the primary sector are a common-sense, tried & proven American monetary experiment that worked (or at least didn’t lead to disasters), and would now seem more useful than ever (for averting economic-societal catastrophes) in the 21st century.¹⁷¹⁴ See also “Financial Crisis (of 2008-)”, “Great Extinction, 6th”.

17) Basically, in the digital age, you “don’t need the ‘backing’ of [2nd-tier/TAB-bankmoney] money anymore. You don’t need bank assets hoarded on a balance sheet. You don’t need [those 2nd-tier] assets packaged as collateral, to ‘back up’ [3rd-tier] money market instruments....” (Wortmann, 2018b, mn.14-18).

“Implementing proper demarcations... [between the roles] of *public* (money) and *private* (money lending) affairs in...[a society’s] financial system” involves 2 main points:

- providing state-issued (digital) cash [a.k.a. ‘base money’/RAB] money;
- abolishing all state aid to financial institutions (a state should only back money that it has issued itself)¹⁷¹⁵
 - a. deposit guarantee [FDIC] schemes discontinued [as no longer necessary],
 - b. private money ([TAB-bankmoney] claims) no longer accepted for tax payments [which will be lower],
 - c. interbank settlement [in Reserves/RAB] divested from the public sphere, and
 - d. regulatory oversight reformed [that means reduced]; f.e. no central or state-determined interest rate [apart from usury ceilings] (Wortmann, 2017).

See also “Separation of Powers”, “Sovereignty”, “Civil National Identity (CNI)”.

18) So what’s the problem lingering today¹⁷¹⁶... long after [perhaps more pressing concerns like] slavery has been abolished, national-monetary rivals vanquished [see “[Currency wars, the](#)”], civil rights etched in stone,

¹⁷¹⁴ Has un-anchored “fiat” currency (simply ‘free-floating’ in relation to all the other un-anchored “fiat” currencies), post-2008 & post-‘COVID’, now mostly run its course? Money, like the moon, is inherently derivative and cannot (whether we choose to admit it or not) be based on ‘nothing’. Over the past couple centuries or so, with a few exceptions, it has been based on bank (i.e. *state-monetized credit institution*) credit-- which has essentially mandated both massive systemic debt crises (see also “[Currency Wars, the](#)”, “Debt cycles”) and the hand-over-fist plundering of the Earth in general (see also “Great Extinction, 6th”, “Climate change”, “COVID”). Cheer up; with great Crisis comes great opportunity. “We have to...[sooner or later] establish the buying power of our [societal] money in terms of [at least a more realistic approximation of basic] wealth”- Randy Cook (Asbridge & Cook, 2020, mn.58); in other words, we should not try to get the [primary] sun to revolve around the [derivative] moon; or there will eventually be hell to pay-- either environmental and/or political. See also “Wealth”, “Parity pricing (for the primary sector)”, “Lunatics”, “Food”.

¹⁷¹⁵ And that means “bound by zero inflation policy” (Wortmann, 2017); not [the 20th century’s accustomed] “2”, or 3, or 5% a year (a.k.a. “ants in the pants”). See also “Inflation/deflation”, “Freedom continuum (maturation)”.

¹⁷¹⁶ According to former Spanish CB Governor Miguel Ordóñez, the main problem is simply that “citizens do not see clearly that the [TAB] deposits of private banks are fragile”, because this chronic condition is effectively covered up (most of the time, anyway) by all the state ‘protections’” (Ordóñez, 2019, mn.16). “Deposit Insurance is the opium of the current monetary system” (Ordóñez, mn.17). In a deeper sense, the problem of state-monetary accountability will unlikely just fade away from the advent of higher technology. Quite the contrary:

and technology developed to the point where the TAB-bankmoney circuit of money seems increasingly useless and a debt-drag on society? “Politically, I find that people that are fairly strong on ‘the left’, and the people that are fairly strongly on ‘the right’-- *both* [sic] of them are in favor of this. It’s the people in the middle that sort of aren’t affected a whole lot-- that don’t care that much socially. Those are the...ones that I have to persuade. [To the] ‘far right’ I say ‘*Look, this is free enterprise. You can now operate*’. And they go ‘*Oh man, yea! Sure enough!*’ [To] the ‘far left’ I say ‘*Look, we’re going to get rid of [systemic] inequality*’. And they go, ‘*Yea, bring it on!*’ The people in the middle go ‘*Hey, uh, I want my ice cream and my beer*’. You know?” (Kortsch, 2017b, mn.33). “There is [however] a growing awareness of the fact that we have not been told the truth as to how this [money system] actually works” (Kortsch, 2017b, mn.36). See also “[Deceptive Banking Terms \(d.b.t.’s\)](#)”.

19) Is “consent” that is uninformed ethical and a cool thing to do? “I don’t think we [US] can stand it any longer. We [the citizenry] have to point out to them [the monetary gamers] that [either]: ‘*Ok, that’s your money, not ours*’ [i.e. terminating public support for bank welfare; see Ch.5], or... ‘*That’s our money; you don’t have it anymore*’ [i.e. full sovereign money reform; see Ch.6]. One or the other... And it’s up to us.... The public...mandate is absolutely essential” (Cook, 2019d, mn.47); in the 21st century. See also “Parity pricing (for the primary sector)”. Why? See also “Economics, Parity”.

20) The subject has generally been further along in Germanic-speaking areas of Europe, where Monetary Reform is a household term (since the latter 2010’s) in the Netherlands and in Switzerland (which conducted a hastily-run national referendum on it in 2018). Whereas in Germany itself, national media have reported on the growing phenomenon since c.2014, and large conferences there, and in Sweden, have been examining and discussing salient details since 2018. See also “[Cashless Society \(War on Cash\)](#)”, “[Digital Cash/Currency](#)”.

21) “For the banks, a sovereign money reform means that they can continue to conduct their business freely within the legal framework, but they can no longer produce the money they need for it mostly [by] themselves. Instead, they must have fully funded their [actual] lending... [only] in plain [base] money” from the Treasury or CB (Huber, 2012). See also “Privilege”, “Base money”.

22) “Banks would no longer hold the monetary [creative] power. They would have to fund their lending activities and other proprietary businesses in full rather than fractionally, as does any other financial and real business as a matter of course. Notwithstanding, banks would continue to provide payment and money services, and...would again be the financial intermediaries [that] they typically were¹⁷¹⁷ before attaining sovereign monetary [creation] powers” (Huber, 2017, 6) and lying about it. See also “Tobin, James (1918-2002)”, “Mutual funds (& Reform)” [EFMFs].

23) In the 2020’s, systemic MR “approaches” may be clarified in terms of a basic continuum:

<u>Earth-based</u>	<u>Hi-tech-based</u>
[]

23b) The pendulum, so to speak, should be somewhere in the middle, to avoid extremity and/or ecological-economic-political¹⁷¹⁸ (see also) “Dystopia”, “Malthus”, “Reform, false”.

24) Monetary reform Updates: -

See also “Separation of Powers”, “Decentralization”, “[Federal Funds \(accounts\) for All](#)”, “Minsky, Hyman”, “Transition (from debt-money to sovereign money)”, “Parity pricing”, “[Primary Sector Economics \(PSE\)](#)”, “[World Par Economy \(WPE\)](#)”.

Monetary reform, big picture (zoom out)- (from ‘the barbarous relic[s] of the 2nd millennium’, to a non-draconian, non-dystopian, sustainable ‘space ship Earth’ for the 3rd millennium)

“Reserve currency” → “Graham, Benjamin” + (multi-) “Parity pricing” (anchors) = WPE → “Georgism”.

“One thing that I would like to bring up is that... we have a lot of non-state actors who look to have more and more significant capacity, including in the skies [and space]. I hate to bring up the old James Bond movies, but we’re [already] running into non-state [opaque] actors that have a lot *more* power-- including military power-- than state actors” (Fitts, 2018r, mn.28-29).

¹⁷¹⁷ See “Goldsmith’s Tale, the”.

¹⁷¹⁸ This 13-syllable mouthful can be simplified to simply “*eco-political*”. After all, few doubt that the economy drives politics; and it will be increasingly clear (this decade) that ecology, at the end of the day, is still the primary driver of economies. See also “Economics, ‘Parity’”.

2nd millenn.a/the bridge to the....
See also "Reform, 101", "Design".

3rd millenn.

'Monetary reform light'- See "Federal Funds (accounts) for All".

Monetary reform, transition- See "Transition" (from debt-money to sovereign money)".

'Monetary reformers'- "Any monetary reform approach insensitive to the division of monetary, fiscal, and financial market functions will in fact progress from bad to worse."- Joseph Huber (2017, 152). See also "Money, 3 (contemporary) Tiers of".

1) "I think what we are trying to *achieve* [sic] is a scientific monetary system that reflects physical reality and social desires.... James Stewart...an old-time monetary reformer... had... the monetary reformers' motto... '*Whatever is physically possible and socially desirable must be financially possible*'. It's as simple as that, you know, because it's just numbers, bits and bytes...That should not constrain us" (Walton, 2018, mn.3-4). See also "Power".

2) What should constrain monetary reformers, however, is the awesome breadth and reach of money in today's society (which certainly does not evade the consciousness of others). For any of the latter majority to consider monetary reform in any approximation of seriousness, the focus and intent must be upon the veracity and accountability of public 'weights & measures' (amongst which [what we choose to use for] 'money' is our primary measure of value).

3) like economists in general, are often gullible, overconfident believers trying to be experts mistaking opinion for experimental evidence. Monetary reform will not win a critical mass of support for legislation until it becomes more self-critical and adopts an experimental approach that attracts ordinary, cautious people with common sense. (For example, that one does not meaningfully 'reform' money without also meaningfully reforming politics).¹⁷¹⁹ See also "Financial-Politico Complex", "Left brain, Right brain".

4) One common mistake is that monetary reformers do not understand that *bank credit* [TAB] is only a component of *bank money* when they imagine that bankers "create money *out of nothing*" by loans.¹⁷²⁰ Bank credit, like all promises, is created out of words between 2 parties, and is immediately backed (not by gold or bullion, but) by base money (Reserves/RAB), which the bank lenders cannot create by themselves any more than the borrowers could. See also "Money, 2 classes (layers) of", "Loan swaps".

5) Another "typical monetary reformer fallacy is confusing the bank credit [TAB] payment rate with the entire money supply, and hence concluding that the entire system is a "Ponzi scheme". In reality, bank credit payment is only part of the overall payment (GDP), just as bank credit [TAB] is only part of *bank money* [TAB + RAB]. GDP is a product of both the supply and *the velocity* of money,¹⁷²¹ which is much faster with Reserves/RAB money; and most monetary reformers do not take this into consideration. See also "Velocity of money".

6) They often just indict by rhetoric and suggestion without even focusing on the real crimes like the banks directing their credit toward asset bubbles, and the Fed paying the banks IOR not to lend or stimulate the economy, and the central bank drive toward a cashless society and overly-consolidated police state. See also "Cashless society (War on Cash)".

7) A general issue is that some monetary reformers also seem oblivious to the centralizing interests and designs of central banks, and are not averse to giving still "more power to central bankers, by turning

¹⁷¹⁹ The "financial system [apart from perhaps only the 1880's-1920's] is just a subset of the governance structure. And if you don't understand the governance structure, then it's [pretty much] impossible to figure out how to re-engineer the financial system" (Fitts, 2019w, mn.20). This is just common sense. See also "Governance", "Estates, 3".

¹⁷²⁰ Not one monetary reformer in a hundred has any interest in (monetary) accounting.

¹⁷²¹ The main reason that the base money supply [RAB] is smaller in volume [than TAB] is that its *velocity* is greater. The *payment volumes* between the two are much more equal than the *supply* volume, which is a deceptive measure if it is not considered in the broader context. It is not criminal that bankers are more efficient at recycling their base money [RAB] than the public is at circulating bank credit [TAB]. There is plenty of criminal banking activity that the reformers could focus on without pretending that normal modern money mechanics is criminal or immoral in itself. See also Titus, 2017 ("State capture").

them into the only creators of the money supply.... and [getting] rid of...decentralization” instead of using knowledge of money to arrest and possibly reverse the 20th century’s centralization¹⁷²² trend (Werner, 2018b, mn.115) in a way that is honest and just. See also “Separation of powers”, “K.J.B. (King James’ Bible)/70 Year Plan”, “Design (Knowledge Age)”.

8) “What you’ll find [with some real world experience, however] is that people in that 5-10% net energy plus [range of] people...We can all disagree enormously at a conceptual level, but we are all about getting things done, and using resources well, and ethically, at an intimate [local] level, and that’s why it’s so important to continually bring things down to an intimate [local/real] level.... It was really funny because at a philosophic level we had extremely profound disagreements... but when it came to getting something done [on the ground], we were there, together” (Fitts, 2018c, mn.22).

8b) Richard Vague and Catherine Austin Fitts don’t agree on everything. But they do agree on this (main) point. “Over the last 2 years, I’ve [focus-group] visited with hundreds of middle-class Americans, conducting 30 group meetings in 10 different states, [in order] to hear firsthand about their concerns. For all the [unpaid] talk of political division, their issues were [in fact] almost always identical. whether Republican or Democrat, whether men or women, and irregardless of ethnicity. Too many of them are in dead-end jobs, mired in debt, with constant health care challenges” (Vague, 2020, mn.6-7). See also “Parties, political”, “Reform, 101”.

See also “Fiscal”, “Debt-Free National Money (DFNM)”.

Monetary theory- (a.k.a. ‘monetary philosophy’)¹⁷²³ 1) like a backup quarterback or imaginary girlfriend-- no match for the reality of (monetary) control, as was empirically demonstrated in the (see also) “Currency wars” (of the 18th-20th centuries).¹⁷²⁴ This mismatch (of monetary theory and practice) only changes with the internet and Knowledge Age. See also “Design”.

2) In the Orient, they often speak of ‘Heaven & Earth’; in terms of contemporary monetary ideas:

‘Heaven’- see “Georgism (& Land Value Tax)”;

‘Earth, functional’- see “Parity pricing (for the primary sector)”;

‘Earth, dysfunctional’- see “National Debt Economy”, “Great Extinction, 6th”, →“COVID”.

3) State-tethering (or state-sanctioned counterfeiting) doesn’t constitute a new development in terms of theory or ‘reform’. See also “Cryptocurrencies and Stablecoins”, & [the already existing] “Money, 3 (contemporary) Tiers of”.

See also “Parity pricing (for the primary sector)”, “Two sides of the same coin”.

Monetary theory (historical)- (3 main trees)

***Bronze Age cuneiform did not leave a (developed) ‘theory’ (that any historians have yet discovered)¹⁷²⁵

<u>State theory</u>	<u>Credit theory</u>	<u>Commodity theory</u>
B r o n z e A g e***		

Iron Age- ←Aristotle¹⁷²⁶

Medieval- Thomas Aquinas

Bishop Oresme
John Locke

¹⁷²² Certainly one of the big lessons of the 20th century (2nd Industrial Revolution) was its repeated disasters with centralized power. See also “Decentralization”.

¹⁷²³ ‘Monetary’ typically serves as the adjective for not only ‘money’, but also for ‘currency’-- due to the latter not really having a distinctive adjective form. Theories of what is, and philosophies of what *should* be are also not the same (hence the use of “a.k.a.” instead of “i.e.”).

¹⁷²⁴ The Physiocrats (coach) and French (team) lost-- deeper theory & all. And “the whole history of France is the history of inflation” (Quigley, 1976c-pt.2, mn.150). <https://www.youtube.com/watch?v=16V-wNwITw0> [June 18, 1815’s final verdict] .

¹⁷²⁵ The conventional wisdom, from archeology, is that-- per Ancient Mesopotamia & Sumer-- the State advanced farmers Credit, as measured in the most prevalent farm crops (Commodity).

¹⁷²⁶ The ‘Coinage revolution’ of the 1st millennium BCE mostly gifted or spent physical-durable new money (coins) into existence. Aristotle also, however, acknowledged the other side of the coin, so to speak-- commodity theory views (Del Mar, 1880). See also “Coined money”, “Era of (monetary) History”, “Two sides of the same coin”.

Monetization- (converting *intangible* illiquid assets into means of payment; sometimes confused with 'liquidation' which is about doing so for *tangible* assets)

"Honesty is the best policy-- when there is money in it."- Mark Twain, Speech to Eastman College (1901)

"That which seems to be wealth may in verity be only the gilded index of far-reaching ruin."

- John Rushkin, 1862 (Soddy, 1926, 8). See also "Keynesianism", "Pyrite", "Entropy".

"(There is a) 'danger to every government. ... [from] a general propensity in those who administer the affairs of a government, founded in the Constitution of man, to shift off the burden from the present to a future day; a propensity which may be expected to be strong in proportion as the form of the State is popular."

- Alexander Hamilton, Jan. 1795 (Salsman, 2017, 1). See also "National Debt Economy", "Great Extinction".

1) "Economists in effect [have] said [since the 19thc] that since division of labor set up reciprocal markets, and since human wants could not be satisfied, there could be no such thing as...overproduction,¹⁷³⁰ or [even (with many 'neoclassical' theorists)] unemployment" (Walters, 1982, 3-4). See also "Statistics", "COVID", "Transhumanism"; "Economics, Parity".

1b) "...to a society, today, where we have a state of monstrous power and atomized individuals" (Quigley, 1976c-pt.3, mn.243). See also "Quigley, Carroll (1910-1977)", "Big picture", "Monstr.", "Ontocide".

2) Most people have been trained to look away from the simple observation that 'money' today is various stripes of state or *state-backed credit*. hence increased monetization will almost always be followed by increased 'statism'.¹⁷³¹ Over-monetization & 'over-statism' are at least a .9 correlation-- two sides of the same coin-- and pretty much always have been, from the day the first coins were issued. "Bankmoney regime" and (the so-called) "Shadow banking sector" have-- thus far at least-- only added tiers of complexity to the larger process, which inevitably ends in over-monetization-land. See also "Statism", →"COVID"; "Money, 3 (contemporary) Tiers of", "Industrial Revolution, 3rd".

2b) Even for top scholars, it "is... striking" to observe-- after the return of circulating coinage in the mid-700's-- "how general the move to increased political power was across... [most] of Europe...[throughout] the... 4th quarter of the 1st millennium... [By the year] 1000, recognizable [standing] polities [and something like regular taxation] had crystallized in most places in Europe" (Wickham, 2009, 506). Would they soon be

¹⁷²⁷ Franklin's Pennsylvania Land Bank (from the 1730's) was, arguably, the Big monetary Idea of the entire century. It was a reasonable attempt to balance all 3 schools, and served as a basis for the French Revolution (right up to the 1790's). See also "Public Banking".

¹⁷²⁸ ...of the famously State-International/Central Bank approach (in contrast to old Pennsylvania's State banking approach).

¹⁷²⁹ (Although less commodity-approach than was [its antecedent] the 19thc Banking School), the 20thc Chicago School's de facto State support for 'trickle-down' (wealth-based) Economics based on credit is, arguably, something of a synthesis of all 3 trees. But it was deliberately [politically] pitted against the (more state-based) post-War "Keynesianism" throughout the 2nd half of the 20thc. See also "Chicago School", "Neoclassical Economics", "Hegelian dialectic".

¹⁷³⁰ (The) "cause of causes, so to speak-- the *monetary* [sic] cause of the financial and political causes of the banking and...debt crisis...is [always] overshooting creation of bankmoney, financial assets and debt in the bank-led [and automatically state-backed] fractional reserve system" (Huber, 2017, 105). And the new Crisis is generally bigger than the one before. See also "Lender of Last Resort/Too Big to Fail", "Ponzi scheme".

¹⁷³¹ Over the long-term, 'monetization' is also 'state-ization', because the king of "money" is-- either directly or indirectly-- state credit (a.k.a. currency). See also "Money", "Anthropology, of credit & money", "Big Government (growth of)".

ready for a (see also) “New World order” [after 1492] of pretty much ever-rapider monetization-‘modernization’? See also “Currency” [1st power tool], “New World Order’ (N.W.O.)”.¹⁷³²

How Christopher Columbus caused inflation

London wheat prices in silver currency, 1500=100

[a ‘new world’ indeed]

2c) A millennium later it seems: ‘everything is money’→‘everything is gov’t→‘everything is vaccine passport’
(19thc) (20thc) (21stc?)

See also “Great Extinction, 6th”, “Local scrip & Complementary currencies”.

3) Today, **state-monetized credit institutions** (a.k.a. banks) are licensed by governments to officially monetize the collateral of individuals and businesses. See also “Debt money”, →“Debt saturation”.

4) ‘*Monetization of the [national] debt*’ is basically “issuing Treasuries to fund deficit spending.... Yes, deficit spending forces the Federal Reserve to... digitally create [RAB] money (a touch of the computer keys) and buy Treasuries and other assets from commercial banks. No, it is not all borrowed from China. The newer policy of buying *other* [dodgy, toxic] assets from commercial banks... is called *quantitative easing*.... Deficit spending has kept us out of [a] severe depression!¹⁷³³ There was no [increase in] fiscal spending...[after the Crash of] 1929...[T]he Federal Reserve tightened money [then], which caused the Great Depression” (Pash, 2017, 24). See also “Open Market Operations (OMO)”, →“Japan model (asphyxiation), the”, →“Quantitative Easing”, →“Modern Monetary Theory’ (MMT)”.

4b) “Sound principles of commercial banking have long since been cast aside; and what banks do today, to a large extent is unsound...[because] much of what they monetize is improper. When a [primary dealer] bank *monetizes government debt*, that is an improper basis for creating money.... [It is not] a reciprocal exchange.... [M]oney should be created on the basis of creating goods & services that are in the market now, or are shortly [?] to arrive in the market” (Greco, 2016, mn.13).

5) Problems as big as (something like) Ontocide are obviously systemic & structural in nature. This does not necessarily mean that they will be perceived & remarked on (in public) by more than a few (unusually intelligent or responsible) people in much more than a few instances. In the mid-70’s, Carroll Quigley thought that Western civilization (pretty much the last surviving of his 16 civs. in world history) was doomed. Around the time of the “UKUSA”’s “Eurodollars” partnership and burgeoning “Offshore” monetary factories, *Willie Wonka & The Chocolate Factory* (1971) popularized ‘a wonderland of confectionery creations that defy logic’, run by a somewhat misanthropic capitalists’ oompa-loompas. See also “Wonderful Wizard of Oz, the”.

5b) Only a few years later, two of the favorites for top honors at the 1977 ~~eurodollar~~, Eurovision finals seemed (like American prof. Quigley) to be well aware of the monetization phenomenon (though the resultant price inflation of the mid-70’s had been blamed simply on OPEC):

<https://www.youtube.com/watch?v=HbuJtYe7s64> [attitudinal problem],

¹⁷³² “[S]omething must be credited to an instinct for monetary experiment...[even] to the belief that, along with all of the other wonders of the New World, there existed also the possibility, original and unique in history, of creating money to make men rich” (Galbraith, 1975, 53). See also “‘New World Order’”, “Pyrite”.

¹⁷³³ The realization may be new, but not the practice. For “decades, the banks have safely printed any amount of money that politicians wanted to the state. In order to save the banks now, the states had to take on additional debts” (Huber, 2012). See also “National Debt Economy”.

<https://www.youtube.com/watch?v=MNMrTCbZMG4> [attitudinal solution]. See also “Lunatics”.
 See also “National Debt Economy (NDE)”, “Adolescence of Mankind” [.4.0]; “Monetization staircase”,
 “Economics, Parity”, and/or “Local scrip & Complementary currencies”.

[Is the science of... fulfilling desires... an appropriate task for the State? See also “Lender of Last Resort (LoLR)” [.com]]

Monetization & entropization- (one shouldn't put the cart before the horse; money is only wealth's symbol, and popular psychology is mostly an effect of the underlying economic science, not its cause)

The “financial aristocracy may have persuaded almost everyone that the system we live with now is the way that God made it at the creation of the world.”- David Boyle, *The Money Changers* (2002).

See also “Logical fallacies” [.post-hoc], (at the core of) “Economics” [.macro], “Corrupt” [.institutional bribery], “National Identity/Nationalism”¹⁷³⁴.

1) “In most environments the physiochemical laws point away from [building] life and toward an increased entropization.... [There] is... a normal physiochemical evolution driving action in... [two] directions of the entropy range... [per the] *entropization bias*... [of] the 2nd law” of thermodynamics (Popa, 2004, 135). See also “Corrosion-Cancer-Debt”, “Death Culture”,

1b) The 2nd Law: “Entropy never decreases in an isolated system. Although matter and energy are constant in quantity (1st law), they change in quality. The measure of quality is entropy, and basically it is a physical measure of the degree of ‘used-up-ness’ or randomization of the structure or capacity of matter or energy... We assume the universe to be an isolated system... [and] the 2nd law says that the natural, default tendency of the universe is ‘shuffling’, rather than ‘sorting’. In everyday terms, left to themselves, things tend to get mixed up and scattered. Sorting does not occur by itself” (Daly & Farley, 2004, 439). See also “Dynastic cycle”, → “Physiocrats, the”; “Great Extinction”, → “Ecological economics”, “Primary Sector Economics”.

See also “Reform, 101”, App.C: “1-2-3”.

Monetized Credit Institutions- see “State-Monetized Credit Institutions (SMCI's)”.

Money- ‘Forms’ (2), ‘Types’ (3), and ‘Classes’ (2)

Money- (etym.: see also ‘Moneō’; informal broad usage¹⁷³⁵: a/any ‘medium of exchange’ or ‘claim on wealth’ that circulates¹⁷³⁶ as a measure or means¹⁷³⁷ of payment; narrow [& incorrect]¹⁷³⁸ usage: a polity's

¹⁷³⁴ How much of this sociological or social identity (the strength of the signal) “depends on money and how much [of it] there is around us” (Boyle, 2002)? See also “Currency Wars, the”, “Eras of (Monetary) History”.

¹⁷³⁵ For broad (‘liberal’) usage, see “Money, 3 (contemporary) Tiers of”.

¹⁷³⁶ Credit cards are often called ‘means of payment’, but they do not circulate or change hands (as does money).

<https://journals.sagepub.com/doi/abs/10.1177/056943450705100213?journalCode=aexb> [Yang, 2016].

¹⁷³⁷ ‘Means of Payment that circulates’ is often used for informal/broad “money”. Any written or demarcated ‘means’ of payment that circulates is hence also a ‘measure of payment’. ‘Measure of value’ is used more for public law/unit of account “currency”. See also “Units of Account”, “Inflation”.

¹⁷³⁸ Currency is a correct (one-word) term for a State's “unit of account”; ‘money’ is less specific, less formal and typically not in the legal books (including also in the US since circa 1920's). The primary root of ‘monetary’ confusion has been the mixing up of the terms ‘money’ (the broader/unofficial slang) with ‘currency’ (the formal/legal-official term-- since the 17th century-- for a State's specified unit of money). Both terms, however, are still commonly used to mean both direct-‘State money’ (a.k.a. cash or base money) and also merely State-backed (or non-1st tier) money. See also see “Money, 3 (contemporary) Tiers of”, “Currency”, “Units of Account”.

de jure 'unit of account', which is almost always, hence, the dominant 'medium of exchange' [for which any other 'circulating mediums' (unless the state is incompetent) are in a satellite/tethered relationship]¹⁷³⁹; not to be confused with 'currency'-- i.e. direct 'state-credit' ['M0'] & *state-backed* credit ['M1']¹⁷⁴⁰ that circulates'; broadest usage: anything that is readily convertible into money or currency)

Satellites and debris in low Earth orbit, 1960-2010. Courtesy NASA.

[satelliting is not a new idea]

- See also "Wealth", "Lunatics" (since the ['offshore'] 1960's), "Monetization", "COVID" (.shutdown op.).
- 1) Since money is a tool or facilitator of payments, 'good money' is reliable & stable (and hence invariably a legal-direct 'measure of payment' with 'inherent/*non-negotiable* liquidity'), and not to be confused with 'near-money' or various forms of *unmonetized* 'credit', which are neither legal tender nor on the payment system. 'Good money' should be so well-understood & stable, as to be a non-issue in political economy. We *don't* have that, although Economists are still pretending (however absurdly) that we do (and that currency-money is irrelevant, a non-factor in their profession). 'Bad money' is structurally unstable, or (worse still) so unstable, misunderstood, and opaque that it can be transformed into, ironically, a much-larger tool-- that of *de facto* governance itself, in the so-called 'modern' age. See also "*Deceptive Banking Terms (d.b.t.'s)*", "Smith, Adam" [misunderstood], "Economics" [macro], "State capture".
 - 2) Apart from whatever is used to signify it, *money* is a means of payment, preferably non-negotiable,¹⁷⁴¹ that *circulates*¹⁷⁴² for goods and services and the debts owed for them. For any money that is not physical cash/coin, its existence is dependent upon a Payment System. Digital or symbolic "Account monies" predate physical (stamped) cash, and are also known as: (synonymous terms) *Virtual money*, *Electronic money*, *Digital money*, *Book money*, *Checkbook money*, and/or *Ledger money*.
 - 3) Does this sound like a tool? It is. A tool for what? See "Estates, 3", App.C: "1-2-3".
 - 4) Since the Upper Paleolithic,¹⁷⁴³ it has been 'governments' (de facto or de jure) that determine the definition of money, or delegate this *sovereign* public responsibility [for maintaining clear and consistent 'weights and measures'] to some private (or quasi-public) institution, that is typically more international or 'globalist' in its outlook/perspective. See also "*Credit money*", "*Creney*", "Gold standards/bullionism".
 - 5) According to one of America first monetary historians, the first director of the US Bureau of Statistics, Alexander Del Mar: "Such a school (the [post-Marx] 'political economists') exhibits no claims to be regarded as authorities on either the principles or the history of money. They have been taught to look upon *money* as so much [international-private] *metal*, whereas it is plainly an institution of [national-public] *law*" (Del Mar, 1895, 78). Aristotle simply observed this latter point *in passing* (as it was not often contested at that time): Money "...has the name 'money' (*nomisma*)-- because it exists not by nature but by law (*nomos*), and it is in our power to change it..."- *Nicomachean Ethics*, c.350 BCE, (1994, V, 5);

¹⁷³⁹ See also "Local and complementary currencies".

¹⁷⁴⁰ Hence, the primary root of 'monetary' confusion has been the mixing up of the terms 'money' (the informal/unofficial slang) with 'currency' (the formal/legal-official term [since the 17th century] for a State's money). Both terms are commonly used to mean both direct-'State money' (a.k.a. cash or base money) and merely *State-backed* (or non-1st tier) money. See also see "*Money, 3 (contemporary) Tiers of*".

¹⁷⁴¹ "Preferably" like, f.e., the US dollar, which is usually stable enough to be a non-negotiable measure; as opposed to the insufficiently stable Zimbabwe dollar of the several years ago.

¹⁷⁴² As distinct from (unstamped) tokens, chits, rewards, and coupons. See also "Local scrip & Complementary currencies".

¹⁷⁴³ "From its archaic beginnings, money has always been about [mnemonics and] accountancy" (Huber, 2017, 83). See also "Tally sticks", "Credit money".

or, in other words “the nothing that you get for something before you can get anything” (Soddy, 1934, 36). See also “Law”, “Lies”, “Soddy, Frederick”, “Economics, Parity”.

6) It wasn't ‘just the Ancients. Arguably Britain & the world's most influential 18thc philosopher was not Adam Smith, but (his fellow Scotsman & patron) David Hume (1711-76). Hume's disagreements with his more narrowly-focused disciple and “dearest friend” were famously few; but, in fact, The Father of Economics, for some reason, deviated from Hume's basic stance on money: that “It is indeed evident that money is nothing but the *representation of labour and commodities, and serves only as a method of rating or estimating them*” (Hume, 1752). This is fundamentally different from Smith's first and primary definition, reached after a dozen pages of obtuse muddling¹⁷⁴⁴ on the subject: “By the money price of goods, it is to be observed, I understand always, the quantity of pure gold or silver for which they are sold, without any regard to denomination of the coin” (Smith, 1776, Book 1, ch.V). Presented with this evidence, one must ask why? See also “Hume, David”, “Smith, Adam (1723-1790)”, “Bank”, “Banking School/Bank Teachings”, “Hedge funds”.

7) Is it still somehow confusing? In truth, it is not. Money, most simply, is power to pay (expediently) without anything else needed to back it up (Wortmann, 2018b, mn.2). This has been true from the Upper Paleolithic through today. If a monetary tool today is not on the payment system or needs “backing”, then it's merely “credit (or commodity) money”, “near money” or “shadow banking”, not un-backed, ready money (legal-formally known as *currency*). Metal or bank credits require a transformation/stamp or “backing” by something else. The law does not. See also “Base money”, “Credit money”, “Near monies”.

8) Traditions of conflating ‘real’ money (that which does not require ‘backing’; f.e. RAB) with ‘credit’ money (that which does require ‘backing’; f.e. TAB), however, pretty much dominated the 20th century. For example, according to the bloody century's most prominent Economist, “*money itself, [is] namely that by delivery of which debt-contracts and price-contracts are discharged, and in the shape of which a store of General Purchasing Power is held*” (Keynes, 1930, 3). See also “Credit money”, “Bank money”.

9) So where is *money* defined in the U.S. Code/C.F.R.? Apparently nowhere.¹⁷⁴⁵ *Money* “in the laws of the United States is defined... [only implicitly¹⁷⁴⁶, along with] ‘currency’ and ‘fiat’, simply as the [“legal tender”] notes and coins issued by the US treasury or the FED...” (Bindewald, 2018, 183). TAB bank credits, i.e. the vast majority of the M1 ‘money supply’ today, are not covered by these definitions, and are hence actually not *money* in the *de jure* sense.¹⁷⁴⁷ See also “Legalism”, “Central Bank”.

¹⁷⁴⁴ Smith, as would many (if not most) of his successors [f.e. Keynes, Friedman], not only obfuscated, but also flip-flopped on the nature of money, contradicting his unambiguous Book 1 definition with Book 2's alternative view, that “[t]he revenue of the society [‘wealth of nations’] consists altogether in...goods, and not in the [monetary] wheel which circulates them.... The great [monetary] wheel of circulation is altogether different from the goods which are circulated by means of it” (Smith, 1779, Book 2, ch.II). More than a century later, British diplomat Mitchell Innes was not satisfied with Smith remarking upon money-as-symbolic (credit or fiat) tokens only indirectly. On “the question of the nature of money, Adam Smith's vision failed him, as the contradictory nature of his statements attests. It could not have been otherwise. Even to-day accurate information as to the historical facts concerning money is none too accessible: in the day of Adam Smith, the material on which to found a correct theory of money was [simply] not available” (Innes, 1914, 151).

¹⁷⁴⁵ This is not a new observation. “[T]he legal fiction that there is one clearly defined thing called ‘money’... a fiction introduced to satisfy the work of the lawyer or judge, was **never** true” (Hayek, 1990, 57). The nomenclature controversy, however, goes back a ways. “As far as can be determined, the phrase ‘money of account’ [subsequent ‘United States money’, or simply ‘money’ in the U.S.C.] has not been interpreted by any [US] court or Government agency. The phrase [‘money of account’] was used by Alexander Hamilton in his ‘Report on the Establishment of the Mint’ (1791)... Hamilton uses the phrases ‘money unit of the United States’ and ‘money of account’ interchangeably...[primarily] to denote the monetary system for keeping financial accounts. In short, [Hamilton's use of] the [2] phrases simply indicate that [US] financial [book] accounts are to be based on...[Gouverneur Morris' 1786] *decimal* money system.”

-<https://uscode.house.gov/view.xhtml?path=/prelim@title31/subtitle4&edition=prelim#:~:text=United%20States%20coins%20and%20currency,l>. Henceforth ‘money’ (not ‘currency’) **seems** to have been the official term for the US *unit of account*-- until the U.S. Code was **revised** in 1912 and 1923, switching it to the term ‘currency’, “for clarity and consistency in the revised title” (U.S.C. 31:177, §5114[a]). See also “Currency” [law], “Units of account”, “‘United States money’”.

¹⁷⁴⁶ Recent scholarship, at least in Europe, has gotten onto the fact that “definitions of ‘money’ in the laws and statutes of the USA...[are] neither straightforward to determine nor coherent within or across different texts” (Bindewald, 2018, 180).

¹⁷⁴⁷ The openness of 1] the U.S. Code's definition for *deposit*-- introduced by the formulation ‘money or its equivalent’ (12. U.S.C. § 1813 (i)(1)-- is rather legal support that TAB-bankmoney is not actually lawful money in the United States. In 2] “the *economics* literature [however]... *money*...’has a broader definition: it consists [basically] of whatever is accepted” (Bindewald, 2018, 181). 3] Central banks, filled with more economists than lawyers, also take the ‘whatever is accepted’ as a means of payment position, defining (only) “currency” as

10) The power of money is nothing new. “In one of the oldest of.... a collection of moral sentences from all the most ancient Greek poets.... the sense of...[it] was: ‘Nobility [of birth] in men is worth as much as it is in horses, asses, or rams; but the meanest-blooded puppy in the world, if he gets a little money, is as good a man as the best of them’.... Your experience of this truth will not much differ from that of your old friend” (Adams, 1813c). Should such undeniable power be publicly accountable, or opaque?

11) Whatever a realm chooses to use as money, and the necessary rules that comprise it, have always constituted “an institution engineered by political communities to mark and mobilize resources....

[M]oney... is [thus a primary] mode of governance in a material world” (Desan, 2014). More simply, “giving out receipts for contributions to the group”; means that “money is *nation-building*” (Desan, 2015, mn.0-1; 2013, mn.119). See also “Governance”, “Separation of Powers”.

12) Over the past-half century or so there has also been a prevalent belief-- actually more of an assumption-- of “*money as debt*”. This is because “...if you identify *money* [only] with *credit* [of which debt is a form], then... [there] cannot be... debt-free money.... [thus denying] about 2,500 years... [of coin currencies], created and issued debt-free, by being spent rather than loaned into circulation” (Huber, 2013b, mn.34-35). Historically, money has developed in a context of social obligations, duties, and debts of various kinds... [Any] society is built on mutuality.... but it is implausible... I see it as being very, very far-fetched to derive from this, this strong hypothesis that ‘*all money is necessarily created in debt*’. That’s...going too far... Money... [whether] you speak of the *unit of account* or of the *means of payment*.... is an unconditional instrument... for handling credit & debt. And thus cannot normally in itself be created in debt. The idea of paying a debt with another debt of the same kind... may seem to make some sense within the framework of banking-type reasoning. Outside such self-contained reasoning, however... the equation of ‘*money = debt*’...is just another example of banking doctrinal confusion... because it confuses the instrument [of measurement] with the object [to measure]...” (Huber, mn.36-38). See “Usury”, “Scholastics”, “Solipsism”.

[‘bank-type reasoning’: money-as-debt]

13) Such now-traditional monetary confusions, compounded with millennial-era deregulations, proved explosive. “Letting people play with [unregulated, private] money [creation]... as we’ve done... is a bit like giving people nitro & glycerin and saying ‘*Please combine the two to your pleasure*’... Somebody who knows what they do can open up and mine, and then another person can blow the mine up. And we’ve actually been in the blowing-mines-up business in the past 20-30 years, rather than using money productively.”- Steve Keen, 2010 Conference on Sustainability, Grand Rapids, Michigan.

14) It is probably better to think of *money*, more broadly, as “a complex system of rules [a.k.a. law (if from the state)] that changes over time. These rules are used to structure our societies and co-ordinate our actions” (Livingstone, 2017). See also “Governance”.

15) is usually in a state of flux. As “with any social condition [system], money changes over time. The money and banking system today is different from how it was even a couple of decades ago” (Huber, 2017, 1). One thing that doesn’t change about money is that it “is an instrument of exerting power, comparable only to legal command power backed by force. The right to be a creator and first user of money gives power and privilege... In modern societies... such power and privilege must not be private, but a...[publicly accountable] prerogative...under conditions of separation of powers and the liberal rule of law” (Huber, 2017, 3).

16) What we use for money can become a form of *operant conditioning* (since that term was invented by Thorndike in 1911). Economists “have never agreed on how to define and how to measure [money]. Should we be suspicious?... [Consequently] we don’t have money in our models.... [Even though] money is the limiting factor for many things. It can be measured. It can be defined. And its creation and

base money/cash, and defining “money” as anything that the central bank club accepts for payment. See also “Central bank”, “Lender of Last Resort/Too Big to Fail”, “Money laundering”.

allocation is crucial. So we need to think about who creates and [then who] allocates the money supply” (Werner, 2015b, mn.49); because it is still, despite strategic increases in supply, the primary operant conditioner of our age. See also “Conditioning”, “Monetary reform”.

17) should not be conflated with ‘circulating *credit*’ (which is ‘*near money*’). Anything can be (used as) credit between two parties. *Currency*, in contrast, has a publicly recognized stamp¹⁷⁴⁸ (of some sort) in order for uncontested public circulation. The inherent fuzziness of the term ‘money’ comes simply from its middle ground, located in between the 2 poles of ‘accepted private credit’ and ‘public (de jure) currency’. Credit may or may not circulate. Any means of payment that circulates is money. And then any state (or state-backed) money is currency. Still confused?¹⁷⁴⁹ See also “**Money, 3 (contemporary) Tiers of**”.

private credit --- money (+circulating) --- public currency (+ state-law)

17b) Any good thing can be taken too far: on the difference between monetary-currency dependence and community credit-- <https://beyondmoney.net/there-once-was-a-river-an-allegorical-tale> (Greco, 2019c). See also “Local scrip & Complementary currencies”, “United States, the” [Declaration of Independence].

18) Nonetheless, in the 21st century, money accumulation is that (tool) which allows first some, and then all, to escape systemic discomfort and then perhaps the materialist rat race itself.¹⁷⁵⁰ See also “Adolescence of Mankind”, “Design”, “Robotization (and productivity)”.

See also “Anthropology, of credit & money”; “State Theory of Money”, “Chartalism”; “Credit Theory of money”, “State Capture”; “Bankmoney”, “Near monies”, “Criminalization of Banking”, “Credit rating agencies”.

Money, 2 classes (layers) of¹⁷⁵¹ (synon. the **traditional** ‘2-layer structure’ [IMF], ‘2-tiered’ system [Huber 2015], the ‘split circuit’, or ‘dual circuit’ system [Huber, c.2016-18]; commercial bank credit [TAB/‘outside money’] has been ‘backed’ by gold or specie since the High Medieval era, or, more recently, by [federally-created] bonds and ‘reserves’ [RAB/‘inside money’] since the 19th-20th centuries; these somewhat abstract circulatory/tiers, manifest in today’s RAB and TAB, are not to be confused with the historical progression of ‘types’ of money [commodity→fiduciary→fiat], nor with the eternal, everyday ‘forms’ of money [account/digital (abstract) or cash (physical)]). See also “**Money, 3 (contemporary) Tiers of**”.

National “purchasing power...is determined by government spending, or whatever [federal funds-RAB] is flowing out of [t]here...[But] what’s flowing out of [t]here is largely a result of the credit [TAB] policies of banks” (Quigley, 1976b). Does this sound like a contradictory or inconsistent statement? It isn’t.

1) There are 2 distinct everyday types of *national money* today. Huber calls these *interbank* (reserves) circulation and *public* (‘deposit’/bankmoney) circulation-- and they are not interchangeable.¹⁷⁵² *Reserve account balance* (RAB) and *Transaction account balance* (TAB) money classes are 2 parallel electronic

¹⁷⁴⁸ Minsky famously quipped that everyone can create (what they think is) new money; the problem is in getting others to accept it (Gabor & Vestergaard, 2016). See also “**Money, 3 (contemporary) Tiers of**”.

¹⁷⁴⁹ Early Modern (18thc) Anglo-American writers such as Ben Franklin agreed that what we use for money is simply-- in the words of one English theorist-- “valued by its stamp” (Jocelyn, 1718). So did their contemporaries George Berkeley (in Ireland) and Montesquieu (in France). All this of course preceded Adam Smith enabling confusion on the matter, the chaotic French [1st known ‘Color’] Revolution, and the Congress of **Vienna’s subsequent bankmoney agenda**. See also “**Currency Wars, the**”, “Modernity”.

¹⁷⁵⁰ This is not to imply that [the tool of] money is only a passing institution and will not have a role in the future. It will continue to be essential for anchoring credit (into a reliable system of pricing signals and [the most accurate, precise] economic feedback)-- as (still) only governments [with their meta-data] can do-- at least for the foreseeable future..

¹⁷⁵¹ The “***split-circuit 2-tier[ed] circulation***” of (TAB)-bankmoney and (RAB)/Reserves (Huber, 2017, 2017d, 2018d) is a formal articulation of what may be more colloquially referred to as the (age-old) ‘dual-circuit’, ‘dualist’, or ‘2-layered’ (2-classed) monetary systems of the pre-computer/Knowledge age. Identifying the 2 classes as 2 different (physical) “*kinds*” of money is a holdover convention from when gold or silver were Reserves, and there was, hence, a genuine/physical difference in the nature of such bullion reserves and paper banknotes.

¹⁷⁵² There is a “myth that economics teachers shove down students’ throats... and [that] they themselves believe, that banks actually lend out Reserves. And they don’t. They can’t. It’s simply false accounting to believe that they can do that” (Keen, 2016f, mn.18). Joseph Huber concurs, that “on-account, reserves [RAB] and bankmoney [TAB] never mingle. They are *not* [sic] ‘interchangeable’ (even if many economists erroneously think so...)... A customer bank deposit [TAB] never ends up in a central-bank reserves account, and reserves [RAB] cannot be transferred into a customer [TAB] bank account” (Huber, 2019). See also “Clark, John Bates”, “Industrial Revolution, 2nd”.

circulatory systems that never mix-- like gas and oil in a car. They **never mix**.¹⁷⁵³ Confusingly however, they are both measured in the same unit of account (f.e. “dollars”), and influence each other, although one is unable to become the other in terms of accounting. This fact wrecks most of the university and Austrian School and YouTube explanations of how ‘fractional reserve’ and the ‘money multiplier’ and the ‘reserve ratio’ work. All of that university level mathematics¹⁷⁵⁴ is garbage when applied to the monetary world. See also “Mythomatics”, “Monetary Economics”, “State capture”, “Special Purpose Vehicles”.

2) How far back to dualist (2-class) monetary systems go? As long as there has been “history”. Ancient Sumer and its cuneiform accounting system, c.3200 BCE, was not motivated by ‘space aliens’. It was (to the monetarily astute) motivated, at least in part, by the strategic problem of sticks (a.k.a. split tallies) diminishing in quantity, despite the proto-Sumerians’ otherwise rather rich environment¹⁷⁵⁵. See also “Tally sticks” (mankind’s prehistoric/mnemonic ‘money’).

2b) With the invention of a mud-based *cuneiform* system (c.3300-3100-- after the serious crises & inventions of the mid-4th millennium); whenever “Babylonians went to the local alehouse, they did not pay by carrying [per Adam Smith] grain around in their pockets [as would (abstract memory-incapable) animals]. They [instead simply] ran up a [mnemonic or notched/tallied] tab [TAB] to be settled at harvest time on the threshing floor... [paying] most of this grain to the palace for consignments [that had been] advanced to them during the crop year” (Hudson, 2018e). See also “Commodity money”, “Credit money” → “Money, 3 (contemporary) Tiers of”.

3) Nowadays, in order to deceive the public into thinking that TAB (‘bank credits’; UK: ‘current accounts’) and RAB (‘Central Bank’/‘interbank’ base) monies are one and the same kind of money, the Fed website claims the following-- that US banks:

a) ‘deposit’ Reserves at the Fed; or b) hold ‘deposits’ at the Fed; are ‘deposit’ account holders at the Fed. They thus deliberately blur the boundary between transaction account (TAB) and Reserve (RAB) monies. But in fact no TAB money is ever deposited into an RAB account at the Fed or anywhere else. TAB (d.b.t.: ‘deposit’ money) and RAB (interbank/base money) are mutually exclusive categories, although they correspond and are complementary. See also “Parity”.

4) Joseph Huber has called the 2 monetary classes: “public circulation” [for TAB/‘deposit’ money] and “interbank circulation” [for RAB/‘reserve’ money] (Huber, 2018, 1). Today, bank credit extension (commercial loans) is the only means of ‘public circulation’ (TAB-bankmoney) money creation; and (so-called) ‘Open Market Operations’ (including Quantitative Easing) are the only means of increasing ‘interbank’ (RAB) money circulation. See also “Huber, Joseph”, “Supply-side Economics”.

¹⁷⁵³ With the possible exception of command economies such as China, as Steve Keen has noted (in minute two):

<https://www.youtube.com/watch?v=WSfe6uyO5yE>

¹⁷⁵⁴ Mathematics is “all about taking the existing status quo for granted” (Hudson, 2016s). See also “Mythomatics”.

¹⁷⁵⁵ ‘The’ latter 4th millennium BCE Sumerians’ need to innovate was primarily sparked by (not just unpredictable floods, but also, moreover by) the fact that their originally lush [alluvial] and bountiful [*wealthy*-- or soil rich] environment (which had supported a common pottery culture as far back as c.6000) was gradually-- yet increasingly-- desiccating (White & White, 2008e; Kennett & Kennett, 2006). Moreover, the desiccation trend became more acute in the 3000’s (Weldeab, Menke, & Schmiedl (2014, Fig.3); particularly in the 2nd half of the millennium, when “Atlantic winter westerlies” were blocked, “bringing pervasive drought from the Mediterranean into Central Asia. Then the explosion of El Nino undermined the residual influence of [both] the Asian and African monsoons. The effects of... [this] Mid-Holocene Crisis, particularly its chaotic end [c.3000-c.2900], were particularly apparent in predynastic Mesopotamia and Egypt... In Mesopotamia, the Mid-Holocene collapse of winter precipitation undermined... the Tigris and Euphrates systems: the Uruk cities collapsed, followed by a Jemdet Nasr period of 200 years... [And it wasn’t until] after 3000 BC [that] the early Bronze Age warrior dynasties began a recurring cycle of imperial expansion” (Brooke, 2014, 184). Brooke even compares the (c.3300’s) “droughts in Egypt and Mesopotamia” to “the cultural disruptions that followed the intrusions of Europeans into the New World... people died in huge numbers, villages were emptied, local gods discredited, [and] ancient memories lost. Out of such ashes rose the first states... led by charismatic leaders, in which a new caste of priests [i.e. 2nd Estate] monopolized and routinized ritual supplication [a.k.a. carrot], and a new caste of warriors [i.e. 1st Estate] armed with new bronze weapons monopolized and routinized collective violence [a.k.a. sticks]” (Brooke, 190). See also “Eras of (Monetary) History”, “State formation”, “Estates, 3”.

[It's very difficult for federal funds & RAB [intra-gov't money & bank reserves] to get into the 'real economy' of TAB-bankmoney. See also "Quantitative Easing (QE)", "Asset inflation".]

5) "Banks cannot lend Reserves" to non-bank institutions (Keen, 2016o, mn.20); although it is debatable whether most economists know this-- even after the 'jobless recovery' of the past 7-8 years. In 2014, the Bank of England had to step in, "with basically an open letter to conventional economists...saying 'Wake up, guys. You've got a totally wrong model of how banks' money is created. Banks do not lend Reserves, period.'" They can't lend them...[any more than one could] use the oil in my car as fuel.... There are two separate circulation systems. The [commercial] banks themselves have [RAB] accounts as customers of the Central Bank; and that is what QE is boosting... That's like the oil" (2016o, mn.20), which is used by banks whenever 2 parties make an account money transaction. "If you don't put oil [base money] in the car [bank], the engine will jam up" (Keen, 2020, mn.11).

6) Today's (19th-20th century) monetary system is fundamentally *dual-classed* in that it uses (semi-public) RAB anchoring to support (private)state-monetized credit institutions' TAB and bankmoney-creation privileges. Contemporary monetary reform (that isn't phony) simply collapses the unnecessary/superfluous (and dishonest 'welfare') TAB circuit into the superior, pre-existing (and simpler) RAB single circuit (a.k.a. 'plain sovereign money'). Fed funds (Reserves/RAB) work fine without bank credit (TAB); but bank credit without Fed funds is like a car without a motor.

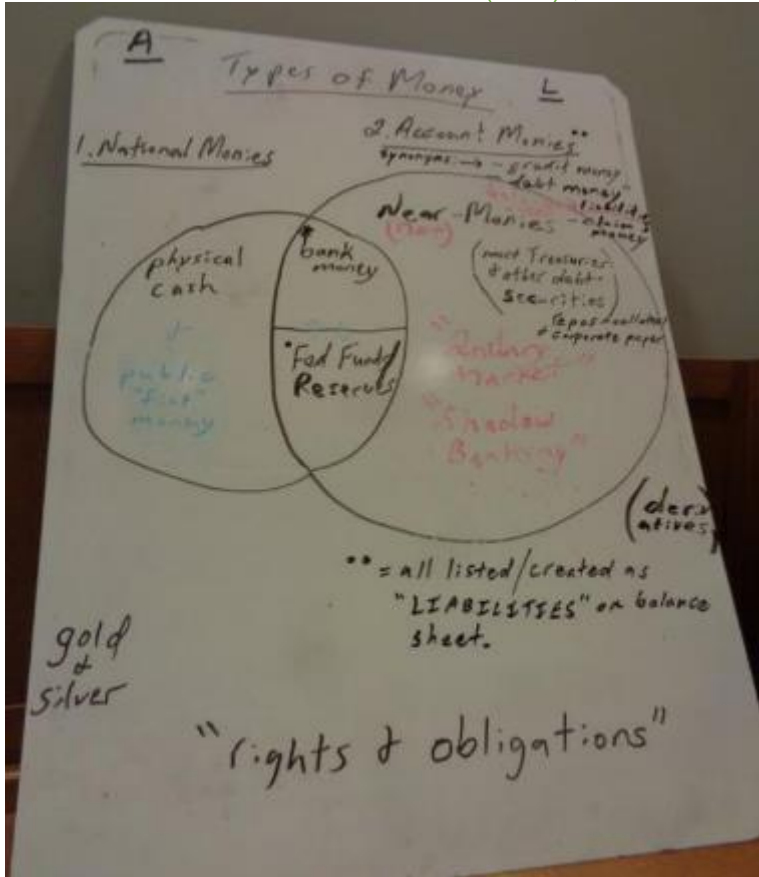

6b) In fact, the merging or 'reform' of the 2 classes/layers of money-currency has already begun (see, f.e. Titus, 2021e, mn.26-27). See also "Debt cycles", "Sovereign money", "Sovereignty".

[State-dependent TAB being sucked up into (actual or pure) state-currency RAB, 2003-2021 (Titus, 2021e). See also "SBS".]

7)

See also “Reserve Account Balance (RAB)”, “Quantitative Easing”, “Transaction Account Balance (TAB)”.

[Only *currencies* or 'national monies' (and the Euro) are 'real [lawful] money' in the sense of being: **a**] *legal tender* (if physical cash), or **b**] on the national-international *payment system* (if TAB/bank credits **and/or** Central Bank-Federal Funds). Liberally defined, there are many forms of Account 'monies', some of which are really on the (public) payment system, and some of which are not [and are, hence, actually just private 'credits', not legal 'currency' per se], including all forms of '*near monies*' (savings and secure investments that are not on the payment system), and the **entire** '*shadow banking*' sector (mostly very high-volume & low-risk debt securities, repo agreements, and corporate paper). *Derivatives* are conditional (i.e. bets) and hence not in the basic monetary picture. *Gold & silver* (commodities) are also neither lawful *national* money, nor even the basis for 'shadow banking' debt securities (since government Reserves/RAB took over this function more than a century ago), and should, hence, also not be in the picture, even though, like oil (& at some times other commodities), they can be used to settle international claims & obligations (instead of the 'reserve currency').]

Money, 3 (contemporary) Tiers of- (base money/federal funds, bankmoney, & 'shadow money'¹⁷⁵⁶; not to be confused with the 2 traditional 'classes' of money [TAB-bankmoney & RAB/Reserves])

"[O]rganizations chartered as banks...have seen their role gradually decline with the advent of competition from non-bank financial services firms. These include mutual fund companies offering money market, bond, & equity mutual funds, insurance companies, finance companies, and government affiliated mortgage entities. In the...[US], deposits in banks have been growing... [slower] than those in non-bank firms...[and] more borrowers have turned... directly to financial markets, rendering... the bankers' [state-privileged] habitat...less & less necessary. These trends¹⁷⁵⁷... are expected to continue..." (Papadimitriou, 1998, 445). See also "State-monetized credit institutions", → "Mutual funds (& Reform)".

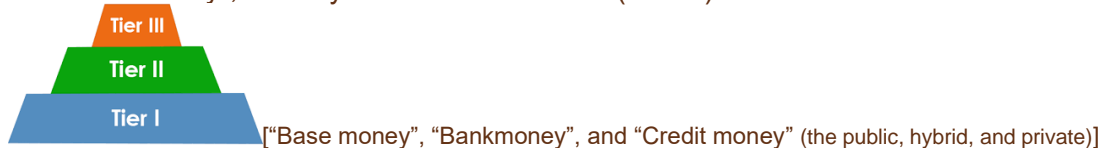

¹⁷⁵⁶ 'Shadow' or 'Near' money, of course, is not legally "money" (state credit, stamped and/or on the Payment System), even though often referred to as such in the vernacular.

¹⁷⁵⁷ Mostly in reaction; (large) banks have expanded "their operations to include non-traditional...very profitable activities, i.e. investment functions and 'off-balance sheet' banking" (Ibid). See also "Savings & Loan Associations" [Monetary Control Act], "Glass-Steagall Act".

1) Irving Fisher (the 1st half of the 20thc's most famous Economist) was, characteristically; “on both sides of the...distinction you might draw between... those who want to limit [& restrict] the creation of money to the [1st tier, sovereign] state, and those who want to broaden it out, beyond [2nd tier] banks, to [3rd tier NBFIs,] communities and individuals” (Boyle, 2002). See also “Estates, 3”, “Civilization, Western”, “Nonbank Financial Institutions (NBFIs)”.

1b) **There's no (inherent) need for credit money to be based on bankmoney.**¹⁷⁵⁸ See also “Credit money”, “Bankmoney”.

2) But the “entanglement between public and private instruments and institutions makes...[today's] monetary system both 'essentially hybrid' and inherently hierarchical. **A]** Central banks sit atop the hierarchy because their liabilities ('reserves' [RAB]) serve as settlement money for commercial banks, and thus as the ultimate liquidity backstop of the system. The **B]** 2nd layer consists of the liabilities of commercial banks ('deposits' [TAB]), which serve as money for the household sector and the non-financial corporate sector...[and a] **C]** 3rd layer consists of the liabilities of [so-called] shadow bank institutions (such as money market funds [MMFs] and repo dealers), which serve as 'shadow money' [SBS]¹⁷⁵⁹ for...[both] financial and non-financial firms” (Braun, Krampf, & Murau, 2020). See also “Shadow money”, “Money Service Businesses (MSBs)”.

3) Are the 3 Tiers headed towards 2? “The bankers might lose a lot of their privilege, but...[with] the adjustment...banking will be much more stable, and bankers will be doing what they should have been doing all along” (Sullivan, 2017, mn.27). See also “Privilege”, “Monetary reform”.

3b) Among the “types of 3rd-tier private money... only **MMF shares** [pioneered in the US] have been of significance so far, amounting to half to twice the [volume of] bankmoney, depending on the currency area” (Huber, 2021).

4) *Ons Geld* calls the '3 tiers/ranks of money: **a]** base-government “*cash* (either physical or digital)”, which requires no ‘backing’, **b]** [TAB-bankmoney] “*deposits*”, and **c]** “*money market funds*” [a.k.a. ‘shadow banking’]. The latter two tiers operate on “the same (principle)...a claim on something that is backed by assets.... [Holders of] banking deposits get a claim on...[the total] assets of the bank, whereas in shadow banking you [only] have a special claim on a singled out package of” assets (Wortmann, 2018b, mn.25; 24). See also “Shadow banking sector (SBS)”, “Nonbank Financial Institutions (NBFIs)”.

¹⁷⁵⁸ In 2008, Goldman Sachs was the derivatives King. In 2021, who cares? See also “Big 3-4 Asset Managers”.

¹⁷⁵⁹ Is this a little ambiguous? “Such ‘shadow money’ lacks explicit public backstops but [nonetheless] tends to benefit from market actors’ expectations that concerns over ‘systemic risk’ will bring central banks ‘accommodation’” (Braun, Krampf, & Murau, 2020). See also “Lender of Last Resort (LoLR)”, “Public-Private-Partnership (PPP)”.

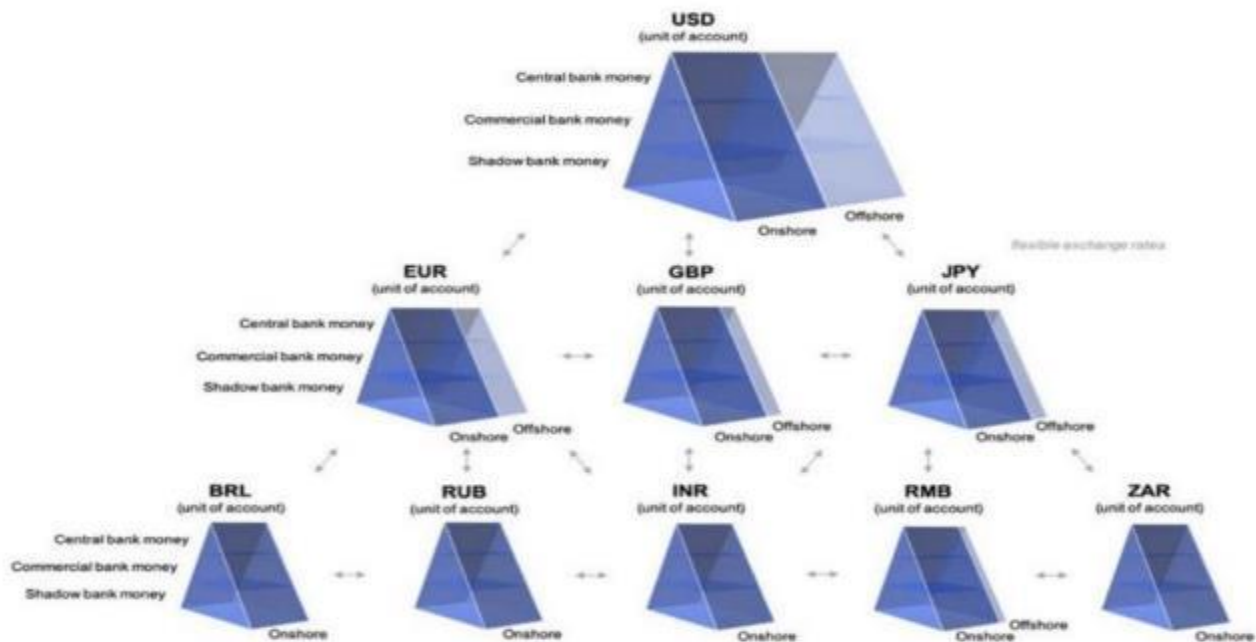

Figure 1. The international monetary system as 'Offshore US-Dollar System'. USD, US-Dollar; EUR, Euro; GBP, British pound; JPY, Japanese yen; BRL, Brazilian real; RUB, Russian ruble; INR, Indian rupee; RMB, Chinese renminbi; ZAR, South African rand. © 2020 Steffen Murau (CC-BY).

[Global currencies pyramid, in 3 tiers: *central* bank (i.e. "base") money, *commercial* bank money (i.e. 'bankmoney'), & *shadow* bank (i.e. 'near') money securities (Murau, Rini, & Haas, 2020)]

See also "Quantitative Easing" [↑base money exp.], "Powellism" [↑bankmoney exp.].¹⁷⁶⁰

Money creation (historical)- 1) for millennia the main prerogative (and signal of sovereignty) of a *state* [i.e. the "1st Estate"]. Then, primarily over the course of the 19th century, first in the UK (1840's) and then in the US (1860's-70's), the monetary stamp of sovereignty-- in something of a compromise between 1st and 2nd Estates-- was usurped by (formerly state) *banks* and then [a century later, also extended to] other 'private'¹⁷⁶¹ state-monetized credit institutions, given the exigencies of industrial warfare in (-what was still at that time-) a (rather dangerous) 'warring states' environment. The ensuing monetary marriage of convenience between the 1st-2nd Estates, roughly concurrent with the 2nd Industrial Revolution (or 'age of mechanized warfare'), has been distilled as follows:

1b) "Banks' special role in [supplying society's] money creation... was sealed by states' commitment that [hitherto wildcat] bank deposits [TAB] would convert into state money...[RAB-cash] *at par* [1:1]. This [mid-19th century] social contract of convertibility¹⁷⁶² materialized in 1) [extensive] bank regulation, 2) lender of last resort, and [also, from the 1930's] 3) deposit guarantees [government insurance]" (Gabor & Vestergaard, 2016). See also "Parity", "Lender of Last Resort/Too Big to Fail", "Federal Deposit Insurance Corp. (FDIC)", "Bank welfare".

2) History is not irrelevant, but "money", as simply a *medium of exchange*, need not be a top-down construct-- at least not with today's technology. Today money can "be created on the basis of value that is

¹⁷⁶⁰ ...and (Titus, 2022, mn.16-20) on the difference between the two. See also "Bank welfare".

¹⁷⁶¹ "'Private' sector elites" = the [revised] "2nd Estate". For more on the (particularly 'Western' notion of the) '3 Estates', see also "Separation of Powers", "Estates, 3", App.C: "1-2-3".

¹⁷⁶² "In other words, you [2nd Estate creditors] need the state [1st Estate government] to say '*I'm going to help the issuers of [credit money] to preserve their promise to pay at [a] par*'" with government money (Gabor, 2017, mn.8). "So that's very important...[the] idea that there has to be a relationship between the state and [any other] money-issuing institutions... because from that relationship the [other/2nd Estate] money-issuing institutions *want to run away*" (Ibid). See also "Criminalization of Banking, the" (when the 2nd Estate horses did get out of the 1st Estate's mid-to-late 20thc regulatory barn); "Industrial Revolution, 3rd", "Regulation".

[already] in the market and ready to be sold.... The control of credit...[can] be localized” (Greco, 2019, mn.27-28). See also “Money”, “Currency”.

See also “History” [monetary], “Reserve Account Balance (RAB)”, “Transaction Account Balance (TAB)”, “Exogenous vs. Endogenous (money creation)”, “Eras of (monetary) History”, “Regulation”, “Monetary reform”.

Money, 3 types of- (primordial: commodity, credit, & state; ‘modern’ usage: commodity, ‘fiduciary’, & ‘fiat’)

1) After mankind’s [mostly prehistoric & pre-‘modern’] stage of using simple *mnemonic* devices (such as tally sticks) as money, the predominant trendline in the types of money used has been from commodity money [medieval], to fiduciary money [early modern], to fiat money [(so-called) modern].

2) not to be confused with money’s eternal two basic *forms*-- account/digital and cash¹⁷⁶³)...

3) ...nor with contemporary money’s 3 *tiers*-- base money/RAB, TAB-bankmoney, and ‘shadow money’.

See also “Money, forms of”, “Money, 2 classes (layers) of”, “Fiduciary money”, “Fiat currency”.

Money creation (in the UK-US today)- (TAB-bankmoney leads; base money/RAB salutes)

1) “Oft said. And all true: ‘90% of bankers, 95% of Economists, and 99% of the Congress¹⁷⁶⁴ do not understand where money comes from” (Bongiovanni, 2019c). This is mostly because; without “being aware of the split-circuit [currency] structure, the entire money and banking system cannot be properly understood” (Huber, 2017, 58). See also “‘Exogenous vs. Endogenous’ (money creation)”.

2) “In a credit money system, certain actors’ liabilities are other actors’ money. Private banks enjoy a state-granted privilege in that system-- they are allowed to create money in the form of bank deposits. When a bank issues a [so-called] loan to a borrower, it [in fact] expands its balance sheets simultaneously on both sides. On the liability side of the bank’s balance sheet, a newly created deposit appears.... Simultaneously, the bank incurs a liability by depositing the loaned amount into the customer’s account-- this claim to be paid central bank money [a.k.a. ‘base money’ or cash] is an asset for the customer and a liability for the bank” (Braun, Krampf, & Murau, 2020). See also “Credit money”, “Central bank (CB)”.

3) This “sequence of money creation starts with the creation of [TAB-] bankmoney, while the central bank refinances [this, in terms of] central bank [RAB] money... [automatically acknowledging] the facts [that] the banks [and other state-monetized credit institutions] have created beforehand” (Huber, 2017, 58).

4) ...in terms of this TAB-bankmoney (a.k.a. ‘the real economy’), new money is created when banks (state-monetized credit institutions) ‘*extend credit*’ [TAB], mostly in the form of loans (70-80% of which are for real estate, although consumer/personal loans and credit card extensions are also significant); but also with **certain other** forms of *bank purchases*. (incl. **purch./re-puch. loans from Fannie/Freddie, etc.?**)¹⁷⁶⁵ _ “banks... also create bankmoney for **proprietary business** on their own initiative” (Huber, 2019c).

>95% is/derives from banks extending credit that is backed by the state (and 80-sth.% of that extended credit is from real estate loans): *WhereDoesMoneyComeFrom-bank_lending_by_sector-13.pdf* [Greenham, et al., 2012]; [and don’t forget stocks or bonds “on margin” (Still, 2019e, mn.12)]

5) So where does RAB (central bank) money (that legalizes TAB) come from? Basically 1] “the central bank buys and sells government securities [treasuries]... and the Treasury actually keeps its checking account at the Federal Reserve.... [And that account is stocked mostly from] Primary Dealer banks...[buying Treasury] debt, and the proceeds from that sale go into the Treasury’s account at the

¹⁷⁶³ Countless written symbols or physical objects have served, over the millennia, as either (abstract) *account* or (physical) *cash* ‘forms’ of money.

¹⁷⁶⁴ Monetary literacy does not seem to have been much better 2 centuries ago, in the early days of the new Constitution: “Funding, banking, assuming, loaning, have compiled a fiscal and political perplexity. The *fiscal*, which could most easily have been explained, since figures can exhibit an account of money, is not even understood by the members of Congress. And the *political*, though better understood, is still [just] a capital auxiliary towards the general [principle of] obscurity” (Taylor, 1794, 46-47). See also “Deceptive Banking Terms (d.b.t.’s)”, “Currency wars, the”.

¹⁷⁶⁵

Federal Reserve. That's... most [of it. But] the other... [way] is that **2**] the Fed can [also] inject more [‘federal funds’/RAB] money [directly] into banks, by [simply] buying the Treasury [or other!] securities that those banks own” (Vague, 2020b, mn.34-36). See also “Primary dealers”, “Open Market Operations”, “Interest on ‘Excess’ Reserves (IOER)”.

6) Banks don't need [TAB-bankmoney] to make a loan, although they do need to have **matching** Reserves [RAB] money. Banks do not lend money. No commercial bank has ever lent money. In law [unlike in Economics], it is very clearcut. You sign a contract to borrow a certain amount of money (plus interest) and will repay. But ‘the money’ is not there. By signing a promissory note, you have issued a security, and the bank [monetized credit institution] purchases this IOU (security). The record of the bank's debt to you is mislabeled as a ‘deposit’. Because most people are ignorant of accounting, banks, for centuries, have booked their liability to you as another type of liability: as a customer “deposit”, from money that wasn't there the day before. And that is how the “M1” money supply [TAB-bankmoney] is created. See also “Loan swaps”.

7) In other words, “Money creation in practice differs from some popular¹⁷⁶⁶ misconceptions-- banks do not act simply as intermediaries, lending out deposits that savers place with them, and nor do they ‘multiply up’ central bank [Reserve/RAB] money to create new loans and deposits” (Bank of England, 2014). See also “Loan swaps”.

8) As Michael Kumhof from the IMF and Bank of England has repeatedly demonstrated, TAB “loans create deposits, and not vice-versa” (Kortsch, 2013, mn.4-5). See also “Exogenous vs. Endogenous (money creation)”.

9) More specifically, the (century-old) “principle is that...banks create only *the principal* when they make the loan...[and that] they also *extinguish* only the principal when the loan is repaid. The money paid for *interest* [however] continues to circulate in the money supply, so this should net out and [thus the economy's aggregate] money and [aggregate] debt would remain equal” (Werner, 2019).

10) In actual *practice*, however, the “main reason [why] debt paces money so badly [in recent times] is the selling of [bundled] bank loans [o]nto the secondary market, which extinguishes the **money [prin.]** but preserves the **debt [int. ?]**” (Werner, 2019).

11) In terms of Reserves, central bank/federal funds/interbank (RAB) money is created by central bank-initiated “Open Market Operations”, in cooperation with the government/Treasury's demand for federal funds. See also “Open Market Operations (OMO)”, “Federal funds (FF)”.

12) Governments provide numerous critical supports for the (private sector's) creation of both RAB and particularly TAB money, via not just: a) **Reserve-backing (for TAB) and Treasury-backing (for RAB; a.k.a. O.M.O.s)**, but also: b) FDIC insurance to support TAB-bankmoney; c) the **Payment System for TAB-bankmoney non-cash payments**; d) an extensive (not always up-to-date) regulatory rubric; in addition to e) Lender of Last Resort function & bailouts when all of the above fail, and f) currently **\$550 bn. p.y.** in interest payments to banks, for providing them with all of these supports and subsidies. See also “Bank welfare”.

12b) Then of course governments actually started creating **most** of the new [TAB-bankmoney] currency during the 2020 ‘pandemic’. (Titus, 2022d, mn.20). See also “QE4”.

See also “Open Market Operations (OMO)”, “Desk, the”, “**Money, 2 classes (layers) of**”, “‘Exogenous vs. Endogenous’ (money creation)”, “Monetary reform”.

Money, ‘end of’- (not possible as long as ‘money’ = ‘a means of payment’); see also “Money”, “Currency”, “USSR” [.end of].

See also “Anthropology, of credit & currency (cultural)”.

Money, forms of- (the 2 basic forms have always been: “*account*”/digital [abstract] or “*cash*” [physical])

¹⁷⁶⁶ I.e. most Economics textbooks’ “myths”, as former chief British bank regulator (& ranking international Financial Stability Board member) Adair Turner has explained throughout this decade (Turner, 2016). The prevalent ‘textbook myths’ have also been bemoaned, more recently, by Peter Bofinger, senior member of the official German Council of Economic Experts (Bofinger, 2019).

See also “Account money”, “Commodity money”, “Cash”, “[Money, 3 \(contemporary\) Tiers of](#)”.

Money laundering- 1) “Everybody that does anti-money laundering, anti-tax evasion knows that this is really driven with the *largest* financial institutions in the world, with the very prestigious lawyers, very prestigious accountants and such, and that if you were rich-- back to the .00001 [percent]-- then you have these people” around (Black, 2016c, mn.49-50). See also “Big 5 (High St.) Banks”, “Investment banks”.

2) **Most** countries didn’t have criminal statutes against it until fairly recently. For example, the Philippines lacked even a basic set of money laundering regulations until September 2001 (OECD, 2011, 13-14), even though the Asian Development Bank was founded there in 1966. Does anyone still think they take this stuff seriously at the ‘higher’ levels?

3) “The US economy is deeply dependent on criminal cash flows. We’re the global leader in money laundering and if we stop doing that the economy would be in for ...a major, major change” (Fitts, 2017r, mn.11). Hyperbole? See also <https://www.youtube.com/watch?v=2FomACJ0YNo> [Boyle, mn.16], “Delaware”. See also “City (of London)” [eurodollars], “Luxembourg”, “European Monetary Union”, “Monetary reform”.

Money lenders- (not creators) lend out a pool of “money that already exists: they get money from somewhere and lend it out at interest. Banks are quite different: their licenses allow them to *create* money in the act of lending it” (Mosley, 2013).

See also “Near monies”, “Intermediation of Loanable Funds (ILF) Theory”.

Money managers- “Investment bankers, mutual funds [including MMMFs], pension funds, stock brokers and insurance companies. Whereas in the past the financial sector made its returns primarily as creditor–by charging *interest* on [TAB-bankmoney] loans and often foreclosing on the property of insolvent debtors–since the mid-20th century it has made almost as much money by charging *commissions* for managing society’s [near money] savings and means of payment, and underwriting stock and bond issues, above all on privatizing public enterprises” (Hudson, 2015b).

See also “Financialization”, “Institutional investors”.

Money market instruments & Money market funds (MMFs)- (a.k.a. ‘money market fund’ shares, ‘money market mutual funds’ [MMMFs], ‘fixed income mutual funds’, ‘3rd-level money’¹⁷⁶⁷, ‘money surrogates’, or simply ‘money funds’; which are not to be confused with the ‘money market *accounts*’ offered by commercial banks, nor with **general** ‘mutual funds’, which are lower volume and longer-term)

1) Larger businesses often rely on highly liquid ‘*money markets*’ [i.e. ‘nonbank markets’ (Huber, 2020c)] for short-term (less than 1 year), low-risk funding. **This comprises the majority of the ‘shadow-banking sector’**, which, in turn, has accounted for most credit in the US, since the 1990’s. Hence, Huber calls them the “3rd-level money surrogate”, behind bankmoney (Huber, 2019). See also “[Money, 3 \(contemporary\) Tiers of](#)”.

2) The broader term money markets pertains to money market *instruments*, mostly: federal funds/interbank (RAB) loans, ‘repos’ (securities lending & repurchase agreements; **often in RAB**), Treasury bills, and commercial paper, **both** of which are in **TAB** and collectively account for the majority of “all outstanding money market *instrument* balances” (Burton, et al, 2010, 262). Negotiable CDs, federal agency short-term securities (in **RAB**), municipal notes, eurocurrency accounts (**often in RAB**), forex swaps (**TAB?**), and short-term asset & mortgage-backed securities (MBSs; also in **TAB?**) are also common.

¹⁷⁶⁷ This is another synonym for (what is still most often referred to as) the ‘Shadow Banking’ sector (SBS). ‘Base money’ [RAB]-cash is the 1st tier (or rank), so-called ‘deposit’ (TAB-bankmoney) is the 2nd tier, and ‘Shadow Banking or ‘Money market instruments’ (including repo agreements) is the 3rd tier. The 1st tier is money (unqualified or ‘backed’ up by anything else); the 2nd-tier is (directly) ‘backed by’ [and is hence also, for practical purposes] money; whereas this 3rd-tier is merely “derived from money objects...[and is hence only] a promise of money” (Wortmann, 2018, mn.2). See also “[Money, 3 \(contemporary\) Tiers of](#)”.

[Fed funds/interbank (RAB) loans, repos, T-bills, commercial paper, and negotiable CDs are the big 5 money market instruments.]

3) Money market instruments are intended to offer what banks cannot-- “that cash managers can quickly *recover their money* if their (shadow) bank defaults” (Wortmann, 2019c, 1). This can be a complex subject, because any contract “has the value of what backs it up. Sometimes it is a lot, and sometimes it is nothing. If you only have a contract without nominalism [1:1 ‘parity’ between state money and the **unit of the contract**], then you have something that has changing value...not one-on-one” (Wortmann, 2018b, mn.5). See also “Parity”.

4) The narrower term Money Market Mutual Funds (MMMFs; or simply ‘money funds’) were the “most important innovation in the money market during the post-World War 2 era” (Ibid), and today MMMFs in Europe manage 35-40% of the banking sector’s total short-term debt. Money funds are required by law to invest in low-risk, short-term securities, which usually means (the big four): *negotiable CDs*.

Treasury bills, *repurchase agreements*, and/or *commercial paper* (all of which are in **TAB**-bankmoney).

5) Due to record high interest rates in 1981-82, money market mutual funds “were the most popular investment in the United States”, with \$230 billion held therein (Markham, 2011, 314), because they paid higher interest rates than did (the old style) ‘depository institutions’. See also “Shadow banking” (short-term IOUs).

6) “Since the 1980s, the **m**arginalisation of central-bank money has also been furthered by the rise of money market funds as a new [rising] *money surrogate*. For the most part, MMF shares [are] purchased with bankmoney. Especially on financial markets,¹⁷⁶⁸ MMFs are used as deposit-like, easy-to-transfer means of payment *in lieu of* bankmoney [**TAB**] or reserves [**RAB**] (depending on whether the payer is a nonbank or a bank). The volumes of MMFs are important, amounting to 2.5 times the active money supply M1 in the USA¹⁷⁶⁹. In Europe, the use of MMFs is not as widespread, but is still...about a third of M1” (Huber, 2018, 4).

7) MMMFs “are also widely used as a parking place for [short-term idle] funds between the purchase and sale of equities, bonds, and other long-term financial assets” (Sawyer & Sprinkle, 2015, 350).

8) In 2008 Wall Street found out that “Money markets weren’t cash.¹⁷⁷⁰ They paid interest, and thus bore risk. But until that moment people [nonetheless] *thought of them as cash*.... All over the world, corporations began to yank their money out of money market funds, and short-term interest rates spiked as they had never before spiked” (Lewis, 2011, 238).

¹⁷⁶⁸ The “accounts are...widely used as a parking place for funds between the purchase of equities, bonds, and other long-term financial assets” (Sawyer & Sprinkle, 2015, 350).

¹⁷⁶⁹ MMMFs, particularly in the US, “have become *creators* of a new money surrogate, in that MMF shares are now being used as another means of payment” (Huber, 2017, 58). See also “**Money, 3 (contemporary) Tiers of**”.

¹⁷⁷⁰ Although there were “almost no MMMFs in 1978, by mid-2008 they managed almost \$3.5 trillion in assets” (Burton, et al. 2010, 260). “For years, repo[s] seemed safe, because every transaction was backed by collateral. Then Lehman Brothers went under when repo investors... stopped rolling over its loans” (McCormick & Spratt, 2017).

9) Nonetheless, by 2018 MMF shares were approx. *2.4 times* the amount of bankmoney in the US (Huber, 2019b). And Yu'e Bao, for Alipay customers in China, was "by far the largest money market fund in the world" (Wortmann, 2019c, 2). See also "Money Services Businesses". See also: "Shadow banking sector (SBS)", "Near monies", "Commercial paper".

Money market accounts (MMA's)- (not to be confused with 'money markets'/'money market mutual funds') Invented in the early 1970's¹⁷⁷¹, these flexible-rate, interest earning ('savings') accounts at banks are designed to pay a higher rate of interest than regular savings accounts, while also offering limited check-writing privileges. MMA's may be offered by commercial banks, credit unions, savings & loans, stock brokerages, other financial service companies, and mutual funds. Like all 'savings' accounts, MMA's (unlike 'money market mutual funds'¹⁷⁷²) are covered by FDIC insurance.

Money multiplier- 1) a common myth that supports the false idea that Central Banks [RAB] control and limit the amount of TAB (d.b.t. 'deposit') money that member banks can create, which is (at least in the 21st century) absolutely false. RAB does not limit TAB. The money multiplier is often identified as the reciprocal of the reserve ratio. See also "Multipliers".

2) The "concept of the money multiplier is...uninformative in terms of analyzing the dynamics of bank lending. Under a... liberalized financial system, there is no exogenous constraint on the supply of credit, except through regulatory capital requirements" (Disyatat, 2010). See also "Capital Adequacy Requirements".

3) is "obsolete, as Michael Kumhoff has explained..." (Huber, 2013b, mn.12-13). Nonetheless, MMT still needs "a conventional 'money multiplier' process between banks & government", for its basic "assertion¹⁷⁷³ to make sense", or else all the government bonds would have to be absorbed by the central bank (Huber, mn.22).

4) "another fictional thing¹⁷⁷⁴ [that] economists-- Neoclassical economists-- like to believe in" (Keen, 2015e; also Jakab & Kumhoff, 2015). See also "Fractional Reserve Lending", "Monetization".

Money Power, the- (synon. 'the money trust' [in 'fin de siecle' era])

1) the original, mid-19th century term for 'banksters', coined by Thomas Benton in the 1820's and often used by British PM William Gladstone, and former US president Martin Van Buren-- and also by analytical historian Carroll Quigley a century later.¹⁷⁷⁵ Pretty much everyone called it one of these 2 terms, from around that point (c.1830, up until the Civil War...and, to a lesser extent, right up to the *Federal Reserve Act*).

2) "...there is little doubt among those who have studied the subject closely, that there is a Money Trust, but that its form and the nature of its operations are not generally understood.... Our financial system is a false one and a huge burden on the people. The money kings know that the people are bending under it.... They have proposed the Aldrich Plan. I have alleged that there is a Money Trust, but it is not in the form of the steel, the oil, the tobacco, the railway, and the other common trusts. It is maintained and governed by an entirely different method. It is *father of the others*, but unlike. The Government prosecutes other trusts, and it

¹⁷⁷¹ During the demise of Bretton Woods era, the first money market fund was brought to market in 1972 by Henry Brown and Bob Bent, after the SEC rejected their application "144 times before it finally [was] approved" (Markham, 2011, 314).

¹⁷⁷² Prior to the Financial Crisis of 2008, money market funds were not insured "by either the FSLIC or the FDIC in the event of investment losses in a money market account [that was] held with a broker-dealer... [This caused] a near-collapse of the money markets [funds] during the subprime crisis" (Markham, 2011, 314). As of 2017, 'money market mutual funds' are still generally not government-insured, although 'money funds' purchased through a bank are covered by FDIC up to \$100,000.

¹⁷⁷³ MMT's assertion, or assumption, is that "modern nation-states...[are] in command of the sovereign currency system, what they call Chartal money. And part of this is the construct of the central bank and the government financially belonging together... in the public or state sector... in monetary as well as fiscal policies" (Huber, mn.24). See also "Public Banking".

¹⁷⁷⁴ "another expression of economic model Platonism... [based upon] some sort of pure cash economy.... [where] banks [are] to be financial intermediaries rather than including the split circulation of [TAB-] bankmoney and Reserves [RAB]" (Huber, 2017, 73).

¹⁷⁷⁵ Popular from the 1830's to the Civil War, usage of the term declined somewhat thereafter, more so after World War 1, and then precipitously after World War 2. It seems to have been, as Orwell might have expected, on the endangered species list by the 1950's.

specifically systematically supports the Money and Credit Trust. The Government creates by indirection what it seeks to destroy by direction.”- Congressman Charles Lindbergh, Sr., Committee on Rules, US House of Representatives, Dec. 15, 1911.

See also “Banksters”, “State capture”, “Currency wars, the”, “Sovereignty”.

Money Services Businesses (MSBs)- (synon. ‘nonbank payment system providers’; a.k.a. ‘merchant services providers’, ‘[shw] digital money [service] providers’, or more simply ‘money transmitters’)

1) Most “digital money issuers” are non-banks. The U.S. code (31 C.F.R. § 1010.100[ff]) defines “MSBs to include money transmitters, currency dealers, check cashers, issuers and sellers of traveler’s checks, and other money orders...[in addition to] the...Postal Service” (McAndrews & Menand, 2020, 5).

This entry, however, focuses on the ‘money transmitters’¹⁷⁷⁶ component of MSBs. Famous transmitters include Western Union, Moneygram, Paypal, Venmo, and Bitpay. See also “Diem”.

2) Non-banks in the US retail payment system are (still only) licensed and regulated by states. Approx. 25,000 MSBs, “are subject neither to federal prudential oversight nor to the Fed’s reserve requirements”, though they must (at least) register with the US Treasury’s Financial Crimes Enforcement Network [FinCEN]¹⁷⁷⁷ (McAndrews & Menand, 2020).

3) “Front-end” MSBs, such as Apple Pay, and Google Pay (a.k.a. “wallets”), do not issue (create) money themselves, but only foster “digital accessibility to bank accounts or credit cards, in which the monetary liabilities are issued by banks”; and...

3b) “Classic” MSBs such as Western Union issue liabilities consisting “not of a general-purpose [a.k.a.] monetary claim, but...[only] a claim to redemption of the liability by a specific payee...[usually] in a different location; but...

3c) so-called “Modern” MSBs (a.k.a. ‘end-to-end’ providers [BIS], or ‘e-money service providers’¹⁷⁷⁸), such as Paypal, Venmo, WeChat Pay, Alipay...[and numerous] stablecoins “and other digital tokens¹⁷⁷⁹.... issue monetary liabilities of a more general-purpose nature that...[can be]¹⁷⁸⁰ quite similar to [TAB] deposits, and are used for multiple payments and receipts... [U]nlike with classic MSBs, the customer can make payments [directly] utilizing the MSB’s facilities, receive payments, and maintain monetary balances at the MSB without ever having to ‘cash out’ into a bank account. The accounts... [thus] are functionally equivalent to demand [TAB] deposit accounts at banks.... Monetary expansion can...occur when...[this type of] MSB extends credit [not by ‘loans’, but] by purchasing a security¹⁷⁸¹ [which is mostly how they invest] or [by] depositing funds in a bank” (McAndrews & Menand, 6-7). These types of (so-called) ‘Modern’ MSBs can, like banks, co-mingle & invest your funds (and you are only a claimant, not the owner,¹⁷⁸² of them). See also “Custodial accounts”, “M-Pesa”, “Diem”.

¹⁷⁷⁶ With a “money transmission license, entities are limited to keeping [the bankmoney] deposits [that are to be transferred] in regulated banking institutions... [and not, f.e.,] to purchase interest-yielding securities” (Kaminski, 2019). See also “Diem”.

¹⁷⁷⁷ In 2016, the US Treasury’s OCC set forth “the basis for its [FinCEN’s] authority” to approve “applications by FinTech companies for a special purpose national bank charter” ?? (Clark, 2017). See also “Fintech”, “Regulation”.

¹⁷⁷⁸ ‘E-money service providers’ are (according to Ehrentraud, et al, 2020) regulated either as banks or as non-banks. With the former, “customer [TAB] balances (“float”) [and] are [like banks] covered by the [country’s] deposit insurance scheme”; with non-bank “e-money service providers”, however, “most jurisdictions” require a “100% reserve requirement” to “ensure that all redemption requests can be met at all times...”. M-Pesa, Alipay, and WeChat Pay are all treated as non-banks. See also “Mobile Phone Payments”. Paypal, however, is apparently treated as “a banking business”, even though its comingled deposits are not covered by FDIC (McAndrews & Menand, 2020).

¹⁷⁷⁹ “...such as “the wildly successful M-Pesa product [that is] issued by Vodaphone” (McAndrews & Menand, 13). See also “M-Pesa”.

¹⁷⁸⁰ This segment does not make it clear that not all so-called ‘modern’ MSBs are capable of ‘augmenting the money supply’. Per Ehrentraud, et al.’s study (two notes above), some so-called ‘modern’ MSBs are treated by the state more-or-less as banks (f.e. Paypal), while others are treated as non-banks (f.e. Alipay, M-Pesa) and thus cannot co-mingle funds and must provide only custodial accounts.

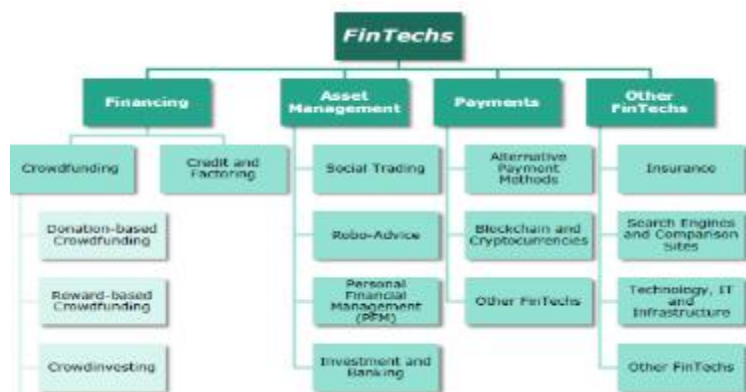

¹⁷⁸¹ The issuer of a debt security purchased by a MSB is, in effect, getting “a loan from...[the] MSB”; although the MSBs “money creation is [somewhat] more constrained than that of banks... [since it can] not make loans to its own customers” (McAndrews & Menand, 2020, 8) .

¹⁷⁸² In 2002, PayPal was “ruled not a bank by the State of New York...[even though its business model involves] moving customer funds between customer’s account and [a] bank account/money fund; [the court did] not address [the issue of] holding [a.k.a. co-mingling] customer funds” (Clark, 2017, 6), which only banks [monetized credit institutions] are supposed to be able to do.

4) A “review of the relevant state requirements reveals that [some ‘modern’] MSBs are permitted to engage in money creation... outside of the existing system of [Federal Reserve] monetary control... [T]hey issue ‘shadow’ digital money”, which some have likened to antebellum “‘wildcat’ banknotes... [which] we think is apt in the case of money issued by firms like PayPal...” (McAndrews & Menand, 2020).

5) “[A]ny business that, like a bank, augments the money supply should be subject to the US government’s monetary regime.... [W]e propose that Congress amend federal law to require that [all] MSBs back their monetary liabilities [credit extensions, at par] 1-for-1 with commercial bank [TAB] deposits, [which are, in turn, already] insured or otherwise fully backed by [RAB] deposits at the Federal Reserve¹⁷⁸³... [Such a] change in the MSB licensing regime would be cost efficient for MSBs [themselves], feasible, and would prevent abuses of current practices by prospective shadow digital money providers who could become very large, given the size of the platform” (Ibid); and some MSBs already “process hundreds of billions of dollars of payments per year” (McAndrews & Menand, 5) See also “Money, 3 (contemporary) Tiers of” (which Paypal appears to be violating, given the loopholes in the law), “Wildcat bank”, “Counterfeiting”.

6) This is because state “law is remarkably permissive; even the “model statute for state MSB licensing and regulation-- *The Uniform Money Services Act*... authorizes state licensing officials to permit, in their discretion, ‘any other investment’. Yet... MSBs are not subject to state or federal banking laws. Nor do they participate in the federal deposit insurance program or have access to the Federal Reserve’s emergency lending facilities.” (McAndrews & Menand, 5-6). And even the fact “that [some] MSBs are ‘money augmenters’ is...[u]nfortunately...not clear, given the patchwork of state MSB statutes, and the limited reporting [requirements].... [T]hey are highly susceptible¹⁷⁸⁴ to dangerous runs and panics; their issuance is not subject to control by the Federal Reserve; and, as their market share grows, they are likely to precipitate ‘a race to the bottom’, weakening [overall US] bank regulation at the state and federal level” (McAndrews & Menand, 9). See also “Race-to-the-bottom”, “Bank welfare”. See also “Fintech”.

[MSBs are in the Alternative Payments industry of the FinTech sector.]

Money Supply, US (M1, M2)- (synon. ‘money stock’) 1) M1 is liquid funds, i.e. all physical coin and cash, plus transaction (‘checking’) account balances (TAB). M2 consists of M1 plus most forms of savings investments, including: non-transaction accounts (d.b.t.: ‘savings deposits’), money market deposit accounts, money market mutual funds,¹⁷⁸⁵ and other secure savings investments (d.b.t. ‘time deposits’) of

¹⁷⁸³ The authors find it ironic “that many knowledgeable analysts [even at the *Financial Times*] believe incorrectly that MSB liabilities are currently backed, 1-for-1, by deposits at banks” (McAndrews & Menand, 4).

¹⁷⁸⁴ So-called “modern MSBs like [Paypal’s] Venmo invest in stocks including illiquid equity securities issued by private companies. Such portfolios... are recipes for unsound money. Even banks, which are subject to careful government supervision and benefit from access to emergency lending facilities like the Fed’s discount window, are not permitted to invest in such volatile assets... MSB liabilities are [also] uninsured, they are [thus even more] highly susceptible to runs and panics” (McAndrews & Menand, 2020).

¹⁷⁸⁵ Money market mutual funds in the US are “2.5 times” the dollar volume of M1 (Huber, 2018).

less than \$100,000. “M3”-- the supposed measure of the larger galaxy of mostly derivatives-based ‘near monies’-- was discontinued¹⁷⁸⁶ by the US Federal Reserve Board in 2006.

2) It is widely understood that “M1 *understates* the amount of money that the public could use... and [that] M2 *overstates* this same amount... [As a result] the central bank... cannot know with certainty what the amount of money is that the public intends to use for short-run economic activities” (Sawyer & Sprinkle, 2015, 350).

See also “National money”, “Reserve Account (RAB) money”, “Transaction Account Balance (TAB) credits”, “Base money (M0)”.

Monobank- (synon: ‘Gosbank’) In Soviet-bloc Eastern Europe and China, from basically the 1950’s-’70’s; “all banking functions (account management, savings, current financing, export credits, investment and development loans, money issuance, state budget financing, retirement savings, deposits, etc. [and possibly sometimes also in that ‘order’]) were to be fulfilled by 1 central banking institution-- through a national branch network” (Nonn, 2018). The vast majority of banks in China today are still at least 70% state-owned. See also “Public banking (idea)”, “Great Leap Forward, the”, “Bank, universal”.

Monopoly (and anti-trust)- 1) “The ability to charge more for a product than is warranted by its cost of production (including normal profit), by limiting the ability of customers to choose alternatives or to make rational choices that recognize less costly alternatives. Such rights usually are created by *public fiat*, especially for *natural monopolies*, such as transportation and communications, which were long retained in th^e public domain” (Hudson, 2015b). For more on the *Monopoly* board game, please see:

<https://www.rt.com/shows/renegade-inc/378716-uk-house-prices-risks/#.WLxFD9FA93Y.twitter> (mn.13-15).

2) Can de facto Trusts really be stopped? British are traditionally more skeptical on this. “[T]here is [as usual] a drift towards big [and bigger corporate] units It is futile to attempt to check this drift by Anti-Trust Laws. Laws cannot compel two people to stay apart, when they both want to combine. Anti-Trust Laws have not been very effective in America; they are likely to be far less effective here” (Hollis, 1949, 98).

3) Back in the US, “de facto monopoly power...is usually evaluated at more than 75% market share... [including] the ‘Public Square’... It used to be a big problem with company towns”... [keeping them] from organizing and petitioning” (Barnes, 2020, mn.33). See also “Jones, Alex”.

3b) A precedent was also set in 2001, however, with the firing of Judge Penfield Jackson and reversal of his (June 2000) ruling to break up Microsoft¹⁷⁸⁷ for unfair trade practices. In the ensuing 15 years, “Walmart has [now established] stores within 10 miles of 90% of American shoppers... [And] half of all US households subscribe to Amazon Prime... and Amazon captures nearly 1 of every 2 dollars that Americans spend online... its market power now rivals and exceeds that of Walmart... Within 5 years, 1/5th of the US 3.6 trillion [dollar] retail market will have shifted online, and Amazon is on track to capture 2/3rds of that...” (Blazer, 2017, mn.2-3). See also “I.T. cycle”, “Russiagate”

4) “Today you have 4 or 5 companies controlling almost every major industry... airlines... cable TV... phone companies... information technology... [and] What they’re trying to get isn’t really profits.... [It’s] really monopoly rent-- rent way in excess of normal profits, because they are whatever the market can bear.... So you don’t have to invest more. You don’t have to make capital [large-scale] investment” (Hudson, 2017m, mn.7). See also “Serfdom, neo”.

5) I “think of these times like a game of [inflationary] Monopoly. Every time we pass ‘Go’, we collect \$200. Every time they pass ‘Go’, the friends of the central bankers collect \$200 million. Or a special handful collect \$200 billion... mafias have hierarchies, too. When we land on ‘Go to Jail’, our small businesses are declared non-essential. When they land on ‘Go to Jail’, they get a ‘Get Out of Jail Free’ card” (Fitts, 2022i). See also “Regulation”, “Reform, 101”.

¹⁷⁸⁶ ‘Near-monies’ are not officially/legally ‘money’ for a reason: The line needs to be drawn between public ‘money’ and private ‘credit’, for if it is not demarcated, then “...it becomes tempting to ask at...[some] point whether the search for a general definition of money serves any useful purpose” (Proctor, 2012, 8). See also “Creney”, “Financial Crisis (of 2008-)”.

¹⁷⁸⁷ According to Robert David Steele, Microsoft “is part of the Deep State” (Steele, 2018b, mn.29).

Monstr.- 1) Latin uncompleted stub or root word, only to be completed with something else, another key.
2) *Monstr.* (uncomplete stub); *atur* (easily dominated)
3) It “is absurd and monstrous for society to pay the commercial banking system ‘interest’ for multiplying severalfold the quantity of medium of exchange when (a) a public agency could do it at negligible cost... and (c) important evils result-- notably the frightful instability of the whole economic system and its periodical collapse in crises, which are... bound up with the variability and uncertainty of the credit structure, if not directly the effect of it” (Knight, 1927, 732). See also “Big Government (growth of)”. See also “Moneo”, “Philosophy”.

Montesquieu, Baron de (1689-1755)- (greatest of the post-medieval, Enlightenment philosophers & de facto father¹⁷⁸⁸ of the US constitution; i.e Mr. political ontology¹⁷⁸⁹; antec.: Aristotle, Cicero)
Though the “subject is very extensive...[i]n that crowd of ideas which presents itself to my mind, I shall be more attentive to *the order* of things than to the things themselves. I shall [also] be obliged to wander to the [‘conservative’] right and to the [‘liberal’] left, [so] that I may [properly] investigate and discover...[a higher objective] truth.... for we do nothing so well as when we act with freedom, and follow the bent of our natural genius.”¹⁷⁹⁰- Montesquieu, *The Spirit of Laws* (1748, 292-294). See also “Teleology”, “History”, “Wise men”.

1) An unabashed Anglophile¹⁷⁹¹ and monarchist-timarchist, judge Baron de Montesquieu called political reality as it was (see also “Timarchy”), but also as it should be (see also “Separation of Powers”¹⁷⁹²). Anyone who thinks or assumes that these 2 concepts are somehow irreconcilable doesn’t know their Anglo-American history (or hasn’t “been in the service” or “served”, as the contemporary US military would say). See also “Constitutions & Conventions”, “UKUSA Agreement”, “National Security State”, “Secrecy, Cult of”.

2) A fellow of the (UK) Royal Society and Freemason [from the early 1730’s], Montesquieu “attended parliamentary debates and read the political journals of the day”; according to his Oxford biographer, Montesquieu’s main and 1st point was “[abandoning the classical divisions [from Plato & Aristotle’s day] of his predecessors into monarchy, aristocracy, and democracy, Montesquieu [instead] produced his own

¹⁷⁸⁸ Fmr. president Jefferson was (in 1810) his translator. Madison, refuting the ‘anti-Federalists’ in Federalist #47, wrote: “The oracle who is always consulted and cited... [at least in regards to separation of powers] is the celebrated Montesquieu” (Madison, 1788) . See also “Libertarianism” [limits], “Constitution, US”, “Separation of Powers”.

¹⁷⁸⁹ In “his occasional elucidations of the Roman jurisprudence, instead of bewildering himself among the erudition of scholiasts and of antiquaries, we frequently find him borrowing his lights from the most remote and unconnected quarters of the globe, and combining the casual observations of illiterate travellers and navigators, into a political commentary on the history of laws and manners” (Stewart, 1982, 294).

¹⁷⁹⁰ More specifically, “[N]ot being born in the age I should have been, I have resolved to make myself a partisan of the sect of that excellent man the abbe de Saint-Pierre... and to persuade myself that seven or 800 hundred years from now, there will arrive a certain people for whom my ideas will be useful” (Montesquieu, 1991). It happened sooner than that. In addition to becoming, within a decade of his death, the world’s leading authority on political economy, and-- in the 1780’s-- the most influential theorist of the US Constitution, the Montesquieuesque constitutionality of ‘Western Civ.’ led the development of such progress to explode, at hitherto unheard of rates, from approx. 1880 and the advent of the 2nd Industrial Revolution. From the 1880’s to c.1915, the “world had changed more since...[‘Western’ everyman] went to school than it had since the Romans.... [It] turned out to be the most profound revolution that the West has ever known. It was [only] then that the great mass of people came to live and even to *think* [sic] like everybody else” (Weber, 1989k, mn.1-2). And of course the socioeconomic change did not stop there. See also “Freedom continuum (maturation)”, “Adolescence of Mankind”, → “Currency Wars, the”, → “Parity pricing”, → (then after the ‘post-war’/globalization debt cycle [for a critical mass to get with it])→ “World Par Economy (WPE)”.

¹⁷⁹¹ This was the primary distinction between (the Spirit of ‘87) Montesquieu, and Thomas Jefferson (who didn’t partake in ‘87). The “doctrines” of England & Europe “deem it necessary to keep them [‘the people’] down by hard labor, poverty and ignorance, and to take from them, as from bees, so much of their earnings as that unremitting labour shall be necessary to obtain a sufficient surplus barely to sustain a scanty and miserable life. and these earnings they apply to maintain their privileged [2] orders [Estates] in splendor and idleness, to fascinate the eyes of the people, and excite in them an humble adoration and submission as to an order of superior beings” (Jefferson, 1823). They both agreed, however, on the broader point of the long-term directional arrow → (see Trichotomy, below). Montesquieu’s wife was from a Huguenot family; he nonetheless almost always got along well with “the Jesuits” (<https://www.jstor.org/stable/2707701> [Oake’53]).

¹⁷⁹² This author’s criticisms of the most-valid Political Economy theorist are few, but are contained within this entry (pertaining to Montesquieu’s apparent indifference towards the imbalancing problem of Executive privilege & bloat (in his construct).

analysis and assigned to each form of government an animating principle: the [ENI] Republic, based on *Virtue*; the Monarchy [i.e., “Timarchy” (in the more modern, recent centuries)], based on *Honor* [CNI-CHA]; and Despotism, based on *Fear* [CHA-CHD].¹⁷⁹³ His definitions show that this classification rests not on the [epistemological] location of political power [i.e. official rhetoric], but on the government’s [ONTOLOGICAL (observable history)] manner of conducting policy; it involves a [inductive-ontol.] historical and not a narrow [deduct.-epist.] descriptive approach” (Shackleton, 1986). See also “Ontology & Epistemology”, “National Identity/Nationalism” [National Identity cycle].

[(Rule by) Love-of-Honor may not always be straightforward.]

3) Has **any** other classic (or household name) political philosopher unambiguously placed the Anglosphere (or indeed, even its past 3 centuries of imperium) in the category of (see also) Timarchy?¹⁷⁹⁴

4) Montesquieu’s Trichotomy (adapted for world of 10bn. people):

“As *virtue* is necessary in a [democratic] republic¹⁷⁹⁵, and in a ~~monarchy~~ timarchy *honor*¹⁷⁹⁶, so *fear* is [the most] necessary [quality] in a [openly] despotic [as opposed to simply oligarchical] government” (Montesquieu, 1748, 26). See also “Timarchy”; [& White & White’s trichotomy (2008)] “Civil National Identity”, “Ethnic (National) Identity”, “Charismatic Authority & Dependency”.

Although still most renown for his articulation of (the civil-supporting requisite) Separation of Powers, the famous Anglophile’s classification scheme for all known political regimes was **e**qually noted at the time; and is of greater profundity. Most great paradigms last for more than just 2-3 centuries. It should not need to be pointed out that the Freemasons’ (1st) *Age of Revolution* (the last quarter of the 18th century) was primarily about the jettisoning of *Rule by Fear* as no longer being worthy⁷⁰⁵ (many have called) the Western Tradition (of political-economic development). In both America and France, what initially took the place of imperial Rule by Fear was (for a few months in France, anyway) Montesquieu’s lofty notion of *Rule by Virtue*.¹⁷⁹⁷ But it quickly collapsed in (monetarily-ignorant) France, and was-- even in heady America-- not to survive the decade (of the 1780’s). The US constitution of 1787 that super^{se}ded it was clearly a *Rule-by-Honor* type of governing document (even with the 1st 10 Amendments tacked on), and has since evolved (with fits & starts in the 19th century; then galloping in the 20th) into what (by the dawn of the 21stc) can only be forthrightly characterized as a “Timarchy”-- given “the Presidency’s” (i.e. the Executive branch’s) absolute dwarfing of the other 2 branches of government (with almost all of this being over the course of the [‘secretly’ imperialistic] 20thc). After conquering the world (and the UK), what else left was there to do? See also “Jones, Alex” [‘lose their own soul’], “Civilization, Western”.

¹⁷⁹³ This was **revolutionary** (and right around the time that ‘freemasons’ [of future “Age of Revolutions” fame] were founded)-- i.e. moving beyond a regime’s (self-professed-Epistemological) nameplate [a.k.a. ‘political correctness’] into the ontological (i.e. long-term/history-oriented) picture of classifying regimes according to how, in fact, they *actually affected people*-- making them publicly Fearful, (showy-rhetorical) Honor-freaks, or truly/internally Virtuous.

¹⁷⁹⁴ Montesquieu ”” (1748,).

¹⁷⁹⁵ Voltaire, some decades later, noted that the “‘preferments, distinctions, and honors, in the days of the Roman republic, were worth quite as much as the [superfluous] debris which goes to constitute a kingdom of today” (Montesquieu, 1748, 25, note a).

¹⁷⁹⁶ “[P]hilosophically speaking, it is a *false honor* which moves all the parts of the government; but even this false [external] honor is... useful to the public... Is it not very exacting to oblige men to perform the most difficult actions... without other recompense than that of glory and applause?” (Montesquieu, 1748, 25).

¹⁷⁹⁷ Not just Montesquieu. To philosopher Immanuel Kant (1724-1804), “the age of revolutions was evidence of progress toward the day when the highest good-- the conjunction of human virtue with human happiness-- would be enjoyed by all free, rational beings.”
- <https://amc.sas.upenn.edu/sites/www.sas.upenn.edu/andrea-mitchell-center/files/uploads/HoffmanPennDCC.pdf> . US founding father and constitution writer Gouverneur Morris was also keen on the (long-term) trendiness of the (Rule-by-Virtue) concept: “Thus shall the power and the happiness of these sovereign, free and independent states, founded on the virtue of their citizens, increase, extend, and endure until the Almighty shall blot out all the empires on earth.”- Morris’ official reply to the initial British ‘peace’ commissioners, 1778; in *Gouverneur Morris* (Adams, 2008, 105). See also “United States”, “World Par Economy”, “Happiness”.

4b) What might be called the “2nd Age of Revolution” is unfinished business, and has a long way to go.¹⁷⁹⁸ See also “Democracy”, “Monetary reform”, “Duopoly”, “Parties, political”. We shall know it (as with the others) by its fruits-- when anyone can see that there is, in fact, Rule by [internal] Virtue, instead of by [its superficial aping] Love of Honor. This is not as ‘foreign’ of a concept as it may at first seem to some. See also “United States, the”, “Local scrip & Complementary currencies”.

5) Montesquieu’s classic governing Trichotomy is broadly congruent with trichotomies from other social sciences, including:

a) Kohlberg’s basic “Stages of Moral Development” in *psychology* (Kohlberg, 1981), with:
“Pre-conventional” (obedience) -- “Rule-by-Fear”; (per childhood); despotism
“Conventional” (conformity [to sacred rules]) -- “Rule-by-Love of Honor”; (per adolescence); timarchy
“Post-conventional” (‘social contract’ & universal ethics) -- “Rule-by-Virtue”. (per maturity); democr.republic
See also “Adolescence of Mankind”, “Freedom continuum (maturation)”, “Design”, “Middle class”.

b) Was Montesquieu the key middle man in a continuous political theory-developmental thread that runs from ancient *Aristotle* (Mr. “Middle class”) through post-medieval *Montesquieu* (“Rule-by-virtue”), to modern *Mark Twain*? See also “Politics”, “NSA” [timarchy].

c) the “National Identity cycle” in *history*, with... (White & White, 2008c). See also “Cycles”, “History”.

6) There is unfinished business. On clearly distinguishing (the Powers of) ‘money’ & ‘currency’? See “Hamilton, Alexander” [Hamilton’sFootbinding], App.C: “1-2-3”.

6b) On planet-wide common sense ‘sustainability’, see “Economics, Parity”, “Ecological economics”, “World Par Economy”.

See also “Hegelian” [Mr. (torturous) political epistemology], “Ontology & Epistemology”, “Music”.

[Montesquieu (atop) [although not fully articulating the monarchy-to-timarchy transition] got the main point; other ‘household name’ ‘modern political philosophers’ did not (from right to left): [‘epistemological’] Hegel, [‘power-opportunist’] Smith, Rousseau [has the knee-hinge], Mill [admires the shiny ivory], and Hume has almost got it [i.e. the next 2.5 centuries], even though his & Smith’s little successor (Bentham) is something of a silly reprobate.] See also “Philosophy, national”, “Industrial Revolution” (2nd, and 3rd).

Monty Python’s Flying Circus- (i.e. “Timarchy”/[traditional]”English constitution” will meet the “Industrial Revolution, 3rd”)

“Patriotism or any other version of the herd instinct seems to me an entirely *inadequate basis of virtue.*”

- Lord Robert Cecil, 1st Viscount Cecil of Chelwood, letter to Gilbert Murray (October 25, 1948)

See also “Patri” [I.I.C.].

‘Greeks & Romans’? “[L]et’s face it, there are certain things in life which make life worth living and one of those things is [Monty] Python, especially for someone like me. When you’ve gone through so much in life, and you’re supposed to decide what is real and what isn’t; you [then] watch the television and you see all this madness going on and everyone is being serious and accepting it, and you’re ready to bang your head against the wall in despair. Then someone says, ‘And now for something completely different’.

¹⁷⁹⁸ The distinction between ‘Rule by [internal] Virtue’ and ‘Rule by [external] Honor’ may not seem like much at first-- compared to (the Early Modern centuries’) Rule by Honor replacing ‘Rule by Fear’. But in fact, Rule by Honor is just a halfway house, between the naked expediency (of total ‘political correctness’) and ultimate Knowledge. Particularly in (the cartoonishly narrow & Orwellian field of) Economics, “you have to go along with whatever the policy of that bank or corporation is... or you become dispensable. And so what you basically have, in almost every country [today], is a *purchased* [sic] intellectual class.”- Paul Craig Roberts (Roberts, 2020, mn.10-11). See also “Groupthink”, “Academia”, “Economics”; “Adolescence of Mankind”, “Freedom continuum (maturation)”, App.C: “1-2-3”.

That saves the day.”- George Harrison¹⁷⁹⁹, 1978 (Badman, 2009). See also “Boards/Board Systems”, “UKUSA Agreement” [.1970].

1) Is this not (at least the ‘new’) de facto Establishment [.UK, anyway]? All from Oxford or Cambridge (or a valedictorian, in the case of Gilliam, the lone American), the British comedy writers (a plurality of them History¹⁸⁰⁰ majors, by the way) got license for their own prime-time BBC show in 1969. Two-thirds of the six resided, for years, in Highgate at some point (and/or are veritable face brands for [the 1990’s-2010’s] BBC). See also “Intelligence Community (IC)”, “Military leadership (of 20thc-millennial UK-USA)” [‘They’],→ “NSA” [.Israel].

See also “English constitution”, “Oligarchy”, →“Timarchy”; “Currency wars, the”, →“Scientific Management”; “Revolution, American” [.Wilkes].

2) So what’s the ‘biggest joke’ of this entire (‘post-war’ but pre-maturation) transitional era? See also “NInnies” (Yes, it’s on you-- on everyone), “International Intelligence Community (I.I.C.)”.

[for the love-of-honor¹⁸⁰¹]

Moore’s Law- (‘since 1965’ microchips’ processing power more-or-less doubles every year or two¹⁸⁰²)

1) has held up, through 2020 at least; driving the cost of the average microchip down the “2 cents, at most.... now that computing is close to free” (Miller, 2022c).

2) There is, however, “” that it’ll still be valid, or at least economical, beyond c.2027 (Miller, 2022c). See also “Industrial Revolution, 3rd”.

Moral hazard- 1) “Government liability for ‘socializing risk’ by *bailing out* investors who lose money on bad loans or other savings. The effect is to shift assets and income from the public at large (‘taxpayers’) to the financial sector... The most notorious examples include US Government reimbursement for depositors in high-risk S&L’s in the 1980s, leading to insolvency of the Federal Savings & Loan Insurance Corporation. Also in the 1980s, *Brady Bonds* were issued to reimburse holders of 3rd-world debts that banks knew (or should have known) could not possibly be repaid. Moral hazard increased when Citibank embarked on a series of risky ventures, secure in the knowledge that the government would bail it out on the ground that the New York bank was “*too big to fail*” (Hudson, 2015b). See also “Lender of Last Resort”.

2) “...never [applies] to the borrower. It’s a euphemism for when banks commit fraud... If somebody else doesn’t pay their debt, they call them a criminal and put them in jail. They don’t say ‘*You’re being morally hazardous. Don’t do that again*’” (Keiser, 2016, mn.16). See also “White-collar crime”.

Morris, Gouverneur (1752-1816)- (the middleman of both¹⁸⁰³ the American Revolution and US Constitution; not to be confused with [best friend] Alexander Hamilton) a “one-man council of civil liberties” (Adams, 2008, 142).

¹⁷⁹⁹ Harrison, who famously financed *The Life of Brain* (1979), often mused that Monty Python “held up a mirror to the insanity of world events” (Leng, 2006, 226). See also “Central Banking/Warfare model”, “Great Extinction”.

¹⁸⁰⁰ https://www.youtube.com/watch?v=m_5MtGCWImE [mn.1, “NothingHereBut...”].

¹⁸⁰¹ The Love-of-Honor was a recurring theme in Series/Year 3; (see Monty Python, 1973; 1973b). See also “Montesquieu” [trichotomy].

¹⁸⁰² ‘At the 1975 International Electron Devices Meeting, Moore revised his forecast rate, predicting semiconductor complexity would continue to double annually [only] until about 1980, after which it would slow down to doubling approx. every 2 years’.

¹⁸⁰³ “Morris knew how to get to the nut of a problem, whether financial, administrative, or political, and how to define the issues clearly...[and] the ability to master detail without drowning in it.”- William Adams’ *Gouverneur Morris: An Independent Life* (2008).

“Let me paint my situation.... I have drawn and expect to draw almost if not all the publications of Congress of any importance.... We have nobody else here so that if I quit the State will be unrepresented.”¹⁸⁰⁴- letter to Robert Livingston, Aug. 1778

1) After his “Trust Crocodiles” speech to the New York Provincial Congress¹⁸⁰⁵, Morris (then only 24) was named to the PC’s “small ‘Secret Committee, whose brief was to confer regularly with George Washington...[passing] on to him all strategically and tactically useful information. Morris... promptly became the key New York liaison with Washington, and just as promptly the two men developed a warm relationship that lasted until... [Washington’s] death¹⁸⁰⁶” (Kirschke, 2005, 43-44). See also “Founding fathers”.

2) c.1778-79, was the first (known) advocate for “radical monetary reforms...[i.e. somehow] eliminating all the state currencies in exchange for Continental certificates.... a central comptroller would have to be named and a treasury board established.... [This] basis of Morris’s...essay to [envoy] Franklin [in England, concerning] the Revolution’s financial straits... focused sharply on the nation’s financial problems” (Adams, 2008, 113).

3) Concurrent with the Morris’s Superintendency in Philadelphia was the founding-chartering of the *Bank of North America* (BoNA), which, although congressionally-chartered, was (completely) “funded by private subscriptions. Business cronies of [Robert] Morris who invested in the...[BoNA] were well rewarded... [for investing] a stake in the nation’s future. The bank’s notes were to circulate as [national] currency...[but] A 2nd currency [was also] introduced... the so-called [Robert] *Morris Notes*, backed [simply] by the Financier’s private fortune...[which] turned out to be so popular that, by Sept: 1781, Morris had [already] advanced ‘every Shilling of [his] own’...[effectively replacing] the public credit.... [Meanwhile] Gouverneur’s...remedy was to establish a *national mint*... [proposing] that the system be based on a **decimal** measure, using the Spanish silver dollar.... [But the] proposal was delayed in Congress and later amended when Jefferson offered... [instead] the dollar as the basic unit” (Adams, 2008, 132-134).

3b) “Gouverneur’s 3rd, and most important, proposal, called the ‘*Report on the Public Credit*’¹⁸⁰⁷, was introduced in Congress on July 29, 1782.... [It basically established] a federal plan to control money and credit by assuming the total public debt of the war, in exchange for government certificates secured by an independent source of federal taxes, [in order] to underpin the central government’s debt... [This meant]

¹⁸⁰⁴ One who doubts that Morris was often tasked with, or volunteered for, Atlas-type responsibilities should see pp.103-105 of *Gouverneur Morris*, by Willam Adams (Adams, 2008).

¹⁸⁰⁵ The Morris family (like many New Yorkers) became split over the matter of Independence in the mid-1770’s. Although Morris elder half-brother Lewis signed the Declaration of Independence, GM’s mother Sarah handed over the family’s Morrisania estate (in present day Bronx Co, NY) to the British/Loyalists in August ’76; and half-brother Staats Long Morris (1728–1800) “fought in the British army, and became a major-General. Gouverneur [meanwhile] served in the New York Provincial Congress in 1776–1777, [and] was perhaps the leading advocate in that body” for issuing a formal Declaration of Independence.

¹⁸⁰⁶ Perhaps Morris had not 2 but 3 ‘best friends’. “Martha Washington asked Gouverneur to present a eulogy at...[George’s New York] funeral” in Dec. 1799 (Kirschke, 44); Henry Lee had done so 3 days earlier (as asked by Congress) at the Philadelphia funeral on Dec. 26th, after Washington’s Virginia funeral on Dec. 18th. The 2 first met on June 25-26, 1775, for perhaps 7 hours, and conferred regularly between 1778-79, due to Morris’ key role on the Secret Committee (Ibid). The 2 men also collaborated closely at the Philadelphia convention “for more than 3 months”, and had also had “regular weekly meetings” there (from 1781-84), when Morris was deputy Superintendent of Finances. Morris’ letter to Washington (admonishing the retired General that “The Exercise of Authority depends on personal character... you are the *indispensable man*” even “helped induce Washington to assent to become the first President”; and global celebrity Washington’s “letters of introduction” helped pave the way for Morris in France. In Nov. 1788, Washington even introduced Morris with “only let him be once fairly presented to your French Ladies,, and I answer for it, he will not leave the worst impression in the world of the American character... I rely upon it he will make his way good” (Kirschke, 44-45); Gouverneur was henceforth Pres. Washington’s “first US private agent (or presidential envoy...”, concerned mostly with “Britian’s disposition” (Kirschke, 45). “Both men also...had also lost their fathers when still prepubescent... [and] Morris’ physique was so similar to Washington’s that he was asked by...[a] sculptor...with Washington’s consent, to pose his body as Washington’s.... [Both also] wrote voluminously” (Kirschke, 46). See also “Hamilton, Alexander”.

¹⁸⁰⁷ The 1781 *Report* has long been cited, by learned monetary historians, as the basis of Hamilton’s subsequent 1790 Report on the Public Credit. Was the original more from Robert or Gouverneur, or **both**? The “sweeping statement...[and] summary view of the financial crisis confronting the new nation”, the 1781 *Report* was “[t]he product of close deliberations with Gouverneur Morris...[and] the crescendo of their first year in office” (Rappleye, 2010, 303). See also “Morris, Robert”, “Hamilton, Alexander”.

the...nullification of Article 8 of the Confederation, which stated the common expenses were to be paid 'out of a common treasury, which shall be supplied the several states' by their own taxes and apportioned by their own revenues.... Their [political] timing was bad...[after the] victory at Yorktown the previous October.... [and] a new request to collect additional revenues through land, poll, and excise taxes was turned over to an unfriendly committee" (Adams, 2008, 135).

4) "" (Treanor, 2021).

4b) "" (Treanor, 2021).

5) See also "Bills of credit".

6) "was not inclined to dance attendance on local politicians" (Adams, 2008, 113), and became less popular with the Federalist/Democratic-Republican disputes of the 1790's & early 19thc. Among the detractors by then was Thomas Jefferson:

"The fact is, that Gouverneur Morris, a high flying monarchy-man, shutting his eyes & his faith to every fact against his wishes, & believing everything he desires to be true, has kept the President's [Washington's] mind constantly poisoned¹⁸⁰⁸ with his forebodings [regarding the French Revolution]."

- *The Anas*, 1792;

"Conversation with Mr. Morris. Do not at all concur in his opinions. Think him more decidedly English the more I see of him."- John Quincy Adams, diary entry, Feb. 22, 1796.¹⁸⁰⁹

6b) It was mostly¹⁸¹⁰ due to Morris's (possibly treasonous¹⁸¹¹) unpopularity during the War of 1812 (and his benefactor Robert Morris's imprisonment¹⁸¹² from 1798-1801) that the middleman-worldly founding father¹⁸¹³ was largely air-brushed out of subsequent 19th (and even 20th) century (somewhat mythological) US histories; and the hagiographic tradition has mostly held (at least until c.2005-2010's). See also "History", "Solomon, Haym (1740-1785)".

See also "Constitution, US (of 1787-91)", "Hamilton, Alexander (c.1756-1804)".

["We The People"]

¹⁸⁰⁸ Jefferson also had riffs-- using forceful terms-- with (civic) philosopher David Hume over the nature of (see also) "Civil National Identity". Morris, like John Adams, simply foresaw that the French Revolution was headed for disaster[s]. "To Morris, any assumption that France, with a wholly different history, could adopt and install a fully operating American-style government by fiat was pure folly [the stuff of caricature]. Time and education were necessary 'to bring Slaves to the Enjoyment of Liberty.... The Progress towards Freedom must be slow and can only be completed [sic] in the Course of several Generations'" (Adams, 2008, xiv).

¹⁸⁰⁹ See Comment.

¹⁸¹⁰ According to others, it was, more generally, Morris' "exuberance and outspokenness...[that proved] always offensive to some. His excoriation of slavery was one of the most eloquent speeches at the Constitutional Convention, and made him no friends in the South. His dire (and accurate) predictions about the course of the French Revolution were not popular in France, or in America. During his time in France [1789-98 (as US Minister 1792-94)], Morris was the object of clandestine attacks by people like Thomas Paine and Jefferson's secretary William Short (who dearly wanted the position of minister himself), and others who saw him as an obstacle to profiteering from the American Revolution. Even [very close friend Alexander] Hamilton denigrated him-- falsely-- to Washington, in a sorry episode, when Morris's reports about Britain's intentions conflicted with Hamilton's foreign policy goals. All of these attacks were circulated and prejudiced many against him, and some are still repeated by historians", 2 centuries later, in the 2010's (Miller, 2019).

¹⁸¹¹ See Kirschke (2005, 151-152), for GM's involvement in the veteran officers' Newburgh Conspiracy of March 1783, which seems to have had both Washington and Hamilton putting out fires (GW dousing Newburgh in NY; Hamilton unsuccessful in averting [an unnamed veterans' revolt in] PA) that particular Spring-Summer (a few years prior to the unpaid vets'-anti-debt Shays' Reb. of 1786-87, and the anti-tax Whiskey Reb. of 1791-94).

¹⁸¹² "Unlike Ben Franklin...[R. Morris] did no publicly known charitable work, and made no known charitable contributions.... [H]is mammoth land speculations [starting from the mid-1780's] vastly overextended even his Croesus-like fortune; by 1796, his credit had entirely collapsed, and in 1797 he went bankrupt" before there were US bankruptcy laws (Kirschke, 2005, 157).

¹⁸¹³ (26th PotUS) Theodore Roosevelt took the time to write a biography of G. Morris, calling him "better than any other man the clear-headed, practical statesman, who is genuinely devoted to the cause of constitutional freedom" (Roosevelt, 1888).

Morris, Robert (1734-1806)- ('the financier of the Revolution' & superintendent [czar] of finances from 1781-84, RM [usually working with attorney G. Morris] was *de facto* PM¹⁸¹⁴ of the US from c.1776-84) Superintendent "Morris experienced some failures, but he [also] achieved minor miracles.... [By the time he] quit in 1784, the [confederal US] government was [basically] solvent" (Graebner, Fite, & White, 1975, 101). See also "Articles of Confederation", "Solomon, Haym (1740-1785)".

1) Born in Liverpool, "Morris left England to join his father [tobacco trading] in Maryland in 1747 and...[2 years later was apprenticed to] a mercantile house in Philadelphia. During the war, Morris was vice president of...[PA's] Committee of Safety (1775-76)¹⁸¹⁵ and was a member of both the Continental Congress (1775-78) and the PA legislature (1778-79, 1780-81, 1785-86). Because he was hoping for reconciliation with Britain, he did not sign the Declaration of Independence until several weeks after its adoption... [Nonetheless Morris pretty much] controlled the financial operations of the war from 1776 to 1778...[and also] raised the funds that made it possible for Gen...Washington to move his army from the New York area to Yorktown...[in] 1781. Morris had borrowed [on his own collateral] from the French, requisitioned from the states, and also advanced money from his own pocket."

- <https://www.britannica.com/biography/Robert-Morris-American-statesman>

2) When the Revolutionary "war broke out in 1775, the Continental Congress asked Morris to use his shipping connections and financial acumen to help amass the money and supplies to create an American army and navy.... "- <https://www.rmu.edu/about/history/robert-morris> . Morris served on multiple committees, including the "Secret [i.e. Quartermaster] Committee, which procured arms and munitions for the Continental Army, and [also] the Committee of Secret Correspondence" concerning (also secret) international diplomacy.- 710pprox/www.mountvernon.org/library/digitalhistory/digital-encyclopedia/article/robert-morris/

2b) Although he resigned "public office in 1779 after the accusations of misconduct¹⁸¹⁶... Congress [had a change of heart and asked Morris to return the following year, appointing him] superintendent of finance in 1780, which he...[only] accepted in 1781... [after being expressly granted] unilateral power in dismissing any employee within the treasury, and...[of also maintaining] his merchant ties made while in private business.¹⁸¹⁷ The need for Morris to accept...is evident in Congress' granting of these requests. In July

¹⁸¹⁴ "Since 1776, Morris had advocated scrapping Congress's committee system of administration and replacing it with departments of war, marine, treasury, and foreign affairs under individual executives" (Randall, 2022, 202).

¹⁸¹⁵ safety

¹⁸¹⁶ In "July 1779, a congressional committee report attacked Morris for profiteering. But even more damning to Morris's reputation was his opposition to paper money. From 1779 until his appointment as Superintendent of Finance [1781], Morris fought tooth and nail on the issue of paper money in the Pennsylvania Assembly [with its 'radical' constitution of 1776]. He vehemently opposed [as had the British *Currency Acts*] the idea that Pennsylvania's paper money, like Rhode Island's, be declared *legal tender*, with penalties for non-acceptance. Morris insisted that...[such] tender and penal laws were destructive of all credit [a.k.a. interest payments]. But this only made William Lee [time check] indignantly accuse Morris of driving paper money out of circulation...[in order to allow] nothing but gold and silver to be current, so that Morris could set up a deliberate financial swindle [when the AoC states still weren't paying any taxes to the Continental Congress]. Morris had amassed substantial holdings of depreciated paper currency while it was current at 1,000 and 1,200% under value and was now, said the accusation, trying to secure to himself the payment of the paper money that he had collected at a substantial profit. Morris [however] was eventually acquitted of all charges. On October 4 [1779], a street mob attacked Morris, James Wilson, George Clymer, and 20 or so others who belonged to a Republican Society at City Tavern in Philadelphia. Morris and the Society retreated to Wilson's Stout, a 3-story house... and when the mob pursued them, they barricaded the doors and shuttered the windows. Someone began shooting, and in short order, the mob stormed the house, breaking down the doors, and trading gunfire on the stairs, which dropped several of them. The mob [then] wheeled up a small howitzer, but as they did, the 1st City Troop of Cavalry appeared and, sabers swinging, dispersed the mob. The battle of 'Fort Wilson' left 4 of the mob [including 1 African-American freedman] dead and 14 wounded... [A]s clearly as Morris understood that America's chief peril lay in 'the derangement of our Money Affairs', he could not get the states... to [unanimously] agree to any solution he proposed. On July 29, 1782, [Superintendent of Finance] Morris submitted to the Confederation Congress an ambitious plan to stabilize the country's economy. First and foremost was the approval of the 5% impost [that had already been] passed by the Congress in 1781", but all 13 states never agreed to it- <https://www.wondriumdaily.com/robert-morris-congress-superintendent-of-finance/> . See also "Articles of Confederation".

¹⁸¹⁷ By the latter months of 1780-81; "the British seemed to be winning the war. Washington's army was a disaster. Both the military and the [underlying] financial position of the country seemed on the verge of collapse. State legislatures stopped collecting or even imposing taxes for requisitions to Congress.... [Robert] Morris's... [Bank of North America] would be privately financed, with Morris and his friends... serving ...[both] as subscribers and as the governing board. Yet it would operate as a public corporation, publicly chartered both by Pennsylvania and by the Congress. The charter would make board members immune from personal lawsuits...[and] could use the bank's capital for [personal]

1781 [only 3 days after being sworn-in], Morris wrote with confidence to George Washington that he would soon have the means to support the general's army" (Ibid); in its Virginia strategy. This is because Morris was now, effectively, the USA's 'Prime Minister' concerning all things financial-budgetary¹⁸¹⁸ for the Continental Congress; either with or without the power to tax the constituent states. A systemic "confusion of public and private accounts, due primarily to the fact that *his own credit was superior* to that of the United States, gave rise to charges of dishonesty, of which he was acquitted."

- https://en.wikisource.org/wiki/1911_Encyclop%C3%A4dia_Britannica/Morris,_Robert . See also "Solomon, Haym (1740-1785)".

2c) "Fellow members of Congress questioned the legality of...[what would be America's 1st] bank, but realized the need, and granted...[Morris' request for] a [BoNA] charter [in May]¹⁸¹⁹; the bank opened for business on Jan. 7, 1782, in Philadelphia. The bank would be privately owned, funded through subscribers, and governed [only] by its investors. With the government having [effectively] no power of taxation, the bank would provide an alternative [or 'Plan B'] source of revenue, by using the capital gained through its investors [a.k.a. interest] to ameliorate the [new] national debt [economy]."

- [711prox//www.mountvernon.org/library/digitalhistory/digital-encyclopedia/article/robert-morris/](http://www.mountvernon.org/library/digitalhistory/digital-encyclopedia/article/robert-morris/) See also "Bank", "Central Bank", "National Debt Economy (NDE)".

2d) The BoNA was "the intended to put an eventual end to the need for state emissions of currency" [711prox//www.mountvernon.org/library/digitalhistory/digital-encyclopedia/article/robert-morris/](http://www.mountvernon.org/library/digitalhistory/digital-encyclopedia/article/robert-morris/) ; but instead folded, from a Congressional charter into only a Pennsylvania charter, after only 3+ years as the country's Central Bank. See also "Constitution, US (of 1787-91)".

3) Famously declining George Washington's offer to serve as the USA's 1st Treasury Secretary, Morris "urged [Alexander] Hamilton's appointment in his stead.¹⁸²⁰ As [the 1st (state-elected)] US senator ...[r. 1789-95] he [always] supported the Federalist policies and gave Hamilton considerable assistance in carrying out his [their] financial plans, taking part... in arranging a bargain by which certain Virginia representatives were induced to vote for the funding of the state debts, in return for the location of the Federal capital on the Potomac.... At one time or another he owned wholly or in major part nearly the entire western half of New York state, 2 million acres in Georgia, and about 1 million each in Pennsylvania, Virginia, and South Carolina."

- https://en.wikisource.org/wiki/1911_Encyclop%C3%A4dia_Britannica/Morris,_Robert

4) From 1790-1800, (the first two US) Presidents Washington and Adams lived, worked, and rented Robert Morris' house in Philadelphia, with Adams doing so (from 1797-1800) even after Morris had gone bankrupt, fled the capital city as a fugitive, and was eventually incarcerated in debtor's prison. See also "Morris, Gouverneur (1752-1816)", "Hamilton, Alexander", "Founding fathers".

Mortgage (etym. ; a.k.a. "the measure of deadness") 1) "Mortgage interest represents about 70% of all interest charges in the US and British economies. This revenue now absorbs all the otherwise taxable profits...[of] the commercial real-estate sector, leaving no revenue available for the tax collector (and in fact creating 'book losses' that investors use to offset income earned on their other operations)" (Hudson, 2013).

2) Mortgages have been more nationalized¹⁸²¹ over the past decade. From 2001 through 2007, Federal Housing Authority (FHA) and Veteran's Administration (VA) loans "only accounted for an average [of]

investments... The bank would meanwhile lend to the Congress and manage its finances... with no more quibbles about [Morris] mingling public finance with his own.... The richest man in America... [also now] controlled the Congress" (Hogeland, 2014).

¹⁸¹⁸ Earlier RM had "practically controlled the financial operations of Congress from 1776 to 1778, and when the board system was superseded in 1781 by single-headed executive departments, he was chosen [S]uperintendent of [F]inance."

- https://en.wikisource.org/wiki/1911_Encyclop%C3%A4dia_Britannica/Morris,_Robert

¹⁸¹⁹ This was actually before Morris was sworn in (on June 27th [wiki]), and only about 2 months after Maryland had finally ratified the Articles of Confederation (making a 'sovereign' country) on March 1, 1781. See also "Articles of Confederation" .

¹⁸²⁰ Morris "enlisted the young Hamilton in a project to get the whole country focused on what Morris had come to see as its unifying basis: paying interest to the federal bondholding class" (Hogeland, 2014). See also "National debt".

¹⁸²¹ And they have also been cheapened. "Mortgage *debt service payments* as a percentage of disposable personal income have fallen [from 7.22%, in Oct. 2007] to [4.24%, in Apr. 2018], their lowest...since 1980, when the data was first recorded (Kapfidge, 2018).

\$138 billion in loans per year...[But ^{by}] 2017, FHA and VA loans... [were up to] \$441 billion... [comprising] 24% of all 1st lien mortgage” financing (Kapfidze, 2018). Mortgages held by banks (a.k.a. ‘portfolio loans’) that year “accounted for \$524 billion in new mortgages... tripling in volume from their 2009 low... [albeit still] down 29% from their pre-crisis average” (Kapfidze, 2018).

3) Nonetheless, the unlisted QuickenLoans/RocketMortgage surpassed Wells Fargo and JP Morgan to become the largest mortgage originator (and ‘retail lender’) in the US in 2018. See also “Fintech”. See also “Mortgage bonds (subprime)”.

4) The “*new* home purchase lending sector” is also sometimes called “loan servicing”, or simply “servicing”.

Mortgage-backed securities (MBS)- (synon. ‘mortgage-based securities’, ‘mortgage-related securities’, ‘mortgage pass throughs’; government-agency and private MBSs **are now**, next to treasuries, the leading form of near-monies)

1) The mortgage securitization industry goes back at least¹⁸²² to the 1930’s New Deal, with the establishment of FANNIE MAE, in order to add liquidity to the 2ndary mortgage market, which was at that time dominated by the thrifts sector.

2) The specific term MBS, however, **seems to have been** coined in the early 1980’s. The GSE Ginnie Mae guaranteed the first *mortgage passthrough security* of an approved lender in 1968, and in 1971 Freddie Mac also issued another form of ‘mortgage passthrough’-- this time called a ‘participation certificate’-- composed primarily of private mortgage loans. In 1981, the GSE giant Fannie Mae then issued its first ‘mortgage passthrough’, which it termed a *mortgage-backed security* (MBS), (Fabozzi & Modigliani, 1992, 21); and the term has stuck since then. “Total *residential mortgage debt* in the US first crossed the \$1 trillion mark in 1978...[and] \$13 trillion at the end of 2014... [while] mortgage *bonds* totaled \$2.1 trillion in 2014” (Berliner, Quinones, & Bhattacharya, 2016, 4).

3) In 1982, “Rule 415...[of] the Securities and Exchange Commission (SEC)... allowed for so-called shelf registration of securities issues...[which] facilitated the issuance of non-agency mortgage-backed securities... The resulting growth and development of the MBS market facilitated the expansion of a national market where bond market investors provided much of the funding for mortgage lending” (Berliner, Quinones, & Bhattacharya, 4). Also the *Secondary Mortgage Market Enhancement Act of 1984* (subseq. codified to 15 USC §§77d (5), 77r-1), further “removed perceived regulatory barriers inhibiting the development of a private market for residential mortgage-backed securities” (Texas.gov, 2018).

4) **Since the 1980’s** liberalization, the Fed, operating through the FRBNY’s Desk, purchases or sells these types of securities using the same accounting **as if** it was purchasing a US Treasury security.

5) “Beginning in 1992 [in particular], Congress pushed Fannie Mae and Freddie Mac to increase their purchases of mortgages going to low and moderate-income borrowers. In 1996, HUD... gave Fannie & Freddie an explicit...[quota]: 42% of their mortgage financing had to go to borrowers with incomes below the median income in their area. The target increased to 50% in 2000, and 52% in 2005.... [During this period] Freddie & Fannie met those goals every year, and funded hundreds of billions of dollars worth of loans, many of them subprime and adjustable-rate loans made to borrowers who bought houses with less than 10% down. Fannie & Freddie also purchased hundreds of billions of dollars worth of subprime securities for *their own portfolios* to make money, and [also to] help satisfy [the] HUD affordable housing goals” (Schwartz, 2009, 20). See also “Financial Crisis (of 2008-), “Conservatorship”.

6) Official GSEs are still the primary re-sellers, with Fannie & Freddie purchasing 44% of all new mortgages through the mid-2018; with private securitization companies purchasing only about 2% of all mortgages-- notably higher than the 0.6% they purchased in 2017. Although private securitization companies’ \$438 billion in total assets (2017) is still less than half of the \$1.1 trillion worth of mortgages that they held, pre-Crisis, in 2005 (Kapfidze, 2018).

¹⁸²² Earlier, pre-big government examples of MBS were farm railroad mortgage bonds in the mid-19th century, which contributed to the Panic of 1857.

6) Fannie & Freddie's legitimization of the MBS industry eventually; "enabled crooked banks to move junk mortgages off their books, sticking German land banks, pension funds, [and] mutual funds, and [also] enabling hedge funds to bet that these CDOs were junk, [who?] buy cheap insurance from A.I.G., and then get the US Treasury to bail out AIG to pay the winners on Wall Street who knew all along that these mortgages were junk."- Michael Hudson (Dodson, 2009).

7) Both Fannie and Freddie (in addition to the 11 Federal Home Loan Banks) are GSEs, under the conservatorship of the Federal Housing Finance Agency (FHFA), chartered by Congress in 2008, as an independent federal regulatory agency. About a month after its founding, the FHFA placed Fannie & Freddie under conservatorship.

8) In 2011 the FHFA filed suit against Swiss bank UBS and 17 other financial institutions, for misrepresenting about \$200 billion in MBSs that were offloaded to Fannie & Freddie.

9) Most of the toxic assets¹⁸²³ that brought on the 2008 Financial Crisis were mortgage-backed securities (Mehrling, 2018); sold no713pprox.uch by the GSEs, as by private companies (Cooper, 2018); which still have approx. 80% of their assets "in subprime and Alt-A loans" (Kapfidze, 2018).

9) 'Post-Crisis', such "[r]isky mortgage bundles are still difficult to value and pose a threat to banking and the stock market" (Soll, 2014, 206).

See also "Mortgage bonds (subprime)", "Government Supported Enterprises (GSEs)".

[The 21stc CB's primary tool?]

Mortgage bonds (subprime)- 1) By the 2000's, the overall US "mortgage bond market was huge, bigger than the market for US Treasury notes and bonds. The entire economy [c.2005] was premised on its stability, and its stability in turn depended on house prices continuing to rise.... [Michael Burry noted that] 'One hallmark of [housing bubble] mania is the rapid rise in the incidence and complexity of fraud.... The FBI reports mortgage-related fraud is up fivefold since 2000' [or doubling every year]. Bad behavior was no longer on the fringes of an otherwise sound economy..." (Lewis, 2011, 54-55).

2) From the 3rd quarter of 2001 through year-end 2008, approx. 20% of all new mortgages "went to people with subprime credit scores (lower than 660). In the 3rd quarter of 2018, [however] subprime borrowers received just 9% of all mortgages"¹⁸²⁴ (Kapfidze, 2018).

3) Part of the subprime inflation was because, in the 1990's, "Wall Street recognized that the same principles that underlay JP Morgan's risk model could be [ahem] adapted to bestow coveted triple-A ratings on large chunks of complex new products created *out of subprime mortgages*."¹⁸²⁵ Firms could use...[JP Morgan's new 'Value at Risk' model] to persuade regulators-- and themselves-- that they were taking on very little risk, even as they were loading up on [bundles of] subprime securities. And they could

¹⁸²³ This is, or at least was, often a term of hyperbole, not accuracy. They weren't 'toxic' because they were collateralized-- even the weakest ones sold for something. See also "Financial Crisis (of 2008-)" [Kotlikoff].

¹⁸²⁴ Also between these two periods, the percentage of all US mortgages going "to people with excellent credit" doubled, from 26% to 57% (Ibid).

¹⁸²⁵ "As a rule, any loan that [has] been turned into an acronym or abbreviation" (Lewis, 2011, 127).

use *credit default swaps* to off-load their own subprime risks onto some other entity willing to accept it. By the early 2000's, these two worlds-- [old] subprime and [the new] **quantitative** finance-- were completely intertwined" (McLean & Nocera, 2011). See also "Financial Crisis (of 2008-)". See also "Credit default swaps", "Credit rating agencies", "Derivatives".

Mortgage debt- see "Mortgage bonds (subprime)", "Housing prices", "Gutfreund, John (1929-2016)".

Multipliers- (currencies have always been designed to compound something or another)

1) (real-sustainable)¹⁸²⁶ See "Parity pricing (for the primary sector)" [.multiplier], "Land".

- a 'Multiplier of Peace'.²¹; tamed, and ever-tamer government.

2) (fraudulent-unsustainable) See "Money multiplier", "Bankmoney".

- a 'Multiplier of War'.²⁰; big, and ever-bigger government.

See also "Economics", "Economics, Parity".

Murabaha loans- "Moslem law bans the charging of interest (*usury*), but but permits loopholes that achieve that achieve a similar economic effect in practice (see *Agio*). A murabaha mortgage loan is extended without nominal interest, to purchase a house or other property, but the borrower pays a rental charge [service fee] set high enough to incorporate what is in effect a rentier interest charge" (Hudson, 2015b). See also "Sharia finance".

Music- (the great sublime or the great subliminal)

1) It's nothing new. Music "was necessary to soften the manners of the Arcadians, who lived in a [otherwise] cold, gloomy country...[and] the inhabitants of Cynete, who slighted music, were the cruellest of all the Greeks, and...no other town was so immersed in luxury and debauchery.... Aristotle, who seems to have written his 'Politics' only in order to contradict Plato, agrees with him...in regard to the power and influence of music over the manners of the people"¹⁸²⁷ (Montesquieu, 1748, 37). See also "Lexicon Test, the".

2) "Music is a higher revelation than all wisdom and philosophy. Music is the electrical soil in which the spirit lives, thinks and invents."- reported by Bettina von Arnim,¹⁸²⁸ in a letter to Goethe, May 28, 1810.

3) See also "**Cultural Calendar**" [without the *muse*, how does one "*sic* (seek) 'em'?"]; "Council on Foreign Relations (CFR)" [for what happened to it], "Nineteen-Seventies (1970's)".

3b) Temptation is axiomatic with power. Ready for the **Leonard Cohen** [1980's] **challenge?**

→ "**Multipliers**" [.Duopoly]. See also "**Cultural Calendar**", "Nineteen-Seventies", "Nineteen-Eighties".

Mutual funds (& Reform)- (relatively long-term, pooled investments, typically limited to stocks, Treasuries, municipals, and other types of bonds; not to be confused with the short-term and large-scale...)

[see also] "Money markets/Money market funds (MMFs)", "Money market accounts (MMA's)".

1) In the 1990's, the market value of US mutual fund assets, at approx. \$5 trillion, exceeded "the total value of funds on deposit in the US banking system" (Schinasi & Smith, 1998). See also "SBS".

2) Since the Crisis, they've nearly doubled, from \$9.6 tn. (2008) to \$18.7 tn. in 2017 (SIMFA, 2018).

¹⁸²⁶ In the raw material ratios discovered in the 1930's-40's, were in fact "linear multipliers...governed by the flow of *raw material energy* [a.k.a. real wealth] and these ratios slowly expanded" with technological development" (Lundgren, ch.10; Cook, 2022b., mn.101).

¹⁸²⁷ It has consistently "prevented the effects of a savage institution, and enabled the soul to have such a share in the education as it could never have had without the assistance of harmony.... [Music is] able to inspire the soul with a sense of pity, lenity, tenderness, and love.... [O]f all [the] sensible pleasures, there is **none that less corrupts** the soul" (Montesquieu, 1748, 39).

¹⁸²⁸ Von Arnim further paraphrased Beethoven's (c.1810) observations to her as: "Music is the [primary] mediator between the spiritual and the sensual life", and "...the on incorporeal entrance into the higher world of knowledge which comprehends mankind, but which mankind cannot [yet] comprehend.... [like dreams, an] *electrical coil* in which the mind thinks, lives, [and] feels. Philosophy is a precipitate of the mind's electrical essence" in this same letter to Goethe (as cited in *Goethe's Correspondence with a Child* [1837]). See also "Mythomatics", "**Cultural Calendar**".

3) Hmm. Want a 'banking' monetary system to "never fail[?]"... [L]imit the banking system to its legitimate purpose, which is [as their propaganda has long claimed, simply] intermediation. It's not gambling with the economy. It's not engaging in opacity. But [rather] just helping [genuine] lenders find borrowers, and helping the savers find investors.... *Equity-financed mutual funds* [EFMFs]¹⁸²⁹...[plus] the money market funds that are now large-deposit... [and] mark-to-market... that fluctuate in value...and their shares fluctuate in value, too... [All these put together] number about 10,000, [which is already >2x] the number of banks in the country"; and "about 25% of the financial system back in 2008... [already consisted of] mutual funds that were equity financed...None of them failed" (Kotlikoff, 2021, mn.39-40; mn.50). See also "Money markets/Money market funds", "NBFIs", "*Federal Funds (Accounts) for All*".

3b) It is not a new idea. Two centuries ago, French reformer "Saint-Simon, Claude Henry de (1760-1825)...[was] best known for recognizing the need to replace debt [leverage] relations, by turning saving[s] into equity (stock) investment. Among his followers, the Pereire brothers helped create...Credit Mobilier [() bank, c.] basically as a mutual fund" (Hudson, 2015b).

4) *Closed-end* mutual funds: "we're gonna buy these mortgages [or bonds] and just hold them to maturity... [and] any money [that] comes in is gonna go to you, [minus] the fees for running" it (Kotlikoff, 2021, mn.41-42).

4b) *Open-end* mutual funds go up & down with the values of stock market shares and/or indexes, and "the fund itself doesn't have...liability... [for] the investment" (Kotlikoff, 2021, mn.42).

5) A "very easy" implementation would be "to say that every financial corporation has to reorganize itself as a mutual fund holding company... issuing more and more mutual funds, and engage in less and less leverage, so that... like over 10 years, just being" an EFMF (Kotlikoff, 2021, mn.113-114).

5b) This should also involve a "federal financial authority that would verify and disclose, online, in real time, on an ongoing basis, the value of all securities-- that is [EFMFs].... All this verification has to be done anyway. Let's have it done by... people that don't have any vested interest in lying about your ability to repay" (Kotlikoff, 2021, mn.119-121). See also "Monetary reform".

5c) Currency would come into existence from 'printing' "to pay for government spending [and (being from a digital base) would not expire]. That's how [only] the new money would [initially] get into the system...[The Treasury or] Fed would also be able to influence interest rates" by buying or selling "closed-end mortgage mutual fund" shares (Kotlikoff, 2021, mn.145). See also "*Federal Funds (Accounts) for All*"

See also "Investment companies", "Banking, end of".

Mutual funds, fixed income- see "Money markets/Money market funds (MMFs)".

Mutual Savings banks- See "Savings Banks".

My Dinner with Andre (1981)- <https://www.youtube.com/watch?v=68JLWyPxt7g> ['.bots']

Mythomatics- 1) Mathematics distorts "*ontology*... the sense of meaning that's a part of any discipline... [i.e.] *what are you trying to understand?*.... the distortion comes from the ideology that...most economists aren't even aware that they've got?" (Keen, 2017d, mn.4). "The first really strong attempts to mathematize Economics actually occurred back in the early 1800's... But the really large-scale attempts to mathematize the discipline occurred in the 1870's...[with] Leon Walras, a French economist" (Keen, mn.6), who attempted to show that there should be no trade in markets until "equilibrium was achieved" (2017d, mn.6-7). "He couldn't prove it mathematically" (mn.9); and "today the computer...[math will also] tell you that there's no solution" (Keen, 2017d, mn.12). See also "Ontology & Epistemology", "Science of Assumptions".

1b) This is not trivial. "Physics is bounded by physicality...the physical universe. Mathematics [however] is unbounded. This is this is precisely what [Economics iconoclast Frederick] Soddy was pointing out" in the 1930's and 1940's (Cook, 2022, mn.40). Unbounded? See also "Monetization".

¹⁸²⁹ A.k.a. "mutual fund banking... [which] by the way, operates very much like Islamic banking should operate" (Kotlikoff, 2021, mn.56).

2) “Mathematicians are basically like hired guns. They work with any area where they can improve the knowledge of that particular area, by adding their mathematical analysis. They work with chemical engineers... geneticists... geometers... physicists, and say, ‘*Good idea here. Let’s just delve into the mathematics more deeply*’; and they take it as written that the people working in the area know what the right model is, and that they are just improving the right model.... [including] Neoclassical models that assume stock markets and all other markets are either in equilibrium or very near to it, and [that] they converge to equilibrium” (Keen, 2012c). See also “Equilibrium”.

2) useful for lending credibility “to this parallel universe model, what computer operators call ‘garbage in; garbage out’... mathematizing something completely fictitious” (Hudson, 2017g, mn.39).

See also “Numbers”, “Economics”, “Parallel universe”.

[Myths, Big 6](#) (i.e ‘the big 6 monetary myths’; ‘oligarchy’s m.v.p.s’).

1) “A man is always a teller of stories, he lives surrounded by his own stories and those of other people, he sees everything that happens to him in terms of these stories and he [then] tries to live his life as if he were recounting it”- Jean-Paul Sarte, 1964 (Bruner, 2004, 699); and is hence vulnerable to [increasingly?] strategic deceptions. See also “Central Intelligence Agency”, “Conspiracy theorist”.

2) “Finance capitalism” (from the 2nd half of the 18th century to the 1st half of the 19thc) was “able to persuade both... [business and government] to accept two ‘axioms’ of its own ideology. Both of these were based on the assumption that politicians were too weak and too subject to temporary popular pressures to be trusted with control of the money system; accordingly, the sanctity of all values and the soundness of money must be protected in 2 ways: by basing the value of [government Reserve/RAB] money on 1] *gold* and, by 2] allowing *bankers to control the supply* of [what everybody *else* uses for] money [via *bankmoney-TAB*]. To do this, “it was necessary to conceal, or even to [from the late 1960’s-70’s’ textbooks] mislead, both governments [1st Estate] and people [3rd Estate] about the nature of money and its methods of operation” (Quigley, 1966, 53). See also “Numbers”, “Finance Capitalism”.

3) The “world we...lost [in 2008]. To understand it, you had to believe that global markets...[were as natural as] the seasons, were givens” (Tooze, 2018). See also “Market fundamentalism”.

The Federal Reserve’s 2 most persistent stonewalls (in addition to its dominating patronage of academic ‘monetary economics’ [Still, 2013]) have been around: a) maintaining the banks-as- ‘intermediaries’ (of ‘loanable funds’) myth¹⁸³⁰; and b) refusing to discuss the 2 monetary classes (RAB & TAB) within the same paragraph or even article. See also ‘Monetary Economics’.

4.Lf

5.fd.org

6.pm=infl.

4) “The key master lie [sequence] is this one-- that the politically-imposed [not economically] global corporate system calling itself the ‘global free market’-- that that *politically*-imposed global corporate system [supposedly] equals the ‘free market’, equals ‘democracy’, equals a solution to poverty.” - Prof. John McMurtry, 2001. See also “Freedom continuum (maturation)”, “Free market”, “Globalism”. See also “Economics”, “2nd Industrial Revolution”, “Lender of Last Resort/Too Big To Fail”, “Bank welfare”.

¹⁸³⁰ A very rare exception to more than a half-century of Federal Reserve stonewalling about banks creating money (TAB-bankmoney) was the FRBNY’s “I Bet You Thought...” publication (Friedman, 1977, 22), (Titus, 2020b, mn.7-8).

[Since the mid-19thc, 'the European organ of the oligarchy'] [See also "Hegelian Dialectic"]

Narcissism- 1) "...Hollywood has helped prepare us for the level of narcissism that we have in society today. For the last 20 years or more, they've been pumping out ridiculous amounts of narcissism.... [in] men...women... police... Wall St. executives... And lo & behold here we are 20 years later with real-life versions of all those [characters]... narcissistic power [-tripping] just being *thrown* at us.... TV has a way of making us feel small.... [with its] narcissistic projections. They're not real people. They're actors, reading from a script, written by strategic marketing people, who have written it... [to] make us *feel* a certain way" (Vrabel, 2011, mn.47-49). "If you lord over this system... and become a billionaire by putting others in debt and... wear an outfit that might cost more than some people's annual salary... That can't help but breed narcissism. Otherwise, if a person like this wasn't narcissistic... they would look for another way to contribute to the community. But, to stay in their jobs, they have to believe that they are doing good, which *requires* a narcissistic separation..." (Vrabel, mn.51-52). See also "Evil".

2) "No one can throw a bigger tantrum than a narcissist who's losing control of someone's mind." - 'e.s.' See also "Corporate Media Cartel/6 Sisters", "Contempt".

Narrow Bank, the- (former FRBNY head of research James McAndrews' term for a new kind of private entity that **only invests Reserve money**, in an account at the US Federal Reserve; a.k.a. a 'Pass Through Investment Entity' [FRBNY])

1) It has "nothing to do with the Chicago Plan... or Vollgeld...or anything like that... [Rather, it's about attaining] higher rates than are [currently] available in the market to institutional [large, nonbank] investors..." (McAndrews, 2018b, mn.46). Injecting "competition into the money markets [SBS] is a very important goal... [T]he government, when it's providing this Interest on Reserves, it's very important to have a competitive market" (McAndrews, 2018, mn.20); i.e. to share the subsidy.

2) "Its business plan is to arbitrage a government subsidy that has, since 2008, been provided by the Federal Reserve...to banks.... The vigor...in TNB's business plan comes from [partaking in] the subsidy that the Fed [now] provides banks [i.e. all **state-monetized credit institutions**], through the interest it pays on *master [RAB] account* balances.... [Basically if TNB] passes the Fed's IOER subsidy on to non-bank savers through mutual funds, [then] eventually banks will face pressure to *raise their deposit rates*, or risk losing deposits to money funds... once MMF's could [also] harvest the Fed's IOER subsidy, using TNB" (Kupiec, 2018, mn.3-5). See also "Bank welfare".

3) Hence, "if TNB follows its legal business plan, it would be the safest bank on the planet. The risk to the Fed [however], is that TNB will unlock the banks' monopoly on the Fed's IOER subsidy. [Thus the] Fed's strategy towards TNB appears to be to... quietly run out the clock on... [TNB's] approval" (Kupiec, mn.4-5). "If we can inject more competition into the market, that is...how we can cure this subsidization [a.k.a. bank welfare] problem that plagues the IOER" policy (McAndrews, 2018, mn.20).

4) **It's like a 100% Reserve bank in the 1930's; but now it's passing along the [new] IOER subsidy. It exposes [some of] the hypocrisy of the Fed, and (a small part of) the expense of its TAB-bankmoney subsidy. IOER was accepted by Congress on the promise of pass-through. The lack thereof is a major scam. McAndrews is using it as a teaching tool. He wants to (actually passthrough the) higher rates to non-banks.**¹⁸³¹ TNB is not going to pocket the difference. General investors will use it.

5) The Fed claims that deposits at TNB "...could become attractive investments for many lenders in overnight funding markets...[especially in] the overnight general collateral ("GC") repo market.... [which could make] it harder for banks to monetize Treasury securities in times of stress"; but in fact "demand

¹⁸³¹ "Nonbanks" (NBFIs) is, of course, a broad category, and there is some discrepancy as to whether TNB would be, at least in its early stages, either: 1] limited to only those "lenders in the federal funds [RAB] market who... [already have] a reserve [RAB] account with the Fed, but...cannot receive IOR, such as [f.e.] *Fannie Mae*" (Crawford, 2018, 7); or would 2] also include an exodus from MMMFs (Selgin, 2018). Crawford and Selgin seem to agree, however, that the plethorization of Narrow Banks would eventually be "likely [to] crowd out much of the current money market activity", which Crawford calls "an unambiguous win for stability" (Crawford, 2018, 13).

would [just] shift at the margin, from private market actors to the Fed...[and] would not fall in aggregate” (Crawford, 2018, 10-11).

6) According to McAndrews, the Federal Reserve is [or was] already running 2 (semi-public) “narrow banks”-- the Foreign Repo Pool (est.1970’s-ongoing) and the ON RRP (2014-18).

7) So *why aren’t they all jumping on McAndrews’ bandwagon? Because that’s the way monopolies work. They talked him down because his business model is for educational purposes, and would reveal the absurd injustice of the ongoing monopoly. Monopolies don’t work on competition. They work on conformity...*

8) ...and often run on fear-mongering (in addition to obfuscation). The Fed also even claims that TNB “deposits could be seen as more attractive than Treasury bills”; which is, *weirdly*, “an argument against a more stable money option based on the fear that money-market investors might flee to it in a panic... Similar logic could lead one to reject any stable money options” (Crawford, 2018, 12). See also “*Federal Funds (Accounts) for All*”.

9) The FRBNY has still not [as of 5/20] decided on whether to issue TNB an account, and the US Court for the Southern District of New York, granted the FRBNY’s motion to dismiss McAndrews’ suit in March 2020.

10)

See also “Narrow banking”, “Reverse Repo agreements (ON RRP)”, “Interest on Required Reserves”.

Narrow banking- (a.k.a. ‘limited purpose banking’ [Kotlikoff], ‘100% Reserves’ [20thc], ‘two-window banking’ [Seidman], & ‘safe banking’; not to be confused with the contemporary ‘The Narrow Bank’ [privatization of ON RRP] plan in the US)

1) A narrow bank is “a bank whose assets comprise not risky loans or securities, as most banks hold, but rather ‘safe’ assets: in its purest form, *cash* in the vault or *reserve* account balances [RAB] with the Federal Reserve” (Crawford, 2019, 4). See also “Base money (M0)”.

2) (traditional & European usage)- when [all] banks are not allowed to create new money when issuing loans; i.e. a contemporary European term for genuine & universal chartalism, i.e. all banks being required to actually use their own money (or ‘loanable funds’) when issuing loans.

2b) (21stc American usage)- If [only] some “kinds of financial institutions could safely *separate* both *depository and lending* services, [then] why would we need the extensive regulatory structure for banks with the large resource costs to the economy? During the savings and loan debacle in the 1980’s... the Brookings Institution put forward a proposal which...labeled *narrow banking* as a solution to the moral hazard problem of banking. A kindred proposal¹⁸³² was put forward in the 1930’s, but ultimately lost out to the New Deal proposals for *deposit insurance*...” (Phillips & Roselli, 2009, 10); even though “Nobel Prize winning economists Milton Friedman, James Tobin, and Maurice Allais all supported the idea of narrow banking” (Phillips & Roselli, 11). See also “Imperialism, American”, “Super Imperialism”.

3) Narrow banks-- sometimes a.k.a. “‘monetary service companies’ (Litan 1993)” (Papadimitriou, 1998).- “could come about either through mandatory legislation 1)] or *voluntary* change¹⁸³³ 2)].... [with a resultant] reduction in the regulatory burden” (Phillips & Roselli, 2009, 12); and the latter already has been happening. See also “*Money, 3 (contemporary) Tiers of*”.

4) Positive Money estimated the market cost for having an ATM card and modern access to your money account (within a narrow banking system) would be around \$75 per year (Walsh, 1/19).

¹⁸³² The various 1930’s “Chicago Plan” proposals introduced to either the Roosevelt Admn. and/or Congress were actually for a “100% Reserve” or ‘narrow banking’ *mandate*, not merely for enabling volitional adoption.

¹⁸³³ “[O]verall, we [at FDIC] think that the core banking proposal is a sound proposal. We don’t subscribe to the wholesale banking part of this...however, since we think the market will construct...[such ‘narrow’] banks without the need for further government involvement... [Nonetheless] if we don’t reform the system, we face a disaster for both the industry and the nation.”

- FDIC Chair William Seidman, testifying before Congress (Seidman, 1991, 39-40). See also “Monetization”, “Great Extinction, 6th”.

5) "Variations on the narrow banking concept include [James] Tobin's 'deposited currency'...[fmr. FDIC Chair William] Seidman's 'two-window banking'¹⁸³⁴, Kareken's '100 percent reserve' requirements, Spong's 'high liquidity asset', and Haemmerli's 'consumer bank'" (Papadimitriou, 1998, 447). See also "Intermediation of Loanable Funds (ILF) Theory", "Narrow Bank, the".

Nasserism- (The Arab world [not to mention Europe] wasn't always like it is today. Though the Germans lost World War Two, the victory was pyric one for Britain, which relinquished nearly all of its Empire in the 1940's-60's high-water mark¹⁸³⁵ for nationalism.)

"Once the center of global population concentrations in antiquity...[the] greater 'Middle East'-- running from Morocco to Istanbul to Afghanistan-- was surpassed by China around...560, by India around 1000, by Europe in the 11th century, by sub-Saharan Africa in the 12th, and by the New World population in the 13th" (Brooke, 2014, 415).

1) Prior to the British invasion and "veiled" Protectorate of 1882-1922 (with ongoing troop presence until 1956), Turkic-Albanian military commander-cum-Viceroy of Egypt, Muhammad Ali (de facto ruler of Egypt from 1805-48), attempted to bring Egypt out of the middle ages by instituting a series of dramatic reforms-- often via violence-- in order to permanently end half-a-millennium of Mamluk rule.¹⁸³⁶

2) After the Atlantic Charter and World War 2, the de-colonization process got rolling, in much of Africa, in the 1950's; and Egypt was the largest 'protectorate' in either the Dark Continent or the Middle East. As elsewhere, "younger officers who served in the war became convinced of the criminal incompetence of the men ruling¹⁸³⁷ Egypt" (Mansfield, 2010, 270). These "free officers" deposed and exiled the British puppet monarchy in the summer of 1952. As is usual in such situations, they wanted to rid the country of foreign/British influence, exploitation by landlords, and a corrupt political life. "A few of them had sympathies with the [British/freemason-founded] Muslim Brotherhood and a few were Marxists, but the majority could only be described as *nationalist*¹⁸³⁸....But they had no developed political ideas, let alone a political programme" (275). This Revolutionary Council proclaimed a Republic in 1953 and initiated some popular land reforms, before officially electing their primus inter pares, Colonel Gamal Abdul Nasser, to be prime minister in 1954-- "the first true Egyptian to rule the country since the time of the Pharaohs.... Wide reading of Arab/Islamic and Western history and biography convinced him that the Egyptian people had innate qualities waiting for national redemption after centuries of submission..." (Mansfield, 277).

¹⁸³⁴ FDIC Chairman Seidman (r.1985-91) suggested establishing "insured [sic] and uninsured [sic] deposits, which would be used to finance primarily short-term lending & transaction clearing" (Papadimitriou, 1998, 447-448); and explained (twice) it to Congress in 1991: https://www.google.com/books/edition/Core_Banks_Proposal/szOLs9juelwC?hl=en&gbpv=1&dq=two-window+banking+Seidman&pg=PA54&printsec=frontcover [p.40-60 (Seidman, 1991)] https://www.google.com/books/edition/Core_Banks_Proposal/szOLs9juelwC?hl=en&gbpv=1&dq=william+seidman+two+window+banking&pg=PA38&printsec=frontcover [p.38]. See also "Savings & Loan Crisis", "Risk", "Socialism".

¹⁸³⁵ See also "Debt cycles".

¹⁸³⁶ "Under...[Ali], in 1808, most of the land belonging to private individuals was confiscated in return for small pensions... By this revolutionary method of land 'naturalization'...Ali became proprietor of nearly all the soil of Egypt. He also created for himself a monopoly in the chief products of the country, including dates. Using forced labor, at the sacrifice of 20,000 lives, he built the...canal between Alexandria and the Nile...[to develop] cotton in the Delta...[and] re-established the overland transit of goods from Europe to India..." (George, 1879, 573).

¹⁸³⁷ Muhammad Ali & his successors, the "Khedive [*Alawiyya*] dynasty" (sometimes a.k.a. 'Alawitte' or "Twelver") bore, in fact, a Persian-derived name (which the Ottomans had picked up in the 1500's). It is widely acknowledged that for "most of their history, Egyptian Muslims have been spared the sectarian issue of Sunni versus Shiite...[as] the Egyptian version of Sunnism...[has often incorporated] Shiite influences, a situation unique to Egypt among the Arab nations. This is reflected in the Egyptian love of Aal al-Bait, [5 of] the Prophet Muhammad's descendants... whose shrines worshippers regularly visit... Egyptians also adopted the Fatimid tradition of celebrating Ramadan with lanterns, baking kakh cookies for Eid, and so forth" (Dagres, 2013). It is also oft-remarked that the father of Nasser's wife was Iranian (part of "the 2nd wave" of Shiites who emigrated in the [Khedive] "19th century" and continued to practice Shiism); and, according to some, "Egyptians celebrate the deceased in a manner that overlaps...both Shia and Sufi practices" (Neria, 2012). "Egypt is *Sunni by sect, but Shia by temperament*."- The Economist, Sept. 30, 2017.

¹⁸³⁸ What kind of nationalism? Col. Nasser, their 34-year-old de facto leader, "was strongly anti-communist and temperamentally fairly sympathetic towards the United States, although this did nothing to lessen his determination to make Egypt fully independent of the West" (Mansfield, 1973, 670). See also Nasser, 1958: <https://www.youtube.com/watch?v=TX4RK8bj2W0>

3) In the mid-50's prime minister Nasser, along with India's Pandit Nehru and Yugoslavia's Josip Tito, was founding the international non-aligned movement when a string of unusually fortuitous events seemed to fall out of the sky. First in Feb. 1955, a failed false flag attack by Israelis in the Sinai-- attempting to simulate "Egyptian outrages against British institutions" (Mansfield, 287) in order to get the British to stay-- was revealed, which increased nationalist sentiment. Moreover, Nasser's nationalization of the Suez Canal Co. in 1956 provoked a combined Israeli-Franco-British military action against Egypt which also fizzled (due primarily to opposition from the US Eisenhower administration,¹⁸³⁹ not from Egyptian military). Nonetheless the "military defeat against overwhelming force...scored an almost total *diplomatic* victory... and Nasser's popularity in Egypt and among Arabs elsewhere reached new heights" in 1957, after the Israeli forces withdrew from Sinai & Gaza, all British & French property in Egypt was sequestered, and their subsequent "economic blockade of Egypt...[proved] futile" (Mansfield, 290). "The years 1956 to 1959 marked the high tide of Nasserism as he seemed to sweep all before him.... he could not regulate the tide of Arab fervour... [which transcended] Arab doubts about Egypt's commitment to the cause of Arab unity, [doubts] which were shared by Egyptians themselves" (Mansfield, 291). See also "National Identity/Nationalism", "Angry Birds".

4) The chain of fortuitous events, in retrospect, seems to have been arranged by the globalist diplomatic corps of the day-- i.e. the CIA-led US foreign policy of the 1950's. Before Ian Flemming's first James Bond novel was even started, President Eisenhower and the Dulles brothers-- Allen Dulles at CIA and "Secretary of State John Foster Dulles-- rebuffed Soviet treaty proposals to leave the Middle East a neutral zone... and let Arabs rule Arabia. Instead, they mounted a clandestine war against Arab *nationalism*-- which Allen Dulles equated with communism-- particularly when Arab self-rule threatened oil concessions. They pumped secret American military aid to tyrants in Saudi Arabia, Jordan, Iraq and Lebanon, favoring puppets with conservative *Jihadist*¹⁸⁴⁰ ideologies that they regarded as a reliable antidote to [the wildly exaggerated threat of] Soviet Marxism" (Kennedy, 2016).

5) (Hourani, 1991.).

6) Trilateral Commission & Carter Admn. foreign policy insider-big mouth Zbigniew Brzezinski has been 'credited' with fully hashing out "the geo-political doctrines that were [after the Arab-Israeli wars (1949, 1956, 1967, & 1973) had settled down to mere diplomatic hostility] brought in with the Carter Administration... Brzezinski had this idea of '*The Arc of [perma-] Crisis*', which was [basically about] how to use the Islamic population...radically-Islamicized Islamic populations, in the [geographic] arc that...[ran from] the Soviet Union...over to China... [basically taking Britain's place in what used to be known as] The Great Game.... And [Lyndon] Larouche [in an election-eve broadcast in Nov. 1976] exposed...[the incoming strategy's (ostensibly)] Malthusian intent, and the desire to keep permanent [imperial] warfare as the major element of US policy" (Schlanger, 2020, mn.123-124). See also "Reserve currency", "Larouche, Lyndon (1922-2019)", "Dispensationalism" & "Zionism".

7) "Some investors" still have as broad of a conception of "their rights" as ever; "*European* companies have recently launched legal actions against the raising of the minimum wage *in Egypt*" (Wallach, 2013).

8) The string of astonishingly consistent "miserable failure"s in US middle-east interventions in the 7 decades since World War Two is now provoking the largest global refugee crisis since the Attila the Hun and the Dark Ages. The millions of displaced persons now flooding into and destabilizing much of Europe are "refugees of a pipeline war and CIA blundering" (Kennedy, 2016).

9) (Hourani, 1991,)

10) "" (Kinzer, 2013,).

11) Half a century later, the 2011-14 Arab Spring, and particularly its "Muslim Brotherhood [led Tunis-Egyptian origins]... was platformed by Silicon Valley and MI6. That's everybody: Bezos, Gates, Jobs, Brin,

¹⁸³⁹ G (Kinzer,).

¹⁸⁴⁰ "At a White House meeting between the CIA's director of plans, Frank Wisner, and John Foster Dulles, in September 1957, Eisenhower advised the agency, 'We should do everything possible to stress the "*holy war*" aspect,' according to a memo recorded by his staff secretary, Gen. Andrew J. Goodpaster." Five years earlier, President "Truman had forbidden the CIA from actively joining the British caper to topple Mosaddegh. When Eisenhower took office in January 1953 [however], he immediately unleashed [Allen] Dulles...ousting Mosaddegh in 'Operation Ajax'" (Kennedy, 2016).

Schmidt, Sandberg, Soros, Bloomberg, Chomsky, Jacob Rothschild. The whole school bus”¹⁸⁴¹ (Moon, 2019n). It seems to have only fully¹⁸⁴² worked in (the European Union-dependent) Tunisia. Whereas elsewhere, usually within a couple years, either: the military regimes/dictatorships were back in charge (Egypt¹⁸⁴³); or they went into Islamic fundamentalism (Libya, Iraq); or they never fell (Bahrain, Syria¹⁸⁴⁴); or are in an ongoing state of [US-supported] civil war (Yemen). See also “East India Co.” See also “National Identity/Nationalism”, “Georgism”, “Central Intelligence Agency”, “Israel (and Al-Qaeda-ISIS)”.

Nation- (synon. a country) See “National Identity/ Nationalism” [.White&White].

National (income) accounting- (Is the unit of measure to be ‘gross’ or ‘net’?; not to be confused with ‘gross national income [GNI]’) agricultural adjustment
See also “Gross Domestic Product (GDP)” [.gross], “National Income” [.net].

National Bank- (not to be confused with either: a) a ‘Central Bank’, nor with b) nationally-chartered ‘commercial banks’; sometimes a.k.a., however, as Federal Reserve ‘member banks’)
1) National banking, as distinct from the globalist CB syndicate, “views itself as [being] in a supportive role of national economic policy.... [seeking] insulation and independence from the international finance architecture [that is today] dominated by dollar hegemony” (Liu, 2004b). See also “Independent Treasury system, the” [19thc], → “Super Imperialism” [20thc], → “Monetary Authority” [21stc].
1b) In simpler terms, “owned and operated by society” (Zarlenga, 2002, 322, 662).
2) This is not a new sentiment.¹⁸⁴⁵ From 1816-23, David Ricardo developed a proposal for replacing the (private) British Central Bank with what he called a (public) “English National Bank”. Was it ‘sovereign money’ (f.e. greenbacks, Monetative.de) proper, or merely publicly-stamped bankmoney at lower interest (f.e. PBI)? According to Ricardo, “the only difference would be with respect to interest.... I propose to place this trust in the hands of 3 Commissioners” (Ricardo, 1824, 3, 11). See also “Ricardo, David”, “National money” (which can be either ‘sovereign’ or ‘bankmoney’), “Canada” [1938-74].
See also “Central Bank”, “Member banks”.

National debt- (that which caused both the American and French Revolutions ☹️¹⁸⁴⁶)
See also “Adolescence of Mankind”, “Monetization”, “World Par Economy (WPE)”.

National debt (US)- (a.k.a. ‘public debt outstanding’ [broader], ‘debt held by the public’ [narrower]¹⁸⁴⁷)

¹⁸⁴¹ The Arab Spring, however, seems not to have supported by Israel, which officially “supported the dictatorships of Jordan [and] of Egypt until the last moment. That is why the Israeli embassy was the first [embassy] to be sacked, after the [initial] victory of the Egyptian Revolution, because the Israeli security services in Egypt were... advising, on an hourly basis, the dictatorship of Hosni Mubarak” (Galloway, 2012, mn.45-46). See also “Hegelian dialectic”.

¹⁸⁴² A half-dozen other Arab states bent to popular pressures for some degree of liberal parliamentary and/or administrative reshuffles, principally: Morocco, Algeria, Oman, Jordan, Kuwait, and even Saudi Arabia.

¹⁸⁴³ A national culture of only 7% “long-term orientation” according to (Hofstede, 2015, mn.6).

¹⁸⁴⁴ “The weapons that are crossing the borders of Syria are coming...through a nexus, in which the United States and Israel are vitally involved with their key allies [in the region]– Saudi Arabia and Qatar...” (Galloway, 2012, mn.47). See also “War”.

¹⁸⁴⁵ The City of Amsterdam’s **Wisselbank** (est.) was the oldest predecessor to them all. (Zarlenga, 2002,). See also “Central Bank”, “Glorious Revolution”.

¹⁸⁴⁶ <https://www.youtube.com/watch?v=VV9zMtjPul0> [3Mn., mn.4]

¹⁸⁴⁷ The broader/inclusive term “public debt” (\$21 tn. in April, 2018) includes the narrower term “debt held by the public” (\$15.3 tn. in April, 2018), which is simply the aggregate amount outstanding that the government has borrowed to date, *excluding* that portion of the debt which is held in government accounts). The term *gross national debt* is something of a compromise between the two, including only some of the government accounts.

- 1) direct liabilities of the US Treasury/government (\$21.3 tn. as of 8/2018), primarily in the form of 'Treasury securities'/'public debt securities', some of which are 'marketable debt' (T-bills, notes, and bonds), in addition to unmarketable savings bonds and some state & local government securities.¹⁸⁴⁸
- 2) US Treasury bonds holders are "mostly big banks.... When Congress wants to spend more money than it has available through the collection of taxes, it has been persuaded in the past that it must *borrow* [sic] the money, by issuing *bonds* [sic], to have more money to spend...[T]he biggest secret in the history of economic theory [is that] it is not necessary [for a sovereign government] to borrow money in order to have [its own] money.... The big bankers cannot afford to have...[the] secret become widely accepted-- that national debts are not a national necessity.... [And the paradox still is that] "...only the folks who are the biggest players in the financial world really understand that" (Still, 2019, mn.4-5).
- 3) 'We [taxpayers] owe it to Ourselves [bondholders]' is less accurate than seeing today's national debt as another form (since it exploded in the 1980's-90's) of regressive taxation/extraction, although, as is often noted, the US national debt can be (and is) indefinitely put off, and can also be fairly easily written off with various accounting and/or Monetary Reforms. About 45% of the US national debt is foreign held, as of Dec. 2017, with China first at \$1.8 tn. and then Japan at \$1.06 tn.
- 4) "The biggest buyer of our [national] debt is... American pension funds-- the American retirement savings, since...[at least] the National Security Act" of 1947 (Fitts, 2018t, mn.17).
- 5) *The Public Debt Subject to Limit* is the maximum amount of money the government is allowed to borrow without receiving additional authorization from Congress¹⁸⁴⁹ (TreasuryDirect, 2018).
- 6) Although the (so-called) 'Federal' Reserve remits *its* profits on interest from the national debt to the US Treasury every year, all other holders of US Treasury debt of course do not. And even though the "principal [on the national debt] just gets rolled over from year to year... the *interest* must be paid to private bondholders...by the taxpayers and [this] constitutes one of the biggest items in the federal budget... projections are that, by 2027, US taxpayers will owe \$1 trillion annually just in interest on the federal debt" (or almost \$12,000 per year for a family of four)-- just in user-fees for renting the national currency. Ouch. And "it is a direct transfer of wealth from...[FICA & income taxpayers] to the wealthy investors holding most of the bonds. Where will this money come from? Crippling taxes [on those already paying too much], wholesale privatization of public assets, and the [ongoing] elimination of social services will not be sufficient to cover the bill" (Brown, 2019). See also "Bonds, government", "Tax shift", "Dutch Disease", "Debt peonage".
- 7) "Runaway [public] debt" means when "the interest on the [public] debt-- the non-negotiable payment on the debt-- is now bigger than tax revenues" (Titus, 2022d, mn.10). See also "[National Debt Economy \(NDE\)](#)", → "Zombie economy".
See also "Bonds", "Reserve currency (global)", "Debt saturation".

[National Debt Economy \(NDE\)](#)- (a.k.a. 'monte' [14thc Florence], or 'guild republic' [UK]; the 'government deficit-debt system', the 'spinning top'¹⁸⁵⁰ or 'hamster wheel' [20thc]; i.e. '[the devil game](#)'; what Western civ. is all about?)

"It's a record of your past history. It's not a sign that you don't have a future."¹⁸⁵¹ Steve Keen (Keen, 2020b, mn.37). See also "Reserve currency"; "Parity pricing", "Monetary reform".

- 1) a complex scheme prototyped as a practical innovation within what might be called Europe's 'Warring States' era [15th-to-mid-20th centuries]. 17th century Holland and then 18th century Britain-- the first such

¹⁸⁴⁸ Such 'direct liabilities of the US Treasury' do not include the US government's Medicare or Social Security obligations (Bergman, 2019, mn.15), the latter of which is sometimes estimated at around (an additional) \$15tn.

¹⁸⁴⁹ "Furthermore, the Public Debt Subject to Limit is [technically defined as] the Public Debt Outstanding *adjusted for*: Unamortized Discount on Treasury Bills and Zero Coupon Treasury Bonds, Miscellaneous debt [pre-1917], Debt held by the Federal Financing Bank, and Guaranteed Debt" (TreasuryDirect, 2018).

¹⁸⁵⁰ i.e. that which appears to be 'stable', until it slows down.

¹⁸⁵¹ Circa 2013 "there is <15% of the original wetland area, globally, than was present 300 years ago (Davidson, 2014)" (Bradshaw, et al, 2021); i.e. the time when the NDE was developed. See also "Great Extinction, 6th", "Monetization".

outright “fiscal-military states”¹⁸⁵² (Brewer, 1989)-- led the way in this commercialization of society and broadening of military finance to encompass pretty much everyone in the realm (see also “Super Imperialism”). As Marjolein ‘t Hart explains, prior to “the 16th century few European states contracted substantial long-term debts at all... [but] By the 18th century, almost all were permanently indebted... [as] subcontracting voluntary loans became one of the best [military finance] options... When such state obligations were handled with care a *public debt* emerged, now so characteristic of present-day national states (Hart, 1993, 158). “Differing arrangements for meeting the expense of war accounted for a significant part of the variation from [European] state to state. Those arrangements, in turn, depended on the degree of commercialization... the importance of capitalist oligarchies, and the relation between [declining-rural] landlords and [rising-urban] merchants. The Dutch Republic showed the effects of great commercialization, powerful municipal oligarchies, sharp inter-city rivalries, and relative subordination of landlords to capitalists.... [The Republic’s resultant] public debt gave lenders an interest in the well-being of the new power, forging an enduring alliance between the nascent bourgeois state and its whole and half-capitalists (Hart, 1993, 226). William of Orange, et al would transplant this system onto England in the 1690’s; then the Morris and Alexander Hamilton would, in turn, graft that means of creating an “enduring alliance” onto the new USA in the 1780-90’s. See also “Bonds, government”, “Peace Window (& great compromise)”.

2) Not to be outdone by their maritime rivals on the other side of the Channel, in “1694, a consortium of English bankers made a loan of £1,200,000 to the king. In return they received a royal monopoly on the issuance of banknotes. What this meant in practice was [that] they had the right to advance IOUs for a portion of the money the king now owed them to any inhabitant of the kingdom willing to borrow from them, or willing to deposit their own money in the bank-- in effect, to circulate or ‘monetize’ the newly created royal debt.¹⁸⁵³ This was a great deal for the bankers (they got to charge the king 8% annual interest for the original loan *and* simultaneously charge interest on the same money to the clients who borrowed it), but it only worked as long as the original loan remained outstanding. To this day, this loan has never been paid back” (Graeber, 2012, 49). See also “Primordial Debt”, “Oligarchy”.

3) The first known ‘national debt’ scheme, however, goes all the way back to 14th century Florence, which (about a century prior to its Bush-er-Medici era) was in financial crisis after Edward III’s epic default of 1340-41. Not wishing to rely on “hope that a foreign lord would solve the crisis and [then just] go away... What emerged was one of the most sophisticated forms of fiscal policy yet devised. The vast and widely distributed debt of the commune of Florence was amalgamated into a single fund, or *Monte*... [H]olders of the debt-- or those who later *bought into* it... [were] promised a return of 5%. The effect was revitalizing. Access to capital by the commune rose almost 300% in just 40 years, restoring the finances of the city[state].... The guildsmen of the lesser guilds... were brought more actively into the signoria... A new sense of balance and cooperation began to operate, and the city[state], lubricated by the Monte shares, functioned much more effectively... a greater proportion of the population was now directly affected by communal policy... [and] took a more active interest in the commune as a whole and not just in their own guild, neighborhood, or extended clan. A new concept of the [bonded] state was emerging” (Bartlett, 2018, 8-9). See also “State capture”, App.C: “1-2-3”.

4) In the US, does the NDE date from the Morris and Hamilton’s national bank scheme (1787-88), or from the Bank of North America deal & Treaty of Paris (1781-83)? In either case; the initial government of the United States of America “pledge[d]... specific revenues for the payment of debt and interest. By **the**” (Dewey, 1934, 113-114). See also “Owners, the”, “State capture” [Jefferson].

4b) Alexander “Hamilton as Secretary of the Treasury and [his predecessor] Robert Morris in the Senate made federal debt permanent with the *Funding Act* passed August 4, 1790, and [then] consolidated the

¹⁸⁵² From the 1400’s until 1801, long before there was any “United Kingdom”, every English king also called himself the king of France.

¹⁸⁵³ Actually, as Niv Horesh has pointed out, the Bank of England’s private “note issue prerogatives were not much discussed” in its early years and decades. “Rather, the Bank had been primarily envisioned as a channel of raising funds from the public so as to support the Crown’s naval expansion and expansionist wars.... [Paper] note issuance was therefore not much conceived as revenue generating in its own right but as a commercial privilege enticing lenders [unquestioned *loyalty*] to the [new] Crown.... It was only in 1797 that £1 notes were being disbursed by the Bank... for the first time in lieu of gold coinage” (Horesh, 2014, 72-73).

private control of the money supply with the *Bank Act* passed February 2, 1791. From then to our own day, we would think the Federal government was issuing our money, while in reality, the Federal government's role has been [with a 2 decade exception for Jackson-Van Buren's 1830's "Bank War"] to enforce the payment of interest on a money supply [that's mostly] created and...[managed] by private banks and their shareholders."- <https://www.siue.edu/~rblain/debtproblem.html>

4c) Does it sound like a whacky idea to you? You're not alone. Most of the respected political economists of the day considered NDEs to be a bad idea. In addition to the 2 greatest, mentioned below (Montesquieu and Hume), ..., even Adam Smith did not endorse it. Franklin's dealmaking in Europe notwithstanding (for the time being), most of America's 'founding fathers'¹⁸⁵⁴ did not see eye-to-eye with Alexander Hamilton on the virtues of establishing a perpetual national debt.

- "I sincerely believe with you, that banking establishments are more dangerous than standing armies; & that the principle of spending money to be paid by posterity, under the name of funding, is but swindling futurity on a large scale" (Jefferson, 1816).

- "I go on the principle that a public debt is a public curse, and in a Republican Government a *greater curse than any other*" (Madison, 1790).

But the exigencies of warfare during the great Currency Wars were paramount-- for to the winner went the world. See also "Smith, Adam", "Central Banking-Warfare model".

5) The NDE as we know it today, however, didn't get rolling in earnest until the Wilson Admn., World War One, and the 3rd Currency War. The USA-- traditionally a debtor nation-- suddenly emerged from Treasury Secretary McAdoo's 4-month closure of Wall Street in "the 2nd half of 1914 as one of the largest creditor countries in the world. It "was not foreordained that citizen investors would [indefinitely continue to] flock to the...[equities] market[s] after the Armistice" ended WW1; but it certainly wasn't for lack of effort. "Federal and state governments [now (after the war)] sold bonds [for everything from funding] workers' compensation, [to] maternal and infant health care, pensions for soldiers...& the elderly, and subsidized farm mortgages" (Ott, 2018). See also "Labor capitalism" (lost to 'shareholder capitalism'), "Reserve currency", "Central Banking-Warfare model", "Twentieth century".

6) Today, the US Treasury "has an entire division whose sole function is to finance the rolling over of this debt and to manage the ongoing mismatch in the timing of tax in-flows and government expenditures... [selling] a variety of Treasury securities with various maturities and face amounts" (Burton, et al, 255). See also "Federal Accounting Standards Advisory Board (FASAB)".

6b) That is because under a "fractional reserve system any attempt to pay off the Government debt, whether by decreasing Government expenditures or by increasing taxation, threatens to bring about deflation and depression" (Fisher, et al., 1939, 42), as most of Europe learned in the 1930's.

7) Are "national debt economies" still useful in the 21st century? Many economists, such as the *New York Times*' Paul Krugman claim that the national debt "*doesn't matter because we owe it to ourselves*".¹⁸⁵⁵ But the 'we' who owe it are the 99%. And the people who are 'ourselves' are [only] the 1%. So the 99% owe

¹⁸⁵⁴ In addition to (mostly famously) Jefferson and Madison, both Sam and John Adams++-- in addition to George Washington**-- were all, to varying extents, "anti-national debt". To this list should also be added Alexander Hamilton himself, who, given some "mature reflection", had this to say about the new US national debt that he had created: "Nothing can more interest the national credit and prosperity, than a constant and systematic attention to husband all the means previously possessed for *extinguishing the present debt*, and to avoid, as much as possible, the incurring of any new debt" (Hamilton, 1792). It wasn't a typo; politicians flip-flop. See also "American System, the". ++- Samuel "Adams' experience with the land-bank controversy made him acutely aware of the men who whispered in the ear of the king and Parliament: the English merchants [a.k.a. banks]... This was the first step toward servitude" (Puls, 2006, 39). See also "Revolution, American". **- George Washington (who held Bank of England shares throughout the Revolution [Raphael, 2013]) saw public debt only as a rather dangerous-- if occasionally necessary-- tool of warfare: "As a very important source of strength and security, cherish public credit. One method of preserving it is [however], to use it as sparingly as possible; avoiding occasions of expense by cultivating peace....; avoiding...the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts, which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burthen, which we ourselves ought to bear." - Farewell Address, Sept.17, 1796 (<https://www.mountvernon.org/>).

¹⁸⁵⁵ Of the official \$19 trillion US national debt in 2016, the two largest foreign holders were Japan and China, at \$1.13 tn. and \$1.12 tn, respectively. See also Montesquieu, below.

to the 1%... more and more, thanks to the magic of compound interest” (Hudson, 2016c). See also “Compound interest”, “Adolescence of Mankind”.

7b) Visionaries like Henry George realized this in the 19th century.¹⁸⁵⁶ “There never was any good reason for the institution of the [1863-64] national banking system, and there is not today any good reason for its continuance. Like all special privileges it is but a taxation of the many for the benefit of the few, and like all use of governmental power for private advantage, it has resulted in governmental extravagance and political demoralization” (George, 1888b). See also “Bonds”, “Industrial Revolution, 2nd”.

8) A century earlier, Adam Smith “wrote that no government has ever paid its debt”¹⁸⁵⁷ (Hudson, 2017e, mn.2); and in the 1740’s, Montesquieu took the time to note that: “(National) debt takes the wealth of the state from those who work, and gives it to those who are idle...”- *De L’esprit des lois*, 4, 22, 17.

See also “Communism”, “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”.

8b) David Hume (who corresponded with both Montesquieu and his ‘dearest friend’ Smith) agreed. In “a letter to Montesquieu, who was of the opinion that there are no advantages to public debt...Hume [also] points out several disadvantages of public debt... [First of all] it shifts industry to London, while the burden of paying for the public credit shifts to the countryside, which may not be equitable.... The tax burden will...increase [and also shift], as the credit has to be paid, and increasing the tax burden...[must] either increase the price of labor or lead to oppression. Foreigners could [also easily] acquire a portion of the public debt, thereby...gaining some control or advantage over the people or industry. Income from those who hold the public debt (the idle rich) encourages them to lead an idle and inactive life” (Mcgee, 1989). See also “Tax shift”, “Thatcher, Margaret”, “Corporations (and corporate ‘personhood’), “Rentier”.

8c) David Hume was worrying about the pernicious effects of a NDE from the 1740’s: the British “system of public credit has two evil aspects. One was that it places...” (Hume, 1752). “” (Livingston, 2006, mn.). See also “Evil”, “Evil twins”.

9) A few decades after George, Chemistry Nobel laureate Frederick Soddy articulated the obvious, pointing out that the “Virtual Wealth of a community is not a physical but [like “debt”] an *imaginary negative* wealth quantity. It does not obey the laws [even] of conservation [of matter]¹⁸⁵⁸, but is [simply] of *psychological* origin” (Soddy, 1926, 295). See also “Physiocrats, the” [who lost the...], “Currency Wars”; [hence, it all (i.e. ‘Western civ.’) winding up in] “Mind Control”, & [academic] “Parallel Universe”.

10) Is this a good model for governments to emulate? Ellis Medavoy is a “man who knows how stories are invented for public consumption and how high the lies are piled. Not long after we met for the first time, he said to me, ‘I can tell you how to run a world, you know’. I laughed. ‘Really’. “Sure,” he said. “You make up something complicated. Then you insert it into the bloodstream of the society, and you watch it bloom. You make it complex enough that it will take armies of people to sort it out and argue about it, and then you have them. The other thing is, what you make up has to cost money. A lot of money’. ‘Why?’ I said. ‘Because people want their lies to have value, and that is judged by how expensive they are’.

¹⁸⁵⁶ ...as did honest political philosophers of the 18th century, such as Montesquieu: “Some have imagined that it was for the advantage of a state to be indebted *to itself*: they thought that this multiplied riches by increasing the circulation. Those who are of this opinion have, I believe, confounded a circulating paper which represents money... with a paper which represents [merely] a debt. The first...[is] extremely advantageous to the State; the last can never be so.... [because] the taxes raised for the payment of interest...[on this] debt, are a hurt to the manufacturers, by [just] raising the price of...labour. It takes the true revenue of the state from those who have activity and industry, [in order] to convey it to the indolent; that is, it gives the...[facilities] of labour to those who do not [work], and clogs with difficulties the industrious... These are its inconveniences. I know of no advantage.”- *Spirit of Laws* (1748, 394). He might have added the advantages of: 1] mustering finances and manpower for the sacrifices of war, and that 2] ‘national debts’ (unless denominated in someone else’s currency) can always be, like a Simon Says game, written off. See also “Banking”.

¹⁸⁵⁷ Specifically, there “is scarce, I believe, a single instance their having been fairly and completely paid” (Smith, 1776, 725-26); though he also writes that the UK “probably would [have] by this time... completely paid” it, if not for the “Spanish War of 1739” and the recent 7 Years War (Smith, 739-40). See also “Integrity”.

¹⁸⁵⁸ A.k.a. the Law of Conservation of Mass, or “Lavoisier’s Law”, Lavoisier paraphrased it, in the 1770’s, as: “Nothing is lost, nothing is created, everything [within a closed system (such as Earth’s biosphere)] is transformed. So-called ‘modern’ banks, Central Banks, and (their resultant) NDE attempt to allude this common sense physics by constantly kicking the can (of debt) down the road, pretending that it doesn’t exist (for some, but that it does exist for others). See also “Central Bank” [alchemy], “Financial Crisis (of 2008-)” [End of Alchemy], “Hypocrisy”, “Dynastic cycle”, “Tax shift”.

"Suppose the citizenry ends up paying for these lies," I said. 'SUPPOSE?' he said. '...Of COURSE they're going to pay. They're going to pay until it hurts. You know the old expression, Seeing Is Believing? That's bunch of crap. PAYING IS BELIEVING. Remember that'" (Rappoport, 2020). See also "Cognitive dissonance", "Oligarchy", "Money" [.state credits], →"Fascism, 'Modern' Hand of".

[¹⁸⁵⁹Spin city? See also "Shell game, the".]

11) So what is it good for (besides perma-war financing)? "The elimination of market processes regarding [central banks' (ostensibly bottomless) Reserve/RAB] lending to [commercial] banks can be explained [in a way that makes sense], historically. In the [centuries] past, banks provided flexibility for the [national] money supply, which was otherwise unable [before computers] to keep pace with [demand for] economic [i.e. monetary] development under a [traditional] metal standard. In addition [to *increasing* the nation's money supply], banks ['monetized credit' (TAB) also] facilitated *distance* payment, by arranging payment on the basis of mutual settlement [i.e. "double-entry accounting"], instead of [the burdensome] transferring [of] cash. For that to work, confidence in claims on banks' [credits/TAB] had to be beyond any doubt... [Hence] the public should *ignore* the risk to which money 'in the bank' is exposed. [And that] is still the premise of the monetary system [today]... That is old thinking however, as the necessity for money circulation to run through bank balance sheets¹⁸⁶⁰ has become obsolete through the internet (Wortmann, 2019b, 3). See also "Ignorance (monetary)", "Bankmoney regime".

11b) It's not very good for eradicating poverty. According to some studies, nearly 1/8th of the Earth's inhabitants are still starving, and another 1/4th are "micronutrient-malnourished" to the point of abnormal dysfunction. See also "Central Banking-Warfare model", "Great Extinction, 6th".

11c) Nonetheless, even though "inequality among people and countries remains staggering, the global middle class has grown rapidly and exceeded half the human population by 2018 (Kharas and Hamel, 2018)" (Bradshaw, et al, 2021, 4). See also "Monetization", "Malthus, Thomas".

12) It's not the 18th or 19th century anymore. "While the [global] dollar system has...had a disproportionately negative effect on developing countries [forcing them to always have USD trade surpluses & export 'cash crops'], the main fault lines that emerge from the dollar system are [now] along [intra-national] class, rather than national lines.... [and] Because most of the entities operating in this system do not fall within the purview of the Federal Reserve [yet alone the US gov't], most [of this planet's] dollars are [in fact] supplied via *offshore interbank* credit, funded by dollar deposits at *non-US* banks, or 'eurodollars'." (Feygin & Leusder, 2020). See also "Eurodollars", "Dutch disease".

13) It is also worth noting that Hyman Minsky's first "institutional prerequisite" for transitioning to a (more straight-forward) national narrow [i.e. honest] banking system was, in fact: a "large government debt that can be monetized" (Minsky, 1995, xii). See also "Minsky, Hyman" [.monetary reform].

13b) The US national debt could be 'monetized' next week (or [more sensibly] gradually, as the Treasuries come due)-- and the Reserve/RAB 'inflation' would (initially, **at least**) **only** show up in Reserve/RAB money, not the 'real economy'. 'Monetizing the debt' adds to aggregate RAB. If one defines 'inflation' as an increase in a money stock, then by definition such an increase (in TAB or RAB) is an 'inflation'. But to say that 'the Fed monetizing the debt is inflationary' is misleading, because the normal usage of "inflationary" refers an increase in overall TAB price levels (which are, of course, in TAB-bankmoney, not Reserves/RAB). See also "Money, 2 classes (layers) of", "Monetary reform", "Helicopter money".

14) Of course the NDE is not just for UK-USA. Over in Europe, "George Soros has already laid the Plan out. They want to default on the [public] debt, issue perpetual bonds, and then issue a digital Euro. And [then] the Hobbesian choice in front of the European middle class is gonna be: 'You can either have debt forgiveness, or you can starve and freeze to death'... [It's] the European Commission [that] now has tax

¹⁸⁵⁹ The "appearance that money is [somehow] exempt from the laws of thermodynamics is an illusion that can only be maintained while the scale [or spin] is increasing...[i.e. when] the financial sector is expanding relative to the real sector" (Daly & Farley, 2004, 258). See also "Financialization", "Ponzi".

¹⁸⁶⁰ ...Not to mention (at some point) money circulation in general. See also "Local scrip & Complementary currencies".

and spend authority, thanks to the 'COVID' relief bills" (Luongo, 2022, mn.24-25). See also "European Commission", "Eurobonds".

15) National Debt Economy Updates: 11/21- In its latter stages; today's "Fed has all kinds of abilities to... make transfer payments to [a very wide range of] different entities...in the form of buying and selling securities. That makes it essentially *impossible* to figure out [exactly] how much of what the Federal Reserve is up to is really just...electronically printing money... to pay for what the government is spending... [or, say, how much is] making transfer payments to corporations to keep them afloat... or giving money to households.... You need to have a *fiscal* [sic] system that is sustainable, to make sure that the monetary system is not printing a lot of money-- directly or indirectly-- [in order] to cover the... Treasury...[W]e have a fiscal system that is highly unsustainable...a huge amount of unfunded liabilities that... are [now] about 7 times the amount of the official [national] debt... and broke countries end up running [strategic] inflations. And we're now" doing that (Kotlikoff, 2021, mn.107-109). See also "Imperialism, American", "Black budget (US)", "Bretton Woods", "Bank welfare". See also "Compound interest"; "Dutch Finance", → "Glorious Revolution, the", → "Revolution" [2nd millennium], "Homo Economicus", "Debt deflation", "Pentagon capitalism"; "Economics, Parity", "NInnies".

[See also "Imperialism", "Numbers", "Eras of (monetary) History"]

National Emergency Employment Defense (N.E.E.D.) Act- (legisl. introduced by Rep. Dennis Kucinich of O in 2010, to end the National Debt Economy; re-introduced in 2011. See Ch.6)

1) "In the emergency [expedient] of 1933-34, the absence of any permanent monetary agency capable of handling the situation was a valid reason for giving the President and the Secretary of the Treasury *emergency* powers over our monetary machine.... But once Congress has established a Monetary Authority and given it a mandate, no other [Executive] agency should then have any concurrent or conflicting powers.... This policy...[necessitates close] cooperation with the [Executive] Secretary of the Treasury, but the independence of the [Legislative] Monetary Authority must be scrupulously safeguarded" (Fisher, et al., 1939, 20). See also "Monetary Reform", "Separation of Powers". See also "Zarlenga, Stephen (1941-2017)".

National Identity/Nationalism¹⁸⁶¹- (whom to extend familial-decency relations to; from the Latin cognate *natio* ['from birth']; sometimes a.k.a. [broadly] '*social identity*',¹⁸⁶² or [more narrowly] 'a shared *psychological* sociological state' [Voegelin, Lutz] or [the oxymoron] 'political psychology' [f.e. Pieczenik, 2019n, mn.19-21]) "It is curious that physical courage should be so common in the world, and [yet] moral courage so rare."
- Mark Twain (Twain, 1940)

"Every person's mental programming is partly unique, partly shared with others"¹⁸⁶³.

- Geert Hofstede, *Culture's Consequences* (1980). See also "Culture".

"*Trust* [sic] is the basis of any true social organism [,and its converse]."- Thomas Meyer (Fitts,21, mn.21). See also "Civilization", "Civilization, Western", "Inequality".

1) Does it (whom to trust) matter? Mathematician-philosopher "C.S. Peirce explained, early...[in the 20th century... [that] all symbols and their objects, whether in software, language, or art, require the mediation

¹⁸⁶¹ "One must not be deceived into thinking... that modernized, secularized forms of *nationalism* in any way represent its beginning" as a behavioral phenomenon (Hastings, 1997, 198). See also White & White, 2008.

¹⁸⁶² '*National identity*' (as opposed to the deeper phenomenon of '*nationality*' [White & White, 2008c]) is the most prevalent "subtype of social identity" that 'modern' individuals are consciously aware of-- be this awareness of a more thoughtful/contemplative nature, or simply (unthinkingly) powerfully reinforced by conformity with national symbols and cultural heritage, as filtered through (again, typically 'national') media and political/status institutions (White & White, 2008).

¹⁸⁶³ Across "a number of countries...we discovered that we get the same country [cultural] differences for 15 year olds as we got for the entire population. Values attained in childhood change rarely in later life" (Hofstede, 2015, mn.9). But this "collective level of mental programming is shared by some but not [by] all. The individual level is unique, as no two people are programmed exactly alike (Hofstede 2001, pp. 1-5)" (Balykina, 2013, 2-3). See also "History" [elite studies], "Design".

of an interpretive mind. From our minds, open potential *metaverses* [sic]... Without dimensions beyond the flat universe [however], our lives and visions wane and wither. This analogy of the 'flat universe'... [comes from] C.S. Lewis' essay 'Transposition', which posed the question: If you lived in a 2-dimensional landscape painting, how would you respond to someone earnestly telling you that the 2D image was just the faintest reflection of a real 3D world?" (Gilder, 2018, xiv). See also "Design", "Long-term orientation". 1b) In simpler terms, since the days of "Plato's Cave" (and [in so-called 'modern' times] the famous "Robbers Cave experiment" of 1954), it has been oft-noted that human beings' greatest fear is generally that of ostracism or being outcast/expelled from the [largest-salient] social group (that they grew up respecting and deferring to). This has very deep (socio-biological) roots (White & White, 2008b).

[Plato's Cave.21; see also "Long-term orientation".]

2) "Nations finally elevated *national interest* to the *highest religious*¹⁸⁶⁴ plane as the only way to break the financial [oligarchs'] bond" (Hudson, 2012g). This "Age of Nations" is generally regarded to have commenced with the Treaty of Westphalia in 1648,¹⁸⁶⁵ which ended Europe's disastrous wars of religion; but not wars of financial conquest and imperialism (which were just warming up)... See also "Currency wars, the" [neo-mercantilism?], "Smith, Adam (1723-1790)" [Scotland; (& head of the 'neo-mercantilist' tree)]. 2b) Popular-monetary nationalism¹⁸⁶⁶; which "gave rise to the national state [in most of 'the West'] as the typical political unit of the 19th century...was not [yet] possible for the larger dynastic states which ruled over many different language...groups... [culminating in 3 empires] the Austro-Hungarian Empire, the Ottoman Empire, and the Russian Empire...[disintegrating after their] defeats in" World War One (Quigley, 1966, 36). See also "Charismatic Authority (CHA) & Charismatic Dependency (CHD)", "Orwell, George".

¹⁸⁶⁴ Why do people often call nationalism "a religion"? In "the idea of the nation we have a kind of spurious immortality, don't we?" (Onus 1998, mn.25).

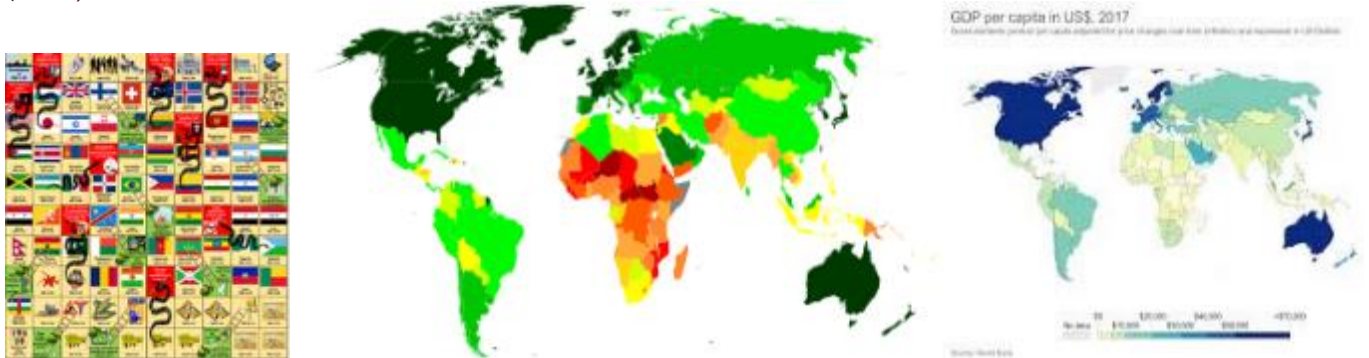

¹⁸⁶⁵ This proto-'age of nations' was for the elite (literate), in an era when States were asserting some primacy over the nobles and clergy. For many Westerners/Europeans (the precocity of the American and French Revolutions notwithstanding), the onset of popular *National Identity* (and also some degree of dabbling in its excessive manifestation: 'nationalism') was, however, mostly from the 2nd half of the 19th century, when technological change was driving countries (in the wake of the 1st & 2nd Currency Wars) to be more competitive; i.e. the vox pop now pretty much had to "understand the laws and the... process of legislation.... A country full of people that couldn't understand each other wasn't a [sufficient] nation. Its people were not fully citizens. If you wanted them to obey laws, pay taxes...[and] serve in the army-- not reluctantly or resentfully but freely & willingly, [then] you had to persuade them that this was *their* country.... The first thing to do was to enlarge people's horizons-- to show them that their Fatherland was more than the village or the valley, [and] more than Brittany, or Tuscany, or Kent-- that it was really this hitherto abstract entity called France, or Italy, or England. This was to be done primarily in school[s] ...public, universal, compulsory, and free.... [N]ever before the 1880's were all the children of Western Europe taught to read and write-- even the girls, who hardly ever went to school before" (Weber, 1989k, mn.9-10). "The [nationally recognized] certificate that you got when you left school at [age] 13 or so...replaced first communion or confirmation as the symbol of emancipation and growing up... the key to getting a job, just at the moment when the...economy was producing new jobs [and] new opportunities for social mobility..." (Weber, mn.11). See also "Currency Wars, the", "Industrial Revolution, 2nd".

¹⁸⁶⁶ Such popular nationalism "was already [long] evident in England at the time of the defeat of the Spanish Armada in 1588...[if not more than a century earlier in Joan d' Arc's France; see also "Primogeniture"]; it reached Germany and Italy only after 1815, became a potent force in Russia and the Balkans toward the end of the 19th century, and was noticeable in China, India, and Indonesia, and...Africa, only in the 20th century" (Quigley, 1966, 28-29).

3) "...the issue which has swept down [through] the centuries and will have to be fought sooner or later is the PEOPLE versus the BANKS"- attributed to Lord Acton, c.1875 (Hannigan, 1971). See also App.C: "1-2-3".

4) At one extreme, *nationalism* (excessive ideological belief) may lead-- as it did, numerous times in the mid-20th century-- "to totalitarianism, and totalitarianism leads to idolatry. It becomes not a *principle* of politics but a new religion and, let me add, a false religion. It depends partly on a pseudoscientific doctrine of race, which leads inevitably to the *antithesis* of all that we value in Christian morality" (Cecil, 1938). See also "Ontology & Epistemology", "Hegelian dialectic".

5) At another, "[i]f a country doesn't have borders, and anyone can come in, no matter what their background, well [then] it's over-- finished, caput. There is no country. And that's the idea, as I've been saying since the 1990's: it's to bring an end to countries, so that the world does not have effective [3rd Estate input, or] cultural [or political] borders, where [the] people can [understand and] decide their own fate within their borders. They want a world government dictating to everyone..." (Icke, 2018e, mn.8-9). A "key for the ruling class's plan is to create a new bourgeois, with no national allegiance-- and they've done so. These people enjoy hobnobbing in Monaco and Davos, above the fray of [any] nationalism, which They think is only for the dumb masses"¹⁸⁶⁷... (Vrabel, 2011, mn.112). See also "Council on Foreign Relations (CFR)", "M.I.T."; White & White, 2008.

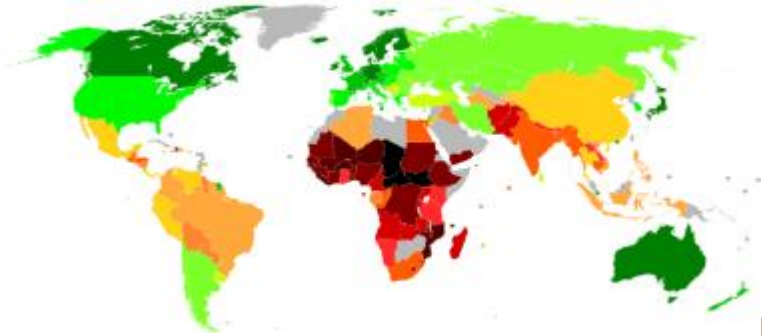

[‘Snakes & ladders’-- the UNDP’s old ‘Human Development Index’ was mostly just a .9 correl. with bankmoney (GDP) per capita]

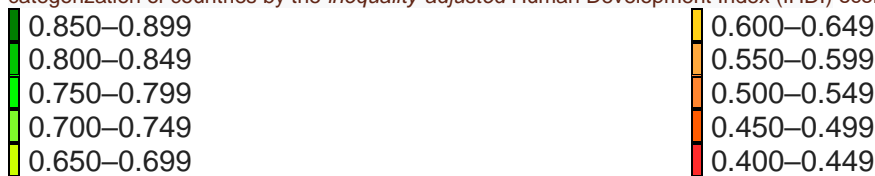

6) ...whereas, in its civil form, national identity is the highest (highest-minded) form of social identity, whether or not it is reflected in the numbers on spreadsheets. “Neuroscientists have given up looking for the seat of the soul, but they are still seeking what may be *special about human* [beings’] *brains*, what it is that provides the basis for a level of self-awareness and complex emotions unlike those of other animals.... pathways and connections that are central in creating social emotions, a moral sense, even *the feeling of free will*? There are specialized neurons at work.... [unusually] large, cigar-shaped cells called spindle cells”¹⁸⁶⁸ (Blakeslee, 2003). See also “Civil National Identity”, Appendix C: “1-2-3”.

¹⁸⁶⁷ The 2015-16 Trump campaign in America provided a revealing, if imperfect, litmus test on this issue, with many ‘Globalists’ reacting apologetically to criticism of their religion’s assumed (promised) right to rule the roost without being asked hard questions.

¹⁸⁶⁸ Such ‘spindle cells’ “in the [brain’s] anterior cingulate cortex have been shown to be pivotal in our ability to manage stimuli from different regions of the brain *in a socially appropriate manner*-- and can thus [also] be thought of as a development towards more sophisticated brain organization and fluid thought processes. ‘[I]f anything marks us as distinctive from other animals it is the power to discriminate amongst...[numerous] kinds of alternatives’ (Sarnecki & Sponheimer)...[cited in] (White & White, 2008b). In other words, what we “term culture is...so ingrained in the human psyche”, from so many millennia of both biological and cultural evolution, “that it cannot be extirpated from human consciousness without our becoming something other than, or less than, human. Inevitably, constitutions [as manifestations of a society’s preponderant national identity] embody [whether written or unwritten], contain, or at least leave significant room for cultural mores and values that are...the fundamental grounding for human social interaction” (Lutz, 2006, 16). White & White (2008) call the ‘modern’ manifestation of this: *national identity* (which can be exaggerated or twisted into *nationalism*), and term the deeper, pre-historic, pre-countries, and pre-human manifestation of the group-social identity phenomenon: *nationality*. See also “Anthropology & Evolution”.

[Categorized with similar weighting for GDP (bankmoney turnover) and the “human inequality” that often comes with it, however, the new HDI (2017 rankings¹⁸⁶⁹) looks different. ‘Nations’ and monetary-World categorization of countries by the *inequality-adjusted* Human Development Index (IHDI) economic ‘white-collar’ accountability still matter.]

6b) The loss of this (effective ‘social dope’) from a society is not pretty. An articulation of this was provided by British philosopher Edmund Burle’s confessional letter to Ben Franklin, December 1781.

“There was a day when I held high the honour and dignity of the Community I belong to. Indeed its authority, which I always connected with its Justice and its Benevolence was a subject of my warmest enthusiasms. I ever wished and not wished only, but struggled that this Government in all Stages of this unfortunate Contest, and in all the variety of Policy which arises in it, should take the lead in every act of Generosity and benignity, and without derogating from the regard due to the younger and (not the inferior) Branch of our Nation, wishd that as the older we should furnish you with examples. But providence has not done its work by halves. You have Success; and you have added and may yet add more to what success is unable to bestow. I never had the smallest reason to be personally proud; Nationally I was high and haughty. But all the props of my pride are slipped from under me. I wishd to bestow, and [now] I am left to supplicate.” See also “Civil National Identity”.

7) “The first generations to go through [public] school [in the latter 19thc/Fin de Siecle era] were more law abiding and more patriotic than any before or since” (Weber, 1989k, mn.16). See also “Patri”.

8) Earlier in the Fin de Siecle era, French linguist-philosopher Ernest Renan (1823-92) captured the fire-like duality of the [what was not just to be a passing] craze: “Through their various and often opposed powers, nations participate in the common work of civilization; each sounds a note in the great concert of humanity, which, after all, is *the highest ideal reality that we are capable of attaining*. Isolated, each [nation/national perspective] has its weak point. I often tell myself that an individual who had those faults which in nations are taken for good qualities, who fed off vainglory, who was to that degree jealous, egotistical, and quarrelsome, and who would draw his sword on the smallest pretext, would [also] be *the most intolerable of men*. Yet all these discordant details disappear in the overall context. Poor humanity, how you have suffered! How many trials still await you! May the spirit of wisdom guide you, in order to preserve you from the countless dangers with which your path is strewn!”

- “What is a Nation” (Renan, 1882). See also “Cultural Calendar”, App.C: “1-2-3”.

¹⁸⁶⁹ The new Inequality-adjusted HDI (IHDI) was tentatively introduced in 2014, with the addition of coefficients for *intra-nation disparities* in: income, health, and education levels, as measured (primarily) by “the World Bank’s International Income Distribution Database, the United Nations Children’s Fund’s Multiple Indicators Cluster Survey, ICF Macro’s Demographic and Health Survey, the Socio-economic database for Latin America and the Caribbean (SEDLAC) and the United Nations University’s World Income Inequality Database” (UNDP, 2018). The inequality-adjusted (new) vs. unadjusted (old) HDI data are conveniently juxtaposed at: <http://hdr.undp.org/en/composite/IHDI> ; whereas the new IHDI’s ‘rankings’ of nations are at: https://en.wikipedia.org/wiki/List_of_countries_by_inequality-adjusted_HDI#cite_note-4.

[Fire is to animal control-energy as Nationalism is to human control-energy... Won't Be Fooled Again in the 21st c?¹⁸⁷⁰]

[a) irregular flints by 400kbc; b) regular by 40kbc; then c) regular & widespread fire control by 5kbc]

[He who experiments wins': a) Bronze Age standing armies; b) Greco-Roman citizen-yeoman soldiery; 21stc) regular & widespread nat'l identity control by 2010's]

9) Such (often) dangerous curves & trends, since perhaps a century before Renan's day, have been, like fire, more-or-less controlled or at least (increasingly) managed. How so? With the law and legal emphasis (a.k.a. trendiness), of course... And (specific definitions of) money are merely a sub-component of the law. "The City" has probably been tinkering with such a 'legal-monetary-cultural' contraption since, ironically, the latter 18th century [when the US founding fathers told London, until at least the early-mid 1780's anyway, to buzz off]. Yes, national identity-nationalism is-- like Renan's fire-- a natural phenomenon that can be (and is/has been) manipulated (18thc), steered (19thc), and effectively controlled (20thc). China and Saudi Arabia were even mastering the game in the 2010's.

See also "Secrecy, Cult of", "Debt cycles", → "Cultural Calendar".

10) The 2010's have been on the other side 'national (common law) vs. 'global' (natural law) pendulum. Is global-imperial lawlessness (vis-a-vis constitutionalism) at a peak? With the European Union, etc.; "[y]ou've torn up the Treaty of Westphalia and you've got a...lawless, out-of-control [monetary-political] system" (Fitts, 2017, mn.17), fully manifesting in the 2nd decade of the 21st century. Fellow Reagan-Bush veteran Paul Craig Roberts agrees that "There's [now] no shame here, in Washington.... We have...lost the great hope of Western Civilization. There's no respect for truth. There's no integrity... in any aspect of the government... It's a lawless operation" (Roberts, 2019, mn.13) that has been, at the same time, expanding the number of laws for everyone else. See also "Common law", "Trump, Donald", "Civilization, Western", "Accounting standards".

11) "From whence comes this *beast of muddy brain* that trails a boy, a man, a family and a civilization through Century 20 into Century 21?"- https://www.amazon.com/Beast-Muddy-Brain-Charles-Walters/dp/1601730136/ref=tmm_pap_swatch_0?_encoding=UTF8&qid=6sr=

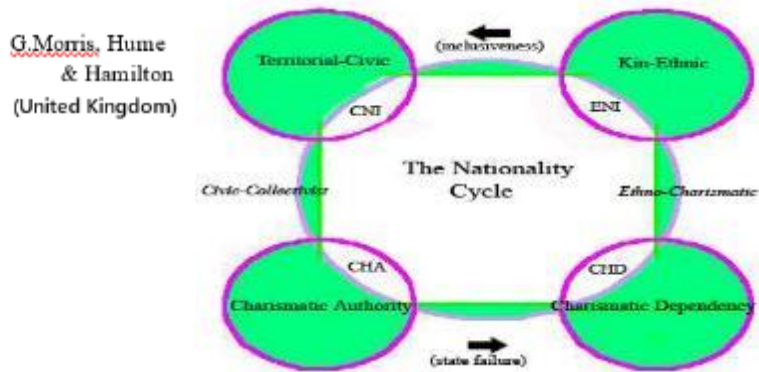

See also "Economics", "Ninnies"; "Economic science".

Mayflower Compact
(an "ethno-civic" identity)
Jefferson's - 'Merry England'
& Madison

(USA-'1865')

¹⁸⁷⁰ See also "Board Systems", "Bullshit [cat shit] jobs".

[The historical National Identity Cycle¹⁸⁷¹ (White & White, 2008c), driven by (see also) “Politics”¹⁸⁷²]

National Income- ('raw materials income'¹⁸⁷³ + debt'; '.89 correl. with 'National Income and Product Accounts [NIPA]'; i.e. 'net' or 'wealth accounting' [as opposed to 'gross accounting']; a.k.a. 'national accounts') i.e. 'how one gets “a managed currency based on national books” (Peek, 37), instead of 'a managed economy based on (see also) “International Financial Reporting Standards (IFRS)”,&→ “Related parties”.

1) Francois Quesnay (the original “Physiocrat” political economist) “hypothesized that wealth originated with production from the land and then flowed from hand to hand, with trade transactions providing income for the nation” (de Yong, 1994, 1). See also “Physiocrats, the”, “Political economy”.

2) See also “Kuznets, Simon ()”.

3) In Parity (for raw materials) Economics, simply “the Productivity Index (x) the Consumer Price Index” (Lundgren, 1994b, mn.114).

3b) When a national economy prices its “raw materials [in balance]¹⁸⁷⁴ at a proper ‘Parity’ level [ratio, then]...you maximize...profits¹⁸⁷⁵... [consuming] your own [national] production without the need for [gross or strategic] debt expansion” (Lundgren, 1994b, 46). This is because “farm income”, is in inverse correlation to aggregate debt (Lundgren, mn.51).¹⁸⁷⁶ See also “Parity pricing (for the primary sector)”, “Wealth”.

3c) *Farm income*-- both the largest and most consistent component of raw materials production-- has sometimes been “used as a short cut to predict national income... [and] The federal government spares no expense in calculating gross and net farm income [NFI], as well as farm production output on a monthly basis. This is not true with other raw materials that flow through the economy...” (Lundgren, 1994); because NFI was originally a cardinal component of “National Income”. See also “Kuznets, Simon”.

¹⁸⁷¹ At some risk of over-simplifying, the National Identity/‘Nationality Cycle’ exemplary, household name, archetypes may be listed as: Johan Herder-- for the “Kin-Ethnic” heritage (ENI); Ben Franklin-- for the “Territorial-Civic” heritage (CNI); Genghis Khan-- for the “Charismatic Authority” heritage (CHA); and then nobody in particular for (the stateless/‘anarchic’ state of “Charismatic Dependence” (CHD). See also “Trump, Donald”, “Franklin, Benjamin”, and “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”, respectively.

¹⁸⁷² ...and for a closer look at the pivotal/leveraged ‘CNI-to-CHA’ transition, see also “Civil National Identity (CNI)” [flow].

¹⁸⁷³ RMI is a.k.a. “Gross Farm and Mine Income” (Wilken, 1947, ch.14).

¹⁸⁷⁴ “At Parity” means in balance with the other sectors. “[P]arity for agriculture has to be computed on the basis of indexes in the other sectors.... [W]ithout a par for agriculture, the market system cannot function [properly without government], and... political force will...[wind up eliminating (or neutering)] much of the private sector... Profiting at agriculture’s expense has been the super business, the greater banker and the politician’s game ever since Spartacus-- and even before”; but it must stop (Walters, 1982, 13). See also “Great Extinction, 6th”.

¹⁸⁷⁵ ...as opposed to maximizing debt. Hyperbole? See also ‘National Debt Economy (NDE)’, (as maximized by) “Gross Domestic Product (GDP)”, (until the later stages of [the resultant]) “Race-to-the-bottom” global economy. Thus, when global commodity prices hit ‘rock bottom’ (mostly via the Earth’s biosphere being entroped into [supposedly] useful things), it became high time to learn the difference between “needs” and “desires”. Starting, perhaps, most rationally, with the needs of the biosphere itself, and then also the needs of nations, etc. to stop playing debt-Ponzi games. National Income accounting includes-- to borrow a phrase from the much-maligned Al Gore-- ‘Earth in the balance sheet’, because it at least gives the Primary sector is due. Any system that doesn’t recognize this in the 21st century is economic madness. See also “Great Extinction, 6th”.

¹⁸⁷⁶ Randy Cook simplifies this. “Raw materials income plus debt generate [the] National Income” (Cook, 2022b, mn.82).

Farms and their value of production by farm type, 2020

Percent of U.S. farms or production

Note: GCFI = annual gross cash farm income before expenses. Nonfamily farms are those where the principal operator and their relatives do not own a majority of the business. Components may not sum to 100 percent because of rounding.
Source: USDA, Economic Research Service and National Agricultural Statistics Service, Agricultural Resource Management Survey. Data as of December 1, 2021.

[US Gross Farm production, 2020]

4) Significance? “We measure the many items which make up the *cost* of producing raw materials, and the various [other] steps in our economic system with *price*. If we pay a proper price in the different steps from raw materials to consumption, [then] we automatically create the income to use what we produce” (Wilken, 1961). See also “Scholastics” [“Just (‘sustainable’) price” (in the Quantum Age)], “Physiocrats”.

4b) A “multiplier” of 7 between net “farm income” and (gross or net?) “national income” was identified by Carl “Wilken and his associates [They] found that during the 1946-1950 base [parity price] period, net farm income comprised about 7% of [Kuznets] national income... [as] gross farm income rolled through the urban economy at a multiple of 1:7” (Lundgren, 1994; Cook, 2022b, mn.79).

4c) “Agricultural gross income... leads...[N.I.] by 6 months... Wilken...and his group were able to forecast National Income, 14 years in-a-row, to better than 1% [error in] accuracy, 6 months in advance of government figures.... [And] the only reason they stopped after 14 years was because essentially the...[gov’t then] stopped keeping the [“national income”] numbers. We’ve tried to pick that up and carry it forward...”(Cook, 2021, mn.42-43). See also “Statistics”.

5) Declining National Income [profits being replaced with debt] is something that no amount of flippancy can resolve. See also “Propaganda”, “Statistics”, “Reserve currency”, “NInnies”.

See also “Wilken, Carl (1895-1968)”, “Democracy” [tariffs], “Multipliers”, “Reform, 101”.

National money¹⁸⁷⁷ (synon. ‘national currency’) 1) is money authorized (stamped) by a national/sovereign government that is good for paying expenses and collecting taxes. Most money is *national* money and has been, increasingly,¹⁸⁷⁸ for over 2000 years.^{1879, 1880}

¹⁸⁷⁷ The term ‘government money’ is not used here, because it has other meanings (such as ‘government-issued money’).

¹⁸⁷⁸ This long-term monetary *trend* has largely been due to the relative *success* of predominantly public money systems, such as the Roman Republic, China and England, vis-à-vis less-unified and more bullion/commodity-based systems. It is sometimes overlooked that “national money-- like national language-- was largely a foreign idea in [most of] 18th century Europe. Much as German courtiers spoke French and the French mass was [still] performed in Latin, gold and coins had an international currency regardless of the specific [minted] forms [that] they took.... French money changers converted... hundreds...[of minted coins] on the basis of weight and metal content alone. Law may have prohibited the French king’s subjects from using foreign coins in domestic transactions, but it also allowed-- and at times actively encouraged-- the import of such objects” (Spang, 2015); mostly as a form of reserve/‘backing’ of some sort. See also “Reserve currency”.

“Moreover, while some early-modern moneys were effectively transnational, many others were regional or subnational.... All along the [18thc French] kingdom’s borders, mints produced *both* golden louis for the [international] import-export market and small change for their own hinterlands” (Ibid). The Revolution’s initial leaders of the Constituent Assembly (from 1789-90), such as Count Mirabeau, et al, “were imagining a currency space far more homogenous and bounded than the one in which they lived” (Spang, 2015).

¹⁸⁷⁹ Monetary “systems are first and foremost domestic institutions” (Ricks, 2017, 122); even though ‘nationalism’ and prevalent *national* identity were not popularized, even throughout Europe, until the 18th and 19th centuries. See also “National identity/Nationalism”.

¹⁸⁸⁰ Germans agree: “There can be no question that responsibility for the monetary system lies, and will continue to lie, with sovereign national states.... Any currency provided either by banks or by other private companies must therefore fit into the state-determined system. Anything else would ultimately lead to chaos and instability.”- The Association of German Private Banks, October 2019 position paper calling for a ‘digital euro’ (<https://www.finextra.com/newsarticle/34677/german-banks-call-for-digital-euro>)

- 2) National money is usually: a) *public cash*-- paper or metal¹⁸⁸¹ money with the country's name on it (often legal tender), or b) *digital/account money*-- (bank "account"/TAB) money, legally considered to represent or to be exchangeable for such physical cash.
- 3) National money is not necessarily *issued* by the national government (it can be delegated-privatized).
- 3b) For example, *we've lived in a credit-centric national money environment for the past 400 years... bonds, gilts, Treasuries... go back to 17th century Dutch-English practices, and-- in N.Italy-- to 14thc Venice & Florence. See also "Accounting, double-entry", "Austrian School".*
- 4) National money predominates over other kinds of money, primarily because:
- a] *taxes* must be paid in national money, with the tax revenue stream providing credibility, and also
- b] government spending gives it wide *circulation*.
- 5) Each nation has a single money system, called its *currency*; and each currency has a unit.
- 5b) "Once you give up your [national] currency, you're dead meat" (Roberts, 2020, mn.23-24).
- 6) Local, private and *complementary* currencies-- like casino chips, uncoined gold, or bitcoin-- are *non-national* money. See also "Money".
- See also "Money, 2 classes (layers) of", "National Debt Economy", "Debt-Free National Money (DFNM)".

National Organization for Raw Materials- See "Nlnnnies", "Parity pricing (for the primary sector)".

National Security Agency (NSA)- (formal: 'NSA/CSS'; a.k.a. 'no such agency' [20thc]); although it was (like the CIA) thought up during the Truman administration, the NSA was opened five years later (1952), does not have a Congressional charter, and was (unlike CIA) intended to be at least for its first 2-3 decades. Edgar Snowden's revelations from 2013 put the NSA budget at \$10.8bn (vis-a-vis the CIA's \$14.7bn.; McGregor, 2013).

"A political society that is large and affluent-- the regime designed by the framers of the American Constitution [of 1787]-- will suffer civic fragmentation and be tempted by power, inevitably sliding toward monarchy. This decline, [Mark] Twain thought, was virtually complete in the...[US in 1908], in which centralized government was [already] dominated by an imperial presidency, personified by [then US] Theodore Roosevelt" (LeMaster & Wilson, 2013, 588). See also "President of the United States (PotUS)", "Timarchy".

1) According to its most famous whistle-blower, former "Director of World Geopolitical and Military Analysis" William Binney, "the Intelligence Community does not exist to answer questions for the President. It exists to keep the money moving" (Steele, 2017b, mn.32). The famous programs that the Church Committee revealed in the 1970's, "MINARETTE at NSA, COINTELPRO at FBI and CHAOS at CIA...[are] exactly what the 3 agencies are doing now under Bush and Obama. They're doing exactly the same thing except orders of magnitude, more, more, [and] more; and in fact if you read... the articles of impeachment of Richard Nixon, you could apply them directly to what's going on today" (Binney, 2015c). The scale of crimes today, however, is much, much larger: "the FBI is the front. They take the flack from everybody, because they [Deep State] figure they [the FBI (being the oldest of the non-Pentagon spy agencies)] will still survive... But behind them are the supporting agencies like the NSA, and CIA, and others, who are actually...helping them do and achieve what they [the DoJ] want to do, as a [Deep State] collective group of...I call them the *Praetorian Guard*, who will determine what our government does. And that's why they think they have so much power" (Binney, 2018b, mn.21-22). The "NSA has all the fiber-optic taps across the United States and [also] even around the world" (Binney, 2017c, mn.2). See also "Deep State", "Shadow Government".

¹⁸⁸¹ Physical money, called *cash*, is coin, plastic, or paper. It has denominations in fractions and multiples of the legal unit.

1b) Strategic ambiguity (if not to say confusion) over “Administrative sovereignty” is not a Johnny-come-lately issue. Carrol Quigley, half-a-century ago, pointed it out as a structural flaw from the 1780’s constitution. Power abhors a vacuum, and the US constitution (at least originally) said nothing on the matter (Quigley, 1976c-pt.2, mn.123). Two miles down the road (and 43 years later), a George Washington Univ. seminar sought to publicly address the issue of “this [resultant] new *global policy* arena (as *opposed* to a global *public policy* arena)”, arguing that the new order “must be ...reconceptualized via its interaction with transnational administration. Moreover... the transparency & accountability of global policy actors and their transnational administration are hampered by underdeveloped global administrative law (and international administrative law) arenas, and...[this raises] new questions about... our abilities to encourage its actors to be transparent & accountable” (Elliot School, 2019). Main point? “[T]he traditional administrative sovereignty of the state can no longer be assumed” (Ibid). See also “Sovereignty” [.administrative].

1c) It’s simply S.O.P. “in the government contracts-- and I ran a few of them-- [that] once the government pays for something from a company...[the company owns] that; and they have the right to universal use of that product [hi-tech or otherwise] that they purchased, period” (Binney, 2021, mn.33). The preceding 3 minutes of discussion are also pertinent (Binney, mn.30-32). See also “Sovereignty”, “Mind Control”.

2) “The NSA has been spying on all members of Congress and all presidents for decades.¹⁸⁸² [NSA whistleblower] Russ Tice... came out a couple years ago and said that NSA was monitoring every one of Barrack Obama’s communications from the day he became a junior senator... to blackmail¹⁸⁸³ him” (Steele, 2017b, mn.39). “There are 7 NSA’s, not just one. Most of NSA is going through the motions¹⁸⁸⁴-- it is collecting information [that] it does not process. It’s simply spending money. And then there are small rogue elements...who are not so rogue; they’re [now] institutionalized. There’s the portion that spies on Wall St.,¹⁸⁸⁵ so they can do *insider trading* with their *offshore accounts*. There’s the portion that spies on people directed by the president. The whole thing is out of control. The whole thing is not serving the public interest” (Steele, mn.40). The “spying on the US government itself, they don’t write that up. It happens in the quiet little dark corners of the NSA, and very few people are involved, and very few people [at NSA] know about it” (Binney, 2018c, mn.30).

3) The NSA database (dagnet) “has everything for the past 10 years, [and] most everything for the past 15 years, but it only processes 1% of its information” (Steele, 2018, mn.11).

4) “It’s not impossible to track these kind of [financial] things. Everything that’s digital leaves a record” (Fitts, 2015b, mn.33). “The telcoms were instrumental in this whole process, and so there is a *very* intimate level between what the telco’s and NSA were doing in terms of...intelligence [spying] within a place, and how places-- and the *financing of places*-- were managed, and the real estate” (Fitts, 2017k, mn.10). The 1996 *Telecommunications Act*¹⁸⁸⁶ further enabled “the political control...engineered by controlling each county, bottom-up... They were rolling out a plan that had to do with political control of

¹⁸⁸² The situation has just gotten worse in the 21st century with the radical increase in data and (commensurate?) increase in access to the NSA database. “The only ones [with access today] who are recorded or watched or monitored are NSA analysts. [All the others who now also have access, the] FBI, the CIA, the other agencies of the government that can come in and look at that data are not monitored.... That is why [subcontractor] Edward Snowden could take all the data he did, and they don’t even know how much he took!” (Binney, 2019, mn.30-31).

¹⁸⁸³ Washington’s “control file system [or a-constitutional Star Chamber] is very serious and very real; and you’ve got a lot of very good people who... you know, they made one mistake or they made two mistakes... So we’ve got to find a way to get a majority of the leadership in this country free of the control file” (Fitts, 2016g, mn.33). See also “Parties, political”, “Homosexuality”.

¹⁸⁸⁴ At “one point...they ran...[a] test across the entire agency... [finding that] 85% of the people in NSA working there were characterized as ISTJ. That means *introverted, sensing, technical and judgmental*” (Binney, 2015c).

¹⁸⁸⁵ “I worked on Wall St. and the guy with 3% information...was rich compared to the guy who had 1% information, because we never had 100% information. We had to do an act on 3%. Your edge was getting 3%” (Fitts, 2017e, mn.41). See also “Insider trading”, “NSA”.

¹⁸⁸⁶ The “*Telecommunications Act of 1996* has a clause that acts as the nemesis of everybody trying to fight *cell towers* on grounds of health risks...Section 704...prohibits the denial of a cell tower based on environmental concerns. Section 332(c) (47 U.S.C. 332(c) [reads]: ‘No State or local government or instrumentality thereof may regulate the placement, construction, and modification of personal wireless service facilities on the basis of the environmental effects of radio frequency emissions to the extent that such facilities comply with the Commission’s regulations concerning such emissions’.

The courts have interpreted ‘*environmental concerns*’ to mean health concerns.”

- <https://childrenshealthdefense.org/emr/emf-5g-wireless-frequently-asked-questions/>

the entire economy. It's not just about telecommunications"¹⁸⁸⁷ (2017k, mn.10-11). Bill Binney agrees that the entire sector is easily intimidated and compromised-- "threatened out in the open, actually. So they all know it. So they all participate" in following NSA/Deep State political blacklistings (Binney, 2019, mn.20).

5) The extent to which the 'legal' examination of such (NSA database) records necessitates permission from the NSA is now more ambiguous, after outgoing President Obama's (2016) amendment of **Section 2.3 of the Reagan administration's X.O. #12333**.¹⁸⁸⁸

6) Perhaps this is because the NSA has also been watered down by sub-contracting in recent decades. "Actually, NSA is outsourcing a good deal of their responsibilities to... contractors who are divisions of some of these companies-- TRW, Booz Allen, all those, and Boeing, who also have other departments doing other business. And so they [contractors and their parent co's.] have the ability then to look at [search] all the NSA data collected on all... the people who are competing with them in the world, [and] see everything they're planning, like in terms of bidding for contracts or things like that. They can see that" (Binney, 2018c, mn.11-12).

7) In any event, what they used to call 'Total Information Awareness'¹⁸⁸⁹ started "here within the US and it focused on US citizens. Then it [radical digitalization] spread around the world... [for both US agencies and] the Five Eyes group (Canada, UK, Australia, New Zealand, and the US) went together on this, and then other countries were joining it. So that... [now] they're all adopting the same procedures of bulk acquisition of data and information and using it to share...and they're sharing it back and forth. Just recently... [it was revealed that] the BND, the equivalent of the NSA and CIA over in Germany, was also sharing data with NSA, and collecting data on their own citizens.¹⁸⁹⁰ So it's really a worldwide process that started here... [and] it's really destroying the entire fabric of democracy everywhere on the planet. I mean, Ronald Reagan used to say that 'we're a country with a government'; well, now we're a government with a country and we're making everybody else that way too" (Binney, 2015c). Austria is the latest to want to join the club (Binney, 2018c, mn.25). Other such countries "collect it all... give it to NSA, and then they [NSA] store it... We build... 3 million square foot storage facilities now... We keep it all" (Binney, mn.35).

7b) Binney's account is effectively confirmed by the fact that it was conventional wisdom, even in the 1990's, that "12 countries are thought to account for 90% of the economic intelligence collection directed against the United States: China, Cuba, France, Germany, Iran, Israel, Italy, Japan, Russia, South Korea, Sweden, and Taiwan"¹⁸⁹¹ (Clarke, 1998, n3). See also "UKUSA Agreement", "International Intelligence Community (I.I.C.)".

8) If "anybody in the National Security Agency open[s] their mouth... to give...any public statements, [there's] an 80% chance they're lying outright" (Binney, 2018c, mn.54); not unlike the old USSR. Perhaps

¹⁸⁸⁷ "All of the local communication companies are 'earning' economic rents, because they're all monopolies [or monopolistic competition]-- and that's the result of breaking up the [formerly Ma Bell] monopoly" (Roberts, 2017d, mn.20). George Bush, Jr. "fought to get the telecoms retroactive immunity in 2008, before he left office, because they were in violation of... any number of laws.... [concerning] the privacy rights of their customers.... George Bush and Cheney had to protect them is what happened.... and they wouldn't tell Congress what they were giving them retroactive immunity for!" (Binney, 2018c, mn.25-26).

¹⁸⁸⁸ The now-notorious Executive Order of Dec. 4, 1981, according to Bill Binney's *A Good American* (2016), was the beginning of the privatization of the US I.C. Fmr. CIA Director George H.W. Bush "had a big part in setting [it] up...[T]hey proceeded to set up a system of surveillance and information warfare-- both *for-profit* and for control [management] of public opinion... here and abroad" (Boyd, 2020, mn.105). <https://www.youtube.com/watch?v=666wsDcoNrU> [Good]. See also "Corporate Media Cartel/'6 Sisters'", "Google".

¹⁸⁸⁹ Some months after Sept. 11, 2001, "they had the [Project Genoa head] Admiral Poindexter come out with his... Total Information Awareness program, just to test the waters... and of course everybody was violently opposed to it, because it's clearly violating the constitution. So it got killed right away" (Binney, 2018c, mn.17). Congresspeople knew that "it would give those intelligence agencies, and anybody in power in government, all the information about them...to leverage them in anything they were doing" (Binney, mn.18).

¹⁸⁹⁰ After the publishing of a FISA court memo in January 2018 concerning database protocols, Binney added that: "the FBI and the DEA and the DoJ... [all] also have direct access [to the NSA database]-- and so do the other 5 Eyes... through the I.C. Reach program.... [whereas in regards to any meaningful] oversight from the FISA court-- they can't even tell what's going on. And the intelligence committees, they're about as worthless as anything.... [The database free-for-all has effectively opened] up everything to industrial espionage everywhere.... [from] anywhere in the world" (Binney, 2018, mn.13-14). See also "Shadow Government", "Big data (in the Age of Thieving)".

¹⁸⁹¹ Clarke cites the National Counterintelligence Center's, 1997 "Annual Report to Congress on Foreign Economic Collection and Industrial Espionage".

this is because “most of the people at the highest levels are involved in this ‘spying on everybody’ program. They all know about it... The IRS leveraged it to go against the Tea Party... [and] the FBI... and Mueller was a part of this; so was Comey-- they were all using this data... against any kind of criminality inside the United States... [tipping off] state and local police to go and arrest people... [telling] them what they were doing and what they were involved with, but they wouldn’t give them the data-- the evidence-- because that’s only collected by NSA *without a warrant*¹⁸⁹²... So they have to do a ‘parallel construction’”, in other words a fishing expedition to match the tip-offs¹⁸⁹³ that were provided by the (politicized) star chamber¹⁸⁹⁴ (Binney, 2018d, mn.30). See also “Police state”.

9) The “path of Totalitarianism... is shown over & over again in history, for thousands of years... [This time, however, it’s] like *shadow-blocking* people-- keeping only certain [‘politically correct’] information available for the general public is [now] the way you control things. It’s the way you [can also] control and manipulate [individual] people. That’s the way you get people to do what you want them to do... This is not a democracy” (Binney, 2019, mn.3). “Nobody knows what the rules are [that] they put into the [internet-search engine] algorithm[s]. That’s kept secret... They’re a part of-- CIA has really infiltrated them. Let me put it to you that way. And so they [NSA] are really following the orders that they are given” from CIA. See also “K.J.B. (King James’ Bible)/70 Year Plan”.

10) “They do monitor... [private citizens] of interest [such as pre-2015 Trump].... All the federal judges, all the members of Congress-- they are all being monitored, fairly closely, because they all [are perceived to] have power or influence.... People of power and influence, they got them and watch them all the time” (Binney, 2019, mn.6). “They have all the data that everybody’s been exchanging” (mn.8). Primary agenda? “They’re using all this to subvert our *entire judicial system*.... and it’s all being done, basically, behind secret, closed doors” (Binney, mn.35). See also “Scientific Management/‘Hawthorne Effect’”, “Technocracy”; Hobbes, 1651.

11) “[A]ll of this mass surveillance that they’re doing is absolutely unconstitutional-- without question.¹⁸⁹⁵ So what we’re really seeing here is an existential battle for the soul of... the United States of America”; which is, basically, going to get back into states (and other) rights, which has already started in the courts (Steele, 2018b, mn.13-14). “The Shadow Government [Hidden government]-- all of that-- these people have... committed treason against the founding principles of this nation... and they’re not being held accountable at all” (Binney, 2019, mn.11).

12) Why not? Certainly at least part of the reason is that “They solicited [decades ago] international support on this. too... mainly from the British and from the Israelis... [neither of whom want] the release of this [truth bomb] data-- that is de-classifying it.... That’s the point” (Binney, 2019, mn.12-13). See also “Globalism”.

13) Nonetheless, given the political will, the illegality “can be cleaned up pretty quickly, technically-- and it’s not difficult. The problem is what would happen would be an *international* backlash... [because] the NSA is the repository [not only] for most of the agencies within the US government... [but] also... for the

¹⁸⁹² It is difficult to imagine a more flagrant violation of the 4th Amendment’s “right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures” (United States Constitution, Amendment 4).

¹⁸⁹³ ...which is a violation of the 5th Amendment strictures against compulsory self-incrimination (Binney, 2018d, mn.31), in addition the unwarranted confiscation of private/personal property without due process of (written) law. It also violates the 6th Amendment basic law, that: “In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed... and to be informed of the nature and cause of the accusation; to be confronted with [which also means the right to question] the witnesses [evidence] against him...” (United States Constitution, Amendment 6), and can also be a severe intimidation or repression of the “1st Amendment... right to free association” (Binney, 2018d, mn.31).

¹⁸⁹⁴ “We can prove that *they* [US Dept. of Justice] fabricate evidence against people” (Binney, 2018d, mn.47).

¹⁸⁹⁵ ...in addition to unlawful. The Obama Administration’s Executive Order 13526, supersedes prior classification X.O.s from Bush, Jr. (#13292) and Clinton (#12958), and is “the overall law for classifying material for the US government. Section 1.7 says you cannot classify, maintain classified [status], or... [fail to] de-classify any material that is evidence of a crime, fraud, corruption, waste, abuse, or embarrassment to a person or agency... [Nonetheless operations such as] The Fairview Program [are] taking in data on all US citizens without warrants... [which is also] a violation of the 4th Amendment of the constitution. That’s criminality. That’s corruption” (Binney, 2018d, mn.28).

'Five Eyes' countries, and about 8 or 9 other countries¹⁸⁹⁶ in the world that are participating in this bulk acquisition of data. They are all depending on NSA to store it, and keep it there, so that they can [fishing expedition] interrogate it" without getting in trouble (Binney, 13-14). According to Binney, all the data can be (and often is) used for "whatever.... These people don't want to give up the power. That's the point" (mn.15). See also "UKUSA Agreement", "K.J.B. (King James' Bible)/70 Year Plan", "Evil".

14) Basically the 4th, 5th, and 6th Amendments (and also possibly the 1st) cannot coexist¹⁸⁹⁷ with the NSA database as it now stands. In the larger constitutional sense, the conflict is between these Amendments (the heart of the Bill of Rights) and Hamilton's Article 1, Section 8, Clause 2 (the "borrowing [national debt] clause"). See also "Big Government (growth of)", "Economics, Parity".

14b) It's not just a recent or 21st development. "The fact is there is little if any remaining constitutional protection of private rights against government attack-- because the farmer isn't being paid"¹⁸⁹⁸ (Walters, 1982, 12). See also "Sovereignty", "Parity pricing (for the primary sector)".

14c) In the smaller (short term) sense, operating in accordance with the constitution is operationally "...doable. They just don't want it done, because it's not expensive... taking [only] one 100th of 1% of the data [that is now being collected].... All they [Congress] have to do is cut their [NSA] budget.... [hence tearing up the] whole schedule for how you pay all these cooperating [contractor] companies" (Binney, 2018d, mn.53-54). See also "Imperialism, American".

15) "There is", however, "a hero in this entire story, and it's not a lawyer.... Admiral Mike Rogers... [2014-18] head of the National Security Agency. He discovered the illegal spying...[and] went personally to the FISA Court and briefed the chief judge [there], and worked with her for months, to uncover the people who" illegally spied on Donald Trump for 4 years (DiGenova, 2019, mn.3).

16) "People need to know for sure that they never had to give up privacy for security. That was never the case. It was a lie from the beginning, by those in power... and they used it gain power over everybody. And it is reversible.... It can be fixed easily, and without difficulty" (Binney, 2020, mn.249).

See also "Deep State", "Central Intelligence Agency", "UKUSA", "Scientific Management", "Provocation operation (Po)".

National Security State- (basically a militarized version, or supplantation, (per the *Nanal Security Acts* of 1947-52) of the pre-existing "Deep State") See also "Deep State", "Timarchy", "Secrecy, Cult of".

1) "Incredibly, technology is expected to jump start the economy every few years, thus... [a]lmost anything can be excused under the imprimatur of national security.... Next, textiles and steel nosedive straight out of the country, college economists...[argue] that Nintendo games and...[social media] pick up the slack" (Walters, 1971, 2003, 396). See also "Technocracy", "Social media", "Google", "Physics".

Nationalization- "Whenever [almost] any public utility or necessity becomes [in effect] a monopoly in private hands, the community, small or large, should take possession of same, by right of eminent domain, paying a just value therefor, and operate same in the interest of the whole community" (Loucks, 1916, 290). See also "Nationalization (of banks)", "Monopoly (and anti-trust)".

Nationalization (of banks)- Notwithstanding the obvious point that it is not in the business of any (non-totalitarian) government to be in the business of banking (judging, steering all private capital investments); "Public banks could issue credit cards at cost... [and] they won't make loans for corporate takeovers. They'll make loans to actuality help companies grow..." (Hudson, 2017i, mn.56).

See also "Public Banking Institute (PBI)", "Monetary Reform", Ch.4.

¹⁸⁹⁶ These other (non-Five Eyes) countries have a lower level of access (Binney, mn.14).

¹⁸⁹⁷ The 7th, 8th, and 10th amendments haven't been in particularly good health these days either. See also "State capture", "Oligarchy".

¹⁸⁹⁸ "Stability for agriculture by its very nature is a constraint on what government can do. The greater the parity [balance] between [the] different sectors of the [national] economy, the... [less demand there] is to enact laws, issue administrative rules and regulations, or make court decisions which revoke or abrogate individual rights, and consequently the more restricted is the domain of the bureaucrat and the politician" (Walters, 1982, 12-13). See also "Big government (growth of)".

Nature- See “Ecological economics”, “Capital, natural”.

Natural law- (that which appeals “over the authority of the king and Parliament, to fundamental principles” [Vile, 2018,148]; i.e. **teleologizing**, for political reasons, the scientific revolution; sometimes a.k.a. ‘deism’¹⁸⁹⁹) See also “Teleology”, App.C: “1-2-3”.

“To say that there is nothing just or unjust, but what is commanded or forbidden by positive laws, is the same as saying that, before the describing of a circle, [that] all the radii were not equal” (Montesquieu, 1748, 2).

“[T]he sacred rights of mankind... are written, as with a sunbeam, in the whole volume of human nature, by the hand of divinity itself, and can never be erased or obscured by mortal power.”- Alexander Hamilton, “The Farmer Refuted”, Feb. 23, 1775.

1) Although always a part of Classical & (then) Western civ¹⁹⁰⁰, the concept became particularly salient during the Enlightenment, as “an 18th-century...[counter, to the] clergy and monarchs [who had always claimed that their own traditional] special rights [& privileges were somehow] divine rights¹⁹⁰¹...[So] the revolutionists resorted to nature. But... [obviously] the word natural does not mean that the forces of nature are all arrayed on the side of human rights... [The reformers just didn’t want to say] *moral*. A natural right is an *asserted* moral right... If enough people join in upholding the assertion... [of it], then that right [now] has force [beyond rhetoric], and becomes a [common law] right respected by government and society” (Beard, 1943, 38). See also “Common law”.

1b) Yes, it was ramped up (to fit the time): “This law of nature, being co-eval with mankind and dictated by God himself, is of course superior in obligation to any other. It is binding over all the globe, in all countries, and at all times: no human laws are of *any* validity, if contrary to this...” Blackstone’s “Commentaries on the Law of England”, Section 2 (Blackstone, 1766).

1c) Blackstone’s predecessor in the “17th century, Sir Edward Coke [1552-1634, also]...defined and defended the liberties of Britons as something beyond the actions of the King and Parliament¹⁹⁰².... Coke thought that the legislature lacked the legitimate power to alter the British Constitution, and that the constitution was an accumulation of legal traditions, developed gradually over time, which rested ultimately on the wisdom of experience, and upon natural law.... He treated sovereignty as a mystical quality, not capable of full, reasoned explication. Unlike Blackstone for whom law was the command of the (earthly) sovereign, to Coke, law was [simply] the...rules under which people, corporations, and rulers interacted. Americans drew [much more] upon Coke’s constitutionalism” (Samuelson, 1996).

1d) Although “the doctrines of deism and natural law were losing popularity in Europe on the eve of the Revolution, their [continued] acceptance by American Revolutionary leaders is strikingly evident in the best-known passages of the Declaration of Independence” (Graebner, Fite, & White, 1975, 52). This is because “” (Vile, 2018, 148). See also “**Charismatic Authority (CHA) & Charismatic Dependency (CHD)**” [.natural law].

2) Like its namesake [nature], NL has, more recently, tended to favor (per *laissez-faire*) the **centrifugal** (e.g., politically, the ‘1-4’ [or ‘seniors-freshmen’] coalition; typical of ‘globalism’), at the expense of the

¹⁸⁹⁹ The Great Awakening of the 3rd quarter of the 18thc was actually “in some measure a[n emotional] reaction” to the preceding quarter century’s ‘excesses’ of empirical reason and mechanistic physics (per what some have called “the cult” of John Locke and Isaac Newton that existed [particularly] in the 1730’s) . A growing group of “[i]ntellectuals...[from] the late 17th century had come to believe that there were ‘*natural laws*’ not only in astronomy, physics, and other physical sciences, but [also] in fields such as religion and government as well. These individuals believed that through exercise of his reason man could discover the natural laws of religion as well as of science. *Deism*, the natural religion which resulted, postulated an omnipotent God who required virtuous living and allocated rewards and punishments accordingly after death. Deists [most famously] rejected divine revelations...” (Graebner, Fite, & White, 1975, 51-52). See also ‘Philosophy’ [‘determinism’ vs. ‘agency’].

¹⁹⁰⁰ In addition to Thomas Aquinas’ famous articulations in the 13thc, classic authors on public rights, including “Aristotle, Cicero, Locke, [and] Sidney...[all] articulated philosophies of natural law or natural rights” (Vile, 2018, 148-149).

¹⁹⁰¹ It was then primarily used to challenge the “divine right of kings”. See also ‘Enlightenment, the’.

¹⁹⁰² Coke’s *Institutes of the Lawes of England*, first published in stages between 1628-44, is still today widely recognized as a foundational document of English & American common law, See also “Common law”.

centripetal (e.g., politically, the ‘2-3’ [or ‘juniors-sophomores’] coalition; typical of ‘nationalism’). Civilization is pretty much the art of balancing [preferably non-violently] these 2 basic forces and their respective interests. See also “Debt cycles”, “Dynastic cycle”, “Trump, Donald”.

2b) Laws (like currencies) are tools, and Natural and Common Law have long been thought of as resting on different sides of a state’s toolbox. For example: “The Year 1776 is celebrated for a revolution in favor of [‘natural law’] *Liberty*. The year 1787, it is expected, will be celebrated with equal joy, for a revolution in favor of [‘common law’] *Government*” (Raphael, 2013, 2). See also “Common law”, “Tools”.

3) Despite ‘natural law’ rhetoric, when put into practice (i.e. politically) it tends to lead, over the longterm, to Legalism (a.k.a. ‘of, by, and for the lobbyists’), with that ideological combination-- of ‘natural law’ (theory) and ‘legalism’ (practice)¹⁹⁰³-- often going “over-the-head” of traditional “common law” folkways, even though ‘the common’ folk vastly outnumber such professional interests as attorney-legalists & academic-theoreticians (even today in the millennialist era). What could go wrong? See also “Legalism”, “Parties, political”, “Corporations (and *corporate ‘personhood’*)”, “Franklin, Benjamin” [Bacon’s dystopia]. See also “National Identity/Nationalism”, “Com law”, “Globalism”, “Oligarchy”.

Near monies- (synon. ‘quasi monies’ [OnsGeld], ‘money surrogates’, ‘dollar-denominated money claims on non-bank entities’, ‘3rd-level monies’, ‘monetary services’ [usually of a longer-term and less restrictive volume than ‘*shadow-banking*’ assets, which comprise the majority of (though not all) r-monies]; a.k.a. [non-payment system] ‘*savings investments*’; *d.b.t.’s* ‘cash equivalents’, or even worse just ‘cash’)

1) a slightly nebulous (though not deliberately deceptive) ‘street’ term for traditionally liquid, non-cash assets (i.e. not on the payment system, but only ‘1 or 2 clicks’ away), such as:

1a) [*narrowly*-defined]: Treasury bonds/bills or certificates of deposit (CDs) or other secure *savings investments* [*d.b.t.* ‘time deposits’] (f.e. ‘money market deposit accounts,’ and ‘money market mutual funds’; not to be confused with mutual funds or stocks in general) that are readily convertible into money. See also “M2”.

1b) [*broadly*-defined]: “The market for US dollar-denominated money-claims [on non-bank entities] is huge,¹⁹⁰⁴ exceeding \$25 trillion on a gross basis. (By way of comparison, total outstanding US mortgage debt is about \$14 trillion.¹⁹⁰⁵).... The 9.3% annualized growth rate of this market from 1995 to 2007 far exceeded the 5.4% annualized growth rate of nominal GDP over the same period... this is primarily an institutional market... Apart from...[*savings investments*], MMF shares, and physical currency...few of these investments are held directly by [relatively small fry] individuals” (Ricks, 2016, 34), as opposed to institutions making million-dollar minimum increments. See also “M3”.

2) Indeed, “[m]ost of the assets held in custody at the...[FRBNY] in international official accounts are in the form of marketable US government and agency securities” (Federal Reserve Bank of New York, 2018). See also “National Debt Economy”, “Reserve currency”.

3) “The short-term IOUs that are issued by shadow banks are widely understood to be close substitutes for [banks’] deposit instruments. For accounting and other purposes, these short-term debt instruments are called *cash equivalents*. Corporate treasurers and other businesspeople just call them *cash*. Economists sometimes refer to them as *near money* or *quasi money*.... [However, such] “cash equivalent instruments... are not typically used as a means of payment... [i.e. they are not] money.

In this respect, [some forms of] cash equivalents [‘near monies’] look like ordinary bonds” (Ricks, 2016). See also “Cash equivalents”, “Debt securities”.

4) *Commercial paper* debts are also transferable to banks and may also thus be considered a form of ‘near-money’, although backed CP is not as solid as Treasuries or CDs, which do not require collateral or

¹⁹⁰³ More simply put, “natural law” tends to turn into “legalism”, and then excessive “legalism” tends to justify itself in terms of “natural law”-- that is, until ‘the commoners’ snap out of it (i.e. the loser script of relying on hyperbolized rhetoric and legalese). See also “Commons”.

¹⁹⁰⁴ Some consider ‘near monies’ to be unquantifiable, or nearly infinite in nature; hence ‘M3’s discontinuance in the US. Drawing the line between “M2” and “M3” was always tough, and the Federal Reserve also discontinued (publishing) “M2” numbers in February 2021.

¹⁹⁰⁵ And US *shadow banking* liabilities reached \$20 trillion in 2007, compared to traditional bank [TAB] liabilities (pretty much the same as “mortgage debt”) of less than \$12 trillion (Noeth & Sengupta, 2011).

securitization. (CP is **more often** called 'shadow banking'; Treasuries and bank CDs are **more often** called 'near monies').

5) Although there is much overlap between the terms '*near money*' and '*shadow banking*'. The latter more often pertains to extremely short-term & high-volume, non-bank institutional alternatives to old-school **TAB**-bankmoney debt financing; whereas those areas of 'near money' that are not more-or-less [synonymous with] 'shadow banking' often pertain to smaller (or individual-scale) medium-to-longer-term bonds, bills, CDs, and other secure forms of investment that are one step away from the payment system.

6) Most forms of (the broader category of) near money are nothing new. "[T]he main point is likely to be lost if we fail to recognize that savings-deposits, treasury certificates, and even commercial paper are almost as close to demand deposits [**TAB**] as are demand deposits [**TAB**] to legal-tender currency [physical cash]" [i.e. one step]- Chicago Economist Henry Simons, 1934 (Ricks, 2016, 40).

7) Austrian founding father Friedrich Hayek was in favor of erasing the distinction between near monies and state/stamped money: "There can be no doubt that besides the regular types of the circulating medium, such as coin, notes, and bank deposits, which are generally recognized to be money or currency, and the quantity of which is regulated by some central authority or can at least be imagined to be so regulated, there exist still other forms of media of exchange which occasionally or permanently do the service of money... [I]t is clear that, other things equal, any increase or decrease of these money substitutes will have *exactly* the same effects as an increase or decrease of the quantity of money proper, and should therefore, for the purposes of [no loftier notion than] theoretical analysis [a.k.a. experimentation], be counted as money"- 1931 (Greenham, et al, 2012, ch.5). See also "Globalism". See also "Money markets & Money market funds", "Shadow banking (SBS)", "Commercial Paper", "M3", "**Creney**".

Negative interest rates policy (NIRP)- (i.e. the 'great divergence'¹⁹⁰⁶ of Japanese-European central banks from US-UK CBs [from 2015-18]; not to be confused with QE, which is just CBs 'cleaning up' their constituents' balance sheets)

1) "a sign of a bunch of managers of fiat money who don't understand fiat money... [and of] our fiat... [currency] rulers not understanding fiat...[currency]" (Keen, 2016d, mn.5). 'Capitalism' without interest is 'capitalism' without risk, which is really just post-'capitalist' "central bankism" (sometimes a.k.a. 'communism'). See also "Capitalisms".

2) "a very far-fetched view" (Galbraith, 2016c); i.e. a temporary¹⁹⁰⁷ improvisation, a sign of desperation. See also "**Great Divergence (monetary; 2015-18)**".

2b) "Absolutely crazy" (Werner, 2021, mn.54). See also 'German (industrial) banking' [.small banks].

2c) ...like a fox? <https://twitter.com/SNewmanPodcast/status/1605729839935533061?cxt=HHwWisDRqYWy2cgsAAAA> (Luongo, 2022b, mn.42). See also "**Powellism**" (stamping NIRP-communism out), "Eurodollars" [.planet].

2d) Is Europe driving banks out-of-business? NIRP "policy is not without its critics. Switzerland's banks, in particular, have suffered as negative rates [-0.75% base rate] have squeezed their margins to historic lows, leading to substantial underperformance compared with [other] European and US peers.... [And] ultra-low bond yields have [also] eroded returns for risk-averse strategies" such as pension funds.

- *Financial Times* (20-3-2). See also "Nonbank Financial Institutions (NBFIs)", "Banking, end of".

3) "...an unnatural concept. You pay interest to someone who has lent you money, but you do not agree to pay interest to someone who has borrowed from you. Similarly, it would be nice to go shopping and to have the shopkeeper pay you the purchase. Apparently, this would be turning the real world upside

¹⁹⁰⁶ NIRP (more in Europe) puts pressure on **state-monetized credit institutions** (banks) to extend credit ('lend'), while IOR/IOER (more in the US) compensates banks for *not* lending. See also "**Great Divergence (monetary; 2015-18)**". It would seem that, in the US, CBs still want to grow the government; whereas in the more socialist EU & EMU nations, that has already been attained, so policy there is a more direct form of (see also) "Bank welfare".

¹⁹⁰⁷ Insiders at the St. Louis Fed agree: "The fact that it is costly to store and protect large amounts of currency means that short-term rates can become slightly negative in some circumstances. Nevertheless, zero is a reasonable approximation on the lower bound for interest rates" (Fawley & Neely, 2013, 82).

down.... [a] distorted measure of conventional interest rate policy, in a desperate attempt to regain the latter's effectiveness which has largely been lost in the present bankmoney regime. What actually happens when 'negative interest' is imposed is as follows:

Negative interest on [TAB-] bankmoney reduces the liabilities of banks to their customers and results in higher balances of a bank's profit account. This is tantamount to an *illegal private tax* on deposit money to the benefit of the banks.... The resulting profit in terms of the central bank's equity would be paid out annually to the treasury, adding to the public purse. Negative interest would then indeed [literally] be a tax on holdings of DC [digital currency]....[and] a technocratic folly born from unworldly model economics... [A NIRP] is about a) the overt expropriation of money if imposed on [TAB-] bankmoney, and is b) an unwise tax if imposed on [RAB] reserves and DC" (Huber, 2018d).

3b) As of (at least) 2020, in the Eurozone area, banks' "balances at the central bank [do in fact] pay a negative rate of interest, so...[the banks] have to pay interest to the CB, which of course is a burden on the banks, and generates profit for the Central Bank... [Thus] the banking sector cannot get rid of those Reserves.... unless the CB returns the bonds [right] back to the financial sector" (Huber, 2020c, mn.7).

4) **an obvious violation of property rights, and just a more direct way of getting people's money than the usual** tactic of **inflation**. Bankers openly admit that as "long as holding cash... remains an option, negative rates can only be used sparingly, lest depositors take their money and run.... A radical ...reform which replaced cash with electronic money could solve this. But [unveiled] sucking money from bank accounts [just] might... [prove to] be unpopular" (Economist, 2018b). See also "Provocation operation (Po)".

5) "Until recently it was widely believed that interest rates *could not* fall below zero. That turned out to be untrue though, as the alternative, holding considerable amounts of *cash*, is inconvenient and risky" (Wortmann, 2019d). Essentially bank 'depositors' have no alternative (to what the banks say), other than dealing with large sums of cash. See also "**Federal Funds (Accounts) for All**".

6) are currently being prevented in the US by the Fed paying Interest On Excess Reserves (IOER). "The idea is that if banks can stash money at the Fed at 0.5% interest, [then] they won't lend to anyone else for less than that" (Coy, 2016). See also "Bank welfare".

7) Nevertheless there was, globally, an estimated "\$9.2 trillion worth of negative-yielding government securities as of July 11" (Forsyth, 2018); not with US Treasuries, but mostly in (harder hit) Europe¹⁹⁰⁸ and Japan. See also "Federal Funds rate (FFR)", "Interest on Excess Reserves (IOER)".

[Most 'higher rated' European junk bonds now pay less interest than US Treasuries (Zerohedge, 2017b)]

7b) From the winter of 2015-16, "every time the Fed moved [rates] a little bit up, the colluding central banks... the ones that were involved in the **global policy of zero percent interest rates on average**... they would counter-balance.... [saying] '*We've got the other side of this. We are going to reduce our rates from zero to negative. We are basically going to pay banks to give us money, to liquify the economy.* The Bank of Japan [then] did the same thing", including purchases of long-term debt in their version of Quantitative Easing, "so that they could render all the costs of borrowing, throl 10 years, at effectively zero" percent interest (Prins, 2018b, mn.12-13). [Prins insists that it's all about CB's coordinating to "counter-balance" rising US; falling EU/Jpn., w/o expln. as to why.]

¹⁹⁰⁸ Also the vast majority of Italian BB-rated bonds, from 2018, are paying *lower* rates than US Treasuries.

8) In Switzerland “since they introduced negative interest rates to allegedly stimulate the economy, borrowing rates...paid by borrowers have been rising!” (Werner, 2016b, mn.111); and have squeezed “profit margins of the banks so much that the banking sector comes under massive pressure to merge and amalgamate. Larger banks lend less for productive purposes and engage more in financial transactions” (Werner, 2016c).

9) What an absurd problem¹⁹⁰⁹. “If politicians want to curb the negative interest rates, they will have to take action themselves, by introducing [actual] market processes [to the sector] in a responsible way” (Wortmann, 2019d). See also “Central Bank”.
See also “European Central Bank (ECB)”, “Regulation”.

Negotiable debt- “derivatives, money market funds and repos.... The combined ongoing value of these...‘negotiable debt instruments’ is today many times the total value of global GDP” (Mosley, 2017).

Needs, desires (& law)- (a fool doesn’t know the difference...between a ‘sane’ and ‘insane’ society) Power “rests in the ability to satisfy human *needs*.... Notice I do *not* say human *desires*¹⁹¹⁰. One of the striking things about our society today is how remote our desires are from our needs.”

- Analytical Historian Carroll Quigley (1976c-pt.3, mn.’43). See also “Civilizati’n, Weste”n” [Quigley], “Totalitarianism” [I.C.].

“Earth provides enough to satisfy every man's need, but not every man's greed.”

- M.K. Gandhi (1869-1948), in *Gandhian Model of Development and World Peace* (1989, 80). See also “Ecological economics”, “Imperialism”, “Privilege”.

Neo- Orwellian *doublethink* term... a prefix meaning the *opposite* of what the root word has meant. The political aim of the “neo”-oligarchy is “to win by ideological and political conquest [‘*Brave*’ *New World*], rather than [by] the more expensive military oppression of an outright police state [1984]” (Hudson, 2012g). See also “Orwell, George”, “Neoclassical Economics”.

[‘neo’-freedom?]

Neoclassical Economics (NCE)- (synon. ‘neoliberal economics’, ‘neoliberals’/‘monopolists’; a.k.a. the ‘Lausanne School’ and/or the ‘Mathematical School’ of economics, or even ‘*neo-Keynesian* economics’¹⁹¹², which is synonymous with the past half-century’s ‘mainstream economics’)

¹⁹⁰⁹ As Jamie Caruana (General Manager of the BIS) remarked in 2014, “‘Low rates can certainly increase risk-taking, but it is not evident that this will turn into productive investment...[and] if they persist too long, ultra-low rates could...entrench a highly undesirable type of equilibrium-- one of high debt, low interest rates, and anemic growth’” (Prins, 2018c, 9). And it’s not just some fly-by-night theory. See also “Japan model (asphyxiation), the”, “Monetary Reform”.

¹⁹¹⁰ “A tapeworm...[injects] a chemical into its host that trigger[s] a craving by the host for what the tapeworm wishe[s] for its dinner. By managing it’s hosts desire, a tapeworm manipulated its host to set aside self-interest and please its parasite. And so the tapeworm proceeded to consume its host’s energy and health” (Fitts, 2003). See also “Parasite”, “Imperialism”, “Big...”.

¹⁹¹¹ This has taken a hit with the demise of civics classes in the 21st century (to date). See also “Civics”, “Political Economy (classical)”.

¹⁹¹² This requires some explanation. The “Neoclassical-Keynesian synthesis” [merger] in the mid-20thc (which is synonymous with ‘*Neo*-Keynesianism’) was really more like a Neoclassical incorporation of Keynesianism. Basically Hicks, Modigliani, and Samuelson updated the

NCE “break[s] up the economic system and look[s] only at the parts.” - Michael Hudson (Dodson, 2009)

1) “The school that arose in the last quarter of the 19th century,¹⁹¹³ stripping away the *classical* concept of economic *rent* as *unearned income*.¹⁹¹⁴ By the late 20th century the term *neoclassical* had come to connote a deductive body of free-trade theory using circular reasoning by tautology, *excluding discussion* of property, debt, and the financial sector’s role in general (see *Nobel Prize* and *Parallel Universe...*)” (Hudson, 2015b). See also “Unearned income”.

2) “They were arguing against Marx¹⁹¹⁵ back in the 19th century, and they were saying ‘*Marx is saying Capitalism is gonna fall apart. We are developing an alternative saying [that] Capitalism is a perfect system...* in the 1870’s...’ and that’s really difficult... so we’re going to make a few simplifying assumptions: 1] *Let’s ignore money, ok?* 2] *Let’s ignore credit.* 3] *Let’s ignore disequilibrium....* As it happens, the mathematical modelling they did didn’t prove what they wanted to prove, anyway. It took 30 years to establish that by mathematicians. [Nonetheless] They were so hung up on this idea of a market economy reaching equilibrium [that] that became the mindset that they’ve been stuck in for one-and-a-half centuries, without actually realizing it... ignoring banks, credit, and money”¹⁹¹⁶ (Keen, 2016u, mn.4-5); Neoclassicism is thus “...more dangerous to *capitalism* than any number of left-wing revolutionaries” (Keen, 2016o, mn.19). See also “Capitalisms”, “Lender of Last Resort (LoLR)”.

3) Richard Werner has identified 5 primary “pillars”¹⁹¹⁷ of Neoclassical Economics, the assertions: a] that banks are “mere *financial intermediaries* that have no special powers; b] that GDP “causation runs from *interest rates* to economic growth”; c] that markets “are in *Equilibrium*, thanks to price movements; d] that “we need to borrow from abroad or attract foreign investment” (because there is a fixed quantity of money); and e] that “high growth require[s] deregulation, liberalization and privatization.... adopting a *laissez-faire* attitude: no matter how big and influential a small number of multinationals or mega-banks get.... It has been their ploy to pretend that they were issuing what is a very scarce and precious resource– savings... For if it was not scarce, why should we be prepared to pay the bankers for this service (in the form of interest)?.... they can only charge for ‘capital’, because economics has been designed to create the myth of its scarcity” (Werner, 2016c). Neoclassical economists “assume that capital is the scarce resource, while ‘labour’ is in abundant supply, [thus] justifying a high reward for capitalists and a low reward for labour– resulting in a declining distribution of national income in favour of the capitalists and an ever declining share for labour” (Ibid).

prevalent Neoclassical models with (certain statistical-governmental aspects of) Keynesianism, and it became the new ‘mainstream’ after WW2. It is [or was] called a ‘synthesis’ of Neoclassical (assumptions) and Keynesian (‘demand-side’) theory because the conclusions of the model in the long run-- or in a “perfectly working” IS-LM system-- were Neoclassical, but in the “short-run” or “imperfectly working” IS-LM system, the Keynesian conclusions held (as the real default margin)- <https://www.hetwebsite.net/het/schools/synthesis.htm>. See also “Big government (growth of)”. In the 1960’s; what “came to be called the *Neo-Keynesian consensus* put... [more] weight on monetary policy [than did the old NCE], and owed a great deal [also] to” Friedman & Schwartz, 1963 (Bordo & Rockoff, 2013). See also “Post-Keynesian Economics”.

¹⁹¹³ What Thorstein Veblen coined “Neoclassical” Economics in 1900, developed in large part from the works of Stanley (‘private central bank’) Jevons and John (‘unearned income’) Clark, taking up the oligarchical baton from earlier reprints of Jeremy (“*Defence of Usury*”) Bentham (1748-1832). See also “Usury”, “Compound interest”, “State capture”, “Industrial Revolution, 2nd”.

¹⁹¹⁴ The “*whole idea* [sic] of classical Economics is [that] not all income is earned. Landlords don’t earn their income from... [taking] rent in their sleep” (Hudson, 2020c, mn.24-25) See also “Neo”, “Rentier”, “Compound interest”, “Zombie”.

¹⁹¹⁵ There is evidence to the contrary, that the ‘vested interests’ of the latter 19th century who endowed the new ‘Economics’ schools, took ‘regular American’ Henry George more seriously than they did Karl Marx and his handler Friedrich Engels. As mentioned above (see “Georgism”; Gaffney, 1994), “neoclassical economics” was being formed in late 1880’s and 1890’s America, with the world’s first “Economics” departments opening later that decade. In the ‘economizing’ US and UK at that time, it would not seem hyperbole to say that George was outselling Marx by at least a 20 or 30-to-1 margin, and was a household name. For a long time it seems that Marx’s *Das Kapital* was only selling well in Russia- 3,000 copies in one year anyway, whereas in Germany (its intended market) the first edition of 1,000 copies took over 5 years to sell (Figes, 1998, 139). Marx’s earlier 23-page *Communist Manifesto* pamphlet (1848) didn’t even see any publication in the United States until 1872, in *Woodhull & Claflin’s Weekly*, a short-lived 1870’s radical New York women’s periodical.

¹⁹¹⁶ Keen considers continuing these 19th century assumptions into “the 21st century-- when we have the mathematical technology to model disequilibrium systems... [and] build models... [that include] credit and money... is intellectually criminal” (2016t, mn.5).

¹⁹¹⁷ Steve Keen sometimes simplifies the Neoclassical “fantasy planet” to 2 primary elements: “where everything happens by barter and money is irrelevant” (Keen, 2017k, mn.15). Bernard Lietaer concurs that “what’s taught” in Economics departments today “is an abstract ideology which has nothing to do with reality. The reality being... [for them, only that which] ‘fits my equations’” (Lietaer, 2014). See also “Barter”, “Money”.

See also “Market fundamentalism”, “Globalism”.

4) A primary result of these false assumptions is the “principle of Neo-classical Economics... [that] any way of making wealth is as productive as any other way. It’s value-free [gross]. And productivity is measured by how much income [changing hands] is generated in the short-run. There’s no long-run... and they show this by mathematical models that are very tunnel-visioned, and essentially leave out of account all the social consequences and economic consequences.... [It is] the anti-thesis of... [Classical Economics] Smith... Ricardo... Mill... [who] advocated, namely [that] you tax the unearned income” (Hudson, 2011c). See also “Neo”, “Orwell, George”, “Nobel Economics Prize”.

5) “They model the velocity of money, but ignore that that means the velocity is *humans*.... They’re stuck in ridiculous math models¹⁹¹⁸ that assume away the fact that we are living, loving human beings.... It actually enshrines narcissism” (Vrabel, 2011, mn.46). See also “Contempt”.

6) Economics today “is dominated by a mythical vision¹⁹¹⁹ which we call neoclassical Economics” (Keen, 2015); the “vast majority of economists... delusionally model the macroeconomy as if *banks, debt and money don’t exist*” (Keen, 2015b); perhaps because their myriad assumptions (of past consensus & “equilibrium”) may seem sensible “if you assume that markets [monied values] come before governments [assigning value to money], but the whole argument totters quickly once you realize that they don’t” (Graeber, 55). See also “Clark, John Bates”, “M.I.T.”, “Gross Domestic Product”.

7) “When I look back on that period of my life, I realize... what Economic education did at that stage. It didn’t make me into an analyst. It made me into a zealot... [with] a vision of a perfect society”, and thus committed to “changing the real world into the thing you see in your textbooks” (Keen, 2016m, mn.0-1). “Only in the Neoclassical paradigm are ‘shocks’ the cause of crises. Like [the 16thc] Ptolemaic theory of comets” (Keen, 2017b). See also “Neo”, “Lender of Last Resort (LoLR)”.

Bentham’s peerage

[Simon says, ‘No banks, money, or debt allowed’.]

Neoclassical revolution- (‘unearned income’ no longer exists?)

In order to allow “bankers to [maintain] control of the supply of money... it was necessary to conceal, or even to *mislead, both governments and people* about the nature of money and its method of operations.” - Carroll Quigley (1966, 53). See also “Banking School/Bank Teachings”.

1) An “anti-classical reaction” of “junk economics” upended Anglo-American Economics “just before World War One”, essentially laundering all sorts of (what was hitherto called) *unearned* income and *usurious* activities into an accounting system that is now called Gross Domestic Product (Hudson, 2016d); which later proved to be of unsurpassed utility in defeating the German “socialists” (See “German [industrial] banking”). To the victors go the spoils? One century after the displacement, however, the “result of this... Neoclassical revolution... just before World War One was that today, almost all of the economic growth in the last decade has gone to the 1%” (Hudson, 2016d). The economy isn’t really “growing”, because rentier gaming “is not production, it’s not consumption. The wealth of the 1% is [now] obtained by essentially loaning money to the 99%, and then charging interest... and recycling this interest at an exponentially growing rate” (Ibid). See also “Unearned income”.

¹⁹¹⁸ Prof. Keen agrees that “calling what Neoclassical Economists do ‘mathematics’ is an insult to mathematicians” (Keen, 2020, mn.1). See also “Mythomatics”.

¹⁹¹⁹ “Neoclassical theory... puts banks as if they were like this perfect [and invisible!] fuel that never never breaks down. For me they’re like the oil in an engine, which you need. But if you fill it up completely with oil you know... you’ll stop it [from] working. They are a lubricant. They are not the source of wealth” (Keen, 2011b). “It’s almost as if they’re wearing... marble... glasses... They’re not even looking at the important data, even though... the statistical agencies record it. So they’re completely ignoring private debt” (Keen, 2016e, mn.30), as well as banks’ endogenous money creation (mn.31). “So they’re completely blindsided by the most important causal factor... And they’re still floundering around trying to explain why [significant] growth is not occurring now (2016e, mn.32).

2) How on Earth did this happen? “It wasn’t because the people who wrote that stuff believed it... Jevons and Marshall and so on... But they didn’t believe [that] it was possible to analyze the economy unless you assumed [that] it was in equilibrium. So it was a technical choice for them, back then; [but] it [then] became a religion [‘omniscient, omnipotent, benevolent’]¹⁹²⁰ in the 20th century” (Keen, 2016p, mn.2). See also “Equilibrium”, “Physiocrats, the”.

3) Nonetheless, ‘the suits’ had to vaporize ‘Georgism’, to include George’s vernacular synthesis of Classical Economics. George’s work, was first published in 1879, 15 years after Herbert Spencer’s trendy “survival of the fittest” [animalistic] UK-type big think...[and] it drew out the obvious fools. George was [then] the elephant-in-the-room, basically... So they had to re-figure all the working definitions... [in order] to kill that word ‘capital’-- to make it [into] a meaningless [muddle] word. *Progress & Poverty* was basically arguing with [the then-proto] economists, from the [pre-existing] Classical [economics] framework...[in] a plain-speak analysis...[making sense] of [and popularizing] the [yes, it was sensible then!] framework that the Classical economists had [(for the most part) already] worked out over the past century. See also “Clark, John Bates (1847-1938)”, “Industrial Revolution, 2nd”, “Georgism”, “Fin de Siecle”.

[See also “Debt cycles”, “Cycles”]

Neo-Cold War- 1) “is about... trying to oppose any country that doesn’t want to accept US and European banking in control of its economy” (Hudson, 2016c). Washington is currently trying “to exclude” Russia and China “from the international monetary system. The United States has boycotted the Asian Infrastructure Investment Bank. So it’s not going to be part of the rebuilding of the Eurasian economies. And it’s told Europe to essentially back Ukraine [and to] avoid importing Russian gas. There is a trade war, and a financial war against Russia, China, and the BRICS that is splitting the world into two halves...” (Hudson, 2015d). See also “Russia”, “Russiagate”, “Land Bridge”.

2) How is it going? As of summer 2020, “in terms of power, we [US] are already displaced by Russia and China. And... the United States...(won’t) intentionally start a war with **either**, because we know we wouldn’t do well”. But it’s [still] important to have an enemy...[for the] 1,000 billion [\$1tn.] annual military-security-complex budget”- Paul Craig Roberts, Oct. 1, 2020. See also “Angry Birds”.

3) There are “clear indications, by the United States staying in Ukraine, and getting [permanent] bases in Ukraine, [that] it will break up that Germany-Russia-Beijing-& Israel... plan to dominate Eurasia” (O’Connell, 2022b, mn.17). See also “Russiagate”, “International Intelligence Community (I.I.C.)”

4) https://twitter.com/adam_tooze/status/1606005745899737100?cxt=HHwWmMC4-fDt1sksAAAA

Neoconservatives- (synon. ‘neocons’, ‘chickenhawks’. ‘naked imperialists’; termites) were originally known as “the crazies” in early 1990’s Washington; nonetheless a decade later they were at the reigns of power, across the board, in Washington foreign policy.

1) “They were childish thugs on a power drunk. It is hard to explain unless you experienced the madness in person¹⁹²¹...[f]or those who have a hard time fathoming the idea of destroying a civil infrastructure so

¹⁹²⁰ Concerning how “markets” have been “given a sacred character”, see also “Market fundamentalism”.

¹⁹²¹ Fitts “worked in the George H.W. Bush administration... [and] did work with people associated with the Republican Neocons. They were quite literally nuts. They got pleasure from destroying things. They were thugs. They were incapable of dealing with facts, let alone

you can justify spending multiples more bringing in...private corporations to rebuild the function, generating vast fees for your friends...” (Fitts, 2019d). See also “Culture”, “Reserve currency”.

2) “There’s not one Neocon who’s ever served our country, or build his own corporation....[They] were created by *Commentary Magazine*...[of Norman] Podhoretz, the father-in-law of [fmr. Asst. Sec. of State and contempt of Congress pardonee] Elliott Abrams... Jews who were Trotskyites and avowed communists. The only thing they really understood was that we had to have revolution at every point in the progression of history.... [What] the Neocons want is a constant state of war, and a military-industrial-complex where the United States makes certain that Israel be the focal point in the Middle East...” (Pieczenik, 2017c, mn.9-10). See also “Imperialism”.

3) Today neocons “...view democratic governments that impose progressive income taxes to finance public infrastructure and other economic welfare as being [just] as reprehensible as the pre-democratic regimes criticized by Adam Smith and other early *liberals* [who were then] protesting against [18th century] governments controlled by autocratic monarchs [that were] spending tax revenue largely on...wars and colonial ventures. Neoconservatives... [today] support wars to enforce the *Washington Consensus* throughout the world” (Hudson, 2015b).

4) Under neocon-Deep State stewardship, “the United States and its accomplices... [have] systematically, intentionally committed war crimes for 2 decades” (Roberts, 2019, mn.20)....

5) ...And the “global neocons do not appear deterred by the recent calculation that the United States has spent \$5.9 trillion on the War on Terror... since 9/11-- a time when US pension funds were still fully funded.... [Meanwhile, under the ‘news’ radar], “FASAB-56 can now finance secret armies without the interference of seasoned Marines such as Generals Mattis and Kelly” (Fitts, 2019i). See also “Federal Accounting Standards Advisory Board (FASAB)”.

6) basically “the War Party” (Hudson, 2012g). See also G. Orwell’s *1984* (chimpanzees), “Neoliberalism”, “Washington Consensus”, “Attitude inoculation”, “Zionism”, “Green Neocons”.

[see Fitts & Betts, 2019]

Neoliberal Economics- See “Neoclassical Economics (NCE)”.

Neoliberalism- (a.k.a. state-sponsored ‘economic libertarianism’¹⁹²², ‘the cancer system’ [McMurtry])

1) The political¹⁹²³ “philosophy that public ownership and regulation is inherently less efficient than management by financial operators. The policy conclusion is that the public domain and government enterprises should be privatized and the sales proceeds used to roll back taxes on the highest wealth and income brackets. Unlike the [classic] liberalism of Adam Smith and subsequent free-trade economists, *neoliberalism* endorses an intrusive role of government to protect property and financial fortunes” (Hudson, 2015b); and “has been running Europe for the past 10 years” (Hudson, 2016i, mn.11). See also “Financialization”, “Neo”.

2) “It’s basically a politicized version of first year [“invisible hand”] Economics” textbooks (Keen, 2017c, mn.1); i.e. “a misleading [**deceptive banker’s**] term for the financial and industrial **corporatism** of global

complexity. Don’t believe me? Watch Charles Ferguson’s documentary, *No End in Sight: Iraq’s Descent into Chaos*. Then watch *Vice*” (Fitts, 2018w).

¹⁹²² *Libertarianism*, though it is mostly supposed to be about domestic (legal) policy, is often distinguished from (economic) ‘neo-liberalism’ in terms of being more isolationist (as opposed to interventionist) in *foreign* policy.

¹⁹²³ Although the terms a.*neoconservative*, b.*neoliberal*, and c.*neoclassical* are sometimes conflated, they are usually meant to refer to [the formerly discredited terms] a.*imperialism* (in foreign policy), b.*rent-seeking* (in domestic policy), and c. *‘free-market’ism* (in economic policy). They also correlate with a. ‘neocons’, b. ‘libertarians’, and c. ‘neo-classicists’, respectively (in the millennial era political-economics lingo). Yes, the oft-changing and similar-sounding names seem to have been applied to evade, confuse, and retard public discussion (slippery labels). See also “Deceptive Banking Terms (d.b.t.’s)”.

scope, oligopolistic markets, and cross-border supply-chain dominance” (Huber, 2018, 5). See also “Globalism”.

3) “The basic neoliberal idea of prosperity is financial gain based on turning [various forms of] rent *extraction* into a flow of interest payments...[from] buyers-on-credit. This policy favors financial engineering over industrial investment” (Hudson, 2017p). See also “Finance Capitalism”.

3b) It “divides the economy into [tunnel visioned] parts...[that] makes every part trying to make a gain [all the time]. And if you do that, [then] you [eventually] don’t have any infrastructure that is lowering the cost for...[everyone. But] instead have every part fighting” everyone (Hudson, 2020c, mn.127).

4) The “Neo-liberal model” is “imposing on the economy such heavy debt charges, such heavy taxes, that living standards-- over the next 10 years-- will have to fall by at least 15%.... Once you strip all of the capital away.... Once you impose debt-peonage on an economy, you’re left with a Feudal-type system... That’s our future, until voters push back in another direction” (Hudson, 2009). See also “Debt peonage”.

5) The “last 30 years has...[been] dominated by a revival of the long-since-abandoned 19th century creed that held that ‘free’ markets and human freedom in general were ultimately the same thing. *Neoliberalism* has always been wracked by a central paradox. It declares that economic imperatives are to take priority over all others.... All other hopes and dreams... are to be sacrificed for the primary goal of economic productivity. But global economic performance over the last 30 years has been decidedly mediocre.... *By its own standards...* the project was already a colossal failure even before the 2008 collapse...” (Graeber, 2013b). See also “Robotization”, “Corporate Media Cartel/6 Sisters”.

6) the de-regulation (of the F.I.R.E. sector) Party; “Today’s creditors do not put individuals formally into bondage, but leave them free to work and live anywhere they want– as long as they buy goods from privatized infrastructure, squeezing out economic rent, pay their debts and pay taxes to subsidize high finance. That is the essence of *neoliberal* ideology, and explains why the banking sector subsidizes its pet politicians so well” (Hudson, 2012g).

See also A. Huxley’s *Brave New World*¹⁹²⁴ (bonobos); “Neoconservatives”, “Neoclassical Economics”.

[US pretax income growth, 1980-2014]

Neo-Keynesian- See “Neoclassical Economics (NCE)”.

Neo-serfdom- See “Serfdom, neo”.

Net equity- See SD&SNM, p.6-7.

Net income/retained earnings- after dividends to shareholders; **taxes?**

¹⁹²⁴ According to Paul Craig Roberts, most Russian and Chinese economists are also trained in “neoliberal” economics.

Net position- See "Equity".

Net profit (national) accounting (as opposed to 'gross')- See also "National Income", "Gross Domestic Product (GDP)".

'New World Order' (N.W.O.)- (a.k.a. 'globalism', which, uncorrected, 'leads' to 'zombie apocalypse'¹⁹²⁵; i.e. [simply] Bretton Woods 'I, II, and III') See also "Bretton Woods".

"The 'New World Order' isn't new at all. According to Alexander Del Mar it started in 1662, once they permanently got that [perpetual] Charter from the [Crown &] Bank of England" (Titus, 2019b, mn.4). See also "East India Co", "Corporations (and corporate 'personhood')".

1) More formally, a 20th century Anglo-American financial-corporate-military plot for "nothing less than to create a world system of financial control in private hands able to dominate the political system of each country¹⁹²⁶ and the economy of the world as a whole. This system was to be controlled in a feudalist fashion by the central banks of the world acting in concert, by secret agreements arrived at in frequent private meetings and conferences ... Each central bank... sought to dominate its government by its ability to control Treasury loans¹⁹²⁷, to manipulate foreign exchanges, to influence the level of economic activity in the country, and to influence cooperative politicians by subsequent economic rewards in the business world. In each country, the power of the central bank rested largely on its control of credit and money supply" (Quigley, 1966, 324). See also "Lender of Last Resort", "Bank of International Settlements (BIS)".

1b) Former and Plato-ite H.G. Wells¹⁹²⁸ () in the 1930's was (Wells, 1940).

1c) a term famously patented by President George H.W. Bush in Jan. 1991-- for ""¹⁹²⁹-- , has subsequently been **twisted** into

1d) Charles Walters dates it back to president Truman initiating the first GATT papers in 1947, seconded by "Eisenhower... bringing the Republican Party into alignment with the [what had been the Democratic Party's traditional] free-trade stand" (Walters, 1971, 397). See also "Race-to-**the-bottom** (of the barrel)".

1e) The 1953 Reece Commission¹⁹³⁰'s Norman Dodd: <https://www.youtube.com/watch?v=YUYCBfmlcHM> [82] See also "Foundations".

2) By the early 80's, the US National Institute of Education-- "where all the [education sector] research is performed... [where] all the grants and research contracts were sent out.... all around the world--" was changing Education, everywhere, "to a brainwashing, using Pavlovian, Skinnerian, operant conditioning COMPUTERS and workforce training for the globalist economy-- the corporate, fascist, socialist,

¹⁹²⁵ Run-amok currency debasement & 'globalism' was first extrapolated & popularized into various streams of chaotic & dysfunctional dystopias (with the initial inflation waves) in the 1970's. Basically, monetary chaos brings about over-reaching state interventions [almost always in the wrong direction/wrong target; see also "Dumb-downing", "Lobbyists"], which provoke the rise of either Totalitarianism and/or stateless Anarchy (or some combination-flavor of the two...yummy.) Pretty much every post-war, non-'nukes' dystopian forecast-- since the 70's alt-rock songs, the 80's-90's 'Terminator'-type motion pictures, and 'Hunger Games'/'In Time'-type films in the 2010's-- has been along rather similar (and similarly-vague) storylines of causality. A magician always mis-directs (the suckers') attention away from the real causality (the real system). The numerous (and all UK-USA) zombie-apocalypse films thus far this century are all [whether serious, or comical, or even musical] pretty much about the 'dumb-downing' of a vast majority failing to rise to the occasion (of post-'consumer'dom). Anyone who's studied history, or lived through much of the 20thc, should know, in their bones, that only 'the' government can (have the groupthink-chutzpah to) try to get over collapsing

a million different (actual) causes into only 1 (fear-mongering) myth. See also "Intelligence Community (IC)". It's not the 14th or 16th century anymore, and providence doesn't hate us. It is just (high) time for another step up. See also "Sovereignty", "State Capture", "Eurodollars", "Zombie", "Debt cycles", "Parties, political", App.C: "1-2-3".

¹⁹²⁶ This is what it looks like (6-8 decades later): https://www.youtube.com/watch?v=R6iCAkIZ_pw [Edinger, 2022, mn.6-7].

¹⁹²⁷ I.e. the money creation process

¹⁹²⁸ Wells was, according to Orwell (his highest-profile critic) "" (Orwell,).

¹⁹²⁹ asfasdf Bush Sr. later euphemized it as ""tighter & lighter hands"" (Fitts, 2022k, mn.9). See also "White-collar crime".

¹⁹³⁰ The Reece Commission, , http://www.preparingyou.com/wiki/The_Reece_Committee

communist government” (Iserbyt, 2018, mn.31). “It’s total brainwashing. Anything coming out of [the DoE, in] Washington is a...Marxist brainwash” (Iserbyt, mn.34-35). See also “Orwell, George”.

3) “The ‘New World Order’ [however] isn’t [really] new at all. It started in...[the 1660’s], according to Del Mar, once...[the English East India Co.] *permanently* [sic] got that charter from the Crown of England, to export [what had formerly been only the Crown’s] silver” (Titus, 2019b, mn.4). See also “Imperialism, ‘modern’”.

3b) The phrase “*New World Order*” was not, however, pronounced openly in public by high level politicians until the 1990’s, hence reviving Wells’ prophecy, Quigley’s thesis, which shifted its plotter’s defensive focus (from stonewalling) to that of ridiculing¹⁹³¹ traditional patriots, in the “*Corporate Media Cartel (CMC)*”.

4) Rule 1 of this “feudalist fashion...[run] by the central banks of the world”, since the Congress of Vienna, has been: ‘a nation issuing its own debt-free national notes or currency is forbidden’. See also “Banking School/Bank Teachings”, “Bankmoney”.

5) According to ‘Deep State’ researcher, former US House Budget Committee aide Mike Lofgren, this (bankmoney-fueled) “hybrid of corporate America and the National Security State.... is the big story of our time... *the red thread* [of causality] *of the last 3 decades*. It’s how we had deregulation, financialization of the economy, the Wall St. bust, the erosion of our civil liberties, and perpetual war.... this other [US] government that operates according to no constitutional rules or any constraint by the [de jure] government.... It’s all the *national security* functions of the government... the Pentagon... Homeland Security...the State Department. It’s also Treasury, because they have a kind of symbiotic relationship with [the so-called ‘Fed’ and] Wall St. (Lofgren, 2014, mn.3-6). “Does anyone see the disparity between this *extravagance* for the Deep State, and the *penury* that is being forced on the rest of the country?... About 70% of the US intelligence budget goes to contracts” [contractors] (mn.9-10), and Groupthink “drive[s] any bureaucratic organization” (mn.12). Wall Street is “...the ultimate backstop to the whole [Deep State] operation... because... they can provide 2nd careers for a lot of the government operatives. They’re going to make more money [& guaranteed benefits] than they ever dreamed they would...” (Lofgren, 2014, mn.13). I.e. it essentially runs on (more of the same) veiled bribery and revolving-door culture from the issuers of bank credit (TAB-bankmoney). See also “Technocracy”, “Control systems”, “Groupthink”, “FASAB-56”.

6) At least in terms of European banks controlling everything, the “N.W.O. does not exist anymore... It’s done... The Rockefeller children whom I know-- the great, great, great great grandchildren-- they couldn’t care less. They’re really not involved in money. Most of [George] Soros... [operations are] really irrelevant” (Pieczenik, 2017b, mn.17); or strawmen. See also “Philosophy”, “‘Opposition’, controlled”.

6b) More broadly defined, however, “if you look at the trend and direction, there is significant investment [i.e. trillion\$] underway to pull the United States apart, and to make a fortune on doing to the United States [c.2020] a sort of hi-tech version of what was done to Russia [c.1990].... There’s a [looting] land-rush going on in the United States, and... has been going on for a couple years, ever since the [2020] election started, and there’s no indication to me that either [Washington] faction intends to stop it.... We have [as of summer 2020] the Federal Reserve printing trillions of dollars... [while] Main Street...has been [halfway] shut-down, and they’re spending their savings down. And then you have the private equity firms and the insiders...grabbing massive amounts of cashflow and market share...[with] zero percent cost of capital to buy everything up cheap” (Fitts, 2020g, mn.1-2). And of course it’s not just the US. For example “in France... all the...businesses that applied for the equivalent of the PPL loans in France were required to put all their financials and documentation into the Amazon cloud. What do you think’s gonna happen to them? They’ve been thrown into a debt [to government] trap, and now... the data beast has all their confidential information, and the [favored] private equity guys are getting zero percent cost of capital to come in and pick ‘em off [like fish in a barrel]. So you’re watching...[the US ‘Deep State’s] leveraged buyout of the planet... [with] free play-money to buy ‘em up” (Fitts, mn.2-3). See also “Industrial Revolution, 3rd”, “Transhumanism”, ShadowGate, 2020 [‘the data beast’].

¹⁹³¹ The cliché for challenging elitist control over the levers of a lawful society goes ‘First they ignore you, then they laugh at you, then they bribe or co-opt you, then they fight you, then you win’.

7) "It doesn't mean some kind of a world-based democratic government. It means the American Empire. And of course what's in the way of [that] Empire is Russia, China, and to a lesser extent, [also] Iran. So these countries are in the [US Deep State's] crosshairs.... And the world is never okay until Washington has complete control over everything. That's what it means. It doesn't mean anything else [in the first two decades of the 21stc at least].... It [just] means that the rest of you guys got to get in line" (Roberts, 2017b, mn.40). See also "Washington Consensus", "Food", "Imperialism- American".

8) The term does, however, have an underlying (and deeper) irony, given that "the New World" was-- first and foremost-- an Eastern hemisphere synonym-slang for the "new" Western hemisphere, for the approx. half-millennia from c.1500-c.2000. In the 21st century, the irony is that the Internet revolution is also making a "new world" of sorts... perhaps not quite as dramatic as the discovery of the original "New World", but nonetheless on a similar order of intellectual magnitude (e.g. Weber, 1989c). See also "Philosophy", "Adolescence of Mankind", App.C: "1-2-3".

8b) 'Late stage'-'state capitalism' tends to be not as sturdy as it may appear. High-tech productivity aside for the moment; "people who win in a rigged game get stupid. [Financial] crime pays, [and] crime grows, but it [also] continually knocks the productive [in everything but technology] out of the system...[to where] at some point, you've got a very centralized, very fragile [top-heavy] system. You know.... the problem with the whole thing is [that] it's got a negative return on investment"; from the unaccountable¹⁹³² magic wand monopoly money (Fitts, 2020g, mn.3-4). See also "Capitalisms", "Productivity". Is this funny? See also "Debt cycles", "Bankmoney regime", "Technocracy", "Numbers", "Slavery".

8c) China and Russia? They've already eaten the bugs (& all house pets) and experienced the zero negative population growth, respectively (China 1950's-mid-60's; Russia 1990's-mid-00's).

7/22- Is it 'the good ones or bad ones' who are being driven out of (what were formerly known as) public Washington's sector institutions? <https://www.clarkcountytoday.com/news/health-experts-quit-cdc-nih-due-to-bad-science/> ; <https://www.bitchute.com/video/4L8FZ83savw4/> [NIH exodus];

9/22- "[W]e are experiencing [from c.2020 (the political implementation of)] a global coup d'état. This is a fundamental change... in a very radical way... The changes-- operationally, financially, and legally-- that needed to occur for this [political] to happen had been rolled out over the last 3 decades; and it's been happening steadily... We've seen many people who've warned and written about...where it's leading**... [but] it's only now that they're throwing the trap.... It's the centralization of political and economic power" (Fitts, 2022k, mn.7-9). "There's an emotional and energetic commitment there which is frightening" (Fitts, mn.11). See also "Civil National Identity", "National Identity Cycle", "White-collar crime".

** - Then again, maybe 'it' "is leading" (like this [dual-themed] entry) to 'the audience' transforming a horror flick into laughter (as John Carpenter feared would happen with *The Thing*). See also "Methodology".

See also "UKUSA Agreement", "Monetization", "'Management' vs. 'leadership'", "Provocation operation".

New York Federal Reserve- See "Federal Reserve Bank of New York (FRBNY)", "Desk, the".

'Nine' key (entries)- (in terms of a "1-2-3" 'vs.' "draconian" future)

¹⁹³² Not just the "land rush" and blatantly self-destructive politics has been going on since 2018. See also "Financial Accounting Standards Advisory Board" ['FASAB-56'].

¹⁹³³ ...or perhaps consumers-into-property: <https://banned.video/watch?id=62e53b3229060f37494d17d0> [Reese,22-7-30; 'since 1974'].

“Montesquieu”- theory & Monty Python
“Parity pricing”- Parity Economics & USDA
“World Par Economy” [Reserves ‘System’]

“Ecological economics”
“Hamilton”- ‘Hamilton’s Footbinding’ & Madison’s Inv. Hand
“Reform, 101” [mutual inoperability]

& ‘wild card’ (yet ‘unknown’) factors?

“International Intelligence Community (I.I.C.)”,

“Big 4 Accounting” & (Asset managers).

& ...as to whether the new **ecologic-economic System** is to be allocated via DEMOCraCIA, see also (the determinant factor of) “Design” (mentality).

Nineteen-thirties (1930’s) & Roosevelt Admn.- (the [so-called] ‘modern’ Western world has always been re-made after every 7-8 decades) See also “Debt cycles”.

“No one will ever know how many fantastic schemes were in the air. Many of them crossed the border line of sanity, but...[nonetheless one] who attempted to apply elementary common sense was denounced as an obstructionist. It was a heresy to assert that two plus two had to equal four.... Master minds were everywhere about us.”

- FDR Admn. insider George Peek (1936, 12; 30). See also “UKUSA Agreement”, “Common sense”, “Peek, George (1873-1943)”.

1) What gave way? Basically Congress (& even more so Parliament over in the UK) was unable to withstand the pressure of corporate personhood (increasing through the 1870’s-1920’s); the Executive was now primarily running D.C., and that of course soon meant the standing ‘Military-Industrial-Complex’ (from the 1940’s-90’s; and then pretty much the “I.I.C.” from 1990’s-20??). See also “Military-Industrial-Intelligence Complex”.

2) Many faulty schemes didn’t work; some valid ones eventually did; others were fated for short-term success but long-term structural failure; while still more were (more like) a century ahead of (the [global] socio-political reality of) their time. See also “Parity pricing” [1933 vs. 1938]; “FDIC”; “Graham, Benjamin”.

Nineteen-forties (1940’s), the- the most violent era in the history of civilization, man, or the entire planet

Nineteen-fifties (1950’s), the- came in on “National Income” (a.k.a. “Parity pricing (for the primary sector)”; but went out on “National Identity/Nationalism” instead. See also “Ninnies”, “Imperialism, American”. See also “Cultural Calendar” [breast- heart].

Nine teen-sixties (1960’s), the- See Tyler Durden. See also “UKUSA Agreement”, “Globalism”; a joke about the 60’s: <https://www.dailymotion.com/video/x85vlvr> [MontyPython, 1974b, mn.12].

Nineteen-seventies (1970’s), the- (i.e. pretty much ‘playtime’, the decade that invented both the Shark & ‘jump the shark’; sometimes a.k.a. ‘stairway to heaven’)

a [perhaps premature] celebration of world conquest (1940’s [.Atlantic Charter]) & liberation (1960’s [i.e. CivilRights 1.0]), before the 3rd Industrial Revolution (& trans-humanist) villainry set in. See also “Peace Window, the”, “Industrial Revolution, 3rd”, “Montesquieu, Baron de” [exit the ‘rule-by-love-of-honor’].

“What does a sane man do in an insane society?”- Joseph Heller (BBC, 2002)¹⁹³⁴.

1) It wasn’t just more ‘civil’ rights. “[N]otice, we [now] put...[(increased) savings] into medical insurance, life insurance... into retirement pensions, and so forth, and so forth, and so forth. All of this is [F.I.R.E. sector]

¹⁹³⁴ Question: http://news.bbc.co.uk/2/hi/uk_news/1868619.stm (“...Why does...[Catch-22] matter?”). See also “Lexicon Test, the”. Answer: <https://www.youtube.com/watch?v=yPOSBUVU86M> (old “Economics”, 101). See also ‘World Par/Balanced Economy’.

spending ... [by the] middle class. And it...[made] the middle classes the...[most] significant *creditor group* in our society today”¹⁹³⁵ (Quigley, 1976b). See also “Monetization”, “F.I.R.E. sector”.

2) https://www.youtube.com/watch?v=15wq1Yg_Ac4 [‘radio rolled me’¹⁹³⁶]. Growing up in the 70’s? “Jenny was sweet. She always smiled for the people she’d meet...”; and perhaps, for some, a more serious research question.

3) At least when compared to previous 50-year eras in the US, not much of substance (besides ↑ technology; ↓ institutional integrity) has changed in the half-century since then,

<https://www.youtube.com/watch?v=jQnIL-XPerQ> [junkfood]. How could that be? See also “Quigley, Carroll (1910-1977)” [swine flu jab], “COVID Op.”, “Intelligence Community (IC)”.

See also “Peace Window, (& great compromise), the”, “Estates, 3”, App.C: “1-2-3”.

Nineteen-Eighties (1980’s), the- (the decade that often came in so brilliant¹⁹³⁷ went out on dumb-downing & self-destruction; the proverbial ‘decline & fall’ has been a long, slow, & increasingly obvious trail ever since) How many prevalent songs in 1980-81 featured the word “whip”?

See also “Cultural Calendar”, “Debt cycles” [fashion], “Music”; “National Debt Economy”, “Dutch Disease”.

Nineteen-Nineties (1990’s)- (i.e. ‘Digitalization, 102’; the highest [or would that be the lowest] of High [(see also “reserve currency”) Imperialism & I.I.C. ‘gifting’/strategic planning)

See also “Reserve currency”, “Israel (& Al-Qaeda-‘ISIS)”, “International Intelligence Community” [Pollard].

Nineteenth century- (that transitional era between the 18th [‘century of racism’] & 20th [‘century of High Imperialism’] centuries) See “Enlightenment, the”, “Twentieth century”, “Adolescence of Mankind”.

Ninnies- (should valid economic science be more about shaping National Identity or National Income?

This is perhaps the missing lynchpin for [group awareness of] the entire [so-called ‘modern’] facsimile of derived reality)¹⁹³⁸ See also “Reality & Facsimile”, “Ponzi”; “Soddy, Frederick (1877-1956)”.

“- Frederick Soddy, .

1) Does National Income always lead National Identity in civil/civic societies?

“Peace and rain is just a way to say prosperity; and buffalo chips is all it means to me.”- Tom T. Hall

See also “Monetization”, “Economics, Parity”.

2) On this planet, the difference (in science language) between a full-blown organ/ism and its prerequisite orgasm was agreed upon, centuries ago,¹⁹³⁹ as NI... something with legs (so to speak), something worth measuring.

2b) Now does it matter if this something (NI) induces (or compels) us-everyone, as members or ‘citizens’ of the societal-economic organism, to mentally measure an economic society and its progress in terms of a Gross yardstick or a Net yardstick? How one decides this question is deciding how society will be governed. See also (Kuznets’ original) “National Income”, → “Gross Domestic Product”, “Kuznets, Simon”; “Governance”.

3) Great power is easily abused (as some noted in the mid-70’s): <https://www.youtube.com/watch?v=2UbtcmjfKa8>

[KnightsofNI]. See also “Evil” [psychology]; “World Par Economy (WPE)”.

See also “Design”, “Energy”.

¹⁹³⁵ In the 4+ decades since then, the ‘middle class’ was increasingly (and predictably) bifurcated or split apart by such (see also “Financialization”, “Middle class”).

¹⁹³⁶ Hyperbole? See also “Cultural Calendar”.

¹⁹³⁸ Yes, there is (and was) a song-video for the phenomenon: <https://www.youtube.com/watch?v=7km4EHgkQiw> [Sting’93]. See also

“Democracy”, “Cultural Calendar”, “Nineteen-nineties (1990’s)”.

¹⁹³⁹ From the Ancient Greek ὄργασμός (orgasmós) and , ὄργανον (organon), respectively (with both words then being re-discovered in Europe’s Scientific Revolution of the 16th-17th centuries).

Nobel Economics Prize: (est. 1968; synon. 'the Riksbank Prize') 1) "In 1972 the Swedish Bank...awarded it to the neoclassical economist Paul Samuelson. The term *economic science* is misleading. In contrast to the natural sciences, it is not evaluated in terms of how realistic its assumptions are, but merely how logically consistent they are, much as one might criticize a work of *literature* or *science fiction*. Given mainly to free-market economists of the Chicago School, the award has helped legitimize anti-government economic ideology; (See Learned Ignorance)" (Hudson, 2015b).

2) The "[Swedish central bank](#) established a pseudo-'Nobel Prize' by awarding substantial sums of money to selected economists— none of them supporters of the [what was then the traditional] credit creation theory of banking— and calling this prize the '*Riksbank* [Swedish central bank] prize in economic sciences *in honour of* [dynamite inventor] Alfred Nobel'. The fact that journalists would abbreviate this as a 'Nobel Prize' in their reporting of the award could neither have been a surprise nor unwelcome to the Swedish central bank, which lobbied for the involvement of the Nobel Foundation in the award of this prize. Through the award of this central bank prize, a *particular* branch of economics...[mostly] based on the *deductive* methodology, received a significant boost internationally. It is noticeable that a number of authors implicated in leading the public away from the credit creation reality of banking have been receivers of this Swedish central bank prize (including Samuelson, Tobin,¹⁹⁴⁰ and Krugman). Meanwhile, investigative journalists have pointed out that the editorial boards of leading journals in economics, and especially monetary economics, are staffed by current or former employees of and consultants to central banks, particularly the US central bank" (Werner, 2016).

See also "Economics", "Neoclassical Economics (NCE)", "Parallel universe", "Debt saturation".

Nobility- See 'Grants'; "Aristocracy (& nobility)", "Estates, 3".

Nominal- (sometimes a.k.a. 'real'; i.e. 'non-inflation adjusted' figures)

Nominalism (monetary)- (synon. for state [see also] "Parity" supports [for bank credit = base money])

Nominalism (philosophical)- (holds that things like universals, essences, and abstract objects do not exist at all. Instead, these things 'exist' simply as names given to physical, concrete particulars.)

See also "Physics" [Ockham], "Aristotle" [Ockham], "Civilization, Orthodox", "Devil" [theory].

Non-bank banks- a particularly convoluted [d.b.t.](#) which FFIEC.gov (from c.2000) refuses to define. Banks ([d.b.t.](#) 'depository institutions') were still heavily regulated and circumscribed during the technological advent of ATMs & credit cards in the 1970's & early 80's.

1) Hence: in the 80's, "there was the 'nonbank bank loophole', which had originated literally because of a comma in a statute that let commercial companies own institutions that either dropped *commercial lending* or *checking accounts*, and thus became 'nonbank banks'. Discover Bank, now a large direct bank, originated when [nonbank] Sears purchased a community bank named Greenwood Trust to issue the Discover Card [in 1985]... Congress closed that loophole in 1987" (Cocheo, 2019b); and use of the term dropped off (for some time).

2) That may have been the end of story, but the term 'non-bank bank' has resurfaced (with the rise of myriad 'financial services' in recent years) as a near synonym for (see also) "Industrial loan corp. (ILC)".

3) "" (OCC, 2017b, 16). See also "Bank Holding Company"→ "Investment Banks".

See also "[Deceptive Banking Terms \(d.b.t.'s\)](#)".

¹⁹⁴⁰ In Tobin, 1963, in particular "we find the origin of postwar American Keynesian orthodoxy.... Abstracting... indeed from all the mechanics of the payments system, Tobin shifted attention to asset prices rather than bank lending decisions as playing the central role in directing the flow of new credit and hence [also of] the economy more generally. In Tobin's hands, banks are mere intermediaries, one among many and perhaps not even the most important..." (Mehrling, 2020). See also "'Exogenous vs. Endogenous' (money creation)", "Homogenization".

Non-bank- (any person or entity lacking a 'deposit banking' charter; synon. the 'nonbank sector'; not to be confused with 'nonbank banks')

Nonbank Financial Institutions (NBFIs)- (synon. 'non-monetary financial institutions' [Huber], 'non-bank financial companies'; sometimes even a.k.a. 'nonbank banks'¹⁹⁴¹; i.e. most 'financial businesses' don't have a 'deposit banking' charter¹⁹⁴² and thus operate on the '2ndary credit' market; not to be confused with 'financial firms' [that specialize in payments], nor with 'nonbank intermediaries' [i.e. credit cards & fintech co's]) Although there been some knowledge "that since 1932 the Fed has had the power to lend to nonbanks (entities lacking a deposit banking [i.e. money-creation] charter) under 'unusual and exigent circumstances' (Ricks, 2016, 197); it wasn't until 1991 that Congress "did away with the long-standing collateral limits on Fed loans to nonbanks" (198); a change that has proven "just as consequential" as the latter Glass-Steagall repeal (Ricks, 2016, 199). See also "Glass-Steagall", "Repo (Repurchase) agreements". 1) are rather "broadly defined", by the *USA Patriot Act* (of 2001), "as institutions other than banks that offer financial services (FFIEC.gov). This includes: contractual savings institutions (i.e. insurance companies & pension funds), mutual funds & money market funds (MMFs), government-supported enterprises (f.e. Sallie Mae, Fannie Mae & Freddie Mac), financial service/brokers, investment companies, stock, options & futures exchanges, currency exchanges, private equity funds, venture capital, arbitrageurs, pawn shops, casinos, leasing, credit card, check-cashing, & microfinance firms... All of these may lend and borrow money that they have, but they may not provide 'demand deposits' (TAB); i.e. they cannot create bankmoney (TAB + RAB) and hence do not have accounts at the central bank. See also "Financial Institutions/Services".

1b) This means that "they don't own" the money in your account; "you own it" (Werner, 2018, mn.25). See also "Government Supported Enterprises (GSEs)".

2) Nonetheless, some NBFIs engage in "quasi-banking functions"-- securities dealers/brokers, venture capital corps., investment houses (and are typically regulated by the CB); and some NBFIs do not-- nonstock savings & loans, credit card companies, pawn shops, electronic money issuers (which are regulated by the SEC).

3) NBFIs' aggregate volume surpassed that of state-monetized credit institutions (a.k.a. 'banks') in the mid-1990's. See also "Shadow banking (SBS)".

3b) And since then NBFIs have become "active not only in money exchange and payment services, but also in various branches of...[loanable funds] lending and investment business...[and the] overlaps [with banking] continue to increase... [T]he traditional distinction between monetary and non-monetary financial institutions, banks and shadow banks, [will] soon no longer... [make] the same sense as before" (Huber, 2021). See also "Money, 3 (contemporary) Tiers of", "Separation of Powers".

4) "It is the non-monetary (financial institutions), i.e. non-banks, that accept and lend or invest in bank deposits, for example money market funds, investment funds of any kind, and what are today shadow banks and insurance companies" (Huber, 2019d). [i.e. pretty much the rest of the F.I.R.E. sector]

5) In the post-2008 and *Dodd-Frank* environment, "even non-bank institutions can [now] be too big, or too interconnected, to fail" (Phillips & Roselli, 2009, 8); like AIG Insurance in 2008. See also "Diem", "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)".

See also "Shadow banks", "Nonbank Intermediaries", "Financial Intermediaries".

¹⁹⁴¹ A 'nonbank bank' is a "firm that either accepts demand deposits or makes commercial & industrial loans [monetized credit extensions], but not both. [Federal Reserve chairman] Volcker believed that the federal reserve needed to have jurisdiction over nonbank banks" (Hester, 2008, 78, n44) in general (probably because of their role in the burgeoning credit card industry); which to some extent was achieved by 1991 (Ricks, 2016, 198-99). See also "Nonbank banks".

¹⁹⁴² Nonetheless, NBFIs "often belong to a banking corporation, but as separate entities, which neither turns a bank into a financial intermediary, nor a non-monetary FI [NBFI] into a bank" (Huber, 2020). See also "Investment bank".

3-10. Large Bank Lending to Nonbank Financial Firms: Committed Amounts

[Big banks' (TAB) credit extensions to NBFIs gradually doubled from 2013-19. See also "Debt saturation".]

Nonbank Intermediaries- (synon. 'NBFIs without quasi-banking' privileges) credit card companies¹⁹⁴³, plus financial-technology newcomers like "PayPal, ApplePay, Square Reader (NFC) and Square Stand" (Yamaguchi & Yamaguchi, 2017, 14).

See also "M-Pesa", "Nonbank Financial Institutions (NBFIs)". (taxonomy)

N.O.R.M. (National Organization for Raw Materials)- (est. 1971, holding a candle for the good old [economic] days of 'Parity' for raw materials & the primary sector [not just 'parity' for bank credit])

1) The successor organization to Carl Wilken's "Raw Materials National Council" (1936-70)¹⁹⁴⁴.. which had already "brought the 1-5 and the 1-7 [raw material "parity"] formula to national prominence"¹⁹⁴⁵ (Lundgren, 1994, ch.12)-- NORM conducted national economic audits every year through (at least) the 1970's-80's. See also "Multipliers" [.real], "Federal Reserve Audit" [.fake].

2) "With every formula, the premises of NORM proved themselves more enduring than hammered iron" (Walters, 1994). See also "Economics, Parity".

See also "Parity" [for what?], "Physiocrats, the" [.China-France-Smith-George], "National Income".

Normalization- (the US Fed, from 2015-18, tried to draw down & end 'quantitative easing', but gave up)

1) Fed-speak term for unloading/shrinking (tightening) its balance sheet of ongoing QE-related asset purchases, which is **mostly** to be accomplished from increasing interest rates, via the (2008-initiated; and 2015-activated) IOER policy, over the past 3 or 4 years. This is because "mainstream monetary theory and the experience of Japan for the last 20 years tells us that extended periods of ZIRP [Zero Interest Rate Policy] lead to low inflation, or even deflation" (Williamson, 2015).

¹⁹⁴³ Credit card companies such as Visa and Mastercard are not to be confused with the banks (monetized credit institutions) that actually issue and support the credit line accounts-- accounts that are creating new money, just like bank loans, whenever a credit card is used.

¹⁹⁴⁴ The RMNC [1936-70] was co-founded by (in order of the seniority of research): Sears & Roebuck engineer 1] Charles B. Ray [d. circa 1952] who was trying to solve the Great Depression with a Frederick Soddy-Physiocrats approach; former Pres. of North Dakota Agriculture College and chief economist for the US Tariff Commission 2] John Lee Coulter [1881-1959], who was (after being appointed by the Hoover Admn.) then serving in the Roosevelt Admn. [from 1934-??] as "Expert Assistant" to George Peek-- the "Special Advisor to Pres. Roosevelt on World Trade" in 1934-35; Iowa farmer and engineer 3] Carl H. Wilken (1895-1968); and 4] President of the American Manganese Producers Association J. Carson Adkerson (1913-81). The first 3 may be thought of as its braintrust or **troika** (from 1937-c.1952). In 1937-38, they "discovered a natural law of economics, based on arithmetic and physics, that had escaped generations of supposedly-learned economists..... [Then in the early 1940's]" working hand-in-hand in the Congress with the then-powerful National Association of State Secretaries, Directors, and Commissioners of Agriculture (NASDA), Wilken...[et al.] succeeded in getting national legislation passed that [actually] created a 'par-economy'...[and] captured sufficient earned [debt-free] income to virtually pay for World War II as it was being fought"- <http://www.normeconomics.com/fame.html>

¹⁹⁴⁵ c.1946 a bill was introduced, in part on the basis of Charles Ray's finding that in "any given 2 year period, usually either Agriculture [the primary sector] or [sic] Industry [the 2ndary sector] slightly over-produces; and in the following year the other one will react. So you've got sort of a push-pull thing going on.... [in] a constant tug-of-war between...[these] 2 segments of the economy, as to which one is ahead of the other...[S]o... the maintenance of the [USDA] Parity price calculation...[will] smooth those [sector] fluctuations out over any given 2 year period" (Cook, 2022d, mn.41-42). See also "Parity", "Wealth". (& Wilken, 1947, around p.150)

2) The prerequisite term *liftoff* refers to the date at which the Fed departed from its 'emergency' period (late 2008 to late 2015) of zero interest rate policy (ZIRP) (Williamson, 2016); only to abandon it in 2018-19. See also "[Great Divergence \(monetary; 2015-18\)](#)".

3) It should be noted that this objective (ZIRP-to-'Normalization') contrasted with that of Quantitative Easing in the EU and Japan, where (downstream from the world's reserve currency) a *Negative Interest Rate Policy* (NIRP) has been uninterrupted and ongoing.

See also "Quantitative Easing (QE)"; "Monetary reform", "Imperialism, Post-".

Notes- relatively short-term government bonds, maturing within 1-5 years.

See also "Treasury Instruments".

Note of indebtedness- (synon. 'unsecured note') 1) US Federal Reserve notes were fully transformed from ('backed'/redeemable') *promissory notes*, into (unbacked/purely 'fiat) *notes of indebtedness* when congress, in 1965,¹⁹⁴⁶ turned the (unbacked) 1963 series FRN into 'legal tender', 6 years prior to the Nixon administration terminating what remained of the international gold standard and Bretton Woods currency pegs (in August 1971). And the US is still using the unbacked **1963** series to this day.

2) There is nothing in the US constitution, apart from a very liberal interpretation of the 'necessary and proper clause', that justifies Congress granting legal tender status to a 'note of indebtedness'.

See also "Promissory note", "Coined money", "Bills of credit".

Nuclear weapons- "...pretending that nuclear bombs are the most dangerous technology on the planet" (Fitts, 2018j, mn.30). See also "Mind control".

Numbers- (not the best way to attempt escape from man's emotional nature)

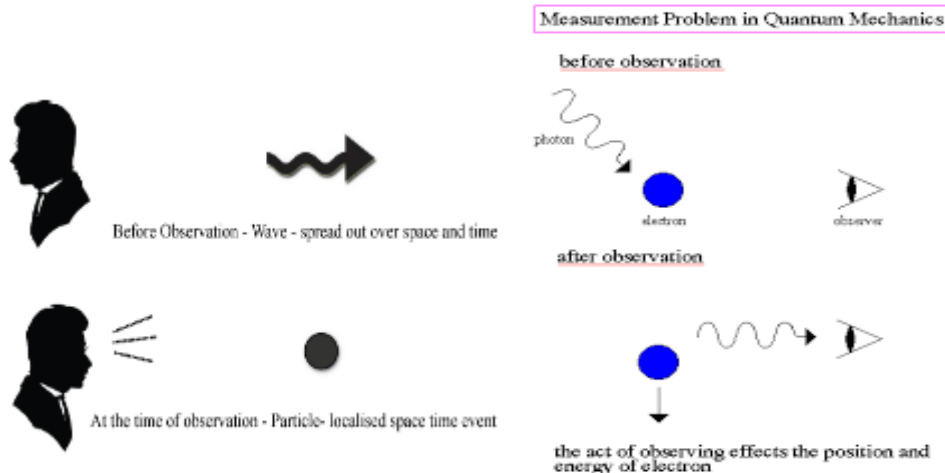

1) "were invented as tools of empire; they remain the way that centralised structures-- imperial cities or corporate headquarters-- maintain their control. And with the numbers that are reported into the heart of the machine come the need for all those tasks of empire: inspectors (to verify), counters ([and tickboxes] to do as they are told), collaters (to turn the numbers into reports for the emperor's aides), [and] bureaucrats (to run the system [with some 'discretion'])" (Boyle, 2020, 47). This book was invented in order to... See also "Main point", "Estates, 3", "Accounting" [.'end of']; "Scientific Management", "Mythomatics", "Tickbox". See also "Governance", "Civilization".

Numerals, Roman- See "Auditing" (without ledger accounts).

Observer Effect/Goodhart's Law- (antec. " "; a.k.a. econ. 'Goodhart's Law', psych. "Hawthorne Effect"; i.e. the metaphysical futility of 'Tickbox culture') See also "Physics, new".

1) "The *first half* of the 20th century proved in the most rigorous way that the core of matter cannot be separated from the observing subject...[T]he observation of a material object changes the object itself." - Mattias, 2022. See also "Design".

¹⁹⁴⁶ FRNs were already, since 1934, not redeemable in gold.

2) The primary distinction between the Regnum Animale and Regnum Vegetabile is 2-way vs. 1-way communication. See also “Imperialism” (the triumph of distant numbers), (eventually destroyed by its “Parasitism”).

3) “”- (Chen, 2017,).

4) Goodhart’s Law: “When a measure becomes a target, it ceases to be a good measure” (Boyle, 2020,). See also “Aquinas, Thomas” [.money]. See also “Mind Control”, “National Identity/Nationalism”.

Off-balance-sheet- (synon. ‘non-mixed assets’) segregated, stand-alone, ‘fiduciary’ or ‘custodial’ accounts are ‘*non-mixed assets*’-- as opposed to non-segregated ‘deposit accounts’ which are legally the property (liabilities) of the ‘bank’ (state-monetized credit institution). See also “Fiduciary accounts”, “Custodial accounts”.

Offshore banking centers- (synon. ‘secrecy jurisdictions’, ‘shell branches’; a.k.a. ‘tax havens’; perhaps a “\$50 trillion” sector [Oswald, 2018, mn.19])

“Legitimate financial activity has no need for the secrecy [that] offshore havens provide, nor a desire to pay the high fees offshore banks and law firms charge” (Oswald, 2018, mn.44). See also “Big 4 Accounting firms-Management consultants”.

1) Originally an “innovation by the oil industry, creating ‘*flags of convenience*’ to avoid North American and European taxes. The first such tax havens¹⁹⁴⁷ were established in countries such as Liberia or Panama, which used US dollars rather than currencies of their own. The typical ploy was to assign transfer prices for oil at levels that enabled the head office to take its worldwide profits wherever tax rates were lowest.... By the 1960s such havens were proliferating throughout the Caribbean and the South Pacific” (Hudson, 2015b). See also “Eurodollars”, “Lunatics”.

2) **All Offshore Roads (now) Lead to...?** the “Brits basically own and control and run the ‘offshore’ [tax] havens” (Fitts, 2016b, mn.18). “The UK has this network of havens around the world, such as the Crown dependencies-- Jersey, Guernsey¹⁹⁴⁸, The Isle of Man, [and] the overseas territories, which are kind of the remnants of the British Empire-- such as the Cayman Islands...Bermuda...Gibraltar...the Turks & Caicos Islands. These are all tax havens, and they are partly controlled by Britain. They are half-in, half-out of Britain...If you look at their flags, you’ll see a little British flag in the corner. You’ll see the

¹⁹⁴⁷ Tax havens, or course, can also be on-shore. “In almost anybody’s list that’s real, Delaware... would be in the top 5 [globally], and arguably number 1, and the various [English] Channel islands would be probably #2.... Switzerland would still be on these [top 5] lists.... And since the whole nature of the business is not asking questions... and not doing investigations, because they don’t want to know... you don’t have to have... a ‘legend’. You don’t have to make a sophisticated legend up and sow the seeds in the electronic records to make it pass...” (Black, 2016c, mn.40-42).

¹⁹⁴⁸ ...an “exploited quasi-feudal entrepot” according to Adam Tooze (Tooze, 2018).

Governor...is appointed by the Queen¹⁹⁴⁹.... But they do have their own independent politics. So it's kind of an ambiguous relationship... I describe it as being kind of like a spider's web.... So this is *network* of havens around the world" (Shaxson, 2011b, mn.4-5). It "is this offshore system that brings all this money to the [City of London] system"¹⁹⁵⁰ (Shaxson, mn.6). See also "Three Romes".

3) But that hasn't been without (at least) tacit approval from Washington. For example, during the Enron scandal of 2000-01, it was revealed that the supposedly Houston-based corporation had "700 subsidiaries in the Cayman Islands and money laundering... [but when] the head of the financial system...[there] said [that] the Cayman Islands... would be delighted to cooperate with the [US] Department of Justice on any investigation, but... [that] as of yet they [had] not had a request" (Fitts, 2015b, mn.34).

3b) The "5th-largest financial center in the world" the Cayman Islands "hosts... over 3 quarters of the world's hedge funds and \$1.9 tn. in deposits. It has a population of 60,000" (Oswald, 2018, mn.47).

4) While the US federal budget "money started going missing, the amount of money in the offshore havens exploded by *approximately the same*... amount.... I think one of the reasons the Brits went forward with Brexit is because [in the Age of Thieving] they wanted to protect that offshore havens system from the meddling... or regulation [from] the European Central Bank" (Fitts, 2019, mn.30-31).

5) As of 2010, the 4 biggest "secrecy jurisdictions" (i.e. offshoring centers, in terms of volume) were a) The City of London, b) Delaware, and c) relative newcomer Luxembourg-- which had nearly 3 times the volume of d) Switzerland-- the prior world champion from the mid-20th century (Shaxson, 2011b, mn.3). See also "Money laundering".

6) "One of the main causes for the high Dow Jones averages and the worsened income and wealth distribution in the US is the offshoring of jobs¹⁹⁵¹.... [which] imposes massive external costs on American society. Former prosperous manufacturing states are in long term depression. Median real family incomes have fallen¹⁹⁵².... State and local government pension systems cannot meet their obligations. The social safety net is unraveling" (Roberts, 2017). See also "Tax shift".

7) "You want to take it offshore? Tax it 90%" (Cook, 2019e, mn.24-25).

8) This entire offshoring phenomenon could be reversed by using "transaction" taxes on corporations instead of income taxes, which are easy to shift around (Keen, 2016d, mn.32).

9) In recent decades¹⁹⁵³, the US also "has been trying to sell itself globally as the [new Switzerland or Luxembourg]... You know we're becoming the offshore haven of choice...money all around the world is flying into the United States, and we've got... wealthy people moving to the United States...becoming sort of like [London,] an oligarchy camp. But... if we're going to maintain the dollar as a reserve currency, we have to maintain our brand, as supreme in the rule of law" (Fitts, 2018f, mn.27-28); and Separation of Powers. See also "Federal Accounting Standards Advisory Board (FASAB)".

See also "Flags of Convenience", "Offshore magic circle", "Eurodollars", "LIBOR".

¹⁹⁴⁹ And, make no mistake, the Monarch is "the constitutional Head of State of places like Jamaica and Barbados...[and it's big money]. The Queen's *Privy Council*-- the Queen's collection of private advisers...continues to be the *highest Court* in the land for places like Jamaica, and...the British Overseas Territories" (Koram, 2022, mn.43). This is judicial-administrative reality when the British Monarch is your Head of State (Koram, *ibid*), as gob-smacked Australians had demonstrated to them in 1975. See also "Delaware".

¹⁹⁵⁰ This is not intended to discount the "US" side of (what is essentially) a UKUSA system. The "big international banks...run offshore banks, because [basically] they make a lot of money" that way (Komisar, 2020, mn.2); "It exists because.... the Big Banks developed a structure-- a *super*-structure [see "European Union"]-- that allows the crooks to steal from us all" (Komisar, mn.4); with more-or-less impunity (as long as the bribery bubble keeps going). See also "Pilgrim Society", "UKUSA Agreement", "Big 5 (High St.) banks", "Monty Python's", "Adolescence of Mankind" (culminating in the Age of Thieving), App.C: "1-2-3", "Monetary Reform".

¹⁹⁵¹ ...that "began in earnest after the Soviet collapse in 1991", as Chinese & Indian governments changed their attitude towards "foreign capital" (Roberts, 2017).

¹⁹⁵² "The population of Detroit, formerly America's 4th largest city, declined by 25% in the first decade of the 21st century. Gary, Indiana, lost 22% of its population. Flint, Michigan, lost 18%. Cleveland...17%. Pittsburg... 7%.... St. Louis...lost 20%. These cities were once the home of American manufacturing and industrial might" (Roberts, 2017).

¹⁹⁵³ Actually the initial decision goes back to 1967: <https://www.youtube.com/watch?v=fdEKbbhxiUE> (Oswald, mn.38).

Offshore magic circle- 1) consists of “highly profitable multijurisdictional law firms mostly originating in Britain or its Overseas Territories and Crown Dependencies: a smartly dressed regiment of accountants, lawyers, and bankers forming a private global infrastructure that, in league with captured legislatures in the secrecy jurisdictions, makes the whole system work.... Each jurisdiction tolerates different levels of dirt. Terrorists or Columbian drug smugglers would probably use Panama.... Bermuda is a magnet for offshore insurance and reinsurance...for... avoiding tax... the Caymans are favored locations for hedge funds... to get around certain kinds of financial regulation.... Wall Street has long favored locating its Special Purpose Vehicles (SPVs) in the Caymans and Delaware; in Europe the preferred locations for SPVs are Jersey, Ireland, Luxembourg, and the City of London.... Switzerland’s wealth managers focus quite heavily on... tax-evading rich Germans, French, and Italians... though they are [also] open to all comers... Monaco caters especially to French elites, while some wealthy French and Spaniards use Andorra... Rich Australians often use Pacific havens like Vanuatu; a lot of North African money finds itself routed through Malta, another former British outpost... while wealthy Chinese tend to use Hong Kong, Singapore, and Macau” (Shaxson, 2012, 25-27). See also “Money laundering”, “Special Purpose Vehicles”.

2) The entire “offshore system” aggregate comprises at least “half of all [the planet’s] banking assets, [and] a third of foreign investment” (Shaxson, 28). These “illicit offshore flows of money are far less about the drug smugglers, mafiosi, celebrity tax exiles, and fraudsters of the popular imagination, and mostly about corporate activity.... [Although the] drug smugglers, terrorists, and other criminals use *exactly* [sic] the same offshore mechanisms and subterfuges-- shell banks, trusts, dummy corporations, and so on-- that corporations use.... The [estimated] US success rate in catching criminal money was 0.1%- meaning a 99.9% failure rate” in arresting “the greatest transfer of wealth from poor to rich in the history of the planet” (Shaxson, 2012, 29-30).

3) “This is why our [US] trade deficit is so large, because... offshore production... counts as import[s]” (Roberts, 2020, mn.19). See also “Counterfeiting”, “Eurodollars”.

Oligarchy- (both ‘rule by the wealthy’ [Plato, Aristotle], and ‘rule by traders’ [not by landed ‘aristocracy’]) “Wherever men rule by reason of their wealth, whether they be few or many, that is an oligarchy¹⁹⁵⁴; and where the poor rule, that is a democracy.”- Aristotle, c.350 BCE (Book 3, ch.viii).

More specifically; John Locke (in the post-‘Glorious’ 1690’s) advocated “a representative government such as the English Parliament, which had a hereditary House of Lords and an elected House of Commons. But he wanted [the elected] representatives to be only men of property & business [, period].” - <https://www.crf-usa.org/bill-of-rights-in-action/bria-20-2-c-hobbes-locke-montesquieu-and-rousseau-on-government.html>

1) The 1st British PM, ‘Whig oligarch’ Robert “Walpole [r.1721-42] instinctively resisted public accountability. His power and, indeed, his personal finance depended on secret state finance.... Having shielded select ministers and top financiers from ruin and prosecution, Walpole was now called ‘the Skreen-Master General’.¹⁹⁵⁵ Walpole’s tactics led to public outrage, and he was famously attacked in *Cato’s Letters* by Thomas Gordon & John Trenchard, who called for what they believed to be the antique republican virtues of transparent, accountable government through the opening of government books and the auditing of government ministries” (Soll, 2014, 111-112). See also “Civil National Identity”, [vs.] “Secrecy, Cult of”.

1b) “Rule by the few, usually the [very] rich, and hence an economically polarized society. The term recently has been applied to the Russia’s ‘free market’ *kleptocrats*, who obtained Russia’s raw-materials

¹⁹⁵⁴ “In oligarchies the qualification for office is high, and therefore no laborer can ever be a citizen... At Thebes there was a law that no man could hold office who had not retired from business for 10 years.”- Aristotle (Book 3, ch.v).

¹⁹⁵⁵ In the wake of the 1720 South Sea Bubble, a parliamentary “Secret Committee found a staggering £574,000 in stock bribes made to members of Parliament and the government. Not...[just South Sea Co.] directors... but also parliamentarians, ministers, member[s] of the the royal household, and even the king’s mistresses had all accepted bribes of stock in support of the scheme. And all these bribes were found in the company’s books” (Soll, 2014, 112). See also “Federal Accounting Standards Advisory Board (FASAB)”.

resources and other assets under President Yeltsin¹⁹⁵⁶, in 1996, through insider trading. The term has been extended to Latin America and other economies that polarize as wealth concentrates..." (Hudson, 2015b). See also "Pilgrim Society", "Client Oligarchy", "State capture", "Mafia".

1c) "the powerful few...[rule, with pretty much] no systems of financial accountability" (Soll, 2014, 3). See also "Federal Accounting Standards Advisory Board" [FASAB-56].

2) It was in (so-called) "modern" times (of "constitutional monarchy" and "parliamentary sovereignty"), that the "political dominance of large landowners" in Britain "determined the course" of the (latter 18thc-early 19thc) *enclosure movement*. It "was their power in Parliament, and as local Justices of the Peace, that enabled them to redistribute the [as much as half of the UK's] land in their own favor. A typical round of enclosure began when several, or even a single, prominent landholder initiated it... by petition to Parliament... [T]he commissioners were invariably of the same class and outlook as the major landholders who had petitioned [them] in the first place... [and] the great landholders awarded themselves the best land and the most of it, thereby making England a classic land of great, well-kept estates with a small marginal peasantry and a large class of rural wage labourers" (Stromberg, 1995). See also "Capitalisms", "Georgism (& Land value tax)", "Parties, political"; Birzer, 2003 (pp. 93-94).

3) A revolving door of sorts between parliamentarians [1st Estate] & merchants/bankers [2nd Estate] was long the norm in England & the UK by that time. John Taylor, writing from the new Republic with its new constitution, noted something similar developing in the US: "the bank [of the US] could elect all its directors out of Congress... for there is no constitutional or legal restraint upon...[such] occasions. To what an humble station hath the American legislature dwindled down, within [only] 4 years of its creation; its independency is held by curtesy of a [mostly British & Dutch-owned bank] corporation" (Taylor, 1794, 24-25). See also "British Empire(s)", "Currency wars, the", "Capitalisms" [Enclosure].

4) Two centuries later, 21st century "Financial planning under oligarchic government is all about the F.I.R.E. sector" (Hudson, 2012g). See also "F.I.R.E. sector", "Usury".

5) This is because "they're not really trying to manage the economy. They're trying to manage the networks to which they belong. And those networks are fundamentally a nexus of politicians with financiers, and in that nexus...they think they've got to rescue their network, which means you've got to make sure that the financial companies & institutions don't fail. And the financial institutions in return end up funding your re-election¹⁹⁵⁷ campaign...It's an elite trying to maintain an elite, when neither party actually understands the system they are in (see below). This has been a classic story of human existence, unfortunately, since right back with the pharaohs, and it's one reason that these systems ultimately fail" (Keen, 2018^c, mn.12-13). See also "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)", "City (of London), the".

6) In the lingering 20th century at least, the "banking elite has...favored presidential candidates whose pedigrees include at least one nervous breakdown, and extreme neurosis, or a borderline psychosis so powerful as to cripple them as autonomous political actors" (Tarpley, 2008, 65). See also "Timarchy".

7) In Roman days, the "oligarchs took all the money they made financially and put it into land and into monopolies-- and into military power. In the end, all they had left was military power-- mainly the power to destroy other countries... [that] they looted. Likewise today, the only real power America has left is military" (Hudson, 2017q, mn.25). See also "Intelligence Community (IC)", "Imperialism, 'modern'". See also "Parasitism", "Rentier", "Privilege", "Finance Capitalism", "Duopoly".

Oligarchy, American (& transition from)- (It's not the 18th, 19th, or even 20th century anymore)

"Like many Americans, Robert and Gouverneur [Morris] saw the establishment of the new nation as both political and economic opportunity" (Kirschke, 2005, 157). See also "Plan, the (old)", "Plan, the (new)".

¹⁹⁵⁶ "Yeltsin was dealt a very, very difficult hand when he came to power.... His team, no doubt, made many mistakes, [but] it's hard to envision a set of policy choices [there] that would have worked significantly better.... Some of the dilemmas that Yeltsin faced in the early 1990's-- with tax collection, with forcing oligarchs to follow the [new] rules--... were problems that were less... challenging in the 2000's because more & more people had [by then] *learned* that...financial crises are *so* [sic] dangerous to their own hold on power" (Miller, 2019b, mn.5-6), or anything.

¹⁹⁵⁷ Origins of 'reform' (in the prior debt cycle's depression): <https://www.youtube.com/watch?v=W8AgOozM8KQ>

1) Although most of America's founding fathers were large landowners (aristocracy→aristocrats), and there were pretty much no banks in the 13 colonies & USA prior to the 1790's¹⁹⁵⁸ (and there weren't that many until the War of 1812-14), large banks attained control of the money supply in the latter 19th century, and were planning out US political and foreign conquests by the (see also) "Fin de Siecle" era. See also "Quigley, Carroll (1910-1977)".

2) In the first decade of the 20th century, it was most often known as the (JP) Morgan syndicate. After the breaking up of Standard Oil, Morgan's passing, the establishment of the Federal Reserve, and World War One [all in the 1910's], there was a more diverse number of banking 'families' (dynasties)¹⁹⁵⁹ to serve the roaring 1920's and "2nd Industrial Revolution"s unquenchable thirst for capital (a.k.a. bankmoney)-- back when such capital formation was still in the name of [20thc] "Industrial Capitalism" development, instead of the more recent [21stc] financial consolidations (a.k.a. "Finance Capitalism").

3) From the mid-20th century however, there appears, with the growth of "Big Government", to have been something of a re-consolidation of American oligarchy with the rise (parallel, of course, to that of the new CIA & standing "Intelligence Community") of the 3rd generation of Rockefellers (a.k.a. 'classic' Faction1).

4) From that time onwards of course, the United States of America constituted a global Empire, and empires-- particularly large empires (as well as empires in their later stages)-- often have at least somewhat different dreams or "Factions" therein. Behind the financing of the duopoly of Republicans & Democrats (and that of their think tanks & universities) in the past several decades of the (millennial-era) US there have been, to simplify, at least 3 'oligarchical' factions; which in turn seem to have been (since at least the 1980's or '90s) overseen [or at least spied on] by the two primary divisions of the 'Secret Government' (see also "Government, Hidden")-- i.e. the "Deep State" ('venal bureaucrats'¹⁹⁶⁰ & much of the CIA) and the "Shadow Government" ('patriots' & Pentagon-level¹⁹⁶¹ agencies, of which the NSA is still somewhat ambiguous): green- trans-Atlantic oligarchy blue- trans-Pacific oligarchy

5) by chronology Bank: Prim.Ownership:¹⁹⁶² Tech.copyright: Fn.Media: 'Mainstream'CMC:¹⁹⁶³ Badboyz/girlz Faction1 (F1): **Morgan-Chase** Rockefellers¹⁹⁶⁴ Microsoft; **WSJ, Nikkei-FT Comcast-NBC, AP ATT-CNN**¹⁹⁶⁵

¹⁹⁵⁸ The "colonies were generally prevented by the mother country from sponsoring banks-- thus bank notes, the obvious alternative to government notes, were excluded" (Galbraith, 1975, 53). Robert Morris's ill-fated Bank of North America was the first, after Yorktown in 1782, and the (British-like) idea did not take root quickly in the new country until 2-3 decades later. See also "'Free Banking' (era)", "Banking".

¹⁹⁵⁹ For example Warburgs, Schiffs, Mellons.

¹⁹⁶⁰ a.k.a. 'keep it churning'; or (less cartoonlike) those managers-executives within the federal bureaucracy simply not interested in strategic change (that might endanger their cadre's cush benefits & pension schemes). For example, when Steve Pieczenik "worked for Kissinger, we had at most 9-10 people, and Henry had to [waste time to] figure out how to deal with 15,000 [(mostly redundant) employees. Similarly, Reagan's Sec. of State] James Baker had 3 or 4 people, and I was part of that group. He **couldn't figure out what to do with 15,000**" (Pieczenik, 2019, mn.15). Gradually, over numerous decades, such (ever-increasing) 'venal Deep State' masses-- more interested in 'keeping the churn flowing' than in anything else-- built up their little (or sometimes big) 'political'-based empires within the [usually] safe space of the public sector... until the boil was eventually lanced. See also "Deep State", "Trump, Donald", "Design".

¹⁹⁶¹ a.k.a. 'Titanic turners'; and in this case the turn is from Globalist/imperial [quant.] focus to Nationalist/welfare [qual.] focus. It should be understood that both the Navy/USMC and the Army/USAF are high-level Pentagon agencies. The 'halfway house' NSA (sometimes jokingly referred to as "the White House") mostly consists of individuals selected from either; and (bad boy) CIAs ['motormouths'] are, of course, overwhelmingly civilian, non-Pentagon (that means in the I.C. minority), and often used as a fall guy and/or 'limited hangout' for the Intelligence Community in general.

¹⁹⁶² Specific "queries to bank regulatory agencies regarding stock ownership in the top 25 US bank holding companies were [formerly] given *Freedom of Information Act* status, before being denied on 'national security' grounds" (Henderson, 2011); so one is asked to put up with a little bit of conjecture here (or suggest more reasonable suppositions).

¹⁹⁶³ Generally the old school (Corporate Media Cartel; or 'digital') media has always aligned with CIA-MI6-CFR, about as reliably as the "new media" (analog) has backing/support from NSA-Pentagon (Moon, 2017b).

¹⁹⁶⁴ ('Rockefellers-Rothschilds'). Henry Kissinger "had been a paid family employee of the Rockefellers since 1958 and has served as International Advisory Committee Chairman of the [Rockefellers'] Chase Manhattan Bank" (Sutton, 1986). See also "Pilgrim Society"

¹⁹⁶⁵ As clearly as the Trump Admin. (through 2018) has been topsy-turvy in its strategic direction, there is also considerable overlap between the 'classic' F1 and the 'upstart' F3. Holding co. AT&T [est. 1885] is F1. Moon sometimes places (AT&T subsidiary) Warner Media in F3.

¹⁹⁶⁶ The Morgan-Chase-Citibank alliance predates the FRBNY.

¹⁹⁶⁷ Murdoch-Oxford (knighted by Pope, 1 year before GHWB knighted by Queen). Post-Rupert "New" Fox was mostly taken over by Disney in 2018.

¹⁹⁶⁸ "F1"/'Rockefellers' were of course also famous for ostensibly** controlling the USA's larger public events/trends in the (globalizing) 1970's; as were its elected presidents-- Nixon and (to a lesser extent) Carter-- almost as renown in resisting them. **See also "Intelligence Community (IC)".

¹⁹⁶⁹ attributed mostly to the ('weird') post-2000 CIA.

¹⁹⁷⁰ Goldman Sachs (sr.) is often also associated with Merrill Lynch (jr.), and, like 'the Rothschilds'/MI6, of flip-flopping between (controlled ops.) **F2**-'left' (**Soros**) & **F3**-'right' (**Bloomberg**).

¹⁹⁷¹ Pretty much to "Faction 3" (of 'the Establishment') as Warren Mosler is to "MMT"- <https://wallstreetparade.com/secret-owners-of-cato-institute-surface-as-koch-brothers-move-to-take-control/> [per late 1970's-to-early-mid-2010's]. See also "'Modern Monetary Theory' (MMT)"; https://en.wikipedia.org/wiki/Thurston_Howell_III.

¹⁹⁷² Moon, 2018b

¹⁹⁷³ deficit hawk (2009-15), a la Peter Peterson; Buffet, perhaps portentously, flip-flopped to 'who cares' in 2018 (announced in his Feb. 2019 annual letter to shareholders).

¹⁹⁷⁴ Google-Alphabet is, like GS, apparently too big for any one 'Faction'. Moon has placed them in all 3 at one point or another.

¹⁹⁷⁵ I.e. "Turning the Titanic", as Fitts refers to cyclical matters. In this instance, its going from Globalist/Navy-type ops. (exemplified by "F2") to more Nationalist/Army-type ops (exemplified by "F3"). See proceeding Note for more on 'intra-Pentagon' *debt-cycle* [temporal] affairs. Moon would say that "F3" (and prob. "F2" also) is but a reflection & adjunct of F1; to which one could simply reply, but we're not "all Keynesians now".

¹⁹⁷⁶ The Navy/USMC appears to have the Army/USAF outnumbered 2 factions to 1 here, because this particular rubric is only meant to encompass the last quarter of the 20thc to c.2020-- or about 4-5 decades, with 4 *decades* being *one-half* debt-cycle, approx. to the 4 decades of "Bush-Clinton dynasty" (1981-2008). If the "*Yin-side/Globalist*" (↓ int. rates/↑ stocks) 40-year half-life is more-or-less steered by the Navy side of the Pentagon [blaming "CIA" all along the way, as usual]; then it only follows that the "*Yang-side/Nationalist*" (↑ int. rates/ - stocks) 40-year half-life is more-or-less steered by the Army side of the Pentagon (which actually really is much bigger than the W.H. or Congress [and the Dept.ofArmy is older than any of them]). See also "Timarchy", "Montesquieu".

This would correlate to: 1) Army side primacy-- c.1941-'80 and 'also' [under the tutelage/training of **British**] c.1861-1901; and 2) Navy side primacy-- c.1981-2020, and... [well, not getting too far-fetched; let's just say the British Royal Navy/**Admiralty** from c.1816-to-Civil War... (which would seem to make A.Jackson an underrated PotUS)]. <1815, as everybody knows, was 'chaos', not (see also) "Control systems", ← "National Security Agency (NSA)", ← "UKUSA", ← "Pilgrim Society", ← "Debt cycles".

6) Factions? Of course “for all the hoopla it’s the same secrecy culture, same spaceship headquarters, same bicoastal elitism” (Moon, 2020). See also “Big 4 Advertisers”¹⁹⁷⁷, “Big 4 Accounting firms/Management consultants”, “M.I.T.”, “Big...”, “Homogenization”. See also “United States, the”, “Hamilton, Alexander (c.1756-1804)”, “Central Banking-Warfare model”, “Industrial Revolution, 2nd”, “Industrial Revolution, 3rd”, “Big 5 (on S&P 500)”, “Secrecy, Cult of”, “Parties, political” [Hegelian].

[Bankmoney (and its diseases) have always run a step or two ahead in the UK: Germans lampooning “Ali Baba (Churchill) und die 40 Rauber” in 1940; Americans lampooⁿing the future (movies) in 1944.]

One/1 (poem)- Q: Can 1 brief statement encompass 1) a reason for the crazy ops. of the 21st century (as of 2022), why they occurred, and also 2) the/a viable strategic solution that could likely prove valid?

A: Sometimes a riddle only makes sense when the other shoe drops: ‘Getting accustomed to a standing ‘hurry up & wait’ or internal-“passports, please” culture and then lining up to be stuck like pigs can only be (orchestrated in the USA) f^om the gravest of crises-- that of (yes, you guessed it) the life-sustaining biosphere itself. See also “Great Extinction, 6th”, “Ecological economics”. From the gravest of crises, are birthed the most serious of reforms. See also “Bretton Woods” [zombie],→ “Graham, Benjamin”, & “World Par Economy (WPE)”.

See also “International Intelligence Community (I.I.C.)”, “Reform, 101”, “Design”, “Three/3”.

One-hundred/100% Reserve- (a.k.a. ‘100% banking’; i.e. ‘the [20thc] precursor of [21stc] narrow banking’ [Papadimitriou, 446]) See “Full Reserve banking”, “Narrow banking”.

Ontocide- (narrow/formal: the ‘destruction of *being*’; broad: (hence also) the ‘destruction of *everything*’; sometimes a.k.a. eco-slaughter)

“Man has been here 32,000 years. That it took a hundred million years to prepare the world for him is proof that that is what it was done for. I suppose it is, I dunno. If the Eiffel Tower were now representing the world’s age, the skin of paint on the pinnacle-knob at its summit would represent man’s share of that age; and anybody would perceive that the skin was what the tower was built for. I reckon they would, I dunno.”- Mark Twain, “Was the World Made for Man?” (1903). See also “Slavery”.

See “Freedom continuum (maturation)”, → “Monetization & entropization”, → “Great Extinction, 6th”, → “COVID”, → “Reform, 101”.

¹⁹⁷⁷ https://www.youtube.com/watch?time_continue=6&v=cAEHQ4As0xw&feature=emb_logo [‘Look at’].

Ons Geld- (est. Jan. 2015, to bring meaningful Separation of Powers to the 21stc, via monetary-currency reform)

1) "" (Wortmann, 2022, mn.16).

2) The banking sector's built-in reliance upon currency *inflation* "is [basically] a parasitic system that makes us all [little ants-in-the-pants] parasites, [both] to each other and to our environment" (Wortmann, 2022b, mn.140). There is no need for such (psychological) games in the 21st century.

See also "Central Bank", "Parasitism", "Ontocide", App.C: "1-2-3".

Ontology & Epistemology- (i.e. 'the silent movie' [inductive-nature (Aristotle, Montesquieu)] & 'the reported speech' [deductive-words (Plato, Hegel)], or 'cats & dogs' [i.e. "what *is* it?" vs. "what *are they talking about*?"])

1) Ontology (sometimes a.k.a. 'common sense' or 'post-conventional' thinking-ethics); "Aristotle is thought to have been the 1st who based knowledge on experience..." (Jowett, 1885, xix).

See also "Aristotle" [middle class], "United States, the", "Common sense"; "COVID".

2) Epistemology (more about abstract 'how we know' than about what solidly exists; not to be confused with its cousin, *hermeneutics*-- the theory & methodology of *interpretation*, especially of biblical texts, philosophical texts, & wisdom literature). See also "Epistemological undergrowth (& the F.I.R.E. sector)".

[But how do you (actually) *know* that?': Percepts & Concepts (for pretty much any politics-media chattering)]

2b) William of Ockham (c.1287–1347) "was the first philosopher to develop in some detail the notion of 'mental language' and to put it to work for him."- See also "Devil" [Dugin], "Hegelian dialectic".

2c) "Today it [epist.] remains¹⁹⁷⁸ **the great philosophic problem of our age**" (Quigley, 1966, 1276-1277). See also "Industrial Revolution, 2nd", [and, its opposite] "Industrial Revolution, 3rd"; "Academia", "Orwell".

3) The interplay between the 2 may be construed as the (more 'artistic') 'dance of civilizations' (their ebb & flow); that is bef^ore being supplanted by the advent of mathematical usury & (see also) "Debt cycles". In the traditional historiography, the 1st millennium Occident was several times more monetarily (& usury-) precocious than the Orient-- which (as far as we know) tended to phrase (or at least *record*) things more in terms of abstract philosophy than in concrete "usury". For example, Mozi's famous (5th century BCE) "Condemnation of Confucians" describes them as a clique with "certain shared occupations and views... [accusing] them of not believing in an afterlife, yet carrying out funeral...[rights] as if they did.... [Mozi] complains that the rituals...[Confucians] practiced were so minute and complicated that one could spend a lifetime studying them and never know all of them.... [T]hey were [also] fond of music and used it to corrupt people" (Rainey, 2010, 66-67). Such epistemological underbrush formed the stuff of "Dynastic cycle"s, regardless of whether such cycles were also conducted with the mathematical precision that we expect from contemporary "Debt cycles". See also "Confucian", "China".

See also "Montesquieu, Baron de", "Hegelian dialectic", "Religion", "Orwell, George", "Philosophy" [Milo].

[meanwhile, the tree of 'economic science' *is* upside-down (whether 'we' talk about it or not)]

Open Market Committee, Federal (FOMC)- The Federal Reserve System's FOMC, est. in 1933, is the prime instrument for carrying out changes in the Federal funds [RAB] "overnight" interest rate target. Hence the FOMC, at least in theory, "controls the supply of [RAB, thus also TAB] money in the United

¹⁹⁷⁸ Quigley's notion resonates in Britain (more than half-a-century later): <https://reformclub.blogspot.com/2019/05/general-george-washington-and-bank-of.html> [ProblemsRemain]. See also "Quigley, Carroll", (...who didn't know about) "Montesquieu", "Monty Python's Flying Circus"; "Philosophy", "Monstr.", "Reform, 101".

States...[and] is probably the country's most important" commission or committee, and there has been no apparent effort by Congress or the White House to come to grips with fully comprehending its protocols ('administrative law') (Zaring, 2014). See also "Desk, the", "Sovereignty" [.administrative].

1) conducts meetings 8 times per year (in Washington, based on largely NY Fed data), and the minutes of such meetings can be spotty at first, and "what does not come out, [often] until 5 [or so] years after¹⁹⁷⁹ the meetings, is...[a "lightly edited"] transcript of the meeting, and the exhibits and documentation" of what was presented to attendees of the meetings (Titus, 2020b, mn.13). See also "Federal Reserve Audit".

2) They announce it (the FFR), as if they (as opposed to basic monetary supply & demand¹⁹⁸⁰) set it; and the banks follow it. See also "Interest rates" [.Werner].

3) "7 of its members are from the Federal Reserve [Board]. The other 5...are chosen...by private banks" (Holton, 2013, mn.52), with 1 of those 5 slots being permanently reserved for the president of the NY Fed, and the other 4 alternating, annually, between the other/lesser 11 regional Fed heads, sort of like today's rotating 'presidency of the Council of the European Union', or the 16th century oligarchical Councils of Venice. See also "Eras of (monetary) History", "Industrial Revolution, 2nd".

3b) The FOMC sets both the (see also) "Federal Funds rate" & "Discount rate". The latter is set when "[t]he 9 directors at each of the 12 Fed Banks (108 directors) vote on the discount rate [to be] set by the Board... There may be extended discussion at each Fed Bank... in order to convince themselves that they are doing something meaningful, not just rubber-stamping orders from Washington. Then the rubber-stamp ritual occurs" (Auerbach, 2009, 75). See also "Oligarchy", "Hamilton, Alexander (c.1756-1804)", "Insider trading".

4) A broader example is that of the legislative-executive relationship, with the Washington Board setting broad parameters, and then the FRBNY (which has at least twice as many employees-- not counting subcontractors) determining how the policy directive is to be actually implemented (like a 'legislative' and an 'executive' branching).

4b) The Washington FOMC does in fact delegate the "responsibility for implementing US monetary policy to the Manager of the *System Open Market Account* (SOMA) at the Federal Reserve Bank of New York... This Authorization is contained in the minutes of the first FOMC meeting of each year" (Federal Reserve Bank of New York, 2007b). See also "Open Market Operations (OMOs)", "Primary dealers (23)", "System Open Market Account (SOMA)", "Desk, the", "LIBOR".

[Federal Open Market Committee Meeting, Washington, c.2012]

¹⁹⁷⁹ No, it's not an accident. "They [Fed Chair & all the Reserve Bank Presidents] mislead us [Henry Gonzalez's House Banking Committee].... 17 years of Federal Reserve transcripts, neatly typed, that they had lied [to Congress] about for 17 years", c.1976-93 (Auerbach, 2011, mn.5-7). In Feb. 1995, the Fed formally agreed to release its FOMC transcripts, after "light editing", with a 5 year lag. Several years later, in Nov. 2001, Alan Greenspan's senior staff and soon-to-be Fed Board member Donald Kohn (r.2002-10) replied to Banking Committee aide Robert Auerbach, in writing, confirming "that the FOMC members had voted to destroy their unedited transcripts for 1994, 1995, and 1996. FOMC members were told in 1995 that... future unedited transcripts would be 'thrown out', and [that] only transcripts edited by the Fed would be retained... [They] were also told to move some [of the FOMC] discussions to the lunch period, when 'the tape is not on'. The 1995 transcripts also revealed that FOMC members agreed to... [stop] the taping system [that had been] used at their meetings, without agreeing on the subjects that should be 'off the tape'. The term 'organizational subjects' was suggested..." (Auerbach, 2009, 103). See also "Public-Private Partnership", "Federal Reserve Audit", "Greenspan, Alan".

¹⁹⁸⁰ Monetary supply & demand is (in the real world of bankmoney endogenous privilege) broadly/initially set by a) the big NY Fed member commercial/investment banks themselves, in conjunction with b) the 'globalist' primary dealer banks. The FOMC is really more like a typical quasi-private/public rubber stamp committee, approving what the private sector has already done. The NY Fed itself more-or-less admitted this a few years ago, when its conclusion on the subject of "The Fed Funds Market and Monetary Policy" was that "It is important to remember that actual fed funds rates are determined by market participants, based on market conditions" (Federal Reserve Bank of New York, 2013). See also "Market fundamentalism", "Hegelian dialectic", "Lender of Last Resort (LoLR)", "Public-Private-Partnership (PPP)".

Open Market Operations (OMOs)- (the 'primary tool' of 20thc Central Bank policy and Reserve/RAB money creation is a.k.a. 'the 2ndary market' for [US gov't] securities purchases; i.e. +- changes in the CB's buying or selling of treasuries, increases/decreases the interbank [RAB] money supply [which in turn leads the TAB-bankmoney supply]¹⁹⁸¹)

"[A]ny bonds, notes, or other obligations which are direct obligations of the United States or which are fully guaranteed by the United States as to principal and interest may be bought and sold without regard to maturities but only in the open market."- 12 U.S.C. 355¹⁹⁸² See also "Oligarchy".

1) simply increasing or decreasing "[RAB/base] money and [TAB bank] credit by...[creating] reserves" (Feinman, 1993, 575). Hence:

CB 'buying'¹⁹⁸³ bonds (from PD's); 'expanding': ↑↑ FF (RAB), ↓↓ FFR... also ↓↓ TAB-bankmoney rates

CB selling off bonds (to PD's); 'contracting': ↓↓ FF (RAB), ↑↑ FFR... also ↑↑ TAB-bankmoney rates

2) The most common term for CB buying/increasing of RAB is 'expanding the balance sheet' (which decreases the interbank/'federal funds rate'); and for CB selling/decreasing RAB is 'shrinking the balance sheet' (which increases interest rates). This practice of the CB buying or selling securities, primarily treasuries, to the primary dealers in order to increase or decrease the Reserve [RAB] money supply is the only way in which RAB has been created since at least 1923 and has little to do with the Treasury.¹⁹⁸⁴ The primary dealers may then buy or sell these treasuries¹⁹⁸⁵ to the public, in return for bankmoney [TAB], in order, in turn, to expand or contract the public (M1) money supply. See also "Federal Funds rate (FFR)".

2) The Fed didn't begin OMOs "in government securities" until 1923, "in part to increase the interest-earning assets of the Fed.... [The Fed's] primary assets during the early years were [still] gold certificates (issued by the Treasury) and discounts and [gold certificate] advances to private banks. Government securities accounted for only a small part of the Fed's total assets" before then (Phillips, 1995).

3) OMOs¹⁹⁸⁶ (± the RAB money supply, and hence also its interbank 'federal funds' rate of interest) are¹⁹⁸⁷ "1 of three basic tools used by the Fed...to reach its monetary policy objectives. The other tools are changing the rates and terms for borrowing at 2] the discount window and 3] adjusting reserve requirement ratios" (FRBNY, 2007b). In the post-Crisis environment, however, the Fed also added "4]" Interest on Excess Reserves (IOER) payments and "5]" a Reverse Repo Repurchase (ON RRP) facility to its toolbox, in order to avoid negative interest rates. See also "Channel-Floor systems".

4) Banks ('state-monetized credit institutions') are the only corporations that buy and sell in both RAB and TAB. The Fed claims that OMOs are the primary tool¹⁹⁸⁸ of monetary policy. It claims that the purpose of

¹⁹⁸¹ In "general, when the federal funds rate [Interbank/RAB] falls, interest on...[TAB-bankmoney] falls immediately, but when...[it] rises, interest on...[TAB-bankmoney] rises very slowly" (Crawford, 2018, 11).

¹⁹⁸² This means that "governments are prohibited from creating chartal [sovereign] money (except coins)...[because] central banks are not allowed to finance the government directly"; which was ostensibly done for "the separation of monetary and fiscal powers" (Huber, 2017, 152). Such laws, however, 'have...contributed to rendering [both] government and central banks subservient to the banking industry and financial markets" (Huber, 153). See also "Estates, 3".

¹⁹⁸³ There is no money in the CB's 'checking' account. This is (since they are operating as the sovereign government) the 'ex nihilo' magic wand of (Federal funds/Reserve) money creation. See also "Sovereignty".

¹⁹⁸⁴ The *Federal Reserve Act* stipulates that the Fed may only buy & sell treasury securities in "the open market." Thus new Treasury issues must be auctioned-off to private banks (the "primary dealers") first. And hence the (mostly private) New York Fed-FOMC and the (private & mostly foreign) Primary Dealer banks are the partners in this creation of new Reserve (RAB) money that underpins all bank credits (TAB); and the government and public are not... Reserve (RAB) is created to support the buildup of both government and private debt. See also "'Debt money'", "Debt saturation".

¹⁹⁸⁵ With "Quantitative Easing", however, the Fed may buy many other securities like MBOs from the banks- or even from other financial institutions like hedge funds- in order to increase Reserve [RAB] liquidity. See also "Quantitative Easing (in the US)".

¹⁹⁸⁶ Quantitative Easing is, arguably, not really a new tool for the Fed, but more like 'Open Market Operations, squared' (just a radical increase in scale).

¹⁹⁸⁷ Central Banks' new tools (such as Quantitative Easing and Reverse Repos) this decade, although certainly of a larger scale than traditional/20th century OMOs, are not fundamentally different in kind.

¹⁹⁸⁸ For example, a BIS-Federal Reserve paper asserts that after deregulations liberated near monies, or (in their terms) "reduced money market segmentation", "larger open market operations were required to produce a given change in the federal funds rate, but that the pass

expanding or contracting the RAB (interbank) money supply is to maintain the target *Federal funds rate* for interbank (RAB) loans, which in turn raises or lowers the TAB interest rates. According, however, to the quantity *theory of money*, the volume of the bankmoney [TAB] supply itself is more influential in dampening or picking up GDP growth than are interest rates. See also "Interest rates", "Reserve Account Balance (RAB)".

5) Central Banks "are selling [and buying] bonds [from the financial sector] all the time in Open Market Operations, trying to control the rate of interest" (Keen, 2017f, mn.17). When the CB buys these bonds off of the financial sector "it releases [RAB] money into the economic system; if it sells, it reduces the amount of money" (Quigley, 1966, Ch.5). See also "Treasury securities/instruments", "Mortgage-backed securities (MBS)".

See also "Primary dealers (23)", "System Open Market Account (SOMA)", "Interest Rates", "Debt cycles".

Open Source Intelligence- See "Steele, Robert David".

'Opposition', controlled- (i.e. primary modus operandi of the 'bankmoney era' [past 2 centuries (increasing)])

1) Early in the 20th century, the JP "Morgan firm decided to infiltrate the left-wing political movements in the United States. This was relatively easy to do, since these groups were starved for funds and eager for a voice to reach the people. Wall Street supplied both. The purpose was not to destroy; dominate, or take over, but was really threefold: a] to keep informed about the thinking of Left-wing or liberal groups; b] to provide them with a mouthpiece so that they could 'blow off steam', and c] to have a final veto on their publicity and [also] possibly on their actions, if they ever went 'radical'. There was nothing really new about this decision...other financiers had talked about it and even attempted it earlier. What made it decisively important this time was the combination of the...[increasingly] dominant Wall Street financier, at a time when tax policy was driving...[them] to seek tax-exempt refuges for their fortunes..." (Quigley, 1966, 938).

2) "[M]any people who consider themselves rebels against the State are actually expressions of it. They think in solid blocks. They organize and over-organize. They search for one hyper-rational solution after another, digging themselves deeper into cold space. They're geometricians in their own prisons. They embrace the underlying matrices [based on the foundational assumptions] of those they consider their mortal enemies" (Rappoport, 2015b). See also "Hegelian Dialectic", "Duopoly", "Parties, political".

3) "You want an example of mind control? That would be mind control in its most precise form. Ignorance is the idea that you can take one oppressive structure and replace it with the same architecture, but [somehow] drained of all malicious content. The architecture was the problem all along" (Rappoport, 2015b). See also "Money", "Marx, Karl", "Reform, false", "Austrian School".

4) Controlled Op.'ers "view life as a series of blocks. They pick out one block and hold it up, as if it were a shining pair of wings. But a block doesn't fly. It can't. Holding aloft can build a few muscles, but that's all. Strongmen in a circus aren't going to lead us or themselves out of the labyrinth, the System, the Deep State. They're going to recreate yet another fascism, no matter what they call it" (Rappoport, 2015b). See also "Orwell, George (1903-1950)", "Strawman"; "Industrial Revolution, 3rd", "Design".

['The leader of the official opposition being sworn to the Privy Council'; Ottawa, 2017]

Options and Futures- (leveraged wagers [often from insiders] on 'market' timing)

1) *Options* concern when something will happen with *share* prices (either individual or indexed). A *call* option represents the right [or option] to buy shares on a specific date at a specific price; and,

through of changes in the funds rate to *other* market rates was also greater" (Carlson & Wheelock, 2016, 2016). See also "Money, 3 (contemporary) Tiers of",

correspondingly, a *put* option represents the right to sell. They can be publicly or privately traded and involve an extra fee for the privilege of having an option. Although in the US this has **only** been since the post-1971 era, the world's largest options exchange is the Chicago Mercantile Exchange (CME).

1b) Numerous 'classic' [from 1 or 2 decades ago] studies of CME data have found that about around 60% of *calls*-- and (more reliably) 94% of *puts*-- expired **worthless** [**unexercised**] (Summa & Lubow, 2002, 8).

2) *Futures* & 'forward contracts', however, are legally binding, no-option contracts, concerning when something will happen with interest, commodities (such as oil, gold), or stock market index prices.

'*Forward contracts*' are **sold** ('over-the-counter') on public exchanges. Whereas *futures contracts* are (equally binding) private agreements, not on the exchanges. See also "Derivatives".

3) "When the value of a stock so obviously turned on some upcoming event whose date was known (a merger date, for instance, or a court date), the value investor could in good conscience employ options to express his views.... The right to buy Capital One's shares for \$40 at any time in the next two and a half years cost a bit more than \$3. That made no sense. Capital One's problems with regulators would be resolved, or not, in the next few months. When they were, the stock would either collapse to zero or jump to \$60" (Lewis, 2011, 113).

4) According to former large-scale ag. futures contracts trader Tom Asbridge, "it's real simple, the Futures market is me buying something [that] I'm never gonna get, and selling something [that] I can never have" (Asbridge, 2019b, mn.30). Today, as opposed to a quarter-century ago, there's only one posted "futures market price... So the tail is [now] wagging the [ag. futures] dog.... You have allowed speculators to control the entire market" (Asbridge, mn.31); for food in the US. See also "Food".

"Why would you allow a *speculator* [sic] to have control of your marketplace?" (Asbridge, 2019b, mn.32). See also "Dollar-diplomacy (& hegemony)", "World Bank", "Bretton Woods".

4b) "Parity pricing (for the primary sector)" is "what *scares* [sic] the Wall Street traders, [& especially] the futures markets speculators, because they... see their ability to manipulate the [primary sector] margins [as then] going away" (Cook, 2022d, mn.44), as they actually did disappear from circa 1941-52. "They think '*Golly, we can't frighten the [primary sector] market[s] anymore. Nobody's scared of us*'" (Ibid, mn.44-45). See also "Wealth".

5) **Setting prices by futures is insane; it should all be shut down.** See also "Globalization", "Race-to-the-bottom".

5b) This is not a new sentiment. "By 1892 thousands of petitions to Congress called for the prohibition of 'speculative gambling in grain'. And attacks from state legislatures were seemingly unrelenting: in 1812 a New York act made short sales illegal (the act was repealed in 1858); in 1841 a Pennsylvania law made short sales, where the position was not covered in 5 days, a misdemeanor (...repealed in 1862); ... in 1867 the Illinois constitution forbade dealing in futures contracts (this was repealed by 1869); in 1879 California's constitution invalidated futures contracts (... repealed in 1908); and, in 1882, 1883 and 1885, Mississippi, Arkansas, and Texas, respectively, passed laws that equated futures trading with gambling, thus making the former a misdemeanor.... [Again, by the 1890's], futures contracts...were ...outlawed on most exchanges.... [and] Anti-Option bills passed both houses of Congress...[only to fail] on technicalities during reconciliation between the two houses. Had either bill become law, it would have effectively ended [both] options and futures trading in the United States"¹⁹⁸⁹ (Santos, 2008).

6) "The [main] point is that there [are]-- on the Futures market here in Chicago at least-- [no restrictions] on the amount of bushels that can be traded to *discover* [sic] the proper price for wheat. They can trade as many [imaginary] bushels of wheat at they want" (Cook, 2019c, mn.34). Every year, "we trade 10 times more bushels of [what used to be] corn than [actually] exist... That's been for about 30 years" now.... That's what *sets* [sic] the market" (Asbridge, 2019b, mn.34). See also "Food" (and 'food-like substances').

¹⁹⁸⁹ The Chicago Board of Trade was also nearly driven out of business by "bucket shops" during the Fin de Siecle. But after approx. 20 years of litigation, "the Supreme Court [in 1905]... ruled... against bucket shops ([in] *Board of Trade of the City of Chicago v. Christie Grain & Stock Co.*). Bucket shops disappeared completely by 1915" (Santos, 2008).

Overnight Reverse Repurchase agreements (ON RRP)- see "Reverse Repo Agreements".

'Over-the-counter' (OTC)- (sector jargon adj. for 'unlisted' shares or derivatives, traded without an institutional middleman). These shares or derivatives are traded by telephone or computer instead of through brick & mortar 'exchanges'. Although NASDAQ "stocks are frequently referred to as 'over the counter', NASDAQ is not the US over-the-counter (OTC) market. Over-the-counter securities are issued by companies that either choose to, or are unable to, meet the standards for listing on... [any] stock exchange... [They] are... not traded on any of the national exchanges" (Moss & Ernsthausen, 2012, 237). See also "Derivatives".

'Owners, the'- (Why did George Carlin say that 'they own [sic] you'?)

"The public is [income] taxed to enable the government to pay interest on the bond to the bondholder"¹⁹⁹³ (Daly, 1980). See also "National Debt Economy (NDE)", "Rentier", "Taxation of income".

1) Most simply, "...people who control debt, and therefore have ownership rights and leverage" (Vrabel, 2011, mn.24). 1b) Anyone can buy a bond, but "the real owners are the ones who have built up strategic ability to control and exert power over this system. These are people we never see on TV.... It's just the basic method of [about 3 centuries of] corporate governance. This is the way it works [since East India Co. days]. Operators are paid for their expertise in *running* corporations, while the owner's expertise is *controlling* them. Anybody who's been close to the top layers of corporations knows that people from the outside... that might be 3,000 miles away in D.C. or New York, can call the CEO and tell him or her what to do... and these owners have learned to apply this control system to other aspects of life, like government. These controllers are generally born into elite families and they go to Yale, or Dartmouth, Harvard, Princeton, or lesser-known northeast colleges... All the financiers and lawyers who work for them aren't born into these families, but earn their way into Harvard Business School or [like the Clintons] Yale Law School, in order to become part of this inner club. Of course... not...all graduates of these institutions... [but] just a select few. And these schools don't really teach this system, but [a] select few learn about it informally through networking and gaining access to the right social group... The few people [mostly] from these schools happen to be in the key positions of the pyramid-- whether it's the media, the corporate world, the government, the military, [or] the power lawyers and financiers-- they all happen to be in one New York [and London] based club..." (Vrabel, 2011, mn.21-22). See also "Leverage", "Corporate Governance".

2) "At the top of the pyramid is the biggest capital pools.... all the capital pools around the world-- multi-generational wealth that's hidden in a bunch of LLC's. You see... hundreds of them, if you just look them

¹⁹⁹³ Soddy thus concludes that "'taxes are...paid to the bank for doing what the taxes were...[supposed] to prevent being done, namely, the increase [inflation] of the currency [via the gov't just directly issuing more of its own]. Otherwise, there would have been no reason for the State to borrow at interest if it had not wished to prevent the increase of the currency' (*Wealth*, pages 195, 298). Soddy considers this the final *reductio ad absurdum* of the [bank-run] monetary system. See also "Banking School/Bank Teachings" [(1820's) argument], "State capture", "Slavery", App.C: "1-2-3".

up in the Upper East Side... There's endless X-Y-Z Capital Partners, L.L.C. Those types of firms...operating, collectively... [S]ome of them operate together and wield their power to allocate capital" (Vrabel, 2010, mn.0-1). Moreover, behind those "narcissists.... the CEO's of the [big] banks.... are some really old guys with canes and they are the ones that are watching daddy's money... And they use the big South Side banks [JP Morgan, etc.] to launder their money and gain territory and gain claims of assets... in New York, San Francisco, Boston, London, Frankfurt, Tokyo, Paris, Dubai, Hong Kong... the financial elite managing countries and people as an asset on their balance sheet" (Vrabel, 2010, mn.1-2). 4) "I've worked at the top of Wall St. I've worked at the top of Washington. I've dealt with the secret societies. And what I will tell you is these are people who believe in slavery.... If you give them technology that will allow them to chip you and digitize & control your money and turn it I and on, [then] we're talking about a global slavery system" (Fitts, 2017c, mn.138). "I think there is a tremendous effort underway [particularly some parts in Europe] to encourage people to accept wearing...integrated chips into their body" (Fitts, 2018n, mn.111).

5) Since 2008, "the bondholders... [have] tripled their wealth– the bondholding wealth, [in] stocks and real estate. Some 85% of stocks and bonds are owned by the richest 10% of the population. That's blocking the economy from going forward... There's been this enormous concentration of wealth in the hands of what is essentially a predatory and parasitic class– a class that decides that it wants to make its wealth financially– not by creating more employment or producing more goods and services, or by cleaning up the environment, or by getting rid of pollution, but...[mostly] by financial maneuvering...[That's] called 'financial engineering' or fintech" (Hudson, 2019c). See also "Monetization",→ "F.I.R.E. sector",→ "Fintech".

6) Owners Updates- 7/22- <https://jonrappoport.substack.com/p/bill-gates-challenges-larry-finks>

See also "Primary dealers (23)", "Council on Foreign Relations (CFR)", "UKUSA Agreement", "Bonds", "Big 3-4 Asset Managers".

PhD, in Economics- "...like a union card. You needed to get it in order to be taken seriously, because... they [large corporations] know that it's silly. They know that it's not how the world works... [or] how the economy works. But it shows that someone is willing enough to go through a lot of effort, to do something they don't believe in, to suitably prepare them to go to work on Wall Street or for the corporate economy" (Hudson, 2016c). See also "Economics" [.macro], "Fin de Siecle", "Neoclassical Revolution".

Panics- See "Bank runs/Panics", "Financial Crisis (of 2008-)".

Parallel universe- (sometimes a.k.a. 'planet eurodollars') 1) "The objective of...[monetary] economic methodology. A hypothetical exercise in science fiction depicting a world that conceivably could exist, given a sufficient number of internally consistent *assumptions*, (see *Neoclassical Economics*)" (Hudson. 2015b); like that money, debt, and banks are not significant factors to model. See also "Neoclassical Economics (NCE)", "Mythomatics", "Eurodollars", "Homo Economicus", "Science of assumptions".

["You know this Earthling?...(er) This... [dead] person?" See also "Del Mar, Alexander", "Wilken, Carl".]

1b) British have made the observation also. "Paradoxically, neoclassical economics seems to inhabit a parallel universe where wealth can be created at will, money is irrelevant, yet debts are a tangible

reality!.... To [economic science reformer, Frederick] Soddy, real wealth has to obey the laws of physics, whereas money and debts are merely important social constructs” (Positive Money, 2013).

See also “Neoclassical Economics”, “Keynesianism”, “False dichotomy”; “Wealth”.

2) The introductions to (nobel laureates) Paul Samuelson and William Vickrey’s economics texts openly say “that [macro] ‘Economics is not about reality’.¹⁹⁹⁴ It’s about the *internal consistency* of assumptions’. It’s to build a beautiful system that, if it worked, would be so nice that the reader suspends disbelief, like a good science fiction writer would do” (Hudson, 2017g, mn.39). “All that” neoclassical Economics is “is a consistency in these [oligarchy-serving] assumptions” (2017b, mn.40). See also “State capture”, “ConfUSURY”.

3) The international “dollar economy is in fact devouring not just non-dollar economies, but also the US economy.”¹⁹⁹⁵ The dollar is like the rebellious computer HAL 9000 in...Kubrick’s 1968 film *2001: A Space Odyssey*. Hal 9000 was programmed to believe that “*this mission is too important for me to allow you to jeopardize it*”, and proceeded to kill everyone who tried to disconnect it. Dollar hegemony kills all, pushing down wages everywhere with [eventually] no exceptions made for nationality” (Liu, 2004). See also “Reserve currency”, → “Eurodollars”, → “Monetization”, → “COVID”, → “Transhumanism”.

4) “That’s the real fight-- between fiction and reality today. This has taken the place of the old class warfare” (Hudson, 2012c). “When you have a wrong idea and a fictitious view of reality, pushed year after year, and decade after decade, there’s always a special interest that benefits. To have a fictitious, wrong-headed view of the economy requires tens of millions of dollars of subsidy”¹⁹⁹⁶ ... pushing this junk economics, in order to convince voters that somehow getting rid of Social Security and cancelling pension plans is good for you; lowering your wages 30% is good for you” (Hudson, 2012d). See also “Dutch Disease”, “Bank welfare”.

5) Parallel universe Updates: 10/22- Post-2020 Apocalypse, now revealed. “If you’re a citizen in the Western world...today, you’re dealing with a parallel universe of institutions which have [pretty much] no liability” anymore.

[‘Planet Debt’]

<https://www.youtube.com/watch?v=il3iLQ-qDqC> [‘last Y-chromosome to the rescue’; see also “Cultural Calendar (CC)” acquiescence]

Parasite- 1) “A ‘free luncher’, from the [Greek] word meaning an *uninvited guest* brought along to a meal or crashing the party. Parasites avoid detection by *camouflaging* themselves as part of the host itself, and then *disable the host’s brain* to prevent it from taking counter-measures to protect its own growth. The economic analogue most often cited as parasitic is *rentiers*. The objective of such rent-seeking activity is [as always] to obtain something for nothing-- income or price without real cost-value. Financial parasites tend to ride on the backs of real estate investors [and] monopolists, and *lobby* politically to support and un-tax their rent-seeking activities” (Hudson, 2015b).

2) In “nature, what parasites do, they don’t simply take. In order to take, they *have to take over the brain* of the host. And economists have a word, *host economy*.... Smart parasites help the host grow. But the parasite, first of all, has to make the host believe that the intruder is actually part of the body, to be nurtured and taken care of. And that’s what’s happened in...income accounting in America and in other

¹⁹⁹⁴ Hyperbole? “[E]ven in the most advanced industrial economies, if we strip exchange down to its barest essentials and peel off the obscuring layer of money, we find that trade between individuals or nations largely boils down to barter” (Samuelson, 1973, 55). See also “Barter”, “Tally Sticks”.

¹⁹⁹⁵ This is a.k.a. (see also) “Dutch disease”.

¹⁹⁹⁶ See also Still, 2013 [monetary theory], “Censorship, academic”, “Orwell, George” [propagation], “Georgism (& Land Value Tax)”.

countries. The newspapers and the media... treat the *financial sector* as if that's really the economy, and when the stock market goes up [from less than 1,000 in 1980, to +17,000 in 2015], the economy is going up. But the economy isn't going up at all. And the financial sector somehow depicts itself as the brains of the economy, and it would like to replace [public] government [with private]" (Hudson, 2015c). See also "Governance".

3) Debt "is the parasite" (Hudson, 2016k, mn.14). See also "Debt, private", "Zombie".

Parasitism- 1) "In biology, parasites develop a strategy of gaining control of the host's brain in order to obtain nourishment, by *masquerading* as its natural progeny or as a part of its body. For economies, the brain in question is the government. The *rentier* or monopolist masquerades as contributing to the production process, so that its revenue appears to be earned, rather than siphoned off in a *zero-sum* activity. The most successful biological parasites establish a *symbiosis* with their host, in which they actually help the host in seeking nourishment and growth. *Unsuccessful* parasites devour the host without regard for the consequences, as is the case with most *economic* parasitism. In the case of *financial parasitism*, bankers and money managers have become more destructive over the centuries" (Hudson, 2015b). "The great question-- in a financialized economy as well as in biological nature-- is whether death¹⁹⁹⁷ of the host is a necessary consequence" (Hudson, 2015). "The parasite will die with the host. That is how the Roman Empire declined and fell"¹⁹⁹⁸ (Hudson, 2012g). See also "[Corrosion-Cancer-Debt](#)" [Quigley], "Hypertrophy", "Reform".

2) "The monetary and financial system is ultimately parasitical on the state" (Wolf, 2017, mn.109); as it is upon the planet's biosphere. See also "Great Extinction, 6th", "State capture".

3) "The more people who refuse to feed the parasite, the more it helps everybody else" (Fitts, 2017q, mn.19). "If you just ejected the parasite[s], imagine how wealthy we could be."- C.A. Fitts (Titus, 2021, mn.3). See also "Financialization", "Wall Street", "Estates, 3".

[Fatal? See also "Great Extinction, 6th".]

Parity- (i.e. for whatever is being primarily used to support the state's monetary construct. [Today, this is] a.k.a. 'nominalism' [or a 1:1 exchange], between public 'Reserves'/RAB and private bank credits/TAB; not to be confused with 'Parity pricing' schedules for raw materials in the early and mid-20th century USA)

1) One doesn't understand *money* (at the end of the day an agreed-upon concept of measurement) without understanding "parity"-- that 'real' thing (or real institution) which secures or backs-up some notion (or 'fiat') concerning what is to be their institution's primary measure of value. This (selection of what is to serve as the monetary 'base' or **anchoring** [for the monetary 'fiat']) is a political, and fateful, decision (for good or ill, stability or roller coaster, peace or war, clarity or ignorant confusion)-- perhaps the most fateful of decisions. See also "Money", "Currency", "Conditioning", "Reform".

¹⁹⁹⁷ "All of this" financialization "is overhead. But there is no distinction [in GDP] between *wealth* and *overhead*, and failing to draw that distinction means that the host doesn't realize that there's a parasite there. The host economy-- the industrial economy-- doesn't realize what the industrialists realized in the 19th century, that if you want to be an efficient economy... you have to cut your price by having the public sector provide roads freely, medical care freely, education freely"; not driving up prices by putting a meter or toll on everything (Hudson, 2016d).

¹⁹⁹⁸ Parasites are usually most strongly attracted to the sturdiest of hosts; i.e. (in monetary history) to those polities with the strongest heritage of egalitarian citizenship and straight-talking public sectors-- from the Roman, Venetian & Dutch Republics, to the freedom-minded English constitution and American citizen-soldier, farmer-politicians of the classic era. See also "Reserve currency", "Eras", (childhood &) "Adolescence of Mankind", "[Freedom continuum \(maturation\)](#)".

1b) All account money scratches & scribbles, through all recorded history, have been based upon, or at least generally aimed at, 1:1 parity with something, be it:

- a) the chiefdom-temple's credit (Neolithic-Bronze Age [less often in Iron age]);
- b) the predominant agricultural crop of the time ([mostly] Bronze Age [& also before-after]);
- c) physical precious metals (Bronze Age-Iron Age [generally declining throughout, from *diluted* coinage]);
- d) cash-crops, newly-avail. state land, bimetallism, fed & state bonds, or gold certificates [18th-19thc's];
- e) gold certificates, federal & state bonds, and central bank-engineered bank credit [20th century].

See also "Account money", "Eras of (Monetary) History".

2) Throughout its history, (at least) private bank credit doesn't circulate for long (i.e. 'using bank credits for money'), unless it is 'backed' up or secured by something more stable. The 19th century Suffolk System of New England was characterized by banks self-regulating Reserves and other requirements; and it put New England's financial system head & shoulders above the other regions of the US in the 2nd quarter of the 19thc. See also "Suffolk System".

3) Federal government (direct/1st-tier currency) support for private bank credit being used/stamped as [hereby official state] 'currency' (a.k.a. '2nd-tier money') became the national norm in the 1860's-70's. "How can...a contract, which is just the meeting of two minds... turn into [state-sanctioned] money? Well that is done [since at least WW2] by way of *Parity*-- that there is something [governmental] that insures that this contract-- the value of this [TAB] contract-- [always] exchanges 1-to-1 with the [state-fiat/RAB base] currency, with the [physical or cash] money objects. That is the core of... the banking [monetary] privilege" (Wortmann, 2018b, mn.4-5); that *only their*¹⁹⁹⁹ credits are '*monetized*' via such [increasingly extensive] *state support*. It is only because "the central bank [and/or Treasury] ensures parity, [that TAB] deposits can function as money" (Wortmann, 2019b, 8). See also "Bank welfare", →"Death Culture"; "Parity pricing (for the primary sector)", "Monetary reform".

3b) And if & when this state support is perceived to be in jeopardy, there could likely be something of a panic or run, away from bankmoney and towards, f.e., a "digital currency" direct from the state. See also "Digital Cash/Currency".

4) Since the 1860's, the "institutional order... the lawmaker, combined with the [Treasury and/or] central bank... [have increasingly done] all kinds of things that block market processes... [so that] we are not asked to look at this debt-title-- what is it worth. Because otherwise it would not function as money. We would [then] be in the same situation as we were during the 'free banking' time in the United States-- where...every bank could issue its own [state (as opposed to federally) regulated] banknotes; and the banknote was then [without disguise, simply] a *promissory note*...[Everybody knew that it was actually just] a *claim* [sic] on a bank" (Wortmann, 2018b, mn.7). See also "'State Banking' (era)", "Suffolk System".

5) Basically, "by way of prudential oversight" the government says: "'Well, the *government* has looked [with "due diligence"] at these [private monetary] institutions, so [that] you, the public, the markets, don't [have to] look at it anymore... So you have to take it, per se. Just apply [1:1] nominalism, because we want you to do that'" (Wortmann, 2018b, mn.8-9). See also "Statism", →"Federal Accounting Standards Advisory Board (FASAB)" [FASAB-56].

6) "This cannot work, in fact [not for much longer than a century, at least]. It is *against nature*. It is against the laws of the markets. It's just...*trying to create something which is not there*" (Wortmann, 2018b, mn.9). So, inexorably, "[y]ou get a system in which you-- by state aid-- uphold the financial system that does not have the content that you pretend that it has.... [I]t had its value in the past... [when] you wanted to build...monetary flexibility on top of a rather fixed amount of [precious] metal...[But of course] we left [monetary] metallism...[in the 1930's; and then pretty much forever] after the Second World War" (Ibid, mn.9-10). See also "Capitalisms", "Fiat currency".

7) So why do we still "need a system that applies [1:1] nominalism to [the] claims of financial institutions?... [B]ecause it is [providing] payment over distance... [It is better] to work with a network of

¹⁹⁹⁹ In other words, the [public] "state arranges for certain private debt instruments (money claims on banks) to trade at par [1:1, with government "base money"]", and thus [to] be used as money [i.e. on the Payment System, based] on [this 1:1] nominal footing" (Wortmann, 2017); that nonbank financial institutions (and other large corporations) increasingly covet. See also "Capitalisms", "Dynastic cycle".

agents that do not [have to] transport physical [cash] objects, but [instead] have a way of setting off credit claims, and then you can pay by way of handing over information.... In times of stagecoaches and analog telephone...[you needed such a] system to enable payment over distance, not [directly] based on [physical] money objects, but based on derivatives from that-- [in monetary] *instruments*... [Thus the] government had good reason to say: '*We back this, because it is so important to the economy, that we do whatever it takes to support this [EZ payment] system*'. This is [however] now outdated.... Because we can now create intangible [non-physical] money objects.... which embody the [national] currency. It's not a claim on anything. It's not a claim on assets...[or] another counter-party. It's [direct state] money, in itself ...When the Euro was established, you could have chosen, because the internet was already there, to base the system on that. But...[the EU] didn't make that decision. It went on it its old, out-dated system, in which financial institutions are artificially supported by the state", in order to keep using some of their [private] debt titles as [public] money. This approach "brings a lot of problems with it... [One can easily] burn a society with [both] debt and [also] debt *risk* [sic], which puts a limit to the money supply... limiting the engine of the economy" (Wortmann, 2018b, mn.10-13). See also "Japan model (asphyxiation), the". See also "Bonds, government", "Money", "Debt money".

Parity Economics- See "Economics, Parity".

Parity pricing (for the primary²⁰⁰⁰ sector)- (i.e. the 'neo-physiocrats'²⁰⁰¹-mercantilists; understanding the difference between [ontological] 'wealth' and [epistemological] 'value'; a.k.a. 'the parity wage' ratios, or 'monetizing farm²⁰⁰² production', which is also a potential basis²⁰⁰³ for anchoring post-Reform monetary policy; antec. 'McNary-Haugenism' [1920's]²⁰⁰⁴; not to be confused with maintaining 'Parity' [1:1 nominalism]²⁰⁰⁵ between public 'Reserves'/RAB and private bank credits/TAB)

"*Every laborer is worthy of his hire.*"- Luke, 10:7 (& Wilken, 1961)²⁰⁰⁶

"Gradually, through these years,²⁰⁰⁷ the basic principles of national farm policy have become clear. By experience, we have learned what must be done to assure to agriculture a fair share of an increasing national income, to provide consumers with abundant supplies of food and fiber, to stop waste of soil, and to reduce the gap between huge surpluses and disastrous shortages. The Nation is now agreed that we must have greater reserves of food and feed to use in years of damaging weather and to help iron out extreme ups and downs of price. We are agreed that the real and lasting progress of the people of farm and city alike will come, not from the old familiar cycle of glut & scarcity, not from the succession of boom & collapse, but [rather] from the steady and sustained increases in production and fair exchange of things that human beings need."

²⁰⁰⁰ The "primary sector" (mining & agriculture) is sometimes a.k.a. "raw materials" extracted or grown from the Earth.

²⁰⁰¹ "" (de Yong, 1994,)

²⁰⁰² "Of the several [raw material] sources of new wealth-- farming, mining, timber, fishing, and recycling-- farming... provides about 70% of the new wealth created each year" (Cook, 2021, mn.10).

²⁰⁰³ "Our approach here, our analysis, can regulate the value of money, over time, and keep it constant", and we're already using it (deactivated), "as a matter of policy", for 3/4rs of a century now. "Our system worked and can work any time we want to use it" (Cook, 2021, mn.125-26); ...even though the formula that the USDA is "using now is flawed, on 2 counts. It doesn't matter...." (Cook, 2019c, mn.26). See also Lundgren, 1994b, mn.34.

²⁰⁰⁴ The (ultimately successful) "Parity" story in America goes back at least 15 years prior to the late 1930's. See also "Peek, George (1873-1943)".

²⁰⁰⁵ *Parity* is about what the government-- our government-- chooses to support and stabilize (enough to use for money). In the 18th & 19th centuries, the big idea was to make it all (all of these) about bank credit. Now in the 20th and 21st centuries, we've got the Earth's **6th Great Extinction Event** going on (and that's not just with farmers' suicide rates). We now expect our Treasury and government to stabilize/monetize *life* and the *health* of this (dilapidated) planet [a.k.a. real wealth]. Wealth is not money, as the moon is not the sun. Yes, this is Copernican. Better Copernican than Orwellian. Parity pricing schedules are already on the books at our government's USDA (and have been since the 1940-50's). See also "Wealth", "Lunatics", "Academia", "Climate change".

²⁰⁰⁶ Georgist 'single-tax'ers think they have a better answer for 'race-to-the-bottom' labor markets. "Instead of laborers competing with each other for employment, and in their competition cutting down wages to the point of...subsistence, employers would everywhere [now] be competing for labor" (George, 1879, 438). See also "Equilibrium", "Race-to-the-bottom (of the barrel)".

²⁰⁰⁷ adfsdf

- Pres. Franklin Roosevelt, "Statement on signing the *Agricultural Adjustment Act of 1938*"²⁰⁰⁸ (Feb. 16th). "[N]ational income is always approx. 7 times *gross*...[raw materials/primary sector] income. This ratio²⁰⁰⁹ has been... true to within a fraction for the past 25 years, good years or bad, peace or war, prosperity or depression... [Y]ou cannot reduce farm income reducing national income...[because] every dollar of gross farm income automatically creates \$1 of factory pay roll, and approx. \$7 of national income. This is known as the **1-1-7 ratio** and [it] has never been refuted."

- Ray Iberg, testimony before US House Agriculture Committee, May 18, 49²⁰¹⁰
 See also "Physiocrats, the", → "American System, the", → "National Income", → "Economics, Parity".
 "The studies that we've done for 80 years have identified... that if the pricing in the [primary sector] marketplace is below par...or...[only] some...fractional percentage of [the USDA's] parity [schedules]²⁰¹¹, then how can any payment to a farmer be considered as subsidy? If the farmer isn't paid 100% of [this] 'Parity' [calculation]²⁰¹²-- or...[per the early 1950's norm] 90%-- then *the* [real "economy] *farmer is* [in fact] *subsidizing the* [derivative] *economy*" (Asbridge & Cook, 2020, mn.39-40). See also "Agriculture", "Food (and food-like substances)".

[See also "Economics, Parity", vs. "Economics" [Neoclassical]]

2) Main point: A "different world view...absolutely.... Instead of talking in terms of [derivative] *money*, we talk about it in terms of [real] *wealth*-- what wealth exchanges for other wealth. And this involves a concept which is challenging for most...[because they have been trained to the contrary]-- *to think about*

²⁰⁰⁸ The legislation (and Steagall Amendment?) was the result of a 1937 "national conference of farm leaders in Washington, [which] advocated federal legislation to serve these ends. During the recess of the Congress, committees were at work. The task was complex and difficult" (Ibid). Title III of the 1938 *Act* created "Parity" price supports for selected agricultural commodities, while establishing marketing quotas for certain agricultural products to keep their supply in line with market demand. See also "Physiocrats, the".

²⁰⁰⁹ The "raw materials multiplier" or "trade turn" (as Carl Wilken called it), is primarily driven by "*gross* farm income-- the governing factor: and with agriculture always [?] in full production [?], [only] weather permitting, the National Income is always [per Kuznets' 1940's definition] a multiple of the [nation's] gross farm income" (Wilken, 1947, ch.14). The confusion over whether it's *gross or net*++ farm income lives on (see above). "The accuracy of the ['real multiplier'] formula has been carefully checked, in practice, by Charles B. Ray, in actual estimates for Sears, Roebuck & Company...[and] can be...checked with two other ratios, one of which-- the trade turn of the *farm & mine income* [a.k.a. 'raw materials income']-- is given in the [then current] tabulation of National Income."; and Wilken also claims that the ratio can also be verified by "the physical turn of our labor force" (Ibid). +- RC says that the ratio is calculated from *gross* farm ("agricultural") income again (in PG, 22-8-28, mn.9) [vs. Lundgren's NFI].

²⁰¹⁰ https://www.google.com/books/edition/General_Farm_Program/ff6h5qdhR_gC?hl=en&gbpv=1&dq=%22national+raw+materials+council%22+carl+wilken+congress&pg=PA853&printsec=frontcover [p.853]

²⁰¹¹ The USDA's monthly "Parity" schedules are not fixed. Rather, they are "calculate to include...costs of labor & capital in the rest of the economy... [These] changing costs are reflected in the calculation of any particular 'parity' price.... That's what keeps the economy in balance when we [actually] implement Parity pricing for the foundation of our economy"; a.k.a. the primary sector (Asbridge & Cook, 2020, mn.46). "The genius is that it's flexible. It changes with the state of the arts of technology. That's why it's calculated every 30 days, by law.... When other parts of the economy get more efficiency via technology or something, actually the...parity price" declines, because it is unfixed [dynamic]. Only the formula, or "ratios", are fixed (Asbridge & Cook, mn.49-50); and of course could be revisited.

²⁰¹² Gory details? "Parity" is not (even most farmers' perception that it's) "the cost of production plus a profit". "It's the purchasing power of any...[key] agricultural product... compared to a *time period* [a certain 'base period' index] *when it was in balance*" (Asbridge & Cook, 2020, mn.41). They're not making this up. The USDA uses the term "parity prices", per statute from the mid-20thc, but doesn't say why it is "required by statute" to compare today's prices to "the 1910-1914 base period series" (<https://downloads.usda.library.cornell.edu/usda-esmis/files/c821gj76b/q237jm92b/0c484c37w/agpr0321.txt>).

money...[in terms of] *how does money receive its value*" (Cook, 2021, mn.54-55). See also "Wealth", "Money", "Design", "Lunatics".

2b) The basic thesis (as was actually practiced in the US from 1941-52) is "that the bulk of agricultural production is encompassed in 5 basic, storable commodities. [And if] you regulate the income on those 5,²⁰¹³ it *stabilizes* [sic] the rest of agriculture. Every other aspect of agriculture will find its own natural relationship to that stabilized core value; [and then] the rest of the economy will find itself regulating ...self-regulating to this core...area", with much less demand for debt (Cook, 2019c, mn.14-15).²⁰¹⁴ See also "Graham, Benjamin", "Regulation", "Options and Futures".

2c) Debt-reduction and sustainability are serious issues. "Senator Elmer Thomas of Oklahoma [r.1927-50] said it best when he reported back on a farm bill for parity-- one geared to *stabilizing the dollar*-- and asked [that] the measure be assigned to the Committee on Banking and Currency, its logical base for consideration. After all, he said, it was the job of Congress *to regulate the value of money*" (Walters, 1982, 9). See also "Corrosion-Cancer-Debt", "Congress".

2c) Why not anchor 'the value of money' (to an index) instead of policing it? But an index of what? "Up or down... *Ag. prices always lead the way*"²⁰¹⁵ (Cook, 2019b, mn.42). "Agriculture is not commerce; and [hence] *commercial conditions being applied to agriculture will fail*.... Commerce cannot begin until...[the primary sector] delivers"; and we need to recognize the Primary sector as primary "in our economic accounting"²⁰¹⁶ (Asbridge & Cook, 2020, mn.47-48). See also "Lunatics" [i.e. following the 2ndary instead of the primary], "Great Extinction, 6th", "Primary Sector Economics".

2d) In an amazing story of real-world political economy, this did pretty much happen (as America's secret [or at least forgotten] answer to the Great Depression)²⁰¹⁷, with the official US "parity" policy, from 1941-1952, which set a strong foundation (for what would be the next several decades of debt chasing).

3) "Parity" (pricing for the US primary sector), was, however, a victim of the great post-war "Neoclassical-Keynesian synthesis" (NCS), despite "the farm vote" surge basically winning the upset victory for underdog President Truman in 1948. The Eisenhower Admn., breaking a '52 campaign promise, stealthily showed (any meaningful definition of) "parity" pricing the door²⁰¹⁸, electing to run a more globalist US economy on debt expansions instead. See also "Imperialism, American", "Bretton Woods".

²⁰¹³ I.e. in (ratio) balance with the USDA's 1910-14 base period index, which was last achieved fully c.1949, and stood at 90% "parity" as recently as 1973.

²⁰¹⁴ According to Georgist-LVT advocates, however, this need not necessarily be the case. "Parity pricing is a form of price fixing with [just] an elaborate rationale and a convoluted procedure to protect farmers. The benefit of it just gets capitalized into **higher farmland** prices.... Farmers used to have the good sense to call for *shifting taxes to the value of land*. This kept speculators out of the farmland market and actually lowered [the] tax burden on most farmers. The states with the highest taxes on farmland also had the highest share of farmland held by full-time family farms. as opposed to corporate agribusiness and "hobby" farms... The reason for this is that full-time family farmers are [simply] more land-efficient" (Sullivan, 2021). See also "Georgism (& Land Value Tax)", "Dirigism".

²⁰¹⁵ Wilken, et. al found that "*national income was...[consistently about] 7 times farm income.... [and that] raw materials income always... [preceded national income] by approximately 6 months*" (Perry, 2020). From 1929-32, there was a 54% reduction in commodity prices, and a 54% reduction in national income (Walters, 1971, ch.15). Just how this (ratio of 7) works is explained by (Walters, 1982, 13-14). See also "National Income".

²⁰¹⁶ In other words, in order "to obtain a [properly] balanced economic operation [without killing a lot of people], we [should] put agriculture in the proper ratio or relationship to the rest of the economy" (Asbridge & Cook, mn.49); after all, 'they ain't making any more of it'. See also "Political Economy".

²⁰¹⁷ In the pre-Bretton Woods days, "international currency" was a shakier concept. "From 1934-39, the [US] economy [simply] was not paying [enough] for the raw materials... to [then] have a Parity income. So there was a bunch of stuff being produced out of the factories [in addition to the armaments] that couldn't get sold here. So.... [in order] to get it paid for... we had to import *stuff* from the place we're sending our manufactured stuff [to]. And what does everybody...have...? It's not manufactured goods in '34-'39.. It's... agricultural production." - Randy Cook (22-6-12, mn.109-110). See also "Bank of International Settlements (BIS)" [est. 1930], vs. "National Income (NI)" [also est. 1930's].

²⁰¹⁸ According to Randy Cook, "most of the criticism and disbelief of the people who killed Parity after World War Two was...[because] they *refused* [sic] to understand the difference between net and gross farm income.... The Brookings Institute claimed and testified before Congress that there was no 1:5 or 1:7 relationship in the economy" between raw materials or farm income and the national income. So Wilken... pointed out that they used [for their calculations] **net** farm income instead of **gross**" (Cook, 2022b, mn.80-81).

3b) Raw material parity advocates claim that “the declining rate of profit for industry [also dates] from the loss of farm parity²⁰¹⁹.... Industry at large was getting something like 4.5% up to 1980.... You can watch the liquidity slide right out of the banks” from the end of parity in the early 50’s (Walters, 1982, 10-11). “The old simplistic farm organizations saw the processors as their enemy, the handler as a non-functioning middleman, [and] the tractor dealer as a profiteering rascal. But profits are declining across the board, and this cannot be true” (Walters, 1982, 13). See also “Wall Street” [‘since 1982’], “Multipliers”.

4) Since “2013, *net* farm income²⁰²⁰ for US farmers has declined [by] 50%... And without parity in place (essentially a minimum price floor for farm products), most commodity prices remain below the cost of production” (Wiengarten, 2018); farmers (by nature, the most self-sufficient) are turned into cogs and doles of the State [and its lobbyist-run policies]. See also “Lobbyists”, “Death Culture”.

4b) This primary component of imperialism is nothing new. Trans-Mediterranean shipments of “free food-supplies.... [a.k.a. “grain and olive oil”, made] up a quarter or more of the whole [Roman Imperial] budget. It must have mattered very much to the state that its great cities were kept artificially large... with ‘bread and circuses’ as the tag went” (Wickham, 2009, 23). See also “USSR (1922-91)” [‘strip-farming’], “Imperialism, American” [carrots & sticks].

4c) “Trying to export the food is a fool’s game” (Cook, 2021, mn.116). See also “Imperialism, classic”, “Dutch Disease”.

5) “What [Parity pricing] does is exactly what [1920’s Nobel laureate Frederick] Soddy pointed out needs to be done. In other words, the *wealth* comes first [with Parity]. The wealth shows up in the marketplace, waiting for... money to match the [real] goods that are available for sale.... And at every step...(from production to marketing and consumption) no [interest-bearing] debt is required. Then you [will] have a solvent exchange economy” (Cook, 2019b, mn.36-37); with adequate stability. See also “Wealth”.

6) Parity pricing eliminates debt, because primary producers won’t need to borrow.²⁰²¹ Massive *disparity*, however, leads to a vicious circle of massive debt (Asbridge & Cook, 2020, mn.41); over-concentration of the sector, and (eventually) what some have called “industrial food” & “food-like substances”. See also “Food”.

6b). Hence, it is a mistake to view parity pricing as simply a subsidy to farmers [original ‘wealth’] instead of to bankers [derivative ‘money’] or “to create farmers having a higher standard of living... No. It’s to make the economy function without the need for including new debt all the time. And... [the increasing debt pyramid has been ever] since we went off Parity.... [This is nothing new] The entire country has moved from...[what was its traditional] production-based economy... to a *debt*-based economy, where now there’s no [circulating] money that isn’t debt” (Asbridge & Cook, 2020, mn.42-43). See also “Debt cycles”, “National Income”, “Cycles”.

7) The (**unadjusted?**) parity ratio in the second half of 2019 stood at “31...the lowest it’s ever been in history... For every dollar’s worth of wealth that a farmer...[produces], he gets paid 31%” (Cook, 2019b, mn.20). See also “Imperialism, classic”.

²⁰¹⁹ Walters also claimed that United Auto Workers President (1946–70) Walter Reuther “said he understood that labor could not have more of a parity than agriculture without bringing on the wooden nickels of inflation and a declining rate of profit and [also] future investment for job creation” (Walters, 1982, 11).

²⁰²⁰ “” (Cook, 2022b, mn.121).

²⁰²¹ This is because “debt has to make up for it” whenever a national economy consumes the entirety of its aggregate “production. That’s the basis of what we talk about...” in Parity economics (Lundgren, 1994b, mn.50). In other words, when the “various parts of the [national] economy” are imbalanced, or not in ratios that are healthy or sustainable, debt increases to fill the void, which is “precisely what has been happening to our economy” (Cook, 2021, mn.14). See also “Physiocrats”, “Political Economy”, “Imperialism, American”, “Corrosion-Cancer-Debt”.

More specifically, at the ground level, “*non-recourse loan* terms state that the crop itself is the only collateral for the loan” (Cook, 22-6-12, mn.40-42). See also “Company” [limited liability].

8) Parity price schedules (based on the ratios) have been continuously kept by the USDA since 1937, and were used as a monetary-economic anchor between the years 1910-14,²⁰²² 1925-29²⁰²³, and 1942-52.²⁰²⁴ During these periods, “debts were shrinking, employment was increasing, the economy was growing, etc... [because of] equal exchange conditions between agriculture, industry and labor, in other words PAR EXCHANGE, enabling us to afford an expanding service segment” (Cook, 2020b). And they are still (as per the law) calculated and published²⁰²⁵ today²⁰²⁶ and could be immediately used for anchoring prices in America without the need for any legislation or large budgeting (Cook, 2019b, mn.33-35). See also “Bank welfare”, “Common sense”.

9) How can ‘Labor Theory of Value’-type thinking²⁰²⁷ be so wrong in everyday economic reality, yet valid in terms of the utility of using Parity pricing as a monetary base? See (also) “Wealth” [.primary sector], “Food”, “Value”.

10) Nonetheless, ‘everybody’s first thought is that it’s (about) heavy-handed (1940’s-type) price controls, so it’s way out of the Economists’ fields-- including even Georgist economists. No. Heavy-handed, ‘reactionary’ policies are the result of many decades of ignoring the primacy of common sense economic reality on Earth. See also “Imperialism, classic”, “American System, the”.

10b) “Stability for agriculture [& the rest of the primary sector], by its very nature, is a *constraint* on what [a no-longer crackhead] government can do. The greater the parity between the different sectors of the economy... the more restricted is the domain of the bureaucrat and the politician” (Walters, 1982, 13). See also “Wilken, Carl (1895-1968)”, “Graham, Benjamin (1894-1976)”.

10c) Nonetheless, it “does not benefit the US to have a [agricultural] supply management program if other countries do not, and [they then] consequently, increase their exports at the expense of the...[US]. Therefore the *Family Farm Act of 1990*... instructed the Sec. of Agriculture to conduct trade negotiations with other major exporting nations, to achieve international commodity agreements which would ensure that the US and other exporting nations retain their fair global market share as defined by GATT and that export prices remain equal to or above costs of production of the exporting nations.... This program would have moved the nation much closer toward parity and the philosophy of the *new physiocrats* ...[but] the legislation failed to pass” (de Yong, 1994, 82-83), that time around. See also “Wilken, Carl (1895-1968)”, “Pyrite”.

²⁰²² This period was retroactively “selected as...[the] parity base period because...[it] represented a time bracket when the dollar stood at 100 for sector of the economy. The [resultant] parity price level is the level at which there is the greatest [sustainable] distribution of goods” (Walters, 1982, 8). The 1946-50 (or ‘Third base’) period was used to confirm data from the first 2 periods; and it “could have provided an equally valid base period of 100” (Walters, 9). Main point? Newfangled service sector “industries cannot be sustained without parity for agricultural raw materials, unless there is unsound debt expansion” (Walters, 9). See “*National Debt Economy (NDE)*”, “Great Extinction, 6th”.

²⁰²³ 1925-29 was the base period used for “Parity” ratio calculations during WW2 (Cook, 22, mn.56). “[T]he Parity was [also quasi-] implemented in 1933...[but with] a return to the farmer of...only 70%, and it didn’t reach 90% until 1941” (Cook, 2021, 59); probably because “Wilken didn’t publish his [parity ratios] research until 1936” (Ibid).

²⁰²⁴ The “first two [instances] were *curious events* of history due to multiple coincidental occurrences and provided the statistical basis for the ‘raw materials’ analysis which was proven effective by the policies enacted during the 3rd [1940’s] period” (Cook, 2020). The Federal Reserve says that it “resumed active monetary policy” in 1951 (Feinman, 1993, 575). And the The London Metal Exchange (LME), “the world’s largest market in options & futures contracts on... metals... was closed during World War II and did not re-open *until 1952*.” - <https://blog.steinerelectric.com/2014/04/what-is-the-london-metals-exchange>

²⁰²⁵ Although the USDA’s “calculating” has been continuous since 1937, its monthly “publishing” of the numbers has only been since somewhere around 1980, or the past “40 years” (Asbridge & Cook, 2020, mn.39).

²⁰²⁶ See “Agricultural Prices”, at: <https://usda.library.cornell.edu/concern/publications/c821gj76b?locale=en> (2019b, mn.34); also: https://www.nass.usda.gov/Charts_and_Maps/Agricultural_Prices/index.php. “It’s not a fixed price. It’s a *calculated* price [introduced at the primary/real level], based upon the requirements of the rest of the economy” (Cook, 2019c, mn.48). “They’ve fiddled with this formula since 1946-47... time and time and time again. The biggest problem that I have with the formula that they use now [is] 2 concerns. [First] is [that] they use Sliding Parity... which is precisely [the] *opposite* [sic] of what needs to happen.... And the 2nd problem that I have is... the Rolling Base Period.... They are required now to calculate [Parity in] 2 ways. One, according to... the 1910-1914 base [prices]; and the other on the Rolling Parity base... [B]oth sets of numbers [are] published.... It’s crooked.... It’s been written and modified by people who don’t understand what we need to accomplish.... What we’re looking for here is everybody’s dollar should be 100 cents” (2019c, mn.49-52).

²⁰²⁷ The “state of the arts of production is an element of the Parity price calculation. What does it cost to get all this work done? That’s really what we’re asking, as the Parity calculation.” (Cook, 2019e, mn.11).

11) “Yes, your food bill would rise...from about 16% of your disposable income, to 24%. But it wouldn’t stay there long”, as the national income increases; after “probably about a year-and-a-half to 2 years, the economy would...[gain] its proper balance” (Cook, 2021, mn.19-20). And “the end of deficit spending would also help control inflation... [as would] parity pricing...[stabilizing] the purchasing power of the dollar...[&] the whole structure of prices”; and reducing aggregate debt levels also lowers prices and inflation (Cook, 2021, mn.20-21). See also “National income”.

12) Does “Parity economics” have the best (or at least most sustainable) monetary theory? At least they think a) clearly, and b) deeply, and in c) modern (technological) terms about it: “How do we, as the government, put value in the money? And, once we’ve done that, how do we *maintain* [sic] that value as a constant... over time?” (Cook, 2021, mn.55). See also “Physiocrats, the”, “Great Extinction, 6th”, “Monetary theory”, “World Par Economy”.

12b) Would such serious (as opposed to ‘Malthusian’-premised) strategic-sustainability thought constitute a ‘revolutionary’ or ‘Copernican’ attitude shift? “Notice, that at no time, at least in [the 976-1776 period]... did the king find any allies worth talking about in... the most important group in society, the peasants, who were producing the food for everyone else.... If you take basic things that everyone needs, like food... things of this kind, you will never find that possession of these has ever given the possessors or the people who supply the community with them enough power to play any role in political action. So we just [take it for granted and] leave the peasants out of it” (Quigley, 1976c-pt.2, mn.139-140). See also “Political Science” [Boulding], “Great Extinction, 6th”, “Imperialism”, “Food”, “United States, the”.

13) The “health, robustness, and sustainability of the American economy is directly tied to the production of raw materials and the price at which those raw materials *first* enter into commercial channels. When raw materials enter trade channels at prices in balance with the prices of labor and capital, the economy operates on an **earned-income** basis, with no **buildup** of public and private debt. Conversely, when raw materials enter trade channels at less-than-parity prices with labor & capital, the economy lacks sufficient **earned** dollars to operate on a debt-free basis, [and] therefore, public and private debt accumulates” (Cook, 2017). See also “Debt saturation”, “Debt cycles”.

14) Soddy was writing in the 1930’s. Could such a national-based strategy be scuttled, these days, by globalism? “If you monetized agriculture through a sound farm [and raw material] policy, which is [already] on the books [from the 1930’s], and *you didn’t [also] restrict imports*-- so that American manufacturing could not be put out of business by...[cheaper imports, then that] would be a real tough economic problem to solve. It needs a more comprehensive policy.... Look what’s [already] happened all through the Rust Belt” (Asbridge, 2019, mn.37-38). See also “National money”.

15) “Parity” Updates:

2021- at 35% parity (Cook, 2022b, mn.138).

2022.2- “The pricing mathematics and the integrity of the pricing is one of the most critical ingredients that make everything go” (Fitts, 2022, mn.25).

See also “Food”, “Inflation/Deflation”, “Monetary authority”.

Parliament, UK- (was pretty much sovereign for a couple centuries [Hollis, 1949])

1) (Hollis, 1949)

2) “Originally...[it was British Prime Minister] Harold Wilson who said that’s the job of a politician-- to deliver his *constituency*...to his *contributors* and his backers”²⁰²⁸ (Hudson, 2012c).

See also “Glorious Revolution, the”, “Democracy”.

3) Parliament Updates- 11/22-

²⁰²⁸ “Many on the outer edges of the [(1890’s-1930’s) Rhodes-Milner] group, idealists and honest politicians, may never have known that the real [strategic] decisions were made by a ruthless clique about whom they had no knowledge. Dynastic families, the Conservative Cecil’s and the Liberal Rosebery’s, had dominated British politics over the previous 4 centuries [as king-makers & (what today would be called) ‘deep state’ powers-behind-the-throne], and had nurtured British imperialism” (Macgregor & Docherty, 2014). See also “Royal Institute of International Affairs (RIIA; 1919-), “English constitution, the”, “City (of London), the”.

Larry the Cat@Number10cat

"To answer some of your questions: - No I'm not [PM] 'Rishi Sunak's cat' - I live here permanently, politicians are temporary residents - Some of them very temporary - I agree, he's not off to a great start - No, I've not found his wallet. Yet."

See also "European Parliament", "Monty Python's".

Parliaments- See "Congress".

Parties, political- (that which turn violent impulses into baksheesh impulses-- given an improper or imperfect monetary system; in excess: 'political cartelization' [see also "Duopoly"])
In absolutist states, "historians²⁰²⁹ betray the truth, [simply] because they are not at liberty to speak it; in states remarkably free [however], they betray the truth...[due to] liberty itself, which always produces divisions, everyone becoming as great a slave to the prejudices of his faction as he could be in a despotic state"- Montesquieu's *Spirit of Laws* (1748, 315). See also "Politics", "Corruption".

1) Pre-18thc Enlightenment, they were, per the Venetian Republic, largely a matter of 'spill baksheesh, not blood'-- a then-relative luxury in the richest and most monetary-accounting astute of Europe's polities.

1b) The 'factions' (de facto Parties) of the fledgling USA in the 1780's were mostly geo-economic interests masquerading as ideologies, until...

1c) ...they became geographically segregated and the baksheesh could then be expropriated by more direct means (as in the American Civil War).

1d) In India, migration and self-segregation of parties has mostly been along lines of religion.

2) In the USA, political parties "grew up wholly²⁰³⁰ outside the Constitution²⁰³¹ and the legal system as [primarily] the [main] *links between* the 3 branches of...government"²⁰³² (Quigley, 1972b); but have degenerated into vehicles for generating turnout and graft: the largest two of which (most acutely in the US) unfairly discriminate against the smaller ones, in addition to less-organized forms of public participation. See also "Democracy" ['.vote for money'].

2b) Does this remind one of the middleman function of banks being usurped into a (see also) "Bankmoney regime"? General secretary of the constitution of 1787 James Madison²⁰³³-- in contrast to Jefferson and most Virginians-- was not averse to the development of either of these (what would later be called) 'special interests' getting their camel's nose under the tent. A supranationalist (de facto) agent of the Morris-- who were already then running the 'American' economy, such as it was-- Madison only

²⁰²⁹ "[T]he men of thought and deep meditation.... [that articulate the] character of the nation" (Montesquieu, 315). See also "History".

²⁰³⁰ This is not really accurate. Per Madison's *Federalist* 48, there was a vacuum formed (from the 1780's) between "" (Rudalevige, 2005, 20).

²⁰³¹ And the preceding Articles of Confederation era was even more Party-phobic, enduring horrible hindrances; "so as to prevent [...Legislative] exploitation by powerful factions" (Kirschke, 2005, 124).

²⁰³² This intermediary role, in turn, "evolved [in order] to make up for one of the major deficiencies of the Constitution...[its] lack of [any specific] provisions to translate the citizen's vote into a government [that was actually] responsive to the popular will" (Quigley, 1972b). See also "Democracy", "Constitution, US".

²⁰³³ "Little Jemmy" (1751-1836) was indeed like an employee or operative-agent during the 1780's; with "Madisonian thought", sometimes a.k.a. pluralism or 'interest group politics', only "emerging through...the late 1780's and...early 1790's, when it finally crystalized into something permanent and recognizably Madisonian" (Schwarz, 2017, 43). The Good Secretary was, throughout, a competent and diligent organizer; with the requisite (what Schwarz calls) "deep and abiding reverence for the will of the people" (Ibid). Of course anyone in Virginia then could not be elected without such a prerequisite. See also "Corporatism", "Economic democracy".

expressed detailed interest in transforming the “centrifugal” former colonies into subordinate states during the 1780’s. The resultant constitutional structure (if it was to be functional, not just something on paper) had to (Raphael, 2013,). See also “Madison, James (1751-1836)”.

2c) This is nothing new. “All parties, however loyal to their principles at first, degenerate into aristocracies of interest at last; and unless a nation [citizenry] is capable of discerning the point where integrity ends and fraud begins, popular parties are among the surest modes of introducing an aristocracy” (Taylor, 1814, 569). See also “Integrity”.

2d) “Both of these institutional developments, political parties and judicial supremacy, are outside the [original] Constitution. Both of them are largely irresponsible. They are not responsible to the people” (Quigley, 1972b). See also “Federal Reserve”, “Public-Private Partnership”, “Constitution”.

3) They are “in short...inconsistent with every principle by which politicians and philosophers have hitherto defined a free government.... It renders useless or impracticable the freedom of the press... [converting] the representative into the principal.... The danger of parties to free governments, arises from the impossibility of controlling them by the restraint of political law.... No division of power, no responsibility, no periodical change of leaders, no limitation of ‘thus far you may go and no farther’, stops their career. In every form, therefore, they constitute the same avaricious or furious species of aristocracy, which would be produced by a form of government in the hands of a self constituted and uncontrolled body of men. They are universally disposed to persecute, plunder, oppress... and under the title of patriots, are, like [prior centuries’] fanatics under the title of saints, ready to perpetrate any crimes to gratify their interest or prejudices... [With] party confidence, we abolish the only known remedy against the evil qualities of human nature²⁰³⁴, abandon our [great] experiment of political law founded on these principles, and rest for security on ignorant mobs, guided by a few designing leaders, or on cunning combinations, guided by avarice and ambition. The... Jacobins of France... [demonstrate] the natural effect of the unlimited confidence... acquired. This confidence produces an unlimited government... and such a government is despotic.... Malice, envy and calumny instantly become the prime ministers of the furious and tottering tyrant. *Knowing his doom from the fate of his predecessors, he hastens to glut his appetite for mischief before he dies. No numerical checks or balances can reach this dreadful party tyranny...* It is even able to... make the people themselves the authors of their own ruin... [M]en flee to monarchy, because it [party confidence] lays waste and devours their rights with a thousand hands and a thousand mouths.... [In] dominant party zeal, lies, in my view, the greatest danger to the free form of government of the United States.... Nations are universally retributed for the folly and impiety of submitting to this species of human providence, by a divine decree, that it shall unexceptionably convert those servants into masters and tyrants” (Taylor, 1814, 653-56). See also “Libertarianism(s)”.

3b) There was a general consensus. “However combinations or associations of the above description may now and then answer popular ends, they are likely, in the course of time and...[events], to become potent engines, by which cunning, ambitious, and unprincipled men will be enabled to subvert the power of the people and to usurp for themselves the reins of government, destroying afterwards the very engines which...lifted them to unjust dominion.”- George Washington, “Farewell Address”, Sept. 17, 1796

3c) It wasn’t just southern founding fathers.²⁰³⁵ “The same political parties, which now agitate the United States, have existed through all time’. Precisely; and this is precisely the complaint.... I say, parties and factions will not suffer improvements to be made. As soon as one man hints at an improvement, his rival opposes it. No sooner has one party discovered or invented any amelioration of the condition of man, or

²⁰³⁴ “The law of nature which is really the postulate of a true political economy is.... not, as has been erroneously assumed, that men are invariably and universally selfish. As a matter of fact, this is not true.... The law of nature which is really the postulate of a true science of political economy is that men [in a natural, un-learned state typically]... seek to gratify their desires with the least exertion [i.e. the inherent laziness of apex predators, and resentfulness towards that which upsets or disrespects the traditional ‘right’], whether those desires are selfish or unselfish, good, or bad” (George, 1898, 83). See also “Communism”, “Anti-semitism” (lazy answers).

²⁰³⁵ Taylor’s good friend and fellow Virginian Thomas Jefferson also noted (somewhat less stridently) that: because the “people cannot assemble themselves. Their representation is unequal and vicious. Various [constitutional] checks are opposed to every legislative proposition. Factions [nonetheless] get possession of the public councils. Bribery corrupts them. Personal interests lead them astray from the general interests of their constituents” (Jefferson, 1789c). See also “Parliament, UK”.

the order of society than the opposite party believes it, misconstrues it, misrepresents it, ridicules it, insults it, and persecutes it.²⁰³⁶ Records are destroyed. Histories are annihilated or interpolated or prohibited; sometimes by Popes, sometimes by Emperors, sometimes by aristocrats, and sometimes by democratical assemblies, and sometimes by mobs.”- John Adams (Adams, 1813c). See also “Freedom continuum (maturation)”, Appendix C: “1-2-3”.

3d) “Both parties [in the US] have excited artificial terrorism, and, if I were summoned as a witness to say, upon oath, which party had excited the most terror, and which had really felt the most, I could not give a more sincere answer than in the vulgar style, ‘put them in a bag and shake them, and then see which will come out first’” (Adams, 1813b).

4) This is because-- as many of America’s founding fathers realized-- any ‘2-party system’, and certainly those that rest upon a TAB-bankmoney (a.k.a. ‘central bank’) foundation, is but a ruse-- perhaps a *rose* of unusually intelligent and good-hearted lawyers to the mass (3rd Estate) of corporate media-propaganda imbibers... but more like just (occasionally high-priced) attorney-employees and tactical mouthpieces (eventually degenerating into something resembling wind-up chatter toys), for even lesser oligarchs like Trump (as he often demonstrated in campaign 2015-16) and the larger financial oligarchy [and most likely also, in more recent times, the Intelligence Community] that (for the past 2-3 centuries) has directed national and international strategy. This ‘unending’ shell game of sorts was established on the other side of the Atlantic by the mid-19th century. “The ebb and flow of British Imperialism and the predominance of the benign or the evil character of the Dr. Jekyll and Mr. Hyde [game, of what is called the] British Government [standing bureaucracy] is definitely linked with the two major political parties of Britain, as is readily apparent from the... tabulation of successive British Governments... [from the 1860’s to] present day...”²⁰³⁷ (Knuth, 1944, 50). See also “Royal Institute of International Affairs (RIIA)”, “Conspiracy theorist”.

5) On the American side, institutional-grass roots resistance to political duopoly was stamped out (as is usual in UK-USA relations, a couple decades later) by the 1880’s or 1890’s (Theodore Roosevelt’s failed revival in 1912 notwithstanding). A century or so later, and “[b]oth parties [now] believe in taking your money... they just disagree on what to spend it on.... [And between] 2/3rds to 3/4^{rs} of [the US federal budget] can be described as... Congress taking the earnings of one American and giving them to another American...” (Williams, 2019, mn.11; mn.3); a.k.a. entitlements/transfer payments.²⁰³⁸ See also “Discretionary (US Budget)”.

²⁰³⁶ Unabashed Federalist and de facto father of the Constitution Gouverneur Morris also had no illusions of what standing political parties would lead to. “The Tales circulated among the People I can trace back to Men who, having inlisted themselves under the Banners of Faction & being disappointed in the Views burn with deadly Hate and seek Revenge in low Abuse and villainous Insinuation. . You [Robert Morris] will oblige if whenever any Member of Congress or other makes free with my Reputation, you will question him as to Facts and Evidence. It would give me great Pleasure to fix upon some Scoundrel the deep Lie and open all his Infamy to his own Views” (Kirschke, 2005, 122). See also “Hypocrisy”, “Integrity”.

²⁰³⁷ The immature American 2-party system of the mid-19th century was not strengthened by the 1860’s and Civil War. But in Britain, however, the 1860’s reforms (which increased male suffrage there from about 7% to 33%) seem to have been predicated upon a stricter and more party-disciplined version of a 2-party system. Numerous scholars have concluded that the 1867 reforms “demonstrated that the liberal state was organized to counter mass democracy and universal suffrage. The masses were to be incorporated in the nation, but [only] indirectly, on the basis of limited suffrage”; “Nineteenth-century [British] suffragists were not democrats- they did not seek the creation of political system in which every adult man and woman held the parliamentary [Commons] vote as a matter of course” (Mayhall, 2003, 15; 17). From c.1867 up until the 3rd quarter of the 20thc; Britain was “the classic home of two-party government.... Indeed, the practice of simplifying the complexities of politics into a contest for office between a pair of... claimants has endured in Britain through a catalogue of changes which would assuredly have wrecked a less effective system.... [and] Especially in recent decades, moreover, both major parties have developed a strength of organization and tightness of discipline... [for which] no similar approximation exists outside [of the Commonwealth]. For this reason, Britain... stands in contrast to the United States.... [E]ven during a presidential election the cohesiveness of the [US] Democrats and Republicans is far from matching that of the [UK] Conservatives and Laborites” (Lispon, 1953, 337). Since the 1970’s, however, the British 2-party system has lost a lot of its strength, mostly from the ensuing controversies [political misrepresentations] of Thatcherism (→SNP) and European Union (→UKIP).

²⁰³⁸ In the half-century from 1960-2010, such “entitlement spending... [grew from] less than a third of all federal spending... [to] just about two thirds of government outlays, with everything else-- [i.e. the “discretionary” budget of] defense, justice, [and] all the other duties of government-- making up less than one third” (Cary, 2012). Is that not at least somewhat bizarre? Likewise, from “the 1980’s” to 2012, the percentage of American households receiving “transfer payments from the government” increased from 30% to approx. half (Ibid). That is no misprint. In fact, “entitlement spending tended to be an average of 8% *higher* under *Republican* presidents than Democratic ones... [with] the

6) “Orders enslave nations, by making parties.... Whenever party spirit is created, the oppression produced by orders is secured. Patrician and feudal parties were made by conquered lands; church parties by tythes, offerings and endowments; military parties by wages; patronage parties, by offices, bribes and sinecures; and paper [securities] parties²⁰³⁹, by stock, interest and dividends.... All...parties or aristocracies of interest... are avoided by *forebearing to make the laws which make them*, and in no other way.... [F]ree and fair governments cannot be subject to party.... It makes the constitution a blind, from behind which legal parties [‘lobbyists’] or aristocracies strike nations” (Taylor, 1814, 570).

6b) Why were nearly all US founding fathers anti-‘factions’/parties and anti-‘democracy’? They knew full well what was likely to soon develop. By (no later than) the 2nd and 3rd quarters of the 19th century, “Cooping was rampant in Baltimore...[and] seems to have happened [regularly] nearly everywhere in the United States.... [If local gangs weren’t up to it] politicians [in Massachusetts at least] would bring [in vote coercion] gangs from New York, Delaware, Washington and Alexandria to help win elections.’

- <https://www.atlasobscura.com/articles/election-fraud-in-the-1800s-involved-kidnapping-and-forced-drinking> [2016].

[The ‘Bleeding Kansas’ days, c.1855, were not far beyond the pale.]

7) Since the mid-20th century, Democrats and Republicans have been creating the need for monster big government, which is [those who are monetarily literate know] a red-herring from the primary cause of economic distress, which is the underlying monetary system of debt-money extraction. Where are the Lindberghs, La Follettes, or Patmans in Congress today? Taylor’s theories have been undeniable in practice for at least the past 5 decades now. See also “National Security” (cult of).

8) According to political scientist Robert Dahl, the “ideal criteria” for “large-scale democratic government” fall along only 2 simple dimensions: a) universal *rights to* participation; and b) *actual* participation (Dahl, 2000, 36). The first was accomplished with the Civil Rights movement of the 1960’s. The timing of the second has a lot to do with “debt cycles” and (long-foreseeable) crises.

9) “Given the refusal of Congress to enforce the Constitution and financial management and reporting laws to date, we see no reason why they would start now, other than through the intercession of significant political or investor pressure. It should be noted that the primary source of campaign contributions is increases in capital gains from real estate and [the] stock market value of major corporate and wealthy contributors...[T]he *conflict of interest*... [with] any dedication they may have to transparency in the financial statements of major government agencies, contractors, and banks is clear” (Fitts & Betts, 2019). Or, as David Icke says, “so many people *deserve* [sic] the politicians they get. If you are going to vote not by looking at the character, background, [and] history of the person you’re voting for, but by what party [graft machine] he represents or she represents, then you are going to vote people in who shouldn’t be there” (Icke, 2018e, mn.13). And even if the individual candidates are sufficiently straightforward and competent, still “all the time, the slaves are fighting the slaves, for the slave owners, as a...[intended] diversion of focus.... But the game can change, and it can change very quickly.... It’s just a choice.... We can paint a better world” (Icke, 2018c, mn.12-13). See also “Owners, the”, ‘FASAB-56’,

9b) “It’s not gonna come from the top-down. It has to be a bottom-up...[phenomenon] with individual people deciding that they are going to be healthy and [then] doing that” (Francis, 2017, mn.5).

9c) “‘The object in life is not to be on the side of the majority, but to escape finding oneself in the ‘ranks of the insane’.... ‘The happiness of your life depends on the quality of your thoughts. Therefore guard

Nixon, Ford, and George W. Bush administrations... [being] ‘especially lavish’ in their entitlement spending” (Cary, 2012). See also “Integrity”, “Discretionary (US budget)”.

²⁰³⁹ The Whig “party was made strong in England, by the paper stock with which it was enriched and united. In spite of its principles, it was forced by the regimen of this legal wealth to enslave the nation, by poisoning the principles it professed to nurture” (Taylor, 570-71). See also “Politics”, “English constitution, the”.

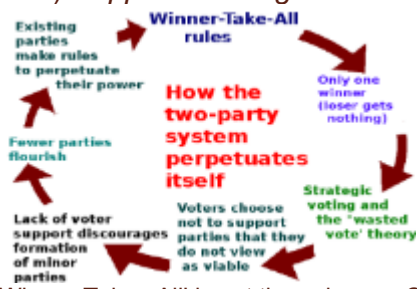

accordingly and take care you entertain no notions unsuitable to virtue and reason'. 'Never esteem anything as an advantage to yourself that will make you break your word or lose your self-respect.'"²⁰⁴⁰ - Marcus Aurelius, 121-180 (McLynn, 2009, xiii-xiv). See also "Usury" [.insanity].

10) Attaining reasonable integrity and coherence in (supposedly) sovereign legislatures and other deliberative public institutions in the 21st century is not something that is very complicated. In addition to the (common sense) electoral reforms mentioned above, simply refusing to tolerate (yet alone vote for) institutionalized graft and political favoritism will come to the fore (or public spending and other projects will simply continue to go awry).

10b) If political parties' representation privilege is still in fact necessary in the Digital-Knowledge Age, then such privileges should at least be limited by law. For example, it has long been observed that "thresholds", within a parliamentary electoral system, "are a good idea. Germany's requirement that parties²⁰⁴¹ win 5% of the vote to enter parliament keeps...extremists [and other single-issue shakedown artists] out, without disenfranchising parties that poll strongly, like the...Alternative for Germany [AfD]. The 5% also keeps German coalitions from growing unwieldy. Parties are [simply] middlemen between [executive] government [services] and voters, organising a multiplicity of policies into a simpler menu of options. That menu can be too short (as in China). But it can also be so long and confusing that voters can't tell what they are ordering-- and [then] probably won't get it. See also "Brazil".

11) It's not the mid-19th century anymore. "I don't think that you can offer more unless you give up the government..." (Burn!, 1969, mn.103). What is the government? See also "Mind control" ['ment'+ 'govern'], "Montesquieu" [.trichotomy].

12) In 2019, "nearly half" of American voters are registered as 'Independent'.... [With] *ranked-choice voting* [as opposed to 18th century 'first-past-the-post'-takes-all voting, smaller]...parties and [moreover] independents can...win.... [while mandating] full transparency of political spending, so we know who's trying to buy influence.... [T]he US constitution gives **states sole control** over how elections are run" (Lawrence & Silver, 2019). "*Approval voting*" is still more tamper-resistant, and simpler. See also "Democracy".

['Winner-Takes-All' is not the only way. See also "Primogeniture", "English constitution".]

16) "...[W]hat I'm predicting is the end of political parties as we know them now.... When you have a one-note orchestra, that's it. Nobody's gonna listen. It's finished. They know that. We know that. It's just playing out now... the death of a system that's really no longer a constitutional system.... The Democratic Party-- they're finished.... [And] Trump in many ways doesn't have a Republican Party. He has his own party" (Pieczenik, 2020b, mn.36; 3).

See also "Duopoly", "Separation of Powers", "Boards/Board Systems", "Oligarchy, American", "**Military-Executive-Corporacy (MEC)**", "Statism", "Governance", Appendix C: "1-2-3".

²⁰⁴⁰ <https://www.youtube.com/watch?v=oWHGqXY5jCk> ['nothing'(Rea)]

²⁰⁴¹ In a "parliamentary" electoral system, seats in the legislature are generally allocated by Party first (then the individual's name, 2nd), instead of by the individual candidate's name first (and then [less formal] party affiliation 2nd).

['We The People', not 'We The Parties']

Parties, political- UK There's an old political dictum: that most of it (politics, especially Party Politics) is 'economic/regional interests masquerading as ideological/cultural interests.

-- i.e. the 17thc "regional" construct [was only overcome (with suffix. 'fat')] in the (latter) 18thc "ideological" --

1) In ref. to the English '2-Party' system, this is what the (17thc's) English Civil War was about: "Mercantilists" (a.k.a. bankers, 'Puritans', 'round heads'-'Parliamentarians'... and what would...> a century later (1780's??), form the base of the new "2nd Estate") first in the City/Southeast vs...the 'Cavaliers' (agriculturalist 'Lords', the old Church/Catholic nobles, traditional feudalists, absolute monarchists...basically the old "1st Estate" in the 'highlands' of the North & West [w/o sufficient "fat" (surplus) to be "modernized"]).

1b) The (more 'futurist'-monied) 2nd Estate (future "Whigs"/'banker's party' won in the mid-1650's, and then again with the Glorious [bloodless] Revolution of 1688-94.

'Whigs & Tories'

2) "Early Whig principles played a key part in shaping the 1689 Revolution settlement... [T]he Whigs presided over George I's accession in 1714 and afterwards engineered the long-term proscription of their Tory rivals. The resulting 'Whig oligarchy' achieved a hitherto unseen stability in political life over the next few decades, with power concentrated in the hands of the great Whig [imperialist] families. By the 1760's, all politicians regarded themselves loosely as Whigs,²⁰⁴² but the term was [also then] consciously appropriated and used by the remnants of the old [landed elite] corps who had regrouped as an aristocratic country party... [and] was promoted by [Edmund] Burke in the 1770's and 1780's, with economical reform and the reduction of the power of the crown essential to their evolving ideology."- <https://www.oxfordreference.com/view/10.1093/oi/authority.20110810110029765>

__However, the new Tories (electoral machine) won Parliament in 1783, and several years later the Whigs formally splintered over the French Revolution, with most of them (by the 90's) actually caucusing with the 'new Tory Party'. A minority of Whig "Foxites... remained in opposition...[to the 'Tory' regime, and] kept alive the name of Whig, associating it with political, religious, and social reform."- www.oxfordreference.com/view/10.1093/oi/authority.20110810110029765
See also "Mill, John Stuart (1806-1873)", "Royal Institute of International Affairs" [Cecil].

'Liberals & Conservatives'

2b) A couple decades earlier, the Tory collapse from ↑enfranchisement issues in the 1831-32 had paved the "way for a return of the Whigs... [A] series of measures including the Great Reform Act of 1832 [↑ voting], changed the political scene... [After] the Tories ...[had been] reduced to only 180 MPs...in the wake of these upheavals...the [new] name 'Conservative' first began to be used, as [PM] Peel [r. early 1835; 1841-46] sought to rally the opponents of further reform in the mid-1830s. He was successful in drawing support back to the party and became [a "Conservative"] Prime Minister after winning the election of 1841."- <https://www.gopartconservatives.org/brief-history-conservative-party>

Then Whiggery, in the 1850's, was largely subsumed into Liberalism (per J.S. Mill), and the Whig label had mostly disappeared by c.1860.

The 19th century '2-party structure' was thus Whig→Liberals & Tories→Conservatives, until (the 2nd Estate's) 2nd Industrial Revolution (of the "Fin de Siecle" & WW1-era) blew it up, circa 1900. The old "Liberals" (fmr. Whigs) were getting to be so *urbanized* that they started going "socialist" (i.e. from the "Liberals" to "Labor").

²⁰⁴² In addition to George I & George II's support in suppressing the Tories, the Whigs "weakened the popular appeal of their opponents by keeping the peace, reducing the land tax, and seeking to avoid religious controversies."- https://link.springer.com/chapter/10.1007/978-1-349-23188-1_3#citeas

2c) This political flip in UK Party roles (i.e. 'Banks' were now 'Conservative', more than 'Liberal') eventually followed in the US, with the Democrats & Republicans switching roles [over the "Big Gov't"/1stEstate Party] from c.1890's-1930's. Such things happen in 'duopolies'. See also "Duopoly", "Trump, Donald".

3) After the (fmr. noble) "Tories" had turned into (Bank-centric) "Conservatives" in the 1840's, and (also following the resultant monetization→urbanization trend) the "Whig". "Liberals" had mostly gone to "Labour" (i.e. in the 1850's & 1910's, respectively)... the Big Banks' imperial-globalism (sometimes a.k.a. "Fabian Socialism") was squarely represented in both 'the Right's and 'the Left's tent. Nonetheless, according to Carroll Quigley's primary sources (from the 1st half of the 20thc), the "influence of [at least] the [Milner] Group in Labour [Party] circles [up to the 1940's, anyway had]...always been slight" (Quigley, 1981, 309). See also "Hegelian Dialectic", "Eurodollars" (tidal wave since the late 60's), "City (of London)" [Blair].

3b) The Labor/1stEstate and Conservative/2ndEstate always collaborated in running the Empire, but in the post-Imperial era there has been an increasing degree of traditional political 'regionalism' & anti-'Whiggishness' [sometimes a.k.a. 'civ.-by-Banks'] erupting in ('Thatcherite' and millennial-era) 'modern' Britain, such as the Scotland secession & Brexit referendums of the past decade. Some, however, will simply insist that the Big Banks were controlling 'both sides'-- **ever since** even the 1st Industrial Revolution got rolling, c.1800 (i.e. not just by the 2nd Industrial Revolution and "Fin de Siecle" era).

See also "English constitution, the", "City (of London), the".

Patman, Wright (1893-1976)- 1) Initially renown for spearheading the impeachment of Treasury Secretary Andrew Mellon in 1932, Patman introduced legislation to nationalize the Federal Reserve in 1938, and was later voted Chairman of the House Banking Committee (1963-75). The Congressman from Texas also initiated the Congress' most thorough investigation into ownership of the 'Federal' Reserve (1976).

2) That Committee should have known what it was doing, because just a few years earlier, another "Wright Patman committee produced a 2-volume study of the whole issue of commercial banks. And every effort was made to suppress that. If you do not think things can be suppressed, I assure you books, government reports, all kinds of things can be suppressed. I tried to get a copy of this 2-volume report... and I've been told by the Speaker's office that the Speaker [McCormick, 1962-71] himself did not get a copy, that the copies were locked up in a back room, and [that] the employees themselves are searched every time they left the room to make sure they haven't taken them out" (Quigley, 1976b). See also "Quigley, Carroll (1910-1977)".

3) Before his Chairman days, Patman "" (). See also "Seigniorage", "Federal Reserve".

Patri- (etym. anc. Greek πατριώτης/*patriotes*-- 'fellow countryman';²⁰⁴³ which, in turn, derives from [both] πάτριος/*patrios* 'of one'sthers' [more 'Western'], and πατρίς/*patris* 'fatherland' [more 'Orthodox'...a.k.a. 'patriarchal' or 'patrimonial' [Pipes, 1995])

1) Is a ('proto-Indo-European'-Greek) linguistic squabble at the heart of the thousand-year 'East-West' divide? See also "Civil National Identity", "**Ethnic (National) Identity**".

1b) No. The Orthodox-Roman rift (warring in 1204, formalized in [the Great Schism of] 1054, and fully evident from Aristotle's contradictions of Plato²⁰⁴⁴) go back further, to the respective heritages-- *pedieis* (men of the plain [Plato's]) and the *paraloi* (men of the coast [Aristotle's]).

See also "Civilization" [.Western, Orthodox], "Aristocracy (& nobility)", "Aristotle vs. Plato" [.GreatSchism].

Patroons- (etym. Latin *patrōnus*; the largest landowning/manorial²⁰⁴⁵ families of America's 'New Netherlands' colony [c.1630-64])

See also "Hamilton, Alexander" [.Schuyler].

Payment processors- See "Money Services Businesses (MSBs)".

Payment service providers (PSPs)- (a.k.a. 'payment services'; enable merchants to accept debt/credit card payments, *without* direct access to 'clearing & settlement systems')

See "Money Service Businesses (MSBs)".

Payment Systems (International)- see "SWIFT Code", "Distributed Payment Systems".

Payment Systems (in US dollars)- 1) the traditional power behind the throne; transforms someone's *idea of money* into real (stamped) money. Today's US payments system works by daily netting out the pluses and minuses between each bank-A and bank-B pair, and compensating the net difference with an equal & opposite transfer of Reserves [RAB]. Most monetary reformers vastly underestimate the Payment System.

See also "Clearance System", "Central clearing counterparties (CCPs)", "Monetary Reformers".

2) **Only TAB**-bankmoney in transaction/current accounts is included in **the** prevalent Payment System (which today is CHIPS), i.e. M1; neither M2 (savings-near monies) nor "M3" (more tenuous derivatives-near monies).

3) The 4 most prevalent account Payment Systems in the US today are:

1. (Retail) Electronic Funds Transfer (EFT) systems- handle pretty much all low-value (less than 6 digits) non-cash payments, including all debit/credit card transactions, **ACH** payments, and also even ATM transactions. Basically everything but Fedwire & CHIPS wire transfers are governed by the *Electronic Funds Transfer Act of 1978* and *Federal Reserve Regulation E*.²⁰⁴⁶
2. C.H.I.P.S.²⁰⁴⁷ system- private (member-owned) **interbank** netting system for relatively fast & cheap²⁰⁴⁸ USD transfers of large amounts (the average *transfer* is approx. \$3 million). Est. in

²⁰⁴³ All of these words-- and even the eventual English term *patriot*-- often had connotations of "ridicule or abuse".

- <https://www.etymonline.com/word/patriot> . See also "Confucian", "Enlightenment, the", "International Intelligence Community [I.I.C.]".

²⁰⁴⁴ It is ironic that it was Plato (born in cosmopolitan Athens) who carried the flame of Dorain/Spartan-style '*pedieis*' ethno-authoritarianism (not democratic), while it was to be his successor Aristotle (from the semi-'barbaric' northern periphery) who carried that of the Minoan-style '*paraloi*' and rational-pragmatic inclusiveness. See also "Civilization" [.'Orthodox' (conservative); 'Western' (as Scientific Method)], "Aristotle vs. Plato" [.Great Schism], "Evil twins?".

²⁰⁴⁵ 'Under **the** terms of the *patroonship*, the patroon had nearly total jurisdictional authority, establishing civil and criminal law, villages, and a church (in part to record vital records, which were not kept by the state [of New York] until the late 19th century)'- wiki (Rensselaerswyck).

²⁰⁴⁶ It should also be noted that ACH payments, even though they are Electronic Funds Transfers, are regulated by the National Automated Clearing House Association, not Regulation E.

²⁰⁴⁷ Clearing House Interbank Payment System (CHIPS)

²⁰⁴⁸ CHIPS is a same-day electronic funds transfer system (open 9-5 EST); whereas cashiers checks and/or money orders require a full business day to clear. CHIPS is less expensive, however, than Fedwire, which provides nearly real-time **clearance**, and is available 24/7.

1970; the number of participating banks initially increased “vigorously”, from 99 to 142, between 1982-85 (Hester, 2008, 74). Since then, however, the number of CHIPS member-participants has “fallen from about 140 in the late 1980s, mainly because of consolidations in the banking industry. Membership might have fallen even more sharply if CHIPS had not...[removed] in 1998... a requirement that members maintain an office in New York... CHIPS is governed by a 10-member board...of senior officers of large banks that establishes rules & fees and admits & reevaluates participants. CHIPS handles about 240,000 transactions a day with a total dollar value of about \$1.2 trillion... [and] estimates that it handles 95% of all US dollar *payments* [in TAB] moving between countries” (Federal Reserve Bank of New York, 2002). The FRBNY article fails to point out, however, that because CHIPS is a netting system, its member banks’ daily “balances [in TAB-RAB?] are settled at the end of each business day by net adjusting entries to each bank’s [RAB] account at the Federal Reserve Bank of New York” (Coker, 2010), hence effectively denying (or at least obscuring) what has been standard dual-circuit monetary practice for at least the past half millennium. See also “Money, 2 classes (layers) of”.

[Netting out at the end of the day, for 2 classes of money/exchange, c.1500] [FRBNY science-fiction, 2010's²⁰⁴⁹]

3. Automated Clearing House (ACH)- the initial *public* transfer system (as opposed to the private CHIPS developed in the 1970's as an alternative to checks, in order to facilitate overnight (1 business day) settlement of everyday high-volume, low-value transactions [in TAB]. “Net settlement adjustments for ACH payments are made against reserve [RAB] accounts at Federal Reserve Banks. (Coker, 2010). ACH payments are now a subset of EFT systems.
4. Fedwire- the Federal Reserve’s system for real-time clearance **and** settlement of larger Central Bank/RAB money transfers of **over \$1 million... in all USD or only w/ the US? (like a domestic SWIFT code)**. Approx. 50,000 banks (monetized credit institutions) use it.

4) CHIPS member banks that “have positive [net] closing positions [TAB-RAB?] at the end of the day receive the amounts that they are due in the form of *Fedwire* payments [in RAB?]. Because [these] ultimate CHIPS settlements are provided by Fedwire, *CHIPS* is a customer, as well as a competitor, of Fedwire. The vast majority of CHIPS members are also Fedwire participants, and the daily value of CHIPS transfers is about 80% of Fedwire’s non-securities transfers” (FRBNY, 2002).

5) The basic problem is that today’s “Payment system [still] depends on [the public sector propping up]: bank liquidity, bank solvency, [and] short-term lending” (Wortmann, 2017). See also “Quantitative Easing”, “Bankruptcy”, and “Shadow Banking Sector (SBS)”, respectively.

6) Since no later than 1998, “...we have the New York Fed member banks and defense contractors running the payment systems, all [of them] engaged in what is not legal under the constitution or financial management laws... [with] securities investors all over the world [nonetheless] buying securities that are not in compliance with the law” (Fitts, 2017q, mn.6). See also “Military-Executive-Corpocracy (MEC)”, “Federal Accounting Standards Advisory Board (FASAB)”.

²⁰⁴⁹ See also “Parallel Universe”, ← “Neoclassical Economics” ← “ConfUSURY”.

7) Meanwhile, “Japan has had real-time payments since 1973²⁰⁵⁰ and other many countries, including South Africa, Singapore, India, and the United Kingdom, have transitioned to real-time retail payments in recent years” (Ricks, et al., 2018, 4), from eschewing traditional private payment systems, which take longer to clear. See also “**Federal Funds (Accounts) for All**”.

8) “Payment law-- one facet of the law of money-- has become something of a scholarly backwater, even in the eyes of its leading thinkers” (Ricks, 2017, 122)..

9) Nonetheless, “it is clear that the operation of the payments system is very profitable and **every firm from Wal Mart to Apple wants in on it**. However, the Federal Reserve continues to maintain its monopoly, and this reinforces the present role of banks in providing both credit and payments functions. Will this continue in the future?.... Governments have pushed for a common currency and technology and the market[s] are perhaps pushing in the opposite direction” (Phillips, 2020). See also “Reserve currency”, “Local scrip & Complementary currencies”.

[Int'l. Payment Providers, by volume, 2021]. See also “Angry Birds”.

10) “The new *European Payment Services Directive (PSD2)*, by extending the payment business to new competitors, will be one of the factors that will put the current banking system [**Fedwire monop?**] in jeopardy” (Ordonez, 2018). See also “Angry Birds”, “Internet of Things (IoT)”.

11) In terms of Monetary Reform (at least in Europe), an Ons Geld-type “safe account can be introduced immediately... [without] any adjustment of legal frameworks nor development of new technologies. It [already] fits well with PSD2, the European legislation for payment services.... Large banks, small banks, internet giants, and fintech start-ups can...[all] offer the same safe account. A *level playing field* for payment services is being realized.... [One] can also decide not to allow any commercial payment service provider access to his safe account.... The holder of the safe account determines who has access to his payment data, and for what purposes this data...[may lawfully] be used” (Wortmann, 2019b, 4-5). See also “Usury”.

12) Distributed Payment Systems- Crypto-currency *distributed ledgers* and local or complementary currencies *needn't be national*. For international payment systems, see also “SWIFT Code”, “Blockchains”. [photo?]

Peace Window (& great compromise), the- arguably, the longest period in the history of the USA without a declared war or other significant military action²⁰⁵¹ were the approx. 7 years from 1975 to 1982, after participation in the Vietnam War was shut down by large citizen protests in the late 1960's and early 1970's (when many politicians were, at least temporarily, as afraid of their constituents as they were of their contributors). See also “Politics”, “Military-Industrial-Intelligence Complex”, “War”.

2) This **Peace Window** was immediately preceded, during the early '70s (i.e. midway through the **Bretton Woods “debt cycle”**), by a “*great compromise*” of sorts. It was reached between (what might be called)

²⁰⁵⁰ “...just like interbank [**RAB**] payments have [been] for decades” (Ibid).

²⁰⁵¹ Small-scale support for the French military intervention in Shaba, Zaire (now Congo) in 1978, in addition to the shooting down of two Libyan Su-22 Fighters in international waters, in the Gulf of Sidra, in 1981 were not up to the scale of a “war”, nor a substantial deployment of US military (which was brought back from S.E. Asia in 1974-75, and sent to Lebanon in 1982).

the 'perma-protesters' of that day and the (1960's 'assassination-addicted') Intelligence Community (IC)- 'Deep State'. The common mass protests of 1970-71 were a thing of the past by mid-decade, not just because of the winding down of the **Vietnam War**, but also due to a (concurrent) huge ramping up of Social Security (& other "entitlements") spending. In addition to the famous **20-25% hike** in social security expenditures; the "various federal food assistance programs nearly quintupled between 1973 and 1977.... [while] the multiple increases in Social Security benefits from 1969-1977... roughly doubled Social Security outlays.... Congress was [also] strongly committed to categorical aid programs for specific diseases... fending off efforts by Nixon and Ford to consolidate or eliminate these programs...[H]ealthcare cost inflation began to accelerate in the early 1970's... [And] Congress refused to cut benefits or... control healthcare costs...[as] Social Security and Medicare cost considerations were overwhelmed by bipartisan support for higher benefits"²⁰⁵² (Ippolito, 2012, 98-99). See also "Democracy" [.vote for money], "Bribery", "Parties, political", "Discretionary (US budget)", "Pension funds".

2b) Of course the Deep State-IC didn't just disband itself (per the Church Committee Intelligence hearings of '75), but rather moved on to some different objectives-- or at least different tactics. See also "Globalization", "New World Order", "Black Budget (US)"; "Provocation Op.", "Reform, 101".

3) A Chinese counterpart to the USA's great 'monetization-to-stop-protesting' compromise of the 1970's-80's seems, ironically, to have ensued in the 1990's-2000's, giving the Jiang-Hu era a certain 70's-retro ambiance.- <https://www.youtube.com/watch?v=yh00z5CDJ-M> [Ch.Insights,10/22, mn.14-]

[Philadelphia, 1976]

Peek, George (1873-1943)- (1st American father of [see also] 'Parity pricing' & 'Primary Sector Economics'; i.e. 'the great anti-imperialist', who re-aligned [see also] 'American System, the') "The American dream of a free, peaceful, and prosperous United States, resting on the foundation of a self-reliant, home-owning agriculture, is not...dead."- *Why Quit Our Own?* (Peek, 1936, 28). See also "American System, the".

"Since Peek promoted the concept of parity prices and equality for agriculture, '*neither* major political party... had dared to offer anything but some [secretive] modification of the parity formula" (Fite, 1955, 351). See also "Parity pricing (for the primary sector)".

1) "Peek was the most militant and resourceful [in addition to the most high-profile] of the farm leaders of the 1920's who popularized and fought for the principle that the Federal Government had the responsibility for helping farmers to achieve equality [i.e. a sustainable balance] of purchasing power with other groups [or sectors]" (Baker, 1954, 96); instead of just getting taken for granted and run-down all the time. Thus "farmers were to receive a fair ratio price, or the domestic price plus the tariff, for...[the] portion of...[their] crop [that was] domestically consumed, and the world price that portion sold on the world market. This 2-price plan was incorporated into the [Republican Congress'] *McNary-Haugen Bill*, which was [very often] before Congress from 1924 through 1928, and was *twice* vetoed by [Republican] President Coolidge" (Baker, 1996).

²⁰⁵² "Even minor adjustments... [such as] President Ford's proposal to cap the 1975 benefit increase at 5%...[were] ignored by Congress, was the Social Security Board of Trustees' request to correct a technical flaw in the Social Security benefit formula that was resulting in 'unintended and excessively costly benefit payments'. Congress [eventually] made this 'decoupling' correction in 1977, but postponed its effective date until 1979.... [Meanwhile] administrative efforts to control Medicare costs through regulation were ineffective, and Congress refused to consider legislative changes in healthcare provider reimbursements..." (Ippolito, 2012, 99). See also "Lobbyists", "Congress".

1b) Peek, a successful tractor executive who closely collaborated with Bernard Baruch on the WW1 War Industries Board and post-war Industrial Board, proposed and wrote most of *McNary-Haugen*, which featured a 2-tiered pricing system (i.e. an “American price” and also a lower “world price”, at which American farmers’ surplus crops were to be “dumped” onto foreign markets), as opposed to the Harding-Coolidge-Hoover Admn.’s failed strategies of “cooperative marketing” and “production controls” for the sector.

2)

3) Peek “remained an economic nationalist to the last and...[consistently advocated] the same method.... [but] failed to take into consideration the overall complexity of economic conditions, both national and international” (Baker, 1996, 97). See also “Coulter, John (1881-1959)”, & “Kuznets, Simon (1901-1985)”, “Graham, Benjamin” (1894-1976).

See also “Physiocrats, the”, “Currency Wars, the”, “Adolescence of Mankind”.

3) ‘Peek was against *any* restriction on [farm] production, which would have meant [that] the surpluses would have increased if the [] bill had been enacted [and simply dumped on foreign markets]. Peek then became a Democrat and was avid against Hoover and for the Democrats. When FDR won, Peek became head of the AAA but could not get along with [Secretary of Agriculture] Henry Wallace [’s hard leftwing appointees]’²⁰⁵³. - amzn. See also “Nineteen-thirties (1930’s)”, “Economics, Parity”.

[c.1920; 1933]

[“An American point of view calls for one policy, the internationalist view for quite another. We have straddled long enough.... Shall we dilute our strength with the world’s weakness? THE BOOK ENDS” (1936, 353). See also “Imperialism, American”]

Pension-fund capitalism- “A term coined in the 1950’s to reflect finance capitalism’s new way of exploiting labor by withholding part of its salary to invest in stocks. Early abuses in America (and most notoriously in Chile at the hands of the Pinochet *junta* with the aid of the Chicago Boys) occurred when companies invested the money in their own stocks, increasing equity prices not so much by raising earnings as by organizing a flow of funds into their purchase (See *Labor Capitalism*)” (Hudson, 2015b).

Pension-fund socialism- “A system whereby employers (in the public as well as the private sector) pre-fund pension commitments by setting aside funds to invest in stocks and bonds rather than government securities. The effect of these *set-asides* is to bid up [bubble up] the price of financial assets. The main beneficiaries of the buildup are venture capitalists taking firms public with *IPOs*, corporate managers exercising their stock *options*, and [quant-computer-trading] speculators...” (Hudson, 2015b). See also “Stock buy-backs”.

Pension fund- 1) The US public sector-- federal, state, and local-- spends about \$1.5 trillion a year on pensions, including Social Security and government employee pensions.

2) “After World War 2, you create a pension fund construct where, instead of families saving and controlling their own money, they put it into these institutional relationships. So...instead of small businesses they become corporate employees, and they start to...put their savings into a vehicle, which is controlled institutionally... And as that money grows, it is being used to finance the buildout of the...American Empire and [revenue streams for] global multi-national corporations, and every year the American baby-boomer generation [in particular] puts...[another] dollar in...[Then] they lever that with

²⁰⁵³ (Peek, 1936,).

financial fraud and other things and that's financing the [imperial] operation. Now when the Boomers are about to retire, you have a problem... instead of putting in a dollar, they want to take out a dollar. That gives you a two-dollar problem. If you look at a) the housing bubble, and all the money that has disappeared, whether in b) the bailouts, or c) the missing money [from the US budget], I think what happened was the leadership [in the 1990's] took a look at the cashflows and said 'You know something? We need to get this [pension fund] money out of the infrastructure, because we don't want to spend it on nursing homes. We want to spend it on...building out the American Empire, whether it's on...on land or on sea. And we need to get this money out before they put it...away on nursing homes. So you literally had a financial coup. It's very interesting. At the end of 1995, there was a huge fiscal battle, and essentially... my understanding is [that] the leadership just said 'That's it. We give up. You can't get a 'democracy' to be financially responsible [At least not without a big lesson first]. In a democratic process within [the structures of] a republic, you can't get the body politic to be financially responsible, so we're just gonna take the money and go'" (Fitts, 2018o, mn.37-39).

3) "The president of the largest pension fund in the country, Calpers, said to me, in the Spring of 1997: 'You don't understand. They've given up on the country. They're pulling all the money out, starting in the Fall'... [and he didn't mean just shifting] the allocations...[to] reinvest money in the emerging markets... I didn't realize until later...that...in fact that September was the beginning of fiscal year 1998, when massive amounts of money started going missing from the federal government. And [now] what I think he meant was...[that] they're really taking the money out of the federal government and moving it elsewhere...in a financial coup d'état'..." (Fitts, 2018o, mn.40).

4) "We have \$25 trillion of assets in the US pension funds" (Fitts, 2018o, mn.53); and they are "the largest investors in US treasuries" (Fitts, 2019u, mn.6).

5) Nonetheless, the "pension funds are being emptied...by low interest rate bonds that are financing these [space investment] budgets... pouring this money into space" (Fitts, 2019w, mn.30).

6) The "part that nobody wants to wrap their brain around...[is that] the global financial system is so insolvent, and the...defined-benefit pensions system[s] around the West are so in arrears... to their future liabilities...They're all in negative net... future value positions. I don't care if we're talking about CALPERS or... France.... They're all in really serious trouble...[G]overnment has over-promised... And...people are trying to figure out a way to get out from underneath it."

- <https://www.brighteon.com/1c2e3688-d96c-488b-8c3f-0fa2fc71593c> [Luongo-Adams, 22-10-7, mn.12-13].

6b) According to Luongo, earlier in 2022, Henry Kissinger went to Davos and tried to persuade the European oligarchs, "Stop. We need to sue for peace with Putin [in Ukraine] or he's gonna eat our lunch, And everybody ignored him"; "the Klaus Schwabs and the Soros'-- who are the real open-borders, destroy the nation-state, communists-- beat out Mr. Realpolitik. And now we're into fantasyland.... [T]hey're using the... US, and British, and now Polish neocons to start World War Three, to cover their [basic] insolvency. Meanwhile the [US] Fed is trying to...in their own way.... [starve the European oligarchs] of dollars." - <https://www.brighteon.com/1c2e3688-d96c-488b-8c3f-0fa2fc71593c> [Luongo-Adams, 22-10-7, mn.13-14].

See also "Black Budget (US)" [FASAB-56], "Social Security".

Pentagon capitalism- "A term coined by Seymour Melman in the 1960s to describe the US Government's practice of drawing up military procurement contracts on a cost-plus basis. Under the terms of these contracts, suppliers make profits by *maximizing* their production costs, not by minimizing them as in traditional market competition. (See *Military Spending*.) Under such conditions, political lobbying and campaign contributions lead to insider deals, as when Halliburton Vice President Dick Cheney became US Vice President and gave Halliburton contracts in the Iraq War without competitive bidding or meaningful government oversight" (Hudson, 2015b).

2) "America's throwing off these dollars... in its [military] bases around the world. That's what the [US budget] deficit is. And that's what the US [Corporate Media Cartel] isn't talking about"; in addition to how Washington tries to get China and other Treasury bond holders to finance it (Hudson, 2010d).

3) “Last year...the Department of Defense had ‘undocumentable adjustments’ of 6.5 trillion dollars. That’s what I call a cut and run.... We now have 11.5 trillion of ‘undocumentable adjustments’. The federal government has not complied with the laws relating to audit and financial statements or financial management-- or the appropriations provisions and constitution-- for... many, many decades” (Fitts, 2017c, mn.54-55). See also “Black Budget (US)”, “Secrecy, Cult of”.

Perfidious Albion- See “Para”, “Reserve currency” [barbarous relic], “Currency Wars, the”.

Personification (fallacy)- See also “Market fundamentalism”, “Statism”, → “Parallel universe”.

Petrodollar- (a.k.a. ‘Bretton Woods II’; from the early 1970’s into the 2010’s²⁰⁵⁴ [leading the 40-year ‘globalist’ debt cycle], all middle eastern/OPEC oil exports were priced in US dollars, regardless of the geography of the trading partners)

1) a variant of ‘offshore’ eurodollars. See also “Super Imperialism”.

2) “In 1975, Herman Kahn and I went to the White House to discuss the oil and the Balance of Payments... The assistant Treasury Secretary explained to us that they told Saudi Arabia and other Arab countries, after the oil war, that they could charge as much as they want[ed for oil]. When America quadrupled the price of grain, OPEC responded by quadrupling the price of oil. And so...there was a little bit of a fury in America²⁰⁵⁵.... But the Treasury [then] said: ‘You can charge as much as you want for oil. This is great. That enables the American oil companies to make a lot more money on their oil... But-- all the money you get from these higher prices, you have to recycle into the United States-- into the US stock market, or real estate market, or bond market. And if you don’t recycle all of your oil earnings, that will be [considered] an act of war. And we will invade you, and there will be a regime change’. So...from 1975 through today, America’s always held the military arm over Saudi Arabia... If it were to sell the ¾ of a trillion in [US] Treasury bonds, what’s it going to do with this?²⁰⁵⁶ What currency would it move into? The United States would treat it as an act of war, and you can be sure that finally the Saudis and the Wahhabis backers would have a regime change...” (Hudson, 2016h, mn.25-26).

[See also “Bretton Woods” [II], “Globalization”, “Flags of convenience”, “Forex”.]

3) Which cartel is at the wheel in the 21stc? “The derivatives market in paper oil trading has completely revolutionized the pricing mechanism for oil. The exporters at the source in the Middle East [etc.] aren’t the ones making...[the] price per barrel. It’s [now mostly] Goldman Sachs, Morgan Stanley, and these oil-derivative trading banks that have emerged which [now also] have such an influence on oil price[s].... [T]he people who control the downstream, which are the big 3 or big 4 oil multinationals, two British and two American... [team up with] Wall Street [and the above-mentioned big banks]. Anytime there’s a news report on Reuters that says insurgents or the opposition in Basra has blown up a crucial oil export

²⁰⁵⁴ “” (Bibow, 2010). See also “Bretton Woods II”.

²⁰⁵⁵ King Faisal was assassinated in March, 1975.

²⁰⁵⁶ “The [dynastic] Gulf States had grand visions of what to do with all their new wealth, but...[few were] willing to actually build their underwater hotels and giant empty picture frames...[Today approx. 65%] of Filipino migrant...[workers]” are in the Gulf States (Edinger, 2022, mn.5). See also “Flags of convenience”.

pipeline, then these hedge funds and oil speculators have an excuse to bid the price of oil up \$10 a barrel in 5 minutes” (Engdahl, 2008). See also “Derivatives”.

3b) The big “oil companies have shifted over the last decade to [3rd Industrial Rev.-type] just-in-time inventory, which means that they’re able to maximize the upwards price pressures. It’s a controlled market... Energy is probably the most controlled market in the world, [bulk] food [commodities] being second” (Engdahl, 2008). See also “Free market”, “Parity pricing (for the primary sector)”.

4) China, in Dec. 2022, lobbied Saudi Arabia to cease paying for Saudi oil in US dollars. According to some, the Petrodollar has been in the process of “crashing”²⁰⁵⁷ since the latter 2010’s (Steele, 2017o, mn.35), although a gradual fade out to digital cash and/or international bankmoney SDRs seems more likely to monetarists.

4b) Russia, seems to have begun the de-dollarization trend, around the time of the 1st Ukraine war. Use of the USD “in Russia’s exports to [the] BRICS [nations] crashed to less than 10% in 2020, [down] from about 95% in 2013” (Mahanta, 2022). See also “BRICs”.

See also “Eurodollars”, “Debt cycles”, “Angry Birds”.

[explodapedia's 11th hour]

Philosophy- (Why does anything happen? The most basic conundrum has usually been ‘determinism’ vs. ‘agency’/‘rational choice’)²⁰⁵⁸

1) “would lead all men into the broad, calm vistas of truth, for the land of philosophy is a land of peace.... each stick and stone is endowed with speech and tells the secret of its being. All life, bathed in the radiance of understanding, becomes a wonderful and beautiful reality. From the four corners of creation swells a mighty anthem of rejoicing, for here in the light of philosophy is revealed the purpose of existence; the wisdom and goodness permeating the Whole become evident to even man’s imperfect [mortal, timed] intellect. Here the yearning heart of humanity finds that companionship which draws forth from the innermost recesses of the soul that great store of good which lies there like precious metal in some deep hidden vein.... [T]hey erect a civilization which will endure after the sun, the moon and the stars have ceased to be. The fool lives but for today; the philosopher lives forever.... The world of philosophy lies neither to the right nor to the left, neither above or below.... from the concerns of men he rises to the concerns of gods” (Hall, 1928, 204). Institutions “of human scheming now stand where once the ancient houses of learning rose a mystery of fluted columns and polished marble. The white-robed sages who gave to this world its ideals of culture and beauty have gathered their robes about them and departed from the sight of men. Nevertheless, this little earth is bathed as of old in the sunlight of its providential Generator” (Ibid). See also “Design”.

²⁰⁵⁷ The US officially achieved (for 2 years) energy independence in October of 2018, due to record oil production in North America.

²⁰⁵⁸ Carroll Quigley once articulated this. “Both man and universe are dynamic, or changeable in time, and the chief...complexity is that both are changing in a *continuum of abstraction*, as well as in the more familiar *continuum of space-time*.... [M]an is [mutually perceived to be] concrete and material at one end of his person, [and] is abstract and spiritual at the other end... with a large central zone concerned with his chaos of emotional experiences and feelings” in between the 2 poles (Quigley, 1966, 1222). See also “Human beings”. Concrete & material empiricism was first thoroughly explored, in the West, in Newton’s Scientific Revolution of the last quarter of the 1600’s, as was emotional determinism in the Romanticism of the 1st half of the 19th century. A thorough exploration of spiritual empiricism (in the West), however, would have to await the invention of the computer and 3rd Industrial Revolution. See also ‘Design’.

2) “The three chief Stoics of the Roman era, Seneca, Epictetus, and Marcus Aurelius, find an echo in the three American pragmatists: C.S. Pierce, William James, and John Dewey.... Pragmatism [however] is one of the hidden factors behind the dominance of the law and lawyers in US society...”²⁰⁵⁹ (McLynn, 2009, xiv). See also “Legalism”, “Parties, political”.

3) “True peace is not merely the absence of tension: it is the presence of justice.... The absence of freedom is the presence of death. Any nation or government that deprives an individual of freedom²⁰⁶⁰ is in that moment committing an act of moral and spiritual murder. Any individual who is not concerned about his freedom commits an act of moral and spiritual suicide.”- Martin Luther King, 1955, 1959. See also “Consciousness”.

4) “If you have many, many people studying spiritual science and learning how to build spiritual power, they become impossible to control. They connect and they make each other impossible to control” (Fitts, 2018n, mn.134). See also “Main point”, “Slaves, to some defunct philosopher”, “Teleology”.

5) This is not (at all) something from another planet. The Western world in the 19th century “was marked by “1) belief in the innate goodness of man; 2) secularism; 3) belief in progress; 4) [classical] liberalism; 5] capitalism; 6) faith in science [a.k.a. ‘scientific method’]; 7) [democratization]; [and] 8) nationalism. In general, these 8 factors went along together in the 19th century... [T]he friends of one were generally friend of [all] the others; and the enemies of one were generally the enemies of the rest. Metternich ... [was] generally opposed to all 8; Thomas Jefferson and John Stuart Mill were generally in favor of all 8” (Quigley, 1966, 24). See also “Civilization, Western”.

5b) In the 3rd Currency War and the heat of the 2nd quarter of the 20th century, however, these traditional²⁰⁶¹ 8 were-- at least by the German ‘Nazis’ and their (presumably stressed-out) supporters-- distilled down to 2, ‘Nationalismus’ & ‘Sozialismus’, or “Na-Zi” for short.’ The ensuing (‘unconditional’) tragedy resulted in such a bloody mess of lies and ballistic half-truths that political philosophy has been fairly screwed up in the 7-8 decades since then. See also “Imperialism, ‘modern’”, [vs.] “Ethnic (National) Identity”, (in the 2nd Industrial Revolution superbowl); “Currency wars, the”, “Big picture”.

5b) “To the 19th century mind, evil... was a... [depraved] conception. It merely indicated a lack... of good. Any idea of sin or evil as a malignant positive [agency] force [that was somehow consciously] opposed to good, and capable of existing by its own nature, was completely lacking in the typical 19th-century mind.... [And] as the... [depraved] idea of the nature of evil flowed from the belief that human nature was good, so the idea of [classic] liberalism flowed from the belief that society [sometimes a.k.a. economics] was bad.²⁰⁶² For if society [like a copy of a copy of a copy] was bad, [then] the state, which was the organized coercive power of society, was doubly bad, and if man was good, [then] he should be freed, above all, from the coercive power of the state. Liberalism [eventually blending into (first rampant usury and then unrepentant) socialism] was the crop which emerged from this [19thc] soil” (Quigley, 1966, 25). See also “Usury”, “Neoclassical revolution”, “Fin de Siecle”, “Industrial Revolution, 2nd”, “Statism”.

²⁰⁵⁹ <https://www.youtube.com/watch?v=O4mQlytlNrg> (‘Wonderful Film’, pt. 1).

²⁰⁶⁰ [<https://www.youtube.com/watch?v=J9p6wFTDdrQ> ‘move around’; see also “Freedom Continuum” (i.e. ‘Planet Problem’), “Civil National Identity (CNI)”].

²⁰⁶¹ “The belief in the innate goodness of man had its roots in the 18th century [Enlightenment philosophy], when it appeared to many that man was... [as] Rousseau said, ‘...born free, yet everywhere he is in chains’” (Quigley, 24). See also “Usury”, “Liberty Bell”. “If only man could be freed, they felt, freed from the corruption of society and its artificial conventions [see also “Board Systems”, “Bullshit jobs”], freed from the burden of... [poverty], of the state, of the clergy, and of the rules of [arranged marriage] matrimony, then man, it seemed clear, could rise to heights undreamed of before-- could, indeed, become a kind of ‘superman, practically a god.... It was this spirit which prompted the outburst of self-reliance and optimism so characteristic of the whole [‘long 19thc’] period from 1770 to 1914” (Ibid). See also “Revolution”, “Estates, 3”.

²⁰⁶² See also “Soddy, Frederick (1877-1956)”.

6) I try not to get it mixed up with (see also) “Political economy” (which usually determines one’s ‘political philosophy’), or with (traditional) ‘national philosophies’.

Physics, Old- (basically denial of [see also] “Observer Effect”; and/or ‘the spiritual-vertical of being’ [Dugin])

1) It has long been noted that one of Western civilization’s classic icons, ‘the great Isaac Newton’, “more or less restated...[Ockham’s Razor] as the 1st rule of philosophical reasoning in his great work *Principia Mathematica* (1687): ‘We are to admit no more causes of natural things, than such as are both true and sufficient to explain their appearances’.... But Occam’s [Ockham’s] razor is often fetishized and misapplied as a guiding beacon for scientific enquiry...invoked in the same spirit as...[did] Newton, who went on to claim that ‘Nature does nothing in vain, and more is in vain, when less will serve’. Here the

²⁰⁶³ Going deeper, however, ‘scratch a Bentham (or [the more moderate] Adam Smith), and you get a HUME’. See also “National Debt Economy” [Jeremy “Panopticon” Bentham was all for it; Smith (1776) was contradictory; both Montesquieu and Hume were against it (as were probably both of the above Germans). Spinoza seems to have been too young to have known about it.].

²⁰⁶⁴ Scratch just a quarter-century deeper, however, and you get a MONTESQUIEU.

implication is that the simplest theory isn't just more convenient, but gets closer to how nature really works; in other words, it's more probably the correct one"²⁰⁶⁵ (Ball, 2016).

2) To some Russians, this seems to mean that "" (Dugin, 2021). There does seem to be a causal link between Ockham's (1380's) Razor, Newton's (1680's) totally inanimate 'billiard balls'-type physics, and such extreme 21st century perversions as "" (Dugin, 2021). There seems to have been, however, no greater exemplar of such "nominalism"-atheistic blinders than Russia's most acclaimed mathematician, Andrey Markov (in the 1880's). See also "Projection", "Ethnic (National) Identity" ['.other'], "Patri"; "Cultural Calendar" [.1980's], "Dumb downing" [.writernator]. See also (it's very convenient for) "Imperialism", → "Dystopia", "Devil" [.theory].

Physics, New- (synon. the [quantum] 'field nature of life'; a.k.a. 'wave genomes'²⁰⁶⁶ or 'holographic DNA') "I regard consciousness as fundamental. I regard matter as derivative from consciousness."²⁰⁶⁷

- Max Planck ('the father of quantum physics'), The Observer, January 25, 1931

"Interference is at the heart of quantum mechanics."- James Schombert <http://abyss.uoregon.edu/~js/cosmo/lectures/lec08.html>

"When we break out of this [top 10] dogmatic assumptions, then science becomes much more interesting. All sorts of [ethical] new research [with informed consent] becomes possible. All sorts of new questions open up; the first thing is to bring them into the daylight."

- Biologist Rupert Sheldrake, 2012, mn.2; 10

[See also "Design".]

1) DARPA officially admitted, in spring 2018, to running a program "[f]ocusing only on programmable modulation of gene expression", even if only "temporarily". Is it a copy of Russian doctor Gariaev's creation of a litmus paper-testable "glucose phantom... [i.e. inducing] a chemical reaction from informed light alone" (Granogger, 2018, mn.129-31)? See also "DARPA".

2) Tszyan Kanzheng's "field nature...[studies] of the ultra-violet light emissions from cells"; date back to the late 1950's,²⁰⁶⁸ before being suppressed in the Cultural Revolution and having to flee across the border to Russia²⁰⁶⁹ (Granogger, 2018, mn.136-37). In both China and then Khabarovsk. Kanzheng built

²⁰⁶⁵ This can be and has been overdone. "The history of science has been distorted by a longstanding conviction that [the most] correct theories about nature are always the most elegant ones.... Occam's razor (which...[is often] equated with advocating 'simplicity and elegance') might not be well suited to biology, where things can get very messy.... There's no easy equation between simplicity and truth.... The worst misuses...fixate on the idea that the [R]azor can adjudicate between rival theories. I have found no single instance where it has served this purpose to settle a scientific debate.... Theories are distinguished not by making fewer assumptions but different ones" (Ball, 2016). See also "Nominalism (philosophical)", "Dumb downing", "Methodology (culture)".

²⁰⁶⁶ (Sheldrake, 2012, mn.20-23; 29-30).

²⁰⁶⁷ This was the (world) norm, up until the 17th-18th centuries' (initial) 'scientific revolution' (Sheldrake, 2012, mn.11-13). See also "'Dark matter'".

²⁰⁶⁸ By 1960-61;"Tsian Kanchzhen used a microwave to cross chicken DNA with duck DNA. Wave DNA crossing took place in [his] 'Biotron', where duck and chicken eggs were kept [and zapped for] long enough. It takes time for information to be wave-switched from one genetic species to another. Only under the influence of microwave radiation did the resulting chickens have the characteristics of a duck. Tsian Kanchzhen [reportedly] used the frequency 11 GHz...[which] is in the band of 5G networks."- Vlnova Genetika.cz And yes, the trans-gene chicken-duck DNA was inherited by and evident in the subsequent generations (Granogger, mn.41). See also "Internet of Things".

²⁰⁶⁹ "In 1966, when the Cultural Revolution broke out, Jiang Kanzheng tried to flee to the Soviet Union but was arrested and detained in the Shenyang Political Detention Center. He was released from prison on September 4, 1970, and handed over to the masses to supervise and reform... [Kanzheng tried] again in 1971, [spending] more than one month to get across the Chinese border to the territory of the Soviet Union...[and wound up] in custody in Khabarovsk..." and sent to a labor camp; although eventually hired by Khabarovsk Medical College (in, it seems, the mid-70's), success was not immediate, and Kanzheng's efforts "to discover biofields was [not] recognized by the Soviet

what he calls “Biotron”s, to support his basic thesis that “DNA as...[a] physical molecule is just something like a tape recorder [in the holographic universe], of [what is] an actual electro-magnetic biological information field or signal. He sees 2 forms of the DNA. One is the passive, molecular structure that is the actual carrier... while the other is the electro-magnetic field of the information [that is] riding upon the carrier. While the molecule is extremely stable, it is possible to change and modulate [condition] the electro-magnetic signal this is carried” (Granogger, 2018, mn.139).

2b) Hence, DARPA also, from no later than 2017, has been looking into the matter of “purposefully signaling” cells with electromagnetic waves. And of course, it is nothing new (since the 1980’s) in Russia: <https://wavegenetics.org/en>

3) If DNA sequences can be reproduced or “replicated.... with no physical DNA molecule detectable.... We [could then] send active germs through the internet in an MP3 file, possibly mixed into music?” (Granogger, 2018, mn.134-35). See also “Mind Control”, “Transhumanism”. See also “Academia”; [vs.] “Observer Effect/Goodhart’s Law”, “Design”.

[Playing God, 'since 1961']

Physiocrats, the (Fr. ‘physiocratie’, from Gk. ‘government of nature’; the original ‘Economistes’ [post-Montesquieu, pre-Smith] were in France, built [mostly in the 1750’s-60’s] around the troika of François Quesnay [1694–1774], the marquis de Mirabeau [1715-89], & Jacques Turgot [1727–81])

“You don’t work real well without blood in your veins.”- Randy Cook (22-2-6, mn.36), and an economy doesn’t run particularly well without acknowledging the primacy of the (see also) “Primary sector”, “Common sense”, “USSR” [.Solzhenitsyn].

Is this some sort of newfangled approach? What do Benjamin Graham, Henry George, Adam Smith, the French (Jesuits), and the Chinese (mandarins) all have in common?²⁰⁷⁰ Answer this riddle and ye shall know the future, and the (see also) “International Intelligence Community (I.I.C.)”

1) “French followers of Francois Quesnay²⁰⁷¹ (1694-1774), who created the first national income account, the *Tableau Économique*. Hence they were called [the 1st] *Les Économistes*. As a surgeon to the royal family, Quesnay’s idea of the circular flow of income was inspired by the circulation of blood within the human body. And as the name Physiocrats indicates, the model was primarily physical” (Hudson, 2015b). See also Appendix B (Institutional Anatomy), “Economics, Parity”, “Primary Sector Economics”.

1b) In a nutshell, “the physiocrats believed that the removal of practices that exploited agriculture, such as the unfair tax system in France... would allow [or liberate] the flow of capital to agriculture, to increase and convert France from small-scale, capital-starved subsistence farming to a more prosperous *fermier* [prosperous farmer] system. The physiocrats rejected the [18thc’s traditional] mercantile system, also referred to as a system of *commerce*, in favor of a system of agriculture²⁰⁷² to increase a nation’s wealth” (de Yong, 1994). Was Ben Franklin (in addition to Adam Smith) influenced by them? See also “Franklin, Benjamin” [.aphorisms].

Academy of Sciences [until 1989, the year that] he also obtained Soviet citizenship.” - <https://translate.google.com/translate?hl=en&sl=zh-CN&u=https://zh.wikipedia.org/zh-hans/%25E5%25A7%259C%25E5%25A0%25AA%25E6%2594%25BF&prev=search&pto=aue>

²⁰⁷⁰ ...’vs. (the ultra-liberality of) “Imperialism” & “Super Imperialism””.

²⁰⁷¹ Actually, c.1750, Quesnay “became acquainted with C.M. de Gournay, and around these 2 men was formed the...sect of the *Economistes* or *Physiocrates*. Its object was 1] to exhibit... the way in which the products of agriculture, considered to be the only source of wealth, would, in a state of perfect liberty, be distributed among several classes of the community, and also 2] to represent by other formulae... the evil results arising from...violations of the natural order” (George, 1879, 574). See also “Economics, ‘Parity’”, “Currency Wars, the”.

²⁰⁷² In other words, the (by that time traditional) “[e]xploitation of gold and silver from the New World provided only *short term* riches that eventually were exchanged for necessary [real] production from the land...[It wasn’t just ‘theory’.] Spain was the leader in exploiting New

1c) The two main premises are that “(1) all new wealth originates with production from the earth and (2) that the income received for this production circulates²⁰⁷³ through the economy with each successive trade transaction providing income for the nation” (de Yong, 1994, 88). See also “National Income”

1d) Hence, the “state should, therefore, give special encouragement to...activities, such as agriculture, that increase the land's productivity...[and it] should not, on the other hand, aid the [physically] ‘sterile’ processes of manufacturing and commerce...offering them **tariff** protection or permitting the creation of great private monopolies. [F]or this, in their opinion, would interfere with the natural processes of distribution and violate the Natural Order”²⁰⁷⁴ (Bodde, 2005, 5-6). See also “Government, role of”, “Privilege”, “Sterile”.

1e) Subsequent ‘*neo-Physiocratic*’ approaches, however-- from Henry Carey’s “American System” to “Parity” approaches in the 21st century-- rely heavily on (see also) “Tariffs”.

2) Furthermore, “[s]ince the revenue of the state, like the wealth of its people, comes ultimately from the land, they believed that the only really fair form of taxation is a *single land tax* levied upon the land's productive capacity. This doctrine was an attack upon one of the greatest abuses in the [Old Regime]²⁰⁷⁵ France of Quesnay's time: the [latifundia-like] existence of great land estates, owned by feudal aristocrats, who paid in taxes only an insignificant part of what their land produced” (Bodde, 6). See also “Georgism (& Land Value Tax)”, “Taxation of income”.

3) Most of this (what the French called ‘Physiocracy’) was **not ever a new idea** in China. “The tremendous debt of the Physiocrats to China is evident in [founder] Quesnay's book *The Despotism of China* (1767), in which he presents his ideas of what a truly **enlightened despotism**²⁰⁷⁶ means...its first 7 [of 8] chapters...paint...a glowing picture of Chinese political and economic conditions, drawing his material directly from Jesuit writings... [In chapter 8] his own theories... [are then linked] directly with the example of China (Bodde, 2005, 7). See also “China”, “Confucian”, “Parity”.

World riches, but was [nonetheless] unable to maintain its superior position when it exchanged gold and silver for [actual] production from outside the country. Gold and silver were not real wealth, but simply facilitated the exchange of real wealth” (de Yong, 5). See also “Wealth”.

²⁰⁷³ They meant it almost literally. The Physiocrats’ *net product* construct “was the source of [all natural/real/national] wealth, and reduction of this [primary sector] production, in monetary terms, was like a [literal] loss of blood in the body's circulatory system and [hence] cause for alarm” (de Yong, 1994, 6).

²⁰⁷⁴ The *original laissez-faire* theorists; “Quesnay and his group thought that the government should do nothing that would encourage trade... [Their] doctrine of *laissez faire* [held] that trade should be permitted to operate free from government restrictions” (Bodde, 6). This was because of both a century-long popularity of *laissez-faire* type attitudes in France, and also apparently because prominent Physiocrat Vincent de Gournay (1712–1759) interpreted the Chinese concept of *wu-wei* that way (Gerlach, 2005)..See also “France” (*laissez-faire* vs. *dirigisme*).

²⁰⁷⁵ The “Physiocrats [were] also... [‘drastic’ in arguing] that education should be separated from the church and made universal, for only in that way could the best available talent of the country be brought forward... [in] an amazing resemblance to those [ideas] found in Confucian [Mandarin] political and economic philosophy. For thousands of years the Chinese had believed that there can be good government only when a perfect harmony exists between the ‘Way of Man’ (governmental institutions) and the ‘Way of Nature’ (Quesnay's Natural Order)” (Bodde, 6). See also “Radical”, “Great Extinction, 6th”.

²⁰⁷⁶ During the reign of Louis XV (1715-74), many “saw signs of growing weakness... corruption and gross social and economic abuses. Many thinkers, therefore, came to realize that the monarchy could be preserved only by carrying out various drastic reforms... [Thus] it became their aim to create an *enlightened despotism* that would rule [1st Estate] for the benefit of the [3rd Estate] people as a whole, rather than merely for a [2nd Estate] small, privileged group...[Looking to] China, these men found powerful support for their [largely borrowed] theories. For in China, as we have seen, Confucianism, though it accepted the idea of an absolute ruling power, at the same time set certain moral restraints upon the abuses of that power. Most prominent among the men who voiced such ideas was a group of French political economists known as the ‘Physiocrats’” (Bodde, 5).

[Is it French or Chinese?-- (real) economics science-as-气]

3b) The Physiocrats, during 1768 and 1769, even got Louis XV and (then) the Austrian Emperor to publicly perform Chinese spring-time plowing rituals. But their influence peaked in the early 70's; and Finance Minister Jacques Turgot was forced to resign in 1776, after some of the more stridently Physiocratic policies appear to have "proved to be ill-adapted for [1770's] France, where a...system of capitalism was already beginning to develop. The forces of corruption and reaction ranged against Turgot...[ended his] attempt to reform France from the top...The attempt that was to succeed came violently from below...[only 3] years later...[and] the European enthusiasm regarding China died away after 1789" and the great civil service reforms of the 1760's-80's (Bodde, 2005, 7). See also "Revolution, French".

3c) Physiocracy-type "thought has represented a minority viewpoint throughout [Western] history and [has] even at times seemed to have been completely forgotten.... [However]" (de Yong, 1994).

4) France has been, for the last thousand years, chronically less-organized than England; and the Physiocrats "have been the subjects of so many and such divergent appreciations by historians, philosophers, economists, and students of political science, that hardly a single general proposition of importance has been advanced with regard to them by one writer which has not been...[polarly contrasted] by another. To de Tocqueville they were doctrinaire advocates of absolute equality. To Rousseau they were the supporters of an odious, if 'legal', despotism. To Professor Cohn they are, in their main proposals, 'thoroughly socialistic'. To Louis Blanc they were tainted with a bourgeois individualism. To Linguet their mystic jargon was charlatanical nonsense, not to be understood even by themselves. To Voltaire²⁰⁷⁷ it was so clear as to be made easily comprehensible (and ridiculous) to the meanest intelligence. To Taine, as to many others, they made powerfully for revolution. To Carlyle, who speaks ironically of 'victorious analysis' and scornfully of 'rose-pink sentimentalism', they seem to have been a mere literary ripple on the surface of the great flood. Rossi praised them for conceiving a vast synthesis of social organisation; certain writers, like Mably, have blamed them for a narrow materialism; while there are judges who pronounce them markedly deistic. To Proudhon their system of taxation was a rare Utopia; to others they lack an ideal of any kind. They were to [Cardinal] de Loménie [1727-94 (& Mn. of Fn. 1787-88)] a bundle of contradictions-- at once monarchical and democratic, half-socialist and highly conservative. To Adam Smith²⁰⁷⁸ their 'system, with all its imperfections, is perhaps the **nearest approximation to the truth** that has yet been published upon the subject of political economy, and is, upon that account, well worth the consideration of every man who wishes to examine with attention the

²⁰⁷⁷ "One need not be obsessed with the merits of the Chinese to recognize... that their empire is in truth *the best that the world has ever seen.*"- Voltaire, 1764; he "praised it because it had no priesthood owning 20% of the land, and contrasted the religious tolerance of the Chinese, who had never tried to send missionaries to Europe, with the European habit of always forcing their own religious ideas upon other people" (Bodde, 2005, 4).

²⁰⁷⁸ In the 1760's, "Smith had accepted employment as a tutor to Lord Townsend's step-son, and in those days an adequate education demanded a trip to the continent. During his stay in Paris, Smith and Quesnay had ample opportunity for detailed discussions" (de Yong, 1994, 7). See also "Smith, Adam (1723-1790)".

principles of that very important science²⁰⁷⁹.... To some they appear to have had a transitory success followed by complete and lasting re^{act}ion. To Léon Say [Mn. of Fn. 1872-83 (& grandson of Jean Baptiste-Say)], their principles, after suffering reverses in the 18th century, have dominated the 19th" (Higgs, 1897). See also "Revolution".

5) The Physiocrats were often one-sided in arguing "that the only source of wealth was from agriculture.... But their [basic] observation on the cycle of economic activity-- where the new wealth originates" was valid; even though "they didn't have an industrial economy" and, hence, couldn't model it (Cook, 2021, mn.108).

See also "Political economy", "Parity pricing (for the primary sector)", "National Income".

Piketty, Thomas- "Since the 1970s, as any significant political threat [to 'capitalism'] has receded, things have gone back to their normal state: that is, to savage inequalities, with a miserly 1% presiding over a social order marked by increasing social, economic and even technological stagnation. It was precisely the fact that people such as my Russian friend believed [that] capitalism would inevitably civilise itself that guaranteed it no longer had to do so.... Some of [Picketty's] suggestions-- an 80% income tax!-- may seem radical [outside of France], but we are still talking about a man who, having demonstrated capitalism is a gigantic vacuum cleaner sucking wealth into the hands of a tiny elite, insists that we do not simply unplug the machine, but try to build a slightly smaller vacuum cleaner sucking in the opposite direction... the sheer fact that in 2014 a left-leaning French intellectual can safely declare that he does not want to overthrow the capitalist system but only to save it from itself is the reason such reforms will never happen. The 1% are not about to expropriate themselves, even if asked nicely. And they have spent the past 30 years creating a lock on media and politics..." (Graeber, 2014). See also "[Media, B](#)". See also "Reform, false", "Dirigism".

Pilgrim Society, the- (what Carroll Quigley [1966] was really talking about?; the original "semi-official public diplomacy actor in the field of foreign relations and...trailblazer for organisations like the British Council and...Division of Cultural Relations, "which themselves were precursors to Cold War organisations like the United States Information Agency" [Marsh & Dobson, 2018].)

"What the French are in military affairs, the Americans are in every kind of civil business; let them be left without a government, [and] every body of Americans is able to improvise one, and to carry on that or any other public business with a sufficient amount of intelligence, order, and decision. This is what every free people ought to be: and a people capable of this is certain to be free; it will never let itself be enslaved by any man or body of men..." (Mill, 1859, 66).

vs.

"[Alexander] Hamilton's attempt to make of the Government which had been established under [the new Constitution] a [psychological] delusion, and the Constitution a sham, to pave the way for its overthrow and for the final introduction of institutions more accordant with his opinions;-- for, as I have remarked, no intelligent man could have expected that the people of America "could long endure a "constitution subject to the treatment to which he had exposed it, and to such as he had still in store for it"; Notwithstanding, "It

²⁰⁷⁹ It's not a misprint or fake quote. Although Smith "condemned Quesnay for attempting 'to degrade the artificers, manufacturers, and merchants by the humiliating appellation of the barren or unproductive classes'...[Economic theory historian Mark] Blaug mentions that Smith misrepresents the notion of the sterile class, since 'the [P]hysiocrats did *not* regard industry as useless, but simply as a sector that produces no net [i.e. multiplied] additions to income'. Blaug also points out that in the end...[even Smith] was forced to argue that manufacturing is productive [mostly] because its receipts are sufficient to pay wages and [hence merely] to replace worn-out [real] capital, but that [the real world of] agriculture is more productive, because it yields rent over and above wages and depreciation. But apart from a quibble on words, this concedes the whole [main point] of the physiocratic argument. The failure of the [P]hysiocrats to...[take seriously the] contributions made to national wealth by non-agricultural sectors forced them to play a minor role in future economic...[theory]. Even with their disagreements [however], Adam Smith was so impressed with Quesnay that he would have dedicated...*The Wealth of Nations* to him, had Quesnay not died prior to its completion" (de Yong, 8). "England during Adam Smith's lifetime was building an [neo-mercantilist] empire based upon trade policies that exploited the production of other nations [that were] providing cheap raw materials for her industries. [C]onsequently England felt that trade was the source of national wealth. Adam Smith, however, believed [like the Physiocrats] that agriculture was a principle source of Britain's wealth" (de Yong, 1994, 9). See also "Agriculture".

can only be when [c.1900] the agriculturalists [Southerners/Democrats] abandon the implements and the field of their labor and become, with those who now assist them, shopkeepers, manufacturers, carriers, and traders, that the Republic will be brought in danger of the influences of the money power" (Van Buren, 1867, 234; 231).

1) Robert and Gouverneur Morris (and 1st Bank of the US) intrigues aside, the first known **merging** between the US and UK financial class ("globalist") elite was in 1902, more than a decade prior to the Federal Reserve plot and World War One. See also "Foundations (of totalitarianism)"; "UKUSA Agreement".

2) One decade prior, Minnesota politician and author Ignatius Donnelly, in the preamble to the foundational "Omaha Platform" of the People's (Populist) Party, formally noted that: "A vast conspiracy against mankind has been organized on two continents [Europe & N.America], and it is rapidly taking possession of the world [Congress of Berlin]. If not met and overthrown at once it forebodes terrible social convulsions [two World Wars], the destruction of civilization [Finance Capitalism whipped Industrial Capitalism], or the establishment of an absolute despotism [Socialism-Communism]. We have witnessed for more than a quarter of a century the [2nd Industrial Rev.] struggles of the two great political parties for power and plunder, while grievous wrongs [mostly extreme ur-banization] have been inflicted upon the suffering people. We charge that the controlling influences dominating both [of] these parties have permitted the existing dreadful conditions to develop without serious effort to prevent or restrain them. Neither do they now promise us any substantial reform. They have agreed together to ignore, in the coming campaign [of 1892]²⁰⁸⁰, every issue but one. They propose to drown the outcries of a plundered people with the uproar of a sham battle over the tariff, so that capitalists, corporations, national banks, rings, trusts, watered stock, the demonetization of silver and the oppressions of the usurers may all be lost sight of. They propose to sacrifice our homes, lives, and children on the altar of mammon..." (Donnelley, 1892). See also "**Currency wars, the**", "Industrial Revolution, 2nd".

3) ...Either that or, more specifically, 'on the altar of' globalist-imperium. Here is an example of ABA convention talk from around that time. If "the people of the United States have the wisdom to seize the golden opportunity that is now presented to them by...[plans and laws] favorable to our banking necessities and the development of our merchant marine, long...[before] the 20th century closes they will not only see the United States [become] the unquestioned mistress of the Pacific and...[its] vast commerce... but [moreover] the celebrated 'Old Lady of Threadneedle Street' [will] walk with equal step with her famous kinsman, 'Brother Jonathan of Wall Street', conscious that the twain control the finances and commerce of the world.... Opportunity, if rejected, will never call again" (Kauffman, 1901, 143). See also "City (of London), the", "Imperialism, American".

4) More than a century later, the "biggest US banks...[still] hold almost 70% of their on and off-balance sheet foreign assets in the United Kingdom" (Vinals, 2014). See also "City (of London), the".

5) During the 'homeland for the Jews' (Balfour) negotiations of 1917 during World War One, "as a neutral, America had to be very careful about open intervention even after she had entered the war, and to an extent Britain acted as her proxy in *putting markers down* for a new world order", as one might expect of a neo-Greco-Roman tag team; "America was deeply involved in [the] secret intrigues both directly and indirectly" (Docherty & McGregor, 2017).

5b) Why doesn't one know or read about such Imperialism, 101 on the TV or in 'the' history books? See also "Foundations (of totalitarianism)", → "History" [AHA].

6) "There does exist, and has existed for a generation, an international Anglophile network. I know of the operations of this network because I have studied it for 20 years and was permitted for two years, in the early 1960's, to examine its papers and secret records" (Quigley, 1966, 950). Not many are. See also "English constitution, the", "Legalism", "**Cultural Calendar**".

7) According to some sources, "" (Knuth, 1944,).

²⁰⁸⁰ That November, the People's Party (a.k.a. "Populist" Party) presidential nominee, James Weaver, carried 5 states, winning 22 electoral votes, in what has, to date, stood as the duopoly Parties' worst showing since the 1860's.

Planned Economy- “Every economy since the Neolithic Agricultural Revolution²⁰⁸¹ has been planned. Most recently, financial managers have replaced *elected representatives*, under the slogan of rejecting a planned economy under *government regulation*. The neoliberal tendency is to create even bigger government as a result of Moral Hazard policies designed to bail out savers from bad loans, bank deposits or other investments, while shifting the costs of [ever-increasing] government away from the property and financial sectors” (Hudson, 2015b). See also “Secrecy, Cult of”, “Moral hazard”.

Plato vs. Aristotle- (the [orig.] ‘Great Schism’ was, and is, greater than the Protestant Reformation) ‘dogs & cats’ (i.e. “what are [do they *think*] they [are] talking about?” vs. “what is it?”)

See also “Patri”, “Civilization” [Orthodox, Western], “Russiagate”; “Methodology” [*The Thing*].

²⁰⁸¹ With the end of the (2.6 mya-c.10,000 BCE) Pleistocene Era and the most-recent Ice Age; extremely rapid warming within 2-3 centuries radically increased water and especially CO2 in the environment, which approx. doubled the yield of such (now-familiar staple) crops as “wheat and barley.... [So] people...[were] settling in to very productive environments.... In evolutionary time, this...[happened] instantaneously.... [A] thousand years... in evolutionary-geological time...is nothing” (Brooke, 2019, mn.14-17)

[Plato always held that reality exists independently of the human mind; Aristotle?]

[The tortoise is (thought of as) such a loser, until he wins'.- Aesop, c.600 BCE]

Plausible deniability- unofficial later-20th century motto of the CIA. See “Central Intelligence Agency (CIA)”, “Economics” (public relations for the), “Deep State”, ↔ “**Military-Executive-Corporocracy**”.

[1988- when art paralyzes life, labelling phenomenon #1; see also “PotUS” (.BushSr.)]

Plunge Protection Team- (formal: the President’s Working Group on Financial Markets [WGFM], est. 1988.3.18. Shh! This [“other Fed”] intervention team is apparently still supposed to be secret, too, because it constitutes a de facto reversal of the *Banking Act of 1935’s* removal of the Secretary of Treasury and the Comptroller of Currency [OCC] from the ‘Federal’ Reserve Board)²⁰⁸²

1) It is not often publicly noted that the US government did not put the full faith and credit of the federal government behind the FDIC guarantee of bank deposits until the *Competitive Equality in Banking Act* was signed into law by President Reagan (after a Senate vote of 92-2) in August of 1987. See also “Federal Insurance Deposit Corp. (FDIC)”, “Liability, double”.

2) But apparently that wasn’t enough of an enormous enough public subsidy for the new, deregulating Wall Street (and its gambling/gaming with public subsidies addiction). A “Minsky Moment” quickly ensued, as the Dow Jones suffered its largest one-day drop (-22.6%) in US history on Oct. 19, 1987; and the following winter the Reagan Admn. issued (presumably what was a carefully though-out) Executive Order #12631, creating the “President’s Working Group on Financial Markets” [WGFM]; which henceforth

²⁰⁸² The OCC (which is under the Treasury) was superseded in US financial policy primacy by the Securities & Exchange Commission and [arguably also] the Commodities Futures Trading Commission. Has the Federal Reserve Board been, in fact, “independent” ever since 1988? The “Plunge Protection Team” was the main result of “Black Monday”-- the Dow Jones’ worst single-day percentage drop ever (22.6%). And-- 30 years later-- the Dow’s 1st-ever single-day +1,000 point gain was, allegedly, in response to Treasury Secretary Steve Mnuchin’s confirmation that “the WGFM [had] met by telephone on the afternoon of December 24th [2018], to discuss the ongoing plunge... The very next trading day, the Dow Jones index experienced its largest ever single day point gain, closing up over 1,000 points... [and] the following day... [something very similar happened] out of nowhere.... There is no doubt that the Plunge Protection Team does exist, and that it convened on Christmas Eve. The hotly debated question is whether the WGFM does more than just talk and persuade, and whether it can and does actually intervene in the markets on a more direct basis...” (Amerman, 2018).

“allowed the federal government to buy S&P futures contracts, the SPX... [crossing] a very important line... because up until that time... it **was** illegal for the government to be [such] an active participant in the markets” (Keiser, 2010, mn.1). See also “Market maker”, “Minsky, Hyman”.

3) Specifically, the WGFM, informally christened by media as the “Plunge Protection Team” in the 1990’s, consists of the 4 highest financial officials in the US government: [in order] a) the Treasury Secretary, b) the head of the Federal Reserve Board [not to be confused with the (private sector) FRBNY head], c) the SEC Chair, and d) the Commodity Futures Trading Commission Chair (or their respective designees). Hence, Alan Greenspan was effectively demoted to a minority share of financial policy power; and his predecessor, Paul Volcker (1979-87), was the last autonomous ‘Fed head’, prior to Jerome Powell²⁰⁸³. See also “Greenspan, Alan”, “Volcker, Paul (1927-2019)”.

4) Mostly how it works is pretty simple. In the “forward markets for currencies, stocks and bonds...[the] Federal Reserve [or, better yet, the Plunge Protection Team] can offer to buy a stock in 3 months at, say, 10% over the current price. Speculators will buy the stock, bidding up the price, so as to take advantage of ‘the markets’ promise to buy the stock. So... [in] 3 months...the price will have risen” (Hudson, 2019b). See also “Stock buy-backs”, “Black Budget”.

5) Beyond that, Michael Hudson says: “I don’t know. We don’t know because it’s a secret [Executive Order]”²⁰⁸⁴ (Hudson, 2019c); no doubt intended to conceal the transition from Financial capitalism to ‘late capitalism’/‘state capitalism’. See also “Secrecy, Cult of”, “Capitalisms”. See also “Finance Capitalism”, “Gutfreund, John (1929-2016)”, “Bank welfare”.

Poetic justice- See “Productivity (US)”.

Polarization- “The tendency for [debt-money] economies to polarize between rich and poor, typically between creditors and debtors (See *Zero-Sum Activity*). This tendency...[has most often been] countered by enacting progressive tax and regulatory policies, encouraging credit to be extended along productive lines, rather than simply to inflate asset prices, and [by] taxing unearned rental income and asset-price gains (Hudson, 2015c). See also “Serfdom”.

Polemics- (cartoon-strawmaning in order to reduce) 1) In political cartoons such as: *The Aristocracy Unmasked. Beware of its caresses, its thousand arms are ready to strike*, c.1791-92, the “theme of conspiracy and counterrevolution, hiding behind a reassuring mask, appeared widely in French revolutionary rhetoric. Here, the Janus-like depiction of the aristocratic woman and the priest, bound together by a serpent, is particularly intriguing, prefiguring a common motif in 19th-century France. Note the cloven hoof and the claw, only partly hidden by the clergyman’s cassock and the woman’s gown” (Tackett, 2000). See also “Violence”, “National Identity/Nationalism”, “Demonization”.

²⁰⁸³ The relationship between the US Treasury and Federal Reserve has always been opaque & ambiguous since at least the days of Treasury Secretary Andrew Mellon-- because there is considerable policy overlap, particularly in times of (the inevitable bankmoney) crises. For example, Chairman Volcker was a stronger Fed head than Chairman Greenspan. In the Great Financial Crisis of 2008, Treasury Secretary Hank Paulson was initially in the lead, and through the ensuing decade, President Obama’s Fed Heads did not do particularly much to shake that initial impression. With President Trump, however, Chairman Jerome Powell (from 2018) seems to know more than Secretary Mnuchin. See also “Treasury-Wall St. nexus”.

²⁰⁸⁴ Most seem to agree that “[w]e don’t know what, of the many open powers [of the WGFM]... are being used. Keeping in mind that executive orders have frequently been used in recent decades to exert broad new powers in areas that *used to* require legislation, and that many executive orders relating to national security are indeed *kept secret* from the public-- we simply don’t [even] know what executive orders may have been issued, over the years, with regard to the WGFM, or what its emergency powers actually are.... [Its] meetings...are [usually] secret, they do not [ever] release their minutes, we don’t know their full mandate...[or] their full powers.... We can have both Federal Reserve and the Plunge Protection Team acting at the same time...” (Amerman, 2018).

[old school]

2) I'm not sure how helpful the polemical style is. If everything is perceived as being all about how bad the banks are, then your average uninformed person, not knowing enough to evaluate the veracity of the claims, may well just write the polemicist off as a crank. (that is, unless he's Karl Marx-Engels-Bagehot). See also "Marx, Karl (1818-1883)", "Strawman", "Hegelian dialectic", "Left brain, Right brain".

Police state- The City of London has a (privatized) police force of 1,200, or "1 officer for every 7 residents" (Shaxson, 2011b, mn.6). See also "City (of London), the", "Dystopia", "United Kingdom, the".

Political Economy, 'classical'- (the study of the relation between [political] power and [economic] wealth; i.e. back before 'money' was assumed to be a non-factor, and [the term] 'usury' used to exist)

1) The institutional father of both "Political Science" and "Economics"²⁰⁸⁵ took shape in the 18th and (to a lesser extent) 19th centuries, when the primary "monetary issue to debate [or fight Revolutionary wars over (was)]: whether the power to control the money system belonged in private hands or in Society's hands. Political economists avoided that debate then, and...[their successors] continue to avoid [directly discussing] it to this day" (Zarlenga, 2002, 332). See also "Montesquieu, Baron de", "Economics", "Money", "Graham, Benjamin".

1b) As surely as the Earth is finite and man is mortal, his resultant nature-- or at least that of his civilization-- is economic-material in nature. And those conditions are (increasingly) fluid or subject to revision. Two centuries ago, James Mill of the British East India Co. (and socialist J.S. Mill's father) published *Elements of Political Economy* (1821). Less than a century later, the 1911 *Encyclopedia Britannica* dismissed the classic tersely, as: "mainly" a historical artifact, an "accurate summary of views which are now largely discarded...[the primary 3 discarded ideas being] (1) that the chief problem of practical reformers is to limit the increase of population... (2) that the value of a thing depends entirely on the quantity of labour put into it; and (3) that what is now known as the 'unearned increment' [income] of land is a proper object for taxation (Chisholm, 1911, 453). It may not need to be pointed out to some readers that we're rapidly approaching the point of 'full circle' since those (building up for World War One) days. I.e. (what might be called) '20th-century-type 'political economy' will be viewed, in retrospect, as not much more than a ('foolish') long-century detour from ecological-economic common sense. See also "Adolescence of Mankind" [.18, 19, 20], "Unearned income", "Neoclassical Revolution", "Monetization"; "Physiocrats, the", "Long-term orientation".

²⁰⁸⁵ Mathematical obscurantist Stanley Jevons (1835-82) is often credited with starting the movement to replace 'political economy' with (the more scientific-sounding) 'Economics' in the late 1870's. "When finally the Science of Money had been...reconstituted [largely in Germany] after being lost for many centuries, the bankers understood that they had to re-bury it in order to protect their parasitic [sometimes a.k.a. 'imperialist' or 'mercantilist'/'neo-mercantilist'] activities..." (Zarlenga, 2002, 357). See also "Neoclassical economics", "Neoclassical revolution", "State Theory of Money", "World War One".

1c) English philosopher (& political economy critic) John Ruskin (1819-1900) “took on the people who were supposed to be experts...in this case, the new economists who believed that scarcity [mentality] was the basic existence of humanity. ‘No’, says Ruskin, to [his 19thc predecessors] Malthus, Ricardo, and Mill: ‘the real science of political economy, which has yet to be distinguished from the bastard science, as medicine from witchcraft... is that which teaches nations to desire and labour for the things that lead to Life: and which teaches them to scorn and destroy the things that lead to Destruction’”²⁰⁸⁶ (Boyle, 2002). See also “Ecological economics”, “Denial”, “Freedom continuum (maturation)”, “Two sides of the same coin”.

2) Undeterred by English poets, none other than (future PotUS) Woodrow Wilson chaired the committee, in the 1890’s,²⁰⁸⁷ that first removed Political Economy from high school curriculums. Henceforth in the new century, “Economics” was to be the study of wealth without power, and “Political Science” would be the study of power without wealth. See also “Divide & Conquer”. The removal of high school “Civics” classes would follow, in the late 20th century. See also “Dumb-downing”, “Fin de Siecle”, “President of the United States (PotUS)”, “Imperialism, American”.

3) “The question today is whether a new ideology and political reform program will emerge to complete the task of *classical political economy*: to free markets from unproductive debt overhead and unearned rentier income” (Hudson, 2012g). A prerequisite for this is called Monetary [actually ‘currency’] Reform, a necessary corrective to ‘classical’ political economists, from Smith to Marx, misunderstanding the basic measure of money-currency. See also “Monetary reform”, → “Primary Sector Economics (PSE)”, → “Democracy, economic”.

See also “State capture”, “Adolescence of Mankind”; “Monetary theory (historical)”, “Populism”.

Political economy (essay)- See “Economic science”.

Political economy, ‘neo’- see “Marxism”, “Neo”, “Socialism”.

Political economy, ‘today’- see “Political risk”, <https://www.youtube.com/watch?v=7bOHC2m85ts> [theBadPol.Eco.song].

Political parties- See “Parties, political”.

Political Pronology- 1) Polish psychologist Andrew Lobaczewski’s classic 1980’s study of the phenomenon of sociopathology in public life.

2) As a way of coping through 4 decades of totalitarianism, “*We’re going to study as scientists the integration of politics with psychopathy. How do psychopaths find each other, organize, and implement political control?....* 5% of the population are born without empathy. You know they’re basically psychopaths. And they are very good at finding each other and *organizing* to implement things for their benefit. 20% of the population are very good at getting things done. And what happens is, they end up operationalizing and running things for the 5%. The 5% get organized and make it attractive for the 20%...They pay them well to do the work; and then the other...75% basically get tortured and harvested by this group of the 25%. And the [main] problem that the 75% have is they cannot fathom that psychopaths really exist... that humans exist that have no [innate] empathy.... You know I didn’t understand a lot of how America was run until I moved to a rural area and studied livestock management.... What they discovered is that when you can teach the 75% that psychopaths exist, and to understand that some humans have no capacity for empathy, that they...[then] stop being erotic [neurotic] and they start taking responsibility and come up with effective coping mechanisms... [Thus] We need to

²⁰⁸⁶ In other words, if a monetary-currency system “doesn’t promote life-- if it doesn’t create beauty and reality-- [then] it must be changed” (Boyle, 2002).

²⁰⁸⁷ Then, with President Wilson’s *Federal Reserve Act* of 1913 (and World War One), “all of this” half-century or so of populist education about money and economics “went into a black box, and only...the specialists could [then] handle it... And so then...the academics in the 1930’s...[were] talking about...[money], with the general populace not being able to really think about it.... We lost the philosophical side of that...” (Walsh, 2019b, mn.36-38). See also “Wonderful Wizard of Oz, the”, “Economics”.

bring transparency, and then shun and withdraw.... If they can understand that and quit being neurotic, and stop necessarily being entrained with 'smart' phones... then they can start to come up with highly effective coping mechanisms, each in their own unique situation" (Fitts, 2015, mn.1:59-2:01). See also "[Corporate Media Cartel \(CMC\)](#)", "Progress", "Privilege", "Parties, political".

Political risk- (a.k.a. bribery-corruption; 'the red button' issue [Fitts, 2010]²⁰⁸⁸)

1) "[T]he whole issue is once you break the taboo, once you tell people, and in particular you tell politicians, that this is possible [to create money directly, without depending on banks], (then) what's to stop them from wanting to do it all the time? And in large quantities? In inappropriately large quantities, rather than in appropriate quantities in appropriate circumstances? So the whole [entire] issue is the political risk" (Turner, 2016).

2) Speaking of 'wanting to do it all the time', how is the state of 21stc '*political economy*' as it stands today? "The basic model is a tornado that has been working its way through our economy for the last 20 or 30 years... [mostly] since the early 90's, when the WTO went into effect... [T]he politicians do something that cause stock prices to go up, or company [real] profits to go up, or company P/E [ratio]s to go up, or both...[with either] a new rule or...contract... That creates capital gains for investors... [and] a portion of those gains" are then kicked "back to [the] politicians as political contributions. The #1 source of political contributions [in the US today] is capital gains on both stocks and real estate. And around & around you go [on DARPA/tech giant technology]....[B]asically Washington engineers the rules... the contracts... the purchases, and engineers more & more...[W]e have a giant sucking sound of more and more of the economy working through the federal budget in a way that props up the stock market.... It makes the [actual] economy weaker... than... if you had a 'free' market' process instead of... an engineered [politically rigged] process..." (Fitts, 2018m, mn.2-3). See also "Political Science" (a.k.a. the management of 'political risk'), "Capitalisms".

See also "Main point", "Inflation", "[Freedom continuum](#)", "Separation of Powers", "Parties, political".

Political Science- (that which was formerly known, in conjunction with pre-"Economics", as "Political Economy", prior to the rise of [see also] the 2nd Industrial Revolution, and "Mythomatics")

1) "Political science in its earliest form is [simply] the knowledge of how to take food surplus away from the food producer without giving him very much in return."- Kenneth E. Boulding (Boulding, 1962). See also "Economics", "Economics, Parity".

1b) With the divorce and segregation of "Economics" from "Political Science"; US society has been (increasingly) "warped... in ways that have yet to [even] be analyzed...[leaving] us with a political vocabulary that is...often [both] descriptively inaccurate & theoretically misleading...[Thus] our very *ability* to engage in the kind of discourse needed for a recurrence to fundamental principles is [being] impeded by the imprecision of terms..." (Lutz, 2006, 2). See also "'Democracy'", "Orwell, George".

2) This is some of what it has turned into (in the absence of the above), after only about one century (c.1903-2010's): https://www.theguardian.com/uk-news/2020/jan/04/cambridge-analytica-data-leak-global-election-manipulation?fbclid=IwAR0s6XwkO_JQ0aBvp4hDOuNPpU9HZ-sSb2Zxhxo2RD7EbNauW-af4JYKyDM ['cambridge analytica' update]

3) "If I committed a grave offense, and as punishment found myself teaching a college course in *political science*, I would pose a question the first day: 'If telling the truth causes conflict, should you a) lie; or b)

²⁰⁸⁸ This is basically the (materialist values) 'democratic' phenomenon of people 'voting for money' [a.k.a. 'voting their pocketbooks', or 'to keep the money flowing'], even though they are aware that doing so is unfair or 'corrupt' to society at large. According to Fitts (Fitts, 2010), hardly even 1% of a roomful of people meeting to "evolve our society spiritually" would publicly raise their hand to vote for an immediately stoppage to "laundering \$500 billion to a trillion dollars a year of dirty money.... [from] hard narcotics trafficking" (what Fitts often calls pushing down a hypothetical "*Red Button*"), if such action also entailed that they would lose some personal form of subsidy or benefit (from said corrupt practices). Solon admonished his fellow Athenians for such practices (pretty much voting for 'tyranny'), c.560 BCE: "[Y]ou yourselves exalted these men and gave them pledges. And that is why you endure evil servitude. Each of you follows in the footsteps of a fox. Yet you are devoid of sense. For you look to the wily [tactical] words of a man. And pay no regard to the [strategic] consequences'. So spoke Solon" (Diogenes Laertius, 2018, 27). See also "Parties, political", "'Democracy'".

tell the truth? And we would spend a year answering the question” (Rappoport, 2020). See also “[Cultural Calendar](#)”.

3b) “[F]or a bit of background, understand that the term ‘political science’ means actual science in the same way that reading freckles means you can predict whether the owner of the freckles is going to give birth to a child who will fly to the moon.”- Jon Rappoport, Jan 2, 2023. See also “[Scientific method](#)”. See also “[Bernays, Edward \(1891-1995\)](#)” [.propaganda], “[NInnies](#)”, “[Academia](#)”.

Political spectrum (in 20thc)-

See “[Communism](#)”, “[Socialism](#)”, “[Liberal](#)” (20thc), - “[Conservative](#)”, “[Liberal \(classic\)](#)”, reactionary-“[Fascist](#)”.
“[Statism](#)” “[Market fundamentalism](#)”.

“[Parity](#)” (for what?)

See also “[Hegelian dialectic](#)”, “[False dichotomy](#)”; “[Populism](#)”.

Political theory, 101 (in the 21stc)- (basic 5 W's)

1. WHO?-

2. WHERE?

3. WHAT?-

4. WHEN?-

5. WHY?- a <https://www.youtube.com/watch?v=nD5MPI2trmM> [‘when you’s in the war...’]

Politically correct- See “[Orwell, George \(1903-1950\)](#)”, “[Provocation operation \(Po\)](#)”, “[United States, the](#)”.

Politics- (the secular-practical side of dealing with mortality) 1) the art and/or science of ‘legitimizing power’²⁰⁸⁹ (Quigley, 1976c-pt.3); or also of de-legitimizing [and taking down] power. See also “[Politics, identity](#)”, “[Statism](#)”, “[Intelligence Community](#)”, “[Power](#)”.

2) Why does “sneaky” always win in money & currency? Because it’s just a subset of governance, and the larger phenomenon is that sneaky ‘always’ wins there, too.²⁰⁹⁰ Why? It’s not because “the devil” (Shivan mental illness), although it is an aspect of ‘God’. It is because ‘most men’ generally dislike (& hence prefer not to see) that by which they are ruled.²⁰⁹¹ This is the same phenomenon that gives us ever-bigger nations, ever-bigger religions, and (until fairly recently) ever-bigger wars-- even ever-bigger banks. See also “[Democracy](#)”, “[Consciousness](#)”, “[Monetization](#)”.

[laziness... distality].

2b) Is it all a “Just Cause”? (https://en.wikipedia.org/wiki/United_States_invasion_of_Panama); or more like “just because” the mass confusion and craziness is deemed more practicable to most men-- i.e. the fog (or that imperial ‘[London fog](#)’²⁰⁹²) made of a nebulous, hazy “banks, warmongers, and religion” that they

²⁰⁸⁹ “Legitimizing power...[means] somehow *demonstrating* to people that the power structure is this” (Quigley, mn.259)..

²⁰⁹⁰ That is at least ss long as the (imperial) gravy train is flowing. Hence the (see also) “[Central Banking-Warfare model](#)”.

²⁰⁹¹ ...and almost always prefer to avoid direct contact with that which dominates them. <https://www.youtube.com/watch?v=9ttDUGM-1mU> [DiamondAmerica]. [That](#) (and in more recent times over-monetization) is what drives the entire (see also) “[Nationality Identity Cycle](#)” and monetary cycles; as what was originally a small & limited tool for the smart & principled turns into the biggest & least-questioned tool for the dumb/irresponsible, venal, and corrupt (and eventually self-destructive). See also “[Cycles](#)”.

²⁰⁹² It is, of course, not just one side of the Atlantic (or the Pacific, or anywhere). According to independent American historian William Howard Adams, a “[Jeffersonian fog](#)” has long clouded (if not befuddled) Americans’ views of the United States’ “founding generation”; and hence also its revolutionary era, and Constitution of 1787 (Adams, 2008, xvi). See also “[History](#)”, “[Jefferson, Thomas](#)”, “[Imperialism](#)”.

can never, it seems, really put their finger on-- except to say that it's 'the devil'-- or something else attributed to supernatural things that they do not understand. 'Our God is bigger than your God'. 'Our country (or natio) is bigger than your country (or natio)'. 'Our bank (system) is sounder than your bank (system)'.

2c) Hence every 'Central Banking-warfare model' will, eventually, collapse into (see also) "Charismatic Authority & Dependency" (because any 'winning' empire is [increasingly] addicted to distal authority-- if not for the/its (see also) "Intelligence Community". See also "Hypertrophy", "Dynastic cycle".

Will the 'adolescents' ever grow up? See also "Adolescence of Mankind".

2d) Not that many people have both the willingness & ability to contemplate the forests & peaks, that lie above the (oft-propagated) trees & darkness. Most folks talk, either directly or indirectly, of changing the taxes and subsidies. But the Deep State just keeps doing whatever-- because of (see also) "Reform, 101", not because "Jones, Alex". See also "History", "Needs, desires".

See also "Governance", "Freedom continuum", "Government, role of", "Integrity".

'Politics, identity'- 1) the most-typical enabler of a strategic policy of "looting the country [takes place]... When you have this type of a [looting] system operating, the only direction in which the country can go is down... If... [a so-called] Left...government [or Party]...had some sense of obligation to ordinary people" (a.k.a. its constituents), then it would not have (already) "ruined [sic] its opportunity [to serve them] by adopting the deadly [zero-sum gain] politics of [primarily ethnic] identity politics... [which simply places] the country into the hands of the people who will loot [sic] the country, [which is always] at the greatest expense of ordinary people, in order to steal the [formerly public (or 'nationalized')] assets of the country and put them in private hands" (Roberts, 2020, mn.5-6). See also "Politics, macro", "Ethnic (National) Identity", "Privatization".

2) the primary (political) tool "used by the elites to *separate* [sic] the population-- to split the population up, and turn the various groups against one another...[so that] there can be no unity against the ruling elite.... The people are atomized" (Roberts, 2020, mn.12). "Divide & conquer" is 'as old (and just about as useful) as the pyramids'. See also "Imperialism", "Duopoly".

3) Mix this political culture in with usury-extraction economics, the Information (Overload) Age, and-- last but not least-- the digitalization-New Economy abstracting of accounting standards, and what you will inevitably have (unless there is substantial reform) is "the complete destruction of accountable government.... [leaving] a tower of Babel"- Paul Craig Roberts (Ibid, mn.14).

See also "Feudalism, neo", 'FASAB-56', "National Identity cycle".

'Politics, macro'- (a.k.a. 'wholesale [mass market] politics', at an abstract, 'societal' level)

"the object... is to legitimize power: that is, to get people, *in their minds* [sic], to recognize and accept what is the actual power relationship in their society" (Quigley, 1976c-pt.3, mn.256).

1) [In the old days], fighting (usually) with lies, and/or pecuniary bribery.

2) [In more recent (Big government) times], "The duplicitous art of getting votes from the poor and campaign funds from the rich by promising to be an honest broker to protect each from the other [and/or (increasingly nonsensical) 'social issues']-- while actually being up for sale-- as policy-making is made part of the unregulated ('free') marketplace" (Hudson, 2015b); of corporate/deep state think-tanks (from the mid-20thc) and de-regulated bankmoney (since the latter 1970's-80's). See also "Big government".

2b) It was "Originally... [British PM] Harold Wilson who said that's the job of a politician-- to deliver his *constituency*...to his *contributors* and his backers" (Hudson, 2012c). See also "Congress (US)".

3) How does this (so often) happen? "[B]efore the combined effects of fatigue and alcohol forced us to call it a night, [(in the spring of 2015), fm. US Treas. secretary & Harvard Univ. president Larry] Summers looked at me intensely and asked a question so well rehearsed that I suspected he had used it to test others before me. 'There are 2 kinds of politicians,' he said: 'insiders and outsiders. The outsiders prioritize their freedom to speak their version of the truth. The price of their freedom is that they are ignored by the insiders, who make the important decisions. The insiders, for their part, follow a sacrosanct rule: never turn against [or substantially criticize] other insiders, and [also] never talk to outsiders about what insiders say or do. Their

reward? Access to inside information and a chance, though no guarantee, of influencing powerful people and [some details of the mostly pre-planned] outcomes'. With that Summers arrived at his question: 'So, Yanis,' he said, 'which of the two are you?'" (Varoufakis, 2017, 7-8). See also "European Monetary Union". 3b) "This is how networks of power control the flow of information: through co-opting outsiders [simply] and excluding those who refuse to play ball. They evolve organically and are guided [today] by a supranational drive that no individual can control... Once caught in this web of power, it takes a heroic disposition to turn whistle-blower, especially when one cannot hear oneself think amid the cacophony of so much money-making. And those few who do break ranks end up like shooting stars, quickly forgotten by a [more & more] distracted world.... [T]hose embedded in the very heart of the network are usually too far inside to notice the black box when they live and work inside one. Larry Summers is one such rare insider. His question to me was in fact an invocation to reject the lure of the outside" truth (Varoufakis, 12).

4) But it's not all about (whomever is controlling what a polity uses for) money. "There are 3 key factors in elections-- money, organization, enthusiasm. If you have 2 of them you can win" (Quigley, 1972b).

4b) Win what? See also "Reform, 101".

See also "Political Pronology", "Parties, Political", "Left brain, Right brain", "Populism", App.C: "1-2-3".

Politics, micro- (a.k.a. 'retail [individual] politics') knowing what people (and people who lead other people) really want. See also "Google", "Totalitarian/Nanny State".

Ponzi scheme- (a.k.a. 'pyramid scheme', 'chain letter', or 'Jenga' 'greater fool theory'; 'a system that mandates short-term "growth", long-term default', per the notorious financial scammer Charles Ponzi [1882-1949])

1) "An arrangement whereby *early* investors in a financial operation are paid out of money put up by *new* subscribers to the scheme, not out of actual profits. Investor concerns are alleviated by promises of exorbitant and rapid rates of return resulting from a hitherto undiscovered technique of making money. Named for the Italian-American confidence man Carlo Ponzi, who claimed to have found a loophole in international postage-stamp swaps, the term has been applied to financial bubbles expanding at an exponential rate of credit creation, with no underlying means of earning enough income to keep them going.... their managers...[have often been] political insiders, as [that] normally is required for pyramid schemes to attract customers" (Hudson, 205b); from John Law's day to today. See also "Plunge Protection Team", "Stock buy-backs".

2) Of course it didn't start in the 20th or 19th century. Isaac Newton (1642-1727), "when asked whether the [South Sea Co.] stock would continue rising, answered that 'he could not calculate the madness of the people'" (Zarlenga, 2002, 298).

2b) Arguing before the Pennsylvania Assembly in 1786, "financier of the American Revolution" Robert Morris argued that rapid money circulation-- in and of itself-- "was an infallible sign of confidence...[Paper currency] was being 'pushed from hand to hand, like the lighted stick in the play of *Jack's alive, and alive like to be* [sic], each holder fearing that it should die in his hands.'" - Robert Morris, (Wilson, 1942, 20). See also "Oligarchy", "National Debt Economy".

2) In terms of monetary mechanics, it is incorrect to characterize today's "debt-money" system as being an inexorable "ponzi scheme", based upon the logic of $P + I > P$. This is because the supposition fails to take into account the Velocity of Money (which is always greater/faster for Reserves). Nonetheless, ignorant 'monetary reformers' stick to the schema like a death wish. See also "Monetary reformers". See also "Compound Interest", "Usury", "Debt money", "Federal Accounting Standards Advisory Board" [FASAB-56], "Value".

Populism- (the belief and movement that government should belong to [be 'of, by, and for'] the common/majority People) See also "United States, the".²⁰⁹³

²⁰⁹³ No "other country... has got this [historical] level of knowledge and experience with monetary system[s] and monetary reform history-- certainly not in any of the European countries...[or] the UK.... The 1890's is not that long ago... And...there's been a cultural amnesia since

- 1) “There is no ‘the government’ [personification fallacy], to my mind. It is [simply] either our government (the people’s) or their government (the bank’s). What is called ‘the government’ now is actually ‘the banks’” (Switzer, 2020c). See also “State capture”, “Attitude inoculation”, “Logical fallacies”.
- 2) “[T]he general public is generally incapable of conceiving [this basic point or two], because they don’t understand the mechanisms at work. This should indicate [that] what we need to be showing people [is] the [primary] mechanism...that concentrates wealth and power systematically [like clockwork]...” (Switzer, 2020b). See also “Debt money”, “Usury”, “Compound interest”, “Economics”, “Debt saturation”.
- 3) “...And they are [also] not organized to act” (Ibid). See also “Parties, political”.
- 4) A century or so ago, before the World Wars (or “**Currency wars**”) and ‘super-power’s, many millions of Americans [and Europeans] knew these basic lessons by heart, and came close to winning the 1896 presidential election (Perry, 2019, mn.49-51). See also “Wonderful Wizard of Oz, the”. See also “American System, the”, “Lawful money”, “Money”; Ch.2 [.19thc].

[Reform Party founder H. Ross Perot, Sept. 1992]

Populists (19th century)- weren’t about the allocation of currency (as would be their successors, the ‘progressives’); they were about the creation of currency. See also “Wonderful Wizard of Oz, the”.

Positive Money- London-based team of researchers and campaigners for public monetary reform; more specifically, that the UK’s 1844 *Banking Act*- which made it illegal for anyone other than the Bank of England to create paper money (notes)-- should be updated to apply also to the nation’s electronic (account) money, which is being presently created, almost entirely, by (unaccountable) banks. See also “Account money”.

- 1) Founded in 2010 by Ben Dyson [who left for the Bank of England in 2016], Positive Money, as of 2017, has a members/subscribers list of “about 50,000 people... so... they have some leverage... We want people to realize that this thing can be changed, and [then] it can be completely different and much better for everybody.... If anything is going to change, it’s gonna come from civil society” (Evans & Tyler, 2017, mn.29-30). See also “Civil National Identity (CNI)”.
- 2) What’s so “positive” about governments doing what they are supposed to do, and not doing what they’re not supposed to do? “Another very positive consequence of having Secure Money is that the entities that take over from current private banks could be left unprotected and lose...[the current bank] privileges, and they would [actually] be subject to market rules, like the other financial institutions that are not banks and like any non-financial enterprise. All the regulations created to protect banks, that are ultimately explicit or implicit public subsidies... could be removed, because they would [simply] no longer be necessary” (Ordonez, 2018). See also “Bank welfare”.
- 3) Despite doing a good job of becoming “relevant” in European monetary debates over the 2010’s, Positive Money, in both London and the EU, are (c.2020) “losing relevance in...[terms of] doing something useful for the monetary system... [It is not] Central Banks...[job] to save the [geologic] climate” (Wortmann, 2020, mn.28-29). See also “Geoengineering”. See also “Monetary reform”, “Usury”.

then...”- Jamie Walton (Perry, 2019, mn.52-53). See also “Pilgrim Society”, “UKUSA Agreement”, “**Currency Wars, the**”, “Bernays, Edward”, “Super Imperialism”, “Hypertrophy”.

When we let banks create money out of nothing and let them decide how this new money is spent, then we end up with a society that reflects the priorities of the banks.

[See also “Oligarchy”]

Post-industrial economy- 1) “A euphemism to depict *rentier economies* as progressing ‘forward’, beyond industrialization, rather than a lapse back into the pre-industrial usury-and-rent economy of feudal Europe, when military conquest was the major enterprise and economies polarized between creditors and debtors” (Hudson, 2015b).

2) “[I]ndustrial firms have been turned into essentially *financial entities* since the 1980s. Their objective is less and less to produce goods & services, except as a way to generate revenue that can be pledged as interest to obtain more credit from bankers and bond investors. These borrowings can be used to take over companies (‘mergers & acquisitions’), or to defend against such raids by loading themselves down with debt (taking ‘poison pills’). Other firms indulge in ‘wealth creation’ simply by buying back their own shares on the stock exchange rather than undertaking new direct investment, research or development. (IBM has spent about \$10 billion annually in recent years to support its stock price in this way.) As these kinds of financial maneuvering take precedence over industrial engineering, the idea of ‘wealth creation’ has come to refer to raising the price of stocks and bonds that represent *claims on wealth* (‘indirect investment’), rather than [direct] investment in capital spending, research, and development to increase production” (Hudson, 2011d).

3) “It’s called hunting & gathering....’services’...[are] fundamentally the financial sector” (Keen, 2016o, mn.8-9). “The idea that you can have a...service-sector driven economy presumes [that] you can continue creating debt faster than GDP grows-- indefinitely, and you can’t...” (Keen, mn10). See also “Serfdom, neo”.

Post-Keynesian Economics- (ironically [although not with Economics], this is the line of thought and modelling today that is most congruent with [what might be called] ‘real Keynesian’ [from Minsky-to-Keen]; not to be confused with so-called ‘neo-Keynesian’ [which is more-or-less ‘neoclassical’] nor with ‘new Keynesian’²⁰⁹⁴ [which encompasses everything from mainstream’ Krugman-to-‘MMT’-type reasoning²⁰⁹⁵; a.k.a. ‘Cambridge Keynesians’ [UK]²⁰⁹⁶)

The “Modern Money Theory [MMT] movement...[is] today perhaps the most prominent version of post-Keynesian heterodoxy” (Mehrling, 2020). See also “Modern Monetary Theory”.

1b) “...it does have flaws, but... There is an alternative body of thought. We’re not left totally in the [academic] dark if we abandon these Neoclassical ideas” and assumptions (Keen, 2016m, mn.35).

2) The “post-Keynesian notion of endogenous money is overstated...[resembling] the Banking School real bills doctrine of the 1830-1840s and largely ignores primary [bank] credit creation for *non-GDP*

²⁰⁹⁴ The contemporary ‘New Keynesian’ Economics is something of a catchall term (for the millennial-era majority/‘mainstream’; plus perhaps also ‘MMT’ spendthrifts in the 21stc). New Keynesians inherit (from the mid-to-late 20thc ‘Neo-Keynesian’/Neoclassicals [like Samuelson]) the mistakes of “bastard Keynesianism” (a.k.a. “military Keynesianism”; see also “Reaganomics”). What they all have in common is basically 1] underlying Neoclassical assumptions & path-dependent models (i.e. the old ‘mainstream’ wine), rehoused within 2] bigger-role-for-government-type actual practices (i.e. new ‘mainstream’ bottles). Keen, in order to meaningfully clarify, simply equates all “mainstream” with “Neoclassical” Economics. See also “Neoclassical Economics”, “Capitalisms”.

²⁰⁹⁵ ‘Modern Monetary Theory’, as led by Randall Wray, would reject being lumped in with “New Keynesians”, preferring instead the “Post-Keynesian” classification (having made so many efforts to claim genuine post-Keynesians such as Hyman Minsky). However, many post-Keynesians reject ‘MMT’ (f.e. Palley, 2014; Davidson, 2019). See also “Reform, false”.

²⁰⁹⁶ After the death of Cambridge-based Keynes; the ‘Cambridge Keynesians’, like their American counterparts, the (misnamed) ‘Post Keynesians’, “considered the *Neo-Keynesian* construction [a.k.a. the “Neoclassical-Keynesian Synthesis”] as a horrendous betrayal of the Keynesian Revolution”- <https://www.hetwebsite.net/het/schools/synthesis.htm>.

finance, as well as money supply [being] partly driven by the banking sector's proprietary [downstream] business... [Basically], the identity of money and credit as asserted in post-Keynesianism is a pseudo-truth even in the present regime of bankmoney, and misleading from a systemic and historical perspective"²⁰⁹⁷ (Huber, 2017, 7). See also "Keen, Steve", "'Modern Monetary Theory' (MMT)".

Post-modern economy- "For over a century, the term *modern* referred to progressive economic policies promoting a more *egalitarian* distribution of wealth, as in progressive income taxation and higher living standards through government regulation and planning. Today's *postmodern* economy is reversing this trend, by permitting financial and property dynamics to *re-polarize* wealth and income. The post-modern economic program is one of deregulation, a *tax shift* from property and finance onto labor, and abolition of government power, except for its role in serving the wealthiest layer of the population" (Hudson, 2015b). See also "Neoclassical Economics", "Post-industrial economy", "Income taxes".

Postal Savings & Loan Banks- See "Postal Savings & Loan system".

Postal Savings & Loan system (PSL)- 1) Compound interest is the teeth of the debt money extraction system. The people's government needs a tool to intervene against bank excesses.
2) The Postal Bank will also be put in place to support the eventual gradual introduction of sovereign money from the Federal Government for distributions and payments, so that the banks won't have a chokehold on the distribution of Central Bank (Reserve) money-- or the governments after sovereign monetary reform. **PSL's can put the *lending* back into the (traditional) 'spending & lending' of money creation.** In times of financial crisis, the government needs to intervene to break the banks' consolidation cycle. PSL banks give the government a tool to do this when the banks work against the economic interest of the nation, as they usually have in their class warfare to extract wealth for the financial and executive governance sectors. See also "Usury", "Compound Interest".
3) (wiki) The United States Postal Savings system was a postal savings system signed into law by President William Howard Taft and was operated by the United States Post Office Department, predecessor of the United States Postal Service, from January 1, 1911 until July 1, 1967. The system paid depositors 2% annual interest. Depositors in the system were initially limited to hold a balance of \$500, but this was raised to \$1,000 in 1916 and to \$2,500 in 1918. At its peak in 1947, the system held almost \$3.4 billion in deposits. The system originally had a *natural advantage* over deposit-taking private banks because the deposits were always backed by "the full faith and credit of the United States Government." However, because the FDIC gave the same guarantee to depositors in private banks, the Postal Savings System lost its natural advantage in trust.
4) "You could use the post offices as 'public banks' to provide basic...check cashing services and banking accounts and money transfer services-- at cost-- to areas that now have to engage in payday loans that are a complete rip-off. You would have an alternative to the monopolists. And the payday lenders are all funded by the big banks... It doesn't have to be this way" (Hudson, 2017g, mn.57).
5) In the late 1960's, when Michael Hudson "worked on Wall St., 3% of American bank deposits were in the Post Office banks, which is why the [commercial] banks wanted to drive them under; [and] maybe 15 or 20% were in Savings Banks and Savings & Loans... Mutual Savings Banks don't exist anymore. They were looted by the commercial banks taking them over" (Hudson, 2017i, mn.56-57).
See also "Savings Banks", "Thrifts", "Monetized credit institutions", "Federal Funds (accounts) for All".

Poverty- ("in the sense of...[people] not possessing the material necessities to keep them in health" [Hollis, 1949, 2]).

See also "Food", "Great Poisoning, the", "Dumb downing",

²⁰⁹⁷ "The heirs of Keynes... unreflectingly support Banking School reasoning... [a.k.a.] identifying money with bank credit as if that were the most natural thing in the world" (Huber, 2018). See also "Banking School/Bank Teachings".

Powellism- ('Fed' Chair Jerome Powell's 2020's policy, 1st via BlackRock [& Stanley Fischer], of increasing US bankmoney, largely from 'hedge fund welfare', which is supposedly in contrast with early 2020's replacement of LIBOR with SOFR)

Answering the \$64 dollar question: "Would Jamie Dimon turn over the keys of JP Morgan to a bunch of German eugenicists?" (Loungo, 2022, mn.35).

It's not 'your father's/20th-type Operating System anymore. "This ultimately comes down to an ideological...[contest] between...[continuing to allow] the private sector to distribute and do capital formation, or... is it gonna be the public sector, through the Central Banks and the technocrats over in Europe...; 'Private equity' Powell is not the same as 'Global academician' Bernanke" (Luongo, 2022b, mn.24; 38).

There are 2 main interpretations of what Chairman Powell has been doing:

1) Since 2019-20; see Titus 2022 (i.e. the hedge fund-welfare-based monetary expansion)

2) Since 2021-22, "...Powell isn't fighting inflation, he's fighting the Davos globalists..."- Tom Loungo, Nov. 2022. Since 2019, JPMC "and... to a lesser extent Goldman-- but mostly Morgan-- stopped taking European sovereign debt as Repo collateral, which... caused the Repo Crisis in Sept. 2019.²⁰⁹⁸ The process of de-coupling the American banking system from the Offshore banking system [officially] started with" Powell being named Chairman in 5/2018, alongside (from 6/18) "John Williams to [President of] the New York Fed²⁰⁹⁹.... [T]he Secure Overnight Funding Rate was...[slated to be taken] off the [Americans'] drawing board... [for almost] 10 years... We wanted to get off of LIBOR after the original LIBOR scandal [of 2012, after the Managing Director of the IMF]... Dominique Strauss-Kahn was thrown out of the IMF [in 2011]. All these plans to undermine these [LIBOR] people were actually *dormant* [sic] for like the entire Obama interregnum. And then when Trump came to...[PotUS], he accelerated...[for the lost time]. " (Luongo, 2022, mn.35-36). See also "Trump, Donald" [OPFOR], "Statism".

2b) Who's on what 'side'? (2022) "Bank of New York Mellon & Bank of America are on board with Davos; they all went to Davos. Notice JP Morgan, Goldman Sachs, Citigroup didn't [even] go. Wells [Fargo] didn't go. They didn't even send like VPs or head of...They didn't sent anybody interesting" (Luongo, 2022, mn.46). "And I think now also Morgan Stanley... [all of them] the primary shareholders...of the New York Fed" (mn.48).

2c) And the 'other'? "[R]ead Christine LaGarde...read Klaus Schwab...read George Soros...read Mark Carney. They're the...[officers] for... really The Cartel of banks.... But the American ones are no longer interested in that" (Luongo, 2022, mn.47). "[C]learly still going along with ESG, you have Larry Fink and [Stanley Fischer &] BlackRock... and of course all the European banks" (mn.48). See also "LIBOR".

2d) Overly-cardboard villains? "It's really simple. Davos' plan for the C.B.D.C.s and all this stuff is to do away with commercial banking... destroying the 2-tiered monetary transmission system, which goes from the Central Banks to the commercial banks, and [then] the commercial banks to the retail money users, right? They want to collapse that into: Central Banks-to-retail" money users (Luongo, 2022, mn.11). See also "Money, 2 classes (layers) of".

3) See also "Eurodollars", "Monetization".

See also "Bankmoney", "Quantitative Easing (QE)", "Money, 3 (contemporary) Tiers of"; Titus, 2022.

Power- (that which solves problems-- except, sometimes, with human beings [who are often foolish]).

1) Broadly; "rests in the ability to satisfy human needs.... Notice I do not say human desires. One of the striking things about our society today is how remote our desires are from our needs" (Quigley, 1976c-pt.3, mn.243). See also "Dumb-downing", "Monetization".

²⁰⁹⁸ Tom Loungo's take on the friction between Jerome Powell and (the ECB's) Christine LaGarde at the 2019 Jackson Hole conference: <https://www.brighteon.com/1c2e3688-d96c-488b-8c3f-0fa2fc71593c> [Luongo-Adams, 22-10-7, mn.5-6]; and almost 2 years later, <https://twitter.com/stackhodler/status/1587544699300204546> [Panel5@GreenSwanConf.,Jun'21].

²⁰⁹⁹ The **Corporate Media Cartel**; establishment "hated John Williams as...head of the New York Fed, because they knew he was going to implement SOFR [over LIBOR]. They ran story after story in the Wall Street Journal, Bloomberg, the Financial Crimes, all of that... about how terrible this guy would be" [a.w.s.] (Luongo, 2022, mn.143).

2) More specifically, however; “[p]ower is an elusive concept.. I reduce it to a single dimension: the prospect of *enforceability*, which stands for the ability to invoke a state’s means of coercion for vindicating and enforcing claims against others. The threat of coercion, I argue, gives capital its comparative advantage over other objects, promises or ideas²¹⁰⁰.... Relying on the coercive power of one or more states ensures that economic and social relations become scalable” (Pistor, 2020b). See also “Bank welfare”, “Provocation”, “Capitalisms”.

2b) Michael Mann’s classic theory of 4 “overlapping and intersecting sociospatial networks of power” consists of: the ideological, the economic, the military, and the political (Mann, 1986).

3) “Generally speaking, members of the Global Power Elite are not subject to freedom of information laws or universal transparency rules. Moreover, an international patchwork of disclosure laws makes it an almost impossibility to have a full grasp of how elite members and their networks secretly intersect on a global scale” (Maret, 2021). See also “Globalism”, “Shell game”, “Privilege”, “Secrecy, Cult of”.

See also “Philosophy”, “Freedom continuum”, “National identity/Nationalism”, “Separation of Powers”, “Needs, desires”.

Prejudice- “an unwillingness to examine fairly the evidence and reasoning in behalf of the person or thing which is the object of the prejudice...a prejudgment caused by indoctrination, conditioning, or some prior experience of a singularly pleasant or unpleasant character. A prejudice has strong and deep emotional support.... Prejudice differs from Hasty Generalization in that although Hasty Generalization [also] often represents a spontaneous emotional reaction...[p]rejudice is always a matter of *much longer standing* [sic]. The feeling... is deep, not superficial, and is often completely hidden from the man in its grip” (Allen & Greene, 1966, 13). See also “Propaganda”.

President of the US (PotUS)- (clearly has too many hats for anything much other than ‘reality TV’²¹⁰¹, hence [from its inception], a.k.a. ‘*the foetus of monarchy*’ [Rudalevige, 2005]²¹⁰²). See also “Deep State”. “[O]ur core problem...[is] that we are governed [at the federal level] by people who are invisible to us.” - Catherine Austin Fitts, November 2012

1) Marionettes? The position of PotUS, as originally designed, was for an aristocrat-oligarchical figurehead, like George Washington, to essentially front for (as-of-yet) **unspecified lines of real or meaningful** sovereignty, within the ever-expanding (then kernel of) Executive branch/Deep State. At least the first de facto prime minister of the Executive branch had a name and face, (the unelected, but Senate-confirmed) Alexander Hamilton. Predictably, given the ‘garbage can socialism’ nature of any bankmoney regime, there has been, since the Jefferson-Jackson days, pretty much only one exception to the (expanding kernel of mystery-sovereignty) rule-- the administration of (the unelected) John Tyler (1841-45), who was, even then, almost blown up²¹⁰³. Mystery sovereignty is a concept which, over the

²¹⁰⁰ This involves a lot of (mostly outdated) definitions and conceptualizations, including The “meaning of capital, of social classes, the definition of property rights and markets; the conceptualization of the state and of state law; and questions about knowledge and the command of, or, control over knowledge.... [focusing] on issues that cut across disciplinary boundaries and not...[organizing] comments around [pre-existing] political, economic, or social theories” (Pistor, 2020b). See also “Academia”.

²¹⁰¹ “1st he is Head of the State. 2ndly, he is Head of the government.... 3rdly, he is head of a political party.... 4thly, he is Commander in Chief... [Last but not least, the] President is also the Head of [America’s largest corporation] the administrative system with discretionary and emergency powers....” (Quigley, 1972b). It was obvious (if not undeniable), by no later than the early 21st century, that such a design was pretty much only good for scripting and robo-signing. See also “Propaganda”, “Plausible deniability”, “Deep State”, “Government, Hidden”.

²¹⁰² Moderate Federalist and author of the “Virginia Plan” Edmund Randolph (1753-1813) famously described a singular (unseparated) Executive as “*the foetus of monarchy*” (Rudalevige, 2005, 19), which of course was an opponent that they had all just fought a war against; and the resultant “Articles of Confederation...lacked *any* separate executive branch”, while most of the state constitutions’ had “extremely weak governors... [which typically] limited executive powers to those specifically granted by the legislature” (Rudalevige, 19-20). See also “Constitution, US”, “Sovereignty”, “Timarchy”.

The inclusion of the Bill of Rights (in 1791) substantially slowed down this (structural imbalance and) process, leading Randolph and other relative moderates to switch from opposing to supporting to the (amended) Constitution of 1787-91.

²¹⁰³ The 1844 USS *Princeton* disaster was, up until the Civil War, “unquestionably...the most severe and debilitating tragedy ever to confront a President of the United States” (Crapol, 2006, 210).

long-term, tends to attract the wrong kind of people; and of course the bigger it becomes, the more Byzantine and mysterious the sovereignty. See also “Deep State”.

1b) It was often said, when this author was growing up, that every US president elected in a year that ended in zero (since 1840) had been assassinated and/or died in office. Ronald Wilson Reagan (who, like President Wilson, wound up incapacitated) narrowly missed continuing the 1840-1960 trend out another 20 years-- a long trend of some degree of struggling or resistance to ‘PotUS-as-an-employee’ or actor/teleprompter reader. Since Franklin Roosevelt in the 1940’s, it’s been obvious that any PotUS is going to, inexorably, be in over his head. Henceforth, (the often-made observation in England, that) every American president would be like a box of cereal-- more marketing front than substance. FDR, unlike future PotUS’s, was actually able to freely choose his (actual) successor, and got the cereal box trend rolling with Harry Truman-- the (then-typical) midwestern “farm vote” and “Parity” senator. See also “Currency Wars, the”, “Parity pricing”.

1c) Next was Eisenhower (of the famous last-minute confessions), the ‘reluctant midwestern general’ who’d rather be playing golf than living in D.C.; then Kennedy-- the Massachusetts intellectual (or at least erudite) who refused to duck his head; Lyndon Johnson-- the backcountry equalitarian who used his position to ramp up government [1st Estate] spending through the roof; Nixon-- the high-climbing super lawyer (who was eventually removed for opposing the Rockefeller-Deep State’s ‘free-trade’, ‘race-to-the-bottom’-type agenda); and Gerald Ford-- the all-American football star (whom the Rockefeller-Deep State could plug in like a lamp). See also “Free trade”, “Estates, 3”.

1d) Then Jimmy Carter as the “born again” southern military engineer who thought that he’d get 2 terms if he played ball; Reagan, the B-list movie star come to life, who rounded up a mountain range of Sagebrush Rebellion and other anti-Washington votes...to be delivered to the Bush-CIA-Deep State presidency; Bush Sr.-- the Yalie-CIA/globalist (who actually leaked); Bill Clinton-- the Democrat career politician who rounded up that particularly 90’s combination of idealistic/lazy votes, then run through an increasingly corrupt Democratic Party-Deep State money mill; George W. Bush-- the Legacy (or dynast) PotUS, who said ‘This isn’t just more of the same!; and Barrack Obama-- the (audaciously fake) ‘grass roots’ ‘community organizer’ who said ‘This isn’t just more of the same, really!’ See also “Monetization”, “Democracy”, “Trump, Donald”, “Biden, Joseph”.

2) PotUS has thus been, for numerous decades now; “what I call the prisoner at the top” of the executive/deep state “data beast” (Fitts, 2017h. mn.1). “The Intelligence agencies run the Executive, not the duly elected president²¹⁰⁴.... The Intelligence agencies have run this country, since the president was assassinated in 1963 in broad daylight. So the reality is [that] we have a governance structure issue. Who’s in charge of the country? Is it the people behind the Intelligence agencies, the big investors in the corporations. Is it the Intelligence agencies or is it the People, and this is coming down to a fundamental flaw in the governance structure” (Fitts, 2017s, mn.8-9). See also “Monetary reform”, “Constitution, US”.

1b) This is because PotUS is structured²¹⁰⁵ as an impossible task. “He is [supposedly] the head of the Executive branch [the largest corporation in the Western world]. He’s the [ceremonial] head of the state as well... [which means that] he is *the* representative of the United States government in all foreign affairs [and also, increasingly, ceremonial domestic ‘affairs’, too] and all ambassadors are accredited to him...

Thirdly...he’s [de facto] the head of the [dominant] political party... [And] he’s head of the administrative [i.e. delegation & contracting] system, which is *increasingly* [sic] making all [sic] the decisions...[w]hat will be spent and who will spend it”; so PotUS has developed into the biggest: a) CEO, b) Political, and c) Administrative job imaginable, while “he is also [expected to be] d) the symbol of national unity...[and] focus of our emotional feeling regarding our country” (Quigley, 1976c-pt.3, mn.403-04). Sound crazy? See also “Parties, political”.

²¹⁰⁴ “If you...had enough power to instruct the US president on who his cabinet would be, it would really mean that he works for you, and not the other way around, and you could give him other instructions, too...” (Titus, 2022c, mn.17-18). See also “Trump, Donald”, “Democracy”.

²¹⁰⁵ And it pretty much always has been. Even Presidents Adams and Jefferson, more than 2 centuries ago, did not understand what was going on in ‘their own’ Treasury Departments, until years after their terms had expired.

["President Pierce", c.1854]²¹⁰⁶

[Nixon, Johnson, summer 1968]

2) It should not be controversial to point out that any competent “new administration should need all of 5 minutes to start turning over documents that the last one committed crimes to hide. But... [w]hen the real sovereign power of a nation wages war against her from within, [most] presidents... don’t...risk hanging their masters, who keep the people...[in conflict] with each other, by keeping them in the dark” (Titus, 2017). See also “Sovereignty”, “Parties, political”, “Bush-Clinton Dynasty”, “Secrecy, Cult of”.

3) “Complete incompetency”? “Now beneath that element of the so-called Kabuki of politics is...the Deep State-- or what I call the Honorable Deep State, and they in effect are doing exactly what they are supposed to do...” (Pieczenik, 2017i, mn.2). See also “Shadow Government”, “Government, Hidden”.

4) What is needed at the top of (the 2 million people who work within) the executive branch of the US government is a president who serves primarily as a “guarantor of integrity”, not so much a “decider” (Steele, 2017n, mn.104). We are (or at least should be) in the Knowledge Age now, not the 1930’s. See also Inglehart, 2006 (post-materialist values); “Industrial Revolution, 3rd”, “Federal Accounting”.

5) PotUS Updates: 9/22- “It’s a fantasy...that the President of the country runs the country...very simplifying; it’s very comforting... despite every piece of evidence...that that person is [instead] a marketing front... It’s clear [now] that the...[PotUS] isn’t running anything...[just] sort of the face of Oz” (Fitts, 2022k, mn.6). See also “Wonderful Wizard of Oz, the”, “Star Wars”.

See also “Constitution, US (of 1787-91)”.

President’s Working Group on Financial Markets- See “Plunge Protection Team”.

Press, ‘the’- see “Corporate Media Cartel/6 Sisters”.

Primary dealers (23)- (the term also used in the UK²¹⁰⁷; synon. ‘New York Fed counterparties’²¹⁰⁸ [US])

1) are large banks with international scope that buy and sell securities, primarily Treasuries, from the New York Fed, in order to decrease or increase Reserves (RAB) in the monetary system. The majority of primary dealers (due to ‘eurodollars’) are now foreign.²¹⁰⁹ The NY Fed desk, supposedly on orders from the Washington Board’s Open Market Committee (FOMC) typically initiates this process by buying and

²¹⁰⁶ Gallows humor aside, few serious observers of the mid-20th century would challenge the notion that President Eisenhower, circa 1954 , wasn’t really in charge of the Executive branch. It is also not difficult to find evidence that his 2 predecessors, Truman and Roosevelt, were also in over-their-heads much, if not most, of the time, relying instead mostly on P.R., in what was by then (the 1930’s-40’s) already a “media age”. See also “Edward Bernays (1891-1995)”, “Central Intelligence Agency”.

²¹⁰⁷ The UK 18 primary dealers (a.k.a. “gilt-edged market makers”) control “the secondary gilt [bond] market” (Benos & Zikes, 2016, 24). As of spring 2020, they are: HSBC Bank PLC, Barclays Bank plc, Lloyds Bank Corp. Markets plc, NatWest Markets plc, JP Morgan Securities PLC, Morgan Stanley & Co. Int’l plc, Nomura Int’l plc, Citigroup Global Markets Ltd, Goldman Sachs Int’l Bank, Merrill Lynch Int’l, Royal Bank of Canada Europe Ltd , BNP Paribas (Branch), Banco Santander SA (Branch), Toronto-Dominion Bank (Branch), Deutsche Bank AG (Branch), Winterflood Securities Ltd, and Jefferies Int’l Ltd.

²¹⁰⁸ Many of the PDs “are also members/owners of the New York Fed, including Citigroup Capital Markets, JPMorgan Chase, and [even British] HSBC.... [This] is means that ” (Fitts, 2022i).

²¹⁰⁹ In addition to the US, primary dealers may be controlled by persons domiciled in: the UK, the Netherlands, Canada, France, Germany, Japan, Switzerland, and Israel. As of spring 2020, the 23 primary dealers are: J.P. Morgan Securities LLC, Citigroup Global Markets Inc., BofA Securities Inc. [via t/o Merrill Lynch], Goldman Sachs & Co. LLC, Morgan Stanley & Co. LLC, Jefferies LLC [‘9th largest inv. bank in world’], Wells Fargo Securities LLC [est. 2016], Amherst Pierpont Securities LLC [founded 2009; est. 2019], Cantor Fitzgerald & Co.[est. 2006 (post-9/11)], HSBC Securities (USA) Inc, Barclays Capital Inc., BNP Paribas Securities Corp., Nomura Securities International, Inc., Mizuho Securities USA LLC, RBC Capital Markets, LLC, TD Securities (USA) LLC, Societe Generale NY Branch, Deutsche Bank Securities Inc., Bank of Nova Scotia NY Agency; UBS Securities LLC, BMO Capital Markets Corp., Credit Suisse Securities NY Branch, and Daiwa Capital Markets America Inc. [(the nationalized) RBS was replaced with AP].

selling securities to expand or contract the Reserve money supply. The Fed claims that its purpose for expanding or contracting the RAB money supply is to influence the federal funds interest rate target (set by the FOMC), which in turn influences other rates.²¹¹⁰ The Fed claims that this is monetary policy and is its main purpose. Monetary theorists, however, would say that the economy and inflation are controlled directly by the size of the public money supply and that interest is a *consequence*, not a control. The primary dealers may also buy and sell the treasuries to and from other banks, citizens, and foreigners-- which also contracts or expands the public [TAB] money supply. Moreover, the primary dealers have enormous power in [state] credit allocation that heavily influences whether money goes to asset bubble building or into productivity. See also "Market maker", "Monetary Reform".

2) Select international banks that bid directly at the US Treasury's bond auctions. "Let's say they buy" a Treasury instrument at "88 cents on the dollar, then they sell it to pension funds, banks, whatever, at 89 cents on the dollar. So it's a *pointless function*, [except] they get a little cut, as [unnecessarily] being government" (Santopietro, 2017, mn.6). See also "Bank welfare", "Auction rate securities".

3) A number of observers say that the Primary Dealers are a beard for the Federal Reserve, and/or that the Federal Reserve is a beard for the Primary Dealers. See also "Owners, the", "Federal Reserve audit"; Titus (2017).

4) The Central Bank sells *ex nihilo* RAB, in exchange for Treasury securities that have been auctioned from one of the 23 prime dealer banks. This is one of 3 big cuts that the Primary Dealers receive from the monetary system today. The other two are: the 6% annual dividend for being owners of the Federal Reserve, and (see also) "Interest on Excess Reserves (IOER)".

See also "Federal Open Market Committee (FOMC)", "Eurodollars", "LIBOR (London Interbank Offered Rate)", "Privilege", "Owners, the".

Primary sector, the- See "Parity pricing (for the primary sector)", "National income".

1) No one in their right mind contends what is first here. Adam "Smith agreed with the [P]hysicrats that agriculture was a first and necessary step in the economy, and stated that the exploitation of agriculture, through the price mechanism, by manufacturing was harmful to the entire system" (de Yong, 1994, 9). See also "Ecological Economics", "Rentier", "Leverage".

Primary sector economics (PSE)- (a.k.a. 'raw materials economics'²¹¹¹; blanket term for any reform plan pertaining to "parity" pricing [per Peek-Wilken-Walters] and/or the monetization of bundled commodity units [per Graham-Glazeyev]; i.e. abuse of the base is abuse of the base)

Basically 2 main points: the monetization of raw materials at the 1st point of sale, in combination with/or international monetary reform via using a (large) bundles of commodities to back up (at 1:1 parity) any global 'reserve currency' (or, better yet, 'global reserve system'). The former gradually eliminates (certainly any need for) excess debt expansion; while the latter stabilizes international prices from speculative boom-bust shenanigans.

- the 1st ("Parity") from

- the 2nd ("reserve currency" [imperialism] → reserve system) from

²¹¹⁰ "By adjusting the level of Reserve balances [RAB] in the banking system through open market operations, the Fed can offset or support permanent, seasonal or cyclical shifts in the supply of reserve balances and thereby affect short-term [RAB] interest rates and by extension other interest [TAB] rates" (Federal Reserve Bank of New York, 2007b).

²¹¹¹ The Raw Materials National Council (1936-70; subseq. known as the National Organization for Raw Materials ["N.O.R.M."]) was established, c.1936, somewhere in Iowa. "The purpose of it was to make study of the economic record and to find out why we had this Depression in 1929, when the experts said that we were never going to have another depression". A kickoff event of sorts was held in 1936" (Walters, 1971, 156). See also "N.O.R.M.".

1) Is there some particular reason why now-- in the 21stc-- Earth itself should not be [both] the primary basis & beneficiary of man's economic accounting & theory?; **synon.** 'raw materials economics'²¹¹² [20thc]²¹¹³; **antec.** 'physiocracy' [18thc]; sometimes **a.k.a.** 'ecological economics' [21st] See also "Adolescence of Mankind"s,→ "Central Banking-Warfare model",→ "Graham, Benjamin" [.at].

1b) See also "".

2) See also "".

See also "World Par Economy (WPE)", "Leadership vs. Management".

Prime rate- (a.k.a. 'The Wall Street Journal prime rate') the underlying index for most credit cards, home equity loan lines of credit, auto loans, and personal loans. Many small business loans are also indexed to the Prime rate [Bankrate, 2018].

1) Many "bank loans to very large, strong customers are made at rates tied to [the eurodollar-based] LIBOR (such as 'LIBOR plus 1.5%')... often below...the [so-called] prime rate"²¹¹⁴ (Ehrhardt & Brigham, 2016, 690). See also "LIBOR (London Interbank Offered Rates)", "Federal Funds rate (FFR)".

Primogeniture- (1st male child can get any/all²¹¹⁵ of the inheritance; **anton.** 'partible inheritance') "All men are created equal"- The Declaration of **Independence**²¹¹⁶ (not of dependency [on inheritance]).

[See also "Angry Birds"]

[Primogeniture in Europe was ~~only~~ mostly a northern song²¹¹⁷]

1) As there is no understanding of *Britishness* [post-1700] without understanding 'constitutional monarchy' fronting for the City of London (merchant/bankers' [2nd Estate] domination of [3rd Estate] Parliament); there is no understanding of (the deeper national identity of) *Englishness* without understanding primogeniture- - a primary bridge from medieval (feudalism [with its proliferation of bowing & titles]) to the Early Modern (state-capitalism [supposedly of more equal opportunity]), as there will be both big rich men and plenty of talented folk who have to work (or create something) for a living.²¹¹⁸ See also "Capitalisms", "Inequality", "Montesquieu, Baron de (1689-1755)".

²¹¹² *Raw Materials Economics* is somewhat more labor (theory of value)-centric; in that it "illustrates that the dependable economic generator, throughout this process of advancement, is raw materials income, because... Nature will credit people, and people will debit nature, as long as nature permits the intercourse. To optimize the efficiency of nature's credit, a natural balance must be maintained between the *numbers of workers* engaged in raw materials production and the amount of money paid to those workers. The production cycle that flows from nature's credit-- and thus the jobs that flow from a societal debit of nature... starts with the inputs needed to produce raw materials. It follows that employment and production will increase faster if relative values [correct ratios] are maintained... continuous[ly generating] domestic growth" (Lundgren, 1994).

²¹¹³ Yes, the newly-discovered (or at least *rediscovered*) economic science that guided mid-20th century US economic policy was indeed "lost" by 1960, even (c.2010) to Stephen Zarlenga of *The Lost Science of Money* fame. See also "Parity pricing (for the primary sector)".

²¹¹⁴ In 1980, the prime rate famously rose from 11% to 21% in only 4 months.

²¹¹⁵ 'Winner-take-all' (or "first-past-the-post") voting systems also **seem to** have been popularized in England, in some contrast to earlier political voting systems (such as in **the** Venice) which employed finer notions of ranked choices. See also "Parties, political".

²¹¹⁶ The Declaration was definitely aimed at a trans-Atlantic readership-- and the Revolution had (already) nearly caught on that way also (<https://newmedia.ufm.edu/video/hume-and-the-secession-of-the-american-colonies> [Livingston, 2006]). See also "Revolution, American".

²¹¹⁷ <https://vimeo.com/217614187>

²¹¹⁸ How much of "The Spirit of Capitalism" that Max Weber associated with "the *Protestant Ethic*" was really a *Primogeniture* Eth[n]ic? In Japan at least, it was "an ample supply of young people, [culturally] willing and able to pick up and move into the city and start entirely new lifestyles" that was key to its "industrialization with relatively little social breakdown" (Bestor, 2020). See also "Ethnic (National) Identity (ENI)". Capitalist Japan would be at one end of this continuum (i.e. primogeniture-based 'capitalism'), and the (often Calvinist-mad) Dutch Republic on the other (i.e. religion-based 'capitalism'). The thrift ethic of Protestantism & Calvinism in particular was, undeniably, a key component of the rise of a veritable 'double-entry accounting culture' in (mid-1500's-to-mid-1600's) Holland, which was **always** (distinct from England) not a land of primogeniture (exception for the "patroon" family manorial holdings in 'New Netherland' [& early 'New York'] for

2) According to Evelyn Cecil, the first to seriously address the question, primogeniture in both England and Scotland “likely...crept in after [or with] the Norman Conquest” and that the two countries’ “statutes” on the matter were pretty much “identical” (Cecil, 1895,). But more recent scholarship asserts that inheritance in England, though accustomed to local-regional diversity, was pretty much via primogeniture “by the 10th century” except in Jutish Kent, “where sons shared the land equally”; and the Norman Conquest²¹¹⁹ didn’t seem to change practices much (Mate, 1999, 19-20).

See also “Common law” (which generally tends to be conservative).

2b) By the 11th & 12th, primogeniture on freehold lands, and [also] on many customary lands, often drove younger sons from home to seek their fortunes.”- *Oxford Encyclopedia of Economic History* (2003, p.202). In contrast, by the 13th century, *partible* inheritance was becoming more of the norm on much of the continent.

3) Deborah Anthony, more than a century after Cecil, claims however, that primogeniture developed later in England: sometime “[b]etween the 12th and the mid-14th centuries” (Anthony, 2016).

4) was always a primary strategy for providing political stability (and hence state development, [mostly]) in the pre-state age. Having a “crown prince constitutes a natural focal point for the ruling elite, which makes it easier for them to avoid costly power [secession] struggles”; primogeniture monarchs in the 2nd millennium in Europe “were less than half as likely to be deposed as were monarchs who ruled states with succession orders based on other...[means] such as agnate seniority, election and appointment. The importance of this finding for understanding the history of Europe should not be underestimated”, for Crowns [1st Estate] achieving some degree of stability over “the domestic elite” [2nd Estate], made it possible for ‘the people’/commoners [3rd Estate] to emerge as “a new force” in societies’ governance (Kokkenen & Sundell, 2012, 1; 26). See also “Appendix C: ‘1-2-3’”.

5) Primogeniture may be the oldest factor in England’s traditional precocity in the development of state and monetary institutions (*vis-à-vis* France and the rest of the continent [except the (partible inheritance) Netherlands]). According to Cecil, Napoleon was trying to institute in France²¹²⁰ what might be called *baronial* primogeniture nearly 1000 years after it had been established in 10thc century Anglo-Saxon England (1895,) Everard, 2000, 188).

6) In addition to England (parts of northern France and possibly Morocco), the only regions that have, historically, made a big deal out of primogeniture have been (first and foremost) Scandinavia, Norman-influenced Sicily & Campania, and a little more recently in [always looking for a way to be different from China] Japan (gradually, from the Muromachi period).

6b) “Although occasionally practiced by primitive societies”, primogeniture was “unknown to [what we know about] antiquity; neither the Romans nor the German barbarians knew of It, and It also remained uncommon among Islamic peoples.... The popularity of primogeniture dates back to the grants of benefices made by Charlemagne. With the spread of *feudalism* and conditional land tenure, it gained wide acceptance in [most of] Europe. Primogeniture survived feudalism in Western Europe... [in those areas distinguished by] the growth of *capitalism*, which enabled the younger sons to earn a living... [P]rimogeniture, however, never struck root in Russia, because...all the necessary conditions for It were missing” (Pipes, 1995, 41-42).

7) With England at least, the heritage of primogeniture (that bridge to ‘capital’ & the Early Modern) has been associated with [some irony] a particular *aversion to* Separation of Powers (that bridge to the Modern), at least with proper/public codification and clarity. As Cecil explains, “” (Cecil, 200?)...

about a century). Carroll Quigley also emphasized the (equal opportunity→) thrift culture and private savings that eventually spindled into “individual capital accumulation that [then] became the basis for the industrial expansion of the West” (Quigley, 1966, 1186). See also “Capitalisms”, “Industrial Revolution, 1st” [spinning wool], “Patroons”, “Industrial Revolution, 2nd” [Spindletop, Tx. (i.e. Hello, 20th century: <https://www.youtube.com/watch?v=AxEZIDws7Y> [‘Will Be’, mn.5])].

²¹¹⁹ The Normans were probably surprised, however, by the Brehon Code of Ireland, which not only divided inheritances equally among all children, but also accepted the claims of illegitimate children (Jeffers, 2017), and sometimes even concubines, as long as claimants were not ‘disloyal’.

²¹²⁰ The (Viking and Norman influenced) Bretton region is, as often, an exception to French generalizations. “In fact, any baronial family one chooses to examine will demonstrate succession by primogeniture from its earliest appearance in the 11th century” (Everard, 2000, 188).

7b) Carroll Quigley also tried his hand at explaining England's particular duality, noting that "the younger sons of the landed oligarchy studied law in the Inns of Court and obtained a feeling for tradition and the sanctity of due process...while still remaining...[primarily loyal to] the landed class. In fact...[they] *became* the landed class in England just **because** they obtained control of the bar and the [king's] bench and were, thus, in a position to judge all disputes about real property in their own favor. Control of the courts and of the Parliament made it possible for this ruling group in England to override the rights of the peasants in land, to eject them from the land, to enclose the open fields of the [old] medieval system, to deprive the cultivators of their [traditional] manorial right, and thus to reduce them to... landless rural laborers. This... [process is sometimes a.k.a.] the *enclosure movement*" (Quigley, 1966, 127). See also "Capitalisms" [*enclosure*], "East India Co."

8) Of course it wasn't all bad. "Since all the sons of the upper classes [a.k.a. aristocracy] received the same training, while only the oldest, by virtue of primogeniture, was entitled to take over the income-yielding property of the family, all the younger sons had to go out into the world to seek their fortunes, and, as likely as not, would do their seeking overseas" (Quigley, 128). See also "British Empire".

9) Other English peculiarities that have been traced back to the institution include...

what might be called the 'Jane Austen effect'²¹²¹ (Jeffers, 2017), in addition to the (still extant) House of Lords-- the "rotten boroughs" of Parliament "which were in a sense the creation of primogeniture" (Cecil, 199), and also in turn "the lives of [such English-British stalwarts as] Hobbes, Locke, Addison, and to some extent Steele and Swift... [all of whom] owed at least some of their early advancement and success to the patronage of the favorites of primogeniture" (Cecil, 1895, 199). See also "Royal Institute of International Affairs (RIIA)".

10) ...and maybe even the deeper sense of English national identity? The (somewhat entrepreneurial development of the) **low-bow [longbow?]**, and its democratizing effects in particular, were "absolutely vital for both the construction and the achievement of English late-medieval nationalism, whipped up particularly by the exertions of the Hundred Years War [1337-1453]" (Hastings, 1997, 48). Were late medieval Englishmen (of broader primogeniture practices) "more loyal" (Kokkenen & Sundell, 2012) to their nascent state than were (more partible inheritance [=millions of pretentious 'nobles']) French and other continentals?²¹²² If so, then the reasoning is simple. At the turn of the first millennium, Englishmen were not necessarily more "bright eyed and bushy tailed" than their neighbors (and sometimes rivals). But they could put together such a team, simply noticing "that the incentive to honourable ambition is exhausted in a family with the founder who has [already, automatically] acquired the family honours" (Cecil, 1895, 199), and thus no partible inheritance descendant is expected to do much of anything (new, creative, or risky) anymore, apart from defending the inheritance (even if it is only a 'honorary' title with little meaning other than [a] symbolic right [to laziness]). See also "Protestantism".

[add Amst. & Venice qte. on the plethorization of lazy nobles-FN; a.k.a. 'enjoying life' in the Medit. fashion]

²¹²¹ I.e. a culture where young ladies being "interested in new strategies of marriage" (Morris, 1991, 37) was not discouraged, as "the common law practice of primogeniture...[often] left women with little choice but to secure their social status and economic welfare through marriage" (Jeffers, 2017). Late 19th-early 20th century novels famously contrasted vivacious Americans with repressed British girls.

²¹²² It was, ironically, just a couple decades before the outbreak of the paradigm-shattering Dutch Revolt that Baldassare Castiglione's enormously popular and influential novel, *The Courtyer*, was first published (1528). One "of the defining works of Western literature...[*The Courtyer*] undermined the [new] values of accounting [that were then taking firm root in the Netherlands] by describing the ideal noble as...[a man] who did not dabble in the intricacies of finance.... Like the [fictitious] legendary knight Amadis de Gaul... [a]bove all, he would have to be prudent-- the ancient ethic of Aristotle, Seneca, Tacitus, Plato, and Cicero... hide his emotions and motives, weigh his options, and navigate a world of courtly servility and power. Even more, Castiglione's book preached the idea of *spressatura*... the aristocratic illusion of effortless achievement... in stark contrast with the [oncoming] ethic of of meticulous bookkeeping... and auditing.... He never mentions finances, let alone accounting... It was *The Courtyer*-- a book without numbers that shunned merchant culture" (Soll, 2014, 56). See also "Aristocracy (& nobility)".

Mañana (Is Soon Enough for Me) Lyrics
 (I)... The future she is slipping and she knows she's falling
 My present needs some money, so I can't let her leave
 My financial isn't working and my state doesn't care
 She say she needs a million, so I can't go anywhere
 Because, in case, reserve is soon enough for me!
 (I)... My teacher's always working, she's working every fu

(Givens, 2016)

[Top event of 1836: “Remember the [slight]!”... 'today, not *mañana*!'; top-selling record of 1948]

[classic]

“Primordial debt” - “the ultimate nationalist myth. Once we owed our lives to the gods that created us... Now we owe it to the nation” (Graeber, 71). See also “National debt economy”, “Bernays, Edward”.

“Printing money”- See “[Deceptive Banking Terms \(d.b.t.’s\)](#)”.

“Princes of the Yen”- the best feature film/documentary on how the debt-saturation *pilot* case nation of Japan was transformed by increasing central bank domination over most of the 20th century. See also “Japan model (asphyxiation), the”.

Priorities (‘national’)- (‘what your inner child asks for...’)

1) Sino-French- (the respective 1st child, so to speak); **food**. See also “Physiocrats” [China], “Land”.

2) Anglo-American- (proverbial 2nd child, so to speak); **free thought**. See also “Smith, Adam”, “Neoclassical Revolution,” “Reserve currency”, “Pilgrim Society”, “Food”.

3) Does this matter? See also “Macroeconomics”, “Music”.

See also “Civilization”, App.C: “1-2-3” (for proverbial ‘method in the madness’).

Prison-Industrial Complex- “private prison operators in bed with municipalities, guaranteeing [that the desired prison] occupancy rates are going around locking up people up for minor infractions, or for *no* infractions, just as a way to keep...[the] paycheck coming along”- Max Keiser (Denninger, 2017, mn.20). See also “Feudalism, neo”, “Debt money”.

Private Debt- see “Debt, private”.

Privatization- (not necessarily a ‘privilege’, if there’s competent anti-trust)

1) “Since 1945, even if privatisation had never happened, socialism would have struggled with the move from a world of unsatisfied *needs* to a more complex world of unsatisfied *wants*” (Meek, 2014). See also “Industrial Revolution, 3rd”, “Globalization”, “Power”, “Quigley, Carroll”.

2) However, “[p]rivatization is not privatization, if it’s being conducted by Washington; [then] it’s *piratization*...when the contract is at above-market, as they were in Iraq. And [an undeniable sign of

widespread] piratazation is when you have \$21 trillion of [publicly] undocumentable adjustments” (Fitts, 2019o, mn.5-6). See also “Black Budget (US)”, “White-collar crime”, “Lobbyists”.

3) Such privatization has been an integral part of the rise of millennial-era fascism. When “you look [specifically] at where the [US federal budget] money is going...’government’ operations increasingly are *not* [sic] run by government employees. They’re run by private corporations. So we’re basically forced by law to pay an enormous amount of taxes into this system. And our pension funds and retirement funds are buying an enormous amount of these securities. The money is going into the system...[and] into the hand of private corporations. The assets increasingly are going into the hands of private corporations. And there’s no [adequate financial] reporting back. It’s a secret. It’s [now become] a black box” (Fitts, 2019u, mn.8). See also “Federal Accounting Standards Advisory Board (FASAB)”, “Fascism”.

4) “Governance” is of course not only from “government”. The “commercialization... process means that certain subversive influences²¹²³ were being accelerated. One is: [the] *externalization*²¹²⁴ of rewards and controls. The disruption of communities, the destruction of religion, the frustration of emotions, all of these were greatly intensified by the Industrial Revolution... [a] continued acceleration of the main focus of the activities of the society downward [i.e. top-down or hierarchical].... If you can be controlled by being bought, like a higher salary... and give up all your friends and associations, now that’s an external control” (Quigley, 1976c-pt.3, mn.321-23). See also “Adolescence of Mankind”, “Money”, ‘Homo Economicus’

4b) More obvious, even from the “19th century...[was] increasing [the] role of propaganda to change people’s ways of looking at things.... [mostly] increasing [the] emphasis upon material desire” (Quigley, 1976c-pt.3, 323-25). See also “Propaganda”, “Power”.

5) “One of the most important things that happened was when George H.W. Bush took over the enforcement and intelligence line, as Vice President under Reagan. And an Executive Order was promulgated that would allow private corporations and...banks to assume very classified and sort of deep ‘national security’ functions... [This effectively] created a secret mechanism that would allow the government to borrow an infinite amount of money... and pay private corporations large amounts of money to do secret things behind a secret wall. And FASAB-56 has only made it even more secret.... When you turned it over to the private corporations, what you’re saying to every politician is: ‘*If you slap out more money to this corporation [and its industry lobbyists], and its stock goes up, then it can afford to give you political contributions*’. This is...the spiral downward that we’re watching in Washington and Wall Street: government does something that makes the profits go up for a private corporation, its stock goes up, its investors get capital gains, and the investors turn around and kickback a certain portion... to Congress. And around and around we go” (Fitts, 2019u, mn.17-18). See also “Intelligence Community (IC)” [& for the privatization of the I.I.C. (ShadowGate,2020)], “Greece”.

See also “Thatcher, Margaret”, “Public-Private Partnership (PPP)”, “Finance Capitalism”, “Productivity” [service sector].

Privilege- (Fr. ‘private law’)

1) What’s the difference between gangs and banks? Gangs are typically criminals, are (at least seeking) special privileges, are [hence, literally] private law, which is [in fact now]²¹²⁵ the primary basis for the monetary motor (driver) of ‘Western civ.’ See also “Civilization, Western” [Quigley], “Mafia”.

2) Private “law is border-less in the sense that private parties can carry it with them and seek to convince agents of other countries, such as courts, to recognize and enforce rules that are foreign to them. This has made private power, and indeed capital, more akin to ‘roving’ than to ‘stationary’ bandits” (Pistor, 2020b). See also “Corporations (and corporate ‘personhood’), “Big...”

²¹²³ “The fundamental cause of world instability today, and it’s all-pervasive, is the destruction of communities by [the] commercialization of *all* [sic] human relationships with resulting neuroses and psychoses”, period (Quigley, 1976c-pt.1, mn.). See also “Economics”.

²¹²⁴ “The difference between a stable society and an unstable one is [primarily that] the restraints are *external* in an unstable one. In a stable society we don’t even need a government...[because] the restraints on your actions are internal” (Quigley, 1976c-pt.3, mn.326-27). See also “Big Government (growth of)”, “Georgism (& Land Value Tax)”.

²¹²⁵ See Pistor, 2019; “Capitalisms”.

2b) “For every enclosure movement, of land, knowhow and most recently of data, we find the same pattern: First movers with the goal of monetizing assets secure *de facto* control rights, and then the power of *legal* ordering for themselves, and in so doing they curtail the possibility of a different order for one simple reason. Any alternative would have to wrestle control rights away from them before starting from scratch. Once private legal rights are recognized, this restricts the scope of private law to [merely] modifying and restricting, but leaves little room for re-ordering” (Pistor, 2020b). See also “Dynastic cycle”, “Debt cycles”, “Debt money”.

[From one ‘iron cage’ to another”? See also “Macroeconomics” (.enclosure), “Land”, “National Identity Cycle”.]

3) The “private attorneys who fashion different assets as [what is to be ‘monetized’ as] capital mostly in private law also tend to have privileged access to regulators and tax authorities, and often vet their coding strategies with them before applying them” (Pistor, 2020b). See also “Corporations (and corporate ‘personhood’), “Regulation”.

See also “Intelligence Community (IC)”, App.C: “1-2-3”.

Production, 3-4 factors of- 1) The ‘classic’ political economists (Smith, Ricardo, Mill, George) had it right, listing the “3 factors of production” as: a) ‘Land/Earth (the primary sector), b) ‘Labor’ (stored up labor, in primary, 2ndary, or tertiary sectors), and c) ‘Capital’ (stored up money)

2) Then the Wharton School, in the 1880’s, added a 4th: *public infrastructure*; vs. the ‘Neoclassicists’ c.1920’s addition of ‘*entrepreneurship*’, to the “Factors”.

See also “Infrastructure” [.Patten].

Productivity (US)- (the ratio of outputs to inputs in production)

“- John Titus (2022b, mn.)

1) “Today, for the first time in modern history, you have rising productivity with lower wages...that is a [direct] result of financial management. What they’ve done is shrink the labor force... [while keeping] output steady, by forcing the remaining workers to pick up the jobs... So you’re working labor more intensively.... [that] you don’t have to pay overtime for, and telling them: ‘Work overtime or be fired’. And as [Fed Chairman] Greenspan pointed out, if you’re fired your credit card rate goes up, and you default on your mortgage, and you lose your home... the rise in labor [productivity] is simply working labor more intensively, and essentially burning them out.... The Burnout theory of Labor is the antithesis of the economy of high wages, and America today is in the burnout theory...” (Hudson, 2010b). See also “Robotization”, “Industrial Revolution, 3rd”, “COVID”.

[sustainable?]

2) What have we done the past 4-5 decades? “We have improved the [de jure & short-term] productivity rate of the Military-Industrial-Complex, by destroying the [de facto & long-term] productivity rate of... the general civic life of the country, and now the [latter’s] productivity²¹²⁶...is really slowing down... The perfect metaphor for this was when the head of recruiting for the Marines got up [to Congress] in testimony several months ago and said... [that] only 30% of the kids are eligible to be recruited by the Marines. 70% are not eligible for emotional, mental, or physical reasons.... The cost of secrecy has become so great that...it is basically destroying our civilization” (Fitts, 2018i, mn.10-11). See also “[Military-Executive-Corpocracy \(MEC\)](#)”, “Federal Accounting Standards Advisory Board (FASAB)”.

The Goose with the Golden Eggs

Once upon a time, a man and his wife had the good fortune to have a goose which laid a golden egg every day. Lucky though they were, they soon began to think they were not getting rich fast enough.

[not just for Sun Tzu/warring states]

2b) latest productivity figures “We can’t...” (Fitts, 2022e?, 3rdq). See also “Macroeconomics”.

3) What’s the problem? “You can get [technological improvement](#) and productivity gains out of manufacturing. It’s almost ridiculous [however] to say you can get the same out of [service](#) sectors, and what have been called ‘productivity’ rises in education often [just] means shoving more students into fewer classes...” (Keen, 2016r, mn.28). See also “Service sector”, “German (industrial) banking”; Gaede, 2008.

3b) ...and other administrative matrices of unproven validity: “While digital technologies have the effect of rapidly increasing productivity in the *manufacturing* sector,²¹²⁷ applied to *caring* labor they tend to [in fact] have the [opposite](#) effect: They reduce productivity, as nurses and teachers are obliged to spend increasing proportions of their time *pretending to quantify the unquantifiable*. The result is profoundly inflationary. In the United States, the cost of health care and university education skyrocketed during precisely the time that those sectors became increasingly digitized” (Graeber, 2018b).

3c) Controversy over productivity measurement (as with [see also] “Accounting” and “Statistics”) is nothing new. The “theoretical system of the [P]hysiocrats used the word ‘productive’ only in the context of ‘productive of a net [agricultural or primary sector] product’. By contrast, manufacturing and trade were called nonproductive or sterile, because they created no new net product, but [instead] simply transformed it” into something else (de Yong, 1994, 6). See also “Sterile”.

4) “The [political culture of] Centralization continues to depend on lower and lower productivity... more & more money that is less & less productive.... It’s extraordinary” (Fitts, 2022n, mn.39). See also “Management vs. Leadership”, “Race-to-the-bottom (of the barrel)”.

5) The “federal credit mechanism...[has also] encouraged massive [decreases in \[service sector\] productivity](#). Everybody climbs up the ladder depending on how political and [how] good they are at encouraging centralization, as opposed to merit. So we’re [already] taking a political system as far as it can go” (Fitts, 2017b, mn.33). “Criminality is what’s destroying productivity in the overall economy” (Fitts, 2017r, mn.46). Basically, bankmoney [& BMR] systems are good at technology; bad at veracity. That’s about it (a one sentence version of [this book](#)). See also “Parties, political”, “Progress”, “Integrity”.

²¹²⁶ In reality, though apparently not yet in statistics, there is both short-term and long-term “productivity”. In other words, “productivity” as (officially) measured today is (the myopia of) “destroy[ing] labor, [in order] to maintain a return to capital and [further] centralized control” (Fitts, 2019s, mn.3); which is then, in turn, to be used mostly for (still more labor-reducing) investment in additional technologies.

²¹²⁷ For instance, during “the 1960’s and ‘70s, the output of manufactured goods...[more] than doubled...[while] the labor force in such industries...only increased from [approx.] 28 to 29 million. Much the same was true of transportation, utilities, and communications...[sectors] in which the labor force...increased by a scant few thousand. At the same time, employment in service industries increased by 70%” (Walters, 1971, 2003, 388). See also “Big government (growth of)”, “Service sector, the”.

[Is Rosie lying?] [This will not cover it.]

Progress- the law of progress:

1) “Thus association in equality is the law of progress. Association frees mental power for expenditure in improvement, and equality, or justice or freedom– for the terms here signify the same thing, the recognition of the moral law” (George, 1879, ‘508’).

And evil [as distinct from ignorance] is that which consciously acts to block such progress:

“...to trace the force which stops progress, would...go far to the solution of ...the problem of the genesis of evil” (George, ‘515’). See also “Evil”.

2) “While all other Sciences have advanced, that of Government is at a Stand; little better understood; little better practiced now than 3 or 4 thousand years ago. What is the Reason? I say Parties and Factions will not Suffer, or permit Improvements to be made.... If you ask my Opinion, who has committed all the havoc? I will answer you candidly; Ecclesiastical and Imperial Despotism has done it, to conceal their Frauds. Why are the Histories of all Nations, more ancient than the Christian Æra, lost? Who destroyed the Alexandrian Library? I believe that Christian Priests, Jewish Rabbis, Grecian Sages and Roman Emperors had as great a hand in it as [did] Turks and Mahomitans” (Adams, 1813c). See also “Parties, political”, “Secrecy, cult of”, App.C: “1-2-3”.

Projection (defense mechanism)- “It is amazing, but nevertheless quite in keeping with the age that is passing away, that until quite recently it was common to ascribe to ‘the moral mystery of credit’ and the peculiar virtues of the British banking system the expansion of wealth that was due to the growth of knowledge. Thus the orthodox fell into the very same error that they were and are so fond of ascribing to others-- especially monetary reformers-- namely the absurdity of thinking that all could get rich by means of the printing press and tinkering with the currency” (Soddy, 1934, 43). See also “Industrial Revolution, 2nd“Neoclassical revolution”, “Corrosion-Cancer-Debt”, “Monetization”, Monetary reform”.

Promissory Note- (synon. ‘note payable’)

1) In the US context, Federal Reserve promissory notes (issued from 1913-63) are promises to pay in Congress’s *coined money*, and are therefore ‘constitutional borrowing’, under Alexander Hamilton’s ‘borrowing clause’ (Art. 1, Sect. 8, Cl. 2), as ‘borrowing of coined money under the Borrowing Clause’, as ruled by Justice Gray in *Juilliard v. Greenman* (1884), which put to rest the issue of paper money in the US. Since redemption of bills in specie was finally ended by the *Coinage Act of 1965*, however, Washington²¹²⁸ has been declaring federal reserve notes to still be ‘legal tender’, simply because FRNs are still presumably ‘necessary and proper’ (Art. 1, Sect. 8, Cl. 18), even though Gray’s somewhat convoluted reasoning in *Greenman* no longer applies.

2) If the promissory note is unconditional and readily saleable, it may also be called a ‘*negotiable instrument*’. See also “Coined money”, “Note of indebtedness”.

Propaganda- (the negative word for [government, and/or thick, ham-fisted] ‘public relations’; nonetheless, it’s everywhere) See “Bernays, Edward (1891-1995)”.

²¹²⁸ This is not so in the UK, where the “Bank of England has so far continued to promise to the bearer of a note that it will redeem the note on demand in pound *sterling* [a.k.a. specie]. Some quipsters have now and again tested the [somewhat ambiguous] promise at the Bank’s gate, but [have always] returned empty-handed” (Huber, 2017 18). See also “Base money”, “‘Real’ money”.

1) "Propaganda works. [In the 20th century at least, it] worked in the USSR, in Nazi Germany, in imperial Japan, and in the capitalist US, each to instill in the general public an acceptance of its system as being the suitable one, if not the best, despite visible shortcomings" (Liu, 2005)...

1b) ...none greater than (the great 2nd Industrial Revolution) war machine propaganda. "Beyond any doubt, there were [in WW2 (& WWI)] crazed symmetries, because both sides believed that the answer to violence was more violence. Canting references to 'peace-loving' nations driven to take up arms by intolerable aggression were belied by the ~~bloodthirsty~~ [geo-political] reality. 'Peace offensive' is a term used with great pungency here; as is talk of the 'moral effect' on civilians of indiscriminate bombing. The one common enemy Churchill and Hitler had were people who didn't want to kill at all. Pacifists and humanitarians were regarded on both sides as a pernicious threat- to be suppressed in print and interned in person" (Leith, 2008). See also "Bernays, Edward" ['the father of' (20thc)], "Industrial Revolution, 2nd".

1c) Make no mistake, "the Allies took the lead on [both] bombardment and blockade...methods of war [squarely] aimed at civilians. Both caused incredible suffering...[and when both] did not work [in weakening resistance, the]...response in both cases was to step them up. As refugees and civilian populations in Belgium, Poland, Norway and Holland faced starvation, Churchill refused to let food relief through the blockade.²¹²⁹ He told Parliament that fats would be used by the enemy to make bombs, potatoes used to make fuel, and that- less plausibly-- 'the plastic materials now so largely used in the construction of aircraft are made of [pasteurized cow] milk'" {Leith, 2008). See also "Central Banking-Warfare model".

2) "Here in the United States, we are the most-propagandized people in history" (Stauber, 2002, mn.50). See also "History", "Mind control" (21stc[?]), "Conditioning", "Projection".

3) According to Carroll Quigley, the big ideas (that were pretty much constantly) propagated to Americans (during the century of the 2nd Industrial Revol.) were: future-focus, material desires, individualism, quantity(-over-quality), vicarious satisfactions, the replacement of intellect with ideologies, and "the myth...[that] the nation... can be both a state and a community" (Quigley, 1976c-pt.3, mn.324-31). See also "National Identity/Nationalism", "Bernays, Edward (1891-1995)".

Protestantism- ('take it easy with the priests²¹³⁰, we can read now'; a.k.a. the Protestant Reformation; i.e. when cult 'of *sun measurement*' met the cult 'of *reported speech*' [via the underlying revol. in 2x accounting])

[an adolescent-era game]

1) "The [P]ilgrims were human beings. Otherwise they would have acted differently. They had come a long and journey, and now when the journey was nearly finished, and they learned that the main thing they had come for had ceased to exist, they didn't do as horses or cats or angle-worms would probably have done-- turn back and get at something profitable-- no, anxious as they had before been to see the miraculous fountain, they were as much as forty times as anxious now 'o see the place where it had used to be. There is no accounting for human beings."- Mark Twain, *A Connecticut Yankee in King Arthur's Court* (1889). See also "Accounting" [.Soll], "Federal Accounting Standards" [.no accounting].

1b) "God wants to see you arrested for freedom. God wants to see you go through some fire, before God starts doing what we [sic] want. ... But God's not gonna deliver somebody that doesn't want to be delivered.... But if you're worried about [cowed by] what [other] people think... then they got you" (Jones, 2020, mn.66-67). See also "Dispensationalism" & "Zionsim".

²¹²⁹ In October 1941, the preceding PotUS, Republican Herbert Hoover (who was formerly in charge of US aid to Europe after WW1's civilian-killing blockade); "[publicly] asked: 'Is the Allied cause any further advanced today because of this starvation of children? Are Hitler's armies any less victorious than if those children had been saved? Are Britain's children better fed today because these millions of former allied children have been hungry or died? Can you point to one benefit that has been gained from this holocaust?'" (Leith, 2008). 35 years later, Republican VP nominee Bob Dole briefly tried to resurrect old charges, railing on live national television that "1.6 million Americans" had been killed or wounded in the 20th century "Democrat wars".

²¹³⁰ "[I]n all ages of the world priests have been enemies to liberty..."- David Hume (Bailyn, 1968, 97); with the exception of Thomas Aquinas and some others. See also "Estates, 3".

2) "...was largely a *financial* response against papal bankers, the Lombards, Florentines and their brethren described by Dante in his *Inferno*. To achieve financial independence, Northern Europe needed a new ideology capped by religious *independence*— and indeed, civil independence from religion. That came finally in the form of the Protestant Reformation. Henry VIII *nationalized* England's monasteries and church lands. Greece needs to do the political equivalent today— not via religion as such, but by promoting an ideological alternative to the almost theocratic neoliberal *pro-creditor* doctrine insisting that paying debts is part of 'free markets', and denying [as has Rome, et al for at least a century] that any income or wealth is unearned, or that there is any such thing as economic rent and *unearned income*" (Hudson, 2012g). See also "Market fundamentalism", "Debt cycles", "Usury", "Dispensationalism".

3) The "establishment of this religion...brought back every thing to the standard of the primitive times.... Before the reduction of the power of Spain [1588-1648], the Catholics were...stronger than the Protestants. The latter are gradually come to an equality with them. The Protestants [after naval victories] are grown richer and more powerful.... As to the Catholic countries,... [with] only...learning 5 or 6 words of a dead language... a man need not trouble himself about his fortune; he will find in a cloister a life of ease, which in the world would have cost him labour and pains... the dervishes have in their hands all the riches of state..." (Montesquieu, 1721, 247-248). See also "Primogeniture", "Capitalisms", "France".

3b) And— last but not least— it 'brought things back to the standard' of Roman times,²¹³¹ too. In the German "protestant" states, as in England, "the prince²¹³²...[or monarch] also became head of the Church. Well, that's the way it was in Roman law: the Roman Emperor was Supreme Pontiff, Pontifex Maximus, the head, chief of all the priests in the Roman system" (Quigley, 1976c-pt.2, mn.151). See also "Imperialism". See also "Usury", "United States, the", "Bankism", Ch.2, "Legalism", "Commons".

4) It wasn't, of course, just a German or Dutch reaction against papal-curia-bishopric corruption. In 1760 Connecticut, "Eliphalet Williams echoed the general sentiment, when he told the assembled Anglo-Americans in East Hartford that they should thank the Lord for helping Britons to drive the Catholic French out of Canada. The Lord "ad, he said, 'so far humbled the French and made his Protestant People, *especially* his English Israel, to triumph in his Goodness'" (Samuelson, 1996). See also "Zionism".

5) Not to be outdone, the Calvinist branch (per Switzerland and the Church of Scotland) tended to be even more determinist, literate— and acquisitive. In 18thc London it was said that the "Scot Presbyterians²¹³³ kept the Sabbath, and everything else they could lay their hands on" (Livingston, 2006, mn.5). See also "Eighteenth century", "Capitalisms", "Smith, Adam (1723-1790)".

6) Last but not least, of the Pennsylvania Quakers, Voltaire wrote that that they "had actually brought into existence 'that golden age of which men talk so much and which probably has never existed anywhere except in Pennsylvania'" (Bailyn, 1968, 84). See also "Civil National Identity", "Eighteenth century".

Protocols of the Learned Elders of Zion- 1) another mastermind [synon. 'conspiratorial'] product from the *Fin de Siecle* era (i.e. "Neoclassical Economics", "Duopoly", "**Corporate Media Cartel**"), the Protocols (- supposedly the minutes of a rather detailed world-control meeting during the 1890's that was uncovered by Russian Czarist secret police and subsequently leaked, a few years before their 1st publication in a Russian newspaper in 1903-)

...spin a comprehensive web of 'Jewish' "...control of world banking, world media, Communism, liberalism, and political parties of every type. The master plot includes plans to:

- a) Destroy the Catholic Church and all Christianity; [- - *mixed record*²¹³⁴]

²¹³¹ It's already conventional wisdom that 18th century British nationalism-imperialism was the "outgrowth of more than a century and a half of fighting Catholics both at home and abroad" (Samuelson, 1996). See also "Zionism".

²¹³² In Germany of course, "most of them were not kings... [because] you couldn't adopt the title of king in the Holy Roman Empire except with the permission of the Emperor, and the Emperor would not generally allow that, unless you paid him off, or were...[f]or instance, the Wittelsbach family [that] he could trust" (Quigley, mn.152).

²¹³³ ""- Sir Walter Scott

²¹³⁴ The RCC pilot fish was already gutted and/or captured several times prior to the larger turn-of-the-century ('Protocols') era, including the barbarity of 10th-11th century (pre-Gregorian) popes, Philip the Fair's physical capturing & relocation of the papacy from 1303-05, and the

- b) Promote Atheism; [✓- throughout (1890's-2016)]
- c) Wage class warfare / labor against management; [- - *mixed record*; vague]
- d) Overthrow Tsarist Russia; [✓- 1917]
- e) Corrupt the morals of the people; [✓- *mostly*; though also vague]
- f) Promote senseless “modern art” and dirty literature; [✓- throughout]
- g) Use anti-Semitism to keep “lesser Jews” cohesive; [✓- throughout, increasing]
- h) Manipulate women with ideas of “liberation”; [✓- *mostly*; though also vague]
- i) Create economic depressions and inflations; [✓- throughout, and *before*]
- j) Create “controlled opposition” to themselves; [✓- throughout]
- k) Use state debt as a weapon to enslave countries; [✓- throughout, increasing]
- l) Subvert and control all existing [national] gov'ts; [✓- 1945 (in terms of bankmoney & UN rules)²¹³⁵]
- m) Install tainted politicians that can be blackmailed; [✓- throughout, (arguably still) increasing]
- n) Manipulate college students with phony idealism; [✓- *mostly*; increasing, though also vague]
- o) Assassinate world leaders; [✓- and *before*]
- p) Spread deadly diseases; [?- too vague]
- q) Use balance of power politics to control nations; [✓- and *before*]
- r) Commit acts of terrorism; [✓- and *before* (though not as much)]
- s) Promote sports-games, to divert people from politics; [✓- throughout (arguably still) increasing]
- t) Start a World War which will include the USA; [✓- 1914...1917]
- u) Set up [de jure] world gov't after an economic crash [x- easier said than done] (King, 2015, 146-47).
- Results: only 2-4 objectives, out of these 21²¹³⁶ not achieved -

subsequent century of rivalrous multi-popes, ending in 1417. During what is sometimes referred to as “the disastrous 14th century” and the 15th century’s nepotist **Borgia-Medici rivalry, simony** and the selling of papal indulgences increased to the point of motivating widespread heresy (such as money lending, money-politics). In the early 16th century, it was a Medici pope, Leo X, who ended at least 12 centuries of *strict* anti-usury (and a half century of Dominican-conservative vs. Franciscan-liberal arguments over the subject) with the *Lateran V* Council’s official promulgation that “for the first time in the history of the Roman Catholic Church”, interest-bearing loans were now lawful “for charitable purposes... [even ordering] excommunication of all those who publicly expressed doubts concerning...[this] judgment” (Hoffman, 2013, 378-79). and also (Cashill, 2009). Lateran V concluded in March 1517, six months prior to Martin Luther posting his views against selling indulgences and other papal-curia corruptions on October 31st. Since then, there have been nearly 5 centuries of similar stepping stone proclamations, primarily: Benedict XIV’s *Vix Pervenit* (1745) “to include the lawfulness of interest on investment capital”; Pope Pius VIII curia’s administrative ruling (1830-- after the papacy had been kidnapped again by France, in 1798-99 and 1809-14) releasing “Catholic usurers from the obligation to confess taking revenue from interest” if it was [simply] at a rate “considered legal by the state”; and then Benedict XV’s 1917 *Code of Canon Law* promulgation, delivering the coffin nails, that ““it is not *per se* [sic] unlawful to contract for the legal rate of interest, unless that be clearly *exorbitant*’... [with] ‘exorbitant interest’...never defined...[I]n the very next sentence...it is [also] determined that Catholics who have ‘just and proportionate title’ can rightfully receive an interest rate *above the legal rate* [sic]...[o]nce again...[with] no definition of what constitutes this ‘title’...” (Hoffman, 380-83; 147). See also “Eighteenth century”. For plots concerning the “Protestantism” world, please see “Scofield Bible” and “**Cultural Calendar**” (and also the ‘Ecumenical Movement’); and for plots against ‘Orthodoxy’, there was of course the Communist Revolution itself. See also “Sutton, Anthony (1925-2002)”, “Russiagate”.

²¹³⁵ With the possible exception of North Korea and a few others too small/poor to be of concern. Reversions from the bankmoney or UN protocols/stipulations are not included here. The USSR, by the way, **always had** “fractional reserve” money (Garvy, 1966), and was an integral part of the United Nations, as Russia is today.

²¹³⁶ There are different versions of the ‘Protocols’, and King’s (21-point) summary leaves out some of the more famous 24-point ‘Protocols’ points, including: 1) the global enshrinement of “*the power of gold*” [✓- which arguably was already in place, but then lost in the 1930’s]; 2) something about a ‘*Jewish king*’ to rule over the gold-money world [x- which has obviously not developed, apart from (see also) “Dispensationalism”], and 3) something about encouraging the primacy of “*speculative*” capitalism over industrial capitalism, to make (private) debt slaves out of “the gentiles” everywhere [✓- which would seem to have been achieved for the most part]. With these 3 (hitherto absent) ‘protocols’, the summary total now stands (corrected) at: 4 or 6 objectives (out of 24) not achieved, for an approx. attainment/prescience rate of 79% of “the protocols” (Deng Xiaoping used to say in the early 1980’s that his predecessor, Chairman Mao (r.1949-76), was approx. “70%” correct.) See also “Jacob’s Ladder”, “Dispensationalism” & “Zionism”.

2) The Protocols are widely believed to have been forged by Russian security agents, perhaps plagiarizing from earlier works in France. Nonetheless world events-- particularly over the first half of the 20th century-- matched the Protocols “so closely that the document [became] a worldwide sensation during the 1920’s and ‘30’s... whoever wrote it had an unusual knowledge and spooky prescience” (King, 2015, 146-47). Henry Ford is often said to have printed half a million copies of ‘Protocols’ in the 1920’s, they were best-sellers in Germany in the 1920’s-30’s, and are still popular in some places (primarily the Middle East) today. See also “[International Intelligence Community \(I.I.C.\)](#)”.

3) Real-- as opposed to attitude inoculation-- conspiracy theorist Anthony Sutton noted, a half-century ago (now), that “” (Sutton, 1974, 189). See also “Sutton, Anthony (1925-2002)”, “Attitude Inoculation”. See also “Fin de Siecle”, “Finance Capitalism”, “Zionism”, “New World Order”.

Provocation operation (Po)-

“[T]he weakest of all weak things is a virtue which has not been tested in the fire.”

- Mark Twain, "The Man That Corrupted Hadleyburg" (1900)

“Soon we should see a frightful calm, during which everyone would unite against that power which had viol^{ated} the laws.”- Montesquieu’s *The Spirit of Laws* (1748, 309).

1) a term coined by renown futurologist Edward de Bono in the late 20th century. “Language describes the world the ‘way it is’. A provocation is a statement that is outside or contrary to our experience.... In any self-organizing information system we know that there is a mathematical necessity for provocation. Otherwise matters settle down in a ‘local’ equilibrium” (de Bono, 1999, 146). See also “Humor”.

2) The “formal use of provocations is part of [de Bono’s larger concept of] *lateral thinking*. We do not judge a provocation, because that would be nonsense. Instead we use a different mental operation... [that] of ‘movement. *Judgement* is based on ‘is’ or ‘is not’-- depending on whether something matches our experience²¹³⁷ or does not... *Movement* is based on ‘to’: where does this take us to in the lateral/strategic sense (de Bono, 147)? Obviously this is antithetical in nature to the latter 20th century’s “*politically correct*”²¹³⁸ totalitarianism (neurolinguistic programming) of an Orwell, Mao, or Huxley. “The way we are looking at something [often] determines all subsequent thinking. That is why most of the errors of thinking are errors of perception” (de Bono, 147). See also “Design”, “Jacob’s Ladder”.

3) Any Totalitarian structure “has to” achieve a “situation of *monopoly* on information... [because] perceptions come from information received. So if you want to manipulate perception, which you have to do [in order] to control the population [especially better than they do so in the neighboring state or language group], then you manipulate the information [your] people receive, and [historically, for the past 2 or 3 centuries, anyway, the] People [will] make their perceptions from [that]...” (Icke, 2019, mn.12). See also “Academia”, “National Identity/Nationalism”, “Google”, “Devil”.

²¹³⁷ One of “the dangers of judgement is “comparing things only in one aspect.... Judgement is not much good with non-linear systems... [nor] much good in feedback situations” (de Bono, 156). “We see what we are prepared to see... what we are used to seeing.... Outside [of] science and objective measurement, judgement is always subjective.... The frame of ‘judgement’ [typically] sets the outcome of the judgement. That is why criticism is so easy and so cheap as an intellectual exercise.... Nothing can possibly satisfy all frames” (1999, 158).

²¹³⁸ In “the 1960s, concealed by the Vietnam War, the city was undergoing a transformation *into a cartoon of itself*. That’s when the synthetic notion of ‘being a New Yorker’-- based on nothing-- started to take hold. There were many reasons. Mind numbing leveling television. The raising of children to be targets of advertising and fetish objects in a consumer society. The new New Yorkers were taught that liberal politics were a necessary adjunct of their status [and that]. Liberal equaled big government.... Going to doctors and acquiring diagnoses of physical and mental conditions was starting to take off as a social trend. It was part of ‘good behavior’ and ‘being good’. The medicines and the vaccines were, of course, toxic.... Even skyscraper architecture was moving away from unique structures like the Chrysler and the Empire State, into functional steel and glass boxes.... With people dumbed down enough, they would fall for any con. Any piece of shiny gloss. And it was provided: New York media... covered the rise of New Money as if it were a perfumed cultural signal of a dawning epoch... [and] The content of these celebs’ output was entirely irrelevant.... In a silly song he recorded long after its internal demise, Frank Sinatra said New York was the city that never sleeps. Now that’s all it does.... The job of the super-State. Reworking independence into *devotion* to a *synthetic* pose of altruism... it’s good to be BAD” (Rappoport, 2020i). See also “Transhumanism”, “Slavery”, “Internet of Things (IoT)”, “Geoengineering”.

monetary, relating to **money**. (L.) L. *monetarius*, lit. belonging to a mint. = L. *moneta*, (1) a mint, (2) **money**.
money. (F. = L.) M. E. *monceit*. = O. F. *monceit* (F. *monnaie*). = L. *moneta*, (1) mint, (2) **money**; see mint (above).
monster, a prodigy. (F. = L.) F. *monstrz*. = L. *monstrum*, a divine omen, portent, warning. (Put for *mon-es-trum* *). = L. *mon-ere*, to warn.
monument, a memorial. (F. = L.) F. *monument*. = L. *monumentum*, a memorial. = L. *monu*, for *moni*-, seen in *moni-t-us*, pp. of *monere*, to advise, remind; with suffix *-men-tum*.
monarchy; see *Aroh-*, prefix.
monastery. (L. = Gk.) L. *monasterium*. = Gk. *μοναστήριον*, a minster. = Gk. *μοναστήρ*, dwelling alone, a monk. = Gk. *μόνηται*, to be alone. = Gk. *μόνος*, alone. Der. *monast-ic*, from Gk. *μοναστικός*, living in solitude.
monk (L. = Gk.) M. E. *monk*. A. S. *munec*. = L. *monachus*. = Gk. *μοναχός*, adj., solitary; sb. a monk. = Gk. *μόν-ος*, alone.
monochord; see *chord*. So also *monocotyledon*, *mon-ocular*, &c.; see *ocular*, *ode*, *logio*, *syllable*, *tone*.
monopoly, exclusive sale. (L. = Gk.) L. *monopolium*. = Gk. *μονοπώλιον*, right of

[m-words (Skeat). See also "Power".]

4) For example, through 4 decades of financialization, so much money has changed hands that the banks have "been able to buy Parliament and [now] say: 'Shift the tax onto labour. We need a Value Added Tax. We need to tax consumers. We need to roll-back the pensions...so that we can un-tax real estate, un-tax finance, and polarize the economy more quickly.... It'll be a utopia!'" (Hudson, 2017I, mn.12). See also "Baby-boom demographics", "Equilibrium".

5) In the larger sense, each of the first 3 decades of the 21st century, thus far at least, have been about the social learning of, basically, not bowing down before crap (a.k.a. lies/disinfo).

[“by Love-of-Honor” vs. “by-Virtue” is nothing new; see also “Montesquieu”, “Civilization, Western”]

5b) With big Statism, there also arises “an astounding level of ignorance.... people [who] have a very low ceiling of understanding. They’ve never explored what freedom of speech is all about. They’re citizens in name only.... The only workable remedy is raising people’s ability to consider all sorts of judgments, opinions, and conclusions, without being irrationally swayed to one side or another” (Rappoport, 2021d). See also “Fascism” [burst], “Civil National Identity”.

See also “Democracy”, “Debt cycles”, “Russiagate”, “COVID” (Operation shutdown).

[Po example? The UK, c.2010's, was the only country in the developed/industrialized world where workers are getting poorer, though the country is getting richer.]

Pseudo-legal- (a.k.a. unconstitutional) in contrast to, or in conflict with, the basic law.

See also “Common law”, Titus 2016, Titus 2017, “COVID-19”.

Pseudo-liability- See “Liability, pseudo”, “Accounting for public/‘sovereign’ money”.

Psychology- (the giant of today’s social sciences & even macro-ecoics) See “Learned ignorance” [‘social sciences’], “Methodological Individualism” [‘me-me’]; “Design, human” [Jung].

1) [Jungian- (at least) recognizes both individual and collective /‘archetypal’ soul programming. See also “Design”.]

[How much of this is ‘individual’/family (vis-a-vis social-group) identity?
See also “Freedom continuum (maturation)”.]

Fathers of Psychology

2) (chronology)

[Wundt’s neuropsychology, James’ functionalism, Freud’s devilry, Jung’s soul work, Skinner’s Operant Systems pigeons]

a) Wilhelm Wundt (1832-1920)- pioneered the world’s first laboratory for psychological experiments, at the Univ. of Leipzig in 1879, effectively peeling off ‘ps vs.ychology’ from the broader field of Philosophy. “All subsequent psychological laboratories were closely modeled in their early years on the Wundt model. Wundt’s background was in physiology...[and] the Institute was [primarily] concerned...[with] the study of reaction times...sensory processes, and attention.... in much the same way as a chemist analyses chemical compounds, in order to get at the underlying [physical] structure.... Wundt[‘s]... 186 graduate students... helped disseminate his work”²¹³⁹ (McLeod, 2008). See also “Physics, New”, “”.

b) William James (1842-1910)- pretty much an opportunistic popularizer. “Pragmatism blended easily with Darwinism: To understand an idea, ask ‘what is it good for?’ i.e. what is its function in the organism, what is its purpose in an ecosystem... [Also s]ome aspects of Functionalism were clearly just ‘anti-structuralism’”.- <https://webpace.ship.edu/cgboer/wundtjames.html>

c) Sigmund Freud (1856-1939)- pretty much an opportunistic de-popularizer; misconstrued dream analysis, during the half-time decades of the 3rd Currency War. d) Carl Jung (1875-1961)- “learned from Freud about the unconscious...but was more fascinated with the human mind through [individuated] dreams, [as well as prevalent] myth, art, and philosophy”. Jung “developed the concepts of extraversion & introversion; archetypes, and the collective unconscious... considered *individuation* [sometimes a.k.a. soul] to be the central process of human development”²¹⁴⁰.... The Myers-Briggs Type [reactions] Indicator...[was] developed from Jung’s theory of personality typology.”- https://www.geneticmatrix.com/jung-carl_gustav-human-design-chart.html

²¹³⁹ Wundt, it should be noted, “believed that...[his] experimental approach was limited in scope, and that other [more qualitative] methods would [also] be necessary if all aspects of human psychology were to be investigated.... [B.F. Skinner later found that] the results of introspection are subjective and cannot be verified, because only observable behavior can be objectively measured “ (McLeod, 2008). See also “Culture” [Hofstede].

²¹⁴⁰ “The shoe that fits one person pinches another; there is no universal recipe for living. Each of us carries his own life force within him...” - Jung’s (1931) “The Aims of Psychotherapy”, in *The Practice of Psychotherapy* (1966). See also “Design”.

e] **B.F. Skinner** (1904-1990)- “believed that given the right structure of rewards and punishments, human behavior could be totally modified in an almost mechanical sense”. See also “Conditioning”, “Mind control”, “Technocracy”, “Capitalisms” [surveillance], “Tickbox”.

3) Are the founders still very relevant in the 21st century? See also “Totalitarianism”, “Design”. See also “Learned ignorance” [‘social sciences’], “National Identity & Nationalism”, “NInnies”.

Public Banking (idea)- 1) “We want to... create a new foundation for lending” (of TAB/bank credits as what society uses for money)- Walt McRee (Brown, 2018-pt.2, mn.24-25).

2) “[P]romoting industry... is what Saint-Simon in France wrote about 200 years ago, in the 1810’s-1820’s. That was the basis of Saint-Simonian socialist reform... Marx accepted this later²¹⁴¹... [And then] you had German banks in the late 19th century following this new public banking model, with a unity [there] between government, banks, and industry. And everybody expected that this would become the basis for worker-owned... socialist industrialization. World War One changed all that” (Hudson, 2017i, mn.57-58), except in Germany (which had to wait until the EU and Merkel attempted to change all that).

3) “China is the example I think you’re looking for-- a mixed economy, where the Chinese central²¹⁴² bank will decide who to extend the [“bank”] credit to. And if it extends [this] credit to a company that suddenly finds itself in a depression, like happened in 1997 throughout Asia... [then unlike] the Korean companies that... [then]...had to sell out to foreign investors... China can-- because the debts are owed to the *Chinese government*...banks [easily] cancel debts that are owed to yourself.... So China... can continue to function [today], while Europe is in an austerity, debt-deflation, shrinking...[mode], and you can read about it in every story about Greece that you see” (Hudson, 2018d, mn.47-48). See also “Greece”.

4) On the other hand, who are you going to call if the public bank is corrupt?²¹⁴³ The National Bank of Ukraine “is a public bank, and it’s the most corrupt bank in the world, and George Soros and the neoliberals love it: ‘*We want a corrupt bank!*’” (Hudson, 2018d, mn.125). See also “Capitalisms”. See also “Public-Private Partnership (PPP)”, “German (industrial) banking”, “Mill, John Stuart”.

Germany’s Many Banks

■ Private banks ■ Public savings banks
■ Cooperative banking associations ■ Other banks

²¹⁴¹ “Capitalism, according to Marx [even though he never actually used the term], was supposed to fulfill its historic destiny of... [among other things] getting rid of the banks and making them public in character...” (Hudson, 2017i, mn.9). See also “Capitalisms”.

²¹⁴² There is **considerable ambiguity** concerning the extent to which Deng Xiaoping’s famous liberalization from of the 1980’s and 90’s was ‘centralized’ or ‘decentralized’ (and by whose standards). Richard Werner explains the phenomenon as DXP [r.1978-92] establishing “literally thousands of new banks” (Werner, 2021b, mn.24); even though bankmoney creation was not allowed until the mid-1980’s, and the first *private* (privately-owned) banks weren’t allowed until c.1990.

²¹⁴³ For example, in “Hollywood movies in the 1930’s, [in] the small town, there’d always be a crooked banker, working with the saloon owner, and the land speculator, always giving loans to get the politicians to build a road by their house, to make their property more expensive” (Hudson, 2018d, mn.125). Mexico also “nationalized” the banks, from circa 1982-90: “for a few years, we had a public banking system...[but] In 1990...[the] new [& fraudulently-elected] government[’s]...neoliberal policies” broke it up, and the new “system only needed 4 years to...” pretty much [re-]establish [per the ‘Porfiriato’ era] a foreign debt-based (Suaste, mn.19-20); and essentially “globalist” “**National Debt Economy**”. In the 21st century, Mexico now doesn’t “have any more national banks.... Our [‘national’] banks [in the 90’s] were absorbed [in contrast to the US-centric Porfiriato] mainly by Spanish banks. I think there’s only one main bank in Mexico...[Mexico’s 2nd-largest, the Citigroup subsidiary (since ’01)], Banamex,...[that] was...acquired” by a US-based bank (Suaste, 2020, mn.21). See also “‘New World’ Order”, “Latin America”.

[Germany has more banks per head than any other developed country.]

Public Banking Institute (PBI)- 1) founded by Ellen Brown in 2011. A year and a half earlier, Brown explained her reasoning, about reformers' strategic options, to American Free Press editor Mark Anderson: "The direct way would be to Nationalize the Federal Reserve and make it what people think it really is, which is a federal funding agency... and then it could issue dollars directly instead of the government issuing bonds... [Just] let the Federal Reserve issue the money as the government... But that might be difficult to get passed. It would be controversial. So.... this is where²¹⁴⁴ I think we should start, is with the State banks.... They put all their government assets in the Bank by law. Then they do what any bank does, which is [to] expand that into 10 times that sum in loans. So now they have plenty of credit... and can set the terms."- <https://www.youtube.com/watch?v=7GNUbXWHvHM> (July, 2009)

2) The Bank of North Dakota is the PBI's preferred model²¹⁴⁵ to draw upon. Unlike most publicly owned banks, by most accounts it has had a long and stable history. "It's really their business model. They don't pay bonuses, fees, or commissions. They don't have high paid CEOs. They don't have... private shareholders sucking their profits out. They don't advertise.... They're basically an accounting function...[where] you can just have a few people sitting in an office...do this. And in fact that's what we're trying to do in..." other states (Brown, 2018c, mn.45).

3) establishing more State Banks in the US, whereby all state revenues are held in the State Bank, "70%" of which may be loaned... Hence "a free money machine" for Main St. as opposed to Wall St (Brown, 2016). See: Germany, North Dakota, Puerto Rico, China, Cuba, Ecuador, etc. 'Publicly-owned' banks now comprise about a quarter of the world's banks, down from about 40%, c.1990 (ibid).

3) From 2010-2012, 18 US states "have introduced legislation of one sort or another for a state-owned bank" (Brown, 2012).

4) As of 2018, there are "over 50 different cities and counties and states that are working on creating [some version of] a new public bank" (McRee, 2018, mn.51), although usually of substantially lesser scope²¹⁴⁶ than the Bank of North Dakota.

Public finance- See "Finance, public", "Currency".

Public money- See "Sovereign money", "Debt-Free National Money (DFNM)".

Public-Private Partnership (PPP)- (UK-'public finance initiatives'; i.e. the root of most [institutional] corruption)

"[H]ow deeply rooted the Evil is."- John Adams, letter to Benjamin Rush (Adams, 1810). See also "Separation of Powers", "Civilization", "Monetary policy (public)".

²¹⁴⁴ "[W]e're going at the state level, the community level, because that's something we can influence" (Brown, 2018-pt.2, mn.24)."We've put our hopes in one president after another, and it never seems to work out. We The People need to do it ourselves.... It's better if it's leaderless" (Brown, 2018c, mn.126).

²¹⁴⁵ Basically public banks "have much lower costs. They don't have branches everywhere.... They pay only \$280,000 or so... [to] the president of the bank. They don't have private shareholders... They don't have to advertise. They're basically partner[ing] with the local banks, which [means that]... the local bank... [is] dealing with the customer and has all those costs. And the Bank of North Dakota.... In effect...[borrows] the... revenues of the government itself... to lend at a bit more" interest (Brown, 2018c, mn.114-115).

²¹⁴⁶ Speaking of 'scope', in 1949 the Communist Party of China (CCP) "carried out...a view toward nominating the...[People's Bank of China] as an all-powerful *monobank* within a few years. To that end, the PBC was allowed to go beyond traditional central-bank roles and provide credit [directly] to retail and corporate clients" (Horesh, 2014, 220). See also "Separation of Powers".

1) Banking has already been a public-private consortium for over 300 years; resulting in...(see Titus, 2019b). Federal-nonbank PPPs, however, became all the rage in the Reagan Admn. first term, and pretty much increased through the next 3 decades. See also “Neoconservatives”, “Neo”, “Reaganism”, “Military-Executive-Corpocracy”.

2) “The private tells the government what to do. All of the costs are borne by the government, [and] all of the risks & profits go to the private sector. It really means that we’re presenting an opportunity for banks to make a killing on making loans... that bond-holders are going to be paid very high rates of interest on. The government [however] could create all this money the same way that banks do. The government has computer keyboards, which is how a bank creates money.... [P]ublic partnerships are designed to quadruple or quintuple the actual costs of doing business, and pretend that this is in the public interest, instead of just in the interest of the banks and the corporate insiders that the banks are willing to lend money to.... Look at London’s railroads...[and] water... people now have to pay huge amounts.... We’re talking about a dominant-submissive...partnership” (Hudson, 2016r, mn.13-14). See also “BlackRock”.

3) In summary, “Public-private partnerships are a good deal for investors but a bad deal for the public” - Ellen Brown (Brown, 2017).

3b) This is because; the “private attorneys who fashion different assets as capital [are] mostly in private law [, and] also tend to have privileged access to [the] regulators and tax authorities and [very] often vet their coding strategies with them before applying them” (Pistor, 2020b). See also “Regulation”, “Privilege”. See also “Public Banking Institute (PBI)”, “Window Guidance”, “Owners, the”, “Debt securities” [debt (private) + security (public)], “Thatcher, Margaret”, “Market Bolshevism”, “China”, “Separation of Powers”.

Public Relations (P.R.)- (euph. for ‘propaganda’; i.e. ‘the Orwell sector’)

See “Bernays, Edward (1891-1995)”, “Economics”, “Reverse psychology”, “Parliament, UK”, “Corporations (and corporate ‘personhood’)”.

‘Public Service’- What’s that? See “History”.

‘Publicly traded’- See “Stock market...”, → “Financialization” [.Fitts], → “Stock buy-backs”...

Publishing- “<https://www.youtube.com/watch?v=uGYZYH-D-90>” (Marrs, 2009, mn.29).

Putinomics- (‘the [2010’s-20’s] post-apocalyptic model?’)

Three Pillars of Putinomics

- a) Stable macroeconomics;
 - b) High pensions & entitlements to keep influential groups happy;
 - c) Let the private sector work in certain non-political sectors (not energy or finance)
- (Miller, 2019, mn.7).

1) “When Putin came to power [2000], something around a third of Russian GDP was produced by the government. Today, by most estimates, it’s closer to 70%. So there’s a vast expansion of the role of government in the Russian economy... [mostly] in sectors where the government is...not doing a better job that the private sector would” (Miller, 2019b, mn.8-9).

Quote Berevosky American Pravda Fake Political Class

Consider the fascinating perspective of the recently deceased Boris Berevosky, once the most powerful of the Russian oligarchs and the puppet master behind President Boris Yeltsin during the late 1990s. After looting billions in national wealth and elevating Vladimir Putin to the presidency, he overreached himself and eventually went into exile. According to the New York Times, he had planned to transform Russia into a fake two-party state—one social-democratic and one neoconservative—in which heated public battles would be fought on divisive, symbolic issues, while behind the scenes both parties would actually be controlled by the same ruling elites. With the citizenry thus permanently divided and popular dissatisfaction safely channeled into meaningless dead-ends, Russia's rulers could maintain unlimited wealth and power for themselves, with little threat to their reign. Given America's history over the last couple of decades, perhaps we can guess where Berevosky got his idea for such a clever political scheme.

[See also “Revolving door, the” (Russia doesn't bother with it.)]

1b) So how has the whole thing stayed afloat for 2 decades? See also “Economics, Parity” (their **tree isn't upside down**). Despite slow GDP 'growth', “no one seems very concerned” (Miller, mn.14).

2) “By all accounts, [anti-state or anti-national gov't] protests are not growing in size, and they're relatively small compared to other countries... [and] public opinion data... [consistently shows that] Putin remains more popular among Russians than most leaders do among their populaces²¹⁴⁷... Anecdotal data, as well as the best polling data we have [& Miller has lived there, too] suggest that most Russians are at least satisfied with Putin if not actively supporting him” (Miller, mn.10).

3) Macroeconomics strong; but “on the microeconomics side...business regulation, for example...” still involves a lot of bribes-- “all sorts of different **public servants** officials to get your factory open.... not much [progress]. So Russian businesspeople know that it's better to take the money abroad, where they can invest in a secure, stable location, rather than...Russia, where the returns can be high but the risks are also...high” (Miller, 2019b, mn.14-15) in addition to more numerous. See also “Russia (& Ukraine)” [rules].

3b) Getting “*macroeconomics*” right means that basically “Yes”, it can “be sustained.... [T]hey have the money [a.k.a. monetary stability (or basic balance)] they need to wage war” (or whatever .gov wants), without caving in to “Western sanctions”²¹⁴⁸; “Russia's got the money it needs” (Miller, 2019b, mn.17).

3c) Getting “*microeconomics*” wrong means a lot of (see also) “Corruption”, “Black market”s.

4) The Ghost in the machine? How did Putin get Russians to pay more taxes?²¹⁴⁹ “Russians believe that they have been treated like a 3rd-rank power in the world; and they think they're a 1st-rank power...So they're willing to incur costs... to get themselves listened to.... It does seem to be working” (Miller, 2019, mn.18-19). See also “Civilizations”, “Aristotle” [Plato].

4b) Make no mistake, that national identity is kept alive by high pensions and social payments. “The Russian government has put a lot of resources into the pension system... growing pensions every year...that are paid on time... [and] for most Russians it makes up the majority of their post-retirement income” (Miller, 2019b, mn.3-4). See also “Adolescence of Mankind”, “Monetization”.

5) And reigning in the oligarchs was simply a matter of “economic calculus... [Via] putting political pressure on the oligarchs, you can get them to follow your rules. But the cost of doing so is that you also decrease their willingness to invest money in Russia.... ” (Miller, 2019b, mn.6-7). See also “Oligarchy” [Yeltsin], “Capital flight”, “City (of London), the”.

²¹⁴⁷ Elections in Russia vary by region. In “certain provinces, the election data are certainly rigged. For example, Chechnya...[numbers are] not very credible. But in places like Moscow and St. Petersburg and many provinces, there's...reasonably good apparatuses for monitoring, where civil society groups will be in polling stations.... Now the [mediated] context in which elections are happening is not credible. The media is entirely on the side of the President...[Some] candidates aren't allowed to run” (Miller, 2019b, mn.25).

²¹⁴⁸ Have “sanctions...[imposed] extreme pressure on Rusia? Well, that hasn't happened yet” (Miller, 2019b, mn.18).

²¹⁴⁹ One “of Putin's great successes... has been to convince people that... he is separate from ‘the oligarchs’, when, in fact today, much more so even than in the 1990's, the richest people in Russia are often his friends...[H]is judo buddies are billionaires-- people he was judo sparring partners with in the 1990's” (Miller, mn.25-26). <https://www.youtube.com/watch?v=zBd0tPFrckM> (O'Donnell, 2022b, mn.10; mn.19-27). See also “Hegelian dialectic” (i.e. ‘human shepherding’).

6) In terms of media, “Russian reporters for...independent outlets [of competing oligarchs]...are doing the best work in terms of ascertaining who owns what and how did they get control of it.... The openness of the Russian media space...is not [subject to] a great wall, Chinese style... There is still an elite news media that is reasonably high quality; [and] some of that information does make it out” (Miller, 2019b, mn.24).

Pyrite (fool’s gold)- (sometimes a.k.a. ‘imperialism based on ‘reserve currency’-‘Dutch disease’)

- 1) Unlike most other countries, the USA has long had the luxury of choice in its basic economic strategy. See also “Franklin, Benjamin”, “COVID Op.”, “American System”.
- 2) But to play (or run) with the UK imperium of (see also) “Bankmoney regime”, one must (at least) concur with the following macro-trends:

[deflationary (in peacetime) 19thc; inflationary 20thc]²¹⁵⁰ [Marley’sGhost (of miserly deflation); RiffRaff’s warning of (cyclical) excess]

See also “Pilgrim Society”, → “UKUSA Agreement”, → “Bretton Woods” [I, II, III, & IV?].

[See also “Imperialism”]...[“Reserve currency”, → “Race-to-the-bottom”; “United States, the”.]

Quantitative Easing (QE)- (central banks bailing out the commercial banking sector [and hence, indirectly, society’s TAB money creation]²¹⁵¹, mostly via government bond purchases [Huber, 2020b], but also by buying up the financial sector’s dodgy debts [a.k.a. ‘asset swaps’], thus radically expanding bank Reserves [RAB]) “It means a monetary policy of loose money [within (the late stages of) a national debt economy], the central bank flooding the [banks and] financial markets with CB money [RAB], and [then] the banks flooding the nonbank markets” (Huber, 2020c, mn.3). See also “Bank welfare”, “Money, 3 (contemporary) Tiers of”.

- 1) This was hardly a new idea in 2008. Keynes’ *General Theory* was perhaps the first to publicly articulate the main point, that: “if such a situation” of wide spread debt saturation [d.b.t. ‘liquidity trap’] “were to arise” in

²¹⁵⁰ ...Per “free banking” [.19th] and “Central Banking” [.20th], respectively. See also “Debt cycles”.

²¹⁵¹ The Bank of England explained this succinctly: “QE is intended to boost the amount of money in the economy [first] directly, by purchasing assets, mainly from *nonbank* financial companies. QE initially increases the amount of [TAB] bank deposits [that] those companies hold (in place of the assets they sell). Those companies will then wish to *rebalance their portfolios* of assets by buying higher-yielding [financial] assets, [thus] raising the price of those [financial] assets and [indirectly] stimulating spending in the economy” (Bank of England, 2014, 14).

the future, “it would mean that the public [monetary] authority itself could borrow through the [private] banking system [a.k.a. *Open Market Operations* (which were in existence at the FRBNY from 1923)] on an *unlimited* scale at a nominal rate of interest” (Keynes, 1936, 187); hence creating unprecedented amounts of Reserve (RAB) money to throw at the financial sector (instead of at the military-industrial-complex, which by 1936 Germany had already started, and UK-USA were planning for).

2) And they also knew that such massive Reserve injections wouldn't be very inflationary,²¹⁵² because they “would not inflate the volume of anything that can circulate. It would merely change the nature of the reserves [RAB] behind the money [TAB] which circulates” (Fisher, et al., 1939, 24). “Quantitative Easing”, still today, “basically can only issue Reserves. So essentially, Reserves [RAB] can only sit on the balance sheet of [authorized] agents who can hold [sic] Reserves, and that's banks... on the liability side. [Thus increased Reservers, such as] Quantitative Easing will lead, one-for-one, with an increase in bank [TAB] deposits, and that...[has been] the objective.... and this created some liquidity” in economies.

- Michael Kumhof (Keen, 2018h, mn.28-29).

3) Trying to “stimulate the economy indirectly by driving up bond prices and equity prices” (Turner, 2016); with Reserve [RAB] injections instead of TAB-bankmoney injections. “[Y]ou can't call this a great success. This sheer amount of monetary-policy ammunition [that] we fired and the small effect [that] it's produced is really extraordinary” (Ibid). See also “Quantitative Easing”.

[See also “Totalitarian/Nanny State”]

4) Any mature “central bank can expand the monetary base [Reserves] in 2 essentially equivalent ways: a] by buying bonds from the...[banks], or b] by lending money to the...” banks (Fawley & Neely, 2013, 53). “The European Central Bank and Bank of Japan focused their programs on [b] direct lending [of RAB] to banks-- reflecting the bank-centric²¹⁵³ structure of their financial systems-- while the Federal Reserve and the Bank of England [a] expanded their respective monetary bases by purchasing bonds”²¹⁵⁴ (Fawley & Neely, 51). ECB “board member Lorenzo Bini Smaghi describes QE...[as simply] ‘When the central bank decides to expand the size of its balance sheet, it has to choose which assets to buy. In theory, it could purchase any asset from anybody’... Both the BoJ in the early 2000s and the BOE in the [more] recent episode explicitly described their objectives as *expanding bank reserves* [RAB]-- that is, QE²¹⁵⁵-- rather than [the usual strategy of] easing credit market conditions” (Fawley & Neely, 55), when interest rates (and reserve ‘requirements’) are already near zero. See also “Bank welfare”.

5) The above distinction between “A” (US-UK) and “B” (EU-Jpn.) Quantitative Easings is important, because it demarcates the biggest divergence in ‘capitalist’ world monetarism since the 19th century. This is because the former (A) has led to (increasing) Interest on Excess Reserves (IOER) and other forms of RAB ‘bank welfare’ [massive ‘fiscalism’ by another name] preventing negative interest rates, and eventually (after half a decade) turning the ship of interest rates around-- in a design that the Fed calls *normalization*. With B, however, the ECB & Japan have gone down the rabbit hole of ‘negative interest rates policy’ (NIRP), for which there appears to be no end to QE (or lying about it) in sight. A consequential split in Monetary Reform could also result from this (now decade-long) bifurcation between ‘normalization’ and ‘radicalization’. See also “Accounting standards”, “Accounting for public/‘sovereign’ money”.

6) “bought time for the private sector to heal [de-lever] and for politicians to get their act together” [learn how monetary matters really work] (El-Erian, 2016, 8). Nonetheless, “central banks are the only banks that can operate with negative equity”; hence, “the central banks can keep on doing QE for as long as they like... [In

²¹⁵² “[T]here there is no work, to my knowledge, that establishes a link from QE to the...goals of...inflation and real economic activity. Indeed, casual evidence suggests that QE has been ineffective in increasing inflation...” (Williamson, 2015, 9). See also “Inflation”.

²¹⁵³ I.e. the banks own everything (*keiretsu*)

²¹⁵⁴ Former Goldman Sachs managing director Nomi Prins characterizes the various QE distinctions as: 1) purchasing “from banks, in the case of the [US] Federal Reserve... 2] purchasing *corporate* [bonds] in the case of the European Central Bank, and [3] purchasing] *equities* in the case of the Bank of Japan” (Prins, 2018, mn.10).

²¹⁵⁵

fact] they can't not do it... because what they've done...[is] they've falsely believed that, by increasing Reserves, that [then commercial] banks would be doing more lending. That doesn't work. It violates the laws of accounting, which some of the [central] banks have finally started to realize (Keen, 2017j, mn.51). When QE-created asset bubbles pop, the central banks will simply "have to go back to [another round of] QE again" (Keen, 2017j, mn.52), until the underlying issue of debt and debt-saturation is addressed. See also "Money, 2 classes (layers) of", "Debt saturation".

7) pouring "huge amounts of central bank [interbank] money ('reserves') into the banking sector and other financial institutions, money that has prevented banks, funds, insurers and over-indebted governments from collapse, but [that] has [also] paved the way for future asset inflation and bubbles, and did not contribute to real economic recovery, especially not in the most hard-hit Mediterranean countries" (Huber, 2017g).

8) an "inane" policy which purports "to solve the crisis by inflating asset prices *when inflated asset prices* were one of the *symptoms* of the bubble that caused the crisis. We've seen Central Banks pump up private bank Reserves, in the belief that this will encourage more bank lending, when (a) there's too much bank debt already and (b) banks physically can't lend out Reserves" (Keen, 2016). QE has thus "actually encouraged firms to buy back their own shares", increasing "financial capital's" price, and inflating Wall Street price:earnings ratios, to about 1.5 times "the long-term average" (Keen, 2017e, mn.35).

9) More specifically, the Central Bank buys bonds off the commercial banks (and some other nonbank financial institutions), "so their holdings of [junk] bonds goes down and their Reserves-- which are cash-- go up, and [supposedly] they'll lend the cash to the public.... [This] violates accounting rules: Banks cannot lend Reserves" to non-bank institutions, because there are "two different circulation systems" (Keen, 2016o, mn.19-20). QE does, however, "drive up demand for assets" (mn.22). Because (with QE in Britain in particular) "they're buying bonds and shares and [bad] assets in general off [of] the pension funds and so on, when they buy off the pension funds they create [TAB] money in the accounts of pension funds and the like that is then stored in private banks themselves.... So they use that money to buy assets which drives up asset prices...[and that] money leaks²¹⁵⁶ into the real [TAB] world.... But it's absolutely trivial compared to the amount of [RAB] money... [that Central Banks] are creating..."²¹⁵⁷ (Keen, 2016x, mn.32-33). In summary, there "is no money that actually gets into the real [TAB] economy, except through...[these RAB-funded] asset purchases that then wind up in the finance sector, making the finance sector even wealthier.... They spend the Reserves buying more financial assets.... The [finance sector] brokers then buy fancy cars, and... we get money from cleaning the windshield... a trickle²¹⁵⁸..." (Keen, 2016z, mn.9).

10) Reserves were "trivial before QE began... but are now gigantic for... most private banks of the world. By putting negative rates on those Reserves, [commercial] banks responded by increasing their *mortgage* rates... So rather than encouraging lending, it's actually made lending more expensive... the banks are making up the rules as they go along" (Keen, 2016m, mn.34); because "Bernanke... thought that '*We have to get the banks lending again*'... [T]hey don't realize that...[the problem is] too much bank debt to begin with... so....that rather than enabling de-leverage to occur, they've actually been trying to encourage *re-leveraging*, without realizing that they're already so close to the ceiling level of debt [150-170%] that their

²¹⁵⁶ A better word choice would be 'reverberates', or is 'laundered' into 'the real' (TAB) economy. For a detailed explanation of this laundering of RAB into TAB, see (Titus, 2022, mn.16-20). See also "Money, 2 classes (layers) of".

²¹⁵⁷ Since 2008, the "payment of *interest on excess reserves* [a.k.a. 'paying banks not to lend'], an *integral* part of the new monetary regime, has...[been primary in preventing] the new base [RAB] money from entering circulation.... [a.k.a.] the creation of new [TAB] credit.... It would not be incorrect to imagine the Federal Reserve printing money and simply handing it to these banks in exchange for their agreeing *not to lend* the new money... [T]he value of excess reserves...[in summer 2019 was approx.] \$1.34 tn.... [In summary] the new [QE] money is sterilized by [the] payment of interest on...reserves. The resulting *redistribution* of wealth is not insignificant... [and the] mix of investing that we currently see is the result of distortions by the Federal Reserve" (Caton, 2019). See also "Interest on (Excess) Reserves", "Bank welfare", "Asset inflation".

²¹⁵⁸ Keen has estimated that "...for every trillion dollars poured into the American economy led by [Reserve/RAB] Quantitative Easing, maybe 100 billion [10%] turned up in the actual [non-financial asset] economy, in terms of turnover effect. It has had...[some] impact, but it has [mostly just] massively increased inequality, because the people who have benefited [from] the actual Quantitative Easing have been those who own shares" (Keen, 2018h, mn.27). See also "Asset inflation", "Inequality".

economies can carry.... And they don't think that they'll get any [increase in aggregate] demand²¹⁵⁹ out of it either... Some of the nonsense these [Federal Reserve Board] people believe is just breathtaking" (Keen, 2017g, mn.22). See also "Bernanke, Ben", "M.I.T.", "Open Market Operations (OMO)".

11) Buying government "bonds off the banks...just puts [RAB] money in the banks' Reserve accounts at the Central Bank.... The Bank of England is now saying... in its own research papers... [that] boosting Reserves [RAB] does not create extra money in the private [TAB] monetary system"²¹⁶⁰ (Keen, 2016p, mn.18-19; mn.13). It has pumped up Price:Earnings ratios on Wall St, however, to about 30:1, and such asset inflation "will continue as long as QE continues.... I see QE as... a bit of a Faustian bargain. You can't not continue doing it. If they do pull out...the market will fall..." (Keen, 2017e, mn.19-20). "...America after the financial crisis has turned Japanese, and I expect very much a Japan-style history for the one-market from now on.... until such time as we get a serious political shift..." (Keen, mn.21-22).

12) "Ten years in... those numbers are continuing to grow. Quantitative Easing is not over... [Although] the Fed has [tapered] its books... by less than \$200 billion, out of...[\$4.5] trillion...not really a lot... [A]nd the *other* central banks have *upped* their purchasing of assets...." to \$5.5 trillion in the Eurozone, "5 trillion and counting" in Japan, and about \$800 billion in the UK; "...this emergency process is still going on (Prins, 2018b, mn.18-19). "The system hasn't been restructured. It's just been subsidized" (Prins, mn.42).

13) A few years ago at a conference "a Fed spokesman.... [in private] turned to me and...said '....The biggest source of inequality, in this country, over the last few years, has been our QE program'" (Kortsch, 2017, mn.9-10). This is because a policy of supplying subsidies in Reserves/RAB money is bound to drive up stocks & asset prices at least twice as quickly as ("real economy") wages.

14) "Everyone needs absolution. QE **was** capitalism's confessional" (McWilliams, 2019); that the bank credits-bankmoney economy is nothing without [increasingly massive] governmental support. See also "Bank welfare", "Japan model (asphyxiation), the".

[“Quantitative Easing,” which is in RAB...]

[...has difficulty reaching “the real economy,” which is in TAB]

Central Banks Balance Sheets
Japan moving into uncharted waters

Note: BOJ projection assumes the yen-dollar exchange rate remains at the current level and the BOJ's asset holdings continue to increase at the current level. The Fed forecast is the baseline scenario from the 2018 annual report, and assumes that balance sheet normalization begins in January 2018. Source: BOJ, ECB, Fed data compiled by Bloomberg

²¹⁵⁹ Although they will attain, it is obvious, a strategic increase in the size and scope of government in the economy; see “Japan model (asphyxiation), the”.

²¹⁶⁰ In summary, Quantitative Easing has had only “...a modest effect on limiting *income* inequality [which is mostly in TAB], but a very great effect on exacerbating *wealth* inequality, by inflating *asset* prices vastly more...” (Hudson & Goodhart, 2018), because Central Bank (RAB) monetary injections **pretty much** cannot get to the former without first filtering through the latter. See also “Reserve Account Balance (RAB) money”.

[...and only the American CB seems to know this? The 'Great Divergence' in CB policies from 2016]

15) When does it end for good? At this point, only with the entire bankmoney-based monetary system. In what Jeffrey Snider calls "QE6", Fed Chairman Powell's "\$900 billion in 5 weeks" has surpassed Chairman Bernanke's \$600 bn. in Nov. and Dec. 2008 "by an additional 50% in half the time... [and constitutes, to some] the greatest 'monetary' effort in US history.... [Nonetheless, rarely] in the history of TIPS [Treasury Inflation-Protected Securities] have inflation expectations been, and remained, this low...even after 'Noah' Powell's ['monetary'] deluge.... That's right, the entire market is positioned for another lengthy period of the Fed...undershooting its [inflation] target.... [This is because] bank reserves are like **laundromat tokens**. They have a narrow money-like [RAB] use, but that's not the same thing as [TAB-bankmoney] 'money printing'... [Why] would anyone outside of [token] laundry operators be giddy?.... [A] large increase in bank reserves [RAB], rather than being inflationary, it is actually cautionary.... The bond market gets [this point].... The world is demanding effective money, and these people **only offer[ed]** tokens... It explains 2008 perfectly. It...[also explains] the [lost] decade in between" (Snider, 2020). See also "Money laundering" (HSBC), "Bank welfare".

[Quantitative Easing myth ('printing money'), and reality [interbank "Fed tokens"; see also "QE4"].]

15b) QE is "now a quite regular [part of CBs] toolset. This is a good thing, and it should be maintained as a mechanism in moderate application in the future" (Huber, 2021). See also "Monetary financing". See also "Finance", "**Money, 2 classes (layers) of**", "**Reserve (RAB) money**".

Quantitative Easing 4 (QE4)- (a.k.a. 'pandemic QE'; i.e. 'BlackRock's QE' or getting the CB to 'buy directly from non-banks, in the 2nd tier' [Titus, 2022d, 3]) See also "Helicopter money".

1) From the 4th quarter of 2019, the (so-called) 'Federal' Reserve directly caused **TAB-bankmoney** accounts (not just **RAB/Reserves** at the 'Fed') to increase.

See also "**Money, 3 (contemporary) Tiers of**".

1b) They did this by the Fed going "to the asset seller's bank and...[saying] 'I want to buy an asset from your [non-bank] customer. So your bank needs to get in the middle of that [3-party] transaction, so that I can make this happen" (Titus, mn.5); because the (so-called) 'Fed' is not supposed to deal with nonbanks.

2) No kidding, "YouTube leper [John Titus]" called it from November, 2020, 19 months prior to the Fed's admission (Titus, 2022d, mn.11). The (so-called) 'Fed' itself did not admit it- that "[w]hen the Federal Reserve purchases securities from a nonbank seller, it *creates* new [TAB-bankmoney] *bank deposits*"²¹⁶¹-- until June 2022. (<https://www.federalreserve.gov/econres/notes/feds-notes/understanding-bank-deposit-growth-during-the-covid-19-pandemic-20220603.html>) . See also "Money Supply (US)", "Money, 2 Classes".

2b) Nonetheless, "no matter how high the graphs of [TAB] bank deposits were going...rocketing through the ceiling...[the] chorus of Gomer Pyle economists continue to parrot their [misleading] pet phrases, as if...[QE] in the 'pandemic' was just like the old" QEs (Titus, 2022d, mn.11). See also "**Deceptive Banking Terms (d.b.t.'s)**", "Monetary Economics".

3) Does more aggressive or direct 'Fed' action mean that it is somehow becoming less regressive in running the monetary system? No. "the top 1% of [US] households... got 45% of the new deposits from [the new] Quantitative Easing. It...[has been] very, very skewed" (Titus, 2022d, mn.23). See also "Central Bank".

²¹⁶¹ It does this (tri-party) transaction simply "by crediting the reserve account of the [so-called] depository institution at which the nonbank seller has an account...[whereupon] the...[monetized credit] institution credits the deposit account of the nonbank seller" (Titus, mn.15).

3b) “At this point, even if you [still] can’t see the [so-called] Fed as the instrumentality of...criminals... you have to be asking yourself whether it’s really a good idea to let the Fed control, via Central Bank Digital Currency, the financial lives” of its non-owners (Titus, 2022d, mn.28). See also “Federal Reserve”, “White-collar crime”.

See also “Bank welfare”, “Monetary reform”.

[now taking the place of Wall St.?)

Quantitative Easing (in Japan and Europe)- (a.k.a. ‘indirect monetary financing’)

1) In March 2001, the Bank of Japan “announced that it was increasing the target for bank reserves [RAB], from ¥4 trillion to ¥5 trillion, which was expected to drive the overnight call rate from 0.15% to zero. By 2004, the BoJ had incrementally increased the target for bank reserves... [from] ¥30 trillion to ¥35 trillion, while simultaneously purchasing public and private debt and communicating the conditions necessary for exiting the zero interest rate policy (ZIRP). On March 9, 2006, the BoJ ended its official QE regime, when it reinstated the uncollateralized overnight call rate as the main policy instrument (setting the target at 0%)” (Fawley & Neely, 2013, 55). If that seems esoteric, in simpler terms...

2) “...they expand[ed] banks’ reserves [RAB] at the Central Bank. This is money banks have at the CB that cannot leave the CB. It doesn’t circulate... it’s stuck at the CB. Now what good does that do the economy--nothing.” The Japanese “QE” term is “really misleading because there’s [already like] a half a dozen names for that-- Reserve Expansion, M-[inaud.] Expansion, High-Powered Money, Expansion Monetary Basics... Why call that Quantitative Easing? You see, that’s part of their strategy to obfuscate and confuse people.” - Richard Werner, who originally coined the term *quantitative easing* in 1995 (Werner, 2015). Werner’s original QE was intended as “credit creation” or TAB (account) money. However, starting in Japan, “central banks later used the expression and said ‘Oh, it’s just Reserve expansion-- high-powered money’ expansion, which I predicted was not going to help” with “GDP growth” (Werner, 2015b, mn.108). “In Japan, they mainly bought bonds, increased bank reserves...” (2015b, mn.228). The late 1990’s “original thrust of quantitative easing... [was supposed to be] an expansion in credit creation for the real [TAB] economy, not mainly [just RAB gifting] for the financial markets” (Werner, 2016c).

2b) “Proper QE” is “to stop the issuance of government bonds and borrow from the banks”; but Japan didn’t do that until 2013, “after 20 years of recession” (Werner, 2021, mn.113). CBs “purchasing the non-performing assets from...banks at face value, [simply] moving them from the bank balance sheet to the Central Bank balance sheet” is not the same as “expanding bank credit creation”, which could directly be done by “the government... by stopping the issuance of government bonds and borrowing from [no doubt the Big 5] commercial banks [instead]. These policies could’ve been implemented in Japan” (Werner, 2021b, mn.14). See also “Window Guidance”, “Bank, universal”.

3) According to Nomi Prins, things have changed since then. With Japan's QE, as distinct from America's (mortgage-backed securities) or Europe's (corporate bonds) purchases, the Bank of Japan "decided to buy *stocks*. The Bank of Japan buys... Exchange-Traded Funds, which are just [like mutual funds] different collections of stocks in different areas, and they just create [the "base"-RAB] money to do this" (Prins, 2018b, mn.28).

4) Banks find it easier to collect RAB (Reserve) money from the Fed than to lend TAB (account/deposit) money out, as they have grown bureaucratic and risk-averse. Or as the St. Louis Fed admitted, M1-M3 "did not increase because banks [just] voluntarily held in different areas the increased monetary base [M0] as bank reserves [RAB]- safe, liquid assets in high demand during periods of economic uncertainty" (Fawley & Neely, 2013, 81). See also "Money, 2 classes (layers) of".

5) Japan was the "first country to introduce Quantitative Easing... 20 years ago... [and it] didn't increase [GDP] as expected.... Under the current debt-money system, [there are] no policies to get out of this mess" (Zarlenga, 2014b).

6) The famously anemic Eurozone has found it more difficult to pull the plug on QE welfare-- or to be honest about it. In 2017 the ECB "said that it was going to reduce the size of its Quantitative Easing program... [And also in] the prior year they were [also] going to cut their Quantitative Easing... but they *didn't* do it [either time], so...it didn't hurt the [securities] markets" which therefore got a better-than-expected boost for both years. "They said they were going to taper... to buy less... predominantly corporate bonds²¹⁶², because they're moving into corporates from governments [bonds]... That was promoted in the media as some sort of a tapering...[even though in] reality... they were reducing the amount [of QE bond purchases] per month, but they were expanding the period of purchasing [them]... [amounting to actually] an extra 140 billion Euros worth of Quantitative Easing. Not less, but more. So that's the kind of thing that keeps the markets up" (Prins, 2018, mn.23-24).

7) According to David Stockman, the ECB (like the Fed) "stopped QE...[a.k.a.] buying bonds hand-over-fist" in late December, 2018 (Stockman, 2019, mn.16). See also "Repo (Repurchase) agreements".

8) While in Japan, the BoJ is "already" just "giving money to the owners of the stock market by buying equities...[Even though] many balk at the idea that shareholders are the most deserving beneficiaries of central bank largesse" (Loneragan, 2019). See also "Owners, the".

[treading water in terms of GDP (in TAB); while banks stay afloat (in RAB)]

Quantitative Easing (in the UK)– 1) "the creation of £375 billion of new [RAB] money by the Bank of England [c.2009-12]– had the effect of *inflating financial markets* and increasing the wealth of the already wealthy, but had little effect on spending in the real economy" (Dyson, 2016), with only 8% of the original £375 billion²¹⁶³ trickling "down into the real [TAB] economy. The rest of the money got trapped in...financial markets" (Positive Money, 2014b, mn.2).

1b) Governor Bailey explains that "QE [in the UK] increases bond prices and therefore reduces yields, which in turn lowers [TAB-bankmoney] borrowing costs and [eventually] support[s] spending.... If the recent expansion of bond buying appears to threaten...[the inflation target, then] the [BoE's] MPC can react" (Bailey, 2020). See also "Regulation" [UK].

2) QE in England "differs from QE in America, because in America I think they only bought [Treasury] bonds off the banks, whereas here they're buying [government] bonds off Pension funds [and insurance co's]...so they are actually boosting the amount of money in the [real] economy, but [as with other QE's] it's money that

²¹⁶² The ECB "is involved in a corporate debt bubble.... And that number is increasing", creating more instability as the ECB tends to purchase more bonds from the northern European countries than southern (Prins, 2018b, mn.27).

²¹⁶³ £375 billion per capita is "nearly £ 6,000 pounds [>8,000 USD] for every man, woman, and child in the UK.... [and] more...money that the entire government spends in 6 months" (Positive Money, 2014b, mn.3).

is given to people... [to] organizations, which can only spend that money buying other assets” (Keen, 2016o, mn.22).

3) Nonetheless, in the UK, Quantitative Easing has had “some moderate impact... in terms of stimulating the economy, but it actually winds up [strategically] making the symptoms of the crisis worse”; i.e. debt overhang with higher asset prices²¹⁶⁴ (Keen, 2017i, mn.3).

4) “With Quantitative Easing, there seemed to be [not only] a law of diminishing returns, but [also] the *distortions* coming out of it were just growing & growing. Enormous distortions...[particularly in the] mortgage market, with negative real interest rates... across a wide spectrum.... [A]t what point do you say ‘Enough is enough’.... The distortions are growing & growing” (Jackson, 2020, mn.157). See also “COVID”.

Quantitative Easing (in the US)- (a.k.a. ‘large scale [toxic] asset phases’, “Mr Bernanke’s unorthodox ‘cash for trash’ scheme” [McWilliams, 2019], “true quantitative easing” [Werner, 2018b, mn.27])

1) “The Fed rescued the banks²¹⁶⁵, not the economy. It kept bad debts on the books, instead of writing them down, while its \$800 billion Quantitative Easing #2 in 2011 was mostly sent abroad. The banks took the [RAB] money and jumped ship” (Hudson, 2012g). See also “Bank welfare”, “Repo (Repurchase) agreements”.

1b) According to Fed Board documents (as of 6/22, anyway) there have 4 “rounds” of “QE”:

“QE1”- 2008-Q4 to 2010-Q3;

“QE2”- 2010-Q4 to 2011-Q2;

“QE3”- 2012-Q4 to 2014-Q3;

& (the wholly different) “QE4”- 2019-Q4 to 2022?- <https://www.federalreserve.gov/econres/notes/feds-notes/understanding-bank-deposit-growth-during-the-covid-19-pandemic-20220603.html>

See also “Quantitative Easing 4”.

START	END	TREASURIES	AGENCIES	AGENCY MBS
March 2020	March 2022	\$2,916		\$2,926
September 2012	October 2014	\$790		\$823
November 2010	June 2011	\$600		
November 2008	March 2010	\$300	\$175	\$1,250

[QEs 4, 3, 2, & 1, in US Treasuries, “Agency debt”, and “Mortgage Backed Securities”]

2) “Bernanke seemed to have listened to this advice [see QE (in Japan & Europe), above]-- about the Central Bank having to purchase non-performing assets. This explains why his ‘QE’²¹⁶⁶... was more effective than Bank of England, [and] Bank of Japan QE, because he implemented my original recommendation of using the CB to [simply] *purchase non-performing assets*²¹⁶⁷. They did it all in 2 months, Sept.-Oct. Of 2008.... Buying the bad debts from the banks does not put a cent into circulation.... It’s just cleaning up the balance sheet.... There was no inflation, and the dollar actually rose.... Bank credit in America is expanding at 4-5%. So there is a recovery. Now whether the banks are lending really for productive purposes or not-- that’s a separate question” (Werner, 2015b, mn.112-113).

3) “The private sector is handing its debt over to the public sector and saying ‘*Here’s the debt. Give us the money*’. I mean that’s one of the most outrageous transfers of wealth in human history. The public money... is being handed over to the guys on Wall Street. It’s a crime” (Keen, 2011b).

²¹⁶⁴ Positive Money says that it is simply “making the rich richer by boosting asset prices”; the Bank of England knew, by summer 2016, that extending the policy would just “increase the wealth of the top 5%, when wealth inequality...[was already] threatening social cohesion...” (Boait, 2017b, mn.53).

²¹⁶⁵ “40% of corporate profits in the US [2010] were made by the *banking* sector” (Hudson, 2011d). See also “Compound interest”.

²¹⁶⁶ Chairman Bernanke actually “never called it QE.... He had a different expression... *credit easing*. This is closer to my original definition [for ‘QE’]-- an expansion in credit creation” (Werner, 2015b, mn.228).

²¹⁶⁷ “at face value... In September-October of 2008 the balance sheet of the Federal Reserve quadrupled in one month... [which] doesn’t create inflation.... [or TAB] money [directly], because you’re just shifting assets between the central banks and the banks... away from the bank balance sheets where they are harmful, to the central bank, where they can’t do any harm” (Werner, 2018b, mn.29)

[QE1-QE3: Shoveling base money (reserves) to Wall St. since 2009-10]

4) “These massive money printing campaign[s] never got out of the canyons of Wall Street.... It just became a huge source of speculation” (Stockman, 2019, mn.3). See also “Financialization”.

5) **QE stopped** [or stopped *increasing*, anyway] in the US in late October, 2014. The “scale...was 80 billion dollars a month, which.. [amounts to] a trillion dollars a year worth” of (mostly bond) purchases from “the financial sector”, which then, in turn, pretty much used it to “buy...shares...that then drives up share prices by a trillion a year, then the people who sell [the shares] might use \$900 billion to buy other assets. They might inflate houses a bit and go back into other shares. [And] they might spend \$100 billion of that...buying a few minor consumer items... stimulating the real [non-financial sector] economy. But 90% of it goes into inflating asset prices.... making even worse the inequality that was being driven by the Financial Crisis in the first place” (Keen, 2018h, mn.47-49).

6) The scale? “The Federal Reserve...has purchased bonds off of financial institutions, [at perhaps]... a trillion dollars a year...in America, since pretty much 2010, and... [most of it] has gone across to [be re-invested in] the stock market. So what we have now is the 2nd highest level of over-valuation of stocks in the history of American capitalism”, second only to (the cyclically-adjusted price/earnings ratios of) the 2000 bubble; “it’s literally twice the long-term average” p/e ratio (Keen, 2018c, mn.5-6). And the Federal Reserve, a privately-owned consortium, “today...owns \$1.75 trillion...[in overvalued] mortgage assets. That’s [equivalent to] 26% of the [entire US] mortgage market.... [and] that’s just one of the many bubbles that the Fed is currently involved” with (Prins, 2018b, mn.26). That is not helping capitalism; it is eating it. See also “Normalization”.

[Tiger sharks are known as ‘the garbage cans of the sea’ because will they eat anything.]

Q.T. (Quantitative Tightening)- Central banks reducing/selling off their balance sheets.

‘Quantity Theory’ of money- See “Say’s Law”, vs. “Velocity of money”.

Quigley, Carroll (1910-1977)- (the US grandfather of ‘New World Order’ theory-revelations²¹⁶⁸-- to history and ‘the’ US perspective what George Orwell was to a European & introductory-fictive perspective)

²¹⁶⁸ This development in the first half of the 1970’s came as a surprise to Quigley, a classical-- if sensible-realist-- liberal, who purposefully chose the last 2 words of his Magnum opus as “‘inclusive diversity’... the basis on which our society should be based.... [D]iverse peoples with diverse beliefs must live together and work together in a single community” (Quigley, 1971). See also “Civil National Identity”.

"[T]he truth has a right to be told, and, once told, can be an injury to no men of good will" (Quigley, 1981, xi).

"I have given you here only a moment of time. *A moment of time falsifies anything.* These are [in fact²¹⁶⁹] flows. All right now...the whole economic system-- a flow of rent, a flow of wages, a flow of all of these [goals]. And a flow of profits." - "The World since 1914" lecture, May 1976 (Quigley, 1976b). See also "History" & "Cycles"; "Political Economy" & "Wise men".

Also "said...America was the greatest country in the history of the world-- because our people had always believed in 2 things: that tomorrow can be better than today, and that every one of us has a personal moral responsibility to make it so." - Bill Clinton, acceptance speech, Democratic Party national convention, 1992. See also "United States, the".

1) Originally a physicist and 'polymath', after settling on analytical history, Prof. Quigley was granted (apparently *suigeneris*) access²¹⁷⁰ to primary sources of the "Milner Group" of (the larger Fin de Siecle & WW1-era) UK oligarchs, (pretty much officially) bringing oligarchical planning out of the realm of 'fiction'. Perhaps unexpectedly, his magnum opus, *Tragedy & Hope*²¹⁷¹ (1966) had a popular resonance, and the publisher, Macmillan, after about 8,800 sales, stopped printing copies despite demand; around the same time that a cottage industry of (what Quigley sometimes derided as) "radical right fairy tale" agitators started violating the copyright of large portions of the book (with MacMillan doing nothing²¹⁷²), over-

²¹⁶⁹ (The future Professor) Quigley "...was [as] close to the official halls of American power, as...[any Historian could get. In addition to lecturing] on diverse subjects at the US Naval Weapons Lab., the State Dept's Foreign Service Inst., the Naval College and the Indust. College of the Armed Forces...[Quigley had (already) been, moreover,] a consultant to the Congressional Select Committee which created NASA, and to the Navy's *Project Seabed*, whose task in 1964 was to project what US Naval weapons systems would be like 12 years out", etc. (Zarlenga, 2000). I.e. Quigley was not much closer to a 'one-dimensional academic' than was, say, (see also) "Morris, Gouverneur". Future American Monetary Inst. founder Stephen Zarlenga appears to have been the Quigley estate's editor for *The Anglo-American Establishment* (1981)-- the first known scholarly tome to directly address that subject. Art thou still 'subjects' (of the Anglo-American Establishment)? <https://www.youtube.com/watch?v=N2JpI4Vi51A> ['Morris' eode; 'Moose' (.1977)]. See also "UKUSA Agreement", "NSA" ['.NoSuchAgency']; "Adolescence of Mankind", "Morris, Gouverneur", "Zarlenga, Stephen (1941-2017)"; "Music".

²¹⁷⁰ According to (independent publisher) Zarlenga, the Georgetown (Jesuit) Univ. professor fooled-- or got one past-- publisher Macmillan in the mid-60's. "'No question about it in my mind... [that he was] leading them on. [Only] Quigley had real inside information on this thing. He...[was] protecting his [possibly Catholic] source [until the source had died]. He had that inside information even before he wrote *The Anglo-American Establishment* in 1949.... You have to realize that *The Anglo-American Establishment* was not publishable until after his [Quigley's] death, and then only by someone like us. No established house would touch it... [even though] *Tragedy* was published by Macmillan... [because he] used self-censoring techniques to tone it down, something he did not do in the 1949 manuscript'. Quigley is indeed more critical of the conspiracy in the earlier work, in which he wrote: 'When the influence which the institute [the RIIA] wields is combined with that controlled by the Milner Group in other fields-- in education, in administration, in newspapers and periodicals-- a really terrifying picture begins to emerge.... [S]uch power, whatever the goals at which it may be directed, is too much to be entrusted safely to any group.... No country that values its safety should allow what the Milner Group accomplished in Britain... that a small number of men...wield such power in administration and politics, [that they] should be given almost complete control over the publications of the documents relating to their actions, should be able to exert such influence over the avenues of information that create public opinion, and should be able to monopolize so completely the writing and the teaching of the history of their own period'" (Allen, 1983, 29-30; citing Quigley, 1981). See also "Deep State", "Corporate Media Cartel", "CIA", "Cultural Calendar", "History".

²¹⁷¹ "The main tragedy which Quigley has accurately foreseen is the growing *centralization* of power and consequent pressure placed on democratic institutions. To him, this was a matter of weaponry" (Zarlenga, 2000). The ostensible "tragedy" was that "Western civilization is going down the drain" (Quigley, 1974); and his "hope", at least in the mid-1960's, was that it could nonetheless somehow be salvaged. This author notes that Quigley seems to have failed to grant (such concepts as) "usury" (or 'debt money'/'credit money'/'bankmoney'), or even "political economy" any formal consideration (in any of his public assessments)-- in addition to also never mentioning (see also) "Montesquieu", or "Parity" (even though the latter was a major factor in American governance & politics right up to autumn 1952... [when, post-election, 'Eisenhower's "military industrial complex"/Deep State quietly sandbagged it]). See also "Bankmoney regime", → "Big Government (growth of)"; "Reserve currency", → "Imperialism, American"; "Debt cycles" [try changing horses right in the middle of one] & "Reform, 101".

²¹⁷² According to , a 'personal letter' (supposed) personal letter of Quigley's, from the mid-70's, states: "'I am now quite sure that *Tragedy and Hope* was suppressed, although I do not know why or by whom'" (Allen, 1983).

(rumor that the "publisher, MacMillan, was taken over as they 1st published his book, and the plates and the manuscript were destroyed."- dir. qte. '74). See also "Zarlenga, Stephen (1941-2017)".

(Macmillan refused to print a 2nd edition--"even though there was a good demand for the book.... and *The Anglo-American Establishment*...[was] more critical manner, [and] had proved unpublishable and was gathering dust at Georgetown since 1949" (Zarlenga, 2000).

shadowing the complexities and context of the (1,348 page) original source. See also “Rhodes-Milner (and Cecil) Group”.

2) Since then-- his general ‘pessimism’ [concerning what was, at that time, the near future of American and ‘Western’ civ.] notwithstanding-- Quigley has been America’s most renown ‘analytical historian’. What?! Aren’t Americans always suppose to be optimistic? What was his problem? What did Quigley know about a ‘long-term’ (analytic) view of “the story”-line that others did not (or at least did not fully articulate)?

Quigley plted out that, according to the classic liberalism of “19th century beliefs” & philosophy, “human nature...[was] good...[and] society is bad.... [And] if society was bad, the state, which was the organized coercive power of society, was doubly bad. And if man was good, he should be freed, above all, from the coercive power of the state” (Quigley, 1966, 25). See also “Monetization”, “Local scrip & Complementary currencies”, “Cycles”.

2b) “Notice: I do not [sic] say human desires.... If you ask anybody what they want, what they *desire*, they will give you lists of things which are as remote as can be from human *needs*. Now, in this [‘Western civ.’] society, the process we have been tracing for the thousand years is the growth of the state. And as I indicated in the first lecture, a *state* is not the same thing as a *society*-- even though the Greeks & Romans thought so. A state is an organization of power on a territorial basis. The link between the 2-- a society (whether it’s made up of communities or of individuals) and a state, is this: Power rests in the ability to satisfy human needs”, certainly not [no matter how big it gets] desires²¹⁷³ (Quigley, 1976c-pt.3, mn.243-45). See also “Power”, “Statism”.

This echoes (nearly 2.3 millennia later!) the Chinese establishmentarian Mencius (c.371-c.289 BCE), who “laid special emphasis on ‘the cultivation of the heart’, the best way to which, as he asserted, was to ‘keep few desires’,²¹⁷⁴ or to decrease the bodily desires to a minimum-- a theory which the Neo-Confucians of the Song Dynasty [and their successors] brought into full sway” (He, et al, 2008, 59). See also “Monetization”, “Great Extinction, 6th”.

[‘East is East and West is West & never the twain shall meet’? Tell that to Willie Wonka’s ‘parable of *desire*’ factory: <https://www.youtube.com/watch?v=5wAIQf4WdiE>. See also “Globalism” (half-a-century of), “China”, “Monetization”.]

3) Quigley, though certainly a serous and forthright researcher, can sometimes come across as somewhat fast-talking-- like the modern (2nd Industrial Revolution) type man that he deplores, sometimes ‘theorizing’ around ill-defined buzzwords that he often doesn’t bother to clarify. Granted, Quigley had broad pictures to explain; but by always being in such a hurry, he sometimes winds up sounding like Alex Jones-in-tweed,²¹⁷⁵ and a lot of the concepts that he explored were not adequately followed-up upon.

4) A half-century later, it seems a debatable proposition as to whether somewhere around half of Libertarians and half of Georgists in the US are (still) in the confines of father Quigley’s ‘N.W.O.’ schemata, it often consisting of ill-defined (or at least not deeply thought through) buzzwords (instead of monetary mechanics), albeit punctuated with frequently astute & learned observations on the scene, as would a man in prison-- that prison [of ever-increasing state monetization combined with environmental decay] being an eventuality of the insufficiently-exposed confines of [see also] “Usury” and “Duopoly”.

²¹⁷³ Mixing Society and State? “We have attempted in our society today to throw the whole burden of socializing our population upon the school system, to which the individual arrives only at the age of four or five. A *state* [sic] of individuals, such as we have now reached in Western Civilization, will not create persons; and the atomized individuals who make it up will be motivated by *desires* [sic], which do not necessarily reflect needs. Instead of the need for other people, they need a shot of heroin; instead of some kind of religious conviction, they have to be with the winning team” (Quigley, 1976c-pt.3, mn.253-54). See also “Civilization” [.16candles], “Hypertrophy”, “Fascism, ‘Modern Hand of’ [.oxycontin, fentanyl].

²¹⁷⁴ Mengzi listed as “concrete means for ‘the cultivation of the heart’...[as] ‘the preservation of the restorative influence of the night... ‘the feeding of the boundless spirit’, ‘keeping the heart unaffected’, and ‘seeking peace of mind’” (He, et al, 2008, 59); basically a ‘low frequency of vibration’ (not ‘high’, as was often preached in the ‘new age’ [of institutional destruction] type parlance of the 2000’s, See also “Civilization” [Quigley], “Great Extinction, 6th”, “Industrial Revolution, 3rd”, “Plato vs. Aristotle” [.Mozi vs. Mengzi].

²¹⁷⁵ “I know many other reports that have been suppressed, of this kind [i.e. suppressed Congressional and/or other governmental or insider investigations]. I could give you a list of them. The history of them. There’s books of them. I told you about the book that was suppressed. The one on the China involving in [American] politics.... For instance... Senator [Harvey] Kilgore of West Virginia [1941-56], for years, sent me all the reports of his committee on monopoly and similar things, and some of these were repressed” (Quigley, 1976b).

5) "It will be obvious to you that I have enjoyed my work, although at the end of my career I have no conviction that I did any good. Fortunately, I had a marvelous father and a marvelous mother, and we were taught you don't have to win, but you have to give it all you've got. Then it won't matter.... Do not be pessimistic. Life goes on; life is fun. And if a civilization crashes,²¹⁷⁶ it deserves to."
- Carroll Quigley (Quigley, 1976c-pt.3, mn.354; 416). See also "Civilization", App C: "1-2-3".
See also "King James' Bible/70 Year Plan", → "New World Order", → "Zombie"; "Adolescence of Mankind", "Freedom continuum" [maturation].

'Race'- (officially ended in 1863, 1867, and 1964; see "Ethnic (National) Identity", "Big Lie, the")
See also "Geography".

Race-to-the-bottom (of the barrel)- ('everything cheaper' all the time strat.; a.k.a. 'ultra-liberalism', the 'debt-driven consumer economy', the 'dollar tree economy', or the perpetually 'lower international common denominator; i.e. what a 'National Debt Economy' or 'Keynesianism' eventually turns into) "The [end] result [is] that cheapness of price for goods and services becomes the badge of poverty in the midst of plenty."- Carl Wilken's *Prosperity Unlimited: The American Way* (1947, xiii). See also "Imperialism", "Ninnies", "Parity" (for what?).

"Capital flows to where it's treated t." And "much of the wealth [that is] administered in Britain's offshore havens is controlled from..." (see also) "The City (of London), the".

1) The "advisers and corporate representatives who dictated the [1944 (see also)] "Bretton Woods" agreements effectively determined that thereafter, trade would [eventually] everywhere...[take precedence] over domestic need. The decline and eventually demise of...sovereignty throughout the world became only a matter of time, first crushed beneath the economic power of the strongest nation, America [in the 1950's-60's], and later by the power of international finance [and lastly by the tech giants²¹⁷⁷]. Eventually, America also began to pay the price for unfettered trade and rampant international... [financial governance], when the world financial system...[completed its divorce] from...[underlying economic] reality in 1971.... [With the rise of] a large outflow of dollars from America [in the 1960's]...International banks...[began] multiplying these into...[billions] of 'eurodollars'...[and the US government] had to accept that they [certainly] did not hold enough gold for all these [new] dollars to be exchanged...[And, as soon as the ink was dry on the 'eurodollars' strategy from London], the Americans cancelled the right of all governments to claim gold from...[their holdings of] American reserves... [O]ther countries immediately followed suit...[thus removing] one of the...[main] elements tending to keep finance national... [There now seemed to be] no need for the restrictions on an outflow of money for foreign investments. Since it...[had] always been assumed that foreign investments would bring back repatriated profits,²¹⁷⁸ there was now every incentive...[for] countries to deregulate and allow domestic businesses to go abroad and take capital with them. In addition, countries were hoping for an influx of foreign investment [FDI]...so each wanted to impress upon prospective companies and corporations that they were an open trading nation [not a stick-in-the-mud], and that there were no [old-style] barriers to the repatriation of profits...[and eventually, in the 1980's-90's, the EEC and EMU removed more-or-less] all controls and barriers to the international flow of money. The battle was no longer [as in the mid-20thc] just for foreign exports and foreign markets; it was [now also] a battle for foreign investments... [Make no mistake, it] was clearly understood [at the time] that deregulation of foreign investment would lead initially to a substantial outflow of money, especially from the richer countries..." (Rowbotham, 1998). See also "Globalization", "Capital Account".

²¹⁷⁶ In regards to (so-called) 'modern' Western Civ.'s prospects in the 21st century, what Quigley didn't know about was (see also) "Economics, Parity".

²¹⁷⁷ Here is 'race-to-the-bottom' from a City of London perspective. https://www.youtube.com/watch?v=EYPs-ya_GDA [Edinger, 2019]. See also "Capitalisms", "City (of London), the".

²¹⁷⁸ ...a large and tragic mistake. See also "Taxation of income", "Accounting" [The End of], "Federal Reserve Audit".

See also “Imperialism, American”, “Eurodollars”, “State capture”, “Dutch Disease”, “Inequality”, “Debt saturation”, “Monetization”.

2) “[P]resent trade policy...promotes increased competition that exploits the producers in each country and, according to physiocracy, reduces each nation’s [national] income base” (de Yong, 1994, 89). See also “Physiocrats”, “National Income”.

See also “Imperialism”, “City (of London), the”, “Finance Capitalism”, “Death culture”, “Adolescence of Mankind”, “Parity” [for what?].

[Legacy of the Currency wars' globo-Imperialism?...] [Issuing 'Parity' to something useful (see also “Economics, Parity”)]

Racism- See “Hegelian dialectic”.

Racket, the- “The [Big 4] accounting firms, the [Big 5] banks, the [Big 3 credit] rating agencies, the [Deep State] government, and the [Reserve money-conjuring] central bank-- it’s called a racket... That’s how the [UK] aristocracy keeps going, and it’s not gonna stop” (Keiser, 2018, mn.1). See also “Aristocracy”, “English constitution”.

1) “The reason you even have these Big 4 accounting firms... is because the tax laws are so convoluted that you have to hire [supposed] outsiders to come and interpret for you what the government has just written... [But] the government has just written these laws, as per the consultations of these Big 4 accounting firms, to keep it as... Byzantine and complicated as possible, as a way to thwart competition... They don’t want any competition coming along without having to pay the extortion... the fee, to a Big 4 accounting [‘consultancy’] firm, which works hand-in-glove with the [UK] government to prevent competition” (Keiser, 2018, mn.3-4). See also “Big 4 Accounting firms/Management consultants”. See also “Glorious Revolution, the”, “State capture”, “World Economic Forum (WEF)”.

Racket science/scientist- “A mathematical economist creating sophisticated financial instruments so complex that buyers do not realize they are being defrauded with no reasonable chance to come out ahead” (Hudson, 2015b). See also “Mythomatics”, “Compound interest”, “Neoclassical revolution”. See also “Sabotage”.

Radical- 1) “You’re a radical when you criticize a [mass or common] delusion... ‘The emperor’s naked. He’s not wearing anything’... makes us classified as radical.... Being a radical in Economics is being sensible and pragmatic” (Keen, 2015). See also “Economics”, “Fin de Siecle”; “Primary Sector Economics (PSE)”.

2) Yes, it does come to the fore from time to time. “When I left Congress in ’76, it was in the persuasion that our whole code must be reviewed, adapted to our republican form of government, and, now that we had no negatives of Councils, Governors & Kings to restrain us from doing right, that it should be corrected in all its parts, with a single eye to reason [not protocol], & the good of those for whose government it was framed.”- Thomas Jefferson, *Autobiography* (1821).

See also “Jefferson, Thomas (1743-1826)”, “Founding fathers”, “Conspiracy theorist”, “Integrity”.

Rappoport, Jon- (a.k.a. NoMoreFakeNews.com; i.e. the man who doesn’t ‘get up on his hind legs’)

"If imitation is the sincerest form of flattery, we've flattered reality enough. It doesn't need any more. Reality needs a massive injection of imagination."

"If a person can't imagine a better world, he's stuck with this one."

1) "has been bravely calling out **fake science** and medical-pharmaceutical cartel trickery since the 1980s, the decade in which the cartel carried out its beta test known as HIV/AIDS. Each subsequent 'dud epidemic'-- from West Nile to Zika to Covid-19-- has relied on the **same recognizable pattern**²¹⁷⁹ of propaganda and fake science, but at the same time has gotten progressively bigger and bolder. As I have often said, 'Crime that pays is crime that stays'" (Fitts, 2022d). See also "COVID", "Fascism, 'Modern' Hand of", "Corporate Media Cartel/6 Sisters"; "Methodology".

2) "Jon's clear-headed analysis can also help you connect the necessary dots between the multifaceted and long-standing 'great poisoning'-- of which 'Covid' is just the latest installment-- and the planet-wide financial and governance coups that we are now witnessing and must find [effective] ways to reject" (Fitts, 2022d). See also "Provocation", "Design".

'Rapture, the'- See "Dispensationalism".

Raw materials- (what really makes the [economic] world go 'round)

1) What does it take for (decent) "raw materials agreements"?

a) "";

b) ;

c) ;

d) ;

e) ;

f) ;

g) ;

h) (Dziobek, et al, 1992, 120-121).

See also "Ecological economics", "Primary Sector Economics (PSE)" [raw materials].

Reactionary- "To return to...[yester-year's] system is a hopeless policy.... First...as in all reactionary policies, you do not really restore the past. You restore merely one item out of the policy of the past, in whose picture it perhaps found a place, and put it into a radically different picture" (Hollis, 1949, 6).

See also "Conservative", "Hegelian dialectic", "Democracy".

Reaganomics- (a.k.a. 'military Keynesianism'/'Keynesianism')

1) "An economic slogan for the policy of cutting taxes for the wealthy (and especially for real estate²¹⁸⁰), while increasing I Social Security [or "FICA"] tax on employees (See *Tax Shift*). The effect was to quadruple the public debt during the Reagan-Bush administration²¹⁸¹ ... In addition to tax cuts, Reaganomics dismantled environmental regulations and deregulated industry in general, producing a stock-market and real estate boom that was the precursor to the economic bubble of the 1990s. (See *Chicago School*)" (Hudson, 2015b). See also "Reform, false", "CIA".

2) Who doesn't remember those '\$500 hammer' stories from the latter 1980's? Sovereign government deficit spending does in fact "create" new money (Keen, 2020c); and it was perhaps the chief component of US economic (GDP) growth through most of the mid-80's-to-mid-00's era.

See also "Military-Executive-Corpocracy", "Iancial Crisis of 2008-", "Scientific Management".

²¹⁷⁹ "The [basic] pattern is obvious. *Fake science; government support*-- from (so-called) AIDS in the 1980's and the great iatrogenic wave of the 1990's, to fraudulent Psychiatry in the 2000's (Rappoport, 2022i). See also "Scientific Method", [vs.] "Conditioning". It's as old as the pyramids, as is (see also) "Climate change", "Religion".

²¹⁸⁰ Hence a corresponding 'ez money' boom in [TAB] bankmoney production, and its resultant debt.

²¹⁸¹ "Reagan could easily be argued to be a practitioner of extreme military Keynesianism, using Pentagon budgets to create jobs and drive economic growth" (Graeber, 398, n.25).

['Military Keynesianism': there are >4,000 planes at this one USAF boneyard outside Tucson alone... most of them capable of being brought back to life if needed.]

'Real economy', the 1) banker-ese for the **TAB**-bankmoney circuit, as opposed to the **RAB**/Reserve circuit. 2) in the broader sense, everything except the F.I.RE. sector (gaming/liens/leverage). See also "Money, 2 classes (layers) of", "M1", "F.I.RE. sector", "National Income".

Real Estate- 1) is typically GDP's largest component (at a quarter to one-third), and accounts for about "80% of bank loans"²¹⁸² (Hudson, 2013). Steve Keen says that "at the moment, 90%...of money is created to finance real estate speculation"²¹⁸³.... [Thus] money creation has become the byproduct of funding a Ponzi scheme.... in most of the world... in the last 25 years"²¹⁸⁴ (Keen, 2016m, mn.40-41). In the 1970's, the average age for initial home ownership in Australia was 25; "now it's becoming [age] 40" (Keen, 2017j, mn.46).

2) Globally, there are approx. 220 trillion in real estate assets (Fitts, 2019f, mn.29).

2b) In "almost every Western country, the value of stocks & bonds [*equities*], and the value of *real estate* is just about exactly the same- for the US, Germany, England. But in China, the value of real estate is way, way larger.... [Non-bank] intermediaries finance...[a very large chunk] of...[it], and this is really the problem. If they levy a land tax, then... a lot of these financial intermediaries...[will] go bust. That's what I'm advocating" to Beijing (Hudson, 2020c, mn.28-29); "they're sort of like pay day loan lenders", not banks, because the Chinese "don't want to see a financial class developing along US lines" (Hudson, mn.33-34). See also "China".

3) "The easiest way to make money"²¹⁸⁵ (Hudson, 2017q, mn.11); and now also one of the easiest ways to keep it? Clercial real estate in particular, "has been made virtually exempt from income taxation. Absentee owners avoid tax by a combination of tax *deductibility*...[of] *interest* payments (as if it is a necessary business expense) and fictitious over *depreciation tax credits* that pretend that buildings and properties are losing value even when market prices for their land are soaring" (Hudson, 2017p).

3b) "A large part of the mortgage market is by speculators. The whole reason WHY they are willing to turn over the entire rental flow to the banks is that they hope to come out with a capital gain, really a land-price gain, resulting from systematic asset-price inflation as official policy. The mortgage banker's aim [in turn] is to absorb the entire land rent and even more, if possible. If borrowers are willing to pay a premium for anticipated price rises for property, [then] they will borrow more, and hence pay the banks more interest.... high land taxation will lead to loan defaults and widespread bankruptcy, bringing down banks as well as their customers."- Michael Hudson (Dodson, 2009).

²¹⁸² In Jorda, et al's pioneering meta-analysis of 17 developed economies (Jordà, Schularick, & Taylor, 2016b, 8), "household loans" (mostly mortgages) surpassed "business loans" in the 1990's, and since 2008 have grown far higher (though "80%" may be a slight exaggeration). For the UK, Adair Turner adds that "" (Turner, 2014, mn.14-16).

²¹⁸³ Keen amended this a year later to: "90% or more of the money they create just goes to finance real estate- and [or] *share buybacks*" (Keen, 2017g, mn.23).

²¹⁸⁴ This assertion, though slightly hyperbolic, is broadly borne out by Jorda, et al's long-term meta-analysis of 17 top developed economies, which found that real estate's share of total bank lending rocketed in the post-recession 1990's, surpassing (in aggregate) the 50% mark circa 2000 (Jordà, Schularick, & Taylor, 2016, 12). Perhaps in (Prof. Keen's) Australia, .5 was reached several years earlier than in the 17 nation aggregate.

²¹⁸⁵ "Every time interest rates go down, real estate prices go up" (Sullivan, 2017, mn.27).

4) “1 way that most real estate people make money is by having public investment increase the value of their real estate... [For example using] a Value Added Tax...to build [public] transportation that is going to vastly increase the [the value of] what the landlords own. That [predicting/influencing government investment trends] is how Trump made his money” (Hudson, 2017c, mn.9).

4c) Nonetheless, bank lobbyists “have succeeded since 1930 in reducing real estate taxes from 67% to 17% of state and local budgets.”- Michael Hudson (Dodson, 2009). See also “Taxation”.

5) More broadly, a “large proportion of any [real estate] site’s land value is created by *beneficial externalities*. Most of these result from public spending, e.g., on transportation, parks, schools and other amenities, as well as investment by private developers in the neighborhood” (Hudson & Goodhart, 2018).

6) “In any market economy, the price of real estate will tend to reflect both its rental return and the rate of return on the riskless bond.... The price of land rises and the price of land sometimes falls-- the relevant question is whether the anticipated increase in the price of land is sufficiently higher than the interest rate on bonds to justify a riskier investment” (Minsky, 1990, p.9).

7) In real estate, “the motto is ‘*Rent is for paying interest*’. A buyer will look at a property to see how much rent it pays off, and bid against other prospective buyers for a loan. The winner usually is whoever will anticipate earning the most rent from tenants to pay the interest– and promise to pay this to the bank” (Hudson, 2012g).

8) In “America now, 52% of all the real estate in the United States is...committed to the bank[s]”²¹⁸⁶ (Hudson, 2018, mn.22) as collateral. See also “Owners, the”.

9) This is because real estate loans or “mortgage credit on the balance sheets of banks [*monetized credit institutions*] has been *the driving force* behind the increasing *financialization* of advanced economies... with virtually all of the increase in the size of the financial sector [over the last century²¹⁸⁷ and past several decades in particular] stemming from a boom in mortgage lending to househ^olds.... [with] non-mortgage lending [today] playing only a minor role” (Jorda, Schularick, & Taylor, 2016, 39-40).

10) Unethical tactics (or strategy) in the 21st century? Catherine Austin Fitts “came to the conclusion” in 1998-2000, “that the real estate industry was using this” DoD-DoJ-released mind control technology “to basically get people out of their [targeted] building. You know if you have a tenant in a [long-term] rent-controlled apartment, you want to get them out. This kind of weaponry is very useful for making them sick... [and] making it intolerable for them to stay... It’s basically a way of running people out” (Fitts, 2022I, mn.0-1). See also “Mind control” [~~1984~~ 1994].

See also “Mortgage”, “Banks”, “Housing prices”, “F.I.RE. sector”, “Deutsche Bank”.

‘Real’ money- For the purposes of this book, that which is simply direct and not contingent upon any other source, interpretation, or ‘backing’²¹⁸⁸ by any other promises or anything-e. See also “Base money” [sometimes a.k.a. ‘federal funds’ or ‘fiat’], “Currency”, and/or “Graham, Benjamin” [for a better/*more stable* kind of ‘real money’].

1) Interbank money/‘federal funds’ (a.k.a. ‘Reserves/RAB) are ‘real money’ in the sense that they are the necessary component of most payment transactions (i.e. RAB works without TAB, but TAB does not work without RAB). They are not ‘real money’, however, in the sense that private persons and non-banks do not use them to count their wealth or their purchasing power, or to make economic decisions on. See also “Base money ” (M0), “Money”.

²¹⁸⁶ And as of Jan. 2019, “the Federal Reserve was holding over 10% of US home mortgages The total value of this market is ...comparable to the federal debt: \$15.53 trillion” (Caton, 2019). See also “Mortgage Backed Securities (MBS)”.

²¹⁸⁷ “At the beginning of the 20th century, mortgage lending accounted for *less than a third* of the typical bank’s loan book... [but] Mortgage booms...[have been] an important [if not to say *the leading*] source of financial instability in the post-WWII era” (Jorda, Schularick, & Taylor, 2016, 40). See also “Debt saturation”, “Big Government (growth of)”.

²¹⁸⁸ “The only real coverage [‘backing’] of [1st-tier] money, however, is in real economic output... for which there is a supply and demand” (Huber, 2017, 18). See also “Gross Domestic Product (GDP)”, “*Money, 3 (contemporary) Tiers of*”.

Reality economics- “A term for the study of economics [that is] subject to verification by empirical evidence rather than a body of abstract deductive assumptions by neoclassical and neoliberal economics that do not seek to be realistic” (Hudson, 2015b).

See also “Mythomatics”, → “Financialization”; “Soddy, Frederick (1877-1956)”, “Primary Sector Economics”.

Reality & Facsimile- (on 3 levels of increasing symbolization)

	<u>REALity</u>	→	<u>FACSimile</u>	a.k.a.	<u>see also/instead</u>
1. <u>Ecologic-Economic</u> base:	Prim. Sect. (wealth)		Gross D.P. (its \$ymbolization)	(over-monetiz.&)	“National Income”

[‘Since 1919’ (Somme motive & motivation [for more comprehensive & longer-term planning])]

Recession- (a.k.a. ‘credit crunch’ [from ↓M1]); two consecutive quarters of GDP decline.

1) The 11 US recessions since World War 2 have each been preceded by “a sharp reversal in the private sector’s budget position...” towards higher deficits and private debt (Kelton, 2012, mn. 59).

2) These accumulations have eventually manifested in the “*inveld yield curve*” statistic; whereby “longer-term interest rates are actually lower than shorter-term interest rates... [mostly because] people are anticipating a...recession”; such inverted yield curves have foretold every US recession for “the last 60 yel” (Black, 2018, mn.4-5).

3) More specifically, “the combination of a *negative spread* between the 1-year and 10-year Treasury yields and *negative real growth* (...after deducting inflation of the narrowly defined money supply M1) has predicted a recession by three-to-eight quarters” (Forsyth, 2018).

See also “Gross Domestic Product (GDP)”, “Bond yield curve”.

See also “Governance”, “Reality vs. Facsimile”, “Reform, 101”.

Redemption operation- (the exchanging of one kind of national money for another kind)

1) always largely a façade, like the tip of the iceberg, even before the Bank of England, in Venice, because it allows the salesmen of the banks to determine the amount of popular [TAB] money supply, and is hence (also) to be supported at par (1:1) at the level of base money. See also “Bank welfare”.

See also “Fiduciary money”, “Base money”.

Reform, 101- (changing what government does & doesn’t do; i.e. [in the US] the Reform Triangle, not to be confused with the [20thc] ‘Iron Triangle’ [of inst. corruption, ‘vested interests’ & no reform])

“Properly educated people always appreciate holistic approaches to any challenge. This means that they understand both cause and effect, and intertwined complexities... A major part of our problem in the public policy arena is [simply] the decline in intelligence [along] with integrity among key [over-burdened] politicians & staff-- at the same time that think tanks & universities, and non-governmental organisations have also suffered a similar intellectual diminishment.”- Robert David Steele (Ahmed, 2014). See also “Dumb downing”.

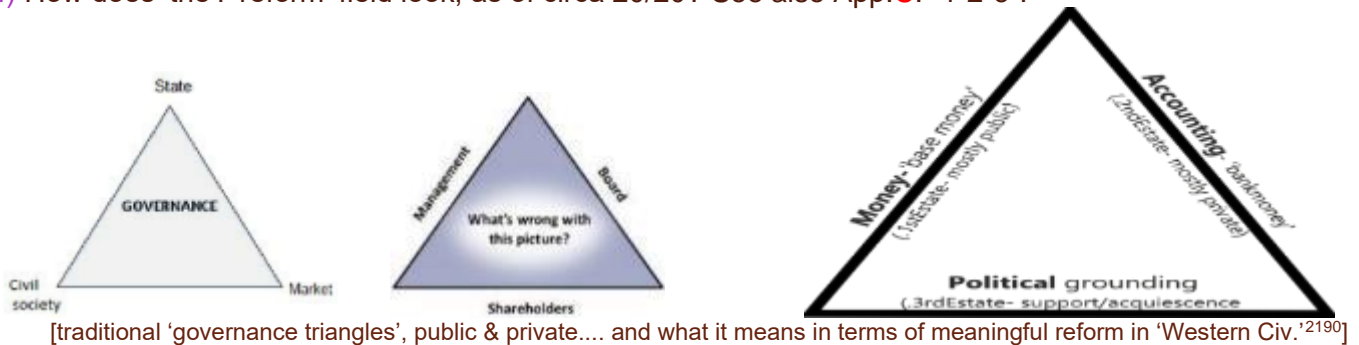

1) *Currency* and its trail-- *Accounting*-- have both always been governed or reformed (at least in Western Civ.) by *Politics*. See also “Politics”, “Political Economy”.

2) The 3 institutions, in terms of meaningful reform, are mutually inoperable. One cannot seriously address 1 of the troika without also questioning the other 2 sides of the distinctly ‘Western Civ.’ governing pyramid, goilback to the 14th-15th century city-state Republics of northern Italy (where the pyramid’s 2nd beam of taking accounting seriously was first carefully constructed²¹⁸⁹ ...and then later surpassed in the Netherlands [16th-17thc] and then the UK [18th-19thc]. See also “Civilization, Western”, “Montesquieu, Baron de”.

See also “Estates, 3”, “Civilization, Western”, “Accounting, standards & reform”, “Parties, political”.

3) “There does not seem to be an easy way to vote, regulate, or teach our way to significantly greater equality” (Scheidel, 2017, 9). See also “Monetary reform”, “Reform, false”, “Violence”, “Needs, desires”.

4) How does ‘the’l ‘reform’ field look, as of circa 20/20? See also App.C: “1-2-3”.

Reform, false- (while in ignorance man chases symptoms & adjectives, instead of upstream nouns, to 'reform')

1) Some monetary experts and schools, such as *Modern Money Theory*, pretend falsely that US money today is *already* sovereign money. Monetary terminology is saturated with deception (see “Deceptive Banker Terms [d.b.t.'s]”). The proof that contemporary US money is not sovereign money is Treasury bills. Politicians like Gary Johnson, the 2012 presidential candidate of the Libertarian Party, claim falsely that we owe this debt ‘to ourselves’. These are obvious weasel words spoken by professors and politicians bought by bankers; anyone who falls for such deception is gullible. The federal reserve banks are corporations, controlled by corporate banks, controlled by controlling private shareholders, who are currently in the process of rapidly extracting the world’s wealth for themselves. A popular modern academic practice is to collapse the Fed and Treasury into one conceptual government entity, because the Fed agreed to rebate its interest profit to the Treasury, after a 6% cut. Even if such theories seem plausible in some ways, they are false,²¹⁹¹ because they fail to start with the right question, namely, why is the current financial system so unjust and so proficient at extracting wealth from the 99% into the hands of the 0.01% in the financial sector. When the magnitude of the problem is understood, it will be seen that such lukewarm academic analysis as MMT fail to seriously undercut the

²¹⁸⁹ The ‘West’s long-admired political & economic stability are both of, course, “grounded in cultures of *accountability*, which rely [in both private & public sectors, since the 16thc] on double-entry accounting systems. Double entry... brought with it [in Florence and northern Italy, more than a century before Guttenberg & Luther] the central concept of the balanced book, which could be used to judge and hold accountable a political administration [not just business partners... and was hence mirroring] the divine aspect of God’s judgement and a tally of sins, but also... sound business and good judgment.... [As with the other cardinal ‘Western’ notion of ‘separation of powers’, however, the practice of actually] maintaining financial accountability was and is a constant struggle” (Soll, 2014, xvi); something easier said than done. See also “Civil National Identity (CNI)”, “Federal Accounting Standards Advisory Board (FASAB)”, “Federal Reserve audit”.

²¹⁹⁰ *Base money* (public cash-RAB), *TAB-bankmoney* (private accounting), and *politics* have often been effectively under the control of one institution, off-and-on, since Medici days in the 15th century. See also “Oligarchy”, “Modernity”, “Modern, Early”, “Civilization, Western”.

²¹⁹¹ See also <https://www.youtube.com/watch?v=LPRMdCSFI8E> (Titus, 2020b, mn.8; Friedman, 1977). See also “Neoclassical Economics”.

extraction racket and thus protects it, failing in its moral responsibility. Fiscal reform is not (see also) “Monetary reform”.

2) In terms of propagating an inadequate understanding the monetary hamster wheel that comprises ‘modern’ society, the ‘new’ False Dichotomy/Dialectic that seems to be emerging, as of the mid-2010’s, is that of ‘Modern Monetary Theory’ (bankmoney controlled “Left”) vs. ‘Libertarian’ (bankmoney controlled “Right”). See also “‘Opposition’, controlled”.

3) Why does this matter? “In summary, one can say that providing money by way of credit creates a mutual obligation to pay, a claim and a liability (a debt), whereas the transfer of money discharges an obligation to pay. This is no hairsplitting. It is about the basic monetary stipulation of whether one asserts a *false identity of credit and money* [sic], as Banking teachings do, or whether one maintains their being different and exacts a *clear separation* of money and credit, or say, monetary and financial powers, as Currency teachings do. Connected to this is the equally fundamental question of whether money comes necessarily with a corresponding debt, or whether the circulating stock of money [even] *can* be debt-free” (Huber, 2017, 95). See also “State capture”, “Credit money”, “Separation of Powers”.

See also “‘Modern Monetary Theory’ (MMT)”, “Public Banking”, “Piketty”, “Dirigism”, “Fin de Siecle”, “Scofield Bible”, “Austrian School”, “Duopoly”, “Parties, political”.

Regulation- (typically a sign of faulty design²¹⁹²; and even when they ‘work’...)

“...public law or regulatory constraints do not necessarily curtail private power and its use of private law; often it only channels it into different directions– with the [long-term] result of an *ever more complex*, perhaps even ungovernable system.”- Katharina Pistor (Pistor, 2020b). See also “*Money, 3 (contemporary) Tiers of*”, “Privilege”, “Lobbyists”.

1) In money & finance (as much as with any other field), it’s been proven time & time again that “[r]egulators have trouble obtaining and analyzing relevant, timely information and are not equipped to react very quickly.... Complicated, new regulations won’t change regulators into super-humans”²¹⁹³ (Peirce, 2012). See also “LIBOR” [UBS]; “Narrow banking”.

2) “doesn’t work [particularly] in a system which concentrates wealth and power. Experience teaches us that such concentrations allow the corrupt to overcome regulation²¹⁹⁴ [simply] by purchasing political power and influence” (Zarlenga & Poteat, 2016, 63). Nonetheless there are many regulatory tactics that would seem helpful today, such as banning “margin lending, for a start” (Keen, 2016n, mn.23). More fundamentally, it is “not a good idea to leave the financial sector to its own devices... [or it] will break down very quickly... like a nuclear reactor without coolant” (Galbraith, 2016c, mn.30). See also “Accounting standards”, “Big Government (growth of)”.

3) The United States has traditionally been more serious about financial regulation (and other forms of separation of power) than other ‘developed’ countries²¹⁹⁵: “It must be pointed out that the amount of financial disclosure required by regulatory authorities abroad is generally not as great as in the United States. This fact may make it more difficult to evaluate the soundness of non-US banks than US banks” (Goodfriend, 1981, 16). “In fact, the tremendous growth of the Eurodollar market in the last two decades [from \$20 billion in 1964 to \$943 billion in 1980 (p.13)] “has largely been the result of efforts to move dollar

²¹⁹² “Let me add, that only a virtuous people are capable of freedom. As nations become corrupt and vicious, they have more need of masters.”- Benjamin Franklin, letter to the Abbés Chalut and Arnaud (April 1787). See also “Design”.

²¹⁹³ Especially when they’re not even in the vicinity of regulating the right things. Financial-monetary regulations show that “all sorts of things are regulated, for example liquidity and equity requirements under conditions of fractional reserves, but not what matters most: the control of money creation” (Huber, 2021). See also “Politics”, “Parties, political”, “Neoclassical Economics”.

²¹⁹⁴ For one of countless examples, see Martens, 2012. And even before such points, “big banks” can simply “hire 1,000 compliance officers. But a small bank... can’t afford to have 2...” (Werner, 2021, mn.48).

²¹⁹⁵ In the 1990s the US banking system was “still one of the most heavily regulated in an industrialized country, superseded only the the Japanese [*keiretsu*-based] financial sector” (Busch, 2012, 73).

financial intermediation outside the regulatory jurisdiction of the United States monetary authorities”²¹⁹⁶ (Goodfriend, 17-18).

See also “Eurodollars”, “Offshore banking centers”, “Design (Knowledge Age)”.

3b) After 4 decades of globalism-inspired deregulation, various “government agencies... can [still] issue cease and desist orders, halt dividend payments, remove bank executives, and levy civil money penalties” (McAndrews & Menand, 2020); although still only one or two bankers in the US have gone to jail this century. See also “Lender of Last Resort/Too Big to Fail”.

4) “As to federal regulation of the activities of commercial banks, what we need is not more, but less, of it. At present, banking operations are complicated and impeded by conflicting regulations and controls. Three separate [federal] Government agencies now send their examiners into banks.... [and] smaller banks, face an increasing trend towards more concentration of economic power in the hands of the big banks.... These trends... cannot be remedied by merely multiplying the regulations,²¹⁹⁷ or increasing the concentration of banking power, *or by deposit insurance*” (Fisher, et al., 1939, 39).

5) The main regulatory bodies for the US banking industry today are (in chronological order):

a) the states- 54 US state or territory-based Banking Commissions (for state-chartered banks)²¹⁹⁸ monitor approx. “6,500 commercial banks and another 400 state-licensed branches of foreign banks... [comprising] over 40% of the total assets of the commercial banking system” (Busch, 2012, 51)²¹⁹⁹;

b) the (privately-owned) Federal Reserve system²²⁰⁰ (FRS; est. 1914) is primarily responsible for the formulation of monetary policy-- in conjunction with the *BIS* uber-regulators in Switzerland (est. 1930); and it is the **sole** regulatory agency for US Bank *Holding Companies*”, as well as for state-licensed banks within the FRS²²⁰¹ (Busch, 2012, 50);

c) the Treasury Dept.’s Comptroller of the Currency (OCC; the lead supervisor for approx. 1500 nationally-chartered US banks²²⁰², est. 1863; changed its focus to solely regulating banks in 1914. Since 1973?);

²¹⁹⁶ From a European perspective, the US financial policy network is “a pluralist system of associations in combination with a [more and more] fragmented regulatory and legislative system leads to policy failure and blockade... [as opposed to the UK, where] market concentration and a [similarly] concentrated regulatory and legislative system create high state capacity, despite a [superficially] pluralist system of associations.... [S]tate capacity varies considerably in the field of banking regulation” (Busch, 2012, 21). See also “Statism”.

²¹⁹⁷ The subsequent decades have revealed that America’s stricter regulatory rubric from the 1930’s did seem capable [unlike most other places apart from Germany] in holding the line on banking failures and consolidations- up until the last quarter of the 20th century at least. See also “Criminalization of Banking, the”.

²¹⁹⁸ 82% of all US banks are state-chartered (& state-regulated); while larger, nationally-chartered banks comprise only 18% (Stackhouse, 2017); even though they account for most of the sector’s market share. At least up until 1980, state “laws had invariably set lower reserve requirements... for state chartered banks (Allen, 2009 113).

²¹⁹⁹ The 54 supervisory bodies have, since 1902, “been represented on the federal level...by the Conference of State Bank Supervisors...whose aim is to ensure the survival of the dual [chartered] banking system” (Busch, 51).

²²⁰⁰ “Here is how the *New York Fed* defines its regulatory regime, under the title ‘*Relationship Management*’: [Bank] ‘Examiners serve as relationship specialists, financial analysts or surveillance analysts, and focus on large foreign banks, other foreign banks, large domestic banks, regional banks or community banks’. Relationship management is not how the public wants its regulators and prosecutors of financial fraud to function, but that is precisely what we have today” (Martens, 2012). The other 11 “regional Fed presidents outside of the New York Fed have little role in supervising big banks”- <https://www.washingtonpost.com/news/wonk/wp/2018/04/03/john-williams-tapped-to-lead-new-york-fed-frustrating-progressives-and-worrying-some-on-wall-street/>.

²²⁰¹ These approx. 1000 state-licensed, FRS banks “hold about 25% of the total asset value of the commercial banking sector... [More importantly, the] 6,010 [bank] holding companies [BHCs] under Fed scrutiny control over 7,000 banks, with [something more like] 94% of all capital assets [in the sector, giving] the Fed... [the most] crucial role... [in] bank regulation.... [T]he Fed has claimed that its [sui generis] regulatory remit is essential to its ability to fulfil its tasks as a central bank (even though none of its international counterparts have such regulatory powers)” (Busch, 2012, 50); and in **recent years** has even sought to substantially broaden its regulatory scope. See also “Dodd-Frank”.

²²⁰² The oldest of the 3 commercial bank regulatory agencies, the OCC used to be responsible for issuing the US dollar, until it was displaced by the so-called ‘Federal’ Reserve in 1914. Now it is “the only one of the 3 federal regulatory agencies whose...jurisdiction exclusively concerns the supervision and regulation of banks.... [The Office spot-checks or oversees] over 2,800 banks operating under national license, as well as 65... subsidiary branches of foreign banks... The OCC [also] controls the licensing process.... [and is tasked with] monitoring the compliance of banks to [various] federal laws such as the Equal Credit Opportunity Act or the Community Reinvestment Act. Most importantly [however], the OCC conducts **on-the-spot** investigations in even the most far-flung locations to gather information...” (Busch,

[established 1863 and 1799, respectively]

c1) Also within the Treasury-OCC is the FinCEN bureau (est. 1990; \$114mn. budget [2018]) is primarily tasked with ‘combating domestic and international money laundering, terrorist financing, and other *financial crimes*’ (within those new-fangled ‘3rd Tier Money’ sectors). It reports to the Egmont Group of [approx. 147 nation-based] Financial Intelligence Units (est. 1995, based in Toronto). See also “Money Services Businesses (MSBs)”.

d) the *Federal Deposit Insurance Corp.* (FDIC; est. 1933), in addition to running the state-backed insurance scheme, “oversees the 5,500 banks which are licensed by individual states who are insured by the FDIC but [who] are *not* members of the Federal Reserve System”²²⁰³ (Busch, 2012, 51);

e) and the new *Consumer Financial Protection Bureau* (est. 2011 by the *Dodd-Frank Act*²²⁰⁴), which was **supposedly designed to consolidate** responsibilities from a number of other financial regulatory bodies, including: the FDIC, the FTC, HUD, and the National Credit Union Administration, in addition to the Federal Reserve, where it is housed (and from which it is funded). It also coordinates with state regulators and the Treasury-OCC.

6) The US Treasury’s regulatory focus hasn’t kept up at all with the banking sector’s consolidations in recent decades, and in terms of reputations, the OCC’s is the most lax. “The establishment of shared assessment methods and categories accepted by all federal regulators was only achieved in 1997. A lack of cooperation between agencies is not surprising.... [as the] system gives banks the opportunity to play regulatory agencies off against each other... fostered by the fact that a distinct bureaucratic culture exists in each regulatory agency.... As a consequence of...[OCC-FDIC] bureaucratic battles [over liberalization, since the 1980’s], the OCC’s reputation as a particularly progressive agency has made it popular with the bankers. The Fed...[in turn] has become increasingly anxious that the ability of banks to move from one regulator to another could lead to the flight of banks to the OCC’s more generous regime” (Busch, 2012, 52).

7) “The lack of [practically] any systematic division of responsibility between [congressional] committees... is a particularly acute problem when it comes to banking policy... [and] exacerbates the inefficiencies of the...legislative process²²⁰⁵... [which is now] fragmented in a fashion comparable to its counterparts in the... regulatory agencies” (Busch, 55).

8) As a result, regulation of insured banking in the 1980s...[and since then, has been] awful. Among other things, Congress relaxed bank and thrift portfolio constraints in the early 1980s, allowing insured institutions to dramatically increase their exposures to risky asset classes like junk bonds and construction loans” (Ricks, 2017, 121).

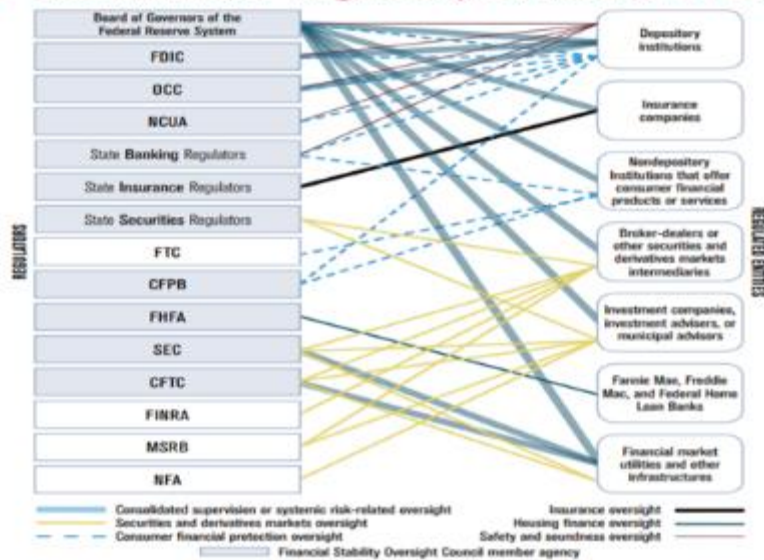

2012, 49-50); although that particular rubric (which hasn’t been updated for decades) sometimes means that both a \$5 mn. bank in Gallup, New Mexico and a Big 6 megabank in New York receive the same regulatory treatment (i.e. one visit from the OCC every 12-18 months).

²²⁰³ The FDIC “also has the right to inspect the books of all those banks who have signed up to its ...insurance scheme... [and] to *recommend* administrative action against transgressing banks to federal...agencies” (Busch, 2012, 51);

²²⁰⁴ The *Dodd-Frank Act* assigned “primary consumer compliance supervision of banks *with more than \$10 billion* to the Consumer Financial Protection Bureau” (Congressional Research Service, 2017). Under the Trump Admn., the CFPB was almost a non-entity (<https://www.americanbanker.com/news/dems-unload-on-cfpbs-kraninger-you-are-absolutely-worthless>); but the Supreme Court (in June 2020) upheld its basic legitimacy in *Seila Law v. Consumer Financial Protection Bureau*, while also striking down the (famously) czar-like tenure provisions for its Director. The 5-4 ruling was ‘politicized’, with Justice Roberts ruling that: “Such an agency lacks a foundation in historical practice and clashes with constitutional structure by concentrating power in a unilateral actor insulated from Presidential control.... The agency may...continue to operate, but its Director, in light of our decision, must be removable by the President at will” - wiki. Justice Kagan, in dissent, wrote that the ruling: “wipes out a feature of [the CFPB that] its creators thought fundamental to its mission-- a [structural] measure of independence from political pressure”- wiki.-

²²⁰⁵ Congress is often, if not typically “a reactive institution responding to or confirming changes rather than initiating them” (Busch, 57).

U.S. Financial Regulatory Structure, 2016

U.S. Dept. of Treasury, "A Financial System That Creates Economic Opportunities"

[Clal 2017, 22]

9) In the UK, however, quite the contrary an "early casualty of the [2007-08] crisis...[was] the *single financial market supervisor model*, pioneered by the British...[Financial Services Authority; disbanded 2013, ...which] had been popular in academic writing... for reasons of supposed efficiency [and independence] ...but the crisis around Northern Rock [the AIG-Lehman Bros. of the UK's Crisis] revealed that in fact decision making was [in fact] shared between the FSA, the Bank of England, and the [UK] Treasury, and [was] complicated²²⁰⁶ by it.... [I]t would seem that the role of central banks has been *strengthened* by the events.... The role model function the UK system had for many in the last decade no longer exists" (Busch, 2012, 253). See also "Lender of Last Resort", "Technocracy".

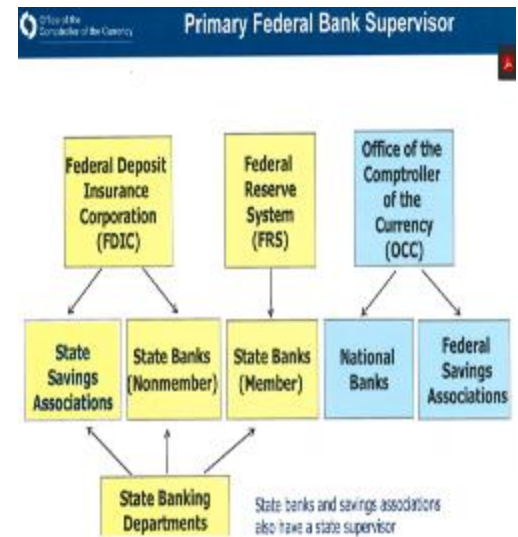

9b) In 2013, however, Britain abolished the FSA (in the name of accountability), and (as of 2021) the "players in the system" are the BoE's Governor and Monetary Policy Committee (MPC), the head of the PRA, the head of the FCA, and the (inflation-targeting) Treasury (Balls, 2020, mn.239). "Monetary policy", via 1] the Treasury-Chancellor's official *inflation* target, in conjunction with 2] the MPC's *interest rates*, is "clear... [and now] easy to observe" (Ibid). "Financial stability", however, "is *much* [sic] more opaque. The target is much less clear.... There's much *less* [sic] understood externally. And it's worried me in the last 10 years, and the Bank of England has ended up taking on *much greater* responsibility and de facto accountability...[with] not enough of that devolved" (Balls, mn.239-240). See also "Financial Services Authority (FSA)", →"Bank of England", "City (of London), the".

10) "" (Pistor, 2022, mn).

11) Regulation Updates: 11/21- The OCC has "begun to increase our focus on the banks that provide services to large fintechs and [hence] facilitate synthetic banking outside of the bank regulatory perimeter. This dovetails with the CFPB's recently announced order requesting data from big tech companies to assess the adequacy of their consumer protections." - Comptroller Michael Hsu, <https://www.occ.gov/news-issuances/speeches/2021/pub-speech-2021-115.pdf> . See also "Fintech". See also Ch.4; "Dynastic cycle, the", "Big 5 (High St.) Banks", "Vortex, monetary", "Lobbyists".

Regulation D- See "Reserve 'Requirements", "Eurocurrency".

Regulation Q- the Federal Reserve's ongoing rules for *capital requirements* at US banks.

²²⁰⁶ "There was, obviously...[c.2002] loads & loads of regulation[s]. It's whether they were actually applied or not that actually mattered; but the global policy was not to properly apply the regulation that existed" (Fraser, 2012, mn.16). See also "City (of London), the".

1) “Because of Regulation Q, banking was not viewed as a very complicated business in the 1950’s. It was claimed that bankers operated on a ‘3-6-3’ rule” (Markham, 2002b, 303); paying only 3% interest, loaning at only 6%, bankers were “then free to play golf by 3 in the afternoon, because there was nothing else to do” (Markham, 304).

2) From 1933²²⁰⁷ until the *Dodd-Frank Act of 2010*, banks were restricted (if not outright prohibited) from paying interest on checking accounts. And until 1986 *interest rate ceilings*²²⁰⁸ were placed on various types of accounts, which drove the rapid growth of less-regulated Money Market Accounts and eurodollars in the 1970’s and 1980’s. See also “Offshore banking centers,” “UKUSA Agreement”.

3) In 1970, the Fed removed Regulation Q’s interest rate ceilings on large CD’s with maturities of less than 3 months; and in 1973 Regulation Q was “eliminated for large CDs (>\$100,000) of all maturities and they have not been re-imposed. Except for the recession period of the mid-1970’s, the CD market expanded steadily through the late 1980s. One of the main engines of growth was the creation of *money market mutual funds*... [which] pooled the funds of many small investors...dissatisfied with the [often less than the rate of inflation] Regulation-Q-limited returns” (Burton, et al, 2010, 254).

See also “Capital Adequacy Requirements”, “Eurodollars”, “Money markets & Money market funds”.

Rehypothecation (‘Repo’) Markets- EB, 9/16 See “Repo (Repurchase) agreements”.

Reinhart-Rogoff thesis- The post-crisis (2009) theory echoes earlier 1990’s EMU criteria in asserting that “things start to go awry once a country passes a loose threshold of [*public debt reaching*] 90pc of GDP” (Evans-Pritchard, 2016c). This is at least somewhat misleading, as government (“sovereign”) debt is easier to manage²²⁰⁹ than (the more widely dispersed) private debt.

See also “Debt, private”, “Debt public”, “‘Modern Monetary Theory’ (MMT)”.

Related parties- (a.k.a. ‘in cahoots’) 1) Traditionally in GAAP (and also originally in IFRS accounting), “the idea is [or was] that transactions between players who are *not at arm’s length are not reportable* transactions at all. These related-party rules were [c.2006] undesirable to the Chinese government [however], because they could call into question the profitability...” of China’s numerous state-owned enterprises (Ramanna, 2015, 15). The more extensive disclosure rules required of ‘related parties’ also motivated the Chinese government to substantially “water down” the IFRS’ official definition of the term (Ibid). See also “International Financial Reporting Standards (IFRS)”, “China- statistics”.

Religion- (‘popular’²²¹⁰ ligaments binding philosophy with cosmology, or ‘philosophy, cubed’²²¹¹)

1) The “hearths of early civilization were...located in a wider context of relatively arid mid-to-tropical latitudes...well-watered [and/or coastal] regions bounded [nonetheless] by...dry and hostile biomes [during a time-frame of general aridification]; of these the Nile [future Islam] was the *most* circumscribed [& the most southerly/dry], [and] the Yellow River [Daoism-Confucianism] the *least* [& the most northerly/wet]” (Brooke, 2014, 189). See also “Civilization”, “Philosophy”.

²²⁰⁷ Per section 11 of the *Banking Act of 1933*, as promulgated by the Federal Reserve Board.

²²⁰⁸ Reg. Q’s interest rate ceilings “were designed to discourage banks from aggressively expanding their loan books and then funding them with deposits from obtained from their competitors by chasing interest rates higher. This ceiling arrangement was deeply offensive to free marketeers, but Senator Glass...understood that competitive efficiency had to be sacrificed to banking safety, given the moral hazard[s] of deposit insurance and fractional reserve banking” (Stockman, 2013, 177).

²²⁰⁹ Indeed, Evans-Pritchard adds that “There is no such [public debt] threshold for a mature developed country with deep bond markets, able to borrow in its own currency. Britain’s public debt was over 200pc after the Napoleonic Wars. Japan is over 250pc today, and the sky has yet to fall in Tokyo [as it has in Greece]. It is perfectly plausible-- perhaps likely-- that the US will end up in the much the same place over the next 15 years” (2016c). Then again...See also “Dutch disease”.

²²¹⁰ From an American perspective at least, Ben Franklin noted that “When a religion is good, I conceive that it will support itself, and when it cannot support itself, and God does not take care to support, so that its Professors are oblig’d to call for the help of the...[state, which] is a sign, I apprehend, of its being a bad one” (Franklin, 1780). See also “Statism”.

²²¹¹ Basically, a society or culture’s (already-decided upon) ‘intersection of Geo-economic *reality* with Politico-cultural *possibility*’ may be either “philosophy, squared” (non-fundamentalist) or “philosophy, cubed” (fundamentalist).

2) actually wasn't much²²¹² until (the radical monetization-culture of) the Axial Age motivated (and/or enabled) some hard ethical thinking. For example, "you find in [the Book of] Job, that God is good. But if God is good, [then] He *cannot* [sic] do anything; he can only do things that are good.²²¹³ And if He can only do things that are good, and cannot do things that are evil, then there is *something* [sic] higher than God: the *rules* [sic] of ethics. Thus the great contribution, even before Christ, moving toward the Western idea of Deity, was the idea of Transcendental *Ethical* [sic] Monotheism" (Quigley, 1976c-pt.1, mn.32). See also "Eras of (monetary) History", "Charismatic Authority".

3) "World religions... are full of...[a] kind of [monetary-economic] ambivalence. On the one hand they are outcries against the market; on the other, they tend to frame their objections in commercial terms" (Graeber, 84). See also "Eras of (Monetary) History", "Monetary economics".

4) "In Asia the number of dervishes or monks seems to increase together with the warmth of the climate" (Montesquieu, 1748, 226). See also "Confucian" (less than most).

4b) "The fear of [Catholic] Spain²²¹⁴ persuaded the silent majority [of Dutch] to accept the leadership of a minority of Calvinists" (Burke, 1974, 80). See also "Protestantism", "Sharia finance", "Spain".

5) "The joy of religion is an exorcist to the mind; it expels the demons of carnal mirth and madness.... [However] A man who puts aside his religion because he is going into society, is like one taking off his shoes because he is about to walk upon thorns."- Rev. Richard Cecil (Cecil & Pratt, 1824, 22; Edwards, 1908, 475).

6) In (or by) the latter 20th century, it seemed that there were only about 9 primaries (chronology).

	'Better the _____than the... _____'.
1.(c.600 BCE)	silence	'ya.-ction'
2.(500's BCE)	abstract-ancestral	עִתָּת רִיבִית world of today
3.(400's BCE)	glitter	whip
4.(400's BCE)	inclusive	barbarian
5.(300's BCE)	'the' ancestral way	glitter
6. (300's)	New	Old
7. (600's)	not to covet	ulumbros
8. (1000's)	trend	stasis
9. (1500's)	new heart	trend

See also "Design", "Culture".

Renaissance, the- (i.e. the re-birth, after 9 centuries, of banking [and 'the fire' of usury], first in Italy and then most of the rest of Europe, from the 1300's-c.1650; i.e. 'the wake of double-entry accounting'; sometimes conflated with the [later-developing (mostly 16thc)] Protestant Reformation of northern Europe) "Do not be afraid of greatness."- William Shakespeare, *The Twelfth Night*, c.1600

1) All through the Middle Ages, Europeans had focused their energy on religious philosophy and the afterlife, viewing the world primarily as a preparation for the one to come.

²²¹² Even the notion of transcendentalism-- that God is "outside of the world of space and time...[wasn't] established" until c.500 BCE (Quigley, 1976c-pt.1, mn.30).

²²¹³ The Christian "'goodness' of human nature...[arose from] the belief that it was a kind of weaker copy of God's nature, lacking many of God's qualities (in degree, rather than in kind), but none the less perfectible...perfectible largely by its own efforts with God's guidance. The Christian view of the universe as a hierarchy of beings, with man about 2/3rds of the way up, saw these beings, especially man, as fundamentally free creatures able to move, at their own volition toward God or away... the fulfillment of all good.... In this Christian outlook, the chief task was to train men so that they would use their intrinsic freedom to do the right thing by following God's guidance" (Quigley, 1966, 1238).

²²¹⁴ "Over the last 1000 years the Catholic Church has been saying [that] it's noble to be poor. But Jesus never said it was good to be poor. What he said was that rich people are greedy and corrupt. That's what Socrates was saying, as well as Aristotle and the Stoic Roman philosophers, [and] the biblical prophets in Isaiah" (Hudson, 2017s). See also "'Conspiracy theorist'". Compounding the long, slow decline (during the 17th-19th centuries) of the world's first global or 'super-power' (which had grown accustomed to relatively easy bullion & very cheap coinage), was the fact that the Spanish language uses not the usual 2 words, but only 1-- *moneda*-- "to designate 2 different concepts: *currency* [as an abstract 'unit of account' system] and [actual physical] *coinage*", in contrast to the French, German, or English languages (Sanahuja-Anguera, 2017, 56, n7). See also "Spain", "Latin America".

1b) With the decimating Great Plagues²²¹⁵ and rise of banking (bankmoney) in the more liberal Kingdoms of the west, however, survivors found themselves in a 'wage earners' market', manorial serfdom was on the way out (from 1370-'s-1570's), and people (even before news of Columbus and various El Dorados) became much more interested in life on Earth, as new emphasis was placed on markets, monetization, and the development of individual potential.

2) Governments, essentially (and there were a great many in Europe then), re-discovered the lost industry of borrowing money in order to finance wars and technological weaponry. Hence, the term represents a glorification of the "permanent institutionalization of that marriage between the interests of warriors and financiers that... [began] to emerge in [the banker-run city-states of] Renaissance Italy, and that eventually became the foundation of [so-called 'modern'] financial capitalism" (Graeber, 2012, 364). See also "Central Banking-Warfare model".

2b) "If you are asserting a proposition about 'universal reason', [then] you are opening it up to the critique of reasoning" (Farrell, 2017), and the rationalization of (incremental) usury. See also "Usury", "K.J.B. (King James' Bible)", "Enlightenment, the".

Rent (land rent)- "...darkens faith in the human soul, and across the reflection of a just and merciful Creator draws the veil of a hard and blind and cruel fate!... a robbery that deprives of their birthright the infants that are now coming into the world! Why should we hesitate about making short work of such a system! Because I was robbed yesterday and the day before, and the day before that, is it any reason that I should suffer myself to be robbed today and tomorrow-- [or] any reason that I should conclude that the robber has acquired a vested right to rob me!" (George, 1879, 327). See also "Georgism (& Land value tax)", "Privilege".

1) "Literally a periodic payment, from French *rente*, a government *bond* paying interest on a regular calendrical basis at a specified rate. The concept was extended to property rents, whose payment also is periodic and specified" (Hudson, 2015b). "[I]n real estate...the motto is '*Rent is for paying interest*'" (Hudson, 2012g). See also "Rentier".

2) "The excess of price over and above the necessary cost of production" (Hudson, 2011).

3) "Economic rent is a payment for privilege."- Michael Hudson (Dodson, 2009). See also "Privilege". See also "Unearned income", "Clark, John Bates (1847-1938)".

Rentier- 1) 1) "Someone living on a fixed income, such as the... government bonds. What Keynes called a 'functionless investor', in his recommendation for 'euthanasia of the rentier' (General Theory, p. 376, 1961 Papermacs ed...). Property rents and interest are the 2 major modern forms of rentier income" (Hudson, 2015d). "This is why [Wall St.] banks back untaxing real estate and deregulating monopolies, to maximize the economic rent that can be paid as interest" (Hudson, 2012g). See also "Real Estate".

2) The rentier class (sector)-- bekownst or otherwise-- "seeks to take for itself the public domain.... [as] the economy is turned into a tollbooth... on access to housing...access to roads...access to telephone systems... siphoning off the wealth..."; in the US since 1980, pretty much "all of the growth in the economy is overhead-- to the rentier sector... the F.I.RE. sector, which should now include the *legal system* and the monopoly system" which it protects (Hudson, 2012b). See also "Duopoly".

3) "Capitalism was [originally] revolutionary. It was to get rid of the landlord class; it was to get rid of the rentier class. It was to get rid of the banking class, essentially, and just pare [down, not increase!] all the costs that were unnecessary for production. How did England and America and Germany gain their [transnational] markets? They gained their markets basically by the government picking up a lot of the costs of the economy" (Hudson, 2020c, mn.8). See also "Ricardo, David", "Capitalisms".

3b) "Before WWI, everybody believed that the era of the rentier was out.... The idea was that all this [feudalism, imperialism] was to be in the past, just as much as banking [a.k.a. "endogenous money creation"]

²²¹⁵ Actually the plagues, in England and France (combined, in the latter, with the 100 Years War), were more than 'decimating': "the French population [by the mid-1400's] was 1/3rd to 1/2th what it had been 150 years before".- <https://www.youtube.com/watch?v=QuHoRgs9UkQ> [WT, pr.23, mn.5].

was to be in the past. They were going to have national banking as a public utility. Instead the rentiers have fought back” (Hudson, 2010b). See also “Neoclassical”, → “Financialization”.

3c) “The idea that people can live off the interest of their mutual indebtedness ([per Frederick Soddy’s] *Wealth*, page 89) is just another perpetual motion scheme-- a vulgar delusion on a grand scale” (Daly, 1980). See also “Soddy, Frederick (1877-1956)”.

4) “The reason why They fight so hard for their [economic way of] life is because they can’t innovate, they can’t create real wealth, [and] they can’t create products that add value to the real economy. So it’s logical that the rentiers will fight the dirtiest fight to keep that monopoly position.”- Ross Ashcroft (Hudson, 2017q, mn.24). See also “Oligarchy”, “Lobbyists”, “War”.

5) The UK is “now really almost entirely a rentier economy.... That’s the whole point...to eliminate work from the economy, and just simply allow people with money to sit on their backsides and collect rent.” - Political economist Ann Pettifor (Keen, 2018, mn.17).

6) The central banking system’s owners are the ultimate ‘rentiers’ of today’s currency systems; they rent out what (pretty much) everyone uses for money. See also “Owners, the”, “Central Bank”, “Lender of Last Resort”.

See also “F.I.R.E. sector”, “Debt peonage”, “Death Culture”, “Bullshit jobs”.

Rentier income- “The essence of *classical political economy* was that no outlay of living or embodied labor is needed to obtain rent and interest.... This analysis offended the vested interests, which sponsored a post-classical reaction...” (Hudson, 2015b). See “Marginal Utility Theory”. See also “Veblen, Thorstein (1857-1929)”.

Repo (Repurchase) agreements- (synon. ‘rehypothecation markets’, ‘overnight Treasury repurchase agreements’, or ‘R.P.s’; a.k.a. ‘shadow money’, or [supposedly] ‘the next-most conservative short-term, secured investment, after T-bills’, that nonetheless, “tends to be the canary in the coal mine” [Titus, 2020g]) See also “Money, 3 (contemporary) Tiers of” [3rd tier].

‘Conservative’ or not, the “system [really only] worked for about 10 years” (Wolff, 2020, mn.4).

1) “are short-term agreements in which the seller (the borrower of funds [usually the primary dealers]) simultaneously sells a government security to a buyer²²¹⁶ (lender of funds [usually the CB]) I agrees to buy the government security back on a later date at a higher price... [F]rom the initial seller’s perspective, it looks like a *collateralized loan*...[and since the] collateral is usually transferred...[repos] are viewed as safer than federal funds loans” and charge a lower rate of interest; while, from “the lender’s [buyer’s] perspective...[they are] still a better deal than holding... T-bills that...earn an even lower rate return” (Burton, et al, 2010, 250). See also “Shadow money”.

2) a shaky modern bank *and hedge fund* financing practice of using *the same collateral for multiple loans*. This is the ‘hocus pocus’ in US bank funding on the money markets. This is why the market lenders to the banks don’t trust such collateral any more, which throws the US banks back into the arms of the mother Fed; as happened in Sept. 2019, when “suddenly...the repo rates popped up to... 10% annualized... [after] JP Morgan [withdrew] from the repo market.... with very few people...really on top of what was going on... There’s a lot more opacity now... that there was...[a decade] ago” (Titus, 2020, mn.7-9). See also “Foreign International Monetary Authorities (FIMA)”.

3) Shaky plumbing: In Sept. 2019, “repo rates spiked... because primary dealers could not borrow enough cash to cover their positions” (Economist, 2019, 2019c). The Fed had to intervene at unprecedented levels,²²¹⁷ and by the following Spring, such ‘market making’ interventions had **cubed** in scale, constituting a new “plumbing” for the global financial system, propping up not only banks, but also

²²¹⁶ “[M]oney market funds wishing to lend money safely overnight...[often] enter into repo agreements with Broker-dealers” (Chabot, 2015).

²²¹⁷ According to prof. Skidmore, the Fed’s “intervening... [was] literally tens or hundreds of billions of dollars of lending [market making] a day. So we now know that they pushed out...in the overnight market...between 5 and 10 trillion dollars-- going to the major banks to keep them afloat” (Skidmore, 2021, mn.25). See also “Market maker”.

the money market funds (MMFs) that millions of Americans have become invested in (over the past several 'globalist' decades). See also "Market maker", "Reserve currency" (Feygin & Leusder).

4) "Selling an asset, with an agreement to subsequently repurchase the same asset, is used [since deregulation] to create a chain of valuable debts..." (Mosley, 2017), in the repo markets, where "banks and hedge funds get short-term funding by swapping \$1tn.-2tn. in [mostly] Treasuries" every day (Economist, 2019c). The Great Financial "crisis changed everything. The Fed added [nonbank] *investment funds and securities dealers* to the list of approved borrowers in the repo market, and [also], using quantitative easing, bought vast quantities of long-dated Treasury bonds...[and its] balance sheet [has] ballooned to \$4.5 tn. [and the holders] of Treasuries, mostly banks, ended up with cash mountains...[as regulators] forced banks to hold more cash and safe liquid assets, such as [more, ever-more] Treasuries" (Mosley, 2017). See also "Treasury securities/instruments", "Federal Funds (accounts) for All".

5) Overnight Treasury-bill repos are (like ON RRP) a close substitute for 'fed funds' (RAB), (mostly just) broadened to include numerous nonbanks. See also "Nonbank Financial Institutions (NBFIs)".

6) "a loan from one financial institution to another, [secured] against tradable collateral, mostly government bonds. These repos have... [many] characteristics of money, but with a twist. The debt, which serves as [the] collateral, becomes an integral part of the package. Debt and money are no longer separate. The [near money] commingling of money and debt has important consequences.... This type of [near] money is critically dependent on governments *issuing* enough bonds [collateral] to feed the beast"²²¹⁸ (Munchau, 2017). See also "Narrow Bank, the".

7) Many repurchasing transactions, like the Fed's OMO repos, "take place through 3rd party custodial banks, in what is known as the *tri-party system*. Custodial banks offer... [primarily] trade settlement, collateral valuation, and collateral eligibility screening" (Chabot, 2015).

8) *Reverse* repurchase agreements or *matched sale-purchase* (MSP) agreements refer to the same [repo] transaction from the perspective of [the monetized credit institution] the *lender* [buyer] of funds (Burton, et al, 262). See also "Reverse Repo Agreements (ON RRP)", "Shadow Money".

9) REPO Updates: 7/21- "You really can't make this stuff up.... [On the *same day* that a] "G30 Working Group Chaired by Tim Geithner-- the former President of the New York Fed²²¹⁹ that secretly sluiced \$29 tn. to bail out the Wall Street banks from their hubristic collapse in 2008-- released a report... calling for a *Standing Repo Facility* [SRF] from the Fed that would be 'open to a broad range of market participants...' the Fed issued a press release...[also on July 28th] saying [that] it was doing just that. The *Standing Repo Facility* (...[i.e.] permanent until the Fed says otherwise) will be able to lend out \$500 billion in overnight loans *each day* at below-market interest rates. If the \$500 bn. runs out, [the] Fed Chair...has the discretion to increase it. The repo operations will be conducted by the Open Market Desk of the New York Fed-- which means that the names of the banks getting the loans will...[be secret], until a media powerhouse decides to stand up... and take the Fed to Court" (Martens & Martens, 2021). The...new \$500 bn. "repo" facility took effect the *next day* (July 29th), and the recipients of its 2019-20 "foray into...[the] pre-pandemic, money-gushing repo operation...[still] remain secret to this day" (Martens & Martens, 2021). See also "Desk, the", "Bank welfare", "Secrecy, Cult of", "FASAB-56".

²²¹⁸ However, with ongoing Quantitative Easing in Europe, the ECB "is still *buying* bonds ['expanding the balance sheet'] to bolster growth and inflation, leaving fewer bonds available as collateral for repo deals, particularly German bonds... So in December 2016, the ECB announced that it would accept cash [base money?] as collateral for its securities lending program" (McCormick & Spratt, 2017). But this is not an issue with the [global res. currency] Federal Reserve: "[I]t remains highly unlikely that the value of propositions received in an ON RRP operation will exceed the amount of available securities on a given day" (Federal Reserve Bank of New York, 2015).

²²¹⁹ "The cringe-worthy name of Geithner is enhanced by 2 other cringe-worthy members of the Working Group: Larry Summers, who helped repeal the *Glass-Steagall Act* so that Frankenbanks on Wall Street could hold trillions of dollars of risky derivatives alongside trillions of dollars of taxpayer-backstopped deposits from moms and pops; and Bill Dudley, another former...[FRBNY Pres.], whose wife collected \$190,000 a year from JPMorgan Chase, while it was 'supervised' by the New York Fed. Unlike the Federal Reserve Board, the New York Fed [FRBNY] is not a federal agency. It is privately owned by the mega banks on Wall Street...." (Martens & Martens, 2021). See also "Primary Dealers, the", "Monetary Reform".

[See also "Sovereignty".]

Research & Development- (from 3 sources to 2)

Figure 6: U.S. APPLIED & BASIC RESEARCH EXPENDITURE BY PERFORMING SECTOR (1980-2015)

Notes: This figure plots the aggregated annual basic and applied research expenditure by performing sector from the NSF National Patterns of R&D Resources (2014-15) tables 3 and 4. Figures are adjusted to 2016 dollars using GDP deflator from the World Bank National Accounts dataset.

See also "Academia" [Bayh-Dole], "Market Fundamentalism".

Reserve (Reserve money)- The Federal Reserve site uses the term reserve in two different ways: 1) in the narrow sense, as 'digital reserve accounts' (RAB), which run the Payment System; and 2) in the broader sense as 'digital accounts plus vault cash' ("base money"), both of which are 'liabilities of the central bank'. See also "Liability, pseudo".

3) "I was told that some²²²⁰ banks do not need Reserves" at all (Huber, 2016b, mn.19). See also "Big 5 (High St.) Banks", "Reserve 'Requirements'".

See also "Reserve Account Balance (RAB) money", "Payment Systems".

Reserve Account Balance (RAB) money- (synon. 'Reserves', 'payment reserves', 'interbank money', 'high-powered money', 'central bank money'²²²¹, 'digital reserve accounts [master accounts]', 'primary-level money', or 'exchange settlements'; less accurate: 'federal funds' [antecedent], 'base money' [which also includes (circulating) cash], 'inside money' [which does not include cash], 'currency on account'/'currency account'; d.b.t. 'deposits' held by 'depository institutions' [i.e. state-monetized credit institutions] at the central bank)

²²²⁰ How bad has monetary confusion & unaccountability gotten in the computer age? According to Huber, fellow straight-talking monetary economist Richard Werner "really means [in saying that banks create money 'out of nothing'/*ex nihilo*, is that] banks [in fact] do not require central bank Reserves [at all] for creating money" anymore, "that [all] banks... don't need Reserves anymore" (Huber, 2016b, mn.34), despite "all of those present-day systems...[for Reserves transfer & accountability, such as] Fedwire... [and] CHIPS in the United States..." (Huber, mn.35).

²²²¹ "Money on [at a] central bank account" (Huber, 2016b, mn.4).

“[R]eserves’, as experience has too often and too sadly proved, may only exist in the playful imagination of that fortunate class who have secured the prerogative to issue bank money” (Del Mar, 1895, 389).

1) It’s like the motor in the car; it’s how the whole system works; and like with a mortgage loan (in TAB) from a commercial bank, CB Reserve/RAB creation doesn’t involve a lot of risk for them. See also “Liquidity” [on] “Leverage” [from the] “Federal Reserve Bank of New York (FRBNY)”.

2) ... This is because ‘Reserves’ are (direct) ‘government money’ [not “liabilities”] and always have been. “The facts are: that all money and currency in the United States are issued now, and always have been, direct by the government, without interest” (Loucks, 1916, 48). Central banks and their member bank constituents have just been positioning themselves, *suigeneris* (via the banking-Reserves/RAB license), between the source of what has **always** been interest-free money creation, and everybody else. Once one understands the 2 classes of (so-called) ‘modern’ money, this becomes obvious. See also “Money, 2 classes (layers) of”, “Deceptive Banking Terms (d.b.t.’s)”.

3) The money that banks use to pay each other is only used between the Central Bank, all state-monetized credit institutions (banks), and the federal government’s Treasury, and does not count for M1 or M2. Rule #1 of the “modern-national debt” monetary system: Reserve account money (RAB) and Transaction account money (TAB) may never mix (although they are **always** exchanged at a 1:1 ratio). ‘Deposit’ (TAB-bankmoney) may never become ‘Reserve’ (RAB), and vice-versa. Reserve is not available to the public; and it is not part of the money supply (apart from ‘base money’ that is converted into cash), since it cannot be used to purchase goods and services. For banks, however, Reserves comprise their checking account balances at the CB, and can be used to buy:

- a) cash and/or loans from the central bank²²²² (at the *discount rate*), and
- b) loans from each other (at the *federal funds rate*).

4) Nonbank people and companies cannot attain it. RAB (Reserve) money appears on bank balance sheets as part of their **Equity**. It does not appear on the balance sheet of any other corporations, nor in the M1 and M2 statistics (but only in the [RAB] ‘base money’ that supports [TAB-bank money] M1 and M2). It is used primarily to measure the solvency or insolvency of a bank.²²²³ If a bank is *insolvent*, it may no longer legally operate. Since bank’s books are balanced every day, this leaves little **wiggle room** for error. Central Bank (Reserve) money is **simply** an interbank measure of how well banks are doing. Such interbank RAB money is, hence, a *pseudo liability* of the Fed (**not intended to be paid back**) unlike the Transaction (TAB) account is a legal liability of the commercial banks. Banks interbank at the Fed and maintain ‘Reserve’ (RAB) accounts therein, while nonbank persons bank at commercial banks/credit unions and hold ‘demand/deposit/current’ (TAB) accounts therein.

5) Central bank/Treasury money (‘federal funds’) that is owned by banks/monetized credit institutions; or ‘vault cash’.

6) Banks may borrow RAB (Reserves) from each other at the ‘federal funds’ (interbank) *rate*. Individual banks control how much RAB money they need. In theory, the Fed does not directly control the RAB money supply any more than its member banks control the TAB (‘deposit’) money supply. In practice, however, there was, increasingly, “Quantitative Easing”,²²²⁴ Id other forms of (mostly RAB) bank welfare.

7) is created “when the Treasury creates...[ex nihilo, unsold] bonds... As soon as that happens, the central bank authorizes spending from the Treasury’s account [at the CB]... Then the bonds are sold... usually by the financial sector. They used to be bought by wealthy individuals... but these days it’s financial institutions, rather than directly to rich individuals.... When the central bank [buys the Treasury’s] bonds, it creates [RAB] money... Now the Treasury has the right to spend because it has [RAB] money in its

²²²² Unlike with TAB-bankmoney, payment of Reserves between monetized credit institutions and the CB does not extinguish or deplete Reserves (Huber, 2017, 82); because they are closer to genuine ‘money’ than credit.

²²²³ Hence Wells Fargo, in 2016, was convicted for creating millions of fake [TAB] checking (M1) and savings (M2) accounts, **in order to increase its claim to [RAB] Reserves and other forms of government bank welfare. (no evidence for that motive)**

²²²⁴ From 2009-14 at least, the Fed’s policy of “Quantitative Easing”-- supplying banks with RAB (central bank/interbank) money “increased liquidity for the banking sector.... Something of the order...of increasing Reserves by the rate of two [hundred] or 300% per year, for a while there... [which] did... forestall a serious crash in liquidity” (Keen, 2015e); until 2019 and the “Repo” markets crash. See also “Repo (Repurchase) agreements”.

account.... It [government] will make an entry... Let's say it's a pension check... They [simply] whack a... 100 pound [TAB] entry in my bank account. Now that is [then] matched by a 100 pound [RAB] increase in the reserves of the...[monetized credit institutions] that I'm banking with... [So] it's a transfer of [RAB] money from the Treasury's account, at the central bank, to the... [monetized credit institution's] account at the central bank...[But] it is also [indirectly?] creating [TAB] money that I spend in the [everyday/real] economy" (Keen, 2017k, mn.12-13).

8) "are the bank accounts that [member] banks [have] at th[central] bank that enable them to settle all the transactions we create... So if you bank at Barclays and...[your transactor] banks with Lloyd's, when you make your [TAB] transfer, there also has to be a transfer of Reserves..." between the two commercial banks; TAB and RAB "are two separate circulating systems... [and] one does not cause the other" (Keen, 2016m, mn.32-33), but are more analogous to the gas [TAB] and oil [RAB] in a car.

9) "Reserves accounts are effectively...[checking] accounts for banks" (Bank of England, 2013); held at a larger or central bank. But it's just a pseudo liability on the Fed's [central banks] books.

10) While larger banks always have their Reserve [RAB] account at the national/central bank, some smaller state-monetized credit institutions may maintain their required Reserves at larger, 'correspondent', banks, which may also supply operating vault cash for a fee.

11) Reserves (in today's QE & post-RRRs environment) "are not irrelevant, the banks still need them. But in terms of their operational necessity and quantity, the reserves, too, amount to only a fraction of the bankmoney [in public circulation]. CBDC in general use can and should change that" (Huber, 2021).

11b) In other words, (increasingly) automatic-fiat "reserves" were initially rationalized as 'financial separation of powers' (i.e. 'Western Civ's 'good housekeeping seal of approval'); but the concept has since become really just civic & civil society's poison pill, leading to chronic over-financialization (i.e. the 'British disease'). Hyperbole? See also John Titus' "Best Evidence" channel (2022). See also "'Financial Separation of Powers' (auto-fiat reserves)", "Separation of Powers".

12) RAB Updates: (not what they used to be) See also "Money, 3 (contemporary) tiers of".

See also "Money, 2 classes (layers) of", "Reserve (Reserve money)", "Quantitative Easing (QE)", "Eurodollars", "Federal Funds (Accounts) for All".

The huge rise in reserves in the 2000s illustrates the ~~perceived~~ inadequacy of IMF resources

Currency composition of world foreign exchange reserves (\$bn)

[See also "IMF", "CMC".]

Reserve backing- When did (20thc) Treasury bonds (mostly) take the place of (19thc) gold?

- 1)
- 2) Bonds were, even in 1912, "the traditional security" (Dunne, 1984, 18).

Reserve currency (international)- (that which is most commonly held by governments as a stock of money for international transactions [a.k.a. gold or silver up until the 1600's]; then imperial trading nations')

'fiat'-bank currency [per the 17th-20th centuries]; but it need not be any singular [or even amalgamated] nation's currency²²²⁵ in the 21stc-digital age)

"For what shall it profit a man, if he shall gain the whole world, and lose his own soul?" - Mark 8:36

Q: What is it that is still needed for looting the world, instead of the saving the world?

A: (a nation/empire-based) reserve currency status. See also "World Reserve **System**".

1) In the past 6 centuries (since the Age of Discovery/'adolescence of mankind'), "6 currencies [have] held global reserve status²²²⁶ the Portuguese *escudo*, the Spanish *peso de ocho*, the Dutch *guilder*,²²²⁷ the French *franc*, the British *pound* and, most recently, the US *Dollar*. Each occupied the throne for roughly 80-100 years, corresponding with its country's international preeminence.... [whereupon eventual] erosion in the status of the currency denied the [reserve currency] empire the ability to attract the foreign investment [that in part was actually financing] its imperial obligations... [Hence] fewer resources were available for imperial upkeep, especially for the military that [had] made [the] imperial gains possible to begin with.... The [US] greenback has been more or less at the helm since the 1920's, though its official coronation only took place during World War 2 (Luft & Korin, 2019, xxii-xxiii).

2) was always about the navy & sea lanes (before the 3rd Industrial Revolution & space)

3) "In 1870 the US economy [surpassed the UK]...as the biggest economy. So the US becomes dominant economically, but it's not until World War One²²²⁸ that the dollar starts to trade [as an] equivalent reserve currency with [the UK pound] sterling.... So we share reserve currency with the sterling from World War One to World War Two... [whereupon] the dollar becomes [de jure] dominant... [in the (age-old)] world of sea empires" (Fitts, 2019w, mn.24).

3b) "The great achievement of Rome, Spain...[the UK, and] now the United States, has been, and continues to be, hiding from the people the long-term consequences of metaphysical...[currency] and...free trade" (Walters, 1971, 399). See also "National Identity/Nationalism" [cycle], "Imperialism", "Dutch disease".

4) More specifically, during the halcyon years of the British Empire, before WW1, "a quarter of the world's population was under British rule...[Its] national debt was about 30% of its GDP, and one pound could be exchanged for 4 to 5 dollars. By the end of World War 2 [however], the debt-to-GDP ratio was 250%. With its coffers empty, within several years Britain was forced to relinquish most of its colonies, [and] its military shrank to the level of a second tier power", as the pound lost half its value in the first decade after WW2 (Luft & Korin, 2019, xxiii-xxiv). See also "National Debt Economy", "Monty Python's".

5) What's the big deal? "With [say] 150 national currencies in the world, (if) you tried to trade each pair, there would be 11,175 foreign exchange markets! (...) Thus... in practice just one currency...[has been] chosen as the central vehicle currency... [whereby] all trading and [forex] exchange takes place first against the vehicle currency before going to the others... [so that] we need to have just 149" forex markets (Luft & Korin, 2019, xx). See also "Special Drawing Rights (SDRs)", "Forex".

²²²⁵ In the 3rd Millennium, single-nation (and even multi-nation) "reserve currencies" will be viewed as a classic 'barbarous relic of the past', or pre-computer age game in which the loot'ies eventually wind up turning the tables on the looters... until a new host for the (biosphere-destroying) parasitic system is put in place. See also "Graham, Benjamin", "World Par Economy"; "Parasitism", "Great Extinction, 6th".

²²²⁶ In the High and Late medieval eras, Florentine coinage such as the gold *florin* (first minted in 1252) circulated "widely throughout western Europe and the Mediterranean...[becoming, by the early 1300's (as the Roman *solidus* was 9-10 centuries earlier)] the standard of international trade... debts which might be paid in other coins or...in kind, were often quoted in florins" (Dotson, 2004, 92).

²²²⁷ The *Wisselbank*-based paper 'fiat' Dutch *guilder* (in contrast to the preceding 2 millennia of Mediterranean coinage) is generally thought of as the world's first prevalent "anchor currency"-- i.e. a form of governmental 'reserves' that (from the 17thc) became more prevalent than governments simply using (age-old) bullion reserves for international settlement. See also "Accounting, double-entry".

²²²⁸ "On May 3, 1917, the Federal Reserve signed its first reciprocal account agreement with a foreign central bank, the Bank of England... [secretly establishing] *nostro* [i.e. foreign cash/'eurocurrency'] and custody accounts on each other's books. This was soon followed by agreements with several other central banks, including the Banque de France, Bank of Italy, and Bank of Japan. These early agreements were instrumental in helping the newly-established Federal Reserve forge a global role for... the US dollar as a reserve currency.... It is no coincidence that the first agreement was signed less than a month after the United States entered the First World War.... [and] dollar acceptances [were] viewed as an attractive reserve asset by the 1920s." - Simon Potter, Executive VP of the New York Federal Reserve (Potter, 2017).

6) The US only “started to build a Reserve currency when it...got control of the sea lanes in the Caribbean...[a century or so] ago...[i]f China gets control of the sea lanes in the South China Sea...and [i]f they continue to build liquidity on the [current] Reserve currency, then...[you could be] talking about potentially somebody that could really cut into the market share of the [US] dollar...” (Fitts, 2018s, mn.43). See also “China’s US Treasury Bonds (c.2004-15)”.

7) Officially “...taking the US dollar off gold in 1971 left only US Treasury debt as the basis for global reserves. The balance-of-payments deficit stemming from foreign military spending pumped dollars abroad. These ended up in... central banks that recycled them [back] to the US by buying Treasury Securities-- which in turn financed the domestic budget deficit. This gives the US economy a unique free financial ride... seemingly *ad infinitum*” (Hudson, 2015, 6). A lot of it was also due to hi-tech supremacy and a big lead in satellites (Fitts, 2019w, mn.24); through the last quarter of the 20thc. See also “Super Imperialism”.

8) Not to mention a big (and *increasing*, from the 1980’s) lead in the ability-- and willingness-- to project military force. From the mid-70’s, it “was [Pres. Carter’s only National Security Advisor, Zbigniew] Brzezinski who [primarily] represented the geo-political doctrines that were [like Zbig & the Trilateral Commission] brought in with the Carter Administration...[This eventually] led to the permanent wars that [after 4 decades of such ‘super-imperialist’ policies] President Trump is [now] trying to stop” (Schlanger, 2020, mn.123). See also “Neoconservatives”, “Deep State”, “Nasserism”.

9) To actually run a reserve currency, however, “the issuing nation must [also] run a permanent and substantial trade deficit to *supply* the world with enough of its currency to be useful. Additionally, the issuing nation must [further] ‘give away’ some of its currency via grants and subsidies, to supply nations which would otherwise have limited access to the currency. It must also have deep, liquid capital markets so foreign nations and entities can borrow the currency” in scale (Smith, 2019). Only the Euro competes with the USD on more than one of these qualities; and the Chinese Yuan has none of them. See also “Dollar hegemony”, “BRICs”.

10) “If you run the reserve currency, then you can basically print [produce] money for free, and *deficits don’t matter*, because you’re basically forcing the globe [and the domestic workforce] to subsidize” it (Fitts, 2016d, mn.20). Don’t expect conventional economists to know this. “When I ask even the most senior economists what they mean when they say ‘reserve currency’ they fumble around for a response and can’t give a definitive answer” (Mosler, 2017e). See also “Neoclassical Economics (NCE)”.

11) The Great Financial Crisis actually “strengthened the dollar’s position, as global investors sought... safe haven securities; and liberal monetary policies provided...[large-scale] monies to fund dollar-denominated loans and capital throughout the world” (Fitts, 2019x, mn.3).

12) However, the “subsequent Euro Crisis in European bank losses resulting from sovereign debt issued [mostly] by the southern European countries flat-lined further growth in the Euro’s share of global reserve currency [USD] holdings...[So the] dollar remained... ‘dominant and dangerous’...[And there developed] a push in numerous quarters to find ways of reducing dependency on [it, led (not surprisingly) by] countries smarting from the sting of US financial sanctions.... The BRIC...as well as the ASEAN nations went to work on creating [currency] swap capacity between [their] central banks, new [international] lending banks were created to reduce dependency on the IMF & dollar-denominated lending, [and] central banks [especially in Europe] began developing crypto-currencies” (2019x, mn.3-4). Gold holdings rose, often vis-à-vis the USD’s market share, and China “increased its global arrangements [in order] to create liquidity for the RMB in financial capitals around the world, and was finally able to persuade the IMF to include their currency in its SDR [basket]”, as Russia & China substantially increased their “financial and economic cooperation” (Fitts, 2019x, mn.4). See also “Angry Birds”.

13) Although the trend had already started, with the Trump Administration’s efforts “to repatriate capital to the US... *Europe*²²²⁹ has already launched an alternative to the SWIFT [US-centric, int’l.] payment system...[T]he governor of the Bank of England announced [in Sept. 2019] that we are moving to a multi-

²²²⁹ “‘The dollar is our currency, but your problem’.”- US Treasury Secretary John Connally, “to his European counterparts, 1971” (Luft & Korie, 2019, xix). A half-century later it’s closer to being everyone’s currency and everyone’s problem. See also “Eurodollars”.

polar world, the president of France... declared the uni-polar empire a failure, and then [in 11/19] the BRIC nations met in Brazil to discuss the creation of a joint cryptocurrency, and Putin announced [that] the US dollar was likely to collapse soon” (Fitts, 2019x, mn.4-5). See also “Angry Birds”.

14) As of 2019, the USD “makes up almost 2/3rds of all known central bank foreign exchange reserves, with the other 150 countries collectively comprising the rest... [Moreover, about] half the countries of the world either peg their currencies to it or keep their currencies [pegged] within a defined trading range relative to” the USD²²³⁰ (Luft & Korin, 2019, xxi). See also “Dollar Standard”, “Petrodollar”.

15) It is sometimes presumed that this post-World War 2 state of affairs is somehow ‘always and perpetually’ beneficial for most Americans. In fact, however, it is (increasingly) not so, as the burdens of such ‘leadership’ increase. Yes, there is a cost, and the “cost of having...[the] reserve currency was smaller after the war, simply because the non-US share of global GDP was considerably smaller than it is now... [H]owever, now that the American share of a larger pie is relatively smaller, the costs of [financing] the global demand for dollars are higher. Most other governments...in fact, actively discourage substantial and sustained purchases of their currency” (Feygin & Leusder, 2020), which tends to hollow-out (financialize) an economy [termite]. See also “Dutch disease”.

15b) It is also somewhat absurdly hypocritical [and hence implicitly threat-based] for (what is, effectively) a de facto governance system to be run in such a manner, given this highly-mediated Information & Knowledge era (1970’s-2020’s): <https://www.youtube.com/watch?v=XjOnAYbcBis> [‘ever since the days of Koine’]

15c) Where is the ‘barbarous relic’ of the 2nd millennia headed in the 3rd millennia and (eventual) Knowledge Age? Dr. Seuss (1904-91) had a clue. After all, the fmr. WW2 propagandist dreamed up *Ten Apples on Top* (1961)²²³¹ after the Currency Wars and Benjamin Graham’s international monetary reform (1944) alternative to “Bretton Woods”.

Reserve Ratio- the ratio of minimum Reserves/RAB (held at the district Reserve Bank or its surrogate) to TAB (customer deposits), as specified by the Federal Reserve Board’s Regulation D.²²³²

1) Economics texts go into a big spiel about how the *reserve ratio* limits the amount of lending. There are a number of formulas. Formulas impress the gullible. But this is false information for dupes. If bankers

²²³⁰ This is because for “many emerging markets, over 80% of their imports are invoiced in US dollars. To protect themselves against currency movements, it is quite natural that they will choose to save in [TAB] dollars, which in turn leads to dollar dominance in [mostly RAB] asset markets”- Gita Gopinath (Sandbu, 2019). As other have noted, Reserves tend to follow (not lead) trade.

²²³¹ <https://www.youtube.com/watch?v=vdeqBUeEs-k> [mn.4; Fable of national R.C.-imperial passions; ending in balanced-par commodity “reserves”]. See also “Graham, Benjamin” [‘System’, not (a government’s) ‘currency’]. This will be the realization of Montesquieu’s 18th century prophecy-- “how” “rule-by-virtue” is to be both enabled and made real. See also “World Par Economy (WPE)”.

²²³² Established Dec., 1990. As of 2017, transactions “in excess of the *low reserve tranche* [loophole] are currently reservable at 10%” (Federal Reserve, 2016).

want to lend and think they can earn money from the interest and get the principal paid back, they are not constrained by piddly (and unenforced) reserve ratio. If they need Reserve to cover the new deposit (TAB) they create for the loan (in order to remain solvent), then they can just borrow it, if they do not already have it. **The bank's equity remains unchanged, and it can increase its future equity by interest revenue.** It is impossible for banks to accumulate their Transaction deposits [TAB] as Reserves [RAB], because transaction accounts are their liabilities, and Reserves are their assets. No accounting transaction can transform a bank's liability into its asset.

2) Supposedly, US²²³³ banks "have to hold [in Reserves] 10% of the deposits of the household sector. That's all that the rule is, and that's got no control over the amount of lending they do. What actually controls the lending is the gearing [i.e. debt] they're willing to have between their equity basis, as a bank, and their level of loans.²²³⁴ And that's where the danger comes in... I a conservative period, they *might* want to have it look like a 10:1 ratio between equity and [TAB] loans. But as they start to get more adventurous-- to 30:1... [then] if 3% of your loans go bad you've wiped out your equity base.... But Reserves are [still] largely irrelevant to that" (Keen, 2016f, mn.20). See also "Insolvency".

3) In other words, a legal "10% reserve ratio [of RAB:TAB] doesn't constrain [TAB] deposit creation, although it does require the central bank to play along" with the ruse that it is somehow regulating state-monetized credit institutions' [TAB] money creation (Van Lerven, 2017). See also "Money", "Money, 2 classes (layers) of".

Reserve 'Requirements'- (the ratio of RAB to TAB [f.e., 1:1]; synon. 'reserve ratio requirements' [RRR's], or 'minimum reserve requirements', which are mostly-increasingly irrelevant [just for pretend] in the computer/digital age²²³⁵; not to be confused with 'payment reserves' [Reserve/RAB money])

1) in order to ensure the liquidity of a state-monetized credit institution (bank), the amount of Reserve/RAB money that (since the **Monetary Control Act of 1980**) all chartered state-monetized credit institutions (d.b.t. 'depository institutions') in the US are required to maintain "by holding *vault cash* and, if vault cash is insufficient, also by a [RAB] *deposit* maintained with a Federal Reserve Bank... or with another [monetized credit] institution [that is] in a pass-through relationship" with the Fed (Federal Reserve Board, 2016), as (is supposedly) regulated by the Fed's minimum *reserve ratio* requirement. See also "Interest on 'Excess' Reserves (IOER)".

2) "The [old] cliché...[was] that 'reserve requirements are a tax on deposits', [i.e.] when a bank increases the reserves that it holds at the central bank, its interest-bearing assets decline and hence its income falls... [So] the maximum interest rates that it can profitably pay on its deposits also decline" (Aliber, 2011, 86).

3) Historically, it has primarily been the liberalization of reserve ['base money'] requirements over the centuries-- from gold and silver, to government bonds, to even (in the 21st century) "securitized mortgages"-- that has lead both the rapid expansion and the increasing instability, of "whatever our money supply is" (Grubb, 2013, mn.202).

²²³³ In Europe, however, banks, as of 2007-08, needed interbank Reserves "of only 2.5-3 [%] euros, of which 1.4 [% of those] euros are coins and notes for ATMs, the rest being non-cash excess reserves (a.k.a. interbank payment reserves) and a 1% minimum reserve requirement.... [However,] to become comprehensively independent of central banks, and [to] fully complete the reign of the *bankmoney regime*, commercial banks would have to dispense with the 1.1-1.6% non-cash Reserve and the remainder of the 1.4% cash Reserve. Most banks would like to see cash disappear anyway, as they are not allowed to create coins and cash by themselves and...have to finance [all of it from the CB]... Aside from this, handling cash is [also] more expensive than the computerised handling of money-on-account" (Huber, 2018), such as credit and debit cards. See also "Bankmoney regime".

²²³⁴ Or in other words, their ratio of Reserves "is **completely irrelevant** to the amount of lending they can do... [which is] actually based on [simply] how much leverage they're willing to have against their equity base" (Keen, 2018b, mn.39).

²²³⁵ In the 21st century now, "about half the OECD" nations no longer even bother to list "reserve requirements" at all (Keen, 2020, mn.9). This is mostly because when (f.e. in the US) banks create TAB-bankmoney by 'making a loan' (extending credit), they've "got [at least] 28 days" to match it with Reserves/RAB, "and actually now in America...it's 45 days... [And furthermore only] about 1 or 2%" of the American "money supply" is subject to the "10%" requirement; it's only for "household deposits"... [not for] 'commercial deposits'...[nor for] 'international-related exchange contracts' and so on" (Ibid).

- 4) Minimum Reserve/RAB requirements were traditionally $1/3^{\text{rd}}$ for foreign banks more than a century or so ago, then reduced to approx. $1/5^{\text{th}}$ through much of the latter 19th and 20th centuries. However, back before the popularization of nations & national money (when money was more thoroughly international), “mid-15th century...Medici branches in Bruges and London [traditionally] reserved 10% of their profits to cover bad debts” (Gelderblom, 2013, 105). See also “Capitalisms”.
- 5) “were of little help in containing the rapid [TAB] credit growth that occurred in the late 1920s. During this period, the primary tool used by the Federal Reserve... was the discount rate...[which was then] generally kept below market [Reserve/RAB] rates” (Feinman, 1993, 574).
- 6) There is a divergence between what Central Banks were reporting in the 1970’s-- before the advent of ATMs and the dwindling of cash (Friedman, 1977, 22)-- and what some CBs are reporting today. Moreover, Reserve requirements have been radically lowered and/or unenforced²²³⁶ since the 1980’s-90’s (at least in the Commonwealth)... with many Anglophone-type countries doing away with them altogether, including: the UK (1981), New Zealand (1985), Australia (1988), Canada (1994), Sweden (1994). This is because without “reserve requirements, banks...still [have to] hold some balances at the...[central bank, in order] to meet their [everyday] clearing needs.... [They] need to maintain a cushion of balances in these accounts to provide some protection against...[leaving] their accounts overdrawn at the end of the day and [thus] subject to stiff penalties”, of 10%, at that time, in the US (Feinman, 1993, 579). And, increasingly; “most banks [simply] find that...[the de jure] required reserves fall short of their daily [de facto] clearing needs” for reserves; and “banks in the United Kingdom are [also] usually willing to borrow from the BOE late in the day to meet their clearing needs” (Feinman, 1993, 584).
- 7) “Other central banks, such as the Bundesbank and the Bank of Japan, which operate in financial environments more akin to those found in the United States, have not eliminated reserve requirements. Echoing arguments made by the Federal Reserve, both the Bundesbank and the BoJ believe that reserve requirements are essential for providing the stable, predictable demand for reserves that is needed for the conduct of *open market operations* and the prevention of...[too much] money market volatility” (Feinman, 1993, 585).
- 8) It (supposedly) wasn’t until 2006-08, that the ‘liberalization’ led to the effective replacement of Reserve requirements²²³⁷ (a.k.a. the ‘reserve tax’) with reserve payments in the US. “Paying interest on reserves is a preferable alternative to eliminating reserve requirements.... [and removes] an incentive to devote resources to new methods of reserve [tax] avoidance” (Feinman, 1993, 585). See also “Narrow Bank, the”, “Trading Departments”.
- 9) Many bankmoney systems-- including the US (until 2020)-- were still keeping up traditional appearances, however. In the Eurozone, the Bundesbank and ECB reduced reserve requirements to a vestigial 1% in 2012, “to ensure that the minimum reserve system... [doesn’t place] a burden on the banking system.... [and] to stabilise **money market** [a.k.a. ‘shadow banking’] interest rates and...enlarge the...[overall] banking system (Bundesbank, 2018). Huber points out, however, that the clear-cut abolishment of reserve requirements in “England, Canada, and other countries...[provides unambiguous] recognition of how fictitious the assumed control function of a minimum reserve requirement is. In the USA [however], the minimum requirement was [still listed as] 10%,²²³⁸ *minus cash in vault* and other deductible items” (Huber, 2018, 3); up until March, 2020, when reserve requirements for all [so-called] depository institutions [**monetized credit institutions**] were abolished.

²²³⁶ “Most...[**monetized credit institutions**] are able to satisfy their entire reserve requirement *with vault cash*, which they hold primarily to meet the liquidity needs of their customers and would likely hold even in the absence of reserve requirements. For these institutions, reserve requirements are essentially costless...” (Feinman, 1993, 570). See also “Vault Cash”.

²²³⁷ In their investigation of the Financial Crisis of 2008-, Congress found that “the big banks were...typically leveraged [at] 52:1” (Still, 2019e, mn.14).

²²³⁸ The traditional (since 1917) RRR of “10%” in the US has been whittled and looped since the 1980’s, and now only applies to **monetized credit institutions’** ‘reservable liabilities’ (“net transaction accounts [and] nonpersonal time deposits”) of more than \$122.3 mn., and **monetized credit institutions** with less than \$16 mn. in such “total reservable liabilities” are exempt, as are eurocurrencies/eurodollars (Federal Reserve Board, 2016-17).

10) Hence, according to Prof. Keen, the “real role of Reserves [RAB/base money today] is to have money [cash] on hand, in case the public panics” (Keen, 2020, mn.10). See also “Base money”.

11) In the era of IORR and IOER *payments*, reserve ‘requirements’ are, apart from the need to guarantee cash, largely ‘fictitious’²²³⁹ or obsolete on both sides of the Atlantic. Even before then, the Fed had “not used the reserve ratio as an instrument of monetary policy *for decades*... And, over the years, banks have figured out many ways to transform ‘transactions deposits’ into ‘non-transactions deposits’, which have no reserve requirements...” (Baumol & Blinder, 2012, 270).

12) Although Hong Kong, like the above-mentioned examples, has abolished reserve requirements, (apparently only) mainland China *now*²²⁴⁰ still keeps up appearances, officially reducing RRRs half a percentage point, to 18%, in August of 2015. “It was the third time [that] the PBoC cut the RRR” that year (HKIB, 2018, 75). See also “Reserve ratio”.

Reverse psychology- (typically how one deals with animals-- and/or children. After all, they cannot [properly] speak or write)

“I have seen it stated that no expert is quick enough to run over a dog; that a dog is always able to skip out of his way. I think that that may be true; but I think that the reason he couldn’t run over the dog was because he was trying to. I did not try to run over any dog. But I ran over every dog that came along.”

- Mark Twain, “Taming the Bicycle”, 1917

Reverse Repo agreements (ON RRP)- (synon. ‘overnight reverse repurchase agreements’, ‘matched sale-purchase [MSP] agreements’; a.k.a. ‘the floor’ on *shadow banking sector* interest rates, 2014-18; which have also effectively pushed up “the *federal funds* rate, above the ON RRP rate, because [since] it’s offered to [non-bank] lenders...they can [then] negotiate with banks for higher [federal funds] rates”) (McAndrews, 2018, mn.20).

1) What were, in the previous decade, mostly repurchase agreements initiated by the *monetized credit institution*/buyer of the bond (rather than by the borrower/seller-- the central bank)²²⁴¹, were ramped up by the Fed, c.2013-14, into a new form of subsidy (bank welfare), in order to *prevent negative interest rates in the shadow-banking sector* (i.e. mostly [see also] “money market funds”).

2) Why did the Fed do this? “In 2012 and 2013, the Fed could foresee [that] the economy was gaining strength, and that they would soon have to raise [interest] rates... [But] if they just raised the Interest on *Reserves*, there was no guarantee that [actual] market [interest] rates would follow. So... the Fed created a Narrow Bank. It’s called [however] the *Overnight Reverse Repurchase Agreement Facility*-- the ONR RRP. And they [also] expanded an existing one-- called the *Foreign Repo Pool*” (McAndrews, 2018, mn.16). The Fed thus “went into business against the existing banks to provide... money market mutual funds & home loan banks [with] a narrow banking facility... in competition with the private sector.... [based on the idea] that there should be a *public option* available to customers... [in order to] foster competition” in the money markets [SBS] (McAndrews, mn.17-18). See also “Narrow Bank, the.”

3) In other words, Nonbank Financial Institutions (NBFIs), like “Fannie Mae, Freddie Mac, hedge funds, money market funds-- can and do make short-term loans to domestic banks and US branches of foreign banks, and they’re often willing to lend at an interest rate below the IOER [which is only for banks]. Without some additional steps by the Fed, this would...[have made] it hard for the Fed to control the federal funds rate and thus, [to] influence...rates throughout the economy... [So] the Fed launched the...

²²³⁹ Minimum reserve ‘requirements’, are not only, in the 21stc, unenforced, but now just “a remnant of former times” (Huber, 2016b, mn.20).

²²⁴⁰ The Federal Reserve Board (stopped bothering with appearances and); “eliminated reserve requirements for all [so-called] depository institutions” on March 26, 2020, per Regulation D “(Reserve Requirements of Depository Institutions, 12 CFR Part 204)” (Federal Reserve Board, 2020).

²²⁴¹ “Reverse” just means that the repurchase agreement “is initiated by the bond-holder [seller] rather [by] than the investor with cash” (McCormick & Spratt,2017).

ONRRP...through which it borrows [TAB-bankmoney] money from non-bank entities... Non-banks... [hence] have no incentive to lend money... at a rate lower than the ONRRP rate, [thereby] effectively setting a *floor under short-term rates* for the whole market”, for banks and non-banks alike (Ng & Wessel, 2018). See also “Shadow banking (SBS)”.

4) “the Fed sells government securities²²⁴² and borrows reserves [RAB] from the *eligible counterparties*²²⁴³ overnight at a fixed rate...” (Chabot, 2015, 5). Since 2014, the FRBNY’s Open Market Committee has set the *maximum* interest rate (‘offering rate’) that the Fed will pay on reverse repos, then the *actual* rate of interest is determined by auction, among the New York Fed trading Desk’s approved counterparties.²²⁴⁴

5) “Reserves by another name”-- ON RRP’s are state-monetized credit institutions selling the use of RAB to the Fed, “just as they do when they hold reserve accounts with the Fed. The difference... is that, in an ON-RRP arrangement, the Fed posts securities in its portfolio as *collateral*,²²⁴⁵ just as in any private repurchase agreement transaction” (Williamson, 2016). (All ‘repos’/reverse repos’ are collateralized). Hence, “Lending on the fed funds market can be a [relatively] risky activity, as lending is *unsecured*, while lending to the Fed in the form of ON-RRPs is essentially riskless”²²⁴⁶ (Ibid).

6) In conjunction with IOER, this form of subsidy helped, for a number of years, to effectively set a floor for the ‘federal funds’ (interbank) rate of interest, in both the traditional [TAB bank credits] and shadow banking systems; with IOER, however, more for adjusting “the *traditional* banking sector... and the *shadow* banking sector... [more influenced] by adjusting the rate on reverse repos” (Chabot, 2015). See also “Channel-Floor systems”.

7) In terms of regulation, although data “on repo and securities lending activities have improved since the 2007-09 financial crisis... none of the regulators have a comprehensive picture of the entire market. Data inconsistencies arise at different points (particularly with eurodollars). For example, depending on accounting standards, repo exposures can be reported on a net or gross basis. Varying frequencies of regulatory filings further reduce data comparability... [And a] lack of a common data standard for [even] identifying counterparties presents a substantial challenge in monitoring cross-market and cross-border exposures” (Baklanova, Copeland, & McCaughrin, 2015, 64-65).

8) Why did ON RRP’s effectively stop in the summer of 2018? From rising conventional interest rates, particularly with the Trump Administration’s increased deficit spending and Congress’ Feb. 2018 debt-ceiling suspension, in conjunction with the Fed’s ongoing (from 2015) “normalization” strategy to shrink its balance sheet from previous years’ Quantitative Easing.

See also “Narrow Bank, the”, “Foreign Repo Pool”, “Repurchase (Repo) Agreements”, “Interest on Excess Reserves (IOER)”.

²²⁴² “[A]round \$2 trillion of Treasury securities...[were] available for ON RRP operations” in 2015 (Federal Reserve Bank of New York, 2015). The “minimum proposition” on all reverse repos is \$1 million, and the maximum for ON RRP’s \$30 billion (Federal Reserve Bank of New York, 2015).

²²⁴³ According to the New York Fed, reverse repos (RRPs) are “open to the Federal Reserve’s primary dealers as well as [to] its expanded [list of] RRP counterparties” (FRBNY, 2015).

²²⁴⁴ “The Desk”’s 16 approved counterparties for ON RRP’s, as of July 2018, are: Ally Bank, Bank of America, Bank of Montreal (Chicago Branch), Barclays Bank (New York Branch), Citibank, Credit Agricole Corporate & Investment Bank, Discover Bank, Goldman Sachs Bank, JPMorgan Chase Bank, Mizuho Bank, Ltd., Morgan Stanley Bank, Natixis (New York Branch), Royal Bank of Canada, Sumitomo Mitsui Banking Corp. (New York Branch), The Northern Trust Company, and Wells Fargo Bank.

https://www.newyorkfed.org/markets/rfp_counterparties.html

²²⁴⁵ Debentures and mortgage-backed securities from federal agencies are not used in The Desk’s RRP operations (Federal Reserve Bank of New York, 2015).

²²⁴⁶ The St. Louis Fed researcher adds that “Therefore, we might expect that, on Dec. 31 [and other financial reporting days], lenders in the overnight market would shift their activity from the fed funds market to [temporarily spiking] the ON-RRP market, as this would reduce risk on their [public] balance sheets” (Williamson, 2016).

Exhibit 1: The Fed Funds Rate Has Moved Closer to the Top of the Target Range, Repo Rates Have Risen Above IOER, and Use of the Fed's RRP Facility Has Nearly Ceased

[Reverse Repos were only significant at between 0-1% interest; as a substitute for near zero-interest T-bills (ZeroHedge, 2018b).]

Revolution²²⁴⁷ (connotations aside; judge them by their clarity, for clarity enables equality, fraternity, liberty, justice, and the like)

"Principles have no real force except when one is well-fed."

- Mark Twain, *Extracts From Adam's Diary* (1906). See also "Food (and food-like substances)".

"You who build these altars now

To sacrifice these children

You must not do it anymore." - "Story of Isaac", 1968²²⁴⁸

1) "an enduring political and social change created through mass action.... [R]evolutions...[often] catch people by surprise. Revolutions happen when the distinct concerns of many different groups are, for a time... soldered together... produced...by... what historians [traditionally like to] call 'contingency'" (Spang, 2020b); as the [subconscious-subliminal] snowball starts to roll; "not behind...to vanished certainties but ahead to uncertain possibilities" (Ibid). See also "Intelligence Community", "Nasserism" [Arab Spring], "National Identity/Nationalism".

1b) Of course the R-words that we remember from history (as distinct for smaller-scale 'revolts' or 'rebellions') are larger-scale socio-political avalanches and were not put in place that way by accident (but by deep structural mis-alignments and injustice in the daily life of [a growing] society): "A revolutionary situation is one in which the structure of power-- *real* [sic] power-- is [in fact] not reflected in the structure of law, institutions, and conventional arrangements. Law and legal arrangements, including constitutional arrangements, were not legitimate, in 1776, in much of Western Civilization-- that is they were not responsible because they did not reflect [real] power. The laws of the polity, whether it is the English Parliament-- which legally had the right to rule America-- or with...the nightmare constitution of France²²⁴⁹

²²⁴⁷ This word, like many, has been somewhat poisoned in (so-called) 'modern' times. The 18th century/Enlightenment "notion of 'revolution'... contrary to ours today, did not connote a violent break with the past, but [rather] a *thoughtful evolution* away from the present. The early American state constitutions spoke of a 'frequent *recurrence to fundamental principles*' as [being] the bulwark of freedom and constitutional government. The framers of the...Constitution [of 1787] included an amendment process at the end-- not as an afterthought, but as the embodiment of this frequent recurrence to fundamentals, this permanent (r)evolution. 'Recurrence' does not mean 'the reestablishment of' or 'adherence to original intention'.... Rather, 'recurrence to fundamental principles' involves the action of going back mentally and [then] in discourse to recapture the principles that inform and animate our constitutional [rule of law] system, to reconsider these principles in the light of altered circumstances and commitments, and either to reaffirm in contemporary language and symbols what still speaks the [genuine] truth to us, or to alter and then ratify formally modifications or additions to these principles" (Lutz, 2006, 1). Why? Because...

²²⁴⁸ The '60s revolutions' that eventually did, in fact, stop the Vietnam War were, obviously, not an in-depth or deep eradication of the underlying problem, which, like a hydra, grew back-- public opinion & politics or not. See also "Reform, 101" [accounting, money], "Central Banking-Warfare model", "Industrial Revolution".

²²⁴⁹ "[P]rivilege (literally, 'private law': one set of laws for the nobility, one for everyone else; one set of laws for the province of Brittany, one for Normandy; one for pork butchers, one for pastry cooks) had been the foundation of the kingdom...[of France's] entire judicial and administrative order" (Spang, 2020); since the 15th and 16th century, which had "condemned France to what we would call legal disunity"

[with its >half-dozen very different types of currency & money], which no longer in any way reflected the structure of power in French society; or...east of the Ine...[with] the enlightened despotisms²²⁵⁰ which existed there, which [also] did not reflect the power struggle, [or] the [real] structure of Europe...as Napoleon showed them very quickly” (Quigley, 1976c-pt.3, mn.310-12). See also “Privilege”, “Power”.

2) Why? ...what “elites naturally do in all human societies...[usually gradually, over a long-term, is] a) sanction existing social inequalities, b) legitimize their right to continue demanding and receiving unequal access to resources, c) maximize the amounts and varieties of commodities & labor at their disposal, and d) increase their political power...” to keep it that way (Algaze, 2001); or at least to try to keep it that way. See also “Natural law”, “Common law”, “Parties, political”, “Power”.

3) If/when the above phenomenon is uncorrected, “Onion prices have been known to bring governments down²²⁵¹ in India. In Brazil tomatoes are the driver of social protests. In China its pork, and in Egypt its wheat. So we can see that different places have different vulnerabilities and we don’t tend to give enough credit to the fact that individual *food prices* can make an enormous difference. An emerging market worker spends 40-70% of his income on food and energy [staying alive] alone... [So] the workers are asking for wage increases. The wage demands in China are running at 70% per annum for skilled workers” (Malmgren, 2013); and in America it’s gasoline prices, and sometimes other provocations... See also “Inflation”, “Inflation, unadjusted”, “National debt”, “COVID”.

4) Starting with England’s (so-called) “Glorious Revolution” of 1688-94, each of the classic Big 5 [martial] Revolutions of the entire 2nd Millennium have eventually morphed (some more quickly, some more slowly) into, essentially, Dutch-British-style “National Debt Economy (NDE)” monetary systems, based (at least traditionally) upon a “Central Banking-Warfare model”.

a) “Glorious Revolution” (1688-94)- whether or not NDE was a primary objective of the original Dutch invasion or not, England was set upon that path by the 1690’s (just prior to becoming the UK).

b) “Revolution, American” (1770’s-80’s)- The Spirit of ’76 kicked it out; then the (counter-revolutionary) Spirit of ’87 allowed monetary imperialism to return, albeit in the guise of an ‘American’-run NDE.

c) “Revolution, French” (1789-90’s)- was different. “The revolution in France was a struggle by a government which did *not have sovereignty* to obtain sovereignty [which was-- even then-- mostly monetary in nature], which to us would be the essential, identifying characteristic of any state-- sovereignty ...[But the Am. Rev.] very clearly was an effort by [colonial] states who [already] had [de facto/monetary] sovereignty to curtail it, divide it up, *hamper it*, by such things as federalism, separation of powers, electoral colleges, and so forth and so forth” (Quigley, 1976c-pt.1, mn.8). The French (monetary) Revolution, unlike the American experiment, had largely failed within several years (c.1795-96), and the subsequent Napoleonic era-- although establishing at least a basic monetary sovereignty-- was bullionist in nature, and thus both a primary enemy of (and logistically-inferior [at least over the long-term] to) the newer British (NDE) way of running things. Hence, the British et al won, and after 1815 France was also ‘reformed’ to compliance with the (NDE) model (Montesquieu, Rousseau, etc. doing approximately nothing to stop this development). See also “Currency Wars, the”, “National Debt Economy (NDE)”.

d) (Russian) Communist Rev. (1910’s-30’s)- started out like the French/Color Rev. with Jacobin-like Bolsheviks, but their leadership was mostly from abroad (the West) and the 5th (of 10) planks in “The Communist Manifesto” calls for: “*Centralisation of credit in the hands of the state*, by means of a

(Quigley, 1976c-pt.1, mn.109-10). See also “Privilege”, →“Feudalism”, →“Revolution, French”; “Federal Accounting Standards Advisory Board” (FASAB-56).

²²⁵⁰ As in France, it was also mostly about efforts “to establish some kind of a more rational life in their principalities, to create a uniform *system of weights and measures*.... [during the] period from 1776...[to c.1801]... They couldn’t do it. Their systems of weights and measures... were absolute...chaos. They had a different weight or measurement for every commodity...[and those] measurements changed as you went from village to village or district to district.... What had been happening [for centuries] is the measurements had been getting larger, because the power of the creditors was so great that, if you owed a bushel of wheat to your landlord, all the landlords together, over generations, could make the bushel [into] a larger measure” (Quigley, 1976c-pt.3, mn.313-14). See also “Credit money” [creditor money].

²²⁵¹ What’s “the difference between a [‘real’] revolution and [simply] the failure of a state or the collapse of an empire? Only that in a [‘real’] revolution, many men, women, and children have the emotional energy to imagine a better future and put lots of creative work into trying to make it so (Spang, 2020b). See also “Design”, “History”.

national bank with State capital and an exclusive monopoly.”²²⁵² See also “Lender of Last Resort”. Nonetheless, Russia was deemed-- along with Germany-- to be the primary enemy of Anglo-American-French domination of the world, so at least 1 of the 2 had to be thrown a serious curve ball-- something to fight over. Hence it was Russia (not monetarily sophisticated Germany) that got to undergo, for several decades, a bizarre experiment with (see also) “Monobank”. Thus it was not until the 1990’s and Francis Fukuyama’s posit that the inefficiencies-cum-wreckage of the monobank system were (belatedly) superseded by a NDE. And even today, Russia’s national debt (at approx. 15% of GDP) is but a fingernail compared to the G7 nations, China, and most of the OECD. See also “Globalism”.

e] (Chinese) Communist Rev. (1940’s-60’s)- unlike Russia’s, moved promptly (i.e. 1950’s) to a monobank system (whereas the Soviets had had a somewhat more gradual monetary transition).²²⁵³ The 90’s, post-Gulf War transition to the requisite-‘capitalist’ NDE, however, was gradual, without many private banks; and China’s relative national debt (as % of GDP) actually declined from 1995-98. From the 2009 policy shift (from exports to consumption-led growth), however, the national debt (along with business and even [to less extent] consumer debt) has skyrocketed, at one of the fastest rates ever known... leaving [the 2 best-friends] China now as the world’s biggest ‘liberal’ and Russia as the world’s biggest ‘conservative’ on the subject. Go figure. Is NDE not worth fighting wars over anymore? See also “Intelligence Community” [I.I.C.], “Industrial Revolution, 3rd”, “Design”, “Money, ‘end of’”.

See also “Corrosion-Cancer-Debt”, “Adolescence of Mankind”, App.C: “1-2-3”.

5) Sometimes (strategic) transitions require termites. “I guess they’re trying to recruit people that don’t have honor, and then the good guys, I’m told, get kept low level. And then the bad people just get put at the top until you get people like [CIA director, 2006-09] Hayden, and [DNI in Obama’s 2nd term] Clapper, and [CIA director in Obama’s 2nd term] Brennan... [in contempt of] Congress, saying: ‘We’ve never spied on one American’. It’s just...unbelievable” (Jones, 2018, mn.20). In “my life... I’ve met enormous amounts of people. And the two professions that I’ve found, in my experience, know less or [even] least about what’s really happening in the world are journalists and politicians... [E]ven Prime Ministers [these days] don’t really know what’s going on in the world. But... those two professions...are [ostensibly] a. directing the world, and b. reporting [on] those directing the world. And most of them are absolutely clueless” (Icke, 2018d, mn.1-2). See also “Money” [state credits], “Communism” [Hegel], “National Security Agency (NSA)”.

6) “What if a policy designed to protect the balance sheets of the wealthy has unleashed forces that may lead to the mass appropriation of those assets in the years ahead?” (McWilliams, 2019).

See also “Quantitative Easing”, “Baby-boom demographics”, “Montesquieu, Baron de”.

7) In the larger sense, it’s not just that TAB-bankmoney simply breaks down into debt-saturation every 7-to-8 decades (and that we are henceforth confronted with various ‘modest proposals’ for what to do about it). It is also that [what Van Buren called] the Money Power (more recently known as ‘globalization’ or ‘bankmoney regime’) has always been a phenomenon of [headquartered in] the old East, migrating Westerly-- from 2nd millennium BC Akkad & Babylonia to 1st millennium BC Athens & Rome, from 9th Byzantium & Venice to medieval Florence & Genoa; from 15th-16thc Lisbon & Madrid to 16thc-17thc Bruges (Antwerp) & Amsterdam; then to 18th-19thc London, and 20thc New York. Is that (locus) really mostly all there is to ‘Western Civ.’? See also “Montesquieu, Baron de” [Age(s) of Revolution].

8) This ‘evolution’ of the Money Power’s preferred locus of control (from 22nd BCE Akkad to [supposedly] 21stc Shanghai & Hong Kong) is on the cusp of completing, in its own right, one ‘revolution’ around the planet. See also “Debt cycles”.

²²⁵² This strategic policy objective was (unabashedly) echoed (in a leading ‘capitalist’ country), 176 years later, by German Finance Minister Olaf Scholz (in response to Facebook’s prospective “Diem” coin): “‘We must do *everything* to ensure that the *currency monopoly* remains in the hands of the state” (Huber, 2021, n8). See also “Lender of Last Resort/Too Big to Fail”, “Hegelian dialectic”, “Diem”, “Local scrip & Complementary currencies”, “Statism”.

²²⁵³ Notwithstanding its other fields of radicalism in the 1920’s-30’s, the Soviet Union (which always had some amount of conflict between International & National visions of ‘communism’) **seems to have** simply kept its 1940’s warhorse-commandery monetary system [a.k.a. monobank] going (without major revisions) until it collapsed, c.1990.

8b) ...The resultant over-monetization (even if the entire process wasn't hamstrung by very questionable allocation practices) inexorably ran up against the limits of both: 1] the Earth's capacity for exploitation, and 2] humanity's tolerance for strategic lies and injustice²²⁵⁴-- or, more specifically-- the circumscribed freedoms that resulted, eventually, from 'both' of the large trends. Hence, even pre-2020-21 (see also "Apocalypse"), nearly all of the "preconditions of revolution exist[ed] in the UK and most western countries. The number of active pre-conditions is quite stunning, from *elite isolation* to *concentrated wealth*, to *inadequate socialisation & education*, to *concentrated land holdings*, to *loss of authority*, to *repression of new technologies* (especially in relation to energy), to the...[auto-pilot] of the public sector & [the] spread of [institutional] corruption, to *media dishonesty*, to *mass unemployment* of young men, and on and on..." - Robert David Steele (Ahmend, 2014). See also "Inflation", "Food"; "Intelligence Community (IC)", "Provocation operation (Po)". See also "Plan, old (the)", "Plan, new (the)".

[Migration of (2nd Estate/usury-based) monetary Empires in history; the National Constituent Assembly (1790-91) didn't understand]

Revolution, American, the- (definitely a triangular affair, seen in Europe as part of the Anglo-French wars)

1) "What do we mean by the Revolution? The war? That was no part of the Revolution. It was only an effect and consequence of it. The [real] Revolution was in the minds of the people, and this was effected, from 1760 to 1775, in the course of 15 years before a drop of blood was drawn at Lexington. The records of 13 legislatures, the pamphlets, newspapers in all the colonies ought be consulted, during that period, to ascertain the steps by which the *public opinion* was enlightened and informed concerning the [increasing lack of] authority of Parliament over the colonies."

- John Adams, to Jefferson, 1815 (Bailyn, 1967, 1; Adams, 1815c). See also "Natural law".

1b) And what was 'in the minds' of the leadership and (other) people? Hypocrisy over the (see also) "Glorious Revolution". "In England, the polity established control of the country in [what was simply] an oligarchy of landowners, the Whig oligarchy. Members of Parliament were sent to Parliament by pieces of land, and someone, who owned a piece of land which did have the right [They're talking about the right of the land, not of the person]... could send a member to Parliament, whether that piece of land had *anyone living* on it or not. Well, that was not a [actual] reflection of the power structure of England-- that [inanimate] pieces of land were powerful. And I would, [but] do not have to demonstrate to you, that the legal arrangements by which the British Parliament made the rules to govern life in the...[US were] equally unrealistic" (Quigley, 1976c-pt.3). See also "", "Debt cycles" (.the last round's unfinished agenda).

²²⁵⁴ "The West has pursued an [post-]industrialization path that allows for the [monetary] privatisation of [real] wealth from the [shrinking, instead of expanding] commons, along with... the externalisation of ...[large corporate] costs.... When trade treaties have secret sections-- or are entirely secret-- one can be certain the public is being screwed and [that] the secrecy is an attempt to avoid accountability" (Ahmed, 2014). See also "Lobbyists", "Corporations", "Public-Private Partnership (PPP)"; "Provocation", App.C: "1-2-3".

2) And, believe it or not, the (expected or normative) relationship between mother England and the American colonies had never been specified²²⁵⁵ (at least in public). Then after the two sides' close, if informal, collaboration²²⁵⁶ during the "French & Indian War" had ended, the underlying difference in perspectives²²⁵⁷ was, like a fault line, suddenly exposed. "For [the British] Parliamentarians, a Whig was a patriot who extolled the revolution of 1688 for bringing the King under law by placing him effectively *under Parliament*.²²⁵⁸ To most Americans [however], a Whig upheld the right secured in 1688 to live under laws made by *one's own* representatives"²²⁵⁹ (Samuelson, 1996). See also "Common law".

2b) Nonetheless even "liberal imperial reformers, [such as fmr. Massachusetts gov.] Thomas Pownall ...[echoed] the perspective of London when he wrote that 'I do suppose that it will not bear a doubt, but that the supreme legislature of Great Britain is the true and perfect representative of Great Britain, and [of] all its dependencies'" (Samuelson, 1996). There were, according to Thomas Fleming, perhaps "75,000 to 100,000 Loyalists in America during the Revolution... [> 3/4ths of which] fled after the war" (Schellhammer, 2013). John Adams' ('classic') approximation-- that only '1/3rd' of the colonies' subjects supported the rebellion, with another '1/3rd' actually on the side of the British-- was always an exaggeration.²²⁶⁰

3) Nonetheless at times it was "only the notable exertions of financier Robert Morris, ambassador Ben Franklin, and General George Washington [that] kept the government solvent and its armies in the field" (Rudalevige, 2005, 20). See also "Founding fathers (of USA)", "Morris, Gouverneur".

Theaters (by chronology): a) Canada- "" (Graebner, Fite, & White, 1975,)

b) Northern states- British "hopes were shattered by [Gen.] Burgoyne's surrender at Saratoga" in 10/1777 (Graebner, Fite, & White, 1975, 87).

c) Southern states- "" (Graebner, Fite, & White, 1975,).

3b) It wouldn't have been won unless it was a world war, which is what it was-- or at least what it turned into (with time, increasingly, on the side of the rebels). From the get-go, Old Regime France, which had been "relegated to inferior status by Britain in the 7 Years War,...recognized, almost from the war's conclusion, the prospect that American resentments might present an opportunity to humble Britain and

²²⁵⁵ This informal state of affairs is often known as the indirect or "loose imperial system that existed in the old empire [and it] depended implicitly upon [Edward] Coke's [initial articulations of the English] constitution. Parliament and the, admittedly subordinate, colonial legislatures could *easily* coexist as long as all parties regarded sovereignty as something beyond reason and understood the inherent limits on all power" (Samuelson, 1996). See also "Religion", "Philosophy".

²²⁵⁶ Many Americans, rightly, felt double-crossed by London in the 1760's, because the preceding years (if not decades) of victorious "Anglo-American patriotism... [was based on the] root premise of constitutional equality among Britons across the empire" (Samuelson, 1996). See also "Racism".

²²⁵⁷ "A trading nation has a prodigious number of little particular interests; it may then injure or be injured in an infinite number of ways. Thus it becomes immoderately *jealous*, and is more afflicted at the prosperity of others than it rejoices at its own. And its laws...[while still in the mercantilist era] may be so rigid with respect to trade and navigation... that it may seem to trade only with enemies" (Montesquieu, 1748, 311). <https://www.youtube.com/watch?v=0cxFzHO9lfi> ['jealousy & mayhem']. Even prior to the fall of French North America (c.1759-60), Montesquieu and others had sensed "that American colonists would not indefinitely accept the burden of [unfair & hypocritical] fiscal restraints. Unyielding British policies [generally worsening through the 1750's-60's]... hastened independence, but it is safe to say that it would have happened anyway" (Laqueur, 1993, 261).

²²⁵⁸ This was the conventional interpretation of (the then-trendy) Blackstone *Commentaries on the Laws of England*. But in "America, unlike in Great Britain, [such] Blackstonianism was incompatible with English liberty. By demystifying [traditional Anglo-British] sovereignty, Blackstone forced to the surface the tension between Parliament's role as the legislature of Great Britain, and as the legislature of the empire, and thereby made the imperial constitution unworkable" (Samuelson, 1996), in a way that it wasn't before.

²²⁵⁹ And the best way to make that case "was to draw upon [Sir Edward] Coke's constitutionalism, which allowed them to hold that the Glorious Revolution was the triumph of English liberties in all of His Majesty's dominions, rather than merely the placing of the King under Parliament" (Samuelson, 1996). See also "Glorious Revolution, the".

²²⁶⁰ Although sentiments "varied by region, opinions about the Rebellion changed over time, and loyalties shifted.... Robert Calhoun ...[estimated (plausibly)] that probably [only] 15 to 20% of adult white males remained loyal to Britain, and...40 to 45% of the free population... actively supported the Patriots" (Schellhammer, 2013), leaving approx. another 40% wishy-washy or indifferent. "Americans love grouping things into thirds nearly as much as they love lists.... Historian J.L. Bell pointed to Adams's memories of the Boston Massacre as evidence that Adams tended to exaggerate the number...of the people opposed to him...[which was] nothing new for the time ...[S]tudy...American Revolution-era newspapers...[and you'll find that a very] common propaganda tactic was to inflate the number[s] of your enemy, and deflate your own" (Schellhammer, 2013 [comments]).

enhance its own relative status²²⁶¹ (Graebner, Fite, & White, 1975, 99), not to mention its trade lines (and chronically horrible budget). See also “Revolution, French”.

4) The Revolution was a monetary-economic war; and the nation that came into being as a result embodied in its initial constitutions (the Articles of Confederation) a complete rejection of international exploitation²²⁶²; and then later (c.1788) added an exception, for the [ostensibly silly purpose of] ‘borrowing money’ from others (Art. 1:8:2; in contrast to ‘coining money’ in Art. 1:8:5). But that’s just how things were done (if one wanted to run with the big dogs) in the late 18thc. See also “Articles of Confederation”, “National Debt Economy”, “Franklin, Benjamin (1706-1790)”, “Conspiracy theorist”.

5) Increasingly irreconcilable economic differences, growing since the 1750’s (Titus, 2019b, mn.18).

6) From the British perspective, first of all the American colonies generally weren’t turning a profit,²²⁶³ and much of the establishment saw a window of opportunity in the 1760’s to rectify that (Smith, 1776). To much of the American colonies’ establishment, however, the latter 60’s and first half of the 1770’s were, *au contraire*, their one shot opportunity²²⁶⁴ to get rid of those (often bumbling) foreign overlords from across the sea. An equal portion of Americans elites, however, were fully “willing to accept further taxation on the condition that they were granted political power” in London & (the sovereign) Parliament-- and doing so would have “quickly” settled the 1760’s dispute (Galiani & Torrens, 2019).

6b) So why didn’t the British simply make the reasonable compromise (suggested by Adam Smith and others) of allowing American representation in Parliament (in exchange for substantially higher taxes)? The “political calculus in Great Britain [sometimes a.k.a. London] was more complicated than the one envisioned by Adam Smith [up in Scotland]. American representation would have shifted the [domestic] balance of power within Britain in favor of radical political reform.²²⁶⁵ Fearful of this outcome, the British chose” instead the military option (Galiani & Torrens, 2019); perhaps assuming that it would be an unpleasant, but basically easy, business (against the armory & foundry-less ‘rebels’). Instead they earned the villain role, indemnity from pretty much all the rest of the European powers, and after 2 or 3 years, a world-scale international coalition pointed against them. And “The World [was] Turned Upside Down”, at least until the Federalists’ 1790’s counter-revolution. See also “Constitution, US (of 1787-91)”.

7) Which Philosophers of the century were for or against it?

<u>For</u> HUME ²²⁶⁶	<u>compromise</u> BURKE	SMITH	<u>Against</u> BENTHAM	<u>N/A</u> HEGEL ROUSSEAU
VOLTAIRE				

²²⁶¹ “‘It is our duty’, wrote Foreign Minister Vergennes [r.1774-87], ‘to seize every possible opportunity to reduce the power and greatness of England’” (Graebner, Fite, & White, 99). See also “Physiocrats, the”, “Currency Wars, the”.

²²⁶² Or, for that matter, any ‘national’ exploitation, either. It wasn’t until “November 1777...[after] France had refused to lend the [famously bullion-starved] United States any money unless there [in fact] *was* [sic] a United States”, that the Continental Congress finally approved the Articles of Confederation; and then it took an additional 3 years “for all 13 states to sign on” (Raphael, 2013, 6). See also “Civil National Identity”.

²²⁶³ For starters, the American colonies had (pretty much always) “paid much lower taxes than other subjects of Great Britain”; while “[t]he revenue collected in the colonies was not nearly enough to cover the cost of their defense...[even before] the British Empire had demonstrated its willingness to protect the colonies in the [budget-busting] 7 Years War. After that war, new taxes... were unavoidable” (Galiani & Torrens, 2019).

²²⁶⁴ The 7 Years War had “removed France as a threat to American colonies, [thus] allowing the rebels to safely count with French military support without fear of falling into the hands of France. Americans had a [rare] window of opportunity to mount a credible [armed] rebellion” (Galiani & Torrens, 2019).

²²⁶⁵ This is not hyperbole. The decade-long Wilkes & Liberty movement in the UK “nearly caused a revolution” in England (in the late 1760’s-early 70’s), and “the American Revolution part of that... English-Atlantic culture... an extension of that civil conflict going on in England” (Livingston, 2006, mn.1-2). Throughout the War, General “Washington’s personal London representatives, at his instructions, transferred...[funds] out of [Washington’s account at] the Bank of England, to make payments to his creditors.”

- <https://reformclub.blogspot.com/2019/05/general-george-washington-and-bank-of.html>

²²⁶⁶ Both Hume (1711-76) and Smith resented “that the English wouldn’t really accept them”, and Hume actually “spent most of his life abroad in France...He never really too much like England” (Livingston, 2006, mn.5-6). Hume was against Wilkes & Liberty, but he was for American succession. And that’s very odd [rare]” (Livingston, 2006, mn.3). Hume was even “bitterly opposed” to the 7 Years War with France (mn.9). See also “United Kingdom”.

6b) Even in the UK, liberal London was for it; the Crown against it (Livingston, 2006, mn.24). “What we call the American Revolution was in fact merely part of an English civil...strife that had spread across the Atlantic” (Livingston, 2006, mn.27), and lodged there, due to Americans’ particular sense of betrayal by the British after the French & Indian War. The Wilkes & Liberty movement “had rocked England to its foundations off-and-on, for a decade”, from 2 years before the *Stamp Act* (Livingston, mn.27). See also “Monty Python’s” [England also had a ‘bicentennial’ (of sorts) to celebrate].

See also “Revolution”, “Civil National Identity” [Jefferson vs. Hume], “Constitution, US”.

Revolution, French, the- 1) It “was evident that people wanted... 3 different ideas-- [Liberty, Equality, Fraternity] which are all wonderful-- but not [at all] practicable [with what institutional machinery they had at the time]... [Within] a centrally-organized organism, it’s...simply not possible” (Meyer, 2021, mn.22)...

1b) ...But the Old Regime wasn’t even “centrally-organized”. “I don’t find it mentioned in most history books...[but] certainly...the most important edict...of the Old, Old Regime...was an order [from Charles VII, in 1454], for every locality to write down the [old] local customs. It took a 150 years... but by 1580... there were 365 law codes of the local customs in France; and these were the binding laws, which meant... [that, although the Kingdom of France] had territorial unity...[it also] had every other kind of legal disunity. Taxes were different everywhere, because [of] the way it was customary to do it. There were tolls preventing commerce from moving everywhere. There was no unity of the judicial system: at one time there were 14 supreme courts [and ‘the’ monetary system wasn’t much better].... No...[power] in 1789 could survive...[with] different systems of weights and measurements for every comlity” (Quigley, 1976c-pt.1, mn.109-10). And “the king of France was not absolute-- he was not even sovereign [by then. He had reached...the peak of his power around 1520; and by 1576... already his power was collapsing...²²⁶⁸ into a growing morass of increasingly rigid restraints.... The king could not borrow, because he had no collateral” (Quigley, pt.1, mn.112). It was not an anomaly. Nearly a century-and-a-half later, even Louis the XIV’s (r.1643-1715), “own fortune was next to nothing, and he depended on [Cardinal] Mazarin [‘First Minister’ of France from 1642-61 (& then also his successor, Jean-Baptiste Colbert, until 1683)]” to run and finance the kingdom” (Soll, 2014, 88).

1c) After FM Colbert’s double-entry accounting lessons were forgotten or ignored in the 1690’s, the economy largely reverted to its traditional medieval chaos, and, by the 7 Years War, “was only staying afloat thanks to Spanish loans.”- https://www.youtube.com/watch?v=CCPEm_tASdo [3Mn.]

2) “[V]ery much like the...definition of ‘revolution’ that emerged in the summer of 1789...[the] evocation of ‘national money’ united two hitherto largely distinct phenomena. While...[this] modern meaning of ‘revolution’ combined popular uprising (the storming of the Bastille) with political transformation (the Tennis Court Oath), ‘national money’ combined small change (the money of the poor) with the state’s

²²⁶⁷ ...but only within the ‘categorical imperative’- <https://amc.sas.upenn.edu/sites/www.sas.upenn.edu/andrea-mitchell-center/files/uploads/HoffmanPennDCC.pdf>.

²²⁶⁸ 11-year old King Charles IX (r.1560-74) "had to find, in 1561, enormous sums of money... And... the city of Paris said that they would... guarantee these loans that were given to him, but [that] they [first] needed a guarantee that the interest would be paid. And the Church of France [then] volunteered to pay the interest. These are *les Rentes sur l'Hotel de Ville de Paris*. This made within a hundred years, [or] 150 years, the Church of France stronger [sic], and more of a sovereign political entity, than the monarchy itself” (Quigley, 1976c-pt.1, mn.115).

commitment to honoring its inherited debts (the assignats). In both cases, the [theoretical] combination²²⁶⁹ proved [tactically] effective, but also *highly unstable*. The coins with no intrinsic worth and the [new] paper, backed by [confiscated Church] land, would now [supposedly] form a single entity: French *national currency*. In practice, however, the people and the [new] assignats did not fit seamlessly together” (Spang, 2015, 150-51); i.e. about half the population actually hated them and what they stood for.

2b) In the resulting turbulence; France’s first-ever “civil service system” (established c.1791) hardly survived 10 years and was not to be “re-established...[until] the 1840’s” (Bodde, 2005, 9). See also “Physiocrats, the”, “Dirigism”.

3) Author of the ‘national money’ manifesto, Rabaut de Saint Etienne (1743-93), “might speak in protorepublican terms of *one money for all*, but-- as with [the revolution’s initial leader in the Assembly] **Mirabeau’s**²²⁷⁰ proposed inscriptions [for slogans on the new money]-- symbolic uniformity would not...make social differences [suddenly] disappear. Instead, explicit [monetary] policy initiatives *collided* with previously unstated assumptions. The deputy [and director of the Caen Mint²²⁷¹, Jacobin], Gabriel de Cussy, for example, intervened to suggest [that] working people simply had no place for carrying paper money... [insisting that] innumerable problems would arise if the Assembly put ‘a written money in the hands of people who cannot read, a fragile money in the hands of people who are careless, [and] an easily dirtied money in the hands of people whose condition is inseparable from filth” (Spang, 151). Frenchmen had “always lived in a world where different people had different money” (Spang, 2015, 152). See also “**Currency wars, the**”, “Congress of Vienna”, “National money”, “**Federal Funds (accounts) for All**”.

[A century after Waterloo (1914), no *de jure* titles of nobility, but 2/3rds still die w/o any assets; and the 1% own 70% of assets.]

Revolution, Russian- See “USSR (1922-91)”.

Revolving Door, the- Although this D.C. term for symbiotic relating between the public and private sectors was prevalent in the 1980’s (as was its prerequisite-- the ‘Military-Industrial-Complex’-- from the 1960’s), it wasn’t until the mid-1990’s that an outright “*financial coup d’état*” kicked in, characterized by a “significant shift in assets and money out of governments all around the world and into private corporations... From 1996, what we have done is we have levered the...sovereign governments up with tremendous amounts of

²²⁶⁹ More than a century later, the German *Na-zis*, also driven to some state of desperation by British Imperial-monetary provocations, would combine the late 19th century’s two most powerful ideas-- Nationalism & Socialism [*National Zocialismus*]-- into another explosive combination, that apparently invited a sustained British Imperial intervention. See also “**Currency Wars, the**”.

²²⁷⁰ National Assembly leader Gabriel Riqueti, Count of Mirabeau (1749-1791) was the short-lived son of famous Physiocrat economist Victor de Riqueti, Marquis de Mirabeau (1715-89; a.k.a. “Mirabeau the Elder”), with whom his relationship was complicated. “From the first **Mirabeau saw** that the royal and ministerial scheme of financial reform would be insufficient to cure the existing evils... [and] that reforms could be successfully carried out only by a strong Government. From the opening of the States-General until his death 2 years later, Mirabeau was undeniably the most important figure in public life in France, and the story of his life is that of the Revolution.... He was largely responsible for Necker’s resignation in September, 1790, and for the appointment of Clavière in his place”; Mirabeau was also elected president of “the Jacobin Club” on Nov. 30, 1790, prior to being elected president of the National Assembly on January 29, 1791. - *New International Encyclopædia*/Mirabeau, 1905. **2xagent**; Jefferson

²²⁷¹ de Cussy had purchased this position, as was then the norm. Mints in 18th century France were openly “venal offices” (up for sale to the highest bidder), and it would not be until 1879 that “the Paris Mint became the sole producer of coins [in France] and a fully state-operated institution” (Spang, 2015, 248).

debt, and we have shifted tremendous amounts of money into private hands”²²⁷² (Fitts, 2017n2, mn.16). “If you can finance and access an infinite amount of money on a non-transparent, secret basis, then you can run the whole planet outside of the law” (Fitts, 2017n2, mn.24). See also “Offshore banking”. See also ‘Military-Industrial Complex’, “Central Intelligence Agency (CIA)”, “Black Budget” [U.S.C. 50, 403a], “Social media”, “Financial Accounting Standards Advisory Board” [FASAB-56].

Rhetoric- “Thunder is nice; thunder is impressive; but it’s the lightning that does the work.”- Mark Twain. ; and “[t]he difference between the almost right word and the right word is really a large matter-- 'tis the difference between the lightning-bug and the lightning.”-

Rhodes-Milner (and Cecil) Group- (a.k.a. the ‘international Anglophile network’, or simply ‘Rhodes-Milner Group’)

See “Royal Institute of International Affairs (RIIA)”; “Globalism”, “Conspiracy theory”; “Industrial Revolution, 2nd” [1870’s-1960’s].

Ricardo, David (1772-1823)- (‘comparative advantage’→ ‘free trade’; not to be confused with ‘free banking’)

1) Adam Smith’s successor as the UK’s (banking Establishment’s) premier political economist, Ricardo “shared nearly the same view of money-- as gold and silver, but Ricardo [unlike Smith] applied it honestly and was strongly opposed to fleecing the nation by charging interest on the national debt”²²⁷³ (Zarlenga, 2002, 323). See also “Public Banking (idea)”.

2) “A bond broker, Member of Parliament, and political lobby for Britain’s financial sector” (Hudson, 2015b); Ricardo “aimed his **rent theory** at Britain’s [rural] landlords, while remaining silent about the [urban] *financial* rentiers” (Hudson, 2015, 17); except for his 1819 plan for paying off and ending the British national debt (Zarlenga, 2002, 290-291). See also “National Debt Economy”.

3) “By 1823, Ricardo [had even] worked up the courage²²⁷⁴ to propose establishing an English National Bank” (Zarlenga, 2002,). See also “National bank”, “Bank of England”.

4) According to Steve Keen, Ricardo was “also a swindler... [who was] swindling his fellow stock brokers over who won the battle of Waterloo²²⁷⁵... [and also] swindling the world over the idea of *comparative advantage*” (Keen, 2018e, mn.10-11). See also “Banking School/Bank Teachings”.

5) Ricardo “would also claim that labor was the objective measure of all value...perhaps an unfortunate inference.”- <https://www.adamsmithworks.org/documents/1776-and-all-that-thomas-jefferson-on-adam-smith-1> . See also “Labor theory of Value”, “Marx, Karl (1818-1883)”.

5b) A century later, the OxBridge term “Ricardian capitalism” was still being twisted. “The normal, if there be a normal, is that man is a social animal who finds...fulfillment in a number of organic relationships. Ricardian capitalism was not a conservative creed. It destroyed ruthlessly all traditional relationships that stood in its way. It weakened the bonds of family. It proclaimed it as a gospel of progress that man should

²²⁷² That’s what debt and usury are. See also “Leverage”.

²²⁷³ One example of Ricardo’s straight talk: “It is evident...that if the Government itself were to be the sole issuer of paper money instead of borrowing it of the Bank, the only difference would be with respect to interest: the Bank would no longer receive interest and the Government would no longer pay it...” (Ricardo, 1824, 3). Franklin wrote about the same thing more than half a century earlier in Pennsylvania.

²²⁷⁴ Around the time of Waterloo (8-9 years earlier), Ricardo had written to Thomas Malthus: “I always enjoy an attack upon the Bank and [i]f I had the courage I would be a party to...” such attacks (Zarlenga, 2002, 287). Ricardo explained in 1816 that “...I cannot but deprecate the facility with which the state has armed the Banks with so formidable a prerogative” as control over the UK’s money supply (Ibid). See also “Bank welfare”.

²²⁷⁵ On Sept. 14, 1823 the *Sunday Times* remarked in Ricardo’s obituary that during the Battle of Waterloo (1815), Ricardo-- the man who would soon become the UK’s most renown political economist since Adam Smith-- had “*netted upwards of a million sterling*”, (Skousen, 2009, 99); over 100 million dollars in today’s money. (Perhaps some people conflate this with the more famous [although not officially admitted] Rothschilds-Waterloo story today; perhaps there was some connection.) In any event, he immediately retired from his job in the bond pits, subsequently purchased an estate in Gloucestershire, now owned by Princess Anne, and retired to the country. Ricardo was appointed Sheriff of Gloucestershire for 1818-19, and in August 1818 bought Lord Portarlington’s seat in Parliament for £4,000, as part of the terms of a loan of **£25,000**. His record in Parliament was that of an earnest reformer for the economic benefits of bankmoney (from 1810) and ‘free trade’ (from 1817).

no longer be tied to his home, but should rather be both encouraged and compelled to move both himself and his money in indifference to a constricting [older, 17th-18th type] patriotism and [now only] at the sole call of profit. It remorselessly destroyed the feudal relics...[for some time weakening] monarchy, and aristocracy, and the landed interest.... [because now] the price mechanism and the profit motive would cause people to work hard out of self-interest, and the consequence of this harsh but healthy discipline would be that idleness would be banished from the land, that enterprise would be rewarded, and that as a result more would be produced for everybody" (Hollis, 1949, 8). See also "Capitalisms", "Hegelian dialectic", "Orwell, George (1903-1950)", "Myths, Big 6", "Bentham, Jeremy (1748-1832)". See also "Malthus, Thomas (1766-1834)", "Comparative advantage", "Full Reserve banking", "Keynesianism (Abba-ism)".

Risk- 1) was "the rationalization" for the re-introduction of "interest and profit by the 13th century Schoolmen [Scholastics]. However, the aim of business is to *minimize* risk or, if it must be undertaken, to demand government bailouts. (See *Moral Hazard*.) Inasmuch as interest on [f.e. US] government bonds is risk-free, the risk premium applies only to rates above the yield set by the central bank for public borrowing" (Hudson, 2015b). See also "Usury", "Capitalisms", "Securitization".

2) "Savers/investors should be able to *choose* the risks they are exposed to.... So the risk-bearing assets of the [post-monetary reform] bank should be grouped together on separate balance sheets, according to the (approximate) level of risk" (Dyson, Hodgson & van Lerven, 2016, 18). See also "Monetary reform". See also "Groupthink", "Minsky, Hyman (1919-1996)".

'Risk Reserve Ratio for Forward Forex' (in China)- (apparently a Sino-generis term for regulating foreign forex speculation)

1) Forward forex "sales are provided by banks to companies as an exchange rate hedging derivative, enabling the latter to avoid exchange rate risk."- <https://www.chinabankingnews.com/2020/10/13/pboc-reduces-foreign-exchange-risk-reserves-ratio-from-20-to-zero-for-forward-sales-and-settlement/>

2) The RRRFF of 20% was re-instated (back to 20%) in Oct. 2022.

2b) Initially, the RRRFF was "set at 20% on 31 Aug. 2015, in order to deal with strong depreciation pressure [on the Yuan], before being reduced to 0% on 8 Sep. 2017, as that depreciation pressure eased. On 6 Aug. 2018, [the] PBoC [then] reimposed a foreign exchange risk reserve ratio of 20%, in response to greater expectations of renminbi depreciation and signs of pro-cynical volatility on forex markets."

- <https://www.chinabankingnews.com/2020/10/13/pboc-reduces-foreign-exchange-risk-reserves-ratio-from-20-to-zero-for-forward-sales-and-settlement/>

See also "Forex", "Reserve requirements".

Risk, socialized- The ultimate in minimalized risk, "turning Wall Street partnerships into public corporations...[turned] them into objects of speculation. It was no longer the social and economic relevance that rendered it Too Big To Fail, but the number of side bets that had been made upon it" (Lewis, 2011, 263). See also "Minsky, Hyman", "Gutfreund, John (1929-2016)", "Derivatives".

Road to Serfdom- (via [public] taxation or [private] interest/debt?)

1) "An economic policy in which society relinquishes or loses its choice to centralized planners";

1b) "During World War 2, Frederick Hayek wrote *The Road to Serfdom* to depict all government regulations and planning as leading inevitably to centralized bureaucratic planning. The book became the ideological bible for subsequent neoliberals such as Margaret Thatcher to dismantle government authority and privatize the public domain. But inasmuch as *every* economy is planned, their efforts left a political vacuum, which has been filled by large financial institutions operating globally. Their mode of planning via the *IMF*, *World Bank* and *Washington Consensus* has turned out to be the new road to serfdom by loading down economies with unproductive debt, imposing economic austerity, and using the resulting financial crisis to assert dictatorial powers over government" (Hudson, 2015b). See also "Debt saturation", "Near monies".

2) “Democratic government policy was supposed to lead the world *away from* the vestiges of feudalism, but financial planners now impose client oligarchies, economic austerity and debt deflation, replacing the public Treasury with a [private] central bank.... [resulting] in an economic counter-Enlightenment, by untaxing wealth via a tax shift of the fiscal burden onto labor... [and] related anti-labor policies. (See *Labor Capitalism and Race to the Bottom*.) [Democratic public sectors] aim at maximizing domestic employment and economic potential, [whereas] financial planners aim at maximizing the price of real estate, stocks and financial securities relative to wage levels. The danger of an economy following a road to serfdom thus lies more in dismantling government and turning its planning power over to the financiers than in empowering democratic governments pursuing progressive economic policy, tax policy, fiscal policy and monetary policy” (Hudson, 2015b). See also “Fin de Siecle”. See also “Serfdom”, “American System, the”, “Feudalism, neo”.

Robotization (and productivity)- 1) USA currently has the lowest labor participation rate since 1974, and the trend looks set to continue, with perhaps all manual work robotized by the 2030's.²²⁷⁶ Work hours should, as a matter of common sense, also be reduced, allowing more time for education and recreation. 2) Nonetheless, according to National Medal of Science winner Ralph Gomory, only “a handful of people hold the robotic patents. Therefore, in a robotized world, the distribution of income and wealth would be concentrated in the hands of a few dozen people. Indeed, would there be any income or wealth of any magnitude?” (Roberts, 2017). See also “Financialization”, “Productivity”.

3) Transgenderism?- They've got to [as part of the larger agenda of curbing population growth rates] “be able to make a robot a citizen... so you've got to get the birth certificates, and the driver's licenses, etcetera to recognize ‘no gender’, because it's going to be very expensive if you have to make girl robots and boy robots.... the Deep State [wants to] roll out robotics and integrate them into the workforce...at very high speeds... It's extraordinary” (Fitts, 2018h, mn.40). “If you can take the labor and payroll system and simply adjust them, so that robots can slip right in... you'll save... 30 years and a trillion dollars” in legal wrangling (Fitts, 2018t, mn.32). “[Y]ou gotta follow the money” (Fitts, mn.35). See also “Corporations ('corporate personhood')”, “Owners, the”, “Slavery”.

[Harvard Law School library, 2018] ...

4) “I think that's where the Trump revolt came from in the very first place” (Keen, 2018, mn.20).

5) ‘White collar’ professions are no longer immune from the Terminator. “Knowledge workers of every stripe and variety-- radiologists, accountants, middle managers, graphics designers, and even marketers-- are already [also] feeling the heat, as pattern recognition software begins to penetrate every professional field” (Rifkin, 2014). And software programs such as “E-Discovery... [already] sift through millions of legal documents, looking for patterns of behavior, lines of thoughts, concepts and the like, at speeds that would trump the best Harvard-educated lawyers, and with crisp analysis that even the most well-trained legal scholars might miss....[W]ith the new...software, one lawyer [for example] can do the work 500 lawyers, and with greater accuracy” (Rifkin, 2014). See also Economist, 2019.

6)

See also “Industrial Revolution, 3rd”.

Rollover- to extinguish & renew (reinvest) a financial instrument after its initial maturity date

Roman Empire- (the proverbial ‘rise & fall’ via the scenic route-- i.e. taking about 8 centuries for what the British Empire ran through in approx. four centuries)

²²⁷⁶ Approx. half of all OECD jobs (inclusive of all sectors) are also at ‘probable’ risk of robotization, according to an OECD study (Economist, 2018).

1) Simple life-expectancy was a big deal in intelligence back then, and the Mediterranean super-foods were more-available (if not also more numerous). Everywhere in Europe had pretty plentiful fish; but “the Mediterranean diet promotes the consumption of large amounts of olive oil and other monounsaturated fat-rich foods such as nuts, seeds and avocado. Monounsaturated fats...help lower ...[bad] cholesterol levels. Moreover...[unadulterated] olive oil is a...[leading] source of vitamin E and polyphenolic compounds”-- i.e. such abundant antioxidants substantially lowered (at least) the p^{atri}ciate’s “levels of systemic inflammation” (Jacob, 2019). Make no mistake, it was a substantial advantage in the development of the capacity for strategic intelligence (as was also, of course, the Phoenician alphabet, and a writing-literary culture, famously developed by the 1st millennium BCE Greeks’ [mostly before the relative newcomer Romans supplanted them-- as Lords of the great Sea of riches]). See also “Slavery”, “Hypertrophy”, “British Empire”, “Empire”; “Adolescence of Mankind”.

Royal Institute of International Affairs (RIIA; 1919-)- (synon. Chatham House; in tandem with the US Council on Foreign Relations [CFR; est. 1921], the primary think tank or bridge the UK-USA [bankster] elite’s merger that characterized the 20th century, starting [in the UK] with the Rhodes-Milner Group, est. 1891)

1) Primary? According to Carroll Quigley, the British Crown/City²²⁷⁷-Imperialist “Rhodes secret society” (a.k.a. “the Milner Group”)²²⁷⁸, fully established²²⁷⁹ in 1891, “was the chief influence in [Prime Minister] Lloyd George’s war administration in 1917-1919 and dominated the British delegation to the [Versailles] Peace Conference of 1919; it had a great deal to do with the formation and management of the League of Nations and of the system of mandates; it founded the...[RIIA] in 1919 and still controls it... was a very important influence on the [sucker] policy of appeasement of Germany during the years 1920-1940; and it controlled and still controls, to a very considerable extent, the sources and the writing of the history of British...foreign policy [ever] since the Boer War” (Quigley, 1981, 5-6). See also “History”.

2) Power behind the throne? According to Quigley, up until the 1930’s & World War Two at least, the “power that was utilized by Milner and his Group was really the power of the Cecil family and its allied families such as the Lyttelton (Viscounts Cobham), Wyndham (Barons Leconfield), Grosvenor (Dukes of Westminster), Balfour, Wemyss, Palmer (Earls of Selborne and Viscounts Wolmer), Cavendish (Dukes of Devonshire and Marquesses of Hartington), and Gathorne-Hardy (Earls of Cranbrook). The Milner Group was originally *a major fief within* the great nexus of power, influence, and privilege controlled by the Cecil family. It is not possible to describe here the ramifications of the Cecil influence. It has been all-pervasive in British life since 1886. This **Cecil Bloc** was built up by [fmr. UK Prime Minister (1885-92; 1895-1902)²²⁸⁰, and ‘longest name ever’] Robert Arthur Talbot Gascoyne-Cecil, Viscount Cranborne and third Marquess of Salisbury (1830-1903). The methods used by this man were [then] **merely copied** by the [secretary] Milner Group” (Quigley, 1981, 15); not to mention its high-profile oligarchical megalomaniac Cecil Rhodes (1853-1902). See also “English constitution, the”.

See also “Council on Foreign Relations (CFR)”, “Shell game”, “‘Opposition’, controlled”.

²²⁷⁷ The early 20th century “Sovereign appears to be fully as impotent as described in the words of Andrew Carnegie [1835-1919] ‘in theory still a real monarch, although in reality only a convenient puppet, to be used by the cabinet (the City) at pleasure to suit their own ends’; not able even to exercise the power of pardon that is a prerogative of a governor of an American state...[or] the President” (Knuth, 1944, 53).

²²⁷⁸ Quigley, the 20th century’s foremost (public) researcher of this topic, also noted the following terms for the Group: (Alfred) “Milner’s Kindergarten [1901-10]...the Round Table Group [1910-20]...the [Cecil] Rhodes crowd...*The Times* crowd...the [Oxford Univ.] All Souls group, and...the [1930’s] Cliveden set.... all these various terms referred to the same Group” (Quigley, 1981, ix) of essentially British Crown Zionists. Alfred Milner (later UK Sec. of State for War, 1918), initially on behalf of diamond magnate and fmr. Cape Colony PM Cecil Rhodes, managed the Group via 3 branches: the (establishment historians Alfred and Alfred J.) “Toynbee group gave him the ideological and the personal loyalties which he needed; the [League of Nations mastermind Robert Gascone] Cecil Bloc gave him the political influence, without which his ideas could easily have died in the seed; and the Rhodes secret society gave him the economic resources which made it possible for him to create his own group independent of the [politically dominant] Cecil Bloc” (Quigley, 1981, 6-7).

²²⁷⁹ Quigley also noted that “the outlines of the [Rhodes-] Milner Group”, which directly founded the RIIA (and hence indirectly founded the American CFR), “existed long before [it was “fully formed” in] 1891.... This group formed at Oxford in the early 1870s and was extended in the early 1880s” (Quigley, 1981, 7). See also “Industrial Revolution, 2nd”, “Fin de Siecle”.

²²⁸⁰ I.e. 4th place, behind only his predecessors Walpole, William Pitt, & Robert Jenkinson in British history (<https://www.youtube.com/watch?v=yUPqASrmeYs> [‘live it down’]).

["Bob's Your Uncle"- Cecils since the 16thc]

Royalty, 'modern'- (a.k.a. 'the Crown' bureaucracy; [equiv. to 'deep state' bureaucracy in 21stc US])

1) Within two centuries of the Glorious Revolution and founding of the Bank of England, the "merchant bankers of [the City of] London" had "brought into their financial network the provincial banking centers, organized as commercial banks and savings banks, as well as insurance companies, to form all of these into a single financial system on an international scale which manipulated the quantity and flow of money so that they were able to influence, if not control, governments on one side and industries on the other. The men who did this, looking backward toward the period of *dynastic monarchy* in which they had their own roots, aspired to establish dynasties of international bankers and were at least as successful at this as were many of the dynastic political rulers [of the 18th and 19th centuries]. The greatest of these dynasties, of course, were the descendants of Meyer Amschel Rothschild (1743-1812)... whose male descendants, for at least two generations, generally married first cousins or even nieces.... They were, especially *in later generations*, [more] cosmopolitan rather than nationalistic. They were usually highly civilized, cultured gentlemen, patrons of education and of the arts, so that today colleges, P^rofessorships, opera companies, symphonies, libraries, and museum collections still reflect their munificence. For these purposes they set a pattern of endowed foundations which still surround us today" as much as ever (Quigley, 1966, Ch.5).

2) At least in the first half of the 20th century, the "international financial oligarchy use[d] the allegoric 'Crown' as its symbol of power and ha[d] its headquarters in the ancient City of London, an area of 677 acres; which...in all the vast expanse of the 443,455 acres of Metropolitan London, alone... has its own private [police] force..." (Knuth, 1944, 59).

3) "...American readers may not be aware of the fact that... 6 or 7 men can plunge the [British] nation into war... [and] these men do it in 'the king's name', who is in theory still a real monarch, although in reality only a convenient puppet.... Next to the sapping of the roots of true manhood in the masses, by decreeing their inferiority to other men at birth, this is the most potent evil... in the British Constitution, and it is chargeable solely to the monarchical system.... But this vital truth not one of the so-called 'practical' statemen of Britain sees or will consider, or... will venture to tell. Not one of them, apparently, has a soul above cheap corn, which is worshipped as the highest good. Indignities to the spirit of the masses, by which manhood is impaired... may safely pass unnoted, so long as their bodies are fed."

- Andrew Carnegie (1886, 303). See also "Food", "Dumb-downing".

See also "City (of London), the", "English constitution, the", "Deep State".

Rule of 72- "The *Rule of 72* provides a quick way to approximate the number of years needed for debts, savings or prices to *double* at a given compound rate of increase, by dividing 72 by the interest rate. The result is fairly accurate up to a rate of 20%. To double money at 8% annual interest, divide 72 by 8. The answer is 9 years. In another 9 years the original principal will have multiplied fourfold, and in 27 years it will have grown to 8 times the original sum. A loan at 6% doubles in 12 years, and at 4% in 18 years. But as Herbert Stein famously quipped: "Things that can't go on forever, don't" (Hudson, 2015b).

See also "Compound interest", "Royal Institute of International Affairs (RIIA; 1919-)".

*Russia (& Ukraine)*²²⁸¹ (etym.; always an emotion-based experience?; and intelligentsia-I.C. managed since the 1700's²²⁸²; i.e. 'the Northern Pole' [of the great 'anti-civilizational' tropics-to-subarctic meridians]) LTO "81" (Hofstede, 2015). See also <https://www.hofstede-insights.com/country-comparison/china,germany,usa> [.power distance²²⁸³].

"The most temperate parts of Persia, Turkey, Muscovy, and Poland have not been able to recover perfectly from the devastations of the Tartars [sic]" (Montesquieu, 1748, 273). See also <https://www.hofstede-insights.com/country-comparison/china,nigeria,russia,the-usa> [.power distance²²⁸⁴].

According to Herodotus, ancient Russia, in the 2nd millennium BCE, "was a grain exporting nation, and Russian grain went as far as Greece. Apart from growing wheat, barley, oats, and hemp, they hunted and they fished, and wove coarse cloth...it is understandable that the Russians should have [pretty much always] seemed yokels²²⁸⁵ to some of their [Greek & Persian affiliated] tormentors" (Ustinov, 20).

"Moscow regards itself as Byzantium²²⁸⁶— as a unique symphony between spiritual and temporal powers" (Escobar, 2022b). See also "Plato vs. Aristotle"; "Communism", → "USSR".

"Better to be slapped by the truth than kissed with a lie."- Russian proverb²²⁸⁷

1) Due to Ice Ages, of course, it is not one of the world's older countries. "Royal politics did not delineate the history of the Scandinavians or Slavs²²⁸⁸ with any consistency until the late 10th century.... It may be that there was as yet no clear distinction between [1st Estate] 'kings' and leading [2nd Estate] 'aristocrats' in either [group]... [A]ristocrats, too, were probably leaders of followers, rather than landlords of tenants for a long time" indeed (Wickham, 2009, 473). See also "Charismatic Authority (CHA) & Charismatic Dependency (CHD)".

1b) One thing that was delineated, however, was that "the political organization of the Eastern Slavs [c.mid-1st millennium] was still largely tribal; they had created no unified system through which their constant tribal conflicts could be resolved. According to Russian tradition recorded in the Primary Chronicle, the chief source of much of early Russian history, internal dissension and feuds among the Eastern Slavs around Novgorod became so violent that they voluntarily chose to call upon a foreign prince who could unite them into one strong state" (<http://www.italysoft.com/bandiere/en/russia/>). Novgorod was founded in the 500's, "built up along ethnic boundaries", such as Slovenes, Chuds,

²²⁸¹ The two 'Slavic brother' languages are about as similar as, say, Spanish and Italian. But Eastern Europe has always been (with the exception of the Novgorod Republic) more 'ethno-authoritarian' than the liberal (i.e. Separation of Powers-constitutional) West, and the political violence and traumas there are, obviously, closer to the surface of today's (2022) politics. What is particularly unique about (what might be called) the *Ukrainian-Mongol-Russian-Soviet* traditional history of the Great Eurasian Steppe is exactly that (somewhat puzzling progression of foci). Basically the Mongol-Tatars destroyed Kievan Rus (except for Novgorod, the land of its founders) and replaced it with (the more suitable) Muscovy, which then-- after incorporating Novgorod c.1478-- quickly expanded to become (no longer *Sparta* Muscovy).

²²⁸² In a society-culture that only values intelligence, of course it's going to wind up being run-- more-or-less openly-- by 'its' "Intelligence Community". See also "UKUSA Agreement", "Confucian" [Mandarins].

²²⁸³ There are (still some) disagreements concerning whether "Russia" is more "long-term" or "short-term" oriented.

²²⁸⁴ There are (still) disagreements concerning whether "Russia" is more "long-term" or "short-term" oriented.

²²⁸⁵ "No inscriptions or documents of any kind have been found prior to the appearance of the Greeks on the northern shores of the Black Sea" in the 7th century BCE (Haar, 9). The requisite deep ploughing (for a surplus-enabling 'civilization' up there) was not to be until the Iron Age.

²²⁸⁶ Constantinople, the Byzantine Empire's capital, "was undoubtedly, and incomparably, the most splendid city and dazzling centre of culture in the entire Christian world... [In the 900's, they] dreamt of Constantinople among the cold mists of Norway, on the banks of the Russian rivers, in the strong castles of the West, and in the counting houses of avaricious Venice" (Averintsev, 1989, 37). For this peerlessness, 3 "criteria were cited... 1st [and foremost], it professed the true, or Orthodox, Christian faith. 2nd, it managed its state affairs and diplomatic relations in a highly civilized [or procedural-bureaucratic] way, that was supplemented by [its claim to] the literary and philosophical culture of classical antiquity. 3rd, it was [in fact] the *legal* successor to the Christian-Imperial Rome of Constantine the Great... [S]uspensions about the orthodoxy of Western Christianity had grown up in" the 800's; and "Byzantine authors liked to remark that Christ's birth coincided with the reign of the Emperor Augustus" (Averintsev, 1989, 37; 38).

²²⁸⁷ They know the fierce winds of both. <https://www.amazon.com/Russian-Pendulum-Autocracy-Democracy-Bolshevism-Americans-Revolutionary/dp/0893574848>

²²⁸⁸ *Slavs* "seemed to have called themselves Slovene or *Sloviane*, which most likely derives from *slovo*, 'the word', to signify people with the gift of speech... [in] contrast to 'Nemtsy', the 'dumb [mute] ones'... given by Slavs to all the other Europeans, and, more specifically, [to] their German neighbors" (Pipes, 1995). "'All the people consider themselves to be *khlops*, that is slaves of their Prince'"- Sigismund Herberstein, 16th century German traveller to Russia (Pipes, 1995, 85).

and Prussians (Haarmann, 2000, 13). “Slash-burn” agriculture predominated in the 600s, and would remain “the prevalent technique of farming in Russia until the 16th century...[and]...the 3-field system” (Pipes, 1995, 27-28). **Vs.** “the Orthodox faith...[and the] spiritual choice made by St. Vladimir [a.k.a. Vladimir the Great (c.958-1015), Grand Prince of Kiev 980-1015], who was both Prince of Novgorod [969-c.977] and Grand Prince of Kiev, still largely determines our [Ru. & Ukr.] affinity today.”

- Vladimir Putin’s “On the Historical Unity of Russians and Ukrainians” (July, 2021).

2) The geography²²⁸⁹ is not only unusually cold, but also an odd combination of relatively dry, yet marshy. This is due to both its basic flatness (a condition, like its irregular precipitation²²⁹⁰, shared with Africa), and the fact that Russia pretty much only gets leftover precip from the Atlantic westerlies that first make landfall over the British Isles and Scandinavia. The great, frozen (and sometimes boggy) flatlands are thus left-- at least during the current interglacial Holocene era-- with a famously “deranged” drainage network²²⁹¹ that, unlike other countries, can be practically impossible to make sense of (in terms of meaningful patterns).

2b) Hence; ‘Russia was traditionally a country of widely scattered small villages, not one of... latifundia, and it knew nothing of central economic management until the imposition of War Communism in 1918... [T]he kind of control and surveillance essential to an ‘Oriental Despotism’ was entirely out of the question here... pre-modern Russia [did not (also like Africa) even have] a regular road network... it [was] impossible to institute...a tightly organized bureaucratic regime before the 1860s, when railways and telecommunications were introduced” (Pipes, 1995, 20-21).

2c) The “inhabitants of cultivated plains are seldom free. Circumstances have occurred to put the Tartars [sic], who dwell in uncultivated plains, in the same situation²²⁹²” (Montesquieu, 1748, 280).

3) Kievan Rus²²⁹³ principalities were first defeated by a (Mongol-allied) Tatar reconnaissance force in 1223; then all of them fell-- except Novgorod in the far north-- to the Mongol Empire’s full invasion of 1237-40.

²²⁸⁹ “Nowhere else in the world has nature’s climatic and geologic phenomena interacted so decisively to create *clearly defined* natural soil and vegetation regions.... [Basically,] all the territory south of an imaginary line drawn from Odessa...to Irkutsk...suffers from varying degrees of chronic *water shortages*. Territory lying north of an imaginary line from St. Petersburg to Irkutsk has a chronic deficit of solar radiation. The roughly cone-shaped territory in between, often referred to as the [region’s] ‘fertile triangle’, is in fact not very well suited for agriculture in many areas, and offers nothing approaching the natural advantages of the United States’ ‘cornbelt’” region (Berentsen, 1997, 565). Moreover, it was mostly unusable **up until the Iron Age**, due to the fact that “northern soil” (even when it isn’t frozen) is “short of natural plant food... [and] requires deep ploughing” (Pipes, 1995, 3).

²²⁹⁰ “Precipitation... follows... a pattern [rather] different from that prevailing in...vegetation and soil. It is heaviest in the northwest, along the coast of the Baltic...and decreases...towards the southeast. In other words, it is the most generous where the soil is the poorest. Another peculiarity... is that the rain tends to fall heaviest in the second half of the summer.... [and] Russia has [long] averaged one bad harvest out of three” (Pipes, 1995, 3-5). See also “**Charismatic Authority (CHA) & Charismatic Dependency (CHD)**”, “China” (precariousness).

²²⁹¹ The rarity of the Muscovy region’s “radial drainage pattern played no small part in Moscow’s rise to prominence” (Berentsen, 575). The Central Russian Uplands, sometimes a.k.a. the Valdai Hills, northwest of Moscow (less than halfway to St. Petersburg), mark the ‘commanding heights’ of the entire Eastern European plain, and is thus (like Tibet for China) the source of most of the region’s rivers, such as the Volga.

²²⁹² **df** (Berentsen, 566).

²²⁹³ “Nothing reflects better the relationship of the Normans towards their Russian realm than... their failure to work out an orderly system of princely succession... [O]n the death of a Kievan ruler, prince fell upon prince, and all semblance of national unity vanished until the victor made good his claim... Later various attempts were made-- none of them successful-- to assure a regular procedure of succession” (Pipes, 1995, 31). See also “**Charismatic Authority (CHA) & Charismatic Dependency (CHD)**”.

[Kievan Rus, 1215]

3b) 'What is striking about Russia is how late *domainial institutions* transformed themselves into public ones. In France, the differentiation was completed by the 14thc; in Russia it only began in the 18th.^{2294 2295} This lag assumes considerable importance if one bears in mind that these two countries began to constitute themselves into national states at approx. the same time...around 1300. Secondly, in Russia the distinction between the domainial and the public spheres always remained very vague" (Pipes, 68). 3c) Hence, Russia has long terrified the West; because of its (traditional) "*patrimonialism*"²²⁹⁶-- a primitive mentality "where the rights of sovereignty and those of ownership blend to the point of becoming indistinguishable, and political power is exercised in the same manner [a la prehistory] as economic power"²²⁹⁷ (Pipes, 1995, 22).

²²⁹⁴ From the early 15th century, tsars "insisted on being addressed exclusively as *gosudar*" ['lord'] (Pipes, 1995, 78). See also "Charismatic Authority (CHA) & Charismatic Dependency (CHD)".

²²⁹⁵ The medieval **Novgorod Republic** was a significant exception to the generalization. As far back as the 12th century, Novgorod was "remarkable for the... development of democratic institutions. The *veche*, the popular assembly of town folk, exercised considerable influence, and the Novgorodians took to electing their own princes as military leaders, being careful to limit their power and even forbidding them to own land within Novgorodian territory. Considerable power was also exercised by...archbishops and mayors" (Hingley, 1991). Peter Ustinov concurs, adding that Novgorod "was ruled by a popular assembly which elected its civic officers and looked to outside potentates only for its defense. Its trading capacity was enormous, and its dominion extended to the Urals and the far north. Contacts with the rest of Europe were constant" (Ustinov, 1983, 24). In Novgorod and Pskov at least, "the veche even succeeded in arrogating to itself legislative authority and forcing the princes to execute its will" (Pipes, 1995, 31). See also "Civil National Identity".

²²⁹⁶ The famous Russologist Richard Pipes used the term *patrimonial* to describe "a regime where the rights of sovereignty and those of ownership blend to the point of becoming indistinguishable, and political power is exercised in the same manner as economic power. 'Despotism', whose root is the Greek *despotes*, has much the same etymological origins, but overtime it has acquired the meaning of a deviation or corruption of genuine kingship, the latter being understood to respect the property rights of subjects. The patrimonial regime on the other hand, is a regime in its own right, not a corruption of something else... [C]onflicts between sovereignty and property do not and cannot arise because, as in the case of a primitive family... they are one and the same thing. A despot violates his subjects' property rights; a patrimonial ruler does not even acknowledge their existence.... Under a patrimonial regime, the economic element absorbs, as it were, the political" (Pipes, 1995, 23). See also "Totalitarianism", "Charismatic Authority (CHA) & Charismatic Dependency (CHD)", "Reform, 101".

²²⁹⁷ It "is obviously significant that the term for 'sovereign' in modern Russian should derive from the vocabulary of private law, from a word which had meant owner and particularly owner of slaves. Although we translate *gosudarstvo* as 'state', a more accurate equivalent would be 'domain'. The word 'state' implies a distinction between private and public, between dominium and Imperium. *Gosudarstvo* carries no such connotation" (Pipes, 1995, 78). The term *Gosudarstvo* is also the gerund form of the noun *gosudar* ('lord'). See also "Serfdom".

4) For centuries, “[o]nly the state” had “Western technology... but... could afford them only by draining wealth from the people. This draining of wealth from below upward provided arms and Western technology for the rulers, but kept the ruled too poor to obtain these things, so that all power concentrated at the top. The continued [military] pressure from the West.... [increased] pressure downward... and the *autocracy*²²⁹⁸ became more autocratic... [And, in] order to get a bureaucracy... the landlords were given personal powers over the peasants, creating a system of serfdom in the East just at the time that medieval serfdom was disappearing in the West. Private property... and direct contact with the state (for taxation or for justice) were lost to the Russian serfs.... By [the 1730’s]... [t]he peasants of Russia, seeking to escape from the pressures of serfdom in the area west of the Urals, began to flee eastward, and eventually reached the Pacific.... Eventually the autocracy followed the peasants eastward, and Russian society came to occupy the whole of northern Asia” (Quigley, 1966, 87).

4b) The “autocracy found, in 1812, that it could not defeat Napoleon’s army without calling on the Russian people.... If the [resultant series of] reforms led to demands for [heaven forbid!] nationalism, how could a dynastic monarchy such as the Romanov autocracy yield to such demands without risking the loss of Finland, Poland, the Ukraine,²²⁹⁹ or Armenia? As long as the desire to westernize and the bad conscience of the upper classes worked together, reform advanced. But as soon as the lower classes began to make demands, reaction appeared... [T]he history of Russia was an alternation of reform and reaction²³⁰⁰ from the 18th c to the Revolution of 1917.... Alexander I (1801-25) and Alexander II (1855-81) were reformers, while Nicholas I (1825-55) and Alexander III (1881-94) were reactionaries” (Quigley, 1966, 87-88). See also “Chinese communism” [.30-year cycles], “Estates, 3” [.30-year], “Ethnic (National) Identity”.

5) Although “by 1864 serfdom had been abolished, and a fairly modern system of law, of justice, and of education... established... On the other hand, the autocracy continued, with full power in the hands of weak men, subject to all kinds of personal intrigues of the basest kind; the freed serfs had no adequate lands, [and] the newly literate were subject to a ruthless censorship which tried to control their reading, writing, and thinking... [while] non-Russian peoples of the empire were subject to waves of Russification and *Pan-Slavism*²³⁰¹ ... [I]n general, the autocracy was both tyrannical and weak” (Quigley, 88).

6) Through most of the ‘long 19th century’, “Westernizers argued that Russia was merely a backward and barbaric fringe of Western Civilization, that it had made no cultural contribution of its own to its past, and that it must pass through the same economic, political, and social developments as [did] the West.... Slavophiles [in contrast] insisted that Russia was an entirely different civilization from [the] Western... and was much superior because it had a profound spirituality (...contrasted with Western materialism), it had a deep irrationality in [its] intimate touch with vital forces and simple living virtues (in contrast to Western

²²⁹⁸ “*Autocracy* means a country with a strong enough government to prevent an Oligarchy from taking over” (Hudson, 2022). See also “Aristocracy (& nobility)”, “Estates, 3”.

²²⁹⁹ “*The Ukraine*” (‘the borderlands’) is an imperialistic term, per “the Ukrainian Soviet Socialist Republic”, which was typically shortened to simply “The Ukraine”. “To consider Ukraine’s normal condition to be that it is part of Russia is a major misreading of history” (Szporluk, 1997). See also “USSR” [famine].

²³⁰⁰ “In the most typical Russian minds, both extremes were held simultaneously, regardless of logical compatibility, in some kind of higher mystic unity beyond rational analysis. Thus, Russian [published] thought provides us with striking examples of God-intoxicated atheists, revolutionary reactionaries, violent non-resisters, belligerent pacifists, compulsory liberators, and individualistic totalitarians. The basic characteristic of Russian thought is its extremism” (Quigley, 1966, 102); followed by its duality. Hence, in terms of political culture, “[t]hose who embraced the state were expected to embrace it as an autocracy in which the individual has no rights, else their allegiance was not pure... [while] those who denied the state were expected to reject it utterly by adopting anarchism” (Ibid).

²³⁰¹ *Pan-Slavism* “originated in Central Europe and not among the Eastern Slavs. After some mediaeval beginnings among the Poles and Czechs, there was an interesting Pan-Slav movement among the Croats during the Renaissance”; but Juraj Križanić (1618-83) and other Pan-Slavists “had no impact whatsoever and their works and lives were only rediscovered by scholars [after the French Revolution & Napoleon stirred up all things ‘national’] in the 19th century, when Pan-Slavism for the first time became a movement much discussed by journalists, diplomats, and scholars... [but], even then, less in Russia than in Central and Western Europe. Around 1830 Pan-Slavism began to haunt many European minds... in which they expressed their fear of Russian domination over the continent” (Kohn, 1961); pretty much because Russia-- in some contrast to Ukraine, Poland, and the rest of the minority of non-Russian Slavs-- had long labored for and collaborated with the ‘Mongol-Tatar Yoke’. But “in Russia itself [however, P-S] did not emerge as a public movement before 1856” (Kohn, 1961); and now seems officially dead and buried, from the formal divorce of the Russian and Ukrainian Orthodox churches in 2018.

rationality, artificiality, and hypocrisy); it [also] had its own native form of social organization, the peasant village (commune) providing a fully satisfying social and emotional life (in contrast to [the] Western frustration of atomistic individualism in sordid cities... [Thus, they saw no] need to pass along the Western route...[of] industrialism, bourgeoisie supremacy, or parliamentary democracy.... Originally the Westernizers in Russia had been inspired by French thinkers, while the [ethnic] Slavophiles had been inspired by German thinkers” (Quigley, 1966, 89).

6b) By late-century; the Intelligentsia, “[a]lready disillusioned with the West, the Church, and the government, and [also] now rejected by the peasants...could find no social group on which to base a reform program. The result was the growth of nihilism²³⁰² and [see also] anarchism” (Quigley, 90).

7) “Under Lenin’s regime-- not Stalin’s-- the Cheka [Soviet secret police] was to become a vast police state. It had its own leviathan [Hobbesian] infrastructure, from the house committees to the concentration camps, employing more than a quarter of a million people [and murdering a greater number than that]. These were the Bolshevik *oprichniki*, the detested [national] police of Ivan the Terrible... [and] it was they who would secure the [new] regime’s survival... Terror became an integral element of the Bolshevik system.... Although no one knew the precise figures, it is possible that more people were murdered by the Cheka than died in the battles of the [American] civil war” (Figes, 1998, 649). See also “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”.

7b) Even in the midst of The Great Patriotic War (1941-45) with Germany, in which (a world record) , “steps are being officially taken to prepare a dictionary of Old Slavonic²³⁰³ for use in schools; and one vainly tries to imagine a British government [ever] giving official backing to the preparation of an Anglo-Saxon dictionary during a world war!” (Wrenn, 1944, 118). See also “Ethnic (National) Identity” [language].

8) “The Cold War with Russia is and was largely an MI6 media²³⁰⁴ disinformation project” (Moon, 2019); because of the usual century-old British imperial objective of keeping Germany and Russia apart. “When the EU unravels, Germany will not necessarily be on the side of the [UK] Commonwealth. Merkel is moving closer to Putin and China everyday” (Moon, 2017c). See also “Cold War, the”, “Angry Birds”.

9) “Russia went through an absolutely awful [as opposed to lawful] transition²³⁰⁵ from socialism to ‘capitalism’²³⁰⁶, and they are now skeptical of both (Keen, 2018, mn.21-22). See also “Capitalisms”, “Monetary reform”.

10) In terms of *accounting* (a.k.a. the rules of the game), there have been 7 “periods of development”:

a) from “862-1240, Byzantine influence”; (“led to primitive account. methods... dom. by...state ownership of prop.”);

b) “1240-1480, Tatar influence”; (dom....[by enforce. of poll (head, flat) taxes at the village level]);

c) “1480-1700, [the] First Russian School”; (a.k.a. the “Moscow Period”; a “syst.of formal state ctl.” only from latter 17thc);

d) “1700-1861, European double entry accounting”; (the “transfo... to...double entry”, specif. from 1722 & 1740);

e) “1861-1917, Second Russian School”; (-serfdom,+jury trial; proto-‘capitalism’; 1783-1917 1,356 acctng. books);

²³⁰² Nihilism “was a rejection of all conventions in the name of individualism.... [But since] man is a man and not an animal because of of his individual development and growth in a society made up of conventions, the nihilist rejection of conventions served to destroy man rather than to liberate him as they expected... [B]y destroying all conventions and stripping all persons naked of all conventional distinctions, they hoped to sink everyone, and especially themselves, into the amorphous, indistinguishable mass of humanity. The nihilists were completely atheist, materialist, irrational, doctrinaire, despotic, and violent” (Quigley, 90). See also ‘Industrial Revolution, 2nd’, “World War Two”.

²³⁰³ Were (most of) the Slavonic peoples of old thinking of themselves as being brighter, or simply more “talkative ‘...[in] comparison with the ‘dumb ones’” [*nemtsy*] of Germany? (Wrenn, 1944). The “early Slavs wre nomadic cattle drivers organized into clans and tribes... [without a lot of] political...[or] military forms of organization.... The Slavs seem to have called themselves Slovene or Sloviane, which most likely derives from slave, ‘the word’, to signify people wiht the gift of speech, in contrast to Netsy, the ‘dumb ones’, the name given by Slavs to all the other Europeans, and, more specifically, their German neighbors” (Pipes, 1995, 1).

²³⁰⁴ “MI6 is synchronous with CIA as far as election meddling is concerned” (Moon, 2018). See also “UKUSA Agreement”.

²³⁰⁵ How bad was it? Average male life expectancy dipped into the upper 50’s for most of the years between 1993 and 2005. Although the figure has since improved to the upper 60’s (along with that for females increasing to the upper 70’s), Russia’s natural rate of population increase has been negative every year (except 2013-15) since 1992; and average fertility rates have now started downward again, from 2017-19. The United Nations predicted, in 2018, that Russia’s population will decline to 132.7 million by 2050. See also “Depopulation”.

²³⁰⁶ Well, labels often exaggerate. Actually “40% of the workforce in Russia is employed in the public sector”, vis-à-vis 15 or 16% in the US (Hill, 2020). See also “Big government”.

f) “1917-1985, Marxism”; (“in the 1930’s... elements as promissory notes, stocks, bonds, and dividends vanished”²³⁰⁷); g) & “1985-, Int’l. Accounting Standards”; (from Dec. 1991, the “new set of fn. statements are...[basically] Western”); (Sokolov & Kovalev, 1996, 508-509).

10b) That’s 2 out of 7 (prior to the 1990’s). Carrol Quigley classified “Soviet society” as being “outside [of ‘Western’] civilization” (Quigley, 1966, 10). See also “Civilization”, “USSR (1922-91)”.

11) After “labor was going unpaid” in the early 90’s (Hudson, 2020c, mn.104); “Russia paid 100% interest a year to [mostly] US investors in 1993-1994...[even though] Russia did not have enough foreign exchange to pay domestic ruble-wages or to pay for domestic goods and services. But neoliberal advisors convinced Russia to back all [of the] Ruble money or domestic currency credit [that] it created by backing it with US dollars...[and obtaining] these dollars involved paying enormous interest to the United States²³⁰⁸...[even though there] was no need for this backing. At the end of this road, the United States convinced Russia [somewhat like occurred (two decades later) with Greece & the European banks] to sell off its raw materials, its nickel mines, its electric utilities, its oil reserves... [And US neocons] ultimately tried to pry Crimea away” from Russia, too (Hudson, 2020).

11b) The “Rape of Russia in the 90’s...was the US intelligence agencies and the Russian mafia, which is 99% Jewish” (Fitts, 2021In.30-31). See also “Intelligence Community” [I.I.C.], “Israel”.

11c) Hyperbole? ⁴⁰⁰ (Webb, 2021, mn.17). See also “Israel”.

12) “It seem” like what’s happened in Russia is almost²³⁰⁹ a paradigm that people are following for a *post-apocalyptic authoritarianism*²³¹⁰... [in] Turkey²³¹¹... India...” (Graeber, 2018, mn.23). Authoritarianism tends to follow (unresolved) crises. See also “National Identity/Nationalism” [cycle], “Putinomics”, “New World Order”.

12b) This may not be hyperbole. It’s not the 1990’s anymore: “Russia is the country with– by far– the least debt, both public and private. Having after 2014-- following [US economic] sanctions²³¹²-- been cut off from the Western debt orgy, even Russian corporations are shielded against a possible Western debt [i.e. rust] apocalypse.... Not only is the government virtually debtless, but it has again replenished its spectacular forex²³¹³ and sovereign wealth fund reserves.... And...Russia [also] runs the world’s 3rd biggest trade surplus” after China and Germany (Hellevig, 2019). It should also be noted that “Russia’s economy is...[no longer] as dependent on fossil fuel extraction as it is habitually...[made out to be] in the West” (Ibid). Estimates vary widely, but it appears that oil and gas now account for somewhere in the vicinity of 15% of Russia’s GDP (down from 20% in the mid-2000’s); compared to about 7% for the US economy (2017), or 19% for, say, the Texas economy in 1981. Russia has now become, arguably, “the

²³⁰⁷ ...and “there was no need for accounting methodology to determine liquidity and financial leverage... and theoretical research was limited to scholastic disputes about the limits of accounting and the classification of accounts” (Sokolov & Kovalev, 1996, 508).

²³⁰⁸ In 2005, C.A. Fitts-- “in the middle of my last year of litigation with the Dept. of Justice... was... offered a chance to come over to the other team.... It was so bizarre.... [Then] I got online and realized...[that] Russia and the Russian funds were [then] the #2 holders of Fannie Mae and Freddie Macs in the world...They [some Russians] were just helping the [US Deep State] mortgage guys to get me out of town” (Fitts, 2021e, mn.16). See also “Government Supported Enterprises (GSEs)”, “Super Imperialism”, “International Intelligence Community (I.I.C.)”.

²³⁰⁹ Not ‘almost’. See immed. below.

²³¹⁰ a.k.a. the Putin (or top advisor Surkov) model: <https://www.brighteon.com/36e83abe-b67f-4d63-b56a-0f80f4491c8a> (mn.37-40, Curtis). “Dubbed the ‘Grey Cardinal’ and the Kremlin’s main ideologist, [Vladislav] Surkov [b.] is commonly regarded as the mastermind of Putin’s Ukraine policy which plunged Moscow into open conflict with the West. Fmr. close advisor Vladislav Surkov was curly fired by Putin in Feb. 2020, whereupon the (always provocative) Surkov publicly stated (or perhaps leaked his view of the insiders’ consensus) **that**: “

²³¹¹ Since the July 2016 failed coup d’état against the government of PM→President Erdoğan [r.2003-], a “constitutional referendum...[voted in] centralized power in the presidency, the mass replacement of elected mayors with government appointees, arbitrary prosecutions of rights activists & other perceived enemies of the state, and continued purges of state employees, all of which have left citizens hesitant to express their views on sensitive topics.”- <https://freedomhouse.org/report/freedom-world/2018/democracy-crisis>

²³¹² “In fact, since 2014 when the sanctions were first imposed, Russia’s industry has grown 12%” (Hellevig, 2019).

²³¹³ And balanced: 15% of Russia’s forex reserves, as of 2019, are in Chinese Yuan, not just in dollars and euros.

world's most self-sufficient major country"²³¹⁴ (Hellevig, 2019), a distinction which, as recently as the 1950's or 1960's, still belonged to the continent-wide USA.²³¹⁵

Money Trail

Russia's dollar reserves likely shifted to swaps after it dumped Treasuries

[RCB holdings of US Treasuries vs. Forex reserves [2019-21]. See also “Angry Birds”.]

12c) Simplified: “They’ve got a national pool of savings that’s off-the-charts, and they produce all the things that everybody needs” (Luongo, 2022b, mn.46). See also “Putinomics”.

13) Vladimir Putin became the latest Russian leader to pursue a grand “pivot to Asia” strategy in 2014.

13b) It was often said in the previous decade that Russia’s only ‘warm-water port’ or overseas naval base was in (Tartus,) Syria. It survived the decade (of US sanctions & NATO’s tightening encirclement of Ru.); and in Dec. 2020 Putin announced plans for (what will be) Russia’s 2nd warm-water base, on the Red Sea coast of Sudan with a 25-year lease, and capacity for 300 personnel.

14) The basic problem, however, persists. Unlike China, “Russia really doesn’t have...[rules]. It’s really all centralized...[and] President Putin²³¹⁶ keeps it this way.... almost single-handedly holding the oligarchs in and saying: ‘Look, you can keep your money, as long as you do exactly what the government would do... But none of this is created into a legal system, a tax system, and a system where the government actually does get most of the benefits” (Hudson, 2020c, mn.109-110). See also “Putinomics”.

14b) Russia made ‘offending religious believers’ a criminal offence in 2013. See also “Civilization, Orthodox”.

14c) In economic terms, this (authoritarianism) manifests in Russia’s persistently high GINI coefficient (inequality) rates-- a problem that has not been alleviated by a relatively underdeveloped banking [not to mention political] sector (62% of banks are still state-owned [World Bank, 2019]). The “top 5 banks” in 2019, according to the World Bank, were generating “57% of all banking sector profits”; while as many as 1 in 5 workers in Russia is “informally” employed; and exorbitant real interest rates of perhaps “15% or more” extract from all but “the largest [politically-favored] corporations” (Hellevig, 2019). See also “Black Market economies”.

15) “Eurasian-icists” and “Atlanticists” are still debating, with the former “basically saying that the central problem with Russia is...[that] the Russian central bank [RCB] is... an Atlanticist trojan horse inside the Russian economy” (Escobar, 2020, mn.103-104). See also “City (of London), the”...

15b) ...that Putin, et al actually support? “” Roberts, . See also

<https://www.youtube.com/watch?v=zBd0tPFrckM> (O’Connell, 2022b, mn. 20-23 [‘BBC1997vid’]); “World Economic Forum (WEF)” [Putin], “Plausible deniability”.

²³¹⁴ Fellow BRICS member Brazil would also seem to have a claim to that title, with only 14.3% of GDP coming from imports (2018). Also less than Russia’s 20% were: Nigeria (13.2%), the USA (15%), Japan (16.8%), and even China (18.7%).

²³¹⁵ It may seem unimaginable to some youngsters that the US, as recently as 1948, imported only 3.2% of its GDP (United Nations, 2017, 30); this is compared to approx. 15% (and 20% for Russia) in recent years, whereas most Western European countries’ imports are between 30 to 40% of GDP.

²³¹⁶ “First and foremost, it is worth acknowledging that the demise of the Soviet Union was the greatest geopolitical catastrophe of the century.”- Vladimir Putin’s 2005 “State of the Nation” address to parliament. See also “USSR (1922-91)”.

16) As of 2021-22, oil-and-gas sales still comprise “as much as 1/5th” of Russian GDP²³¹⁷, “while fuel and energy products...[are] the majority of Russia’s exports.”- *Wall Street Journal*, Oct. 1, 2021.

16b) “[T]he goal of the Russian military is to protect her borders roughly 500 to maybe 800 kilometres away from it.”- ‘The Saker’, 8/22: <https://michael-hudson.com/2022/08/the-big-context/>

16c) Even though “Russian influence in Europe is now at its lowest level since Peter first transformed Russia from a medium-sized player on Europe’s eastern borderlands to a great power towering over its neighbors.... Russia’s military became far stronger during.... the ’000’s and early 2010’s.... as the US drew down forces from Europe and focused its resources on...operations in Afghanistan and Iraq... [T]he military balance in Europe... has shifted significantly in Russia’s favor.... The country most in need of a credible security guarantee isn’t Russia. It’s Ukraine” (Miller, 2022). See also “Putinomics”.

[‘3rd Rome’ & Byzantium’s successor since the 15thc]

17) Russia & Ukraine Updates: “true sovereignty of Ukraine is possible only in partnership with Russia.”

- Vladimir Putin, “On the Historical Unity of Russians and Ukrainians” (transcr. July 12, 2021)

2/22- The “Nord Stream 2” pipeline, to “double gas flow to Germany”, was suspended prior to opening. This approx. doubling of Nord Stream 1 volume had always “faced resistance within the” EU, US, and Ukraine, on the grounds...[that] roughly half the EU’s gas currently comes from Russia-- and [that it would] deny Ukraine transit fees.”... <https://www.rferl.org/a/germany-nord-stream-warning-ukraine/31674542.html>

4/22-

[‘Russian’ language & ‘ethnicity’ in the 8 oblasts (2001)]

6/22- (WW1 scenario) “This break up [of uni-polar US’ism] into the Multi Polar World Order...[which some presume only to be] each set of princelings ruling their [own] little Banking Cartel area, has been in the works a long time. With the US bleeding Ukraine out... they will get what they want- Ukraine begging for permanent US bases. Putin keeps agitating demanding Berlin keep to its end of the [alleged/undisclosed] deal. He will be valuable as a cudgel to keep [traditionally Russophobic] Europe in line and [with more] US bases in the region [instead of less]. A big ‘Growly Bear’, though we can debate whether he is toothless and clawless [or not] in comparison to US technology...[a]s long as he growls” (O’Connell, 2022b). See also “Secrecy, cult of”, “Intelligence Community” [international].

7/22- (WWI scenario) was Ru. desperate and/or deluded [into an attack & ‘limited war’ strategy]? “Putin also had one critical issue which necessitated the invasion, Putin is approaching retirement, and he knew he must eliminate the risk of Ukraine and its NATO military on Russia’s borderland, the flat land border which makes the entry into Russia easy. If [the vast majority of] Ukraine stays in western hands, then it could provide the instability that could take down Russia while the succession was occurring.”- Comment from “Orwell rolls over..” @ (O’Connell, 2022b).

²³¹⁷ ...in addition to “around 40% of...[the Russian government’s] budget revenue. Some 1.5 million people who work in the...[Russian oil & gas sector] might lose their jobs by next year.... Other sanctioned petrostates, like Iran and Venezuela, have struggled to recover from the big hit to production...[that Western sanctions] have caused.... Russian oil output, including crude and condensates, is...expected to fall 15% this year to its lowest level since 2003, according to the International Energy Agency....[Foreign] companies provide 60% of the [Russian oil] industry’s software, according to Moscow-based...Vygon Consulting. While local Russian players provide most of the basic drilling, international firms dominate the market for advanced exploration and well-treatment techniques” (Kantchev, 2022).

10/22- The *Telegraph* “account and [fmr. CIA Director David] Petraeus’ threats are nonsense. But what matters is that this is the way the West perceives it, and it is this perception that will further widen the war. That this would be the consequence was obvious from the beginning. Putin waited 8 years while the West built and equipped an army for Ukraine and established the propaganda narrative, and when Putin belatedly acted he did so in a way guaranteed to widen the war. Did no one tell Putin that wars cannot be fought on a shoe-string in a limited [18thc] manner? Putin’s go-slow limited intervention has given Washington 7 months in which to convince *Western* peoples that Russia is the aggressor, supply weapons to Ukraine, train Ukrainian soldiers in their use, and establish communications systems for Washington to provide targeting information to Ukraine’s forces. It is impossible to imagine the Kremlin conducting a war in a way less likely to succeed” over the short-term (Roberts, 2022f). See also “Long-term orientation”.

[Sanctions against Russia summer 2014; summer 2022. See also “G-20”.]
 [...& Russian exports-by-country 2013; exports-by-country 2021]

8/22- The world’s currency and macroeconomic mess (or ‘perma-crisis’) could be handled in a better way. See also “Patri”, “Graham, Benjamin (1894-1976)”, “World Pa’ Economy (WPE)”. See also “Patri”, “Russiagate”, “Globalism”, “Angry Birds”.

‘Russiagate’: (that which may finish up [the half-century of] what ‘watergate’ started²³¹⁸)

²³¹⁸ i.e. Washington’s 2nd Estate using the/their *Corporate Media Cartel* (and/or Deep State ops.) to ‘coup’ 1st Estate reps (Pieczenik, 2019); whenever, for example [citing just presidents, not congressmen], JFK, or Nixon, or Carter, embarks upon a strategic direction that ‘They’ don’t like (https://www.youtube.com/watch?v=auO9FBkR9_s [‘myth of fingerprints’]). See also “Estates, 3”, “Deep State”, “Secrecy, Cult of”, “German (industrial) banking”. In other words, pulling “the curtain back and [beginning] to expose whole other levels of this [Deep State] apparatus, which we have suffered from ever since [at least as far back as] the un-prosecuted assassination of John F. Kennedy. It pulls the

“The West’s dread of a German-Russian cultural and industrial juggernaut came across loud and clear when NATO’s 1st secretary-general, Lord Ismay [r.1952-57], was asked why NATO was needed: “To keep *the Soviet Union out, the Americans in, and the Germans down*. (... [and] NATO is shameless enough to still feature this quote on its website).”- C.A. Fitts, 4/22: <https://home.solari.com/coming-thursday-magnolia-intermezzo-russia-the-threefold-social-order-and-the-present-age-with-thomas-meyer/>

1) According to George Friedman, founder of (CIA outside-the-beltway)²³¹⁹ Stratfor, breaking up anything substantial between Germany and Russia is nothing new²³²⁰: The “primordial interest of the United States [or the UK, anyway], over which for a century we have fought wars-- the First, Second, and Cold War-- has been the relationship between Germany and Russia²³²¹, because united they’re the only force that could threaten us; and to make sure that doesn’t happen” (Friedman, 2015, mn.53-54). Is the (‘craziness’ of the) Carthagian peace Treaty of Versailles and outlandish Communist Revolution²³²² starting to make sense yet?²³²³ See also “USSR”, “Central Intelligence Agency”, “LaRouche, Lyndon” [attitude innoc.].

1b) “The ultimate fear dictating...[most] US foreign policy since the early 20th century is the possibility of Germany clinching a new version of Bismarck’s 1887 ‘Reinsurance Treaty’ with Russia. Add China to the combination and these 3 actors are able to control just about the entire Eurasian landmass... [T]he US would...be turned into a geopolitically irrelevant island” (Escobar, 2021). See also “Angry Birds”.

2) “Secrecy in government exists for only 1 reason: to prevent the American people from knowing what’s going on. The idea that anything that is going in our government is not known to the Russians, about the moment it happens, is nonsense” (Quigley, 1976c-pt.3, mn.407). See also “Mind control”, “NSA”, “International Intelligence Community (I.I.C.)”, “Secrecy, cult of”.

3) After a century of wars, pseudo-wars, and economic wars, a US president was interested in normalizing relations with Russia [as candidate Trump clearly articulated from the 2016 primaries], and that “is a threat to the vast military-security-complex budget” (Roberts, 2018c, mn.2). Afghanistan-as-the-enemy doesn’t work forever when one is trying to keep a budget churning of (at least) \$1 trillion a year, “which is larger than the...[entire GDP] of all except 16 countries in the world.... That kind of money needs an enemy, and Russia is the enemy, and Trump is threatening to take the enemy away... and so Trump has to go, and that’s all Russiagate is about” (Ibid, mn.2-3). Despite the rather ham-fisted (and unilateral, and

curtain back on the actual *forces* [sic] what are repeatedly presented to us as discreet [i.e. ‘organic’, as opposed to synthetic] events” (Boyd, 2020, mn.100). See also “Currency wars, the”, “German (industrial) banking” [Meyer.], “President of the United States (PotUS)”.

²³¹⁹ Whether or not Stratfor was singled out amongst the two-dozen or so UK-USA-Israel “private intel”/contractors these days, it was, according to Julian Assange’s group, “a private intelligence Enron. On the surface, it presents [itself] as if it [were] a media organization, providing a private subscription intelligence...but underneath it is [providing its real value by] running paid informants networks, laundering those payments through the Bahamas, and through Switzerland...and.... not merely monitoring activists (for Dow Chemical and Coca-Cola)... [but] has [also] now started its own private strategic investment fund, where it is using...paid information from insiders to [insider trading] invest” (Assange, 2012, mn.0-1). “The activities of intelligence organizations, increasingly, are privatized... [to be] taken out of the realm of the *Freedom of Information Act*, [and] of US military law [sic]. So they are [hence] often used [sic] by government who want to conceal particular activity. Stratfor is simply out-of-control...Even as a private intelligence organization, it is being completely hopeless in protecting its deep entity... [or in] providing accurate information. It is engaged in internal deals with its captive financial investment firms that it is setting up. So...it...is...[like] Enron, where there [was] not even proper corporate control...” (Assange, mn.2). See also “Public-Private Partnership (PPP)”, “Revolving Door”; ShadowGate, 2020; “Intelligence Community” [I.I.C.].

²³²⁰ ‘Nothing new’, that is, since the Prussian unification of Germany, the rise of Chancellor Bismarck (r.1867-90), and (Whitehall belatedly finding out about) his eastward dreams (in the diplomatically-tumultuous 1880’s). A century earlier, the British, (most) Germans, and Russians were tight. “In fact, Britain concluded treaties for 18,000 [mercenary] troops from German principalities in January 1776, after negotiations for 20,000 Russians fell through” (Graebner, Fite, & White, 1975, 90). See also “Pilgrim Society”.

²³²¹ According to Quigley, “the central problem of Europe” has been “for a century, the problem of Germany” (Quigley, 1966, 1282-83); rather than the (larger) problem of German-Russian partnering. From the mid-20thc, however, “the original mission of NATO...[was always] to keep the Americans in, the Germans down, and the Russians out” (Hudson, 2022)..

²³²² ...& its large-scale funding and support from the US & Western-based multinationals (Sutton, 1974).

²³²³ Not to blame everything on UK-USA imperialism, keeping Russia and young Germany apart was not exactly ‘going against the grain’ or intellectual tide of that time. “The general trend of intellectual development in Russia in the years before 1914 [as in Prussia-Germany] could hardly be described as hopeful. To be sure, there were considerable advances in some fields such as literacy, natural science, mathematics, and economic thought, but these contributed little... to Russia’s greatest intellectual need, a more integrated outlook on life. The influence of the old Orthodox religious attitude continued [of course] even in those who most emphatically rejected it” (Quigley, 1966, 101). See also “Ethnic (National) Identity”, “Civilization, Western”.

mealy-mouthed) nature of the narrative, new media (YouTube, Facebook, Google, and Twitter, etc.) censorship-- via either shadow-banning and/or account suspension/termination-- has been increasing, which "is only possible" within the US "because the anti-trust laws... have not been enforced [since the late 1990's and Microsoft]. These are monopolies, and monopolies are against the law-- the *Sherman Antitrust Act*; but they [Deep State] don't enforce it... They just prevent the law [or just as often the will of the public/public officials] from being enforced. Plus, they have the Neoliberal [Neoclassical] Economists saying 'Oh, well today you have to be a monopoly, in order to...compete globally.... So we have to have monopolies, especially tech monopolies'" (Roberts, 2018c, mn.8), that have often been accused of being seeded by or fronting for Pentagon agencies such as the NSA and DARPA. See also "Deep State", "Currency wars, the".

4) The ruse, no matter how deep-budgeted, "is a lie...a cover for [simply] having a few people able to control [pretty much all the circuits of] information [that they think matter]²³²⁴. Remember now...[it's been nearly a quarter-century since approx.] 90% of the TV and print media...[has been] owned by 5 or 6 companies" (Roberts, 2018c, mn.9).

5) Some years now after the 'Financial Crisis' (a.k.a. "financial coup d' tat"), "...you have an Establishment all over the United States that's unbelievably insecure.... [because] part of the problem is... [that] they have an economic model that is dependent on harvesting... an exploitive model. So you always need somebody or something to harvest, or it doesn't work. And so... you need an enemy, because you need an excuse" (Fitts, 2018n, mn.48-50). See also App.C: "1-2-3".

6) The two countries "historically... that I have been extremely concerned about are...China and Israel, in terms of their influence in our political process" (Fitts, 2019s, mn.30).

7) "There's no doubt that the [Deep State's] actions against Trump were a conspiracy of sedition... It is obvious²³²⁵.... People have to understand. This isn't some kind of mistake" (Roberts, 2019, mn.28-29).

8) According to some informed sources, 2017-19 Dept. of Justice "special counsel" Robert Mueller himself knew full well and was, effectively, running a "counter-coup": "I think Mueller, who really regretted what he did on 9/11 and before that, understood that the republic was in serious trouble... [W]hat he was doing was creating a mechanism by which he [in effect] entrapped the *New York Times*, the *Washington Post*, MSNBC, CNN, Anderson Cooper, Rachel Maddow, and the whole slew of other media personnel, including Hillary Clinton, and [again] the *New York Times*, and other major newspapers, in...[their] attempt to take out Trump.... [W]hat he *really* [sic] stopped was an underlying coup which was building up for a very long time. He did it in a very clever fashion. Because he entrapped them [CMC stooges] in such a way that everybody wanted to claim that Trump was either crooked, and/or crazy. The one who came out the most obviously [culpable] in all of this was James Clapper [Dir. of National Intelligence, 2010-16], John Brennan, DCI [2013-16], and Mike Hayden, DCI [2006-08], as well as [numerous coup plotters at] the FBI. And it was Mueller's way of saying 'the Republic will remain intact'. He understood that we in the military intelligence-- and in Intelligence, were involved in the soft coup under Nixon. So he understood that there was a [another] coup coming about; and he did... a *counter-coup*... and exposed all of the people who had flagrantly violated their statute and their responsibility" (Pieczenik, 2019f, mn.0-1).

9) 2022, as much as any, will be known as the year world went "Multipolar". "Moscow is spending way less than the NATO contingent in the Ukrainian theater. NATO has already wasted \$50 billion-- and counting-- while the Russians spent \$4 billion, give or take, and [have] already conquered Mariupol, Berdyansk, Kherson, and Melitopol, created a land corridor to Crimea (and secured its water supply), controls the Sea of Azov and its major port city, and...[also] strategically vital Volnovakha and Popasnaya

²³²⁴ ...just under the guise or beard of "private" Board Systems, instead of "public" 'Big Government'.

²³²⁵ ...And already found by the Judiciary (such as it is these days). "There was a brazen plot [c.2015-16] to exonerate [Democratic Party nominee] Hillary Clinton illegally [i.e. Plan A: vote fraud], and then, if she lost the election, to [Plan B] frame Donald Trump.... [Then CIA director] John Brennan [and Clinton loyalists created] a scheme to do everything they could to [politically] harm Donald Trump. The problem for Brennan and [then National Intelligence director James] Clapper, and [then FBI director James] Comey... and all of them now is... that the FISA court... [has found] that for more than 4 years before the election of...Trump, there was an illegal spying operation going on by FBI contractors-- 4 of them-- to steal personal information, electronic information about Americans, and to use it against the Republican Party" (DiGenova, 2019, mn.0-1).

in Donbass, as well as Izyum near Kharkov. [And all that] doesn't...include Russia hurling the entire, collective west into a level of recession not seen since the 1970s" (Escobar, 2022c), while lancing the boil on absurd levels of 'western' media acquiescence with state-oligarchical propaganda. See also "Angry Birds", "Land Bridge", "Corporate Media Cartel" [.shriek-o-meter], "German (industrial) banking" [.Hudson].

10) Russiagate Updates: 6/22- Sberbank, which "accounts for more than 1/3rd of Russia's banking sector", was the 8th Russia-based bank to be banned from the Belgium & US-based "S.W.I.F.T. codes" network. So Putin announced [@ BRICS summit] that, ""We are exploring the possibility of creating an international reserve currency based on the basket of BRICS currencies'.... I mean, we all saw how well that went with the 'alternative' New Development Bank, right? Or...[perhaps] you remember when China [c.2017] created a SWIFT 'alternative'...that relied on the SWIFT network to transmit its payments?" (Corbett, 2022). See also "Society for Worldwide Interbank Financial Telecommunication (SWIFT)", "Payment Systems". See also "Corporate Media Cartel", "Aristotle vs. Plato", "Grand theft state".

Rust- See "Corrosion-Cancer-Debt", "Bucket(s) of crabs".

S-curve- "The typical shape of growth in *nature*, such as human beings whose height tapers off as they reach maturity. They also typify most business cycles, which taper off after an upswing as employment, raw-materials and resource limits are approached and wages and commodity prices rise, slowing profits. The demand for specific products likewise tapers off, as markets become saturated. [However] the fact that financial claims and debts tend to grow at compound interest means that financial dynamics tend to outrun the S-curve of production and consumption, creating business crises..." (Hudson, 2015b). See also "Compound interest", "Reserve currency", "Hypertrophy".

Salomon, Haym (1740-1785)- (main fiscal agent, broker, and fiduciary- to 'the financier of the Revolution'; see also "Morris, Robert"²³²⁶).

1) After the 1st Partition of Poland in 1772, Salomon, (like Franklin and Washington) a very active Freemason, "immigrated to the UK and (not long after)...revolutionary [America & the]... Sons of Liberty spy group. The 4-5 language fluent polyglot was caught by the British in 1776 [and then again in 1778], but escaped both and...[then served as] general 'agent to the French consul' for some years thereafter. Saloman was also rumored to be 'the paymaster for [all] the French forces in North America. In 1781, he began cooperating extensively with Robert Morris, the... Superintendent for Finance [r.1781-84 (and de facto Prime Minister of the Congress)]. Often working out of the London Coffee House on Front St. in Philadelphia, from 1781-84²³²⁷ he converted bills of exchange and foreign government notes into

²³²⁶ Superintendent Morris (r.1781-84) "allowed Salomon to use the title 'Authorized Broker to the Office of Finance'" (Harrington, 2013).

²³²⁷ "Early in 1781...[Salomon] made known through the newspapers that he was a dealer in bills of exchange on France and Holland. For the most part the money advanced by Louis XVI and the proceeds of the loans negotiated in Holland [also] passed through his hands. He was entrusted with the negotiation of all the war subsidies of France and Holland... which were sold to the resident merchants in America without

spendable cash at...low rate[s] of interest... [using] the proceeds to meet the urgent needs of the [often unpaid] US army, navy, and the government [in general]. Salomon negotiated the sale of a majority of the war aid from [both] France and Holland, and...also personally supported various members of the ...Congress during their stays in Philadelphia.... Acting as the Patriot he was, he never asked for repayment” (Raab, 2022). “He was a broker who sold US government securities for a commission. He was not a rich man, and there is no record that he ever lent money to our government” (Harrington, 2013).

[Oct.1781 advert], []

2) Salomon did 'lend', however, to numerous cash-strapped politicians in the 'government', including (let's face it, half the Virginia delegation to the Constitutional Convention): James Madison [from winter 1781-82], (Attorney General & soon-to-be Governor [r.1786-88]) Edmund Randolph, Gen. Washington [at Yorktown], and also colleague James Wilson²³²⁸ (then Advocate General for France [r.1779-83]). See also "Madison, James (1751-1836)" ['invisible hand'], "Wilson, James (1742-1798)" [ExecutiveBloat]. 2b) ; before American mobs forced the Congress (and temporary 'US' capital) to relocate to in **June 1783**. See also "Articles-to-Constitution (transitional riots/rebellions)". See also "Founding Fathers", "Constitution, US (of 1787-91)", "Credit money".

[Herald Square: "Haym Salomon, Gentlemen, Scholar, Patriot. A banker whose only interest was the interest of his Country."]

Samuelson, Paul (1915-2009)- the most oft-cited "Father of Modern Economics"; & "foremost academic economist of the 20th century."- *New York Times*; see also "Parallel universe", "Tobin, James (1918-2002)".

Savings & Loan Associations- (synon. 'savings & loans', 'S & L's'; a.k.a. 'thrifts'; 'building societies' [UK])

1) Were, along with mutual savings banks (according to Milton Friedman), actual "intermediaries" of loanable funds [i.e. not creating new money], and were so popular, at least through the mid-20th century, that they were limiting "the effectiveness of monetary management, and that it would be desirable to

any loss, at a credit of two and three months, for which he received the small commission of one-fourth of one per cent. Several European financial houses did business through him. A few days after the.. [above-mentioned public notice(s)], Robert Morris became Superintendent of Finance." and worked closely with Salomon through the term of nearly 4 years.- Rev.Madison C. Peters' *Haym Salomon, The Financier of the Revolution* (1911): <https://historicrothopedia.com/haym-salomon-financier-of-the-american-revolution/>.

²³²⁸ Another of Robert Morris' lead attorneys, who-- like RM (but unlike G. Morris)-- was reluctant about signing the Declaration of Independence. See also "Bank of North America" [Grubb], "Morris, Robert".

extend **control by the Federal Reserve** to them” (Friedman, 1965, 9-10), which then happened 15 years later. See also “Savings Banks”.

2) Saving & Loans were restricted from issuing *commercial loans* prior to the *Monetary Control Act* of 1980,²³²⁹ which allowed for a 5% (of total assets) ceiling (for such ‘loans’), which was then also increased by subsequent legislation, **most** recently the *Economic Growth & Regulatory Paperwork Reduction Act* of 1996 (which raised the ceiling to 20%). See also “Loans”.

3) At year-end 2017, there were 752 federally-insured S&L’s, down from 4,500 in federally or state-insured, in 1980. See also “Savings & Loan Crisis”, “Thrifts”, “**Monetary Institutions**”.

Savings & Loan Crisis-

1) “Interest rate competition [had already] cut profit margins from a lucrative 25% in the 1950’s to as low as 7% in the 1970’s” (Markham, 2011, 315); i.e. no more “3-6-3” norm.²³³⁰

2) The *Monetary Control Act of 1980* then deregulated the S&L’s, during a recession, to enable them to lend with fractional reserves like commercial banks.²³³¹ The *Garn–St Germain Depository Institutions Act of 1982* then further compounded S&L’s risks, by completely removing interest rate ceilings and allowing all nationally-chartered thrifts to use 10% of their assets in commercial loans and merger-acquisitions, again getting them into more direct competition with commercial banks.²³³²

3) ‘Take the money and run’? In a CB system-- which was new to S&L’s, and also initiated during a time of monetary instability and stress-- **state-monetized credit institutions** “can withdraw their credit with the central bank entirely in cash, and the central bank [pretty much automatically] prints as many notes as necessary to meet that demand” (Wortmann, 2019b, 14). See also “**State-monetized credit institutions**”.

4) “The typical savings and loan president was a leader in a tiny community...the sort of fellow who sponsored a float in the town parade; that said it all, didn’t it. He wore polyester suits, made a five-figure income, and worked one-figure hours. He belonged to the Lions or Rotary Club and also to a less formal group known within the thrift industry as the 3-6-3 Club: He borrowed money at 3%, lent money at 6%, and arrived at the golf course by 3 in the afternoon. Each year four salesmen who sold bonds to Texas thrifts performed a skit before the Salomon trading class.... The Salomon salesmen enter the thrift just as the thrift managers are leaving, tennis racket in one hand and a bag of golf clubs in the other.... The Salomon salesmen fawn over the thrift men.... [Then] having schmoozed their client, move in to finish him off. They recommend that the thrift managers buy a billion dollars worth of interest rate swaps. The thrift managers clearly don’t know what an interest rate swap is; they look at each other and shrug. One of the Salomon salesmen tried to explain. The thrift men don’t want to hear; they want to play golf. But the Salomon salesmen have them by the short hairs and won’t let go. ‘Just give us a billion of them interest rate swaps, so we can be off’, the thrift managers finally say. End of skit. *That* [sic] was the kind

²³²⁹ “Changing reserve requirements...[was] a hard-hitting measure and...[was] seldom used... [T]he *Depository Institutions Deregulation and Monetary Control Act of 1980* extended reserve requirements to all [so-called] depository institutions [**state-monetized credit institutions**]” (Federal Reserve Bank of Minneapolis, 1988), in other words, to any institution with an account at the [so-called] ‘Federal’ Reserve. See also “**Deceptive Banking Terms (d.b.t.’s)**”.

²³³⁰ The general consensus is that the “most important contributing factor causing the demise of the S&Ls and Savings Banks was the establishment in the early 1970s of the first *money market mutual funds*. It took some time, but the growth in these funds eventually pulled a large percentage of deposits from these institutions by...[savers] seeking higher nominal yields offered by the MMMFs. It was not until 1983 that the thrifts were authorized to compete for deposits by...[issuing] certificates of deposit” (Dodson, 2020). See also “Money market instruments & Money market funds (MMFs)”.

²³³¹ Paul Volcker noted that “Titles I and II of the law ‘will undoubtedly take their place among the most important pieces of financial legislation enacted in this century’... Applying reserve requirements to **all institutions that accept deposits** provided the Fed with valuable ammunition...” (Robinson, 2013); in addition to **perhaps doubling** its regulatory scope from the early 1970’s. See also “Regulation”.

²³³² Ronald Reagan’s OMB Director at the time, David Stockman, perhaps euphemizes the wild developments of the early ‘80’s as simply conferring “vastly expanded asset powers, such as real estate development lending and junk bond investments, on the [already] massively insolvent savings and loan industry... [Congressman] Freddie St. Germain of Rhode Island... was a practical politician who rarely met a lobbyist he could not accommodate. St. Germain’s case for deregulation... [was] simply that it was an unavoidable emergency expedient design to help thrifts to earn [he said with a straight face] their way out of their current balance sheet disasters. The Great Inflation [of the ‘70’s] thus spawned a cure [Federal Reserve dominance] which was worse than the disease” (Stockman, 2013, 177-78). See also “Criminalization of Banking,” “Derivatives”.

of person who dealt in home mortgages, a mere sheep rancher next to the hotshot cowboys on Wall Street. The cowboys traded bonds, corporate and government bonds. And when a cowboy traded bonds, he whipped 'em and drove 'em" (Lewis, 1989, 105-106).

5) From 1986 to 1992, nearly 1/3rd of America's 3,234 Savings & Loan Associations failed, 747 of which were liquidated by the Resolution Trust Corporation from 1989-95 (leaving only 597 remaining by 1997²³³³). At least half of the liquidations were in Texas,²³³⁴ where the regional boom-bust cycle at that time correlated with OPEC oil prices, which more than doubled during 1979-80, before tumbling 2/3rds from 1985-86 (Brewton, 1992).

6) In the mid-1980's, the CEO of the largest underwater S&L in the country (Sunrise Savings & Loan of Florida) "went up to Bush's office when he was Vice President, and.... One week after he met with these people, the Federal Home Loan Bank Board... withw a veryringent cease & desist order against Sunrise... and there was no Federal Home Loan Bank Board investigation" when Sunrise was shut down a year-and-a-half later, at a cost to the public of \$700 million (Brewton, 1992, mn.5-6). The "major borrowers" at the S&L included "mafia people, CIA people, and...businessman...John Riddle, who ties into the circle of Houston businessmen that George Bush comes from. And Riddle, at this time, was involved in transshipment of arms to the Middle East" (Brewton, mn.6). With both Sunrise and its fellow failed giant (and uninvestigated) S&L-- Hill Financial of Pennsylvania-- "you find a connecting thread of ams shipments to the Middle East... and [Vice President] Bush's office was directly involved in keeping Sunrise Savings open..." (Brewton, 1992, mn.7-8). See also "Deep State".

7) "The mafia... were in it at the beginning... They knew what de-regulation was going to do... They figured out a scheme, and the head of this scheme was...New York mobster...Mario Renda...[who] went to jail for like less than three years...[despite being] convicted in New York, Florida, and Kansas City. Renda would collect money from various institutions like pension funds and credit unions, bundle it up into \$100,000 bundles so it was covered by federal deposit insurance, and then place it in Savings & Loans all across the country-- billions of dollars. And once he got the money...into the S&L, he could basically control them. He had a hammer over their head; if they didn't do with this money what he wanted [them] to do... [Renda] would tell the S&L's to... lend the money to his buddies" (Brewton, 1992, mn.8-9). Louisiana-Texas mobster Herman K, Beebe had a different method for placing the hammer, through financing the purchase of Savings & Loans, via his many associates (Brewton, mn.10).

8) In the US in the 1980's, "there was probably a trillion dollars of...loans made that probably shouldn't²³³⁵... have been made... because... they were [all] guaranteed by the government and they weren't being regulated²³³⁶ and supervised" (Mosler, 2017, mn.-48-47). The approx. \$325 bn. in bad loans "was deficit spending. They facilitated private sector deficit spending that never would have happened. So if you look at the Reagan boom... you had Reagan cutting taxes and increasing military spending, and Congress increasing spending...so you [ran] up the public deficit that way. But the private sector deficit spending-- through the S&L's...a trillion dollars over 4-5 years, back when that was huge money... the whole national debt was only a trillion when Reagan came in and 3 trillion when he left. So we're talking about 100% of the public debt that was doubled through the private sector deficit spending [that had to be eaten by the federal government]. That's what drove the... good times of the Reagan years. Without that...private sector lending from the S&L's-- which was something in retrospect that nobody would have allowed-- [then] the Reagan years wouldn't have been anything like what they were like" (Mosler, 2017, mn.47-46).

9) Basically, the **big bankers wiped out the** [newly deregulated] **litttle bankers**; running up a taxpayer tab of \$124 billion, in order to "bailout...the deposit insurance system" (Ricks, 2017, 121). Moreover, combined

²³³³ Pilloff & Prager, 1998, 1027.

²³³⁴ "When we took those rules out, it took a very short time to have 50% of all the bad loans in the system [be] real estate-related. In Texas, every single one of those major banks essentially failed because of that" (Seidman, 1991, 44-45).

²³³⁵ Government regulators eventually closed "1,043 institutions holding \$519 billion in assets.... [From] 1986, through year-end 1995, the number of federally insured thrift institutions... declined from 3,234 to 1,645, or by approximately 50%" (Curry & Shibut, 2000, 26).

²³³⁶ For example, by law, S&L's must have at least 65% of their loans in residential mortgages.

underwater thrifts *and banks* in the "...debacle of the 1980s led to the failures of over 2,600 US depository [state-monetized credit] institutions, holding over \$700 billion in combined assets" (Ricks, 2020, 66).

10) "We got over a thousand felony convictions, and that's just in cases designated as 'major' by the Department of Justice.... we had a 90% conviction rate.... It's hard to prosecute elites; after all, the corporation will pay for their defense.... The other thing people forget-- a huge advantage in elite white-collar crime-- is [that] you get to talk to your lawyer *in advance*, before, and *while* you are committing the crime, and he or she gets to advise you.... [functioning] very much like co-conspirators.... The bank was the victim, being looted by the CEO... You [lawyers] were helping the CEO *destroy* your client [the bank]" (Black, 2016c, mn.6-8). See also "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)".

11) Have there been any serious reform proposals before Congress since then? See also "Narrow banking" [1980's-90's]; "Dodd-Frank", "Capital Adequacy Requirements", "Congress" [.trend-to-end] See also "Thrifts", "Criminalization of banking", "Accounting Control Fraud".

Savings Banks- (synon. 'mutual²³³⁷ savings banks'; 'trustee savings banks' [UK])

1) Unlike commercial banks or credit unions, SBs were pure intermediaries of loanable funds (between savers and borrowers), prior to the *The Depository Institutions Deregulation & Monetary Control Act of 1980*, which "liberalised restrictions on the assets that savings banks could hold, allowing modest amounts of commercial²³³⁸ lending and other types of asset holding... [and] made it easier for mutual savings banks to convert into *stock savings banks*²³³⁹ [supposedly] as a way of recapitalising [the old style 'mutual'] savings banks... [The 'reforms' basically] allowed savings banks to act more like deregulated [commercial] banks" (Wadhvani, 2011, 80); to include 'fractional reserve' accounting (money-creation privileges), via having accounts at (and thus being regulated by) a Federal Reserve bank.

2) Historically, for "most of the 19th century, mutual savings banks were the fastest growing financial institution in the US, and generally had a reputation as conservative²³⁴⁰...well-managed institutions.... At their height in the late 19th century...[they] accounted for over a quarter of the assets in the American banking system" (Wadhvani, 59).

3) "" # (Federal Reserve Board, 1943; Pilloff & Prager, 1998, 1027).

4) Savings banks' market share was slashed by the development of Federal Deposit Insurance for commercial banks and S&L's in the 1930's, though they "maintained a steady 10% share of financial intermediary assets between 1940 and 1970... [with] approximately 500 institutions" in the US, prior to the interest rate shocks and deregulations of the latter 1970's and early '80's (Wadhvani, 79).

5) In 2018, there were 494 savings banks in the US, with \$374 bn. in assets.- www.americasmutualbanks.com

6) Circa 2010, 82 remaining '*mutual savings banks*' (presumably those still with 'loanable funds' accounting, instead of 'reserve' accounting) "account for less than 1% of the assets of the American banking system" (Wadhvani, 59).

See also "State-monetized credit institutions", "Thrifts", "Savings investments".

'Savings deposits'- deceptive banking term (d.b.t.) for "Savings investments." "I'd like to ban the word *savings* from macroeconomics. Individuals save; economies do not" (Keen, 2016d).

Savings investments- (d.b.t. 'time deposits', 'savings deposits'; deactivated bankmoney that's not on the payment system)

²³³⁷ *Mutual Savings Banks* are so-called because their customers are members with voting rights who (as with credit unions) have a say in determining the goals of the institution. See also "Postal Savings & Loan Banks".

²³³⁸ typically/traditionally 'fractional reserve' or new money-creating

²³³⁹ Since at least the 1930's, only Stock savings banks have been "Fractional Reserve (monetary) institutions". Whereas in *mutual* savings banks, the money put in is invested by the bank on behalf of [its fiduciary] the savings depositor...in *stock* savings banks, it is borrowed, on term, by the bank from the depositor and gives him no [legal] right to consider it as [his] money..." (Fisher, et al., 1939, 33).

²³⁴⁰ Presumably 'conservative' here is a euphemism for the 'loanable funds'/'full reserve' system of accounting. See also "'Exogenous vs. Endogenous' (money creation)".

1) deactivated bankmoney that is only included in 'M2', not in 'M3'²³⁴¹ (or any additional measures of monetary aggregate), f.e. money market mutual funds, money market deposit accounts, and CD's of less than \$100,000, in addition to other federally-insured savings accounts.

2) Although "savings" are not 'money' by definition, bankers and economists pretend that savings investments (d.b.t. 'time deposits') are a kind of national money (they call it 'M2'), but savings investments are just *investments*, not money, since account holders are unable to make payments with savings investments. Savings investments do not meet the definition of *money* and are not backed by a [state/RAB] Reserve requirement the way that [TAB] checking/current accounts are.

3) They are, like other investments, a form of *deactivated bankmoney* (i.e. not on the payment system), not money. Savings investments are, however, more liquid than many other investments, since they are convertible to money on demand; but other *liquid investments* are also convertible on demand. Savings investments are loans by the public to banks.²³⁴² They are legally bank debt (*liabilities*), but the entire banking system lacks the equity to repay more than a fraction of these loans to the public. Banks fool people into thinking that their savings investments are safe. They talk about FDIC. However, if even one of the big banks goes bankrupt, there is not enough in FDIC to cover the savers' losses. Bank runs are a constant threat to the [TAB] banking system. That is one of the reasons why the banks want to go to a cashless society. Without cash it is easier to conceal insolvency.

See also "Payment System", "M1", "Near monies", "M2".

Savings rate- (savings as a percentage of disposable personal income)

"Between 1960 and 1984, the US personal savings rate... never fell below 8%... [But, after the 1970's inflation shocks, followed by 37 years of declining bond yields, that] is [now] far out of reach today."²³⁴³ In late 2017, the US personal savings rate was (back down to) 2.4% (Wack, 2018).

A bygone era

The U.S. personal saving rate long hovered in the 10%-12% range, but in the last two decades it has generally remained at a much lower level

[Wack, 2018; eurodollars led the bond curve?]

Say's Law- ()

1) "Named for the French liberal economist Jean-Baptiste Say (1767-1832), this 'law' states that payments by producers to their employees and suppliers are spent reciprocally to buy the products of these producers. In popular terms, '*Supply creates its own demand*'. If this version of circular flow were true, there would be no business cycles or depressions. John Maynard Keynes accordingly devoted a large part of his *General Theory* (1936) to explain why this circular flow was interrupted, and blamed the financial system" (Hudson, 2015b). See also "Keynes' Treatise on Money (1930)".

²³⁴¹ The traditional dividing line between 'M2' (household savings) and 'M3' (larger near-money accounts) is \$100,000.

²³⁴² 'Time deposits' "(i.e. the bank's liability) cannot under any circumstances be true deposits of physical money. The actual 'deposit' is [in fact] a loan to the bank, drawing interest, and therefore not appropriately available as money to the depositor.... if we could rename time 'deposits' and call them '*time loans*', the general public would gain much in its understanding of these matters" (Fisher, et al., 1939, 33).

²³⁴³ Although the US savings rate was "as high 11% in 2012...that proved to be a temporary blip...likely caused... by lenders writing down delinquent consumer debt", and by late 2017 the rate had fallen back down to its pre-crisis 2.4% (Wack, 2018).

2) "Situating himself in the tradition of Adam Smith...[Say] came to oppose the Physiocratic school of political economy on essential points.... [Nonetheless] like them, he based this new science on a sensualist theory of knowledge, a utilitarian theory of action and a theory of government-- which we have proposed to call economic philosophy.... [and] makes little use of 18th century Antiphysiocratic writings" (Steiner, 2019, 677). See also "Physiocrats, the". See also "Ricardo, David (1772-1823)".

Science- See "Scientific method", "Theory".

Science of assumptions- "An oxymoron in which the criterion for acceptability of a discipline are whether its assumptions are *logically consistent*, without regard to whether or not they are *realistic*. The result tends to be circular reasoning based on tautological definitions. (See...*Junk Science and Neoclassical Economics... Reality economics*)" (Hudson, 2015b). See also "Parallel universe", "Mythomatics".

Scientific Management/'Hawthorne Effect'- (synon. 'Taylorism'; i.e. 'the stopwatch'; a.k.a. "messing with the lights" [Schell, 2006])

"[I]t shifted power from the professionals to their technocratic managers, just as Taylor intended it to do." (Boyle, 2020, 47). See also "Power", "Technocracy", "Transhumanism".

"You can only control human behavior [over the long-term, with]...internalized controls, not by externalized controls. And you only can get internalized controls in community" (Quigley, 1976b). See also "Confucian", "Observer Effect/Goodhart's Law".

1) In June 1903, within months of Henry Ford finishing his experiments with assembly lines, the most-influential management guru of the 20th century, Frederick Winslow Taylor (1856-1915), first put forth "the idea that you can sum up a working task completely in terms of the numbers, and reward the effort people might make along those lines.... The ideas that became 'scientific management' meant breaking every task down into [distinct] units, measuring how long they took, and [then] setting targets for workers to meet.... [It] was at first an American ['Protestant ethic'-type]²³⁴⁴ phenomenon... it took some years before the combination of 'scientific efficiency' and time-and-motion study crossed the Atlantic.... [but] They have since been hugely influential"²³⁴⁵ everywhere (Boyle, 2020, 38-39). Between 1907 and 1915, "manufacturing efficiency per employee went up by a staggering 33% every year. In some ways, the modern industrial world has been basking in his success ever since" (Boyle, 46). See also "Productivity", "Globalization", "New World Order".

2) The "Hawthorne Effect" is the term applied in later decades to Elton Mayo's "observer effect" experiments at the Hawthorne Works-Western Electric factory outside Chicago from 1927-33,²³⁴⁶ the main idea from which Michigan psychology professor Richard Nisbett has called "'a glorified anecdote" (Kolata, 1998). And "'Once you've got the anecdote' [or myth], he said, 'you can throw away the [supporting] data'" (Ibid). The Hawthorne Experiment supposedly demonstrated that "regardless of the changes made in working conditions-- more breaks, longer breaks or fewer and shorter ones-- productivity increased. These changes apparently had nothing to do with the workers' responses. The workers, or so the story goes, produced more because they saw themselves as special, participants in an experiment, and their inter-relationships improved. Sounds very compelling" (Ibid); to a mad scientist. "The results of this experiment, or rather the human relations *interpretation* offered by the researchers who summarized the results, soon became gospel for introductory textbooks in both psychology and management

²³⁴⁴ Taylor was from a Philadelphia Quaker lawyer family, and a (maternal) direct descendant of Mayflower Pilgrim Edward Winslow.

²³⁴⁵ Taylor's *The Principles of Scientific Management* (1911) was voted 'the most influential management book of the 20th century' by the Fellows of the Academy of Management in 2001. Peter Drucker, the latter century's leading management writer, called it "'the most powerful as well as the most lasting contribution America has made to Western thought since the Federalist Papers"; he "argues that Taylor shares the honor of having a much influence on the 20thc as Freud and Darwin" (Boyle, 2020, 39; 46)-- so we've got, basically, 'the psychological stopwatch of genetics'. See also "Russiagate", "World War Two", "Twentieth century".

²³⁴⁶ The US Congress had already "banned time-and-motion study methods from government factories in 1915" (Boyle, 2020, 44). See also "Numbers".

science...” (Kolata, 1998). That’s a lot of power rationale, based on rather faulty foundations, as the rest of the piece and subsequent articles have revealed. Nonetheless, Google, spy-chips, the personalized advertising industry, massive NSA electronic surveillance operations (f.e. the ‘Total Information Awareness’, Stellar Wind, and SSEUR programs), and even an “Internet of Things” (IoT) were already in the works by the late ‘90s, as if they’d never seen *Brazil* (1985). See also “Industrial Revolution, 3rd”, “Physics, New”; “Technocracy”, “Chile” [.”COVID”]; App.C: “1-2-3”.

3) ‘Modern’ England has “this ludicrous belief... that the more you measure things, the better they’ll turn out. So we spend all our time measuring academic output here... [distorting] what people actually do” (Keen, 2016j, mn.13). See also “Academia”, “Learned ignorance”, “Productivity” [.services], “Dumb-downing”, “Observer Effect/Goodhart’s Law”, “Ontology & Epistemology” [.philosophic problem].

4) “Science plays a larger and larger role in running the world. But much of it is misleading science, slanted, cooked, biased, stepped on, false, and invented out of thin air”; in “the modern world, this fakery is called *technocracy*. Technocracy may employ methods such as technological surveillance, but the overriding plan for organizing society has nothing to do with science. It [eventually]²³⁴⁷ has to do with control. And when you see it that way, the supposed consensus falls apart” (Rappoport, 2017d). See also “Productivity”, “Duopoly (political management)”, “Diminishing rate of understanding”, “Google”.

4b) The “astonishing thing about Scientific Management is that it has never gone wrong by its own standards” (Saul, 1992, 120). See also “Totalitarianism”, “Slavery”; “Civilization, Western” [=ScientificMethod], “Long-term orientation (LTO)”, “Observer Effect/Goodhart’s Law”.

Scientific method- (a.k.a. ‘science’-- in the broadest sense-- “to look, in a disciplined way, into the world, into what the senses present us with” [Meyer, 2021b, mn.15]; more specifically, the discipline is judged on [further constructs of both] validity and replicability). See also “Theory”.

1) Discipline is one of those things that is often easier said than done. The thing about science is, fundamentally, you have to *share your data* and support your conclusions. Politics, power, and other expediencies may get something over that is bogus (invalid) and/or with very poor replicability, but in any ‘free’ society, it has to stand up to the burden of scrutiny and (even if it has already been accepted) the validity test of time. See also “Methodology” [vs. *The Thing*].

2) The US National Cancer Inst. (to name just one) has been “totally government science since...the mid-1980’s. Depending on the field of science [in the US], government has dominated... since World War 2, and it’s just increased over the years...Now science is almost exclusively...controlled by government and government funding” (Rasnick, 2022, mn.9). See also “Deep State”, “Foundations”.

2b) Consequences? The “guiding doctrine of the National Cancer Institute is... [still (since the 70’s) that] ‘Cancer is caused by mutations²³⁴⁸ in genes that control the way cells grow and multiply’. If you hope to

²³⁴⁷ <https://www.youtube.com/watch?v=WMKLudzDVVA> [sweeps week (vs. TheBlob)]. *Before* Google there was (the not-very-well-respected idea of) ‘scientific management’. *After* Google there was SCTV. See also “Attitude Inoculation”, “Adolescence of Mankind”.

²³⁴⁸ The big lie has persisted, decade after decade, @ <https://www.cancer.gov/about-cancer/causes-prevention/genetics#:~:text=Genetic%20changes%20that%20cause%20cancer,that%20occur%20as%20cells%20divide.&text=Yes%2C%20cancer%20is%20a%20genetic,way%20cells%20grow%20and%20multiply.,> even though it has long been known that many, if not “most carcinogens are...not mutagenic” (Rasnick, 2022, mn.26);

get a grant proposal funded that you submit to the NCI... you have to be consistent with this [false] guiding principle, or at least...[don't] try to get around it or refute it... [or] you probably won't get funded" (Rasnick, 2022, mn.8). See also "COVID".

[Scholastics, the](#)- (pre-university, high-medieval Church scholars or 'bookmen' of the 12th-14thc's)

1) During high-Christendom and the middle ages; "Church scholars were called the Scholastics or Bookmen. Many were later canonized as Saints. They were familiar with the available [& newly-available] writings in existence and focused a good part of their attention on economic matters, particularly on usury and [on ascertaining a] 'Just price'. They were attempting to build a rationally based moral code of business behavior to determine what should be, rather than what was. Their [primary] guides [as in Orthodox civ.] were the writings of the Church fathers and the [main] Councils that had convened over the centuries" since Constantine's day. Unlike the Eastern Orthodox, however, they often read *both* Greek and Latin perspectives. And in "the early 1200's, [when] the works of Aristotle became available in the West...[he also] became...[a Scholastic] guiding light" (Zarlenga, 2002, 177-178), more so than in Orthodoxy. See also "Civilization" [.Western, Orthodox].

2) "Price was considered the main factor determining equity or justice in commercial transactions. Far from attempting to dictate or fix prices, the Scholastics [simply] devised rules of thumb for use when disputes arose.... Oⁿe rule of thumb... was that...[bargaining] attempts should not go beyond 50% of the 'just price'" (Zarlenga, 178). See also "Parity pricing (for the primary sector)", "Physiocrats, the".

3) Also of "great concern to the Scholastics was whether fraud or duress existed, so as to invalidate the conditions of free bargaining.... According to Bartolus (14th century), *fraud* existed in dealings when there was exploitation of the immature or the mentally deficient; where there was insufficient information, blackmail or moral coercion; or when one party was in the power of another.... The Scholastics saw no difference between taking advantage of existing duress or of actively causing or applying duress" (Zarlenga, 178-179). See also "Usury", "Acquinas, Thomas (1225-1274)".

4) To some, it is highly problematic that "the Scholastics... entirely missed the fact and [also] the importance of [using] bank created deposits as money [and currency]. Over a period of several centuries, the [increasing practice of] 'deposit creation as an economic phenomenon is unmentioned by them'...[which] is one reason for the lack of moral condemn^{at}ion of [using] such [bank] deposit creation [as currency] in the present day, whereby banks...[basically use] their credit [extensions] for money, through a process [that was formerly] known as" (see also "Fractional Reserve Lending" (Zarlenga, 2002, 180). See also "Goldsmith's Tale, the", "Aristotle", "Estates, 3".

[School & Schooling](#)- (per 20th century USA)

1) "[W]hen the laws of the Twelve Tables were made, the manners of the Romans were most admirable. The Guardianship was given to the nearest relative of the infant, from a consideration that *he ought to have the trouble of the tutelage who might enjoy the advantage* of possessing the inheritance [of that investment]. They did not imagine the life [yet alone functionality] of the heir in danger, though it was put into

[https://scholar.google.com/scholar?hl=en&as_sdt=0%2C5&q=A+view+of+the+relation+between+carcinogenesis+and+mutagenesis+William+Lijinsky&btnG=\[Lijinsky'89\]](https://scholar.google.com/scholar?hl=en&as_sdt=0%2C5&q=A+view+of+the+relation+between+carcinogenesis+and+mutagenesis+William+Lijinsky&btnG=[Lijinsky'89]) . See also "Logical fallacies" [.'Post-hoc'], "Big lie, the", "'COVID'".

a person's hands who would reap...benefit by his death [or incompetence]. But when the manners of [Republican] Rome were changed, her legislators [also] altered their conduct: 'If, in the pupillary substitution', say [both] Gaius [in the 2nd century] and Justinian [in the 6thc], 'the testator is afraid that the substitute will lay any snares for the pupil, he may [then] leave the vulgar substitution open [unappointed], and [instead] put the pupillary into a part of the testament, which cannot be opened until after a certain time'. These fears and [legal-constitutional] precautions were unknown to the primitive Romans" (Montesquieu, 1748, 306); but the culture of the (imperialist) Republic was strategically corrupting, and they were hence wholly necessary after the time of Augustus. See also "Common sense"; "Transhumanism".

2) A couple millennia later; according to some studies approx. "...only 31% of 4th graders [in the US] are proficient in reading on the NAEP (National Assessment of Educational Progress), and by 8th grade this number is virtually the same (33%). If the average student is not an efficient reader, how can we expect them to excel? One can find similarly alarming statistics for math and the problems compound by the time students are in high school. In fact, according the Heritage Foundation, about one in 3 American students fail to graduate from high school... [and] the numbers are getting worse in [both] relative and absolute terms.²³⁴⁹ In 2008, the US was the only developed country with a higher percent of 55-to-64-year olds with high school degrees than 25-to-34-year olds.... According to the OECD, significant [public educational] progress has been made in China, Korea, Mexico and Brazil... countries often seen as up and coming geopolitical competitors" (Vindis, 2012).

2b) The long-noted "shortage of US-born STEM [Science, Technology, Engineering, Math] workers gives companies 2 choices: import costly foreign labor, or move operations abroad... [T]he US has fewer Ph.D. STEM graduates (per million population) than many other developed countries... [and a very large share] of those advanced degrees are awarded to foreigners. For example, about half of all engineering doctoral degrees are awarded to non-US nationals" (Vindis, 2012). "Dumb downing", →"COVID".

3) What more fruit can one expect from the tree: The aim of public education, in the 20thc US, is "[not] to fill the young of the species with knowledge and awaken their intelligence.... Nothing could be further from the truth. The aim... is simply to reduce as many individuals as possible to the same safe level, to breed and train a standardized citizenry, to put down dissent and originality. That is its aim in the United States."- H.L. Mencken, *The American Mercury*, April 1924. See also "Foundations", "Imperialism".

4) The main problem is that they're pretty much 'all' on 'drugs'-- broadly defined as substances which are as unnatural and laboratory-created as they are heavily used.²³⁵⁰ See also "Food (and food-like substances)" [FDA], "Health".

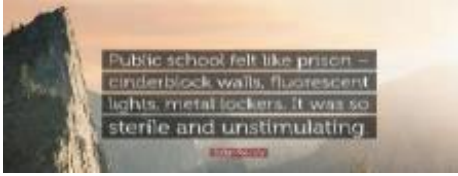

[You're not going to find a clearer sentence-sentencing.]

4b) ...victims to the age of Rule-by-Love-of-Honor (sometimes a.k.a. imperialism), not much less than slaves were victims to the preceding age of Despotism. See also "Montesquieu" [trichotomy], "Privilege", "Corporations", "Public-Private Partnership", "Foundations (of fascism)", "State capture"; "States rights".

²³⁴⁹ "Politicians on both sides of the aisle are all too eager to turn critical issues into an ideological battle rather than seek a realistic compromise. The US desperately needs an overhaul of the education system, but given today's political reality it is not clear when that will happen. It would be foolish to pinpoint any one issue as the sole problem... The education system doesn't need tweaks and fixes; it needs a serious overhaul...." (Vindis, 2012). See also "Baby-boom demographics", "Reform, 101".

²³⁵⁰ Per Jeffrey Smith's study, a town in Wisconsin "changed the school system from the corporate food to local, fresh food; and then they tracked what happened... The behavioral problems [at school] crashed... The health problems crashed. All the kids grades started to get much better, and on any reasonable metric of intellectual performance, physical performance...health, everything, the kids were significantly improved. [But does it] cost [maybe] 10% more.... If you put children in a school, poison them, and they don't get a good education [except in street talk], what's the point?" (Fitts, 2022], mn.31-32). See also "Food (and food-like substances)", "Dumb downing", "Death Culture".

[See also "Imperialism, American", "Leadership vs. Management"]

Scrip (a.k.a. 'chit'; locally-based fiat, or military, 'company currencies', may take up the slack when the national currency [a.k.a. 'legal tender'] is insufficient) See "Local scrip & Complementary currencies".

[1919 General Strike; 1933 local Scrip in the Pacific Northwest]

Secrecy, Cult of (a.k.a. 'because your head would explode'; i.e. the inevitable flip-flopping result of fundamental flip-flopping [a.k.a. lying or confusion] over the nature of 'money' & monetary economics)²³⁵¹ "[T]he hallmark of a truly effective internal security system would be the maximum possible disclosure, recognizing that secrecy can best be preserved only when credibility is maintained.... For when everything is classified, then nothing is classified, and the system [as the USSR found out] becomes one to be disregarded by the cynical or the careless, and to be manipulated by those intent on self-protection or self-promotion."²³⁵²

- Justice Potter Stewart, *New York Times Co. v. United States*, 1971 (Yale Law, 1975, 613, n.33)²³⁵³.

1) In a way, it's nothing new. It has long been well-known that 1/3rd of the signatories of the initial US constitution-- like Franklin and Washington-- were "freemasons". It is also openly admitted that the most "controversial" thing that summer in Philadelphia was that (Soviet-type) "secrecy would prevail throughout. With windows shuttered and doors closed, the members met day after day, 6 days a week, for more than 3 months. Due to the strictly-enforced secrecy, the only record of the proceedings came from [secretary] Madison's minutes, which he kept private...[until his death], the official tally of motions and votes, and a [small] scattering of [other] personal notes and letters. The silence that engulfed the Convention limits what is known about Washington's role, because-- as presiding officer-- he rarely spoke on substantive matters inside [of] the hall where Madison recorded the debate."

- <https://www.mountvernon.org/george-washington/constitutional-convention/washingtons-constitution/>

See also "Constitution, US (of 1787-91)", "Constitutions".

2) There are now, however, many blatantly unconstitutional aspects of the 'modern' US monetary and governmental systems. Secrecy "should be the exception and not the rule. What the government has done [however] is taken that secrecy agreement and turned it into a weapon.... So [that] it binds everybody who touches anything that the CIA touches in any contract they enter into... with threats of

²³⁵¹ <https://www.youtube.com/watch?v=P6NNJq0FZN4> [prime]. See also App.C: "1-2-3".

²³⁵² Public corruption, in & of itself, inexorably; "asks that ideas not be tested in the marketplace, but that they be accepted on the basis of unchallengeable authority. So it is with secrecy" (Yale Law, 1975, 632)...a.k.a. the slow road to (see also) "Charismatic Authority (CHA) & Charismatic Dependency (CHD)", "Transhumanism".

²³⁵³ See note 106 in particular, concerning the revision of top secret "classification guidelines", from simply that "'which could result in exceptionally grave danger to the Nation'..." (1953) to that which "'could reasonably be expected to cause exceptionally grave danger to the national security'.... [including] the compromise of vital defense plans or complex cryptographic and communications intelligence operations; and the disclosure of scientific or technological developments vital to national security.'" (1974); thus effectively brushing away Justice Brennan's concurring opinion in *New York Times Co. v. United States*, 403 U.S. 713, 726-27 (1971), in favor of the case's dissenting opinion from Justice Harlan. The note thus "recommends" that "courts should not rest solely upon executive assertion, but should [instead] examine the circumstances themselves" (Yale Law, 1975, 627-28, n.106). It didn't happen. See also "National Security Agency (NSA)" [X.O. #12333].

prison if anything is leaked... even if it's illegal, which I saw in my own case" (Shipp, 2017b, mn.8). [Too many cooks spoil the broth?](#) See also "Democracy", → "CIA", → "Governance" (rubric.21).

3) "We live in a dirty and dangerous world. There are some things the general public does not need to know and *shouldn't*. I think democracy flourishes when the government can take legitimate steps to keep its secrets and when the press can decide whether to print what it knows."- *Washington Post* publisher Katherine Graham, speech presented to CIA headquarters, 1988. See also "[Corporate Media Cartel](#)", "Mockingbird", "Quigley, Carroll (1910-1977)", "Democracy".

3b) USMC Intelligence co-founder Robert David Steele's "first book, *On Intelligence: Spies and Secrecy in an Open World*- which... had a foreword from Senator David Boren-- the immediate past chairman of the Senate Select Committee for Intelligence-- made it quite clear that the national security state is an expensive, ineffective monstrosity that is simply not fit for [strategic] purpose" (Ahmed, 2014);...other than (see also) "Provocation Operation", App.C: "1-2-3".

3c) Something does not 'fit' anymore? The basic problem (in case one hasn't noticed) is one of growth. That the relatively 'radical' growth in monetization, technological productivity, and population of the past proverbial 2-3 centuries is starting to run up against the (typically unbending) confines of the Earth's biosphere is only one side of the "growth" coin. Just as surely as Mother Nature's matrix fails to acknowledge man's political lines (and may or may not accommodate his economic ambitions), government & governance shifted, over the course of 20th century, from primarily focusing on (see also) "World Wars" and crude statistical growth (i.e. "gross" or indiscriminating growth in pretty much anything [characteristic of governments & governance during the 2nd Industrial Rev.]), to the 3rd Industrial Revolution and its nearly opposite agenda of (ever-increasing) digital precision and (let's face it) conservational efficiency. What does this (new ecol.-econ.-polit.-cultural) agenda have to do with: <https://www.youtube.com/watch?v=mXDefDi-iYo> [Stalingrad'Gates', mn.2-12; 21]? Pretty much nothing. Nonetheless, the old institutional structures of the 2nd-- or even 1st-- Industrial Revolution mostly still remain, more due to their ('mutually inoperable') inter-connectedness than to the 'venerableness' of such still-largely-misunderstood-&-mysterious 'classic' institutions that so & so says we're (still) not supposed to talk about-- even if failing to do so is holding up the entire 'Information-to-Knowledge Age' transition. Problematic public institutions demand public dialog, period. Large, complex task or not, it is simply not within the purview of any Intelligence Community (within 'Western civ.' at least) to conduct such 'public dialog' on behalf of the citizens and citizenry itself (regardless of what parts of the I.C. may think or even plan in private life or behind the scenes). I.C.s are nothing if not 'secrets & leaks'. It's up to 'us', so to speak, not the 'secret brains', to demand, set, and realize appropriate standards for governments and governance in the 21st century and digital age. For 'someone else' to do that for 'us' would be meaningless-- except for countering the entire grain of "Civilization, Western"- "Estates, 3"- "Separation of Powers". See also "Timarchy", "[Military-Executive-Corpocracy \(MEC\)](#)", "National Security Agency (NSA)"; "Constitutions".

4) Not everyone is aware of the (increasingly) enormous economic costs of opacity and lawlessness. "The oppression and the destruction of productivity that comes from secret[s] is so monstrous... that nobody would believe me if I told you... [T]he wealth on this planet is [about like] 1% of what it could be²³⁵⁴-- if we had a financial system that aligned with life...It is remarkably easy-- conceptually [not politically]-- to reconfigure the economy so that you can make money healing the environment...[and] ending poverty. The wealth potential is enormous... Why in the world [do] we have a secret governance system on planet Earth. Why are we destroying the vast majority of our wealth to keep everything secret?" (Fitts, 2018f2, mn.7-8). "There's way too much money...[on] this planet going into...military, going into war, going into force; and part of it is a real concern about [a self-fulfilling prophecy of] lawlessness" (Fitts, 2019f, mn.15). See App.C: "1-2-3".

4b) "Since 1947, the secrecy has gone up-up-up-up-up... [which] creates a massive divide between the different groups...I've watched as the leadership *literally* [sic] pulls away and [like a bully] starts hating the general population...[whom they assume cannot understand] the truth. And [so] they have to come up with more and more ridiculous 'solutions' to try and market things. And [now] you've reached a break point"; "a

²³⁵⁴ This is not a new observation. Henry George spent several pages on articulating it (George, 1879, 468-471). See also "'Hundred-Year plans'".

couple times they've come together and said... 'Let's lower the secrecy'. And they look at the different corporate and financial liabilities and say 'We just can't do it'... [They'd rather] go to a system where you don't have [much of a] population [anymore]. These [D.C.] guys are risk managers, and [from the mid-90's] there has been a financial coup.... If they've stolen all of the money that was supposed to go for retirement and medical care for the baby-boomers... " (Fitts, 2021c, mn.54; 56-57). See also "CIA" [Act of 1949], "Imperialism, American", "Baby-boom demographics".

4c) Gen. "Tony Zinni, when he was commander in chief of the US Central Command, as it was at war [1998-99], is on record as saying that he received, 'at best,' a meagre 4% of what he needed to know from secret sources and methods... 95% of what we need for ethical evidence-based decision support cannot be obtained through the secret methods of standard intelligence practices." - Robert David Steele (Ahmed, 2014). See also "National Identity cycle".

5) "Secrecy is for losers. For people who do not know how important the information really is" (Moynihan, 1998). See also "Soviet Union", "Dumb-downing", "Industrial Revolution, 3rd".

6) "A lot of the secrecy is engineered by turning classified government projects over to private corporations, who then *don't have to report*. They don't have to comply with the SEC [nor US government *Freedom of Information Act* inquiries]. They're making massive amounts of money, and its part of what's keeping the stock market so high and people not understanding what's keeping the stock market so high... [Y]ou have massive amounts of covert money pumping up earnings.... This has been a growing part of the economy, and you can't understand the US stock market unless you understand those cashflows.... the intersection between Wall Street and Washington" (Fitts, 2018s, mn.24-25). See also "Stock Market Boom", "Feudalism, neo", "Internet of Things (IoT)".

7) The one-way mirror of 'secrecy' has grown so large that it must be subdivided into categories. In addition to the millions of documents that are *directly* (de jure) "classified" at different levels of secrecy by the federal government, there is another (even more hidden) sector of de facto/indirect secrecy-- the realm of very substantial government activity that has been either: a) contracted out to private corporations, and/or b) simply handed over to (typically less-accountable) international institutions. This *indirect* secrecy relies on the invocation of values other than direct 'national security', such as "*technocracy*... let the wizards of finance manage this for your benefit... with the... 'greater efficiencies' of the private sector, and the [supposed] cost savings that will result... But the fact is that when they outsource government functions, it is more expensive, and also we really can't see what these private contractors are doing, for a whole host of reasons" (Benjamin, 2019, mn.1-2). See also "Pentagon Capitalism", "Fitts, Catherine Austin", "Technocracy" [Wood].

8) US government classification decisions are under the purview of the executive branch (X.O. #13526), "with little oversight by the Judiciary or Congress" (Fitts & Betts, 2019). No information may be classified indefinitely; but only records older than 25 years are subject to automatic *declassification*, if they "have been determined to have 'permanent historical value' in accordance with title 44, *U.S. Code*" (Fitts & Betts, 2019). "While it may be true that members of Congress theoretically have access to classified budget information, [in practice] classified intelligence reports are routinely provided only to the [national security] committees... [and] the intelligence committees and their members are accorded 'preferential treatment'.... [Even though the] "National Security Act states that Congress must be kept 'fully informed' of significant intelligence activities...many presidents have interpreted this clause to mean [that] they only need to notify the '*Gang of Eight*'... [i.e.] the Senate and House majority and minority leaders, and the chairs and ranking members of the House and Senate intelligence committees.... [whose] offices and hearing rooms are physically located in vaulted areas that meet the CIA standards for storage and discussion of information relating to intelligence sources and methods" (Fitts & Betts, 2019). See also "National Security Agency (NSA)" [intelligence committees], "*Military-Executive-Corpocracy (MEC)*" [Lockheed-Martin].

8) "Secrecy, once accepted, becomes an addiction."²³⁵⁵- Edward Teller. See also "Lunatics" and "Adolescence of Mankind"; "Statistics (warping of)", "USSR (1922-91)".

²³⁵⁵ https://www.youtube.com/watch?v=ViZTfmhij_g ['Uposcrabblenyk', mn.0:42]

10) “We have a financial addiction to secrecy.... One of the reasons they [Establishment] don’t want to [disclose anything very large] is.... [that] you now have tremendous amounts of corporations who have benefitted financially... from taking technology that the government has financed and moving it out into private hands, and they don’t see a way to deal with the legal liabilities [of the Age of Thieving].... They’re very concerned about the legal liabilities, and... [in] some of these operations...you see massive violation of human rights laws.... It’s imperative that independent media make that [necessary] transparency happen” (Fitts, 2019o, mn.40-41). See also “Federal Accounting Standards” [FASAB-56].

11) Running (at least most of) the world is a big task, and USG secrecy culture-- be it from the “Shadow Government” of (mostly military) “Intelligence Community” & “NSA”, or from the civilian bureaucracy of “Deep State” (and/or the “CIA” that often bridges the two)-- and given the “sovereignty” holes in the US constitution, is (good, bad, or ugly) up to some rather large projects-- nearly all of them ‘secret’ at some level, or at least not propagated or widely known, yet alone publicly understood. In addition to the (big 3 fairly well-known exceptions: the) 800 military bases encircling the world, the 3rd Industrial Revolution-type ‘matrix’ of digitizing everything (mostly for the laudable purpose of energy efficiency), and the great “tax shift” away from “corporate ‘persons’” and onto the little people (until they are proletarianized and can effectively pay no more²³⁵⁶)... there are a number of large-scale ‘secret’ policies (in addition to the usual click-bait red herrings) that have been leaking, pretty consistently, since c.2000 or so. Yes, “false flags” are (and have long been) a standard tactic in the imperial playbook. “Geoengineering” and ‘chemtrails’ are of course part of the 3rd Industrial Revolution agenda, as is widespread awareness (better late than never) of the digital nature of life itself. See also “Design”, “Physics, new”²³⁵⁷.

11b) Since c.20/20 (as if by calendar), the “Provocation Op.”s have been, predictably, ramped up (and are only bound to get louder, as the late-2nd-millennium/“Adolescence of Mankind” paradigm continues to dissolve, per childish ‘COVID’ absurdities, highly unethical injectable rDNA/DNA programming, and (mostly national) governments that often don’t quite seem to be ‘on your side’ anymore. See also “Provocation Op.”, “COVID”, “Reform, 101”.

11c) As an acclaimed musician wrote (half-a-century ago now), “[A]ny...[not too major] world that breaks apart falls together again.” There’s (a lot) more to the 21st century than (see also [so-called]) “Central Bank Digital Currency”. Some intelligent & responsible [to both humanity & the biosphere that we rest upon] long-term developmental policies would be (and perhaps are-- if they already exist somewhere “secret”) the following²³⁵⁸ (in chronological order):

- (what should be called the) “International Intelligence Community”’s gifting of certain technologies abroad, in order, pretty much, to make the (globalization) game worth playing for other countries. This has, arguably, been going on since the 1950’s & 60’s (not even mentioning the ongoing “UKUSA Agreement” collaboration, WW2 Lend-Lease, the [often conduit] state of “Israel”, and the enormity of “Eurodollars”). Israel has been part of the strategic dissemination since no later than the early 1980’s, and China since no later than the early 1990’s. See also “International Intelligence Community (I.I.C.)”, “UKUSA Agreement” [.5Eyes], “Treason”.
- “Monetary reform”, in the most basic terms of collapsing the dual classes (or layers) of money-currency into simply 1. This policy has been going on, consistently, for at least a couple of decades now (Titus, 2021e)-- well before the financial implosion of 2008, despite hardly anyone noticing it

²³⁵⁶ Hence the encroaching grip of death process moves up one rung, to the next level of proletarianization. This is not what the “Founding fathers” had in mind. See also “Death Culture”, “Common sense”, “Taxation of income”, “Dutch Disease”, “Reform, 101”.

²³⁵⁷ If the “Central Banking-Warfare model” paradigm is good for anything it must certainly be the (rapid) development & dissemination of high (& ever-‘higher’) technology. The rest, and pretty much all remaining questions, are ‘up to us’. See also “Freedom continuum (maturation)”, App.C: “1-2-3”.

²³⁵⁸ These 3 secret & ongoing strategic policies (that no representatives or ‘deep staters’ ever seem to get upset about) are indeed rarely (if ever) discussed (in any way other than hysterical venting) in either ‘legacy’ or ‘alternative’ media. In contrast, sensible long-term developmental policies that are already (in the 21stc) being rolled out in public include pretty much the entire 3rd Industrial Revolution and “Ecological economics”-type techno-conservation strategies, in addition to the much-ballyhooed “distributed ledger” & “blockchain” revolution.

(and essentially zero public commentary). See also “Money, 2 classes (layers) of”, “Monetary reform”.

- Not quite so secret, though unnoticed at first, has been China’s (or China-Russia’s) Belt & Road Initiative, launched as an aftershoot of its (much more remarked upon) radical²³⁵⁹ monetization strategy (from 2009). See also “Land bridge”, “China’s US Treasury Bonds”, “G2”.

11d) What could all of this add up to? Did not America (or the UK-USA²³⁶⁰)-- after 4-5 centuries of effort-- possess *both* ‘Excalibur’ (invincible super-weapon→‘reserve currency’ status) and ‘the Holy Grail’ (a sustainable ‘par’ economy that does not rely on bank debt) in the 1940’s-to-early-50’s? See also “Super Imperialism”,→ (will eventually yield to) “Primary Sector Economics”, & “World Par Economy (WPE)”.

12) “I have no doubt that the nation has suffered...from undue secrecy... The government takes good care of itself.”- Daniel Schorr. See also “Burien, Walter”, “Statism”, “Monetization”.

See also “Black Budget”, “CIA” [Act of 1949], “Deep State”, “President of the United States (PotUS)”, “National Security Agency (NSA)”, “UKUSA Agreement”, “State capture”, “Intelligence Community” [riddler], “Parties, political”.

[See also “Journalism (standards)”]

Secret Government- See “Government, Hidden”.

Secret Space Program- “He who controls the weather will control the world.”- Lyndon Johnson, 1962; see also “Geoengineering”.

1) After “the Kennedy administration we took the Space Program dark... black” (Fitts, 2016b, mn.26). 250,000 Americans now work in space programs; 350,000 Chinese in China’s space programs. This and other governmental information is not easy to acquire. “You can find very little information on who owns...debt... ‘Is our economy open or closed’” (Fitts, mn.29). Despite lack of media coverage, “You’re seeing spaceports opening up all over the country” this decade, with “coverage only in the local press... not a big piece in *TIME* magazine.... We are repositioning and making a massive investment in space” (mn.30). “You can prove there are clearly 100’s of billions of dollars of underground infrastructure has been built.... [There is] also eyewitness testimony by credible witnesses, as well as... massive video tape evidence of the U.F.O.s flying around the planet” (Fitts, 2016b, mn.31-32). Lockheed-- the largest defense contractor in the world, and...[the outfit] that runs a lot of the payment systems in the US government, which is very convenient [for]...re-directing the money if that’s what’s called for under ‘national security’. Anyway, the head of Skunkworks at Lockheed”, Ben Rich, said (in 1995) that “‘*We now have the technology to send E.T. home*’... My read of this.... is that.... the people running the national security establishment...basically in 1995 gave up on the idea that they could run it responsibly through the US Congress and administration and decided: ‘*You know, let’s It take enough money out to endow a private financing infrastructure to build...[whatever we want] without having to go through the US budget*’” (mn.33-35). With such resultant (currently) secret technologies, “You’re talking about bringing the costs of energy down 70-80-90%, among other things. And basically... doing everything with robots instead of humans...So we have locked up enough technology to deal with...[economic matters]. The [real] problem is [that] if nobody trusts the governance system, and nobody trusts the leadership, [then] how’s that [all] gonna work?” (Fitts, 2016b, mn.35-36). See also “Steele, Robert David”.

²³⁵⁹ Most would agree that the increase in China’s money supply during the 1990’s-2010’s was the largest-scale increase in monetization per capita in the history of the world-- though perhaps not the most radical or shocking-extreme monetization. See also “Coined money” [coinage revolution], “Monetization”.

²³⁶⁰ See also “UKUSA Agreement”.

2) "It's the Navy... running the secret space program, which is right at the heart of operationalizing everything" (Fitts, 2017c, mn.59). See also "Central Intelligence Agency" [Casey-Bush], "Oligarchy, American"; officially admitted 2021: <https://www.infowars.com/posts/the-age-of-walking-mutations-is-upon-us>

3) Since 2000, "start-up space ventures have attracted more than \$18.4bn of investment... Most of [the] investment activity occurred recently, particularly since 2015... In 2017, investment in such [space sector] start-ups was 1/3rd higher than in 2016" (Fitts, 2018d, 28).

4) One "bottom line on secrecy is that...[it] is not used to protect secrets from the Russians. It's used to protect politicians and their lies.... The purpose of secrecy is to allow the government to screw the public and get away with it" (Steele, 2017c, mn.40). See also "Secrecy, Cult of".

5) Moreover, in the post-globalized economic environment, power is about "satellites...[and] global surveillance. Remember, you've invested money all around the world.... The value of the US dollar depends on success in space.... The company that wins in space debris is gonna be one of the wealthiest" (Fitts, 2018k, mn.1-2). Moving far beyond the 20th century dichotomy of US and USSR, in this decade also the UK, Europe, "the Chinese, the Japanese, the Indians, Russia-- everybody is [now] making the scramble for Ice" (Farrell, 2018, mn.2). China, in 2019, announced "a 10 trillion dollar economic development zone on the moon" (Fitts, 2019w, mn.29).

6) What it is about is "the ionization of space.... [W]e're creating a highly complicated control grid that makes everything on the planet accessible to Artificial Intelligence... the vision...is basically, from everything I can tell...madness. It's absolute madness" (Fitts, 2018j, mn.27). See also "Breakaway Civ."

7) "I suspect everybody is in violation of all the [space] treaties; and at some point, when you get this far away from the law... you're in a wild west. Space is becoming-- between the debris and the weaponization ahead of the treaties-- it's turning into a wild west. It's turning into a real mess" (Fitts, 2018j, mn.29-30).

7b) "Nokia and Vodafone were contracted in 2018 to create a 4G network on the moon. There is a reason for these contracts. I would suggest one possible reason is to protect assets from prying eyes and any criminal liabilities that might be asserted for assets that do not enjoy interplanetary sovereign immunity" (Fitts, 2022i). See also "Offshore".

See also "Productivity", "Industrial Revolution, 3rd".

[Lockheed Skunkworks]

Sectors of the economy- (Gaede, 2008, mn.5)²³⁶¹. See also "Primary Sector Economics", "Economics, Parity".

Secular stagnation- (a.k.a. 'very low-to-no GDP growth in a market economy') "...is actually *credit* [TAB, (bankmoney)] stagnation" (Keen, 2018, mn.9). See also "Debt saturation", "Zombie".

Secured- collateralized (by land or property); or bonded ('backed'-bolstered by something else). See also "Securitization", "Fiat" currency.

Secured Overnight Financing Rate (SOFR)- ("LIBOR" is no longer for Americans [as of 2022-23])

1) Since the LIBOR (over the past decade at least) "didn't have anything to do with American banking health.... All US debt is now indexed to...[SOFR], and it has been slowly rolled out over the last 5 years²³⁶². Now SOFR is the [debt] law of the land here in the United States-- all of our credit cards, all of

²³⁶¹ Gaede, a self-professed extrapolation-ist (rather than cyclicist), is obviously seeking attention via hyperbole. Nonetheless, it is simply common sense to observe: "[t]he fact remains that, if the supply of energy failed, modern civilization would come to an end as abruptly as does the music of an organ deprived of wind."- Frederick Soddy, 1912 (Trenn, 1979). As the old saying goes, 'even broke clock is right twice a day'. See also "Great Extinction", "Death Culture", "Homo Economicus".

²³⁶² Starting in Q4 2020, Agency Finance stopped originating loans in LIBOR and began offering loans in SOFR. Capital One... will stop originating new products using LIBOR as a benchmark interest rate by the end of 2021."- <https://www.capitalone.com/commercial/solutions/libor-sofr/>

our mortgages, all of our interest... is indexed to SOFR...[But] the... offshore markets are still indexed to LIBOR” (Luongo, 2022, mn.49). See also “LIBOR”.

2) The Fed Funds rate (FFR) is [now] based on SOFR, “a broad [meta] measure of the cost of borrowing cash overnight collateralized by US Treasury securities in the repurchase agreement (repo) market. The transaction volumes underlying SOFR regularly are around \$1 trillion in daily volumes.”

- <https://www.capitalone.com/commercial/solutions/libor-sofr/>.. The “[old] spread between the Fed Funds rate and LIBOR... was always the thing that Zerohedge has always used to try and figure out when the Fed [Board] was going to pivot” on interest rates (Loungo, 2022, mn.50). See also “Federal Funds rate”.

2b) “The United States will collapse as a functional society if they don’t do this” (Loungo, mn.51).

See also “World Economic Forum (WEF)”, “Feudalism, neo”.

LIBOR	SOFR
Bank-to-bank lending rate (includes credit risk)	Risk-free rates (does not include credit risk)
Unsecured	Secured with U.S. Treasuries
Based on bank submissions incorporating a limited number of actual transactions and expert judgement	Transaction based
\$500 million USD of daily trading of actual transactions in the 3-month wholesale funding market	Over \$1 trillion of daily trading of actual transactions in the overnight Repo market
Forward-looking term structure	Overnight, backward-looking No term structure currently (as of 2021)
Currency options include USD, GBP, EUR, JPY and CHF	Currency option is only USD

Securities- (although not a d.b.t., can have double/contradictory meanings)

1) in the narrow sense, simply Stocks (marketed ‘ownership’ *shares*); see “Stock markets”, “Equity financing”.

2) the broader sense, however, also includes Bonds: see “*Debt securities*” (a category which includes numerous short-term money market instruments, such as T-bills, commercial paper, negotiable CDs, collateralized debt obligations, collateralized mortgage obligations, and mortgage-backed securities. See also “Shadow banking (SBS)”, “Debt financing”.

Securities & Exchange Commission (SEC)- 1) Prior to its creation in 1934, the offering and sale of securities in the US were only regulated by the so-called ‘blue sky laws’ (from the 1910’s) of states.

2) The SEC has, over the past half-century, delegated a number of its responsibilities not directly related to securities trading and regulation. Although it holds the direct charter from congress for GAAP rules, this authority has been officially *delegated* to the FASB and other GAAP ‘advisory committees’ since the mid-1970’s. See also “Regulation”.

3) The SEC “has driven the vast bulk of trading to purely algorithmic forms. You can’t indict a computer...[Y]ou can’t make a creative investment with one, either” (Gilder, 2018, 86).

4) “If you look at the *waivers* which are now allowed by the National Intelligence Director... [who is] now **allowed to waive** SEC disclosure requirements for companies doing business with ‘national security’ classification in the US government. In other words, every bank and contractor doing business with the Department of Defense or the Intelligence agencies, in theory, could have their SEC disclosure requirements waived” (Fitts, 2019u, mn.10-11). They (waivers & exemptions) just keep adding up. See also “Dynastic cycle”.

4b) Special Purpose Acquisition Companies (SPACs) “are companies that tap the public markets with an IPO when they have no commercial operations at all and simply plan to eventually acquire an existing company. SPACs are also known as ‘blank check’ companies... [and they] accounted for half of all IPOs in 2020”; SEC Investor Advocate Rick Fleming’s 2021 Annual Report lists the following (& Fleming’s subsequent reports are now n/a at the SEC website):

“Approximately 85% of SPACs have *restated* their financial statements, which may indicate that these companies were not prepared to handle the heightened regulatory responsibilities of public companies’....

Similarly, we are tracking the accumulation of '*goodwill*' on balance sheets-- a staggering \$3.5 trillion as of 2020-- in light of the recent flurry of deal activity taking place at elevated prices'" (Martens & Martens, 2022d).

See also "Wall Street", "Federal Accounting Standards Advisory Board (FASAB)".

Securities markets- See "Capital markets".

Securitization- pooling illiquid assets (mostly debt securities) together in order to make a (transferable) financial security, that may be sold to 3rd parties. It was first pioneered in 17th century Holland.

1) (narrowly) refers simply to bonds floated by the banks on the market to raise the assets needed to pay for their loans, because banks have to pay [RAB] for their loans before getting the [TAB] installment revenues because, unlike the Fed, they do not have the magic checkbook and do not create the loan deposit 'out of thin air'.

2) (more broadly) "when a loan or pool of loans is transferred into a trust, and the trust then issues bonds that are rated by large rating agencies...[to be] sold in the bond market[s]" (Allen, 2009, 358). See also "Credit Rating Agencies".

2b) In the Financial Crisis of 2008, the "design of mortgage-backed securities collateralized by a pool of mortgages assumed that the pool would give the securities value. The pool, however, was an assortment of mortgages of varying quality. The designers gave *no* guidance on how to price the pool. They claimed [instead] that rating agencies would determine the price of the security. But the rating agencies had *no* formula for this task. They assigned ratings to complex securities as if they were ordinary corporate bonds and without examining the individual mortgages in the pool" (Schwartz, 2009, 21). In a word, "[a]bsent *securitization*, all the various peripheral players in the credit market debacle, including the bond insurers, who unwisely insured securities [that were] linked to subprime mortgages, would not have been drawn into the subsidiary roles they exploited" in the great financial crisis (Schwartz, 2009). See also "Credit Rating Agencies", "Credit money", "Criminalization of banking, the".

3) Rather "than spreading risk...[securitization] techniques have resulted in *hiding* risk; and once the tide on the markets turned in the summer of 2007, investors were in no mood to go searching for it. The enormous sophistication of financial innovation thus caused a stampede out of this segment, and the [2008] drying up of [even] the inter-bank [Reserve/RAB] market was the best demonstration that even the professionals no longer trusted the assurances of their colleagues. Unfortunately for the apprentices, no old sorcerer has...materialized to bail them out" (Busch, 2012, 252). See also "Minsky, Hyman". See also Ch.3; "Financial Crisis (of 2008-)", "Shadow banking sector (SBS)", "Hedge funds".

Seigniorage- 1) fiscal revenue from new money creation, or simply the difference between the face value of a currency unit and its production cost; hence it is the profit made by a government (or private entity) in issuing currency. See also "Patman, Wright".

2) Production oversight of the US dollar (not including 'eurodollars') is currently delegated to the Federal Reserve System, which in turn hands over the *net* profit *from* this seigniorage (i.e. minus expenses and a 6% dividend for Fed-member banks) to the Treasury Department every year. See also "Patman, Wright", "Federal Reserve audit".

3) "The cost of producing electronic money, which accounts for about 98% of all monies in circulation, is essentially zero, meaning that the seigniorage on it is about 100%...[C]onsidering that there are trillions of US dollars in circulation, both in the US and [even more] internationally (for trade, reserve status, and even criminal intent), seigniorage, although not regularly discussed, is [nonetheless] a huge issue. Currently the federal government only collects 'genuine' seigniorage on the *coins* which the [US] Mint, a division of the [US] Treasury, produces.... This is not a major source of income for [the] Treasury" (Kortsch & Walton, 2016, 1-2).

- 4) For “historical reasons,²³⁶³ [paper US] dollar *bills* [also] do not accrue seigniorage to the Treasury. They are printed by the Bureau of Engraving & Printing (BEP)...[which is] a division of Treasury, but... [are then] bought by the Federal Reserve System for the cost of production” (Kortsch & Walton, 2).
- 5) The official (FASAB and US Mint) “technical term for the...[accounting] item category within which seigniorage fits is ‘*other financing source*’” (a.k.a. ‘source of income’), not *revenue* (a.k.a. ‘receipts’), which consists of earnings, claims, and donations” (Ibid).
- 6) Money that is *lent* “into existence...[also creates additional *interest-born seigniorage* to the issuer”, which is usually greater than the seigniorage from *credit-born seigniorage*, [i.e.] on money that is *spent* into existence (Huber, 2013b, mn.39). See also “Sovereignty”, “Usury”.
- 7) The logic is hence unavoidable that the “issuance of public money...[directly] by [the] Treasury would procure 100% of the seigniorage to Treasury, resulting in lower taxes, and/or better services, and lower deficits and accumulated debt [payments]” (Kortsch & Walton, 2016, 3).
- 7b) Kotlikoff’s estimate of *accrued seigniorage*, however, is more modest: “We get maybe 1-2% of our revenue from that” (Kotlikoff, 2021, mn.146).
- 8) In the UK in 2016, “commercial bank seigniorage profits amount[ed] to a hidden annual subsidy of £23 billion, representing 73% of banks’ profits after provisions and taxes” (New Economics Foundation, 2017).
- 9) Commercial banks’ US dollar seigniorage “is nothing compared to [the monetary profiteering of] *shadow banks* now.... The shadow banks are reinventing that same [money] multiplying effect, without being insured” (Desan, 2013, mn.136). See also “Legal tender”, “Shadow Banking Sector (SBS)”. See also “Sovereign money”, “Currency”.

Self destruction- See “Intelligence Community (IC)”, “‘Make-It-Happen’; ‘Let-It-Happen’”.

Self-sufficiency- See “BRICS”, “Russia”, “Reserve currency”.

Senate- See “‘Democracy’”, “Congress”.

Separation of Powers- (the concept and practice that is most essential to what has been known, from the days of Christendom, as ‘Western Civilization’).

“There can be no liberty where the legislative and executive powers are united in the same person or body of magistrates’; or ‘if the power of judging be not separated from [both] the legislative and executive powers”- Montesquieu (Van Buren, 1867, 331). See also “Deep State” [executive bloat].

1) the primary bridge from Early Modern (state-capitalism) to Modern (beings-sapient).

2) Because only Byzantium (and the Bishop of Rome) survived the fall of the debt-saturated and slavery-riddled Roman Empire, monetary and intellectual sovereignty were fractured in Western and Central Europe, allowing for diversity and experimentation in both. In the 11th century, this medieval Order was famously articulated, in Gerard of Florenes’ *3 Estates of Christendom*, as ‘those who pray, those who fight, and those who work’ (the Clergy/priests, the King/knights, and the Farmers/peasants, respectively). Notice that the monetary power was left unallotted (and undefined), which would later cause considerable conflict between the first 2 Estates in subsequent centuries²³⁶⁴. See also “Freedom continuum (maturation)”.

²³⁶³ “The thinking behind this came from the gold standard era... [because] the Fed [then] held the gold [that was] legally needed for [“gold standard”] backing, and the BEP was solely a service organization for the Fed, working at cost. When the US went off the gold standard internally, in 1933, this arrangement was never changed” (Kortsch & Walton, 2).

²³⁶⁴ After Pope Innocent III’s [r.1198-1216] sacking of the Byzantine Empire in 1204, the resultant monetary-political instability kicked off a long trend of the various executives of Europe famously being at each others’ quarrelsome throats for (what would turn out to be) the next 7 centuries of fighting over failed political unifications of Christendom (from the 1200’s-1800’s). In the same century that the Magna Carta nobles refused to bow to England’s King John in 1215; Pope Boniface VIII [r.1295-1303] was forced (by Philip IV of France and Edward I of England) to reverse his bull *Clericis laicos*-- which had briefly prohibited lay taxation of clergy without papal approval-- in 1296-97.

3) Although Gerard of Florenes originally listed his own clergy sector as constituting the 1st of the Three Estates (which would make some sense today in terms of creators' copyright), in terms of a sensible chronology (f.e. 1-2-3), and in terms of historical progression (the same), it is better, or at least more useful, to view the construct as it actually developed historically, with sovereign governments as the 1st Estate (.mil), clergy-banks as the 2nd Estate (.shell), and farmers-workers-consumers-citizens as the 3rd Estate. See also "Estates, 3", Appendix C: "1-2-3".

4) The Roman Church's hypocrisy on money and usury (banning it for others, but, especially from the 14th century, liberally indulging in usury themselves), eventually caused, in the 15th-17th centuries, another revolution (or Reformation) in separating powers, as 1st Estate princes and kings across much of northern and western Europe in particular effectively fired and kicked out (or requisitioned) the 2nd Estate Bishop of Rome's representatives. This development would eventually, after two centuries of not infrequent religious turmoil, be lauded as the *Separation of Church and State*,²³⁶⁵ which was pretty much an unknown concept (outsid of unwritten 'separation of powers' constitutions in Venice, Holland, and [from c.1700] England), up until Montesquieu's articulations²³⁶⁶ on the need to separate powers in general (1748), and the actual American political-monetary experiments throughout 18th century.²³⁶⁷

5) Although the English Civil Wars of the 17th century were ultimately closed down by the Bank of England's...

6) Challenges like Montesquieu's or Jefferson's to (what this author calls) the traditional "blur"²³⁶⁸ (or 'ancient Occidental regime') of 1st-2nd Estates playing "elitist"-style (i.e. esoteric) games to the exclusion

- <https://www.britannica.com/biography/Philip-IV-king-of-France/Conflict-with-the-papacy> . Parliaments (in addition to the sovereignty of national kingdoms) were on the rise in 13thc Western civ., and would be (concurrent with Christendom's un-unifiable executives) for the next 6 centuries (through the 1800's). Innocent III Phillip IV in "" (Del Mar, 1903, 247). See also App.C: "1-2-3".

²³⁶⁵ The specific phrase "separation...[of] Church and State" was first publicly articulated in 1802, by President Jefferson (who had earlier written the Virginia Statute for Religious Freedom during the Revolutionary War in the 1770's to that effect), in an open/published letter to the Danbury Baptist Assoc. in Connecticut (Jefferson, 1802). President Jefferson, like his friend James Madison (in the 1780's), was influenced by the mid-century writings of the French political philosopher Montesquieu [fmr. Pres. Jefferson was even the translator for a French commentary on Montesquieu in 1810], who first articulated that: "When the *legislative* and *executive* powers are united in the same person, or in the same body of magistrates, there can be no liberty; because apprehensions may arise, lest the same monarch or senate should enact tyrannical laws...[or] execute them in a tyrannical manner. Again, there is no liberty if the *judiciary* power be not separated from the legislative and executive.... There would be an end of every thing, were the same man, or the same body [party], whether of the [1st-2nd Estate] nobles or of the [3rd Estate] people, to exercise those 3 powers-- that of *enacting* laws, that of *executing* the public resolutions, and of *trying* the causes of individuals" (Montesquieu, 1748, 151-152). See also "Legalism", "Parties, political".

²³⁶⁶ In fairness, one should also note that Montesquieu's Enlightenment perspective was squarely located in what was (subsequently) to be called the "Old Regime" (absolutist & 'charismatic authority-based) France. Accordingly, the father of 'separation of powers' also drew the conclusion that the "executive power ought to be in the hands of a monarch" (1748, 156); and also even that the "nobility... ought not to be before the ordinary courts, but...[only tried] in that part of the legislature which is composed of their own body" (158-159). The initial American republics, on the whole, did not support such British-French notions, but were persuaded to acquiesce to what was in many ways a limited monarchy (along with banking charters and a 'national debt economy'), c.1790. And the imperium and power of the Executive branch has only increased, vis-à-vis the Legislative & the Judiciary, since the 2nd quarter of the 19th century, while also growing less open and accountable in more recent decades-- despite modern technological-communicative capabilities. Today's Executive is like an elephant to Montesquieu's Enlightenment-era mouse, where "the executive power" was to have "no other part in the legislative than the privilege of rejecting, it...[and was to] "have no share in the public debates" other than the possibility of rejecting Legislative proposals (Montesquieu, 160). See also "Deep State", "President of the United States (PotUS)", "Secrecy, Cult of", "Democracy", "Federal Accounting Standards Advisory Board (FASAB)".

²³⁶⁷ When the (separation of powers [including 'Church and State']) fruit had actually ripened, Alexis de Tocqueville famously noted, in the 1830's, that "there is no country in the whole world in which the Christian religion retains a *greater* influence over the souls of men than in America; and there can be no greater proof of its utility, and of its conformity to human nature, than that its influence is most powerfully felt over the most enlightened and free nation of the earth... the American clergy in general, without even excepting those who do not admit religious liberty, are all in favor of civil freedom; but they do not support any particular political system. They keep aloof from parties, and from public affairs" (1838, 285). Whereas the "unbelievers of Europe attack the Christians as their *political* opponents, rather than as their religious adversaries; they hate the Christian religion as the opinion of a party, much more than as an error of belief; and they reject the clergy less because they are the representatives of the Divinity, than because they are the allies of authority.... The living body of religion has been bound down to the dead corpse of superannuated polity; cut the bonds which restrain it, and that which is alive will rise once more" (de Tocqueville, 295).

²³⁶⁸ Separation of Powers was not the expected 'Western' norm until Early Modern times. (The main difference between East & West was that the latter simply had more saltwater/international trade and **money-per-capita**.) The Roman Kingdom's constitution (like the typical

of (their customary ungulates) 3rd Estate commoners were not-- one may need reminding-- the norm on either side of the English Channel. The ancient mentality of the '3 Orders' was still very much in place, minority dissidents notwithstanding, in (post-'Glorious Rev.')

18th century [and, arguably, also 19th & 20th century²³⁶⁹] England. It is also often overlooked that Enlightenment authors such as Locke were teaching what was, in actuality, an *abstract* idea [or ideal], of 'republican government', predicated upon a *concrete* foundation of (assuming more or less the usual) hierarchical Orders²³⁷⁰ of king, aristocracy/merchants, and commoners. Everyone has priorities, and things that they take for granted. Both Huxley and Orwell made the dystopian nightmares of the 20th century out of this (technological development racing way ahead of political-accountability development). See also "Currency Wars, the", "Dystopia".

7) J.R.R. Tolkien's main point was also in accordance. "Gandalf as Ring-Lord would have been far worse than Sauron.... [because] while [Authoritarian/repressive] Sauroⁿ multiplied...evil, he left 'good' clearly distinguishable from it. [Totalitarian/ideological] Gandalf would have made good detestable and [thus] seem evil"- October 1963, (draft) Letter to Eileen Elgar (2000, 333). See also "English constitution, the", "Totalitarian/Nanny State", "Public banking", "Reform, false".

8) It should also be pointed out, however, that Montesquieu's 18th century idea of '3 branches' (or separate "powers") of government, in addition to Gerard's conception of the "3 Estates" in the 11th century may well have not been possible prior to the widespread utilization of stamped coins (in the mid-1st millennium BCE), which brought forth a *coinage revolution* that propelled the (post-Greek Dark Age) rise of the State [i.e. the "1st Estate", for the purposes of this book and monetary history], and its subsequent 'specialness' or differentiation from the "2nd Estate" (of non-governmental, private sector elite). Of course there was (Bronze Age) civilization before the "coinage revolution"-- in terms of some sort of accounting system for stored agricultural surplus credits. But it probably, however, wasn't civilization as anybody would recognize civilization today (even Chinese). See also "Montesquieu", "Statism", App.C: "1-2-3".

9) "If one accepts that the state is not, and must not be, a monolithic homogenous body, but a differentiated structure of manifold institutions with separation and balance of state powers (including [publicly audited] budgets) under public law, then one will have to assess the concept of a 'currency board' [a.k.a. 'monetary authority', being] under the roof of the [Executive's] treasury as problematic. The m^onetary prerogative should be in the hands of an *independent* monetary state authority outside the executive power, such as, for example, an independent nationalized central bank. This is all the more important since monetary [creation] and fiscal [spending] responsibilities must not [under any circumstances] be confused (Huber, 2015), if this notion is to be meaningful in the 21st century.²³⁷¹ See also "Financial Separation of Powers' (auto-fiat reserves)" [S-curve].

10) Meaningful reform is about making things clearer, and Monetary Reform is about "establishing a thorough separation of monetary and fiscal powers, and...separating both from the wider financial functions that are [better] left to...banks, financial institutions, and markets" (Huber, 2017, 6).

11) In other words, "you can have the decision on how much ([new/additional] money will be [created every quarter]) residing in the central bank [or constitutional (Legislative branch) Monetary Authority/Commission], and the decision on how precisely it is spent, [residing mostly] in the [Executive branch] government. As long as you've located the authority on the absolute amount within the central bank [or constitutional

constitutions of contemporary Ancient Greece) "was a mixture of monarchy, aristocracy [nobility], and democracy...[typified by] harmony of power... [at least during] the first reigns.... [And the] kings... never laid any affair before the people till it had been previously debated in" the (aristocratic) Senate (Montesquieu, 1748, 166). See also "Civilization, Western".

²³⁶⁹ Just observe (latter 20thc) Monty Python British humour, or, even more recently, PM Teressa May.

²³⁷⁰ John Adams (first US Minister to the UK, 1785-88) in later years observed to Jefferson that "all the [British] Barons, Earls, Viscounts [and] Marquis's... have no Idea of any Merit, but Birth. [Hence the newly victorious Duke of] Wellington must pass the rest of his days buffeted ridiculed, Scorned and insulted by [oligarchical] Factions" (Adams, 1815c). See also "English constitution, the".

²³⁷¹ Does Separation of Powers 'still' matter in the 21st century? "[T]he computer prediction of [so-called] COVID deaths in the UK and US made by that abject failure, Neil Ferguson, whose track record, going back to 2001, has been one horrendous lunatic exaggeration after another... of 500,000 COVID deaths in the UK and 2 million in the US [for 2020] were directly used to justify lockdowns in many countries" (Rappoport, 2020d). See also "Civil National Identity (CNI)", "Lunatics".

Monetary Authority/Commission], [then] I think you have an answer to the political danger question” (Turner, 2016). See also “Political risk”, “Congress (US)”.

12) “The separation of the depository and lending functions of banks requires a parallel separation in the role of government” (Phillips, 1995b, 21). See also “Parties, political”, “Monetary reform”.

13) With any adequately designed **debt-free national money (DFNM)** system, “there are clearly defined responsibilities. The National Bank [or constitutional ‘Monetary Authority’ or ‘Commission’] is responsible for the creation of [new] money and the ongoing adjustment of the [sovereign nation’s] money supply. Banks and other financial institutions are responsible for managing assets and financing the economy through loans, investments, and equity investments. Government and Parliaments [legislatures] are responsible for budgetary and tax policy” (Huber, 2018c).

14) In other words, “clearly differentiat[ing] public from private tasks... allows the **State to give ‘security’**²³⁷² to Money and... [also] allows the Market [and its non-monopolistic players] to adopt risk decisions. The State stops telling economic agents the decisions they must adopt when taking risks, and private companies stop offering money as an asset whose security they are *unable* to guarantee. The State will only deal with the regulations of markets, consumer protection, defence of competition... making sure that the market...[is allowed to operate] properly and does not [systemically] defraud citizens, but will refrain from telling anyone what risks they can take, with what capital, with what liquidity requirements, [or] how you should pay your employees, etc.” (Ordonez, 2018). Is this sufficiently clear? See also “Monetary reform”.

See also “Integrity”, “State Theory of Money”, “Libertarianism(s)”, “Estates, 3”, App.C: “1-2-3”.

Serfdom- (or ‘manorial dues’; being effectively ‘bound to the land’ [or perhaps to another single, common occupation], with zero econ. options or choices [which typified ‘the medieval’ economy]; not to be confused with slavery²³⁷³)

1) “The final stage[s] of breakdown of the oligarchic Roman Empire, when debt & warfare had reduced much of the population [for centuries] to *debt bondage*, [which eventually wound up] stripping the economy of money [especially in the 600’s] and [hence] the government of its *ability* to tax the wealthy creditors and landowners, leading to adulteration of the [scarce] coinage, and...[more common use of tally sticks, and perhaps even some] **barter** [for larger-scale commodities (in coinless environment)]. The major economic units to survive were the landed [& now predominantly local] estates of leading...[nobles] and...[the often inter-related] Church. Economic status [with less money] became [more] fixed, [which eventually wound up] tying cultivators to the land as serfs... [Then, with the Carolingian collapse of the latter 800’s] Western European economies degenerated into... manors, under feudal knights and warlords” (Hudson, 2015b). See also “Feudalism” [.manors].

2) When did it end? In England, after perhaps 4 centuries, with the latter 1300’s & (post-Plague) 1400’s ‘monetized’ economy (& in N. Italy about a century prior); wherein “instead of working on someone’s land a couple of days a week, [you instead] paid him money, a penny a day.... Unfortunately...the English judges... said [that] that payment is *rent* and...[that, since] it’s rent, it’s an indication that the lord *owns* the land. Therefore, the peasant had no real right in the land or he wouldn’t be paying rent” (Quigley, 1976c-pt.2, mn.149). See also “Rent”, “Georgism (& Land Value Tax)”.

2b) In German and Slavic-speaking realms, it seems to have been more a matter of decree (political-legalism) than of monetary determinism. Leading German states, perhaps stirred on by the US & French Revolutions, legally abolished serfdom from 1797-1804, with all the rest having joined in by not much later than 1815 (except to some extent east of the Elbe river). In the Hapsburg Empire, it was from 1781-1848; and in Russia, of course, the famous 1863.

²³⁷² a.k.a. the only thing they’re supposed to do-- be it: 1] *physical* security (territorial integrity and basic rule of law), 2] basic *weights & measures* security (of which [the state’s] *money* is one form), 3] electioneering and *public-infrastructure* security (a.k.a. non-discrimination and public E.O.), or administering a *judicial*-courts-jury (and anti-monopolization) system. See also “Civil National Identity”, “National Identity/Nationalism”, “Governance”.

²³⁷³ ... which typified ‘the ancient’ economy. See also “Slavery”. [So are we to conclude that “rent”, in turn, typifies the (so-called) “modern” economy...or only something more like the “early modern”?]

2c) As in England, “enclosure movements” escalated (for the manufacturing of a ‘proletariat’), as increased state-monetization replaced the old labor dues levied by a lord. See also “Capitalisms” [enclosure movement], “Monetization”, “Land”.

See also “Slavery”, “Feudalism”, “Road to Serfdom”, “Freedom continuum (maturation)”.
[photo?]

Serfdom, neo- 1) “...deepening debt peonage in which wages, profits and property rents are earmarked to pay interest-- on loans that can't be paid in a shrinking economy” (Hudson, 2012g).
See also “Debt peonage”.

2) It's happened before. “Are you going to let the 5%-- the creditor class-- foreclose and takeover the whole economy? That happened in the Roman Empire” (Hudson, 2018-pt.2, mn.16).

3) Sharecroppers in the US (from the 1870's-1930's) often had to submit half of their crop to the landlord. As of 2018, 72% of renters earning < \$15,000 per year paid **over 50%** of their income on housing alone, as did 43% of renters making between \$15k-\$30k (Joint Center for Housing Studies, 2020). This is not some theory. See also “Taxation”.

4) Via anything with a chip in it, “the people that want to know what you're doing-- they all know.... [And with] geo-spatial intelligence... they're saying that you... are a feature of the geography. But the problem with you is that you move around.... The geo-spatial intelligence crowd... it's huge. It's embedded in our government, and the military is studying this like crazy.... Everybody belongs to a cell of connections, right.... A crowd can be managed with artificial intelligence software, as they move around.... It's not that they want to know what you're doing, as long as you're being normal you. If you're normal you, that's not a problem to anybody. But when you, or another member of your group, steps *outside* that, a little alarm bell [algorithm] goes off. And if 2 or 3 people in your group step outside the envelope [matrix], they get louder.... That's *geo-spatial intelligence*” (Wood, 2017, mn.15-18). See also “Technocracy”.

Serious- (thought/philosophy) 1) establishing and/or maintaining “it”-- the civil-integrative balance of a society. See also “Civil National Identity (CNI)”, “National Identity/Nationalism”, “Philosophy”, “Design”.

2) Much philosophy (and of course public discourse) is not serious in [this] nature.

See also “Industrial Revolution, 3rd” (‘prison planet’ and/or ‘freedom maturation?’), “Economics, Parity”.

Service sector, the- (a.k.a. the ‘tertiary sector’, after the primary [raw materials] & secondary [manufacturing])

1) The sector accounted for approx. 1/3rd of US “personal consumption expenditures” in 1950, but had ballooned to 56% by 1991 (Lundgren, 1994).

2) “[M]any of those who find market allocation for their services through the police power of the state (that is, sociologists, case workers, economists, teachers, and those who draw it more or less openly by ministering to man's spiritual needs), have developed the [comforting] myth of the leisure society, a state of happiness wherein each person can designate his desires, and receive income each month, a reward for the simple process of drawing breath... Such an ‘each according to his needs’ credo is no less naïve than the ‘squeeze agriculture to achieve national prosperity’ cry”²³⁷⁴ (Walters, 1971, 388). See also “Industrial Revolution, 3rd”, “Power”.

3) A service sector that is “force fed on debt creation [as opposed to ‘earned’ national income] cannot be maintained [apart from the public sector], because there will arrive the ultimate clash between mathematical ambition and physical possibility” (Walters, 1971, 389). See also “Mythomatics”, “Monetization”.

See also “Productivity (US)” [service], “Parity pricing (for the primary sector)”.

²³⁷⁴ “To argue for low profitability in agriculture [a.k.a. primary sector] is also to argue for low profitability in manufacturing” (Walters, 1971, 389). See also “Economics”, “Economics, Parity”.

Setting (assumptions)- (they ain't making any more of it) This planet's 6th "Great Extinction Event" is still accelerating, and many of the underlying presumptions of Western Civ./culture itself stand on the block. Which ones are important (to someone other than oligarchs), and which ones are not? See also "Civilization", App.C: "1-2-3".

Shadow banking sector (SBS)- (i.e. that which generates "3rd tier [near] monies"; a.k.a. 'market-based financing liabilities'. or simply 'money surrogates based on [2nd-tier] bankmoney' [Huber, 2020b], & hence '3rd-level monies' [a.k.a. 'near monies'] in general; the SBS includes 'money market instruments/shares', [so-called] 'cash equivalent' debt securities, 'repurchasing agreements', 'deposit substitutes', or (more specifically) 'nonbank financial intermediation' [i.e. NBFIs], and 'other financial intermediaries' [OFI]; all of which involve "funding a portfolio of financial assets with lots of short-term debt" [Crawford, 2018]; not to be confused with 'shadow money' [which is synon. for (only the) the 'repo markets']; d.b.t. 'money markets') See also "Money, 3 (contemporary) Tiers of".

1) Narrowly defined as basically (non-bank) Repurchasing (repo) agreements that are always *collateralized*, as opposed to being 'backed' by any form of government Reserves. The larger galaxy of such 'near monies' consists of large institutions' high-volume, extremely low-risk & short-term IOUs, offering exceptionally low yields. This is typically done in million-dollar increments of their own 'loanable funds', instead of having to go through the bankmoney (TAB credits + RAB backing) process.

2) 'Shadow banks' are financial intermediaries that (use their own funds to) conduct many of the same functions of banking, albeit without access to any central bank liquidity backing (RAB) or to any specific public sector credit guarantees (FDIC insurance).²³⁷⁵ The term was coined by portfolio manager Paul McCulley in the pre-Crisis 2000's: "Loosely defined, a *Shadow Bank* is a levered-up financial intermediary whose liabilities are broadly perceived as of similar money-goodness²³⁷⁶ and liquidity as conventional [TAB-bankmoney] bank deposits. These liabilities [in the US market] could be 1) shares of *money market mutual funds*; or 2) the *commercial paper* of finance companies, conduits and structured investment vehicles²³⁷⁷; or [as is more often the case in Europe & Asia] 3) the *repo borrowings* of... investment banks and hedge funds; or 4) the senior tranches of Collateralized Debt Obligations [CDOs]; or 5) a host of other similar funding instruments" (McCulley, 2007), such as the mortgage-backed securities (MBSs) that set off the 2008 Crisis.

²³⁷⁵ In other words, "routed outside the balance sheets of regulated commercial banks and other" **fractional reserve** (bankmoney-creating) institutions (Noeth & Sengupta, 2011). Shadow banks are basically '*non-banks that offer money market instruments*' (Wortmann, 2019c, 1). See also "Nonbank Financial Institutions (NBFIs)".

²³⁷⁶ For lack of a better term, such "*moneyness* is a question of immediate convertibility [clearance] without loss of value (at par exchange [1:1], on demand" (Gabor & Vestergaard, 2016); hence shadow banking instruments are exceedingly low-risk, short-term, and high-volume in nature. See also "Liquidity", "Money, 3 (contemporary) Tiers of".

²³⁷⁷ Perry Mehrling's definition encompasses mostly these first two points. Shadow banking is "money market [MMMF] funding of capital market lending.... The deposits of the *money market mutual funds* [MMMFs] are funding-- through *asset-backed commercial paper*-- the holding of a mortgage-backed security. This is how shadow banking works. There're lots of varieties of this. But this is the [main] idea. [And then] all this stuff came to an end [in 2008], when the [inaud.] were unable to roll [over] their funding...[of] asset-backed commercial paper [anymore]. And... all of this stuff wound up on the balance sheet of the Fed... which is [now] doing money market funding of capital market lending. It's [for example] issuing Reserves [RAB] to finance its holding[s] of mortgage-backed securities.... [and hence] solving the liquidity problem of the money market mutual fund[s]... and there were runs on some of these [MMMFs]. It's [also] solving the liquidity problem of" two other SBS institutional "levels", and hence "saved the bacon of the [overall] financial system" (which includes non-banks), simply by putting "a floor" on it (Mehrling, 2018, mn.26-27).

Chart 2: Canadian MBF, by component, before and after the crisis

3) Broadly defined, however, shadow banking systems “can range from money market funds (MMFs), off-balance sheet securitization vehicles, credit default insurance, investment trusts, mutual funds, and so forth²³⁷⁸, to nonbank [NBF] wealth management, nonbank payment services, and foreign exchange [forex] services, to nonbank credit associations, peer-to-peer lending and crowdfunding” (Huber, 2017, 88-89).

4) Most narrowly, the typical *shadow banking* transaction is simply a repurchase agreement, or ‘repo’-- a promise “to pay backed by tradable collateral. It is the presence of *collateral* that confers shadow money its distinctiveness.... Repos are [the] nearest to money-proper, stronger in their moneyness claims than other short-term *shadow liabilities* [which other scholars include as ‘shadow banking’]. Repos rose in money hierarchies as finance sidestepped the state, developing its own convertibility rules over the past 20 years. To convert shadow money into settlement money [i.e. on the payment system] in case of default, repo lenders sell collateral. An intricate collateral valuation regime, consisting of haircuts, *mark-to-market*, and margin calls, maintains collaterals’ exchange rate into (central) bank money... [Outside of the US, banks are] “at the center of shadow-money creation. The growing shadow-money literature, however original in its insights, downplays banks’ activities...[here], because its empirical terrain is *US shadow banking* with its institutional *peculiarities*...[i.e. where primarily] *hedge funds* issue shadow money to institutional cash pools, via the balance sheet of securities dealers. In Europe or China [however], it’s...[primarily] banks²³⁷⁹ issuing shadow money to other banks to fund capital market [a.k.a. securities market] activities” via repo agreements (Gabor & Vestergaard, 2016). See also “Deceptive Banking Terms (d.b.t.’s)”.

5) Former US Treasury official Morgan Ricks has articulated the American perspective, defining a ‘shadow bank’, somewhat more broadly, as: “an entity that **a**) uses large quantities of short-term debt to fund a portfolio of financial assets, [and] that **b**) is not a chartered deposit bank. The shadow banking system [in the US] is just the set of entities that meet these 2 criteria” (Ricks, 2016, 2).

5b) ...and (particularly in the US) nothing new. “When I joined Barclays [in 1991], Ford and General Electric had financial organizations which were *at least* [sic] as big as the banks” (Middleton, 2020, mn.149).

6) The “...short-term funding markets are enormous, but... obscure... part of what might be called the ‘operating system’ of [so-called] modern finance. These markets have weird names-- like *Repo*, *Eurodollars*, and *asset-backed commercial paper*-- but this confusing terminology belies their simplicity... they are just short-term [and low-risk, high-volume] debt. Borrowings in these markets mature very soon, often in a single day. Financial institutions that rely on these markets typically must continuously renew (or *roll over*) large quantities of short-term borrowings. Failing to do so on any given day would result in

²³⁷⁸ McAndrews (2018, mn.21-22) runs through “these shadow bank [sector] liabilities” as “really the alphabet soup [of Fed welfare expansion over the decades]... MBS, ABS, GSE liabilities, CP, repos, M.M.M.F.s, medium-term notes, discount notes, ABCPs, CMOs, CEOs, CEO squares, option notes... and so on.”

²³⁷⁹ Investment banks, ‘universal banks’, ‘public’ banks-- the US-centric heritage of compartmentalizing monetized credit institutions doesn’t mean nearly as much in Europe, and far less so in the Orient. See also “Bank, universal”.

immediate default and collapse of the firm”²³⁸⁰ (Ricks, ix-x). “Both shadow banks and deposit [commercial] banks hold portfolios of financial assets that they fund largely with very short-term IOUs. In deposit [commercial] banking, those IOU’s take the form of deposit [TAB] liabilities. In shadow banking [however] those IOU’s consist of myriad instruments of the short-term funding markets” (Ricks, 2016, 4). “Issuing [so-called] cash equivalent instruments-- the hallmark of shadow banking-- requires no license” (Ricks, 6) nor insurance, nor Reserve/RAB backing.

7) In some ways, the “process of shadow money creation is similar to bank money [(TAB+RAB), albeit] with securities collateral replacing the state’s promise to guarantee [bank TAB] deposits” (Gabor, 2017b) with both Reserve/RAB backing and FDIC insurance; in “the case of the 2008 financial crisis, banks treated financial irresponsibility as a valuable commodity by encouraging everyone to take out as many [‘shadow banking’] loans as possible, securitizing these loans... with shadow money IOUs. This recklessness raised fundamental questions about the [shadow] money creation process” (Gabor, 2017b) that are still with us today. See also “Debt securities”, “Debt money”.

8) As with “eurodollars”, the volume of aggregate “shadow banking” surpassed that of traditional bankmoney [TAB + RAB] US dollars, in the last decades of the 20th century (the 1980’s and 1990’s, respectively). Eurodollars are completely outside the jurisdiction of US regulators, and shadow banking “” (Ricks, 2015).

(Shadow banking’ volume surpassed bankmoney volume c.1996; Noeth & Sengupta, 2011²³⁸¹)

9) Why did it take more than half a century for shadow banking to overpass bankmoney? “Business... [had already, in the 1930’s] developed methods of its own for financing its operations without benefit of [bankrupt & cautious] banks. It has added to its cash reserves [a.k.a. ‘loanable funds’], and has obtained additional resources, not by borrowing from the banks, but by offering investments directly to the public. Hence the natural trend seems to be toward less and less, rather than more and more, commercial banks. Thus it seems that the bottom has been knocked out of the original basis underlying our circulating [TAB-bankmoney] medium. In short, we cannot now depend on short-term bank loans for furnishing us the money we need” (Fisher, et al., 1939, 42).

10) Because the entire ‘shadow banking’ sector (of Non-Bank Financial Intermediation) is more or less predicated upon the use of ‘no risk’ debt securities such as US Treasuries, the sector took a bit longer to ripen in Europe and the other G20 economies outside of the US, with the broader ‘Universe of Nonbank Financial Intermediation’ instruments surpassing the aggregate GDP of the G20-Euro area in 2004 (ZeroHedge, 2014), approx. a decade later than in the US.

²³⁸⁰ For example, Lehman Brothers on September, 2008.

²³⁸¹ See also McAndrews, 2018b, mn.59.

[total Nonbank Financial Intermediation assets vs. G20 & Eurozone GDP, 2002-13 (Zero Hedge, 2014)]

11) *Repo agreements* (a.k.a. ‘shadow money’) are the prime example of “private agents creating an investment vehicle which transforms longer term [government] bonds into overnight debt instruments with safe cash-like characteristics. This is effectively private issuance of money-like assets that substitutes for public issuance of safe assets such as Treasury Bills. The repo market [in the US, as well as in Europe and Asia] constitutes a very important part of... the ‘shadow banking market” (Chabot, 2015, 3). “Collectively, private repos make up a large portion of private money-like claims and are... [the most] prominent example of how money flows throughout the shadow banking system.... [Although with] a big enough haircut, [other forms of] securities such as government-agency mortgage-backed securities (MBS), private MBS’, asset-backed securities, corporate bonds... [and] even equities can [also] be transformed into assets that are viewed by market participants as safe overnight investments” (2015, 4).

12) To what extent is the SBS galaxy dependent upon public sector/legal support? “There seems to be no reason in principle to think that the business model in question-- funding financial asset portfolios with lots of short-term debt, continuously rolled over-- can’t be established using just the basic tools of property, contract, business organizations, and commercial law” (Ricks, 2017, 116).

13) Much of the previous decade’s growth in shadow banking was due to institutionalized double counting, which substantially *overstates* the scale of shadow banking relative to commercial banking (Pozsar, et al, 2013). Post-Crisis, however, “[l]arge parts of the shadow banking system have been dried out” (Tooze, 2018). See also “Counterfeiting”.

14) Most “bankers make a reasonable living”; but all-too-many “want an unreasonable living. And the way you get an unreasonable living is not by financing genuine [risky] entrepreneurial activity, but by financing Ponzi schemes, which is fundamentally what the Shadow Banking sector has been doing for the last... certainly the last 30 years, and arguably right... since the end of the 2nd World War, when we last had them back in their boxes”; back then, total private, corporate, and financial sector debt was “less than 50% of GDP”, as opposed to comprising “300%”²³⁸² around 2008-09, with “financial sector debt... [at] 120% of GDP” (Keen, 2011b). That’s 60 times faster than GDP growth during the same (1945-2008) period. See also “BlackRock”.

15) “Some argue that this [Financial Crisis] disaster has been mainly to do with Shadow Banking. It’s untrue. The crisis would not have been nearly as severe if the Big Banks had not been so heavily involved in [hedge] trading, [and] if they had not been allowed to put gigantic risks off balance sheet without any capital [weighed] against them.... This is not a Shadow Banking [hedge fund] crisis. It is a [chartered] *banking* crisis” (Wolf, 2017, mn.17). Wolf is on solid ground-- the idea was new nearly two decades prior: “there... has been an increasing recognition that bank [d.b.t.] ‘disintermediation’ may be desirable... [originating] in part, from perceptions that effective securities markets are capable of pricing financial risks at least as well as bank credit officers.... [and that] securities markets are capable of distributing financial risks more widely, at least initially... [with less] concentration of financial risks and... [of] moral hazard” (Schinasi & Smith, 1998).

²³⁸² ...of which “probably 250% of it was speculative debt” (Keen, 2011b).

16) Nonetheless, there are better alternatives. “History has shown time and again that runnable cash equivalents-- basically, the financial sector’s short-term and demandable debt [which comprise the ‘shadow banking’ sector]-- present a grave threat to the [stability of the] broader economy. While deposit insurance basically ended runs on deposits, modern panics have involved runs on institutional [shadow banking] deposit substitutes, like repo, Eurodollars, and money market mutual fund shares. FedAccount [for All] would offer a compelling alternative to private cash equivalents” (Ricks, et al., 2018, 4). See also “[Federal Funds \(Accounts\) for All](#)”, “Cash equivalents”.

17) Furthermore, a sovereign or “secure money” system “radically separates money not only from... [monetized credit] institutions but [also] from the entire financial system and...[thus also] the problems of ‘shadow banking’ that we have now will disappear. But it would [nonetheless] be reasonable to study in what way what we now call [the] ‘money’ markets-- because their border with [actual/M1] money is currently very blurred-- would be transformed [instead] into very short-term ‘financial’ markets” (Ordonez, 2018). See also “Financial markets”.

18?) Banks support their liquidity (and reserves) by borrowing from shadow banks, like MMFs. According to McMillan (2014), [TAB-] bankmoney that goes into MMFs, “is then lent back to banks to increase their liquidity.... Someone buys shares in an MMF. The MMF can [then] lend that money to a bank.... [For example, in] a “repo”... very short term [loans]...can be *rolled over serially*, making...a longer-term loan. Repo lenders...require the borrowing bank to put up collateral... some kind of [debt] security... [most often] a US Treasury bond, but...[perhaps] an ‘asset backed security’ (ABS)...[re-packaged loans]” which are presumably being faithfully repaid”. With the loans now converted to securities on the asset side of the bank’s balance sheet, those [asset-backed] securities can be offered as collateral for [a] loan [that a] bank wants...from [only a?] MMF... Howell’20.

Shadow banking sector, global- (a.k.a. ‘the euro currency market’) “The Euro-currency market, in which banks accept deposits and issue loans denominated in foreign currencies, can be understood as a form of shadow banking system at the international level.... [Such] offshore credit money raises the question of an international lender of last resort” (Braun, Krampf, & Murau, 2020).
See also “Eurodollars”.

Shadow banks- See “Nonbank Financial Institutions (NBFIs)”, “Shadow banking sector (SBS)”.

Shadow Government- (one is never supposed to say in public that the IC-IIC has been running things for at least the past half-century [vis-à-vis the ‘Rockefeller-Kissinger-Schwab’-CIA/pvt. sector types])

1) the conventional UK/commonwealth term (synon. ‘Shadow cabinet’) for parliamentary opposition.

2) a less prevalent American synonym (a.k.a. ‘Deep Government’, ‘the Honorable Deep State’ or ‘deep-seated community’) for the ‘special’ Intelligence Community portion of the Deep State: “the secret agencies of our government that function outside the Constitution. They do things without the knowledge of Congress. They engage in unconstitutional activity all the time. That would be [parts of] the CIA, the NSA, and the FBI” (Shipp, 2018, mn.10), in addition to the more numerous Military Intelligence communities that seem to have formed the backbone of the Trump movement’s ostensible challenge to the more civilian and bureaucratic status quo of the Washington ‘Deep State’. See also “Trump, Donald”.

2b) i.e. the Intelligence Community ‘mandarins’. See also “Ecological economics”, “UKUSA Agreement”, App.C: “1-2-3”.

3) As part of the Executive Branch (and Executive bloat) of the federal government, during & after World War Two’s unprecedented scale & lethality of weaponry, this outgrowth of the (traditional bureaucratic) “Deep State” took form, narrowly as the “National Security complex”, but then expanding out, through the 1950’s, into Pres. Eisenhower’s classic-- and much broader (see also) “Military-Industrial complex”.

3b) For rapid response, “you had to have a permanent military class within the government.... and the advancement of the Intelligence agencies.... [seems to have been already in place by Congress’ passage of]

The CIA Act of 1949,²³⁸³ which “exempts the CIA from all laws requiring the disclosure of functions, names, official titles, salaries, and number of personnel employed by the Agency” (Smith, 2021, mn.8-9). This is even though the ‘*Pentagon Intel*’²³⁸⁴-- as exemplified by the (then top-secret) ‘*No Such Agency*’ (NSA)-- had, according to serious estimates, a much larger budget than CIA (Yale Law, 1975, 635). See also “Government, Hidden”, “Black budget (US)”. See also “Intelligence Community (IC)”, “Deep State”, “Continuity of Government (COG)”, “New World Order”, “K.J.B. (King James’ Bible)/70 Year Plan”.

Shadow money- (the most voluminous form of ‘near money’, mostly created by collateralized repo agreements; not to be confused with [the broader] ‘shadow banking sector’, which includes [big bank/investment bank] derivatives; nor to be confused with ‘shadow digital money’)

1) “a promise to pay **at par** without state support” (Gabor, 2017, mn.9), even though it is overwhelmingly predicated on the state’s ‘sovereign debt’ (Gabor, mn.28). See also “**Money, 3 (contemporary) Tiers of**”.

2) The creation of and purpose of Repo agreements-- shadow money-- as enabled by the *Commodity Futures Modernization Act of 2000*, can now be said to constitute “an **end to central bank independence** ... Before the [2008] crisis, it was nearly impossible for central banks to miss their target. Since then, it has become impossible to hit them. This suggests that central banks [now] exercise less control than they think” they do (Münchau, 2017).

3) “The company [future Fed Board Chair Jerome] Powell [c.2006] left behind was crippled with debt. Its total debt burden rose from \$753 million to \$2 billion in one year...[and] annual interest-rate payments...from \$44mn in 2005 to \$105mn in 2007. Rexnord had become a company that was *emblematic* of the private equity world. It was no longer a company that used debt to pursue its goals. It was now a company whose goal was to service its debt” (Fitts, 2022i).

See also “Shadow banking (SBS)”, “Repo (Repurchase) agreements”.

‘Shadow digital money’- sector slang for “unsupervised and unsound money issuance” that can now be done by some MSBs (McAndrews & Menand, 2020). See also “Money Services Businesses (MSBs)”.

Share buy-backs- See “Stock buy-backs”.

Shareware- Around the world, there’s “a real push to get people out of ownership and into renting, because income-producing real estate is one way to produce yield in a world where yields are going down” (Fitts, 2018s, mn.50-51). See also ‘Trendies’, “Transhumanism”, Rifkin (2014).

²³⁸³ The *Act* granted CIA nothing less than the nation’s 1st “blunt constitutional carve-out”. It reads: “‘The sums made available to the Agency may be expended without regard to the provisions of law and regulations relating to the expenditure of Government funds... For objects of a confidential, extraordinary, or emergency nature, such expenditures to be accounted for solely on the certificate of the Director...’ In other words, while other government agencies had to account for their expenses, the word of the CIA director was good enough when it came to what they’d spent and why. In a few accidental disclosures in the...(1950’s), CIA expenses appeared as Department of Defense line items, despite the fact that...CIA is not a Defense agency. No one [seemed] much worried over this issue until the” early 1970’s, leading to a constitutional challenge to the (blatantly unconstitutional) law, which eventually wound up with the *CIA Act* being upheld by the Court, in a 5-4 decision, in *United States v. Richardson*, 418 U.S. 166 [1976] (Taibbi, 2019). What was the big deal then (in the post-war 1940’s)? Informed sources have long reported that various cartels-- ‘the mafia’ of course, and even white-shoed international finance types-- could no longer keep up with the national security types and (long-term planning) military intelligence (not to mention the Timarchy’s fire power) by no later than the first half of the 1930’s-- more than half-a-century prior to undersecretary Catherine Austin Fitts breaking into (and out of) the old boys’ Club in the 1990’s. Either something like ‘CIA’ had to be invented, or the sectors that steered the future would be fully military (a la Turkey, Russia, etc.). See also “‘Make-It-Happen; Let-It-Happen’”, “Intelligence Community” [1931], “Mafia”, <https://home.solari.com/lets-go-to-the-movies-week-of-september-26-2022-lansky/>, “United States of Lockheed Martin”, “UKUSA Agreement”.

²³⁸⁴ Military or Pentagon Intelligence consists of not only the Big 4 military branches (beginning with Army Intelligence in 1775-76) + NSA (est.1952). The Defense Intelligence Agency (*DIA*; headquartered outside of the Pentagon region, across the river in Anacostia-Boiling, D.C.) was established by the Kennedy Admn. in 1961 to (at least) coordinate hum.int.ops. between the military intel (MI) branches [a.k.a. not leaving it **all** to the CIA], and was rapidly expanded after September 2001. Bill Still calls it “the military version of” the CIA (Still, 2022, mn.1). See also “Intelligence Community (IC)”.

Sharia finance- 1) “Much as medieval Christian law legitimized the charging of commercial ‘interest’ and *agio*, Moslem law developed the idea of *murabaha* banking, to enable usury to enter through the back door, by permitting creditors to take their returns as a proportion of the borrower’s gain. Lacking Christian financial laws of their own, Ferdinand & Isabella structured their investment in Christopher Columbus’s voyages of discovery and rapine as a *sharia* loan” (Hudson, 2015b).

2) “Unwittingly...[Chicago Plan] proposals were a natural restatement of some basic pillars of Islamic principles and finance.... Financial stability is a basic concept in finance” (Askari, et al, 2010, 2).

3) Today, “Islamic Finance” or “Sharia Finance” basically means that lending banks take “an equity share” as opposed a “debt claim.... and therefore, rather than getting an interest payment... which is [today’s] Western finance, it takes a dividend flow, based on the amount of equity that it’s got... the risk is being shared between the lender and the company. But the same potential problem is there, that the share that they have of the company can grow.... [T]he level of bank ownership of the industrial sector can [still] become overwhelming... [which may mean that] the industrial sector... stops investing... So you can’t just rely on the... 1] Islamic Finance element... You’ve got all the other parts that go with it. 2] You have the emphasis upon giving. 3] You have the emphasis upon sharing the whole society. 4] You have the idea... of giving to the poor... And you need *all* of those, because what they end up saying is that we can’t let the financial sector take over an economy” (Keen, 2016u, mn.12-13). Anywhere in the world, “When the finance sector becomes dominant, your economy will collapse” (Keen, mn.14).

See also “Usury”, “Venice, Republic of”, “Financialization”, “Mutual funds” [EFMFs].

Shell game, the- ZionistJews²³⁸⁵-UK-USA; UK-USA-ZionistJews; USA-UK-ZionistJews.

See also “Empire (in the so-called ‘modern’ age)”, “Debt cycles”, → “**Cultural Calendar**”, “Big 4 Accounting firms”, “BIS”, “**Corporate Media Cartel**”... [and also (to get to the bottom of it all)] “**Land bridge**”.

[shellgame progress; see also “Bankism”, “Zionism”, “Legalism”, “Lobbyists”]

Short-selling- (synon. ‘shorting’) betting against companies’ stocks or bonds by borrowing the security and then immediately selling it (even though one does not technically own it), in expectation that the security’s price will decline prior to when it must be returned. It usually requires at least a 50% down payment of the value of the initial sale.

1) “Short-sellers bet by borrowing shares from so-called *prime brokers* (Goldman Sachs and JP Morgan Chase are among the biggest), selling them, and waiting for the price to drop, at which point they buy them back on the open market at the lower price and return them. The commonly understood rub is that *prime brokers* don’t always really procure those original borrowed shares, and often give out more ‘locates’ than they should, putting more shares in circulation than actually exist... GameStop is exposing this systematic plundering of firms using phantom shares & locates, by [certain] groups of actors who now have the gall to complain that they’re the victims of a ‘get rich quick’ scheme” (Taibbi, 2021). See also “Investment banks”.

2) “Short-sellers are not inherently antisocial. They can be beneficial to society, instrumental in rooting out corruption & waste in whole sectors like the subprime industry, or in single companies like Enron.... [This depends, of course, upon the ‘quality’ of the ‘regulation’] Let the record show that when the SEC

²³⁸⁵ A more accurate alternative to this phrase would be: “bankmoney-Zionists”. See also “Dispensationalism” & “Zionism”.

imposed a ban on shorts of financial stocks in 2008, they routed [out] short-sellers who were dead right about the insolvency of America's banking sector. The state prevented their correct judgment about companies like Wachovia and Washington Mutual, whose stocks kept plunging even after the ban and went bust soon after" (Taibbi, 2021). See also "Securities and Exchange Commission".

3) Prior to 2005, subprime mortgage bonds "were impossible to sell short... [because] these tranches of mortgage bonds were tiny and impossible to find" and could not be borrowed (Lewis, 2011, 28). See also "Credit default swaps", "Mortgage bonds (subprime)".

Sight deposits- (synon. 'demand accounts', 'overnight deposits'; 'current account' deposits [UK]) Checking and Savings accounts may be withdrawn or exchanged for cash from a bank immediately without notice or penalty. See also "Transaction Account Balance (TAB) credits".

Silly & silliness- See "Humor", "Design", <https://www.youtube.com/watch?v=dPdGlxKrME4> [TenLittle].

Sin, monetary-economic (of the so-called 'modern era')- See also "Deceptive Banking Terms (d.b.t.'s)", "Methodology".

Sinking fund- 1) "How was the debt sunk, by the erection of a fund, producing the necessity of incurring a new debt, to a greater amount than the fund itself?" (Taylor, 1794, 45). It wasn't. See also "National Debt Economy", "Big Lie, the".

2) "A fund set aside by Britain's Parliament in the late 18th century to pay off the national debt by investing in private-sector bonds, and [then] re-investing their interest receipts, so that the savings principal would accumulate at compound interest, doubling and redoubling until it reached a magnitude sufficient to pay off the entire national debt. In practice Parliament could not resist raiding the fund and using it for the main purpose for which politicians spent money in those days- to wage war. A recent version of the sinking fund was developed by Alan Greenspan in 1982, by *imposing forced saving* in the form of prepayment of US taxes by the lowest employee-income brackets, ostensibly to fund Social Security (which was converted into a *user fee* rather than a normal budget entitlement as was the case under the philosophy of progressive taxation). The ensuing fiscal surplus was invested in US Treasury securities and [from 1995] the Republican Congress used the money for the neoliberal policy of cutting taxes for the wealthy and a tax shift favoring real estate and finance..." (Hudson, 2015b).

See also "Tax shift", "Social Security".

Sink- "That part of the environment that receives the waste flow... and may, if [if it is not] not overwhelmed, be able to regenerate the waste through biogeo-chemical cycles back to usable sources" (Daly & Farley, 2004, 439). See also "Ecological economics", "Primary Sector Economics (PSE)".

Slavery- (state of having very little if any political-human rights to one's personage, incl. not to be [or have one's children] bought, sold, or phys. molested; not to be confused with economic 'serfdom')

"Whose property is my body? **Probably** mine. I so regard it. If I experiment with it, who must be answerable? I, not the State. If I choose injudiciously, does the State die? Oh no."

- Mark Twain, "Osteopathy" (1901). See also (the then very fashionable) "Statism".

1) "From the end of the 4th millennium in Mesopotamia, legal codes guaranteed *property* rights even more than they guaranteed what we call *human* rights. For instance, a person had the right to sell himself into slavery, or pledge his liberty as collateral for a loan...[N]ot until the time of the Greek tyrant Solon was the right to enslave oneself abolished" (Goetzmann, 1994).

1b) "The instrument of expansion of Classical civilization [in **both** East & West] was a social organization, slavery" (Quigley, 1961, 270); be it war-slavery or debt-slavery. Aristotle the "slavery of Barbarian to Greek was natural; the slavery of Greek to Greek was arbitrary and cruel" (Jowett, 1885, xxi). See also "Ethnic (National) Identity".

1c) “During the millennium from the emergence of the Roman empire to its eventual decline, at least 100 million people-- and possibly many more-- were seized or sold as slaves throughout the Mediterranean and its hinterlands. In terms of the duration and sheer numbers, this process dwarfs both the transatlantic slave trade of the European powers and the Arabic slave trade in the Indian Ocean. For all we can tell²³⁸⁶, enslavement and the slave trade constituted the principal means of geographical and (both upward and downward) social mobility in the ancient world... the story of the Roman slave trade must count as one of the darkest chapters of human history” (Scheidel, 2007, 18).

1c) When “the Franks lived in Germany, their wealth consisted of slaves, flocks, horses, arms, etc.” (Montesquieu, 1748, 282).

2) “No slave system has ever been able to continue to function on the slaves provided by its own biological reproduction, because the rate of human reproduction is too slow and the expense from infant mortality and years of unproductive upkeep of the young make this prohibitively expensive. This relationship is one of the basic causes of the American Civil War [after the British initiated the cut-off the trans-Atlantic slave flow, from 1807-1840’s], and was even more significant in destroying ancient Rome²³⁸⁷” (Quigley, 1961, 318). See also “War” [confederacy], “Hypertrophy”.

3) “In most times and places, slavery is seen as a consequence of war. Sometimes most slaves actually are war captives, sometimes they are not, but almost invariably, war is seen as the foundation and justification of the institution. If you surrender in war, what you surrender is your life; your conqueror has the right to kill you, and often...[would]. If he chooses not to, you literally owe your life to him; a debt conceived as absolute, infinite, irredeemable. He can in principle extract anything he wants, and all debts-- obligations-- you may owe to others (your friends, family, former political allegiances), or that others owe you, are seen as being absolutely negated. Your debt to your owner is all that now exists” (Graeber, 2009). See also “War”, “National Debt Economy (NDE)”.

4) Of course the “other major source of slaves was *debt*: now that states [in the Iron age] no longer periodically wiped the [debt] slates clean, those not lucky enough to be citizens of the major military city-states-- who were generally protected from predatory lenders-- were fair game” for loan sharks (Graeber, 2009). See also “Civil National Identity (CNI)”, “Coined money”, “Debt peonage”.

5) “[A]s in Eastern Europe, slaves were Ireland’s most valuable exportable commodity”, as “all those tiny kingdoms” were not deemed worth the effort of conquering (Wickham, 2009, 496), until the 16th century.

6) “Initially, settlers in the Chesapeake colonies of Maryland and Virginia relied on white indentured servants as their primary labor force, and at least some of the blacks who arrived in the region were able to acquire property. But between 1640 and 1670, a sharp distinction emerged between short-term servitude for whites and permanent slavery for blacks. In Virginia, Bacon’s Rebellion [1676] accelerated the shift toward slavery. By the end of the century, slavery had become the basic labor force²³⁸⁸ in the southern colonies.” - <https://www.digitalhistory.uh.edu/era.cfm?eraid=2&smtid=1> ; and would remain so for the next century-and-a-half.

7) “[K]ings and emperors [1st Estate] invariably tried to regulate the powers that [2nd Estate] masters had over slaves, and [2nd Estate] creditors over [3rd Estate] debtors [farmers]. At the very least they would always insist, if they had the [political] power, that those prisoners who had already had their lives spared

²³⁸⁶ Believe it or not, there has (as of 2007) been only one “book-length study of the Roman slave supply”, and it just “useful mainly” for “source material” (Ibid). For some reason, “empirical evidence for the relationship between slave supply and demand in the Italian heartland of the Roman empire is almost completely lacking”

²³⁸⁷ Walter Scheidel seems to agree that “[s]everal factors militated against slave reproduction at or near replacement level: imbalanced sex ratios if and when they persisted; higher mortality in cities and [in] mines and on malarial estates; family break-ups through sale or inheritance; and [also] the manumission of slave women of childbearing age.... [T]he high rates of natural growth in the slave population of the Antebellum South were truly exceptional...[as] were [the] catastrophic levels of attrition in parts of the Caribbean.... My earlier guesstimate of an overall biological replacement rate of 80% in the mature [Roman] empire has met with criticism but no plausible alternative” (Scheidel, 2007, 17).

²³⁸⁸ This was a condition that was by then only prevalent in the ‘New World’. Unlike Roman latifundia systems, “[s]lavery had long existed among West African[s]...as it had in some parts on Europe until about the time of Columbus, chiefly to provide domestic servants, rather than workers for commercial enterprise” (Graebner, Fite, & White, 45). See also “Evil”, “Imperialism”, “Corporations (and corporate ‘personhood’), “‘New World’ Order”.

could no longer be killed by their masters. In fact, only [1st Estate] rulers could have arbitrary power over life and death. One's ultimate debt was to the state.... [T]his logic is still with us" (Graeber, 2009); and neither it [1st Estate 'statism'] nor [2nd Estate] bankmoney flimflams should be called "modern"²³⁸⁹. See also "National Debt Economy", "Statism", "Estates, 3".

8) Re-programming rDNA (to re-engineer an individual's DNA) has resurrected the issue of (mass) slavery in the 21st century. "You have to choose integrity and civilization, or choose, you know, being a slave of organized crime"; sometimes a.k.a. resonating "with Mr. Global's cell tower" (Fitts, 2021g, mn.107; mn.115). "We are better dead than [red] going to where Mr. Global intends to go" (Fitts, 2022, mn.47). "If you [do in fact] look at the...control grid [that's been being built thus far every year this century], instead of being on a gold standard or... an oil standard, we're...[looking at] a 'human standard'...[a.k.a.] slavery. If humans are the collateral for the transaction...[then] you...are in a slavery system. That's what the World Economic Forum has said²³⁹⁰: 'It's 2030 and you... have no assets and you're happy'. What I hear is: 'We've stripped you of your assets, and you're mind-controlled'; "as you're being tracked 24/7, they can figure out how to make it wonderful or painful to herd you day to day to day" (Fitts, 2022, mn.38-39; 42). See also "Freedom continuum (maturation)", "Provocation". See also "Mind control", "Transhumanism (TH)".

Slaves, to some defunct philosopher- See "Hegelian dialectic", "Parties, political", "Duopoly", "Dystopia"; "Design" [.lateral].

Slums- See also "Black Market economies".

Small businesses- constitute "more than 2/3rds of employment", globally (Werner, 2021, mn.44). See also "COVID".

²³⁸⁹ The Age of 1st Estate (governmental) dominance was "ancient" and "medieval" (or more specifically, from the Iron Age [latter "ancient"] to the Glorious Revolution & 18thc). The ensuing Age of 2nd Estate ('non-government elites') primacy got rolling in the 18thc (more-or-less congruent with the British Empire), although it could not be said to 'dominate' until the 2nd Industrial Revolution of the latter 19th century. Whether the 18th-19th centuries are more "Modern" or "Early Modern" is an ongoing question of perspective (as we head deeper into the 21st century), but the current 20thc-type 'debt-money-to-debt-saturation' model is in the process of falling apart. See also "National Debt Economy" (the entire paradigm was a fresh idea in the 17thc, then ironed out over the 18th-19th centuries... culminating in Woodrow Wilson's "capstone" of 1913, which was itself re-structured into its current form by the *Banking Act of 1935*. See also App.C: "1-2-3".

²³⁹⁰ ...in this 2016 social media P.R. video: <https://www.facebook.com/worldeconomicforum/videos/10153920524981479> .

'Smart' (spy) tech- 1) "The two companies to really watch are IBM and ATT&T.... between the smart phones and the smart meter, if it involves perfecting the slave collateral [then] it's called 'smart'.... It's a harvesting system... using...no privacy to harvest, manipulate, and control you, particularly...[with] what's coming through in terms of entrainment technology" (Fitts, 2015b, mn.57-58). "When Facebook first came out, I said... 'They [have] finally realized [that] they're paying too much for data servicing. So, let's come up with a way that everyone does their own data servicing and keep their own file updated'" (Fitts, mn.103). "The first time I experienced... [entrainment technology] in a speech context, it felt... like [was] to be with the whales... like a synthetic, junk version of being with the whales..." (2015b, mn.110). 2) "We are standing naked before our government.... I don't think data should be retained on anyone" (Begich, 2017). See also "National Security Agency (NSA)", "UKUSA Agreement".

Smith, Adam (1723-1790)- (the [most famous] 'anti-mercantilist'²³⁹¹; who [in terms of (the underlying) money & banking] "raised the art of obfuscation to new levels" [Zarlenga, 319]; hence effectively heading both the 'liberal' & 'neo-mercantilist'²³⁹² trees of 'economics'²³⁹³, in what might be called the 'Monetization' approach of both; hence Smith was indeed the father of [so-called] 'modern' Economics-- i.e. the philosophical tree of [what Soddy called] 'Economics-as-psychology' [as opposed to a harder science]) See also "Monetization", "NInnies".

"This nation, which liberty and laws render easy... has become a *trading people*... As this nation is situated towards the north, and has many superfluous commodities, it must want also a great number of merchandise which its climate will not produce: it has therefore entered into a great and necessary intercourse with the southern nations; and making choice of those states whom it is willing to favor with an advantageous commerce, it enters into such treaties with the nation it has chosen..."

- Montesquieu's *The Spirit of Laws* (1748, 310-311). See also "Franklin, Benjamin" [.aphorisms].

1) Where was Smith coming from?

Scotland agreed to the 1707 Union "for economic reasons... Mercantilism reigned, and it was thought that Scotland could not manage unless it was tied on" to the English navy, etc.; which sparked a great debate in (barefoot, but literate)²³⁹⁴ Scotland, "about whether little poor countries could get rich. And Smith was the *end* (sic) of that debate.... [What] *The Wealth of Nations* [basically] says is: '*We didn't have to join*'" with that larger neighbor (Livingston, 2006, mn.3-4). And Scots taking over "publishing... and other business" in London was "deeply resented by the English" (Livingston, mn.5).

1b) Where were Smith, et al going?

Both "classical and neoclassical approaches to economics tend to model the economy as a *Robinson Crusoe* island beyond the state, based on private law with no role for public or state law.... amid all the

²³⁹¹ In "National System" political economist Frederick List's appraisal, Smith was, in actuality, more of a sneaky or "*neo*"-mercantilist than anti-mercantilist (see List, below). But the more popularized image of Smith still holds, despite his pioneering of (popular acceptance of) such dubious 'modern' Economist predilections as mind-numbing flip-flops (per Milton Friedman) and ridiculous anthropological assumptions (f.e. "truck & barter" [Ch.2, p.15]; per "Homo Economicus") . See also "Political Economy", "American System".

Among Smith's other foolish assumptions [especially for someone who had written a 550-page book on anthropological morality] that cannot be concealed (within his politi-speak) is the fact that he was in a **distinct minority** of 18thc philosophers (even in the UK) to support the Empire's war against (as Smith finally concluded) those ungrateful American colonies on the liability side of Great Britain's balance sheet (Smith, 1776, 740). So the last page and words of *The Wealth of Nations* is that there should be no sovereign nations-- only imperial balance sheets? Others have noted that, earlier in the book, Smith suggested, as a compromise, an imperial "system in which the political representation of Great Britain and America would be proportional to [simply] the contribution that each polity was making to the public treasury of the Empire" (Galiani & Torrens, 2016). See also "City (of London), the", "Offshore", "Evil twins?", "Sovereignty".

²³⁹² What does "neo-mercantilism" means in everyday talk? "American has always said to other countries 'Do as we say, not as we have done', and when they actually do what we've done, it's [called] Autocracy. That's really it in a nutshell" (Hudson, 2022). See also 'Hypocrisy', "Constitution, US (of 1787-91)" [.separation of powers].

²³⁹³ It has long been observed that "England's mercantilist tendencies had... never been stronger than during the 2 decades preceding [the outbreak of the American Revolution in] 1775.... [which had] created in the colonies a group of officeholders who held their offices at the King's pleasure and considered themselves to be responsible to the King alone" (Kirschke, 2005, 50). See also "Oligarchy".

²³⁹⁴ The "Scots were more literate than the English... every parish had to teach children"; and the literacy rate was second only to some "places in Switzerland and Prussia" (Livingston, mn.4). The USA, by the way, would have the highest literacy by (no later than) "1830" (Ibid). See also "Protestantism".

justified criticism of absolutism and statist mercantilism of the 17th to 19th centuries, the fundamental and indispensable role of the state in [so-called] modern society, including the monetary [currency] system and creating a legal framework for the economy and finance, was improperly dismissed.... In hindsight this was a gross misunderstanding, but in the first half of the 19th century it was an element of social romanticism, which fed into *both* anarchism [no government] and socialism [big & ever-bigger gov't]. Classical liberalism...[in some] contrast, was rationalistic rather than romanticist. But *all* the then 'enlightened' political philosophies were united in their resentment against [or denial of] the state" (Huber, 2017, 38-39). See also "Neoclassical Economics (NCE)", "Local scrip & Complementary currencies", "Liberal (classic usage)", "Hegelian dialectic".

[Heller's 1950's]

2) a misunderstood²³⁹⁵ campaigner against public debts and the wars that necessitated more taxation in order to meet the public interest charges, probably due to his own misunderstanding of the basic concept of money and its origins. Historical records consistently show that Smith's (or anyone's) pseudo-anthropological²³⁹⁶ concept of primordial "barter" has never existed (Graeber, 2012, 37). "No example of a barter economy, pure and simple, has ever been described, let alone the emergence from it of money; all available ethnography suggests that there never has been such a thing" (Humphrey, 1985). See also "History", "Barter".

2b) What Smith is most misunderstood for is his reversing of (what had been) the traditional (millennium-long) English "definition of **m**oney as *legal tender*, and defined it [instead] as [a] *commodity*. This erroneous logical step by the father of economics [has] planted dogma into the minds of people to this day. Advancing his idea more axiomatically, many macroeconomics textbooks define money as the entity that meets the following three functions: (1) unit of account, (2) medium of exchange and (3) store of value. According to this [3rd] axiom of money, gold and silver can be best qualified as ideal money because...[of] their physical [properties]... This reversed definition of money has become a root cause²³⁹⁷ of confusion... Unfortunately, the same logical deduction is widespread among virtual currency enthusiasts" (Yamaguchi & Yamaguchi, 2017, 6). See also "Money", "Libertarians", "Fiat".

3) "When people talk about Adam Smith on a [laissez-faire] pedestal... they have no idea that Smith actually was criticizing the rentier sector,²³⁹⁸ the landlords, the monopolists, and the banks.²³⁹⁹ And he's made out to be a prototypical Alan Greenspan, the lobbyist for the banks and for the real estate sector, and for, basically, for what has become the criminal class" (Hudson, 2016p, mn.16-17). See also "Privilege".

²³⁹⁵ See "Modernity" [usurious], "Neoclassical Economics" [Bentham].

²³⁹⁶ In addition to Smith's famous anthropological reliance upon canine observations (see Ch. 2), Smith's more 'scholarly' examples of fish, nails, and tobacco being used as money were rejected by those who looked closely. "In the years following... *The Wealth of Nations*, scholars checked into most of those examples and discovered that in just about every case, the people involved were [actually] quite familiar with the use of money and, in fact, *were* [sic] using money-- as a unit of account" (Graeber, 37). That's a credit-money system; not "barter." See also "Tally sticks".

²³⁹⁷ For a primary cause of confusion, however, see also "Currency" [etymology (vs. 'money')].

²³⁹⁸ ...While, more importantly, conceding to them all the definitions of key terms. Academics is mostly about nailing down the formal definitions of things, not fleeting polemics (and Smith polemicized both the 1st and 2nd estates).

²³⁹⁹ ...And even the chartered Corporations: "The pretence that corporations are necessary for the better government of trade is without any foundation.... The majority of a corporation [or guild] can enact a bye-law with...penalties, which will limit the competition more effectually and more durably than any voluntary combination.... It is the fear of losing their employment which restrains...frauds and corrects...negligence. An exclusive corporation necessarily weakens the force of this discipline" (Smith, 1776, 117). See also "Homogenization", "Lobbyists", "Corporations (and corporate 'personhood')".

4) Smith tried to appeal to both sides of what was then called the ‘political economy’ debate, but nonetheless his line in the sand was clear. When “it came to a public national bank, [or] a government issuing money, then even one penny was too much for Adam Smith [and his bullionist preconceptions]!” (Zarlenga, 2002, 320). Smith’s “assault²⁴⁰⁰ is one of the most vicious, elitist attacks on [public] society as can be found anywhere from a ‘man of letters’... the beginnings of the relentless [propaganda] attack on society-- the belittling and smearing of its organizational form-- [1E] government... which has been ongoing for over two centuries, and has reached such a destructive and dangerous level today [as governments nonetheless grow ever-larger]... Smith...inadvertently illuminates the primary purpose of this attack-- to keep the monetary power in [2E] private hands: the apparent motive for these attacks...[was] to keep society from properly controlling [and accounting for] the monetary system” (Zarlenga, 321). More than any of his contemporaries in ‘political economy’, Smith “whined impotently about the [national] debt, but made no proposals for eliminating it, [thus] conveying the message that nothing can be done about it” (Zarlenga, 2002, 324). This is the basic paradox of “the father of [both sides of (capital-E)] Economics”. Smith in theory played to the interests of his native Scotland (“*Liberalism*”), while Smith in practice never effectively challenged the groundings of economic imperialism (“*Neo-mercantilism*”), and certainly not of that particular Britishesque miasma of monetary-currency imperialism. See also “National Debt Economy”, “Big Government (growth of)”, “Adolescence of Mankind”, “Reserve currency”, → “Monetization”, → “Politics”, → “**False dichotomy**”.

4b) Friedrich List’s *National System of Political Economy* (1841) “exposed much of Smith’s *Wealth of Nations* as a *political* tract. List... showed that while England aggressively promoted Smith’s ‘free trade’ ideas to other countries, she herself pursued a very different policy²⁴⁰¹... [and] was thus applying the [real] principles of the industrial revolution, but tried to hide that fact from other nations” (Zarlenga, 2002, 328-329). See also “Hypocrisy”, “British Empire(s)”, “National Income”.

4c) A century after List, Frederick Soddy (the discoverer of isotopes) belabored to show how (both sides of) the conventional Economics (resultant from “the father’s” self-contradictory flip-flops) was both delusional and dangerous. See also “Soddy, Frederick”, “Physiocrats, the” (upon whom Smith heaped praise, but nonetheless rejected as [politically] ‘unrealistic’).

4d) Did Smith mostly just constitute a Britishization of France’s Physiocracy? In “Book IV, Chapter IX, ‘Agricultural Systems’, Smith indicates that a necessary [sector] balance is needed and will occur naturally...[He] states: ‘It is thus that every system which endeavours,

either, by extraordinary encouragements, to draw towards a particular species of industry a greater share of the capital of the society than what would naturally go to it; or, by extraordinary restraints, to force from a particular species of industry some share of the capital which would otherwise be employed in it; is in reality subversive of the great purpose which it means to promote. It retards, instead of accelerating, the progress of the society towards *real wealth* and greatness; and diminishes, instead of increasing, the *real value* of the annual produce of its land and labour’....

The [P]hyiocrats and Smith... agree[d] on a policy of laissez-faire. They both believed that in the natural course of events, unhindered by government, the market would allow civilization to develop to the benefit of the common man. Later economists, especially David Ricardo and Thomas Malthus, did not share...[that] optimism, that a natural balance would occur” (de Yong, 1994, 9-10). See also “Physiocrats, the”, “Malthus, Thomas”.

²⁴⁰⁰ Smith went to considerable effort to slander the British government (or any governmental institution) as being “too ‘slothful’, and ‘thoughtless’ to be allowed to run a National Bank based on sound principles... [even though the] private Bank of England... [had, by then, established] a dismal track record.... By 1776 more than half of England’s population lived squalidly in cities” (Zarlenga, 2002, 323).

²⁴⁰¹ Did David Hume’s wayward best friend wind up inventing (what would eventually become) an entire era of institutionalized hypocrisy? “Although the EC [& European Union] propagates the ideology of free trade, and stresses that it does not want to cut off other countries [goods & services] from the internal European market, its real policies [simply] follow EC [commercial] interests...making selective use of both [so-called] free trade and protectionist measures” (Dziobek, et al, 1992, 67), and pretty much always has. Make no mistake, the strategic mixing up of Economics with Politics has also been (increasingly) characteristic since Smith’s day. See also “**NI**nies”, “Parity” (for what?).

5) Smith asserted also the absurd presumption that (as David Ricardo put it) “the issues of notes by the Bank of England... had not nor [even] could have any effect on prices of commodities, bullion, or foreign exchanges”²⁴⁰² (Zarlenga, 2002, 330). See also “Banking School/Bank Teachings” [‘real bills’].

6) Although a voracious reader-synthesizer of (the) intellectual currents (of the early & mid-18thc) and a not-bad theorist of the English constitution²⁴⁰³ & UK construct, the (so-called) ‘father of (so-called) modern political economy’ has subsequently proven an inappropriate north star (north node) for such broader notions as “Globalism”, anthropology, or state theory. “Too often, the benefits of [so-called] free markets are promoted by those with the power, authority and influence to change public opinion for personal gain.... When proven wrong, they become temporarily silent but never confess their crime” (Walters, 1994). See also “Great Extinction”, “Ontocide”; “Economic science”, “Economics, Parity”. See also “Barter”, “Classical Economics (hijacking thereof),” “Ricardo, David”, “Capitalisms”.

Social credit- see “Citizen’s/national dividend”.

Social Credit Ratings (SCRs)- (click-voting is so easy to do; not just in China)
See also “Cryptos’ (slang)”, “Integrity”, “Democracy”.

Social Credit System (SCS)- (a.k.a. *businesses* ‘social credit score’ in China, and/or the ‘smart citizen wallet’ in Bologna, Italy)

1) Current “reality”, in contrast to online click-baiting, is that “the SoCS is not the techno-dystopian nightmare we fear: it is lowly digitalized, highly fragmented, and primarily focuses on *businesses*. Most importantly, such a [rumored] score [for individuals] simply does not exist.... Citizens cannot be penalized for low scores²⁴⁰⁴ ...[and a] national, all-encompassing Social Credit Score for citizens is highly unlikely to ever materialize.... Only violations of laws and regulations can serve as grounds for punishments. Citizens cannot land on a blacklist for playing too many games, occasional jaywalking, having ‘untrustworthy’ friends, etc....[and] Recent regulations have further restricted...[its] scope” (Brussee, 2022).

1b) “Virtually all Social Credit-related decisions are taken by humans, not AI... [and] will remain the case for the coming decade, even as attempts are made to slowly integrate and digitize the system...[which has] been worked on since 2001 and is...far from complete.... The focus for the coming years will be to integrate information sharing systems, establish unified standards, and improve the legal basis” (Brussee, 2022). See also “China- statistics”.

1c) Prevalent “myths like machine-driven social credit scoring obscure much more invasive surveillance initiatives [of the CCP]- Project Sharp Eyes, for example, aims to establish full video surveillance coverage of [all] key public spaces in Chinese cities²⁴⁰⁵ When myths about the ‘Social Credit superscore’ started

²⁴⁰² After UK prices rose approx. 40% in 12 years (1797-1809), Ricardo felt compelled to note that it “will scarcely be believed 50 years hence, that Bank Directors and Ministers gravely contended [with a straight face]... both in Parliament and before committees of Parliament, that the issue of notes by the Bank of England” was not inflationary (Ricardo, 1817, ch. XXVII).

²⁴⁰³ “Montesquieu [had] missed what Smith sought to emphasize-- the unique and unrivalled achievements of the English common law. English liberty, Smith thought, was in turn likely to prove robust in a way [that] Montesquieu failed to see, and for reasons that Hume had not been sufficiently attentive to in the *History*: [i.e.] the long-standing presence [since the (post-Plague) 1400’s] of the [resultant new] common law and...independence of the courts and judges, which...[by Smith’s day] buttressed the 1688 settlement” (Sagar, 2022), & the subsequent liquidation of Crown landholdings. See also “English constitution, the”, “Eighteenth century” [.Glorious]; “Cashless society” [.KingLackland].

²⁴⁰⁴ This is because the SCS “primarily focuses on...marketplace behavior... [But a few] individuals are...included concerning debt [contractual] repayment...[or] in their role as [the] **legal representatives** of companies...[No] more than 0.2% of individuals receive Social Credit-related penalties” per year (Brussee, 2022).

²⁴⁰⁵ “Different digital initiatives follow their own trajectories and should be viewed as separate puzzle pieces. Some may indeed involve strict surveillance for solely political purposes, but others may target genuine societal issues. Reducing Beijing’s use of technology to nothing but automated surveillance & control diminishes [or dumbs-down] our understanding of what it is up to...[and] where it is falling short. Digitalization initiatives regularly fail to live up to their [often hyped] buzzwords. The [eternal Chinese] proverb ‘*the mountains are high, and the emperor is far away*’ aptly captures one of the [traditional] reasons for this” (Brussee, 2021).

to surface, few stopped to ask why Beijing would want such a thing in the first place. In fact, such a single basket for all societal ills would be so obscure and vague in meaning [that] it becomes utterly worthless—a concern that Chinese policymakers are clearly aware of” (Brussee, 2021). See also “NSA”.

2) The international rumor mill kicked in, after, in “the early 2010’s, some [Chinese] cities indeed started scoring pilot...[programs]. However, these gradually became controversial...in China [itself]. The city of Suining [in Sichuan] reportedly deducted points for government petitions & online comments, Suzhou [Jiangsu] planned penalties for reservation no-shows or cheating in online games, and Rongcheng [Shangdong] for littering or jaywalking. Many of these...[experiments] were later criticized by official media or [simply] failed to materialize.... [And by] 2019, China’s central authorities were stating explicitly that they were not happy with...[such] idea[s]...[issuing] formal clarifications that scores could not be used to penalize citizens and that *only formal legal documents* could serve as grounds for penalties.... The personal scoring initiatives that live on today serve only as *positive* incentives. Lacking teeth, they are essentially loyalty rewards programs like those operated by airlines, and few people make use of them. Further restrictions were formally rolled out in...2021, curbing the types of behavior that can be included in the system” (Brussee, 2022).

2b) How strategic is the PRC’s data-driven platform? Over the next “3 years, the State Administration for Market Regulation will start to classify [all] companies on a scale from A to D, nationwide. Companies in Zhejiang can already look up their ‘overall credit [with gov’t regulators] score’...[T]hese scores are not used to blacklist companies. Rather, they serve as an indicator of risk and are used to determine the intensity of supervision” (Brussee, 2022). This is a real problem area (in the US, too). See also “Regulation” [per reg. norm].

2c) Make no mistake, Beijing is officially and firmly committed to digitizing all aspects of governance (in what might be said to the Central’s final victory over the Local in Zhonguo). From 2018-20, China’s ranking on the UN’s “E-Government Development Index (EGDI)” rocketed up 20 spots, to 45th place, just ahead of Malaysia and Latvia. See also “China- statistics”.

3) The first confirmed report of a ‘Social Credit System’ (or ‘score’-rewards program) for ‘citizens’ (not just customers or businesses) was announced by Bologna, Italy in April 2022: <https://americanfaith.com/a-social-credit-system-aimed-at-modifying-climate-change-behaviors-is-being-deployed-in-italy>

4) However, systemic abuse of the ‘COVID’ situation in Zongguo (中国), whether it’s blamed on certain localities & principalities or not, persists: https://www.youtube.com/watch?v=GTpmod_VAmY&t=125s [Beijing(6/22)]

5) Social Credit System Updates:

See also “Industrial Revolution, 3rd”, “Alibaba”, “Conspiracy theorist”, “Projection”.

Social media/cell phones- (‘the new programming’)

1) You “have *no* legal right to privacy in any social media.... [T]ime and time again, insurance companies & prosecutors win their cases based upon information freely...published on social media platforms.... Let me repeat...you have no right to privacy on any social media platform. The information is free to anyone with subpoena power, and you cannot delete it or get rid of it” (Hale, 2020).

2) “Virtually all of these electronic interfaces are monitored, because the objective of the [initial] inventors is to make you come back. And that means they want to trigger the portions of your brain that are associated with 2 things-- drug addiction and orgasm-- sexual [related] activity, the things that will make your brain come back to those same sources to get that charge again...that dopamine release again, to get serotonin levels change.... This is called bio-physics” (Begich, 2018, mn.15).

3) “It is a type of mind control quite frankly; and it’s intended to do that. It’s intended to incite your emotions around specific ideas that are being shoved into you, based on your preferences that are easily discernible today. This *is* [the new] programming” (Begich, 2018, mn.20)...

Only the lonely

April-June 2018, % responding

Share of people saying they always/often feel lonely, left out or isolated, and whether this is a problem

"Is your loneliness made better or worse by social media?", respondents reporting loneliness/social isolation

The Economist

[...Just ask the opium peddler²⁴⁰⁶.]

4) The Pentagon's (sub-contracted) Interactive Internet Activities (IIA) program for "social media psychological warfare" and "fake news" has been run since 2007; originally "by analysts. Now [however] this is more done...through artificial intelligence" algorithms.²⁴⁰⁷ See also "Mind control".

- US Army whistleblower Patrick Bergy, <https://www.bitchute.com/video/OghEGJfHpFW4>, mn.5-6; 9.

He adds that development to prior amendments to the *Smith-Mundt Modernization Act* [of 1948], which 'opened the floodgates for domestic I.I.A. [a.k.a.] social media influence operations', by simply removing its restriction on 'propagandizing to Americans' (Ibid, mn.31-32). See also "Google" [.predictive...].

4b) "What I did was something called *localization*... [which is where] you find a group of people...[maybe] a whole country, a city, a certain religious group...[or even] a 6-block radius... and you...try to get in their mind. You have to understand how they eat...talk, what they like, what pushes their buttons, what drives them nuts... and...[simply] use that...to push...[the bosses'] ideology or product- or direction that you want them to go.... I will know your deepest, darkest fears.... I helped them try algorithms with the strategies that I had created all these years."- US Navy contractor "Tore",

<https://www.bitchute.com/video/OghEGJfHpFW4>, mn.6-7; 10. See also "COVID", "Dumb-downing".

["hyper-domesticated humans" are nothing new (Niogo & Benitez-Burraco, 2019); ...until 'the man' is replaced by 'the algorithm'.]

5) Cell phone/wifi radiation may hinder the empathy pathways of children's brains from developing. Moreover, "addiction to cell phone[s] is like an opiod addiction"- Psychiatrist Victoria Dunckley (El-Gemayal, 2018, mn.118).

²⁴⁰⁶ *The Economist* was founded in 1843, in the City, in order to supply supportive rhetoric and propaganda for the City/British Empire of bankmoney-'globalism', as it was then getting underway in earnest, not just in the repeal of the UK's *Corn Law* tariffs (as they often like to mention), but also in the much larger Opium Wars to attain control of most Chinese trade (having already accomplished the implementation of reasonably pro-bankmoney regimes in about half the world by that decade). See also "Lender of Last Resort (LoLR)", "Currency Wars, the", "Bank welfare".

²⁴⁰⁷ By expressing one's "anger in cyberspace" typically "has no effect, because the algorithms...[tried to make] sure that they only spoke to people who already agreed with them.... One online analyst put it succinctly: 'Angry people [just] click more'" (O'Connell, 2020, mn.11)

6) In the 2020's, it's not just the 'shadow banning' and algorithmic ghettoizing of the 2010's anymore. Since 2019-20, YouTube, Twitter, and Facebook have been openly banning (not just demonetizing) large numbers of user accounts on 'politically correct'²⁴⁰⁸ and arbitrary judgements, without warning (and typically with zero appeals or due process).

6b) In 2020-21; "[f]irst you could lose your social media license if you said masks don't work [at preventing the so-called 'COVID']. Then you could get booted [from, say, 2 of the above big 3] if you said [that 'COVID'] lockdowns don't work. Next...[in the progression] was [the so-called 'COVID', so-called] 'vaxxes' [that also didn't work]. Now, all of these [3 points] have been proven true, to most of us anyway. But the...thing you still risk a 50-50 chance of getting the boot [for], is if you dare to say that elections are rigged" (Still, 2023, mn.0-1). See also "Big 5 (on S&P 500)" ('tech giants'), "Deep State" [FBI], "Orwell, George (1903-1950)". See also "Mind control", "Intelligence Community (IC)", "Cultural Calendar".

Social Security (OASDI)- (formal: Old-Age, Survivors, & Disability Insurance)

1) The largest item in the US federal budget, the Social Security Trust Fund (est. 1939) will be fully depleted by 2035, 100 years after the *Social Security Act of 1935*. "Once the trust funds are exhausted, the Social Security Administration will be limited to spending only as much as incoming revenues. Retirees could face an immediate 23% cut in their scheduled benefits upon depletion of the OASI fund. At that point, 73 million beneficiaries would be affected.... [facing] an across-the-board benefit cut of 20% in 2035 (on average)" (Peterson Foundation, 2019). See also "Discretionary (US Budget)".

2) "Social Security is supposed to be inflation-proof. It" anything but.... We're getting compensated for past annual inflation, with a 3-month [fiscal year] lag to boot!.... If inflation... [runs] at 100% annually, you'll experience a 25% permanent real benefit cut in a program that's supposed to be neutral to inflation! In short, the lag in the inflation adjustment reduces our real benefits, with the reduction larger the higher the inflation rate.... Earth to Congress, reform Social Security's COLA so the adjustment is made monthly, not annually" (Kotlikoff, 2022). See also "Compound interest".

3) In Europe also, "[t]he pension systems are all broke" (Luongo, 2022, mn.24). See also "European Commission".

See also "Peace Window (& great compromise), the", "Tax shift", "Debt saturation", "Monetary reform", "Primary Sector Economics".

[Ibid]

Socialism, economic- (public sector investment) "Investments in fixed assets in state-owned enterprises were all direct transfers or 'grants' from government budget[s]" (Liu, 2002c). See also "Public Banking", "Dirigism"; "Primary Sector Economics (PSE)".

²⁴⁰⁸ ...often after receiving visits and communiques from the FBI. See also "Deep State". <https://www.zerohedge.com/political/what-will-fbi-not-do> [ZH, 22-12-26].

Socialism, political- (long-20th-century euphemism for [authoritarian] ‘statism’, and/or [totalitarian] ‘communism’; i.e. not so much [direct] handouts from Rothschild, as a much longer [dependency] chain of ‘chinese whispers’-- that eventually pollutes [with lies/‘politically correct’ disinfo] all sectors of society.) See also “Oligarchy”, “Parties, political”, “Academia”.

1) originally a “Marxist” diversion from the (primary) monetary issue (i.e.-- simply ‘who issues and how much’), into downstream ‘fiscal’ issues of how that monetary stream should be directed-- i.e. ‘Having failed to achieve basic monetary competency, “the government” then fixates upon how to grab back (in taxes) what it should not need from the rest of society... resulting in ever-higher taxes and ever-bigger government, as these ‘downstream’ measures are not capable of solving the primary/headwaters nature of the monetary-economic problem. In late stage “Socialism” (the same as with late stage “Capitalism”, and our current “mixed” economy [‘state capitalism’]), “socialized losses”, “zombie banks”, and excessive monetization/duopolization of the political scene will be readily apparent-- as they are all dependent upon the same (unreformed) source of money creation. See also “Communism”, “Lender of Last Resort/Too Big to Fail”.

2) “” (de Tocqueville, 1848,).

3) Wise men have pretty much always looked at it askance. Henry George was going after proto-socialism as simply being unnecessary. Carroll Quigley, a century later, was going after ‘liberal’ ‘socialisms’ structural problems with sovereignty and accountability (sometimes a.k.a. [see also] integrity). Those who are seriously focused on strategic problems still follow Quigley’s diagnoses to this day. And those who are serious about structural reforms still have to know about George’s clarity.²⁴⁰⁹ See also “Wise men”.

4) What’s the big deal? Once you’ve got the population (uncritically) voting for benefits, it’s over, just a matter of time. What’s going on today is beyond parody... You can’t even make a joke out of it... And the bankmoney deception is a necessary tool for buying all that... even though there’s nothing inherently wrong with most small banks. See also “France (and the EU)”, “Transhumanism”.

5) Optimal is when “the winner is the smartest guy, the fastest guy and the best guy, instead of...the big guy who was centralizing lots of things and giving lots of money to Congress.... We have 3100 counties and they look like the Soviet Union, because so much of the money²⁴¹⁰ is pumping out of the federal government. We’re basically buying everybody off and engineering...[things just] to make the Washington-Wall Street [*state-sanctioned bankmoney*] machinery work” (Fitts, 2018t, mn.24-25).

6) “I remember a very old study that showed that people who embraced *socialism* tended to work for very large corporations where they were far removed from the owners and top management, and that *anti-socialists* tended to work or have worked for small businesses where they interacted directly with the owners and were able to see the owner’s perspective” (Sullivan, 2018e).

7) Hence, the magicians’ ruse (diverting attention). “” (Rappoport, 2022f).

See also “Duopoly”, “Hegelian dialectic”, “Statism”, “Lender of Last Resort (LoLR)/Too Big to Fail”.

Socialism, economic → Socialism, political → Communism (totalitarianism)
[‘nationalize’ it] [‘vote’ (parties) for it] [‘appropriate’ (seize) it]

Societas- See “Equity financing”, “Venice, Republic of”, “Sharia finance”.

Society for the World Interbank Financial Communication (S.W.I.F.T.) Code- (est. 1973, Brussels; the world’s leading international I.S.O. inter-bank code). See “Payment Systems”, “Reserve currency”.

²⁴⁰⁹ But of course the idealistic Georgists and (less understandably) the Quigley-ite pessimists were both unaware of “national income” and “parity economics” statistics. See also “Economics, Parity”.

²⁴¹⁰ How much? There “is usually 50% or more of the revenues in that county [that] directly or indirectly come from the federal credit. We have centralized an enormous amount of the US economy and the [US] securities market running through the federal credit...[I]f you take that dark, [then] it means [that] everything in that process goes dark” also (Fitts, 2019u, mn.6). See also “Bank welfare”.

Sociology (& social identity theory)- See “National Identity/Nationalism”.

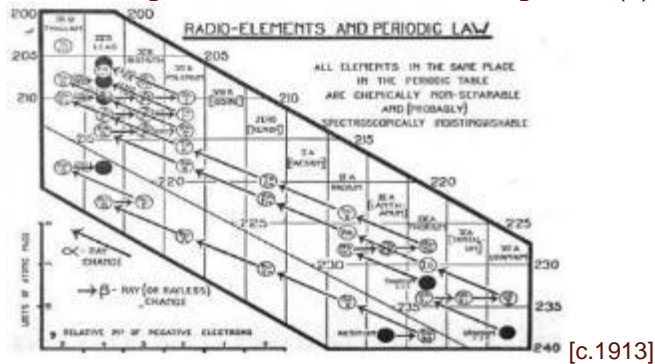

Soddy, Frederick (1877-1956)- (belabored “economics as the science of assumptions energy”²⁴¹¹; i.e. the discoverer of isotopes re-kindled both branches of [what might be called] the ‘reformist monetary-economics’ tree of social science; a.k.a. the proverbial man ‘from Mars’²⁴¹² [Daly, 1980])

See also “Political Economy”, “Academia”, “Usury” [Soddy], “Smith, Adam” [monetization].

“Soddy worked to promulgate an economics that could increase wealth, in the form of available energy, rather than [just the usual] debt” to creditors, hamster wheel type stuff (Morrison, 2007). See also “Wealth”, “Economics”, “Economics, Parity”.

1) Was the father of the tree an embarrassment? “Any reading of the highly sophisticated Soddy (1934) quickly reveals such [20thc-type] labels as.... ‘cranks’²⁴¹³ ...‘agitators’...and...‘conspiracy theorists’ that believe in ‘miracles’...[to be] unfounded defamation.”²⁴¹⁴- Richard A. Werner (Werner, 2014). See also “Conspiracy theorist”, “Projection”.

2) After being awarded the Nobel Prize for Chemistry (1921) for the discovery of isotopes²⁴¹⁵, Soddy, in addition to reorganizing Oxford syllabi for chemistry; then also provided, c.1926²⁴¹⁶, “the earliest and most thorough critique of fractional reserve banking” (Daly, 2016), i.e. a few years prior to Henry Simons & ‘The Chicago Plan’.²⁴¹⁷ See also “Chicago Plan(s)”.

2b) “The post-Nobel laureate’s motivation was simple. “There must be something radically wrong with economic thought and institutions in order for the gift of scientific knowledge to have become such a threat” (Daly, 1980). “It is this absurdity” of man’s abstract money exponentially outstripping the real wealth of the planet (& everyone denying it) “which inverts society, turns good into evil and makes orthodox [E]conomics the laughing stock of science. If the consequences were not the familiar

²⁴¹¹ Sometimes paraphrased as “real wealth” is “something that comes from the energy of the sun” (Morrison, 2007, 157). See also “Hell”.

²⁴¹² “Soddy’s worry about the responsibility of science & scientists to society began with his fear that the atomic energy he and [Ernest] Rutherford had discovered could be disastrous if suitable political controls were not enforced, and [this] led to his abandoning scientific research [in the latter 1920’s]. He lived to see his worst fears realized” in World War Two (Merricks, 1996). “Soddy was in many ways 50 years ahead of his time” (Daly, 1980). See also “Debt cycles”, “Imperialism, American”.

²⁴¹³ The again, as another “revolutionary economist, E.F. Schumacher [1911-77] put it, ‘A crank is a very elegant device. It small, it’s strong, it’s lightweight, energy efficient, and it makes a revolution’” (Boyle, 2002).

²⁴¹⁴ The real scientist did not think much of ‘invisible hand’ (bad) mythology. “Unfortunately...for this argument, inanimate mechanism happens to be my special study rather than that of the biologist. It is the invariable characteristic of all shallow and pretentious philosophy to seek the explanation of insoluble problems in some other field than that of which the philosopher has first hand acquaintance.... The principles and ethics of human law and convention must not run counter to those of [this planet’s] thermodynamics” (Soddy, 1922, 7; 9). See also “Smith, Adam (1723-1790)”, “Bankmoney regime”, “Capitalisms”.

²⁴¹⁵ Actually, Soddy started to turn “away from the study of radioactivity in 1914 and became involved in social and economic issues... [because he was so] critical of the inability of the world’s economic systems to make full use of scientific and technological advances” (Britannica, 2021). See also “World War One”, “Currency Wars, the”.

²⁴¹⁶ Soddy predicted, in 1926, the development of the atom bomb (Daly & Farley, 255).

²⁴¹⁷ Meanwhile, on the *macroeconomics reform* side of the tree, Soddy also (from the 1920’s) “anticipated the basic insights of Georgescu-Roegen and Boulding regarding [what should be] the relation of economics and thermodynamics, and deserves recognition as a pioneer in a line of thinking which I believe will one day be dominant” (Daly, 1980).

atmosphere of our daily lives, [then] they would be deemed beyond the legitimate bounds of [even] the most extravagant [tragi-]comic opera” (Soddy, 1924, 17). See also “Physiocrats, the”, “S’it“, Adam”.

[Don your tragi-comic masks?]

2c) What Soddy called “the ‘flamboyant period’²⁴¹⁸ of using up the [stored] capital stock of coal w’s perceived by...[him] as a ‘very passing phase’, after which the constraints imposed by living on [the daily flow of] energy revenue would be more clearly seen and unmistakably felt” (Daly, 1980). See also “Industrial Revolution’s, ↔ “Monetization & entropization”.

2d) Hence Soddy’s ‘acid test [for the above transition] is that no monetary accountancy be allowed that could not be done equally well by physical counters” (Soddy, 1943, 24). See also “Accounting, ‘Fair Value”, “Accounting” [.’end of], “Commodity money”.

2e) Thus if ‘real’ (or primary sector) “wealth cannot grow at compound interest for long, then debt should n’t either.”If wealth cannot be created *ex nihilo*“ then how can we allow the bankmoney that runs the economy to be “created” by nothing but (government-fiat-backed) promissory notes? “How can we tolerate [for long] the fact that...[the currency] is both created...and [immediately] lent at...interest, while at the same time [also] serving as...[society’s] unit of measure for wealth, which [being real] is incapable of either of those ‘conjuror’s tricks’”? (Daly, 1980). See also “Wealth”, “Reality economics”.

3) Soddy’s 3 “basic reforms... to restore honesty and accuracy to the economic system” were:

a) “100% reserve requirements” for [what would no longer be] state-monetized credit institutions;

- This is already on the way; see also “Mutual funds (& Reform)”.

b] maintaining a constant price-index;

- Apparently Soddy lacked detail here;→ see also “Graham, Benjamin”.

c] & freely fluctuating currency exchange rates (Daly, 1980, 2004).

- We’ve had this since the (latter) 1950’s; see also “Bretton Woods”.

4) Monetary Economics is (still today, as it was then) one of those fields that gets more corrupt and absurd the deeper one goes. Soddy was, in the 1930’s, among the many critics of the (then nearly century-old) “orthodox” British-type banking system: “It is amazing, but nevertheless quite in keeping with the [2nd Industrial Revolution & ‘financial capitalism’] age that is passing away, that until quite recently it was common to ascribe to ‘the moral mystery of credit’ and the peculiar virtues of the British banking system the expansion of wealth that was due to the growth of knowledge. Thus the orthodox fell into *the very same error* that they were and are so fond of ascribing to others-- especially monetary reformers-- namely the absurdity of thinking that all could get rich by means of the printing press & tinkering with the currency” (Soddy, 1934). See also “Hypocrisy”, “Projection”, “Fin de Siecle” (era), “Capitalisms”, “Monetary reform”.

4b) ...and was not cowed, a decade later, by the (then-world-dominating) UK-USA juggernaut of World War 2 and the 1940’s. What is ‘Bankmoney regime’?; wherein the “charlatans and would-be alchemists [i.e. (in reverse order) the bankmoney issuers & their politicians, then *also* (in turn)] become the marionettes of Machiavellian [IC] masters, [in forming] the most dangerous as it is the most ridiculous form of universal tyranny the world has ever been called upon to destroy”²⁴¹⁹ (Soddy, 1943, 6). See also “Bankmoney regime”, “Graham, Benjamin (1894-1976)” [vs. “Bretton Woods”], “Great Extinction, 6th”, “Rentier”.

4c) What is (still) so ridiculous? One simply “cannot permanently pit an absurd human convention, such as the spontaneous *increment* of debt [compound interest], against the natural law of the spontaneous *decrement* of wealth [entropy]“ (Soddy, 1922, 30), and hope for anything other than strategic disaster.

²⁴¹⁸ Soddy meant that “Economic development since the [1st & 2nd] industrial revolution[s] has been in the direction of ever less reliance on the abundant solar flow [or photosynthesis] and towards dependence on the relatively scarce terrestrial [mineral] stock” (Daly, 1980). See also “Industrial Revolution, 3rd”, “Adolescence of Mankind”..

²⁴¹⁹ Analytical historian Carroll Quigley effectively seconded the notion (Quigley, 1966, 1976c).

See also “Monetization & entropization”, “Ecological economics”, “World Par Economy (WPE)”.

[‘May the planet always be solvent’.]

Solvency/solvent- 1) positive equity; assets exceed liabilities. *Insolvent* means that liabilities exceed assets²⁴²⁰ and the business goes bankrupt. Legally, insolvent banks must close. Payment insolvency may occur when there are insufficient funds to pay required obligations on time, and loans are also unavailable, even if equity solvency exists. The 2008 liquidity crisis was a payment insolvency problem. Bank runs occur when banks have insufficient funds to cover withdrawal demands. Banks, unlike other businesses, must balance the books every day. It is easier, however, for banks to hide insolvency than for other businesses, because most of their assets are loans, which may be non-performing-- and auditors are notorious for pleasing their paying customers. See also “Big 4 Accounting firms/Management consultants”.

2) A *cashless society* would help the banks greatly to conceal their insolvency indefinitely. Banks are the only businesses whose solvency is largely determined in Reserves (RAB). If the taxpayers had not been robbed by a bought Congress into taking over the Fannie Mae and Freddie Mac and Student loan guarantees, the entire banking system would probably be insolvent.

2b) “Insolvent firms must not be recapitalized with taxpayer funds”, period (Schwartz, 2009, 23). See also “Bank welfare”, “Monetary reform”.

2c) Nonetheless, the Federal Reserve has often ended up “bailing out insolvent firms. That happened in the late 1980’s... in 2008, and [also back] in the 1930’s. It’s been a continual problem” (Phillips, 2021, mn.9). See also “Federal Reserve System”, “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”.

3) *Quantitative Easing* is a process of offloading bad assets from the bank balance sheets on to the Fed’s balance sheet, in order to (more indirectly) shift the insolvency. They can be buried there, since there is no effective audit of the Federal Reserve’s solvency. Bank insolvency in 2008 was largely caused by addictive gambling in derivatives and the mortgage-backed securities bubble. See also “Federal Reserve audit”. See also “Conservatorship”, “Quantitative Easing (QE)”.

Sovereign debt- oxymoron and d.b.t.; “Debt guaranteed by a national government or its central bank. It is questionable how ‘sovereign’²⁴²¹ a debtor country can be in the face of today’s dependence on IMF dictates of *conditionalities* for rolling over or raising debt levels...” (Hudson, 2015b).

See also “Deceptive Banking Terms (d.b.t.’s)”, “Ponzi scheme”.

[See also “National Debt Economy”]

Sovereign money- (synon. ‘*Debt-Free National Money [DFNM]*’, ‘secure money’ [Ordonez], ‘chartal money’ [archaic], an ‘equity-based’ [Kotlikoff, Phillips] or ‘single-circuit system’; a.k.a. *Vollgeld* (German), ‘state money’ [Werner], ‘public money’ [Yamaguchi, Mellor], ‘constitutional money’ [R. Morrison], ‘narrow banking’,

²⁴²⁰ Hence, “a credit problem... for the Treasury [not the CB] to deal with” (Phillips, 2021, mn.8). See also “Liquidity”.

²⁴²¹ For a thousand years, *sovereign* has meant “the only lord who owed homage [i.e. taxes/interest] to no other, besides the Lord God” (Weber, 1989a, mn.3).

and, specifically in the United States, 'US [Treasury] money' [Zarlenga] and/or 'Just Money' [the Alliance for Just Money]; none of which are to be confused with "Full Reserve banking" [UK] and "100% Reserve", both of which are archaic.²⁴²² "Constitutional, State, Public [money all have the] ...same meaning basically" [Huber, 2014c)]²⁴²³. See also "Huber, Joseph".

- 1) unmediated/direct "real" money, issued directly by the national/"sovereign" government,²⁴²⁴ without interest (a.k.a. 'debt-free'). Sovereign money means no more 'sovereign bonds' (i.e. the national government selling itself). "[H]ere is the point: If the Nation can issue a dollar bond it can issue a dollar bill."- Thomas Edison, in *New York Times*, December 6, 1921. See also "Bonds, government".
- 2) Money, and "especially if denominated in a *national currency*, is no private affair, but a public matter of constitutional importance, comparable to the prerogatives of legislation, jurisdiction, territorial administration and the monopolies of taxation and the use of [organized] force" (Huber, 2018, 5).
- 3) There are many advantages to money being created by the national government without debt. Such "sovereign money in a bank account is completely safe, because it is central bank [RAB] money. It does not disappear when a bank goes bankrupt. Finance bubbles will be avoided, because the banks won't be able to create money any more. The state will be freed from being a hostage, because the banks won't need to be rescued... [in order] to keep the whole ley-transaction system afloat, i.e. the 'too big to fail' problem disappears. The financial industry will go back to serving the real economy and society. The money and banking systems will no longer be shrouded in complexity, but will be transparent and understandable.... [T]here will only be central bank [interbank/RAB] money in our current [checking] accounts at the bank. This electronic money has value exactly like today's coins... The banks can [will then] only work with money they have from savers, other banks, or (if necessary) funds [that] the central bank [treasury] has lent them, [or else [other sources of] money that they own themselves. Banks won't have an unfair advantage over all other market participants any more, as they won't be able to create [TAB] money any more.... [T]here'll only be money guaranteed by the central bank in all transaction bank accounts.... The money will belong to the bank customer, and it won't be lost if the bank goes bankrupt, but it won't yield any interest. Anyone who would like to get interest rather than have 'bank-crisis-safe' [RAB] money can, as now, put their money in a savings account or in other investments that give interest" (Geurkink, 2017) or capital gains. Today's fractional reserve banks "become unleveraged mutual funds... [i.e.] banks' liabilities [are] restricted to equity" (Laina, 2015).
- 4) "Under a Sovereign Money system, there is no longer a split circulation of money, just one integrated quantity of money circulating among banks and non-banks alike"²⁴²⁵ (Van Lerven, 2017). Such a "single-circuit system" would be "easier to manage and to re-adjust flexibly to the economy" (Huber, 2017, 6). See also "Money, 2 classes (layers) of".
- 5) Sovereign money, i.e. a system of single-tier federal funds, "does not need to be backed up by further [superfluous] monetary or financial terms. The sole coverage any fiat currency needs is a productive and competitive economy, delivering the goods and services [that] money can buy" (Huber, 2015).

²⁴²² "100%"-- i.e. the Chicago Plan's *100%-banking* and Irving Fisher's *100%-money*-- was the most prevalent Monetary Reform term in the 1930's (see also: Ch.2), when money & banking still had a lot to do with physical cash redemption. The term "Reserve" [RAB] money itself already has enough multiple meanings without "100% Reserve" adding more entendres to the confusion. Huber lists additional reasons for not using "100%" or "Full Reserve" in conjunction with meaningful Monetary Reform. This is a synopsis of Huber, 2015: <https://www.dropbox.com/s/rot5fz90ytwa18n/Synopsis%20100%20per%20cent%20reserve%20vs%20plain%20money%20%281%29.pdf?dl=0>

²⁴²³ Huber coined the (English) term "Sovereign Money" in the previous decade, implying (from long-standing German notions) that a national government that does not control [as opposed to merely stamp] its own currency (in terms of quantity) is not really in a state of sovereignty. The school of thought is intended to revive Chartalism/State Theory of Money, and has "the most common ground" with "*circuitism*" [Graziani, 2003] and "*monetary quantum theory*" [Cencini & Rossi, 2015] (Huber, 2017, 7).

²⁴²⁴ The less prevalent (albeit older) term '*sovereign money claims*' is also occasionally used by fractional reserve bankers to denote a situation where "the federal government is either issuer or *guarantor*" of "money *claims*" (Ricks, 2016, 33).

²⁴²⁵ In terms of plans for "sovereign" or "public" Digital Currencies (a.k.a. Central Bank Digital Currencies [CBDCs]), it bears reiterating that the "notion of *sovereign money* includes its universal availability as legal tender in *general use*. This excludes complicated restrictions on its availability to particular actor groups, limitation of its quantity in relation to other means of payment, and delimitation of its uses according to particular interests" (Huber, 2018d).

6) Sovereign money, what the Germans call *Vollgeld*, is the best money, since it is lest under the right (i.e. public-accountable) conditions and eliminates the national deficit, while slowing the accumulation of private debt. Reserve (RAB) money is the next best, and TAB leposit') money is the worst-- the most prone to cycles of breakdown and consolidation.

7) *Vollgeld* is not a new idea and, "in the past, had very prominent supporters such as Benjamin Franklin, David Ricardo, Thomas Jefferson, and more recently...Nobel prize winner Milton Friedman. In 1936... the transition to such a [public money] system was developed by the Chicago based professors Henry Simons and Irving Fisher, as the 'Chicago Plan'... [in order to] flatten the boom-and bust-cycles of the real economy. Excessive bank lobbyism of the banking industry and... [plans for World War Two] prevented" the system from being implemented (Stelter, 2018). See also "Imperialism, American".

8) Proponents of "sovereign money" today include: James Robertson, Joseph Huber, the American Monetary Institute (from 2005), Positive Money (from 2012), Ons Geld (from 2014), the *Vollgeld* initiatives of central Europe (from 2014), former Central Bankers like Miguel Ordonez, and certain American Economists such as Ronnie Phillips and Laurence Kotlikoff.

9) "Modern Monetary Theory" (MMT) does not, as of 2020, acknowledge the existence of the term or idea, preferring instead to conflate it with Randall Wray's definition of "sovereign *currency*" (2011), which is another misleading (and also meaningless, catch-all) term.²⁴²⁶ See also "Coined money".

See also "Debt-Free National Money (DFNM)", "National Debt Economy", "Asset money", "Huber, Joseph", "Bank welfare" [.Ordonez], "Mutual funds" [.Kotlikoff].

Sovereignty- (noun: 'that which makes the laws' and is not subject to a 'higher institutional'²⁴²⁷ authority; adjective form: represents a legal commitment of a national government, not of any private entity) "Without sovereignty, I do not think we would say that a state is much of a state, although we might call it that" (Quigley, 1976c-pt.2, mn.119). See also "Military-Executive-Corpocracy (MEC)".

"[T]hey're still our governments and we still think [that] they're running things, even though they're not... [T]hey are [just] in a position of being constantly extorted" (Fitts, 2022n, mn.48). See also "FASAB-56".

1) Due to the public-private blurriness in the *Federal Reserve Act of 1913*, "There is no operational constraint on the [privately-owned, yet sovereign] Fed's ability to make any payment" (Mosler, 2017c). See also "Central Bank".

1b) That's one test of sovereignty. Here's another: certain ("SIFI") banks (from no later than c.2011-12) "have criminal immunity [from US law]. And if you have criminal immunity, [then] you are, de facto, the sovereign, right?"²⁴²⁸ (Titus, 2020c, mn.5). "The reason the... Department of Justice is not prosecuting criminal enterprises... And that is a very, very, serious thing, because if you are an entity, [even] a commercial [cartel] entity...and you have [won] criminal immunity, which is what...[the big/SIFI] banks have, [then] you're basically the sovereign power in the country. The President of the United States does not have [long-term/perpetual] criminal immunity. He might have it temporarily in office. That issue has never been litigated. But the banks [now] have it" (Titus, 2020i, mn.8) See also "Lender of Last Resort", "President of the US (PotUS)", "Trump, Donald" [.OPFOR].

²⁴²⁶ Wray's term 'sovereign currency' is simply a currency that "is national and nonredeemable in the sense that the government does not promise to redeem it for either precious metal or foreign currency at a fixed exchange rate" (Wray, 2011); in other words, not 'sovereign' (debt-free) money at all, but rather what most people would just call a 'free-floating fiat' system, which we've already had for at least half a century.

²⁴²⁷ ...at least not if that (supposedly) 'higher' or 'highest' authority is, in fact, not "high" at all-- but is, rather, arbitrary, illogical, and not making (strategic) sense. "Sovereignty is different [from freedom], because...[it] is not something that we've been given.... I, just by being alive, I'm sovereign. It's like part of my ontology now. By being alive, I am sovereign. So systems...can't take your sovereignty away. But what they can do is that they can make you *forget* that you're sovereign. And that happens all the time...The political system...can make you forget that the politicians...are here to serve you, not the other way around. And it can also make you forget that we don't need politicians to tell us what is right or wrong.... The same with the education systems" (Bjerg, 2021, mn.13-14). See also "Montesquieu" [.ontology, .trichotomy], "Corporations (and corporate 'personhood')", "Parties, political", "Common sense".

²⁴²⁸ "They have a sovereign power that no one [else] in a [constitutional] republic has"; "[w]e have people in the Department of Justice [as of 2012] *telling* [sic] you that these [SIFI] people are above the law... [and] it's in the US Attorney's Manual about *collateral consequences*" (Titus, 2020d, mn.17; 19). See also "Lender of Last Resort", "Congress", "President of the United States".

2) “If you want to have a sovereign government, then a government official needs to be able to say No” (Fitts, 2017r, mn.25). “A sovereign government is a government that has **a**] *Information Sovereignty*. It controls its information and data...[and **b**] *Financial Sovereignty*. It...controls its finances and can operate and finance whatever operations it has within its border. And...it has **c**] a *Sovereign Military*... The US government has lost information sovereignty²⁴²⁹ [from at least the 1980’s or 90’s]. It has lost financial sovereignty now [evident from the FASAB’s ‘Standard 56’ of 2018]. It certainly doesn’t have *operational* sovereignty. The more we depend on private corporations and banks to run the government operations, the more [that] money disappears. And now...[there’s] the privatization of the military and... changes in the law related to military. I would argue [that] we no longer have a sovereign military. We have an expensive military, but not sovereign” (Fitts, 2019f, mn.6-7). “Right now you have the [big] banks and the IT contractors running everything, and that’s why...as a legal matter, they’re liable for the [missing] 21 trillion [dollars in ‘unaccountable adjustments’ from the federal budget over just the past couple of decades]... They are privately liable.... That is one of the reasons [why]... the largest... [subcontract] their operations out” (Fitts, 2019o, mn.19). See also “Trump, Donald”, “Congress”, “Military-Industrial-Intelligence complex”.

3) The power to make war and issue money are the 2 primary criteria of sovereignty. In the US, the Fed is the monetary sovereign, not the government (and since P.A.C. money controls the war decisions, the government is not really sovereign there either). The Central Bank cannot go bankrupt. The CB is sovereign, whether it is private or government. A CB liability may never default.²⁴³⁰ See also “Sovereign money”.

3b) According to historian Carroll Quigley, sovereignty “has **8 aspects**: *Defense*; *Judicious*-- settling disputes; *Administrative* [regulatory] power-- discretionary actions for the public need²⁴³¹; *Taxation*-- mobilizing resources...is what the French government didn’t have [with France’s complex array of currencies and monies] in 1776...; *Legislation*-- the finding of rules and the establishment of rules through promulgation & statute; ... *Executive*-- ...the enforcement of laws and judicial decisions²⁴³². Then [there are] 2 which are absolutely of paramount importance today [in their blurriness & opacity]: *Monetary*²⁴³³-- the creation and [regulated] control of [its own] money and [state currency]-- if that is not an aspect of the public sovereignty [per the privately-owned & mostly-privately-operated (so-called) ‘Federal’ Reserve], then the state is today far less²⁴³⁴ than fully sovereign; and the 8th one...the *Incorporating* power-- the right to say that an association of people is a fictitious [corporate] person with the right to hold property and sue, and be sued, in the courts.²⁴³⁵ Notice: the federal government of the United States today does not [in any clarity] have the 7th and 8th” (Quigley, 1976c-pt.3, mn.300-302). See also “Sovereignty, administrative” [which is also (at least after the 1980’s) in doubt], “Corporations (and corporate ‘personhood’)”, “Transhumanism”.

²⁴²⁹ For example, the PotUS “can’t have a private conversation with the Prime Minister of Australia without 17 intelligence agencies listening and leaking it...to the Washington Post” (Fitts, 2020c, mn.4). See also “Lockheed-Martin”.

²⁴³⁰ This is because CBs don’t issue bonds, or furnish collateral, or borrow. They do issue loans, but as lenders CBs are not exposed to the risk of bankruptcy. CB’s never guarantee redemption in any foreign currency in any significant quantity. The government can go bankrupt whether it is sovereign or not, as in the US sovereign bonds coming from the government [Treasury,] not from the CB, even if you call them ‘the sovereign’s loans and the government is not actually monetarily sovereign. Government bonds and Treasuries may technically default (usually only temporarily) whether they are denominated in the country’s currency or in another currency.

²⁴³¹ Administrative sovereignty “is almost the most important of the 8 aspects of sovereignty, and there is no provision whatever for it in the Constitution of the United States” (Quigley, 1976c-pt.2, mn.123). See also “National Security Agency (NSA)”, “COVID”, “Social media”

²⁴³² Although traditionally of “relative little importance... executive action...[has become] increasingly necessary...[as] communities disintegrated and peoples’ behavior became less & less subject to internalized controls and...[hence more] invasively subject to externalized controls, such as force, duress, threats, fines...”, etc. (Quigley, 1976c-pt.2, mn.129). See also “Bill of Rights”.

²⁴³³ Quigley simply should have, more precisely, used the proper legal term here: *currency* (instead of ‘monetary’). See also “Currency”, “Sovereignty, currency”.

²⁴³⁴ Monetary sovereignty is “perhaps the most important power that exists in a society such as ours today” (Quigley, 1976c-pt.2, mn.130). See also “Monetary reform”.

²⁴³⁵ The Incorporating power “did not exist in the English-speaking world until quite late. It existed in the Roman Law always” and they were all state-corporations, because the *imperium* (public authority) and individual people were the only two legal entities in Roman law (Quigley, 1976c-pt.2, mn.131). See also (roots of the) “City (of London)”.

3c) Hence “[w]e now have a society in America...[and also] in Europe and in much of the rest of the world, which is totally dominated by...[these] 2 elements of sovereignty which...[are] not included in the state structure: control of banking & credit and the corporation.... [It is a mistake to constitute] power... without social responsibility” (Quigley, 1976c-pt.3, mn.355). See also “children”.

4) “Control...[over the aggregate quantity of] money of a realm²⁴³⁶ has always been an element of... [sovereignty], much as [legislative] *lawmaking*, the *judiciary*, [and] *taxation*” (Huber, 2017, 3); and it has been out-sourced. See also “Central Bank”.

5) Hence, “we know that ex-[US] presidents, unlike [since 2012 & the HSBC case] ex-Cartel bankers, are not immune from prosecution, which is why president Nixon needed a pardon²⁴³⁷.... [And thus far the US Justice Department’s] enforcement of the Cartel’s private legal system²⁴³⁸...[has been] faithful to the very letter” (Titus, 2017, mn.47), of CB sovereignty in the US, since c.2012 See also “Financial Stability Board (FSB)”, “LIBOR”, “Feudalism, neo”.

6) How is this sovereignty decided or distributed amongst institutions? “The paramount concern in answering that question...[has usually been] which group is perceived as having the most important common interest and/or the most important rivalry with outsiders. That group will be...chosen to exercise sovereign power, so that it can achieve optimal mobilization of resources to meet the perceived challenge” (White & White, 2008c). See also “National Identity/Nationalism”.

7) In an actual (de facto) sovereign republic, “we [will] elect reliable people who understand that the [sovereign] money...[creation] power has to be used judiciously, or it will cause too much *inflation*. It’s just that simple” (Still, 2019f, mn.5); or at least it will be. See also “Inflation/Deflation”.

See also “Money”, “Bankmoney regime”, “Investment banks”, “Seigniorage”, “Black Budget (US)▲”.

[circulatory systems: who is to be accountable for the quantity?]

Sovereignty, administrative- (sometimes a.k.a. ‘information sovereignty’²⁴³⁹ [Fitts]) 1) Historically, there could be no accumulation of “the aspects of sovereignty” without “bureaucracy”; and hence, in the (relatively democratic) “city-states, like Venice and so forth, which did not have a monarch”, administrative sovereignty²⁴⁴⁰ was traditionally (as we would say today) ‘out-sourced’, or customarily reserved for the bureaucrats or ‘Deep State’ themselves (Quigley, 1976c-pt.2, mn.133). See also “Venice, Republic of”, “Deep State”.

2) 20th century US “independent administrative and regulatory agencies”, however, in “many cases ...have become autonomous. For instance, one of the things they did-- without guidance from any of the 3 main branches until very late-- was to introduce all the inequities of the English-speaking judicial and legal system into the procedures of administration” (Quigley, 1972b). See also “Military-Executive-Corpocracy (MEC)”.

See also “City (of London), the”, “Oligarchy”; “Sovereignty”; Shadow Gate (2020).

Sovereignty, currency- (a.k.a. [informal usage] ‘sovereign money’, ‘government money’)

²⁴³⁶ ...via both *injections* of new money (arterial+), and *taxation/withdrawal* of existing money from circulation (veinous-).

²⁴³⁷ Nixon’s 2nd term was an ongoing constitutional crisis: <https://www.bitchute.com/video/a5xC0puiuXCK/> (Still, 2023b, mn.23-24).

²⁴³⁸ Is this a matter of “Bad Luck” (<https://www.youtube.com/watch?v=A6Zb3T18Jms>), or of “bad law”? See also “Law”.

²⁴³⁹ “You can’t get on the telephone and make a call without the Intelligence agencies and a variety of [unknown] other people having the data and knowing what you’re doing” (Fitts, 2021f, mn.18); vis-à-vis, I guess, ‘what you’re supposed to be doing’. See also “National Security Agency (NSA)”. And “they don’t have the population’s support to take the actions they need to get out of this trap” (Ibid). See also “COVID”.

²⁴⁴⁰ See also “State formation”; the 20th century scholarship on this topic is summarized (and trichotomized) in White & White, 2008e.

Currency sovereignty is what every 'sovereign' government should have; which is not to be confused with sovereignty over all 'money'. See also "[Money, 3 \(contemporary\) Tiers of](#)". See also "Currency", "Money", "Sovereignty", "Estates, 3" [1.1st].

Sovereignty, monetary- (i.e. control over what is to be used for the predominant money in trade; not necessarily to be confused with 'currency sovereignty', which is simply about a government controlling its own currency/'base money') Monetary sovereignty is what (in the future) every democratically-constituted people will have. See also "Currency", "Money", 949pprox.949d949sty", "Estates, 3" [3rd].

Soviet Union- See "USSR (1922-91)", "EUSSR".

Space- see "Secret space program".

Spain- (where 'the system' and 'the physical' [*moneda*]²⁴⁴¹ have always n the same thing)

See also "Apocalypse", "Protestantism".

Special Drawing Rights (SDRs)- (de jure: the unit of account of the IMF²⁴⁴², ISO currency code: 'XDRs'; a.k.a. 'synthetic hegemonic currency' [Carney, 2019]; i.e. what they 'always knew' [all those] "eurodollars" would wind up turning into [just a way of sharing bankmoney 'hegemon' status])

See also "Bretton Woods", "Reserve currency", "Eurodollars", "Monetary reform".

1) Although some sort of 'Reserve Drawing Rights' were integral to (at least the international buy-in for [what was essentially a US-dominated]) IMF in the 1940's; it (Wilkie, 2021,).

See also "International Monetary Fund (IMF)".

Table 1.3. G10 **reserve** holdings with foreign exchange component, 1960s

	US\$ million							
	1960		1963		1966		1969	
	Reserves	Foreign Exchange Component	Reserves	Foreign Exchange Component	Reserves	Foreign Exchange Component	Reserves	Foreign Exchange Component
US	19,359	—	16,843	212	14,882	1,321	16,964	2,781

Japan	1,949	1,577	2,058	1,589	2,119	1,469	3,654	2,614
Total	45,801	9,130	48,789	10,940	51,846	11,881	52,295	15,700

Notes: 1. Residual is mostly gold (priced at US\$35/oz), plus IMF tranches. 2. Minor differences between **reserve** totals in Tables 1.1, 1.2, 1.3 due to refining of Fund estimates
Source: International Financial Statistics—supplement series no. 6: "Supplement on International Reserves", IMF, 1983

[G10 nation 'reserves' through the 1960's (Wilkie, 2012, 26)]

originally created by the IMF in 1969,²⁴⁴³ as an asset to be held in various foreign exchange reserves, and as a hedge against the impending demise of the post-war Bretton Woods system of fixed rates, when "eurodollars" were exploding, and the US was, purportedly, running out of gold stocks at Fort Knox. 3) Although they are typically under the corporate media radar, SDRs, nearly half a century later, are not just hypothetical-- both the USA and Russia offered to use them to bailout the Ukrainian financial system

²⁴⁴¹ The Spanish language uses not the usual 2 words, but only 1-- *moneda*-- "to designate 2 different concepts: *currency* [as an abstract 'unit of account' system] and [actual physical] *coinage*", in contrast to the French, German, or English languages (Sanahuja-Anguera, 2017, 56, n7).

²⁴⁴² SDR's, from c.1972, are only owned and used by IMF member countries, the IMF itself, and a select few organizations licensed to do so by the IMF.

²⁴⁴³ This was, in turn, the implementation of the Sept. 1967 Rio de Janeiro conference agreement to issue the first amendment to the IMF's Articles of Agreement since 1944. The originally agreed upon 'SDR' was initially defined as equivalent to 0.888671 grams of fine gold-- at the time equivalent to one US dollar. After the collapse of the Bretton Woods system in 1971, however, the SDR was redefined as a basket of currencies.

in 2014. And People's Bank of China perma-Chair Zhou Xiaochuan called the SDR "the light at the end of the tunnel for the reform of the international monetary system" (Wile, 2012, 6). As of 2016, the SDR currency basket is purportedly: US dollars (40-43%), Euros (c.30%), Chinese Yuan (c.11%), Japanese Yen (c.9%), British Pounds (c.8%). (Storey, 2017, mn.16-21; based on IMF 2016).

4) "[U]ltimately, there will be a gold component of the IMF's Special Drawing Rights basket.... [because] that is something that these external [outsider] Central banks do want, because it gives them [some] leverage against the dollar..." (Prins, 2018, mn.27-28). See also "Gold standards/bullionism".

5) "Nations will have the option of doing their own [currency] things apart from...[SDRs]. But basically all the... insurance products, all the hedging products that you need to do international trade are all being set up now...[to include] SDRs" (Storey, 2017, mn.22).

5b) 2016-17, in the process of establishing the value of everything in SDR.s (Zang,). First they have to get the people used to the idea of getting rid of cash. Then they'll crash the Bitcoin, and the Special Drawing Rights/cryptos are what's up next... an asset-collection chain that is intended to digitize all assets, for example your house, all known to the police state.

6) How are such assertions supported? "In their current form, SDRs are [in fact] largely illiquid and cannot be converted into dollars or even other currencies in which emerging market debt is denominated", and their institutional progenitor, the IMF, does not have a swap line to the FRBNY (Feygin & Leusder, 2020).

7) In August 2019, Bank of England Governor Mark Carney called for an SDRs-like global *reserve currency* to end any single nation's reserve-currency dominance, attempting to *re-brand* such a (old) concept as "SHC"-- or a new "*Synthetic Hegemonic Currency*"²⁴⁴⁴, instead of (the usual term) SDR's-- "Special Drawing Rights". See also "Reserve currency".

See also "Eurodollars", "International Monetary950pprox.950dDollar-diplomacy (& hegemony)", "Graham, Benjamin (1894-1976)".

Special Purpose Vehicles- (formal: '2ndary market corporate credit facilities' [SMCCFs]; a.k.a. 'special purpose acquisition companies' [SPACs])

1) are "the one way around the Fed...[not being able, de jure, to add TAB-bank] money to the system.... Reserve [RAB] money goes in and [TAB] bankmoney comes out"²⁴⁴⁵ (Titus, 2020, mn.10-11). **Once the Fed [RAB] funds are laundered and monetized through the SPVs, it becomes regular TAB-bankmoney, part of M1.** See also "BlackRock" [JacksonHole].

2) The Federal Reserve "sets up special purpose vehicles (SPV) and lends [RAB?] to the SPVs, which then buy assets or lend. These SPVs can buy assets [in TAB?, that] the Fed is not allowed to buy and they can lend to [nonbank] entities and individuals [in order] to buy certain assets. Under the *Federal Reserve Act*, these SPVs require taxpayer [RAB?] backing from the Treasury... [in order] to protect the Fed from losses. The Fed lends [RAB] to its...Primary Dealers against collateral, and that collateral can [now (as of March)] be anything the Fed decides, including now stocks-- and in the end finally old bicycles."

See also "Money, 2 classes (layers) of".

Specie- See "Coinage".

Spotlight Fallacy- assuming that most-all members or cases of a certain class or type are like those that receive the most attention in the ('professional') media.

See also "Corporate Media Cartel (CMC)", "Fundamental Attribution Error", "History".

²⁴⁴⁴ The Corporate Media Cartel falsely claimed that Carney was calling for a "Libra-like" currency (a term that he did not use [or even imply] in the Aug. 23 speech at Jackson Hole). The BoE governor said, instead, that his SHC concept "would be best provided by the public sector, perhaps through a network of central bank digital currencies" (Carney, 2019). See also "Diem".

²⁴⁴⁵ In other words, "whenever you see a 'Special Purpose Vehicle' in connection with the Federal Reserve, it means that the Federal Reserve wants to do something illegal... [because] the Fed is prohibited from doing certain things....[The Fed is not supposed] to buy assets other than assets that are backed by the *full faith & credit* of the United States government.... They [often] try to swap the 'government guarantee' into 'full faith & credit', and it's a false argument" (Titus, 2021d, mn.8-9). See also "Offshore magic circle".

Stability- In the Old Testament's *Leviticus* 19:36, "the Lord commands his people to keep 'just balances, just weights'. In the US constitution-- Article I, Section 8... the Founders grant to Congress the right 'to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures'. What these mighty powers... seemed to be driving at is fixity. What the [so-called] modern monetary world features [however] is flux. As a unit of measure, the dollar is undefined" (Grant, 2014). Does this seem right to you? See also "Money" [Bindewald], "Currency", "Primary Sector Economics".

Stabilization Program- "Euphemism for an IMF 'conditionality', in the form of an austerity program that chronically stabilizes the debtor country's currency by increasing interest rates and raising taxes so as to deter investment and credit creation. The effect is to make countries dependent on foreign suppliers and [on] further loans and conditionalities, and so on, ad infinitum. (See... *Washington Consensus*)" (Hudson, 2015b). See also "World Bank", "Super Imperialism".

Stablecoins- See "Cryptocurrencies and Stablecoins".

Stages of development, 'the'- "...a euphemism for what Voltaire characterized as the self-centered idea that 'all is for the best in this, the best of all possible worlds'. The hypothesized stages usually are arrayed in sets of three, most characteristically from 1] the *agricultural* stage via 2] the *industrial* stage to 3] the *commercial* [or services] stage, rather than seeing all 3 spheres as developing simultaneously. In practice the...result has [usually] been to advise 'developing countries' to industrialize, by making use of their supposed advantage in possessing low-wage manual labor. This usually involves a loss of agricultural self-sufficiency [especially if the World Bank is involved], pushing 3rd world economies into debt and hence subjecting them to [even more] IMF *conditionalities* that block meaningful development ...[effectively] preventing them [in almost every instance] from implementing progressive economic philosophy.... In the 19th century, financial theorists speculated that economies evolved from 1] a *barter* economy, via 2] a *money* economy, to 3] a *credit* economy. But...[if] money is [always] a form of credit²⁴⁴⁶.... [and thus] emerged from a credit economy [instead of the other way around²⁴⁴⁷... then, conveniently] the result of today's kind of debt overhead is [simply] to carve up and privatize economies, as [large-scale] planning is turned over to international financiers" (Hudson, 2015b). Fanciful? See also "Debt cycles". Innocuous? See also Gaede, 2008; "Sectors of the economy". See also "Teleology", "Zombie", App.C: "1-2-3".

Stagflation- (a.k.a. the 'wage-price spiral' [stemming from commodity a/o asset price inflation]) A condition, typically on the other side of a bubble, "... in which prices rise rapidly without spurring new investment and employment, such as characterized the United States in the late 1970s." (Hudson 2015b); often due to world commodity prices, and/or debt saturation. See also "Petrodollar".

²⁴⁴⁶ It isn't. See also "Sovereign money".

²⁴⁴⁷ See also "Tally sticks".

[other side of a bubble]

State- 1) “a power structure on a territorial basis; and...[it] will survive only if it has sufficient ability to satisfy enough...needs. It is not *enough* [sic] that it has organized force” (Quigley, 1976c-pt.3, mn.255).
 2) The “state is a good state if it is sovereign and if it is responsible” (Quigley, 1976c-pt.3, mn.258). See also “Sovereign money”, “National Debt Economy”.
 See “State formation”, “State capture”.

State Bank- 1) (In the US), either: a) simply a state-*chartered* commercial bank, as nearly all US banks were prior to 1864; or b) (less often) a state-*owned & run* de facto central bank, legally chartered to, f.e. ‘do business as the state of North Dakota’. See also “State Banking’ (era)”.
 2) (In Europe), what they sometimes call their ‘national’ central banks (such as the Bank of Spain), since the ECB became “the central bank” throughout the eurozone in 1999-2000 (even though it is more dependent on its member-constituent banks than is the US Federal Reserve Board). See also “European Central Bank (ECB)”.
 3) “It can provide... a less-corrupt mechanism, protecting the state, protecting their data... You know one of the problems [that] the federal government has, and the reason \$21 trillion is missing, is [that] they were dependent, a depository, on the New York Fed and New York Fed member banks, and look what happened” (Fitts, 2022j, mn.12). See also “Central Bank (CB)”,
 See also “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”.

‘State Banking’ (era)- (a.k.a. ‘bond deposit banking’, ‘bond-secured note issuance’) All bank charters in the USA were-- with the exception of central/national banks-- granted by states, prior to the *National Banking Acts (1863 & 1864)*.

1) Since there were no private banks in the colonial era, banks, as would later be enabled by the constitution of 1787 and empowered by the Supreme Court’s *McCulloch v. Maryland* ruling (1819), banks were slow to be encompassed by coherent regulations. According to Zarlenga, the turning point, from (predominantly) ‘Free’ banking to (substantially) regulated ‘State’ banking was during the Jackson Administration of the 1830’s (when the number of banks in the US first surpassed 500).

1b) Basically, “the states circumvented [Art. 1, Sect.10 of] the Constitution by empowering state-chartered banks to issue [their own] bank notes” (Rhodes, 2012). In addition to the “Bank War”, 1832 also witnessed the first congressional law to require regular reports on the banking sector.

2) Hence a consistent categorization of the 5 eras/stages of FRB would be:

1. 1600’s-1790- pretty much no private banks (which required unique state charter, until c.1836)
2. c.1800-mid-1830’s- ‘Free Banking’ era (minimal and/or inconsistent records & regulations);
3. mid-1830’s-1863- ‘State Banking’ era (state-enforced bonded capital²⁴⁴⁸ securitization req’s);
4. 1863-1913- ‘National Banking’ era (new nationally-chartered/regulated banks compete with SBs);

²⁴⁴⁸ According to *The Encyclopedia of Money*, ‘state banks’ (state-chartered banks’) privately-issued banknotes were secured (a.k.a. ‘backed’), according to state banking laws, simply by “federal or state government bonds”, which had to be “kept...on file at a state auditor’s [a.k.a. comptroller’s] office” (Allen, 2009, 436).

5. 1914-20??- ‘*Central Banking*’ era (private, member bank-owned F.R.S., working in conjunction with other ‘*globalist*’ CBs, and nominally overseen by a president-appointed Washington Board)
- 3) Nonetheless, the entire antebellum 19th century is often simply referred to as ‘the Free Banking era’, because state regulations from 1837-63, though significant, were still rather flimsy in comparison to those of the 20th century. For example there were no bank branches and no deposit insurance plans prior to the Civil War, and only 2 states had reserve requirements. Hence by the 1850’s, “the money supply became a great confluence of more than 10,000 different kinds of paper that continually changed hands, [and] baffled the uninitiated” (Mihm, 2007), all of them free-floating and fluctuating in value.
- 4) Since the mid-19thc; “[n]o country has backed down and...again allowed the issuance of banknotes by private banks that had been the cause of continued banking crises” (Ordonez, 2018). See also “Free Banking (era)”, “Wildcat bank”, “State-monetized credit institutions”.

State capitalism- (a.k.a. ‘late capitalism’) See “Capitalisms”.

State capture- (‘grand theft state’) “It is ill... for the rich unless they rule the state”- Lorenzo de Medici, 1469 (de Medici, 1910). See also “Smith, Adam” [1776].

1) The levers of power within a democratic Republic are designed to be open to meaningful input, debate, and change from the citizenry which it serves and from which it originates. Obviously, this ideal or intended design has not always been successfully (or even adequately) maintained. In most of the democratic republics of today, the primary culprit in the dysfunction²⁴⁴⁹/ossification²⁴⁵⁰/corruption²⁴⁵¹ has been what US president Martin Van Buren referred to simply as “The Money Power”-- i.e. *debt-money war-bond* profiteers (Van Buren, 1867). Just thil-lney (as a weight or measure) is a public utility, and bankers have always wanted to be the ones to meter its use by the public (see also “Deceptive Banking Terms [d.b.t.’s]”). “The very idea of a government, that can create money for itself, allowing banks to create money which the government then borrows and pays interest on, is so preposterous that it staggers the imagination” (Hixson, 1997, 114). Hence the necessity of strategic obfuscation...

2) ...Thomas Jefferson offered only a cautious “summary of the scheme [for a 2nd Bank of the US] as I understand it: but it is very possible I may not understand it in all its parts, these schemes being *always made unintelligible* for the gulls who are to enter into them” (Jefferson, 1813c). In Jefferson’s view, the 2nd Bank (which was signed into existence by Pres. Madison only after the Dec. 184 Treaty of Ghent had formally concluded the British harryments and impressments that led to the War of 1812²⁴⁵²) could be fairly characterized as: a scheme in which “the individual subscribers [banks], on paying their own 5...[million dollars deposit] of cash to Congress, become the depositories of 10.M. of stock belonging to Congress, 5.M. belonging to the states, and 5.M. to themselves, say 20 Millions, with which, as no one has a right ever to see their books, or to ask a question, they may chuse [sic] their time for running away [or running a war], after adding to their booty the proceeds of as much of their own notes as they shall be able to throw into circulation..[T]he subscribers [i.e. initial member banks] may be 1. 2. or 3. or more individuals (many single individuals being able to pay in the 5.M.) whereupon this *Bank-Oligarchy* [.US] or [*“constitutional”*] *Monarchy* [.UK] enters the field with 90.M. of dollars to direct & controul [sic] the politics of the nation. and of the influence of these institutions on our politics, and into what scale it will be thrown, we have had abundant experience. [I]ndeed England herself may be the real... subscriber²⁴⁵³ ... [T]his

²⁴⁵⁰ <http://www.politifact.com/truth-o-meter/statements/2014/nov/11/facebook-posts/congress-has-11-approval-ratings-96-incumbent-re-e/>
See also “Lobbyists”.

²⁴⁵¹ <http://countryeconomy.com/government/corruption-perceptions-index/usa>

²⁴⁵² Although the Treaty of Ghent actually said nothing about these 2 key issues that officially started the war, the Americans’ decisive victory at Plattsburgh (Sept. 1814) had pretty much already decided the geo-political issue of American expansion into the Great Lakes region (a.k.a. one of the 2 ‘keys to the continent’, along with the Mississippi River). A ‘great victory for America’, however, Ghent was not. Treaties also (at least back then) have/had ‘secret clauses’.

²⁴⁵³ When the 1st Bank of the US was liquidated in 1811, it was (only then) revealed that more than 70% of its shares were owned by foreigners, “mostly Dutch and English” (Zarlenga, 2002, 413; Conant, 1909).

state of things is to be fastened on us, without the power of relief for 40. or 50. years”²⁴⁵⁴ (Jefferson, 1813c); conquering by stealth instead of by outright force. See also “Primary dealers (23)”, “Bonds, government”, “National Debt Economy”, “Federal Reserve Audit”.

3) A latter-stage subset of state capture is *regulatory capture*, wherein a preponderance of bank examiners, other regulators, and lawmakers identify and/or acquiesce with financial or other special interests ahead of public interests. As with many if not most social processes, this is not always a wholly volitional or even conscious phenomenon. For example, the late 20th century’s “plethora of banking laws... fostered an extremely formalistic administrative approach, where legal challenges from interest groups have become frequent. This [resultant] political style has been termed ‘*legalistic*’ and is considered... to be an impediment to...change because it makes the political process dependent upon openness, lack of trust, and a willingness to fight over issues” of special interest, thus making it “very difficult for the different players [who have chosen to become] involved to come to a consensus on a common strategy...” (Busch, 2012, 71). Are Legalism and state capture by special/financial interests inexorably inherent to any ‘big government’? See also “Dynastic cycle”, “Big Government (growth of)”, “Boards/Board Systems”.

3b) systemic political corruption²⁴⁵⁵ in which private interests dominate a state’s decision-making processes to their own advantage through opaque channels, that may not be illegal-- i.e. political lobbyists gradually rewriting the laws. “Try to come up with an agency...[where its] regulators are not captured” (Roberts, 2017d, mn.45-46). George Stigler’s Economic Theory of Regulation (1971) said that “regulation would fail because the private interests will capture it...[and] You don’t get any more free market than George Stigler... and he even said... [that] the regulatory agencies will serve the private interests. It’s exactly what happens” (Roberts, 2017d, mn.46). See also “Dynastic cycle”, “Regulation”.

3c) “One thing ought to be clear at this point... [The] US Food & Drug Administration is not in the business of guarding your health. It’s in the business of guarding the health of the chemical and food companies. And [even] the Farm magazines, generally, are not in the business of helping farmers. They are in the business of those who sl toxic technology” (Walters, 1986, mn.18-19). See also “Economics, Parity”, “Food”.

4) Nonetheless, illegality is sometimes obvious, even if media coverage is not: “Don’t you understand, if somebody could steal 4 trillion dollars from the federal government, they control everything” (Fitts, 2015b, mn.12). As usual, “the people who get their hands on this...[the cutting edge] technology and are able to subsidize costs of capital are the ones who’r gonna win...They’ve done that by getting-- basically hijacking-- the federal credit and using it to help centralize power under them... We have to reverse that, and the constitution is the tool... All of their arguments fall down when you realize that they’ve just stolen an enormous amount of money from the federal government, outside the law.... [Today’s] US government doesn’t have *information sovereignty*, and it doesn’t have *financial sovereignty*” (Fitts, 2017o, mn.16-17). See also “Black Budget” (for how many trillion\$ went missing when), “Sovereignty”.

5) when the lobbyists’ numbers, knowledge, and financial power surpass those of the elected representatives, their staffers, and the campaign contributions of non-lobbyists. See also “Lobbyists”, “Congress”.

[...& the Intelligence Community hasn’t intervened yet]

²⁴⁵⁴ Although Congress in 1816 only granted the 2nd Bank of the US a standard 20 year Charter, the member banks (and the banks behind those banks) originally asked for 40 or 50 years.

²⁴⁵⁵ “Secrecy leads to privilege, and privilege leads to corruption” (Fitts, 2016b, mn.42).

6) The greatest enabler of state capture, however, is simply when monetary “theory is seriously underdeveloped.... [where] systematic treatment... [is] not to be found”²⁴⁵⁶ (Ricks, 2016, 12). See also “Glorious Revolution, the”, “Hegelian dialectic”, “Owners”, “Fin de Siecle”, “Reform, false”, “Bush-Clinton Dynasty”, “Creney”, Bank of International Settlements (2018).²⁴⁵⁷

[1-termer Van Buren called them out...²⁴⁵⁸

[‘Tinkering’ with the (original) apparatus of State Capture, c.1784²⁴⁵⁹]

State formation- (a.k.a. ‘state theory’) “Deal me in and do your preaching” (Fagan & Becker, 1970). See also “Religion”, “Civilization”.

1) from “the village level” (a.k.a. ‘chiefdoms’ [i.e. ‘using tally sticks for credit & money’]), to “Kings” (i.e. ‘you don’t vote for it anymore’). See also “Anthropology, of credit & money”.

²⁴⁵⁶ Has such condition improved from two centuries ago, when Jefferson wrote to Albert Gallatin: “We are now without...[a] common value of property, and private fortunes are up or down at the will of the worst of our citizens... As little seems to be known of the principles of political economy as if nothing had ever been written or practised on the subject, or as was known in old times, when the Jews had their rulers under the hammer. It is an evil therefore which we must make up our minds to meet and to endure as those of hurricanes, earthquakes and other casualties” (Jefferson, 1815b). See also “Currency Wars, the”, “Bernays, Edward (1891-1995)”.

²⁴⁵⁷ <https://www.bis.org/statistics/c1.pdf> (i.e. Total vs. International debt securities). See also “Owners, the”.

²⁴⁵⁸ Whether America’s 8th president was rewarded with the following little ditty (a W.H. Harrison 1840 campaign song) due to his antagonizing of “The Money Power”, or to his architecting of ‘the modern’ 2-party political system in the US, is unclear:

“Who never did a noble deed? Who of the people took no heed? Who is the worst of tyrant's breed?
 Van Buren!
 Who, while but a little boy, Was counted crafty, cunning, sly, Who with the wily fox could vie?
 Who when an urchin, young at school, Would of each classmate make a tool, In cheating who the roost would rule?
 Van Buren!
 By scheming who to England went, By intrigue who is President, By proxy who has millions spent?
 Who wants to bring the poor man down, To work a week for half-a-crown, Such [that] t[w]enty seven monarchs [will] own?
 Van Buren!
 Who when distress and want was ours, Profusely scattered golden showers, To buy French Artificial flowers?
 Who never had an honest thought, Who to their senses others brought? And has himself a Tartar caught?
 Who like the wily serpent clings, Who like the pois'nous adder string, Who is more base than [the] basest Kings?
 Van Buren!
 Who rules us with an iron rod, Who moves at Satan's beck and nod, Who heeds not man who heeds not God?
 Who would his friend his country sell, Do other deeds too base to tell? [Who] Deserves the lowest place in Hell?
 Van Buren!”- <https://mudcat.org/thread.cfm?threadid=83400&threadid=83400> [& also this author’s high-school history textbook, in 1984]

²⁴⁵⁹ The caption of Humphrey’s “The State Tinkerers” (1784) reads: “*The [English] National Kettle, which once was a good one, For boiling of Mutton, of Beef, & of Pudding, By the fault of the Cook, was quite out of repair, When the Tinkerers were sent for, — Behold them and Stare. The Master he thinks, they are wonderful [and] Clever, And cries out in raptures, ‘tis [i.e. Empire is] done!/now or never! Yet sneering the Tinkers their old Trade [usury] pursue, In stopping one Hole, they make Two!*” Interest typically doubles the “loan” amount that is to be “re”-paid. See also “Deceptive Banking Terms (d.b.t.’s)”, “Industrial Revolution, 2nd”.

2) “The Chinese Neolithic²⁴⁶⁰ cultures... (Longshan, Hongshan, and Liangzhu)... can be compared with the Ubaid in southern Mesopotamia and the Naqada in Egypt, and perhaps the pre-Harappan villages in the Indus valley, in which dense, hierarchical networks of villages competed for territory and resources” (Brooke, 2014, 186); whereupon “[p]opulations that were in some way *circumscribed by ecological* gradients... often accepted, or were forced to accept, the superimposition of ritual and military elites over the basal stratum of Neolithic village life” (Brooke, 187). See also White & White, 2008d (state theory), “Eras of (Monetary) History”.

3) The “hearths of early civilization”-- the Tigris-Euphrates, Nile, Indus, and Yellow River valleys, in addition to coastal Peru-- were all “located in a wider context of relatively arid mid-to-tropical latitudes.... They took the most time to develop in China, where the ecologies of the great river systems... [were] the least circumscribed among the early hearths... [But] each of the early hearths was particularly susceptible to climate change and fluctuation... The Neolithic peoples of these hearth regions were... poised on a climatic hair trigger”²⁴⁶¹ (Brooke, 2014, 189). See also “Religion”, “China”. See also “Money”, “Corruption”.

State-Monetized Credit Institutions (SMCI's)- (synon. ‘monetary credit institutions’, ‘the banking sector’ [Bailey, Keen]; archaic: ‘fractional reserve’ institutions?, d.b.t. ‘depository institutions’²⁴⁶²)

1) inclusive term for all financial institutions that are currently allowed to use Central Bank/Reserve money (RAB): the (national) Treasury/Exchequer, the Federal Reserve/Central Bank, all *commercial* banks, credit unions ²⁴⁶³, and *thrifts* (S&L’s & Mutual/Savings banks, deregulated in 1980-82).

2) Since the 1980’s-90’s, investment banks, merchant banks, and the vast majority of thrifts, in addition to commercial banks and credit unions, have also been “**Fractional Reserve institutions**”-- allowed to issue new currency into the economy whenever they grant TAB loans (or charge **overdraft fees**).

2b) In order to do this, all **state-monetized credit institutions** must have a ‘reserve account’ at the central bank; “commercial banks, savings banks, thrift institutions, and credit unions, are required to maintain reserves [RAB] against transaction deposits [TAB]” (Feinman, 1993, 570).

3) Amongst the approx. 13,000 M.C.I.s in the US (2017), 43.1% were *banks* [with 61.3% of assets], 50.6% were *credit unions* [27.5%], 6.3% were *savings banks* [11.1%] (Berger, et al, 342-44); with remaining share 3.4% (with 0.01% of assets) presumably going to the 750 or so *savings & loans*. See also “Banks”,²⁴⁶⁴ “Criminalization of Banking”, “Financial Intermediaries”, “Nonbank Financial Institutions (NBFIs)”.

State Theory of Money- (UK synonyms: ‘currency theory’, ‘currency school’, ‘currency teachings’, ‘chartalism’).

“[M]oney is a creature of the legal order.”- Georg Knapp, 1924, 92–95 (Huber, 2013), whether it is official state ‘currency’ or not.

²⁴⁶⁰ “Japan saw a trajectory broadly analogous to China’s Late Neolithic, with the rise of the Early Jomon settlements around 5000 BC, preagricultural but with elaborate ceramic traditions, grading into the classic Middle Jomon after 3000 BC...” (Brooke, 2014, 186).

²⁴⁶¹ The Indus Valley/Harappan hearth was on substantially less of a ‘hair trigger’ than the others. 21st century scholarship has even “proposed that Harappa was unique in its lack of any evidence [found thus far] for defense or war... [arguing] that a lack of conscription in the wider India Valley allowed the Harappans to channel their efforts into commerce rather than conflict... [T]he slow, steady, non-catastrophic retreat of the South Asian monsoon also provides a significant point of contrast with the emergence of warlike states in Egypt, Mesopotamia, and China” (Brooke, 2014, 190).

<https://www.etymonline.com/search?q=money>

²⁴⁶³ This book is primarily from a USA perspective. In the UK, however, “credit unions are *not* banks, since they are not allowed to lend to firms in meaningful amounts, and don’t have a banking license” (Werner, 2016c). Credit unions in the UK “aren’t allowed accounts at the Bank of England, but must use one of the high street banks to handle their members’ deposits, withdrawals and loans. Senior staff at the Bank of England... [however] are very interested in proposals to open up access to the Bank’s payments... [system to credit unions]... breaking the monopoly of the high street banks” (Jackson, 2012).

²⁴⁶⁴ “Banks” is often used as a synonym/shorthand for (what are actually) “**monetized credit institutions**” (d.b.t. ‘depository institutions’) in this book, as they comprise the majority of the **SMCI** (archaic: ‘fractional reserve lending’) sector.

1) First given its name by the German monetary theorist Georg Friedrich Knapp (1842-1926) in *The State Theory of Money* (1905, transl. into English, 1924...), the theory also is known as *Chartalism*. It describes governments as giving value to money by accepting it in taxes (as distinct from simply declaring it *legal tender*)²⁴⁶⁵ (Hudson 2015b). “To-day all civilized money is, beyond the possibility of dispute, chartalist” (Keynes, 1930, 5). Michael Crawford, “the great specialist in Roman republican money...[also surmised] that money [that which carries the stamp] was probably invented so that official payments (taxes, pay for soldiers, tributes, etc.) could be done conveniently” (Sanahuja-Anguera, 2017, 61). See also “Graeber, David”.

[He who has the... most reliable revenue stream in the world]

2) But “state money” *de jure* (i.e. the government simply determining the monetary ‘unit of account’) these days, is not necessarily the same thing as “state money” *de facto* (government-created money). This ambiguity goes back to Knapp’s original stipulation of the term (as merely a unit of account). See also “Modern Monetary Theory’ (MMT)”.

3) Actually American Henry George’s observation-- that government certificates would circulate without problem “if instead of promising to *pay* anything at all, they were simply made *receivable* for public dues [taxes, etc.]”-- (George, 1888), predates Knapp’s definition by 17 years.

4) Knapp, moreover, “was not very outspoken of the [bankmoney] issue. He considered bankmoney rather casually, apparently not yet grasping its potential. [A decade later,] Keynes did, but [he also] assumed a sufficient degree of central bank control over the banks’ credit & deposit creation.... The *state theory* of money was thus [quickly] wedded to the *bank credit theory* of money. The [global] monetary system was considered [to be] a central bank-led sovereign currency regime that also includes private bankmoney as far as deemed admissible or useful. In fact, however, the system [pretty much from the 1930’s in the US, 1950’s in the UK, 1960’s-70’s in Europe, and 1970’s-90’s in Latin America] has mutated²⁴⁶⁶ into a regime of private bankmoney backed by central bank and government, and...[let’s face it] built on pure Banking doctrine” (Huber, 2017, 93). See also “State capture”, “Bank welfare”.

²⁴⁶⁵ “[T]he money of a State is not what is of compulsory general acceptance, but what is accepted at the public pay offices...” (Knapp 1924: vii). See also “Legal tender”.

²⁴⁶⁶ Fmr. Treasury official Morgan Ricks sees the same trend materializing in the US. “The whole design of New Deal bank regulation was that private sector [TAB] “money creation”... would be confined to these *special* entities called ‘banks’ that would essentially be [RAB] *franchisees* of the state.... Money creation was [always] understood to be a public function. Bank [monetized credit institution] chartering was [just supposed to be an] outsourcing of this function. Chartered banks were required to inhabit a special institutional environment...[in return for] a robust supervisory apparatus.... Banks were chartered pursuant to regulatory discretion, under a ‘*public convenience and necessity*’ standard, [just] like a public utility. This wasn’t a licensing system to regulate a private activity; it was government **procurement**-- [i.e.] outsourcing or franchising.... The [2008] financial crisis happened [simplifying somewhat] because we let private sector money creation get out of control. I’m talking about the creation of dollar-denominated deposit [TAB-bankmoney] substitutes...[like the] Repo [market].... I think this is the wrong way to think about this. We really shouldn’t want the Fed directly administering/suppressing the borrowing rates of dealer firms and *hedge funds*. That’s just bad. It’s bad to have all these private firms glomming onto an organ of the state.... We end up with a system of crony capitalism... it’s pretty awful” (Ricks, 2020b). Monetary theory matters. See also “Credit theory of Money”, “Separation of Powers”, “Civilization, Western”.

- 5) To be clear, in a 21st monetized world, it certainly “needs to be [unambiguously] determined by law what shall be money in the sense of currency in general [public] circulation, under whose control and responsibility modern fiat money shall be created, according to what procedures, and who shall benefit from the seigniorage” (Huber, 2013, 3); regardless of what percentage of that (legally defined) public money supply is to be created by government or by other (probably less transparent) institutions. Most Americans are not aware that the current U.S. Code-- still following a long tradition-- does not define ‘money’ in any approximation of clarity or reality with what exists today. See also “Money”.
- 6) “The idea is *constitutionalist*... that money [measurement] is a part of the state sovereign prerogatives, comparable to the prerogative of law-making and the monopoly of taxation...” (Huber, 2013b, mn.6). The main idea of any *currency teaching* is “the separation of money [creation] and banking, the separation of [public] money and [private] credit.... Basically it says [that] banks can and should be free enterprises; but they should not be allowed to create themselves the money on which they operate. That’s the important thing. And *banking* [bankmoney] *teachings*²⁴⁶⁷ of course...[laughing] they don’t agree” (Huber, 2013b, mn.8). See also “Bankmoney regime”, “Reform, false”.
- 7) The “present-day state theory of money”, however, “has mutated into a theory of [merely] state-backed commercial bankmoney...[and] now represents Banking teaching rather than Currency theory” (Huber, 2017, 51), largely due to the post-war dominance of Keynesianism. See also “Modern Monetary Theory’ (MMT)”.
- 8) Genuine “currency theories, as opposed to banking teachings... **a**) separate the *creation* of money from the *use* of money in banking... [and **b**) make] the control of the quantity of money the task of a public authority”; there have been 2 such “currency theory” approaches over the past century-- “100% Reserve” and “Sovereign money” systems-- [and] “equating both kinds of approach is misleading... [because achieving “currency theory” goals] requires progressing beyond *any* type of reserve, in favor of a system that does not need backing-up by reserves anymore...”²⁴⁶⁸ (Huber, 2015).
- 9) Hence a *de facto* “Chartalist” (monetarily grown-up) “world is just being born. If our money is no longer attached to a commodity, gold, [then] it is therefore underpinned entirely by the state [a.k.a. whomever the state has delegated that sovereign power to]. But the state is yet to catch up and realise that it, not private banks, should sit in the driving seat of...[an accountable] monetary system. And society has not yet recognised the transition, a delay which is visible in mainstream economics-- and in its impact on our lives” (Macqaurie, 2018).
- 10) We the people (citizenry) are, at the end of the day, responsible for “our” State or public sector. It is up to us-- not someone else-- to get the State to behave competently and not criminally. Until then, one “could liken the situation [of ever-more monetary labels without consistency in monetary theory] to going to the grocery store and buying a can identified by distinct stickers that, respectively, read ‘nuts’, cryptonuts’, and ‘fruits’, and opening it later only to discover that it actually contained smoked ham” (Vergne & Swain, 2017, 208).
- See also “Money”, “State capture”, “Bankmoney”, “Full Reserve banking”, “Sovereign money”.

²⁴⁶⁷ While the mid-19th century British “Currency School [“teachings”] saw excessive issuance of notes by private banks as the reason for excessive inflation, the Banking School [“teachings”] thought the amount of money in circulation was a *result* of what happened in the economy, instead of a *cause*” [i.e. that GDP Δ = the velocity of *already-existing* money changing hands; not of *new* money creation] (Sindreu, 2016). See also “Inflation/Deflation”.

²⁴⁶⁸ Mid-20th century “100% Reserve” plans may be thought of as forerunners, or a ‘half-way house’, to contemporary 21st century post-‘Reserves’ monetary reform. See also “Sovereign money”.

[George; Knapp]

State's Rights- (the traditional remedy for excess Statism-Imperialism)

1) Look beyond the sales people, to the actual budgets and numbers, and “what you will find is that in many governments around the country there has been a steady deterioration [in integrity], as corporations get in, get control of these different [state & local] operations...[to where governments] get dependent on the corporations, and the corporations do not have [sufficient] integrity [to be the government]. So...we've just seen... now a whole group of state AGs moving to throw BlackRock out of state business. They're saying 'Why should we put money in the pocket of a company that's doing things that are bad...' They're [simply] looking at their budget and their delegation of responsibilities budget and saying 'Why should we give money to somebody who's destroying our tax base?'" (Fitts, 2022j, mn.41-42).

1b) It is sometimes overlooked that the 20thc rise of Big Gov't was not unilateral or only for 'the Feds'. The states are not defenseless. “One of the things that a state can do is [simply] remove from its contract budget, [or] from its asset management money, [or] from its depository and custodian & trustee functions-- or from the underwriting business-- It can remove corporations [from its payroll], and banks...[that are deemed to be acting with insufficient] integrity. They also... have the ability to remove a [corp.'s] certificate of good standing...[meaning that] it cannot do business in the state.... 'Doing business in our state requires that you do not have an organized crime business model" (Fitts, 2022j, mn.42-44). See also “Big...”

1c) “Now...[this is also] a political matter”; f.e., removing a Big 5 Banks from the state's “depository or underwriting functions...[and] there's going to be tremendous political pressure.... I would love to see the state AGs point out that...[the Big Banks] really don't [have TBTF & SIFI immunity, which is a concept] completely outside [of] the [US] constitution...[and]...outside the law... Those banks need to be stripped of their [de facto, from c.2012] immunity from criminal prosecution for criminal behavior. There's [at least] \$21 trillion missing from federal [gov't] accounts, and they ran them, and...the New York Fed...[USG] depository...[T]he state AGs have all the wherewithal...to do it... The question is do they have the support, politically, of enough people in the population-- up against a media that is very dirty” (Fitts, 2022j, mn.44-46). See also “Lender of Last Resort (LOLR)/Too Big to Fail (TBTF)” [.SIFI banks], “Owners, the”, “BlackRock”, “Corporate Media Cartel”.

2) It's not the 20th century (fox-guarding-the-hen-house) anymore. “The thing you need to understand about Detroit is that they're just ahead. All over America, you have fantastic amounts of federally-funded infrastructure. And if you look at the long-term costs of it...it's gonna bankrupt all these towns, and they're just gonna have to let it go.... It achieves central control but destroys the economy.... It's like getting a body out of addiction....” to corrupt and imprudent federal 'freebies' that are (in fact) anything but free over the longterm (Fitts, 2022j, mn.18-19). See also “FASAB-56”. See also “Imperialism, American”, “COVID' Op”, “State Banking' era”.

Statism- (excessive and/or imprudent belief in/worship of the tissue of laws [or its figurehead]; a prerequisite for 'legalism'; a.k.a. 'Hollywood east'; not to be confused with State Theory of Money [which is

simply about keeping things clear]; i.e. an inevitable consequence of [late-stage (overdoing it with the)] 'monetization'²⁴⁶⁹) See also "Imperialism".

"[W]hen he speaks of a whole prior to the parts, what does this mean but the [imagined] idea of the state prior to the existence of it in fact?" (Jowett, 1885, xix). See also "Philosophy", "Constitutions".

"[W]e...[have become] like classical [Late] Antiquity. We're trying to, in our society, to grind down individuals into identical atoms in a mass culture, in which all [non-dominant] communities are dis-approved."²⁴⁷⁰- Carroll Quigley, "Public Authority and the State in the Western Tradition" lecture, 1976

See also "Imperialism", vs. "Civilization, Western".

1) [broadly defined] when state money tokens (a.k.a. nothing) are required before you can get anything.

1b) [more tightly] when control of this monetary aggregate (i.e. new money creation) is (still) not enough (control). See also "Keynesianism", "Conditioning", "Mind control", "Great Extinction, 6th".

1c) Why? To the extent that *homo sapiens* ('ape who knows'), a.k.a. human beings, are:

a) ...always some combination or negotiation of these 2 primary factors, and

b) ...always 'economic' creatures or beings (from negotiating their own [and/or others'] mortality)...

It follows that (at least according to Carroll Quigley), in the Ancient days, everything that you got, which made you a human being, you got from your (Age of Agriculture; "classic" civilization) community. And classic civs. had this in mind: "One of the reasons they built up a totalitarian state is this: Classicists for centuries could not see that there was a difference between a society and a state. When Aristotle says the *polis*... is a *koinonia*...or community found in a community, he means the totalitarian group which gives you everything. He says [that] a man cut off from the polis is not a man. He just looks like a man. He's like a thumb cut off from a hand. It looks like a thumb. But it isn't. It's just a piece of meat. So the [key] word [is] *polis* in Aristotle, and in [even more totalitarian] Plato... [T]his is the 4th century [BCE, and] ...they continued to find it utterly impossible to see the distinction between the *society* in which you live, which gives you everything, which makes you a man, rather than some kind of a, animal, and the *state*, which has the monopoly, or the large part, of the political power in that society" (Quigley, 1976c-pt.1, mn.21-23). So they failed to recognize something that hadn't existed before. See also "Separation of Powers".

2) "One of the first ones to do that [recognize & reject the totalitarian²⁴⁷¹ polis] was Epicurus [341-270 BCE], who... said all he wanted to do was to sit down in a quiet garden with his friends and talk. And ignore politics" (Quigley, 1976c-pt.1, mn.25).

2b) Epicurean *anti*-statism, however, was surpassed in the post-Roman middle-east, where "for Islam, there is no Arabic word for the state. And you may reach the point that the Arabs tended to reach, which was that you trusted no one except your close relatives" (Quigley, mn.17).

3) In temperate lands, however, regular "practice" [often in contrast to propaganda] recognized that "the material interests of most princes were served by more law and order. More law & order improved *revenues*. Regular revenues paid for the regular armies that could impose more law & order and squeeze [still] more revenues-- thus further increasing the central power. With this [double-entry bookkeeping-driven] increasing centralization of the state, the modern relationship between the central authority and the individual subject and taxpayer began to take shape. So [too] did the 'representative institutions'-- the Councils, Parliaments, [and] Estates that mark the modern West, and that are all related to [some sense of justice for] taxes. When states and rulers no longer turned for aid to vassals, but to all [sic] their subjects, they had [of course] to win their consent" (Weber, 1989d, mn.7). See also "Power", "Propaganda" [Bernays].

²⁴⁶⁹ "This is because (that ubiquitous) "currency" is simply state credit that circulates. Hence (in a functional-currency economy), "people behave as if [that] Virtual Wealth were real, because at an individual level [that] money is easily exchangeable for [real] physical assets" (Daly, 1980). See also "Ponzi", "National Debt Economy (NDE)", "Monetization".

²⁴⁷⁰ This means that (increasingly) "[e]verything is a bureaucratic structure, and brainwashed people who are not personalities are trained to fit into this bureaucratic structure and say: 'This was a great life'-- although I would assume that many on their death beds must feel otherwise" (Quigley, 1976c-pt.3, mn.413). See also "Imperialism", "Slavery", "Serfdom".

²⁴⁷¹ "[T]he state in Classical Antiquity was totalitarian, because it was regarded as a [familial] community" (Ibid). See also "Ethnic (National) Identity".

4) In the 21st century, “It has technicians, and as they move closer to becoming full-fledged robots, they seek to make humans over in that image” (Rappoport, 2015b). “Plotline: people were once strong, independent, resistant, and highly suspicious of all efforts to entrain them into cartoon versions of themselves. But after enough [neuro-linguistic] messaging [and payola/feeding], they...[nonetheless conformed to becoming] docile” (Rappoport, 2020i), or scientifically domesticated, like most any other animal. See also “Legalism”, “Bernays, Edward (1891-1995)”, “Corporate Media Cartel/6 Sisters”.

5) The basic dynamic is that (throughout most of recorded history anyway) the larger a state apparatus becomes, the more that its institutional culture attracts people with the wrong kind of motivation,²⁴⁷² putting into motion (if not constantly inoculated against) a snowball effect. State functionaries all-too-often “define themselves, to a significant degree, as having [attained] power by violating their own rules. That’s one of the key ways in which states demonstrate the supremacy of their power...that they’re the one group that doesn’t have to obey its own rules” (Assange, 2018, mn.33-34).

6) This is hardly a new observation. “For most of the agrarian period, the state enriched the few at the expense of the many: gains from pay and benefactions for public service often paled next to those from [the more direct path of] corruption, extortion, and plunder. As a result, many premodern societies grew to be as unequal as they could possibly be [without intervention from neighboring states], probing the limits of surplus appropriation by small elites under conditions of low per capital output and minimal growth” (Scheidel, 2017, 5). See also “Malthus, Thomas (1766-1834)”, “Japan model (asphyxiation)”, “Graeber, David”.

7) The blinkered naivety of statism was more understandable a century ago, when Americans at least had less experience with its failings (in basic veracity and straight-forwardness, yet alone in achieving anything near its P.R. and hype). For example: “The benefits which will accrue from these regional, or, as named in this bill, Federal reserve banks are great and many. The reserves of this Nation, which are needed in times of financial distress and stringency, will be held by those who have a public responsibility for their just and proper use, and not as now, by those who have such responsibility and no purpose of public benefit in their use.... These Federal reserve banks will become to all the banks of this country what the Bank of England is [sic] to the English banks, [and what] the Bank of France is to the French banks.... I am satisfied that the Federal reserve board when constituted will wisely, faithfully, fearlessly, and patriotically discharge the duties conferred upon them to the benefit of the whole of the country and without favoritism to any.... I believe the present President of the United States, animated by only lofty and noble principles in all of his work, will select as members of this Federal reserve board men fully equipped, men with noble purposes and whose administration of their office will redound to the great betterment of this Nation.”- Sen. Claude Swanson, Democrat of Virginia, President Wilson’s pointman in passing the *Federal Reserve Act*, Dec 8, 1913 *Congressional Record* (Swanson, 1914, 430-32).

A *statist*, as demonstrated above, is one who fails to entertain any distinction between the motives & inclinations of the 1st Estate (government people) and the 3rd Estate (non-government ‘working’ people). See also “Estates, 3”, App.C: “1-2-3”.

8) “Feeling good about government is like looking on the bright side of any catastrophe. When you quit looking on the bright side, the catastrophe is still there.”- P.J. O’Rourke. See also “Big Government”.

9) **All statist**s have a heavy hand; and legislation, to the extent that it is taken seriously, should be one of the last resorts, not one of the first. See also “Lunatics”, “Technocracy”.

10) States are of course not God (or any other personification for that matter), but have always been established, as with most any public space, in order to do a primary task of God’s bidding-- that is distinguishing between that which is true, and that which is untrue, primarily, of course, in terms of measures and scales (a.k.a. ‘honest brokering’ between the various constituents and interests). See also “Lies”, “Reform, false”.

11) To transgress beyond this (i.e. **justice**-- in territorial integrity, police, courts, [non-fraudulent] systems of weights & measures, some educational-research institutions, and the prevention of private monopolies),

²⁴⁷² “Those people who don’t control themselves tend to want to control the rest of the world.... That’s the key... don’t try to control anyone else than yourself” (Myer, 2018, mn.52-53).

...and to instead rely upon the state or government for more specific and narrow objectives is **simply to invite corruption**; for such “a tendency short-circuits the role of citizenship...[i.e. the watchdogging of-- not cheerleading for-- the public sector & its public servants] and seems [instead] to view constitutionalism as a set of...predetermined outcomes, rather than as a [civil] process of citizens [being] involved in the [duty of] working out...mutual hopes and needs through the use of commonly accepted decision-making rules and processes” (Lutz, 2006, 15). See also “Corruption”, “Civil National Identity (CNI)”.

11b) “The task [then] is [simply] to explain when the state chooses to invoke public law to curtail private activities, or not” (Pistor, 2020b). See also “Power”, “Lobbyists”.

12) “There is no ‘federal government’...There is a **budget**. There is a money [de facto governance] mechanism. It...[creates Federal funds-RAB/base] money, and it spends money.... [In today’s] Washington, all of the cashflows are controlled and operated by Defense contractors and [the big] banks. There is no government official who controls any of those lines of spending.... Everybody feeds off the pie” (Fitts, 2020k, mn.25). See also “**Military-Executive-Corpocracy (MEC)**” [Lockheed-Martin], “Dynastic cycle”. See also “National debt economy”, “**Creney**”, “History”, “Hegelian dialectic”, “Orwell, George”, “Parties, political”, “Great Leap Forward, the”, “Scientific Management”, “Burien, Walter”, “Separation of Powers”, “Mind control”, “Devil”.

[old light...new windows]

[See also: SCTV, 1982²⁴⁷³]

Statistics (quality of)- “The available statistical evidence is so inadequate in all [the] European countries... [E]xtensive study of...[an economic] subject... with a careful analysis...[is facilitated by] the much better American materials” (Quigley, 1966, 458-459).

See also “Regulation”, “Economics, ‘Parity’”, “United States, the”.

Statistics (warping of)- Has the economy (GDP; ‘money changing hands’) grown since 2008-- or just the statistics? 1) “They make it grow on paper [mostly] by under-counting inflation. If you don’t fully account for inflation, [then] you start measuring inflation as ‘growth. And... that’s what they’ve been doing [more than usual] for a decade, because [unlike with previous ‘recoveries’] you just don’t see the [accompanying] signs of a strong economy. Where is the wage pressure?” (Roberts, 2018c, mn.30).

See also “Inflation, unadjusted”, “Unemployment (statistics)”, “Gross Domestic Product (GDP)”, “China-statistics”, “M3”, “COVID”, “Statism”, “Inequality”, “Interest on Required Reserves”.

Steady-state economy- (Herman Daly’s [not very political] solution to the great environmental crisis)

²⁴⁷³ There is no understanding [-why-] the ‘CIA-1960s’ (That’s pre-“America’s Team”-- <https://www.youtube.com/watch?v=xvQwvwjzBQQ> , mn.5), without something close to this: <https://www.youtube.com/watch?v=C0Kv6tVqWfE> (It took more than a year or two-- or a Beatle or two-- to cheer America up; <https://www.youtube.com/watch?v=3e9iWizfsm8> [Laugh-In]; <https://www.dailymotion.com/video/x2ovimx> [Confuse-a-Cat]). Nor is there, in terms of monetary-political systems, making much sense of something like Mitterrand-Kohl’s subsequent motivation in, so-enthusiastically, creating the (ostensibly crazy) Frankfurt straightjacket of EMU [preferring a devil-close, to a devil-far], which John Major and the British [after having to dismiss Margaret Thatcher] then happily (and surprisingly) okay’ed at Maastricht in 1991. About 7 years later, William Buiter, a member of the BoE’s Monetary Policy Committee, wrote that the EMU plan still constituted nothing less than “a bold [i.e. implicitly desperate] step into the unknown, not unlike Alice’s fall down the rabbit hole” in Lewis Carroll’s 1865 novel (Buiter, 1999, 1). See also “European Monetary Union (EMU)”,→ “Helicopter money”,→ “Big picture”.

1) “The economy viewed as a subsystem in dynamic equilibrium with the parent ecosystem/biosphere that sustains it. Quantitative...[gross] is replaced by qualitative development of improvement as the basic goal” (Daly & Farley, 2004, 440). See also “Gross Domestic Product”, vis-a-vis “National income”. See also “Technocracy”, “World Par Economy (WPE)”.

Steele, Robert David (1952-2021)- (I.C. limited hangout²⁴⁷⁴, [seemingly shelf lived for] the 2010’s) “[M]y colleague[s, like] Parag Khanna, that speak to a new era of city-states are correct in my view. Top down power has failed in a most spectacular manner, and bottom-up consensus power is emergent. ‘*Not in my neighborhood*’ is beginning to trump ‘*Because I say so.*’ The 1 unlimited resource [that] we have on the planet is the human [being’s] brain– the current strategy of 1% capitalism is failing because it is killing the Golden Goose at multiple levels...[because] the gap between those with money and power and those who actually know what they are talking about has grown catastrophic.”- Robert David Steele, 2014 (Ahmed, 2014). See also “Fitts, Catherine Austin”, “Jones, Alex”. “the truth at any cost lowers all other costs.”- RDS (Ahmed, 2014).

1) A 4-year active duty and 16-year reserve US Marine Corps infantry and intelligence officer, in 1979 Steele “joined the CIA because I found infantry in peacetime boring” (Steele, 2017e, mn.2). Retiring from all that 9 years later, from 1988-92, he helped set up the US Marine Corps Intelligence Center while still a reservist. As faculty at the Marine Corps University, Steele was also a developer of the Marine Corps Master Intelligence Plan in the 1990’s. In 2012 and 2016 he ran for the nomination for president of the US, within the Reform Party and Libertarian Party, respectively.

2) “The fact is the US Intelligence Community [IC] is a fraud! And now it’s a dangerous fraud, because since 9/11 NSA has basically been... spying on all US politicians, and CIA has been blackmailing US politicians... And the same is true overseas. The US intelligence money has corrupted other intelligence services, certainly...the Australian intelligence service, as well as [that of] the United Kingdom” (Steele, 2017e, mn.3). “The [I.C.] does not do intelligence [proper/academic]. It does spies and secrecy to promote war, and waste, and bribery. It *does not do decision support.*” (2017e, mn.4).

3) After his decade in CIA, Steele, sometime in the early 1990’s, began developing his Open Source ideas. After his first book, *On Intelligence: Spies and Secrecy in an Open World*, was published in 2000, “I became the Pope for Open Source Intelligence²⁴⁷⁵, which means doing decision support as inexpensively as possible, and as usefully and kindly as possible. Well, **no one** wanted to do this, and the reason they didn’t want to do this was that if I succeed, [then] we can cut the secret intelligence [public] budget by 75%-- and that’s not what the spies want.²⁴⁷⁶ And that’s not what the politicians who are bribed and bullied and blackmailed by **the spies**²⁴⁷⁷ want. So [therefore] the people have to want Open Source Intelligence” (Steele, 2017e, mn.5-6). Steele categorizes his 60 Open Sources into 9 categories: “1] Open Data, 2] Open Access, 3] Open Governance (which includes open money, open politics, and open [media] standards)...4] Open Health, and then you have 5] Open Infrastructure (including open application program interfaces... which means free cellular and free internet access, for everyone, okay?... We should have free communications for everyone. 6] Open Manufacturing, 7] Open

²⁴⁷⁴ See also “Hegelian dialectic”, Jones, Alex” [type stuff].

²⁴⁷⁵ “In 1992, despite [some] opposition from the CIA...[Steele] obtained Marine Corps permission to organise a landmark international conference on open source intelligence– the paradigm of deriving information to support policy decisions not through secret activities, but from open public sources available to all. The conference... brought in over 620 attendees from the intelligence world. But...CIA wasn’t happy, and ensured that Steele was prohibited from running a second conference” (Ahmed, 2014). See also “Reform, 101”.

²⁴⁷⁶ Steele “is hugely respected by senior *military* intelligence experts across the world. As a researcher at the US Army War College’s Strategic Studies Institute, he has authored several monographs advocating the need for open source methods to transform the craft of intelligence. He has lectured to the US State Department... as well as National Security Councils in various countries, and his new book has received accolades from senior intelligence officials across multiple countries including France and Turkey” (Ahmed, 2014). See also “International Intelligence Community (I.I.C.)”, “Secrecy, cult of”.

²⁴⁷⁷ Tired of 99.9% of spy-talk being from (only) 3rd and 2nd-person voices? Here is a recent, rollicking tell-all by Argentine-Cuban-American (often ‘double’-agent) ‘convicted’ spy Bill Gaede: <https://www.youtube.com/watch?v=RSDlIJBdqlw> (Gaede, 2022, mn.24-44). What’s so funny? See also “International Intelligence Community (I.I.C.)”, “Great Extinction, 6th”.

Provisioning, 8] Open Energy, 9] Open Food...[&] Water. I can solve... all 17 of the U.N.²⁴⁷⁸ Sustainable Development Goals, in under 10 years, for 10% of the projected costs, by using Open Source Everything engineering” (Steele, 2017e, mn.7). See also “Great Extinction”, “Design”.

4) **Stages** (see also 2012, mn.122) “I don’t think you’re going to have to entice them. I think they’re going to come running to you...when mainstream [20th century] reality fails.... This is a very rich country. It’s just that we’ve been letting the crooks run the place” (Steele, 2012, mn.147, mn.153).

5) “There’s no amount of money that can overcome everyone voting against them” (Steele, 2017c, mn.34); “...the only thing that can defeat organized money is organized people.... My version is ‘Everyone gets the truth; no one goes to jail’” (Steele, 2017f, mn.23). Even though “I cannot overstate the degree to which the 1% is evil in the most satanic, pedophilic way possible” (Steele, 2017f, mn.41). “What we have in the US today is zero intelligence and zero integrity, and we all know that.... [The answer?] It’s just common-sense and integrity” (Steele, 2012, mn.139-141). “The old [reserve currency] Empire is breaking apart... The whole system is collapsing, and the only thing we’re going to have left is ourselves” (Steele, 2017c, mn.43). “Reality bats last” (Steele, 2017l, mn.43). See also Appendix C: “1-2-3”.

6) *Polemole* is a proto-“citizen’s intelligence web... [that] can lookup which foods have had Monsanto Roundup applied to them.... We’re a hair away. We’re within 5 years of every citizen being an intelligence Minute Man, where...it’s about decision support and critical thinking, and loyal, ethical citizens working together... a nightmare for every corrupt politician...” (Steele, 2017c, mn.55-56).

7) *Panarchy* would be “...what happens when every human mind is connected to all relevant information and all other human minds, and you’re able to self-govern on the fly” (Steele, 2012, mn.113). Before something like that, however, “[w]e need a social ecology that is not...google gestapo... [We need it] where every individual has the rights of ANONYMITY, IDENTITY, PRIVACY, and SECURITY.... [Just for starters] the US Postal Service...[could] offer free encrypted email to every US citizen, as well as everyone who’s resident here... tools for thinking.... All of this is relatively easy to do- particularly if you go the Open Source route.... I mean true Open Source... [not the TechGiants’ ‘clouds’]”²⁴⁷⁹ (Steele, 2019, mn.47-48). See also “Postal Savings banks”, “Google” [Markovian], “Fed Funds (accounts) for All”.

8) Things like this and much more (de-salinization/free water, meterless free energy, no more scarcity of things like fish and the most healthy vegetables) can be attained (more directly with Monetary Reform) and kept secure. See also “Parties, political”, “Monetary reform”.

Sterile- “A zero-sum and hence *exploitative* economic activity. In antiquity this was typified by *usury*, characterized by sterile old men, especially homosexuals abusing children, as distinct from family men reproducing themselves...” (Hudson, 2015b). See also “Financialization”, “Transhumanism”.

Still, Bill- (has been producing Monetary Reform films and short-topic videos since the mid-1990’s)²⁴⁸⁰

1) Particularly incisive have been (the **second** half of) “Still Report #70– State of the Union”- <https://www.youtube.com/watch?v=fGWA583mGxE> ; (its follow-up) “Still Report #448- The Truth About the Fed”- <https://www.youtube.com/watch?v=w3CrQK5NF9I> ; and “Still Report #84- How Loans Control Politics”- <https://www.youtube.com/watch?v=LdMAX30yH64> .

2) Bill Still updates: 1/23-

See also “Intelligence Community”, “Monetary Reform”, “Imperialism, American”.

²⁴⁷⁸ “The Secretary General of the United Nations has zero authority over all the specialized agencies... Those are all little fiefdoms... doing things that don’t work... a lot a great theater.... **1/3rd is spies, working on each other**. Another 3rd of the United Nations is the idiot nephew of the village chief... [So] 1/3rd is carrying the whole thing.... basically theater... reliant on the member states telling them what reality is” (Steele, 2012, mn.149-50). See also “National Identity/Nationalism”, “Design”.

²⁴⁷⁹ “Open data is largely worthless unless you have open hardware and open software. Open government demands open cloud, and open spectrum, or money will dominate feeds and speeds.”- Robert David Steele (Ahmed, 2014). See also “Reform, 101”.

²⁴⁸⁰ “Milton Friedman said to me, after viewing... *The Money Masters*, in February...1996... [Calling] from his office at Stanford University... [Friedman] said: ‘*Boy, if you kill the Fed and do nothing about Fractional Reserve Lending, then you’ve done nothing*’” (Still, 2019f, mn.0-1). See also “Monetary Reform”.

Stock buy-backs- (synon. 'share buy-backs') Since the Reagan Security & Exchange Commission's Rule 10b-18 of November 1982, the US S&P 500 index has (in conjunction with other deregulations and 4 decades of lowering interest rates) doubled 20 times over (approx. 2000%, or 57% per year on average).²⁴⁸¹ The administrative fiat established guidelines for companies to legally repurchase their own shares on the open market without violating SEC market manipulation rules.

1) "Buybacks weren't always the norm."²⁴⁸² In 1985, there were 52. This year... there have been 885.... [with] the 30 companies listed in the Dow Jones industrial average [authorizing] \$211 billion in buybacks this year... three times the amount those companies have spent on research and development.... [T]he manipulation of share price is an explicit purpose of the buybacks... [But it's also about] boosting CEO pay. Fully 26 of the 30 companies on the Dow link executive pay to per-share earnings, which rise when a repurchase reduces...outstanding shares.... Since the early 1980s, corporate boards have believed that their primary mission is to reward shareholders, while workers in post-union, high-unemployment America have had no way even to get the directors' ear. The result is an economic system that rewards (increasingly short-term) shareholder investment and CEO pay at the expense of both labor and the research and long-term investments that companies need to flourish. While privately held firms devote 6.8% of their total assets to investment, publicly traded firms-- the ones with shareholders-- devote just 3.7%" (Myerson, 2013). See also "Financialization".

2) "Once a company decides [that] it has 'excess cash'...[its] options are [either] dividend payments or [since the 1980's]²⁴⁸³ share buybacks.... [F]or the company, share buybacks are functionally equivalent to a dividend payment combined with a reverse [stock] split, as in either case the company has less cash and there are fewer shares outstanding" (Mosler, 2017f); which typically drives up their price. Sometimes buy-backs are used to attain the shares required for those (usually stock options-based) lavish executive compensation schemes. More often they are used in order to compensate for new share issues, which tend to drive down share prices.

3) William Lazonick (2016) found that "92% of corporate profits are spent either on buying back the stock - which means that you're bidding up the price by having less and less stock....- or by raising dividend rates. Only 8% of the corporate profits are being plowed back into the business.... It's like a farmer who's eating the seed corn... The industrial economy in America is essentially being emptied out in order to pay the stock owners, and about 75% of stocks are owned by the richest 5% of the population.... The super-rich are saying '*We're willing to use all the corporate income to run it [industrial capitalism] down...* Basically, the 5% have decided that industrial capitalism is over, and it's time to take the money and run. And you take the money & run by paying out all the income...to yourself [owners], leaving the corporation just an empty shell. And that's how the Chicago Boys introduced 'free markets' into Chile after 1974... It's the neoliberal model.... Emptying out the economy to pay the bondholders...It's economic shrinkage, and the trick is to get the middle class and the working class to *think* that the stock market is them. When the stock market isn't... themselves at all. It's the 5%" (Hudson, 2017i, mn.38-40).

4) "The #1 source of stock buying...in the last few years has been the companies themselves... at rates of 6 [hundred billion-to-] 800 billion per year" (Stockman, 2019, mn.18).

4b) And make no mistake; this crowds-out genuine/strategic "business investment...[to where] the United States is now more into looting, because that's the only place [laughs] they can get any money" (Roberts, 2020, mn. 23). See also "Unearned income".

5) It seems hard to dismiss the conclusion that such "eating the seed corn" engineering belies an underlying attitude of "taking the money and running" or terminal stage looting (as the interest rate cycle shifts from 'bullish' to 'bearish'); i.e. "*We're just going to take the earnings that we have to help the stockholders*". The stock market [today] is actually the reverse of how the economy is doing" (Hudson, 2017m, mn.2-3). Thanks to Quantitative Easing, "[p]eople are borrowing at 1%, in order to buy stocks that are yielding 5 or 6 percent, and...pocketing the difference" (mn.3), as would a mathematician, as opposed

²⁴⁸¹ Figures are based on an S&P index of 2,476 on Sept. 4, 2017, and 137 on November 19, 1982.

²⁴⁸² In the UK, stock buy-backs are still illegal (Werner, 2018, mn.30).

²⁴⁸³ Although share buy-backs were first liberalized in the early 1980's, it wasn't until two decades later, 2003-04, that it became prevalent.

to any sensible notion of a 'capitalist'. "They see that the economy isn't really growing for the 99% of the people.... They realize that the whole boom that occurred from World War Two to 2008 is over. So they're not going to invest...[long-term]... These companies have been turned into financial [parasitic] entities. You should no longer think of them really as industrial entities. Corporations [now] make money financially, not by producing goods and services" (Hudson, 2017m, mn.5-6).

6) Accordingly, during the "COVID" crisis of 2020, the Federal Reserve, in June, banned the largest 30 to 40 US banks from buying back their own shares (and also capped dividends), although the bans **are** expected to be lifted by year-end.

See also "Stock markets", "Neoliberalism", "Chicago School", "Long-term Orientation".

[stock buybacks: 1998-2014]

Stock Market Boom (post-2008)- "Of course the stock market is not the economy" (Kotlikoff, 2021, mn.25).

As 'American as apple pie'? "...infected with the Mania of rambling & gambling, to bring danger on the great mass engaged in innocent and safe pursuits at home... licentious commerce, & gambling speculations for a few...[mean] eternal war for the many."- Thomas Jefferson (Jefferson, 1816b).

1) "the largest group that has bought stocks are companies themselves, with *stock buyback* programs. The managers of companies have used their earnings, essentially, to push up stock prices so that they get more bonuses. 90% of all the earnings of the biggest companies in America in the last 5 years have gone for *stock buybacks and dividends*. It's not being invested. It's not building new factories. It's not employing more people" (Hudson, 2015c).

2) "The value of share prices around the world is fundamentally dependent upon the continuation of central banks being on the...[asset bubble] side, which they [CBs] are now trying to unwind [their balance sheets], and that's going to be real fun" (Keen, 2017l, mn.20). Roberts & Hudson (2019b, below) attribute the boom to more pedestrian causes.

3) "The entire US stock market... is about \$30 trillion"; and (with considerable overlap) about "\$25 trillion in its pension funds.... Where that money goes is where our society goes... and the pension funds are the biggest capital provider... building a corporate juggernaut with-- you know-- we've seen years where essentially they have zero cost of capital... And that's how you win" (Fitts, 2018k, mn.7-8).

4) "Right now, the [US] stock market is *highly* dependent upon on secret money flowing out of the US government, and it's not publicly disclosed. So we're talking about *never-never land accounting*, not only on the government side, but on the corporate side as well" (Fitts, 2018o, mn.18). See also "Federal Accounting Standards Advisory Board (FASAB)" [.FASAB-56], "Black Budget (US)".

5) The dynamic is that of extraction-- *fewer* listed companies consolidating control over markets. There has been "a 90% drop in the number of IPOs" (since c.2000), in addition to a "60% shrinkage in the number of companies [that are listed] on the stock market. We're having a stock market boom, while the number of companies shrinks drastically, and new challengers don't rise up..." (Gilder, 2018b, mn.29-30).

[US IPOs, 1988-2022]

5b) And **algorithmic** (“algo”) trading (as of year-end 2018) “commands **80%** of the US market”, up from approx. 15% of US stock market volume in the “early 2000s.”- <https://seekingalpha.com/article/4230982-algo-trading-dominates-80-of-stock-market> . See also “Secrecy, Cult of, the” [.stock market], “Big 5 (on S&P 500)” [.TechGiants].

6) In winter 2018, “Jeremy Grantham finally threw in the towel and admitted that much of this higher stock market was being engineered and pumped up through Washington... held up with steroids” (Fitts, 2018m, mn.3). Later that year Grantham admitted that he had “under-estimated the ability of the American Establishment to deliver monopoly profits to publicly traded corporations” (Fitts, 2019o, mn.24). See also “Accounting” [.end of], “Federal Accounting Standards Advisory Board” [.FASAB-56].

7) Rigging these days is not at all just 21st century-type QE money²⁴⁸⁴ and share buy-backs. A lot of it is still done the old-fashioned (1920’s) style. According to Michael Hudson, Paul Craig Roberts “points out that Quantitative Easing [QE] has not been increasing since September [‘19]. That’s not how the Fed is...[goosing] it. What they’re doing, he says, is manipulating the forward [i.e. “puts”] market. Banks can promise to buy the Dow Jones Industrial Average stocks, or bonds, in a month or two...at a higher price, and by promising to buy these [to have a put, the right to buy], that means that [tons of] other people are going to [subsequently] bid up the stocks & bonds to these prices.... So you don’t need to create [new] money to push up the stock & bond markets. All you need to do [if you’re a Big 6 bank] is make a promise to buy at a given price, and that will become a self-fulfilling prophecy. [Classic] *Financial* manipulation is what’s keeping the stocks & bond market up [today]. In the final analysis [however], the government [via the Federal Reserve & big banks] can create any given amount of money [i.e. ‘monetary manipulation’] to buy the stocks & bonds, to make sure that their donor class-- the 1% that own most stocks and bonds-- don’t lose money. But at some point, of course, there’s going to be a crash” (Hudson, 2019c). See also “Big 5 Banks”, “Bair, Sheila (& Citibank)”.

8) “At some point, there’s going to be a break in the chain of payments... We know that when that occurs, the government is going to bail out the big banks, the big bondholders and the 1%. It’s going to let the pension funds go under, the insurance companies and corporate business. So it’s going to be that point when the [much of the remaining] healthy parts of the economy are sacrificed” (Hudson, 2019c).

See also “Wall Street”, “Capital Gains”, “Stock buy-backs”, “Industrial Revolution, 3rd”.

Stock Markets- 1) The first was est. in 1602 by the Dutch East India Co. in Amsterdam, initially just to generate public interest in its stocks & bonds (i.e. ‘ownership’ shares & debt securities). And “by 1680, the techniques deployed in the Amsterdam market were as sophisticated as **any** we practice today” (Petram, 2014). See also “**Reserve Account Balance (RAB)**”.

²⁴⁸⁴ Hudson explains how new money creation (even in Reserve/RAB money) need not be necessary. “You don’t need to create more money. Suppose you have a piece of furniture behind you. And you say, ‘Well, I’ve got a promise here from the government that it’s going to give me \$100,000 for that piece of furniture’. All of a sudden, either I or other speculators will say, ‘Well, gee, I’ll give you \$90,000 and I can sell it to the government for \$100,000’. Someone else will say, ‘I’ll give you \$95,000 for it’. The [US] government simply has to make the promise to pay and the price will go up. The bondholders don’t [actually] pay any more money. The stock companies don’t pay any more money. But the price of the stocks and bonds go up. Nobody pays anymore... The *government* is manipulating the market.... [i.e.] the Fed, [delegated to and also] backed up by the [US] Treasury” (Hudson, 2019c). See also “Treasury-Wall Street nexus”, “Bankmoney”.

2) This was because, “[a]bove all, as companies grew larger, more people had an interest in their operations, and separate [and eventually ‘public’] statements were needed [simply] because direct access to the ledger became impossible for all who wanted information. Following the appearance of [chartered] joint stock companies in the 17th century, demands for separate statements became urgent, as creditors and shareholders sought data about their investments.”- *The History of Accounting: An International Encyclopedia* (1996), p.61.

3) “were supposed to supply *equity* investment capital, but since the 1980’s they have been turned into a vehicle for leveraged [debt] buyouts (LBOs). Raiders borrow money much like landlords borrow to buy a property and bleed it. This turns corporate cash flow into interest [payments]. [State-captured] Governments permit this to be tax-deductible, encouraging debt-financing over equity. This worsens their fiscal position, forcing governments in turn to borrow [more] in a deteriorating spiral” (Hudson, 2012g);... of state-capture, debt-overhang, and economic asphyxiation... that is *until the next war* (perverted *jubilee*). ”The turning point was in 1980... [after which] corporate financialization became destructive instead of productive” (Hudson, 2012g). See also “Insider trading”.

4) “In practice, the primary discipline on [publicly traded] companies is exerted by stock markets”; and the art of blowing bubbles therein has been fairly well known-- if not to say something of a science-- for centuries. The fundamentals are certainly nothing new (Ferguson, 2008, 120; 121-122). See also “Homogenization”.

5) “The stock market is a casino where nothing is created nor destroyed, but only changes hands” (Schemmann, 2015, 10); or rather, ‘changes shells’.

See also “Finance”, “Corporations (and corporate ‘personhood’)”.

[‘North American’ corps.’ share of the Frankfurt Dax increased to 36% in 2019. See also “Big 3 (Asset managers)”.]

5) Stocks these days “are pushed up by companies not investing in expanding and [in] production. Instead of putting money into [this] new investment, instead of putting money into the pension funds or improving living conditions, they are using their profits for stock buy-backs and...dividend payouts. Now that pushes up the [rigged] stock market, *instead of* actual investments. So the higher the stock market goes, that means you’re stripping the [real] economy. It’s called asset-stripping.... The economy is being loaded down with debt, it’s de-industrialized, and all of that is applauded on the mainstream media” (Hudson, 2017h, mn.10-11). See also “Parasitism”, “Corporate Media Cartel”, “CIA”.

6) “The average time in which you hold a stock... [has] gone up from 20 seconds to 22 seconds²⁴⁸⁵ in the last year. Most trades are computerized...” (Hudson, 2011, mn.10). See also “Stock buy-backs”.

²⁴⁸⁵ Hudson later revised this to “The average holder of stock in America holds it for 1 minute, maybe not quite” that long (Hudson, 2017i, mn.20); says “28 seconds or something like that” in (Hudson, 2019c).

7) In the US today, “about 75% of stocks are owned by the richest 5% of the population.... Basically, the 5% have decided that industrial capitalism’s over, and it’s time to take the money and run” (Hudson, 2017i, mn.38-39). “The Treasury Bulletin publishes statistics on who owns the stocks and bonds in this country. Small investors (the middle class) basically have been disinvesting. These regular people, normal people, have pulled their money out of the stock market because nobody can understand what it is” (Hudson, 2019c). See also “Stock buy-backs”, “Derivatives”, “Accounting standards”.

8) Catherine Austin Fitts agrees with Hudson that the stock market today is a false “metric” and “deeply, deeply dependent on the military” imperialism (2017n, mn.16). The US stock market has “out-performed stock markets around the world... [because] it’s this very mechanism of pumping in secret money into US corporations [in addition to Quantitative Easing] that’s been driving the US stock market higher... How long can the game last?... a very big bubble that’s dependent on something where there may not [actually] be much there there” (Fitts, 2019u, mn.19). See also “Credit rating agencies”.

9) It’s not the 1920’s anymore. With the rise of Big Data gaming, the problem is no longer “that the stock or bond market comes apart. It is that the stock and bond markets continue to be subsidized by liquidating all sorts of people, animals and living resources. In other words, we are liquidating all of life... people and countries and things to basically keep that [stock profits] game going, while somebody is walking off with tremendous amounts of money that they used [n order] to engineer central control. We have had an ongoing calamity since the mid 1990’s-- a serious financial calamity Calamity is not a big bang that everybody experiences together.... Calamity is an ongoing process” (Fitts, 2019s, mn.1-2). See also “Google”, “Wall Street”, “Academia”, “COVID”.

See also “Financial Accounting Standards Board (FASB)”, “Stock buy-backs”.

[‘Top 5%’ (2019) is also sometimes known as the “F.I.R.E. sector”.]

Strawman- (mischaracterizing another’s argument or position to a flagrant or 3rd degree)

See “Attitude inoculation”, “Marx, Karl (1818-1883)”, “Polemic”, “Violence”.

[‘for the birds’]

Student debt- 1) “The incredible increase in fees in America-- more than 100% of it has gone to the administrative layer, rather than to the educators and the researchers” (Keen, 2016j, mn.13).

2) Within a debt-based economy, “I can make money on your failure, and you can make money on my failure. There is no better example” of this bureaucratization of profit “than what has happened with student loans... literally we’re watching an entire industry make more money from their borrowers’ failure than their borrowers’ success” (Fitts, 2016b, mn.7). See also “Usury”.

3) “I used to be on the Board of Sallie Mae.... [and] had a confrontation with the management, who then privatized them [from 1997-2004. And Fitts’ replacement was the one]... who figured out how to get the laws changed so [that] they could make more money from bankrupting a child than they could from the child paying the loans off. So they could make more money from kids failing.... These guys knew exactly what they were doing...how to engineer it; and they did it” (Fitts, 2018b, mn.23-24).

4) “In 1965, public college tuition was \$2,000 a year. Now it’s \$10,000.

In 1968, the minimum wage was \$10. Now it’s \$7.25.”- Bernie Sanders@SenSanders (2020).

5) “Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.” - US Constitution, 13th Amendment, 1865

6) In a Modest Proposal worthy of the 18th century, in 1998 and 2005 (for public and private lenders, respectively), “Congress completely eliminated the ability to discharge student loan debt from bankruptcy. The same rules [hence] apply to debt from criminal [restitution] acts... [as to] debt from fraud [what used to be called ‘odious debt’]. Loans for education are the only type of loan that has this Federal ‘no-escape’ clause.²⁴⁸⁶ Additionally, the following protections were removed from student loans: Statute of Limitations on collections, the *Truth in Lending Act*, the *Fair Debt Collection Practices Act*, the right to refinance, and...[compliance with] state usury laws...” (Begich, 2019, mn.14). “...stripping student protections from student loans. It’s usury. It used to be illegal. All these things used to be illegal.... [T]he people doing these things... are not socially acceptable” (Fitts, 2019s, mn.3-4). See also “Baby-boom demographics”.

7) “We need to address the enslavement of a generation, for goodness sake!... as our economy is being stripped out and moved East. This is the important thing: an enslaved younger generation will allow this [process] to happen more readily” (Begich, 2019, mn.13-14). See also “Provocation operation”, “Academia”.

Stupid- inability (or perhaps persistent unwillingness) to learn, particularly a main point. See also “Design”.

Suffolk System- (a proto-‘Federal’ Reserve, one century earlier) 1) The “first effort to regulate private banking in the United States... was born of a private initiative” (Allen, 2009, 382). From 1819-24, a protocol developed that “required country [smaller] banks around Boston to deposit reserve balances [RAB...of at least] \$5,000 in one or more of the 7 Boston banks participating in the system... [Thus] country banks could always redeem their banknotes in specie” (Ibid). How did they do this? “The Suffolk Banks always accepted at par the banknotes of country banks that maintained reserves in the Suffolk System.... [and those that refused to participate in this proto-CB] often found themselves suddenly presented with large volume of their banknotes for immediate redemption” (Ibid). See also “Parity”, “Regulation”.

2) Thus without “legal sanction, the Suffolk System was able to coerce the country banks to participate... [and by] 1825, virtually all New England banknotes could be converted at face value in the banknotes of of any other [New England-based] bank, or in gold and silver coin... From 1825 to 1860... this was a rare accomplishment... [in other parts of] the United States” (Allen, 382-83), and its success was certainly still remembered by US policy makers half-a-century later.

See also “Federal Reserve System”, “Federal Reserve audit”.

Super Imperialism (US, millennial-era)- (a.k.a. the global ‘Treasury-bill standard’ or ‘Bretton Woods II’; i.e. ‘carrots, sticks, & currency’ [all 3, plus science-tech. for ‘full spectrum dominance’])

“...He would build empires
And he would have sons

²⁴⁸⁶ Fed Chairman Jerome Powell, testifying before Congress in 2018, was dumbfounded and “at a loss to explain why that should be the case” (<https://vimeo.com/329316758>). “Make no mistake, this is not a case of the ‘Bad Borrower’. This is a case of the ‘Bad Lender’.... The student loan scam has grown wider and deeper, placing over 44 million Americans (plus their family and friends) under... chronic economic stress” (Fitts, 2019j).

Others would fall
Where the current runs
He would find love
He would never find peace
For he must go seeking
The Golden Fleece....²⁴⁸⁷

- Jackie Onassis Kennedy, "Meanwhile in Massachusetts" (Kennedy, 1953)

1) is "the structural outcome of post-WWII superpower geopolitics, with state interests overwhelming free market forces, [eventually] making regulation irrelevant.... [as the US has been able to export] debt, denominated in the state's fiat currency, as capital to the new financial colonies, [in order] to finance the [further] global expansion of a superpower empire (Liu, 2007). See also "Bretton Woods".

1b) There is, of course, much more to it than .mil. Broadly speaking "...the English economy is only about half as profitable as ours because, as an importing nation, they can have only half the trade turn [a.k.a. the primary sector 'multiplier' to the other 2 sectors] on most of their economic cycle... Great Britain, after many years of operation, can pay only one-half the industrial wage that we pay" in the USA (Walters, 1971, 390). The primary sector "trade turn [or 'real multiplier'] is also...[a primary] reason why the United States, with only 6% of the world's population, has [per 1960's] nearly one-half of the income in the world" (Ibid). "Economics, Parity", "National Income", "American System", "Multipliers".

2) A synonym "for Super Imperialism would be *Inter-Governmental* imperialism. The United States exploits the rest of the world above all via foreign central banks [being intimidated into] accumulating dollars"; "[T]his system has forced other governments, in effect, to pay for our wars since Vietnam.... [The] IMF, World Bank loans, but also the US humanitarian 'aid' and military personnel expenditures... [constitute] the dollar surplus abroad...[that] creates more demand for US Treasuries and more foreign dependence on the continuing existence of the US Empire" (Hudson, 2003).

3) "That is how the US [international] balance of payments deficit serves to finance the domestic government budget deficit. The larger the US balance of payments deficit grows as the US spends more militarily and politically around the world, the more foreign central banks end up financing the domestic budget deficit [via purchases of US Treasuries-- still the world's premier low-risk investment of choice]. That frees the United States Treasury from having to balance its budget... More and more of the US federal debt has been owed to foreign central banks. That means that foreign countries are, in effect, financing the costs of surrounding them(selves) with the 800 US military bases. This enables the United States to make military threats, in case they cannot conquer you intellectually, by making you follow the [Rockefeller] University of Chicago²⁴⁸⁸ and IMF²⁴⁸⁹ financialization policy.... The [basic] US strategy is to control your economy in order to force you to sell your most profitable industrial sectors to US investors,

²⁴⁸⁷ Pre-Homeric, Bronze Age myths often spoke of royal power-- in this case (more specifically) as represented by alchemy and especially *placer mining* (i.e. washing gold from streams, which was common in the region east of the Black Sea). The fleeces of sheep [later to become the 'fleecing of sheople'] were, for many centuries, stretched over a wooden frame to greatly facilitate alluvial mining for gold flecks. The historian Strabo (c.64 BCE-24 AD) described the ancient process: "It is said that in their country gold is carried down by the mountain torrents, and that the barbarians obtain it by means of perforated troughs and fleecy skins, and that this is the origin of the myth of the golden fleece." Money (be it straight-forward or arcane) & politics have always been 2 sides of the same construct (even before coins existed). See also "Governance", "Gold standards", "Reform, 101".

²⁴⁸⁸ The present (or "Hyde Park campus"**) Univ. of Chicago was incorporated in 1890 by the John D. Rockefeller's American Baptist Education Society, on initial 'donations' of \$1 mn. JDR (1839-1937) later said of the university: "It is the best investment that I ever made." - <https://chemistry.uchicago.edu/history> ; within the first 10 years, Rockefeller donated \$35 million to the new University (approx. \$1.3 trillion in 2023 dollars). - <https://www.lib.uchicago.edu/e/scrce/findingaids/view.php?eadid=ICU.SPCL.ROCKEFELLER> . See also "Chicago School", "Economics".

** - Only one single brick was incorporated from Sen. Stephen A. Douglas's original U of C Bronzeville campus (1856-c.90; often derided as "Douglas College") into the (Rockefeller's) new Hyde Park campus.

²⁴⁸⁹ For a country to be sovereign; "it is necessary to break away not only from the US dollar, but also from the International Monetary Fund. The objective of US and IMF monetary policy is basically to make your economy much more expensive and inefficient than that of the United States.... [O]utside the United States, countries are told [by the IMF, etc.] to finance their budget deficits by selling off whatever is in their public domain-- namely, their land, real estate, and natural resources, their commanding heights in the form of basic infrastructure and electric utilities" (Hudson, 2020).

[and] to force you to invest in your industry only by borrowing from the United States” (Hudson, 2020). See also “Washington consensus”.

4) Hudson was contracted to explain it to the DoD in the ‘70s. *Super Imperialism* (copyright 1972) “sold best in the Washington DC area, and I was given a large contract... to explain to the Defense Department exactly how this extractive financial system worked. I was brought to the White House to explain it, and US geostrategists used my book as a how-to-do-it manual (not my original intention)” (Hudson, 2017r).

5) “Because of the US trade deficits [since the 1980’s], huge numbers of dollars circulate outside the country²⁴⁹⁰; and one effect of Nixon’s floating of the dollar was that foreign central banks have little [that] they can do with these dollars except to use them to *buy US treasury bonds*.... [T]he advent of the free-floating dollar marks not a break with the alliance of warriors & financiers on which capitalism itself was originally founded, but its ultimate apotheosis” (Graeber, 2012, 366-67). See also “Eurodollars”.

5b) Half-a-century later, America “is now both sides of the Peloponnesian War [431-405 BCE]! It’s a [so-called] democracy exploiting the fellow [reserve currency] ‘democracies’; and it’s [also (since the mid-20thc)] the supporter of oligarchies, in Brazil, Latin America, Africa...” etc. (Hudson, 2020c, mn.57).

6) “Here is our challenge. The US is using financial force-- things like...financial sanctions, money laundering rules, all sorts of dirty tricks-- and it’s also using its military, to stay the primary player, both on the military side and [on] the central banking side, so that they can stay the reserve currency. But we’re using more and more force, and more and more dirty tricks to do it. And the more we use those, the more we lose our soft power. So the quality of our [USA] brand has [diminished] dramatically, and continues to do so... We’re going from the image of you know the shining light on the hill, to [that of] a bully” (Fitts, 2017b, mn.31). “The financial system depends on liquidity, and liquidity depends on the rule of law. And when somebody is basically just a criminal enterprise and a bully, it’s simply a matter of time until everybody makes arrangements away from them” (Fitts, mn.32). See also “Reserve currency”.

7) “...it’s military spending, creating a balance of payments deficit, creating a dollar glut in foreign central banks, that is used to finance the [US] domestic budget deficit that’s [basically] military in nature... [F]oreign countries’... central bank reserves are held, in the form of loans, to the [US] Defense Dept... to surround them with military bases, so they [Pentagon] can say ‘*If you don’t do what we want.... If you make your pipelines go through countries that we don’t want.... then we’re going to use our military bases to shoot you down. Or we’ll have our allies shoot you down, like we had Turkey shoot down the Russian plane*’” (Hudson, 2015e).

8) The Treaty of Westphalia in 1648 “basically created the principle”, after Europe’s hellacious Thirty Years War, that “force is the monopoly of sovereign governments. So that within any place [jurisdiction] you [only] have to deal with one entity that has force. What has happened in the last 10 to 20 years, certainly since the creation of the National Security State in 1947, is [that] we are seeing a complete breakdown of the Treaty of Westphalia²⁴⁹¹.... And now when you’re in a place... there are often very powerful private and corporate...interests that are operating-- with force-- above the law with impunity” (Fitts, 2017n2, mn.11-12). See also “Federal Accounting Standards Advisory Board (FASAB)”.

9) “We’re [now] talking about a real crisis...in global governance. It’s not just in the United States²⁴⁹², but around the world” (Fitts, 2019f, mn.25-26). See also “Governance”, “Dutch Disease”, “COVID”.

²⁴⁹⁰ That phenomenon (a.k.a. “Eurodollars”) was arose more in the 1960’s-70’s, prior to the US trade deficits of the 80’s.

²⁴⁹¹ The Treaty of Westphalia (1648-c.1948) “...based international law on the principle of parity of sovereign states and non-interference. Without a global alternative to letting debt dynamics polarize societies and tear economies apart, monetary imperialism by creditor nations [and the agents that are associated with-- and sometimes control-- them] is inevitable” (Hudson, 2017r). ‘Rule of law’ for all starts with having a lawful monetary-currency system. And as Americans it is our right to have it, and our duty to bring it about if we don’t have it. See also “Federal Accounting Standards” [FASAB-56].

²⁴⁹² Global USD “primacy feeds a growing American trade deficit that shifts the country’s economy toward *the accumulation of rents* rather than the growth of productivity...[which] has contributed to a falling labor and capital share of income, and to the ballooning cost of services such as education, medical care, and rental housing. With sicknesses like these, can we say for certain that the reserve currency confers [mostly] substantial benefits...?.... The dollar’s present centrality does not come from the priorities of United States national security or interests. Rather, it is rooted in the preferences of private actors” (Feygin & Leusder, 2020). See also “Imperialism, ‘modern’”.

10) A viable “currency alternative has to be large enough to have a critical mass, so that it can be used internationally. That’s why China, Russia, Iran and their allies are trying to create their own currency area, incorporating largely the Shanghai Cooperation Organization. The aim is [to] denominate your foreign trade, investment, and government spending in your own currency” (Hudson, 2020). See also “Angry Birds”, “Multipolar”, “Monetary Reform, international”.
See also “Dollar-diplomacy (& hegemony)”, “Eurodollars”, “Neoliberalism”, “Dutch Disease”.

Super-villains- (a.k.a. ‘chew toys’ [Titus]) <https://banned.video/watch?id=6158d6f3b3bca029b0149b1c> (Jones, 2021, mn.48-51). See also “Race-to-the-bottom (of the barrel)”, → “Transhumanism”, “Great Extinction, 6th”.
See also “Kakistocracy”.

Supply-side/Demand-side Economics- 1) “A coherent approach cannot be either supply-side or demand-side. These are [just] opposite positions in terms of vested interest-led political partisanship, but from a systemic viewpoint they represent complementary parts of the entire picture, mutually implying and confining each other” (Huber, 2017, 7). See also “Estates, 3”, “Parity” (for what?).
2) More tersely, the what was called the “supply-side...[approach from the 1980’s] piled debt on everyone except the wealthiest Americans...[while its] unilateral approach to ‘free trade’” (Lundgren, 1994), gutted the real wages of workers, and the debt-fueled GDP expansions steadily *decreased* the average profits of [nonbank] private enterprise²⁴⁹³ (leaving not much else to resort to but “Technocracy” & [ironically] the “Big Government [rise of]”). “Reaganomics” (military Keynesianism)”, “Tax shift”.

Supranational- (i.e. Platonic) See “European Union”, “Ethnic (National) Identity”, “Dien”.

Supreme Court (of the United States)- “...is influenced by public sentiment, powerful interests, and the [c]onstitution itself. Having two out of three on one’s side usually wins” (Sullivan, 2018c).
See also “Separation of Powers”, “Common law”.

Sustainability- See “Ecological economics”, “Economics, ‘Parity’”, “Soddy, Frederick (1877-1956)”, → “Graham, Benjamin (1894-1976)”, → “World Par Economy” [a.k.a. ‘planet: sustainable’²⁴⁹⁴].

[structural-chronic unsustainability drives the (perma-)“Crisis”]

Sutton, Anthony (1925-2002)- (the greatest historian of the 20thc? [see also “Historians”])

1) Sutton, who? See also “Hitler, Adolf” [SuttonHoo], “Historical illiteracy”, “History”.

1b) ...took up (with the documentation) where Prof. Quigley had left off. See also “Quigley, Carroll”.

2) To the big US Foundations, “Communism represents a means of developing... a monopoly... [on] large-scale industry into an admin[istrative] unit...and that they will be the beneficiary of it” (Dodd, 1982, mn.48-49). See also “Conspiracy Theorist”, “Foundations”.

See also “East India Co.”, “Pilgrim Society”, “Intelligence Community (IC)”, “UKUSA Agreement”, “Corporatism”.

²⁴⁹³ Debt-based expansions ultimately result in less to ‘trickle-down’, not more. See also “Economics, Parity”, “National Income”.

²⁴⁹⁴ ... which is, in turn, sometimes a.k.a. (see also) “Steady-state economy”.

Swap lines- (Federal Reserve providing their fellow foreign CBs with USD/eurodollar backstopping, in exchange for an equal amount of the foreign currency)

1) The Fed has “standing US dollar liquidity swap lines” with the Bank of Canada, the Bank of England, the Bank of Japan, the ECB, and the Swiss National Bank. They “were first created during the GFC in December 2007, reauthorized in May 2010 during the Euro area debt crisis, and converted to standing arrangements in October 2013” (Segal, 2020).

2) In March 2020 the Fed re-established swap lines with 9 other nations (in alphabetical order): the Reserve Bank of Australia, Banco Central do Brasil, Danmarks Nationalbank, Bank of Korea, Banco de México, Norges Bank, Reserve Bank of New Zealand, Monetary Authority of Singapore, and Sveriges Riksbank, hence matching the dollar swap lines of December 2007 (Segal, 2020).

3) Why the big increase? It is “absorbing market stress, in quantity, when [dollar] price[s] [are] no longer effective” at that objective (Mehrling, 2020b).

4) A number of G20 central banks are still “*not* covered by these arrangements...[including] Argentina, China, India, Indonesia, Russia, Saudi Arabia, South Africa, and Turkey” (Segal, 2020).

See also “Reserve currency”, “National Debt Economy (NDE)”, “Eurodollars”.

[Japan is not buying Treasuries in 2020 because of the swapline?]

SWIFT codes- 1) the Society for Worldwide Interbank Financial Telecommunication [SWIFT] is the primary international Business Identifier Code [BIC] registry for 10,000 or so banks and other lending and financial institutions (and even some non-financial institutions, such as depositories). It was established in 1973 as a member-owned cooperative (or interbank communications system)²⁴⁹⁵, and now consists of approx. 11,000 international institutions.

2) “The US uses [them] to monitor all transactions”²⁴⁹⁶, and Latin America knows it (Clark, M. 2014).

3) Although the SWIFT code system was founded (1973) in Brussels, “they set up the big computer centers in Washington, D.C. All of the SWIFT transactions...in Belgium are forwarded...[or at least] all the [US] dollar ones are forwarded to Washington, D.C, and the US government approves every dollar transaction... And so the United States government is watching everything that Russia is doing, everything that China is doing... [and actually] controlling whether or not they’ll permit this money to go through” (Storey, 2017, mn.5-6).

4) “We use the financial system as an enforcement arm-- whether it’s to preserve the US dollar, or... a variety of different ways” (Fitts, 2018h, mn.8). In addition to Russia and China belaboring to get around it this decade, in Sept. 2018 the German Finance Minister “said [in effect]: ‘*We need to create an alternative to SWIFT. We cannot let the Americans control global financial transactions and clearing*’... Every time we [US] use the sanctions, ultimately we chip, chip, chip away at the willingness of the world

²⁴⁹⁵ According to banking expert witness Don Coker, “the bank receiving the [verified] SWIFT message...[then uses either] Fed Wire or CHIPS to [actually] make the transfer” (Coker, 2010). So it would appear that all SWIFT-initiated transactions (or % of global international bank transfers) do indeed go through the FRBNY (or its member banks)...

²⁴⁹⁶ ...Moreover, this decade there have been widespread reports of routine NSA monitoring of both SWIFT and credit card transactions (Baldwin, 2017; Der Spiegel, 2013).

to depend on our financial systems.... We're clearly dominant, but the world is [now] doing everything to build transactions away [from that]" (Fitts, 2018i, mn.20-21).

5) "Russia and China have already moved to create a shadow bank-transfer system in case the United States unplugs them from SWIFT....[And] now, European countries have [also] come to realize that threats by Bolton and Pompeo may lead to heavy fines and asset grabs if they seek to continue trading with Iran as called for in the treaties...[that they had already signed]. On January 31, the dam broke with the announcement that Europe had created its own bypass payments system for use with Iran and other countries targeted by US diplomats. Germany, France and even the US poodle Britain joined to create INSTEX-- Instrument in Support of Trade Exchanges. The promise is that this will be used only for 'humanitarian' aid, to save Iran from a US-sponsored Venezuela-type devastation. But in view of increasingly passionate US opposition to the Nord Stream pipeline to carry Russian gas [to Europe], this alternative bank clearing system will be ready and able to become operative, if the United States tries to direct a sanctions attack on Europe" (Hudson, 2019). See also "INSTEX", "Russiagate", "Angry Birds". See also "Payment System", "BRICS", "China International Payment System (CIPS)".

Synthetic Hegemonic Currency- See "Special Drawing Rights (SDRs)".

System Open Market Account (SOMA)- (a.k.a. 'the manager of The Desk'; not to be confused with A. Huxley's wonder drug)

1) The SOMA securities portfolio is created through the auctioned purchase of US Treasuries, from the primary dealers, in so-called 'Open Market Operations'.... [and the] SOMA Manager is responsible for the [entire] staff of the Trading Desk at the Federal Reserve Bank of New York ([a.k.a.] 'the Desk')...[and] The Desk...executes...[OMOs] on behalf of the entire Federal Reserve System" (Federal Reserve Bank of New York, 2007b).

2) In addition to 1] OMOs, the Federal Reserve can also "impact the level of Reserve [RAB] balances by either 2] *reinvesting* the proceeds of maturing securities [within the SOMA] into new [Treasury] securities ([which is] reserve-neutral),²⁴⁹⁷ or 3] *redeeming* maturing securities ([which is] reserve-draining).... Typically the proceeds are reinvested, which...[maintains] the size of the SOMA portfolio and therefore the size of the permanent reserve-adding nature of the portfolio" (Ibid).

See also "Desk, the", "Open Market Operations (OMOs)", "Secured Overnight Financing Rate (SOFR)".

Systematically Important Financial Institutions (SIFIs)- (BIS-speak for TBTF banks, or nonbanks²⁴⁹⁸)
See "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)", "Eurodollars", "Financial Stability Board (FSB)", "Mafia".

²⁴⁹⁷ This is because "securities sold temporarily under repurchase agreements continue to be shown as assets held by the SOMA in accordance with generally accepted accounting principles" (Federal Reserve Bank of New York, 2015).

²⁴⁹⁸ The *Dodd-Frank Act*'s Financial Stability Oversight Council (FSOC) was granted the authority to also designate *nonbanks* for enhanced oversight by the Federal Reserve, as "Systemically Important Financial Institutions (SIFIs)". Since enactment, however, all 4 of the FSOC-designated NBFIs (insurers AIG, MetLife, and Prudential; plus GE Capital) were subsequently removed from 'SIFI' status (by 2018).

[SystemicRisk-DBank&GlobalSIFIBanks (IMF'22)]

Taiwan- (formal: 'Republic of China'; antec. Formosa, a.k.a. 'Chinese Taipei'; i.e. becoming 'like a London-Amsterdam combined' for [prospects for a future] 'Oriental' or Chinese civilization)

1) Is 'eastern political economy' an oxymoron? Is any future 'global civilization' to be suffocating in its (rather un-godlike) uniformity, due to a corresponding (also very un-godlike) planetary decline in (at least the biological diversity of) photosynthesis? See also "Hell".

1b) These are questions that have not been publicly answered yet. (Nor is it clear whether kow-towing to Chairman Mao's Cultural Revolution²⁴⁹⁹ of the 1960's-70's killed-- or mortally wounded-- "Chinese civilization" [more than the Western-fed Taiping Rebellion or Japanese invasion ever did].) See also "Civilization".

2) Digitalization is (from the 2010's) Beijing's big idea²⁵⁰⁰-- how they really are (as was initially observed in the 1990's) to leapfrog over the "explodapedia" Industrial Age/Late Adolescence, going pretty much directly from the Agricultural Age [economic science] to Digital-Knowledge Age [economic science], without any messy ('Chicago'-style) Industrial politics in-between. They are going to be well-accustomed to 'click voting' (within the data matrix)²⁵⁰¹, well before they (are allowed to) vote for any Governor of Liaoning or Guangxi. See also "Social Credit System (SCS)".

2b) "NET" or "National Income" (NI) accounting-- vis-a-vis (20thc type) "GROSS" or "GDP" accounting-- requires significantly more detail, concern, and accuracy for the Primary sector of the economy. How much can Taiwan help the mainland transition from "Gross" to "Net" national accounting? See also "National Income", "China- statistics", "Corruption"; "World Par Economy (WPE)".

4) Taiwan Updates: 3/22- <https://www.taiwannews.com.tw/en/news/4485740> [MACopinionPoll]

See also "Civil National Identity", "Accounting".

²⁴⁹⁹ https://www.youtube.com/watch?v=lhQRz_BP1v8 [Farewell]. See also "Civilizations", "China" [.water].

²⁵⁰⁰ China's "huge and complex bureaucracy...[has long had] many parts that are used to doing things their own way. Although many digitalization plans date back to the 90's, government data management often did not stretch beyond filing cabinets, fax machines and red stamps until well into the 2010s.... Local governments in the past used information asymmetries to strengthen their own position in dealings with Beijing. But digitalization strengthens central authorities by allowing access to source data-- and even enables [surveillance of local bodies](#)" (Brussee, 2021). This is like the equivalent of France (finally) getting a 'national' mint in the 1870's. See also "China- statistics".

²⁵⁰¹ ...& the programming details?... pretty much the difference between "promised land" and drinking sewage (& possibly eating 'soylent green') for the rest of the century. <https://www.youtube.com/watch?v=kk9lqyBrds0> ; <https://www.youtube.com/watch?v=9anYqMcRADQ> [Uroboros; Burning Promised Land]. See also "Keynesianism" [uroboros], "Ecological economics", (meets) "Industrial Revolution, 3rd".

[Taiwan surpasses Japan in GDP per capita (2021)]

Tally Sticks- Used as memory (accounting) aids since Paleolithic times, tally sticks were refined in England²⁵⁰², sometime between the reigns of Henry I and II, into split (exactly matching) tallies of differing lengths, making them tamper-proof and acceptable in court.

1) Desertifying ancient Sumer may have been short on sticks, but they nonetheless regularly kept “‘tabs’ at various merchants and financiers, [which] minimized the need for hard currency” (Goetzmann, 1994).

2) From the 12th century until sometime in the 18th century, such taxation credits constituted the main form of money in England (as TAB bank credits do today). Monetized tally sticks were simply “...IOUs: both parties to a transaction would take a hazelwood twig, notch it to indicate the amount owed, and split it in half. The creditor would keep one [longer] half, called ‘*the stock*’ (hence the origin of the term “stock holder”) and the debtor the other, called ‘*the stub*’ (hence the origin of the term “ticket stub”), or “*foil*”. Tax assessors used such twigs to calculate amounts owed by local sheriffs. Often, though, rather than wait for the taxes to come due, Henry’s exchequer would often sell the tallies at a discount, and they would *circulate*, as tokens of debt owed to the government, to anyone willing to trade for them” (Graeber, 2012, 48). The 7 or so centuries of split tally sticks being used in England is the source of numerous English language idioms such as “...the short end of the stick,” “in the nick of time,” “hold you to account”. See also “Stock markets”.

3) They “were a form of credit which could be created by anybody to record a loan” (Keen, 2017b, mn.25). “Because [each] stick was unique...this [was] the Bitcoin of its time” (mn.25); except, unlike Bitcoin, tally sticks were unquestionably accepted in the courts of law (as the value/demarcation was stable, as opposed to wildly fluctuating).

4) Richard Werner adds that the English “government figured out a way of adding to the money supply without creating the problems of compounding interest for the government. Government-issued government money...in the form of *tally-sticks*.... introduced systematically, by the Treasury...[They] were accepted for tax payments, and that of course gives this money its value.... The economy did well... and government debt could be minimized” (Werner, 2011, mn.5-6). See also Still, 2010.

Tally sticks had unique notches, and then split length-wise so the two halves matched perfectly and could not be counterfeited or changed.

5) “Simple non-split tallies were [also] often used as a record of debt, like running a tab [TAB], for example, for the bread bought at the bakery but not immediately paid for. In various countryside regions of Europe this was common practice even into the [great wars of the] 20th century” (Huber, 2017, 14).

²⁵⁰² According to Huber, talliesticks were also “widely used” in Europe from about the same time frame (c.1100), to sometime during the 15th century... lingering longer in England, until the 17th century.

6) With the rise of the British Empire and (private-issue) banknotes in the early 19th century, however, this prevalent form of debt-free money came to be seen as archaic. Because they could be used to pay taxes, “they...winded up in the English Treasury”, where they were becoming “a big embarrassment... *‘We’re the world power here. A world power doesn’t use pieces of stick. That’s what the natives²⁵⁰³ do. [And, in 1834] Let’s just burn them’*” (Keen, 2017d, mn.26).

6) On the continent, it was really only in the 2nd half of the 19thc (and the advent of the 2nd Industrial Revolution) that the demands for all sorts of record-keeping had grown so much that one “couldn’t afford to use a tally stick anymore and just notch up...accounts.... [You] had to count in the national measures and [in] the national currency” (Weber, 1989k, mn.14-15). See also “Bank of England”.

Tariffs- (economic nationalism) 1) “When you take a [empirical] look at countries that have successfully industrialized, and that included the United States of America, it is [more] often [than not] the case that they’ll whack up tariff walls-- meaning you can’t import the foreign stuff, you force your mates to produce it locally, [and] then you put pressure on the locals [producers].... And that’s what leads to the [economic] takeoff.... America went from being an agricultural nation to an industrial one... behind tariff walls...[as did] South Korea, of course Japan, and Malaysia and quite a few other countries. The period when they [most] succeeded was when they did the opposite of what [“neoclassical”] economic theory said would work” (Keen, 2019, mn.3). See also “Neoclassical Economics”, “Equilibrium”.

2) More specifically, when “[p]roperly implemented, a tariff is not a [micro] trade measure. It is a [macro] *monetary* [sic] measure. And it is intended to adjust the variants in the purchasing power between national currencies, at the border, as the goods are exchanged” (Cook, 2019d, mn.24). See also “Forex” (i.e. ‘**privatized tariffs management**’).

3) Thus, in the 19th century, tariffs were the primary manifestation of a country’s macro-economic management-- what became ‘tax-industrial-monetary’ policy in the (central banks’) 20th century. See also “American System”, “Central Bank”, “Big Government (growth of)”.

4) By “1950 the very idea of tariffs was under sever attack. Americans were told [that] they had nothing to fear because Americans were smarter than the foreigners...[and] could out-produce one and all with a hand tied behind their backs” (Walters, 1971, 395).

See also “Globalism”, “**World Par Economy (WPE)**”.

Tax farming- 1) where the “tax liabilities of citizens were sold off by States to the highest bidder: brutality, corruption and excessive demands were common results. Republican Rome and pre-Revolution France were casualties of tax-farming” (Mosley, 2017). See also “Dynastic cycle”.

2) In 18thc France, the tax farmers/”collectors had lifetime jobs, they basically [kept] the money,²⁵⁰⁴ [and] they [didn’t even] keep books”; so Finance Minister Necker tried to make them all learn double-entry bookkeeping, which was essential for any concept of auditing the tax collectors (Soll, 2012, mn.9). See also “Politics”, “Accounting, double-entry”, “Revolution, French”.

Tax havens- See “Offshore banking centers”, “City (of London), the”, “Flags of convenience”.

Tax revenue (US)- For 2020, the US government’s anticipated income is forecast at: \$3.64 tn. aggregate, mostly from income and payroll taxes:

- 1) **Income taxes**- \$1.82 trillion, or approx. 50%;
- 2) Payroll taxes (including Social Security/**FICA** & Medicare)- \$1.3 trillion, or 36%;
- 3) Corporate taxes- \$256 billion, or 7%;
- 4) Tariffs & Excise taxes- \$156 billion, or 4%;

²⁵⁰³ Tallysticks were also prevalent in medieval and early modern Europe, as evidenced by their reference in the Napoleonic Code of 1804, Article 1333. See also “**Currency wars, the**”.

²⁵⁰⁴ During the 7 Years War, f.e. “the Crown was wringing the country dry with an incredibly inept tax system...an estimated 2/3rds of the potential tax revenues were lost to private middlemen” (Fonesca, 2016). See also “Dynastic cycle”.

- 5) Remittances & earnings (mostly on interest) from Federal Reserve-- \$49 billion, or 2%;
- 6) Estate taxes & other miscellaneous sources comprise approx. 2%.
- See also "Discretionary (US budget)".

Tax shift- 1) "For most of history, taxes have been levied mainly on real property. Not only is this the most visible form of wealth, but property owners were the major class with a sufficient economic surplus to pay taxes. Since about 1980, however, taxes have been shifted increasingly off real estate [and] onto labor, via regressive sales and excise taxes, whilst cutting taxes mainly on the highest income brackets. The tax shift favoring finance and property thus leads to economic polarization..." (Hudson, 2015b).

2) Major tax-shifting is not always overt. "One of the other ways the Thatcherites tried to balance the books in their first budgets was by hiking the price of gas, electricity and council rents, then all still under state control. After privatisation, above-inflation price rises have continued, in the private sector. A tax is generally thought of as something that *only a government* can levy, but this is a semantic distortion... If a payment to an authority, public or private, is *compulsory*, [then] it's a tax. We can't do without electricity; the electricity bill is an electricity tax. We can't do without water; the water bill is a water tax. Some people can get by without railways, and some can't; they pay the rail tax. Students pay the university tax. The meta-privatisation is the privatisation of the tax system itself.... By moving from a system where public services are supported by progressive [public] general taxation, to a system where they are supported exclusively by the [private] flat fees people pay to use them, they move from a system where the rich are obliged to help the poor, to a system where the less well-off enable services that the rich get for what is, to them, a trifling sum.... We have no choice but to pay the price the toll-keepers charge. We are a human revenue stream; we are being made tenants in our own land, defined by the string of [mostly] private fees we pay to exist here" (Meek, 2014).

3) "" (Hudson, 2017f, mn.3-)

4) Shifting around the actual (realized) taxation rates on *income*, in particular, is not as simple (or reliable) as it may sound from, say, 20th century slogans or a computer game. *Evading* taxes [from the 1st Estate] has always been a favorite pastime of the rich [2nd Estate], and even in the most developed state apparati, such as the Netherlands today, the "reality is that this kind of taxation will hit the middle classes and the semi-rich hardest...[the] semi 'elites'. It will not touch the real fortunes that are behind International Finance, which are out of reach of national taxation" (Migchels, 2019b). See also "Legalism".

See also "Taxation", "Dynastic cycle", "Serfdom", "Offshore banking centers", "Free market".

Taxation- Paying for what governments have already advanced (or promised to advance)

"It would be thought a hard Government that should tax its People 1/10th Part of their Time, to be...[used] in its service."- Benjamin Franklin (1758).

1) Anthropologist David Graeber has asked the question why did governments make people "...pay taxes at all?.... Because this is the simplest and most efficient way to bring markets into being" (2012, 49).

Hence the logic follows that, with 70 or 80% taxation, most everything in society will, in fact, be a (taxed) market-- 'rendering unto Caesar' very much indeed.

1b) "Why do we even need federal taxes when the Fed can create money? Inflation sterilization [targeted at ~~whoever can most pay~~ those who cannot run away]" (Moon, 2019d). See also "Capital flight", "Tax shift".

2) Historically, through the ancient and medieval eras, the majority of taxes were, of course, 'paid' in crop yields (and were generally less/lower than one might assume today). For example, in 800 Charlemagne "enacted that a...family... [at least on what was called] a quarter-*factus* [holding]... should do no more than a day's service a week (though two if it had no animals)" (Wickham, 2009, 535). This 'classic' standard (approx. 14%) wouldn't change much until the shock of (see also) "World War One" and Europe's 2nd 30 Years War. See also "Currency wars, the".

3) At a peak of tax extremity in world history, one of the tax regime's architects momentarily reversed course and made a shocking speech before the in 1945. Beardsley Ruml, director of the FRBNY (1937–47) might be called, even today, the father of the dreaded payroll deduction (FICA) tax, as a mandatory contribution to the World War Two effort. (Ruml,).

- 4) It is also the simplest and most effective way to reduce inflation, by soaking up 'excess' dollars that are not being used productively, but are instead just reducing the value of the currency.
- 5) One cannot have national money without taxation, because the "way in which a government gives value to money [is] by accepting it in payment of taxes or for public services (see *State Theory of Money-Chartalism*). The basic fiscal-financial principle at work is that whatever revenue the tax collector relinquishes is available to be pledged for debt service. Without taxation, much more of the economic surplus would be taken by the financial sector..." (Hudson, 2015b). See also "Interest".
- 6) It is a modern myth that sovereign governments are somehow dependent upon the revenue from taxation (in the currency that is their valueless/'fiat' construct in the first place). However, they are dependent upon the labor that taxation motivates: "When the British went into Ghana to grow coffee, they couldn't get anybody to grow coffee until they put a hut tax on everybody's hut. They said 'You have to pay a tax in this new coin or we'll burn your hut down' [foreclose]... The purpose of the tax is to provide 'unemployment'²⁵⁰⁵, so the government [or its agents] can hire the people who became 'unemployed' because of their tax. They created the unemployment. They then eliminate it with their hiring.... The British would pay the town [in some form of fiat/token currency]...and then they would collect the tax" (Mosler, 2017, mn.-1-0). The rest of economic history has been various wrinkles of the same game-- building 'better' mousetraps.
- 7) Such taxation regimes in general have "been [the most] typical device of the International Plutocracy to...[destroy] independent local wealth centers, absorbing their wealth into the Great Hive, and... undermining economic independence" (Migchels, 2019b). After more than half a century of such practices, it is not just some theory or abstract. "I can literally walk out of my house and within 10 minutes spend my entire net worth on lottery tickets. I can, within a reasonable drive, spend my entire net worth on illegal narcotics. If, however, I put together a local stock market and try to finance the local businesses with equity, [then] I'll go to jail.... The [rigged] rules are very complicated, very draconian²⁵⁰⁶, and make it literally impossible for two neighbors to get together and create a company and sell stock to their neighbors.... A big company coming in with franchises trying to takeover the local market can borrow debt at 1% and can raise capital from...pension funds and retirement savings relatively easy... [But] the local business...[has] to pay literally 10-30% for their debt... and they can't raise equity capital locally, or it's very expensive and very difficult" (Fitts, 2017c, mn.35-37). See also "Legalism".
- 8) The Early Modern "...political maxim that taxes are what society's victors are able to extract from the losers [still] tends to demarcate political parties over the issue of what and whom to tax. Today, wealth and finance are being un-taxed, while the tax burden [monetary vacuum] is shifted onto employees (labor and 'consumers' via sales and excise taxes)" (Hudson, 2015b). See also "Tax shift".
- 9) "Besides tax[es] having a purpose of a] redeeming the currency" system itself (Sheppard, 2017, mn.9), taxes are also "sort of b] behavioral devices, because they reward behaviors that are regarded as desirable... [and] punish behaviors that are undesirable.... [and] They can [also] be used c] for redistribution. We [USA] don't redistribute through the tax system. We have a progressive income tax, but taken on the whole our tax and spending system *doesn't* redistribute downward" (mn.10). "We collect 90% of all taxes that we collect through wage withholding... income taxes, social security taxes, Medicare taxes.... The other 10%...[is voluntary], and we fight about that.... Corporations and rich people are fighting about that with the government" (Sheppard, mn.11). "Pretty much everything that is significant in tax happened in World War 2, because of the Vietnam War, or because of Reagan.... State and local tax deductions... are basically Blue State subsidies" (mn.15-16). "We have this corporate tax for fairness... We don't have it for revenue at all. It's really [about political] fairness...it looks a lot better if they [supposedly] pay... The tax system... is also trying to telegraph to them that *the whole economic system that we live under* is fair... We have to create the illusion of fairness..."- Lee Sheppard (Black, 2017, mn.51). See also "Taxation of income".

²⁵⁰⁵ people looking for paid work

²⁵⁰⁶ "Draco was the author (c.620 BC) of the first written code of laws of Athens; he imposed death as the penalty for many offenses, [hence] the origin of the word 'draconian'" (Diogenes Laertius, 2018, 28, n106).

10) A \$150 billion²⁵⁰⁷ a year tax cut-- “in military terms, that’s like nothing, compared to what we spend there” (Sheppard, mn.19). “We cut Medicare every year, folks. And it goes up every year-- because the numbers have nothing to do with reality.... The numbers always, always, always go up” regardless of what is said (mn.21-22). “Look all these [federal budget] numbers are just made up. They can spend on you whatever they want” to (Sheppard, mn.22). “*Congress really likes to fool around with the taxes, because it’s something that they can [still] control.* Because once they have ceded trade policy to the president in... ‘fast track... they have no control over stuff” (Sheppard, mn.24).

11) The ‘least bad’ tax policy is one that does not violate a citizen’s right to the fruits of his labor or his privacy; does not distort incentives to work and save; and minimizes the costs of compliance and administration” (Foldvary, 2006). See also “Taxation of income”.

12) Hence, the “whole idea [of a just and non-distortionary policy] is to tax what is created freely by nature, whether it’s land rent, natural resource rent (whether it’s from the oil and gas and minerals) or other monopoly rent. These forms of rent are what classical economics called ‘unearned income’. It is what landlords make in their sleep without working [or thinking]. This should be the tax base, not an income tax on labour or on industry” (Hudson, 2019c). See also “Unearned income”, “Taxation of [earned] income”

13) The “single most important [tax] loophole” is (since 1987) the deductibility of interest in the US, which “has been the whole basis for the corporate raider movement, for the corporate takeover movement, for the financialization of industry, for the [booming] real estate sector, for the oil and gas sector... [pretty much] every lobbyist in the country” (Hudson, 2017d, mn.9).

See also “F.I.R.E. sector”, “Dynastic cycle”.

[Most ‘Western’ countries²⁵⁰⁸ passed the 15% threshold between 1922-32. See also “Big Government”, “Monetization”.

Taxation, federal (US)-

²⁵⁰⁷ \$150 billion is also the est. cost for 6 months of ‘Overseas Continuing Operations’ a euphemism for bombing. “Bombing costs a billion dollars a week” (Sheppard, mn.23).

²⁵⁰⁸ Denmark and Germany did so c.1900; <https://ourworldindata.org/taxation>

Taxation of income- (i.e. the 20th century's particular 'dynastic cycle' driver, denoting pretty much 'the 4th quarter of [see also] imperialism')

1) In China, Yang Yan (727-781), in the latter Tang Dynasty, introduced a "new taxation system...[based] on the principle of 'gradation according to the wealth of different people'... Taxes in the Han Dynasty were...on the basis of the number of...people and the area of the farmlands; taxes in the Western Jin were...on the basis of the quality and quantity of the labouring forces; whereas this new two-tax...system... rested not on the labouring force, but on that of property.... It stipulated the payment of taxes in money, though [that was] not realized completely.... [revealing] that Yang had embraced some premonition of a new type of economy in germination, the money-economy. By the mid-Tang, there were already... [indications of a] transition from rents in kind to rents in [state] money.... Though...[the new] system had its progressive bearings, it meant nevertheless [actually] the strengthening of the feudal rule and feudal exploitation in a easier way... so the people were soon subjected again to extortions and reduced to the same miserable state as before" (He, at al, 2008, 276).

2) In the UK, income taxes were introduced "during the Napoleonic Wars... mainly on...gross revenue. Mining companies, commerce, and small business had to pay taxes [per the medieval custom] on self-declared average profit... Whereas estate owners and tenant farmers could not avoid the taxation of their gross revenues, merchants were privileged, because their records were [simply] not inspected" unless he appealed against the assessment; and since the introduction of PM Peel's "income tax in 1842... until 1885, only 38 judgments on tax disputes were pronounced... [which] is the reason why only a few people were irritated about the dubious contents of [many UK] special tax regulations" (Schneider, 1996, 576). See also "Central Banking-Warfare model", "F.I.RE. sector", "Bankmoney regime".

3) In Germany, Saxony introduced the first income tax in 1884, then Prussia in 1892, and finally the federal republic in 1913. In France, it also wasn't World War One, but "the yield was extremely low...[and] the French state [then] turned [instead] to a regressive sales tax which entailed the inspection of the books of thousands of small shopkeepers and artisans... [resulting in] political tension over the tax system on a much greater scale than in Britain" (Daunton, 2008, 260).

4) In the US, "income taxes were unconstitutional, [as declared] under Supreme Court decisions... in the 1890's [*Pollock v. Farmers' Loan & Trust Company* (1895)]. And it had to be reversed [to meet the needs of imperialism-warfare] by an amendment to the constitution... [because] it was considered *involuntary servitude*...[a slippery slope to] slavery [or at least 'debt peonage']. That's why the Supreme Court said you couldn't do it. And then... [over the course of the 20thc, it went] from effecting virtually nobody but the top 10%, to effecting mostly the bottom 90%...because of all of the escape hatches for getting out from under taxes" (Begich, 2019b, mn.21). See also "Tax shift".

5) Over the course of the 20th (CB) century, the proliferation of “special regulations” worldwide was so great that, by 1994, “nobody” could any longer “provide valid international comparisons of effective tax rates for [either] the profit of firms...[or] the income of persons” (Schneider, 1996, 577).

6) is an (increasingly) anachronistic tool in the digital age. “Income taxes [today] are [mostly] passed on in the form of higher prices and lower wages.... [because] When a rich person chooses to [instead] acquire an asset that appreciates without generating [taxable] income, he is also choosing [to invest in a (lower-tax)] asset that does not produce jobs” (Sullivan, 2020b).

See also “Industrial Revolution, 2nd”, “Dynastic Cycle”.

Taxation, state & local- State and Local Tax Burden for *Median Income* Households

<u>State</u>	<u>Total State & Local Tax Burden (2017)</u>	<u>US Rank</u>

Tech Giants- See "Big 5 (on S&P 500)", "Google", "Race-to-the-bottom" [.Amazon], "Social media".

Technocracy- (euphemism for lack of public accountability in [what was once supposed to be] the public sector; a.k.a. 'the one-way mirror', the 'twin brother of statism'²⁵⁰⁹; sometimes a.k.a. [see also] "Timarchy"; i.e. the terminus of "bankmoney regime")

"...a privately-funded cohort of experts that short-circuits...[any] democratic process" (Titus, 2022g, mn.4:49). See also "Fascism", "Tickbox".

"We must...be alert to the...danger that [national, & global] public policy could itself become the captive of a scientific, technological elite."- US President Eisenhower (1961b, mn.10).

Half-a-century later, and "[t]his country is [undeniably] being hijacked by a technocracy that is run by corporate giants that are 'globalists' at every level. You're just a consumer... a piece of meat in a system [to them (sans robo-public relations)], and that is not what we are. We are way more than that, and they know this on a fundamental level" (Begich, 2021, mn.17). See also "Provocation op", "Design".

1) "a **global** system designed to implement central resource management and control through rules-based micromanagement. The growth of technocracy is made possible by digital systems and software, artificial intelligence, and the [surveillance state] 'one-way mirror'²⁵¹⁰ managed... by intelligence and enforcement agencies-- [and] funded by our tax dollars. The...[siren song] of technocracy is that it can be integrated into a wide variety of political and corporate systems. While the US promotes the notion of markets and democratic process, our systems can be converted to technocracy with the integration of an endless stream of government, banking, and corporate rules and algorithms that manage and control our daily lives and infrastructure. The same process is rolling out in the one-party system of China and also via [the] mind-numbing regulation by multiple coalition governments and institutions of the European Union" (Fitts, 2019l). See also "Intelligence Community" [.I.I.C], →"Globalization".

2) ...from which the 'freedom' [of choice] of one's own personalized gadgets is the only 'escape'? "As...[Huxley] saw it, people will come to love their oppression, to adore the technologies that undo their capacity to think."- Neil Postman's *Amusing Ourselves to Death: Public Discourse in the Age of Show Business* (Postman, 1985, xix). See also "Dumb-downing", "Dystopia".

3) As the 19th century's "national state [model] began to be replaced by the 20th century's ideological bloc... the shift from amateur to specialist weapons made it likely that the new form of organization would [initially] be authoritarian, rather than democratic, as the earlier national state had been" (Quigley, 1966, 36-37). See also "**Charismatic Authority (CHA) & Charismatic Dependency (CHD)**", "Democracy", "Jones, Alex".

4) is also a consequence of the failure of the 3rd Estate-- almost 2 centuries after the Age of Revolution²⁵¹¹ and 2 decades after the normalization of high-speed internet in most homes-- to rise. See also "Provocation operation (Po)", "Estates, 3".

²⁵⁰⁹ One is (it will become increasingly evident) not going to get out of Tweedle-Dee with Tweedle-Dum-- i.e. delegating the hard thinking and heavy lifting to other/fellow 'statists' will just eventually result in assumptions and policy being rolled over to more technocrats and paid lobbyists. See also "Statism", "Lobbyists".

²⁵¹⁰"Although Western countries are growing wary of Chinese smart city technologies due to data security and human rights concerns, vendors like Huawei remain attractive to developing and emerging economies worldwide."- <https://meric.org/en/short-analysis/e-government-and-covid-19-digital-china-goes-global> [3/22].

²⁵¹¹ The "remarkable linkage of equality, democracy, and freedom, and [also] the issue of original ownership of the land, with the 'state of nature' and man's 'natural right', initiated [3 centuries ago now] a preoccupation with 'natural man' which runs like a [common] thread through the Radical Enlightenment from Spinoza...Ven den Enden...[and] Tyssot de Patot, to Rousseau, and ultimately the militant, revolutionary

5) is also the primary “process by which small businesses and enterprises are driven out of business, intentionally creating larger market share and monopoly profit margins for large corporations. Many of us are managing the increased workload and expense of growing technocracy” (Fitts, 2019l). See also “COVID”, “Serfdom, neo”.

6) “Most the technology that they are using [to test-run technocracy] in China is patently illegal in the United States... But the companies... big tech companies... [noted that] ‘China will let us do whatever we want to do, because they want to control their people, openly so... So we’ll go over to China to develop the technology’. And [then] what happens is, it [somehow] gets re-imported back into the United States, as sensitivity is lowered in our country-- as laws are changed... Wham-- it’s on us now. This has happened in several tangible instances over the past 20 years... So this is not a new pattern. This is the way it’s done. The companies that are developing that technology in China-- the original technology that seeded those companies came from the US of A-- period. End of subject. We have created this monster that now wants to recreate us” (Wood, 2017, mn.13-15). Most sources consider China to be ahead of the US now in the fields of quantum computing, fintech (encryption, online payments), and hacking.

7) Hope “invested in a more just social order...[?] Economic growth is quite simply incapable of satisfying this democratic and meritocratic hope, which must create [other] specific institutions for the purpose, and not rely solely on [so-called] market forces or technological progress” (Piketty, 2014, 96).

7b) Other ‘specific institutions’ must be created because ‘technocracy’ is ripping up the old (2nd Industrial Revolution, 20thc) world of (reliance upon) regulation. “All the things that [would] help it-- including technology-- also open up [more] opportunities [for getting around regulation]. It’s going to be very, very difficult indeed, with any sort of *known* [sic] political system, to keep up with making sure you’re supervising the right thing at the right time... What happens when you get a regulated sector is you [then] get a huge growth around the sides” of it (Middleton, 2020, mn.148-49); and the proverbial “one step behind, as regulators always are, is getting to be a bigger and bigger step, because the economy is getting bigger and...more complicated” (Middleton, mn.154-55). And, if alternatives are not provided, then; “once you move from having a very [regulatory] objective, like keeping inflation down, to a much more complicated one, like keeping the economy going, you’re inevitably going to be [moving] in [to] the role of politics” (Middleton, 2020, mn.156), See also “Regulation”, “Government, role of”, “Design”. See also “Technocrats”, ←“National Security Agency”, ←“Bankmoney regime”; “Serfdom”, App.C: “1-2-3”.

[Skinner’s (& Brzezinski’s) utopia; see also “Boards”, “Headless Horseman”]

Technocrats- (a.k.a. ‘public servants in private markets’ [Braun, et al, 2020])

1) “The first ploy to serve bankers and bondholders is to place technocrats (a scientific sounding euphemism [in the West] for *bank lobbyists*) in place of elected governments [as was done in 2011] in Greece and Italy.... Neoliberals are using Greece’s debt crisis as an opportunity to pry away whatever its government owns: real estate and public buildings, oil and gas rights... port facilities, electric utilities and roads. In times past, it would have taken an army to carry out what the ECB is achieving in Greece. The new appropriators would have had to invade the country to take over its land and infrastructure. But the ECB is doing this without military force, simply by appointing *technocrats* as proconsuls” (Hudson, 2012g). See also “Monetary reform”.

egalitarianism of Robespierre and the Jacobins. Spinoza himself, assuredly, abhors popular tumult and fears political revolution. But at the same time... he also demonstrates that monarchy and aristocracy... the institutionalized inequality which dominated European society in his time, are nothing else than forms of corruption and degeneration from... the normative condition most ‘natural’ to man. The inequality and hierarchy dominant in European society in his day is thus devoid of all legitimacy” (Israel, 2001). See also “Revolution”, “Design”.

2) “*Technocratism*” is “applying standards lawfully, but to the advantage of clients, not breaking the rules but not making a stand for truth and objectivity either. Progression to the partner ranks requires ‘fitting in’ above all else (Brooks, 2018). In other words, within technocrats’ “communities and networks, international cooperation is facilitated by shared intellectual frameworks and professional norms” (Braun, Krampf, & Murau, 2020). Does anyone not already know this? See also “Groupthink”.

3) Are we to believe that most of them work for this man? “I think there’s a lot to be learned from Network²⁵¹² theory. And yet there is some difference between human networks and non-human networks...[But] exactly what that difference is, I haven’t been able to identify... So I think there’s a lot to be [smirking] gained from...[smirking again] natural sciences”- George Soros (Soros, 2010, mn.9-10).

4) Are (even genuine-sincere) technocrats to be trusted (with important things like monetary systems)? “Don’t overrate sincerity... The most sincere person you’ll ever meet is the maniac chasing you down the street with an ax, trying to chop your head off!” (Keen, 2011). See also

TED Spread- “the difference between the 3-month London Interbank Offered Rate (LIBOR) and the 3-month Treasury Bill rate” (Council of Economic Advisors, 2009, 75).

Teleology- (‘no theory of history can do without **teleology**’, nor vice-versa; a.k.a. ‘*sic transit gloria mundi*’) “The first time that you [Jefferson] and I differed in opinion on any material question was after your arrival from Europe; and that point was the French revolution. You was well persuaded in your own mind that the nation would succeed in establishing a free republican government. I was well persuaded in mine, that a project of such a government, over five-and-twenty millions of people, when four-and-twenty millions and five hundred thousand of them could neither read nor write, was as unnatural, irrational, and impracticable as it would be over the elephants, lions, tigers, panthers, wolves, and bears, in the royal menagerie at Versailles. Napoleon has lately invented a word, which perfectly expressed my opinion at the time and ever since. He calls the project *ideology*; and [conservative Congressman] John Randolph, though he was, 14 years ago, as wild an enthusiast for equality and fraternity as any of them, appears to now [be] a regenerated proselyte to Napoleon’s opinion and mine, that it was all madness²⁵¹³.... [W]hen I saw Shay’s rebellion breaking out in Massachusetts... [and] when I saw that the sympathies in America had caught the French flame, I was determined to wash my own hands as clear as I could of all this foulness.... In truth, my ‘Defence of the [nomocratic] Constitutions’ and ‘Discourses on Davlia’, were the cause of that immense unpopularity which fell like the tower of Siloam upon me. Your steady defence of democratical principles, and your invariable favorable opinion of the French revolution, laid the foundation of your unbounded popularity. *Sic transit gloria mundi.*” See also “Design”.

²⁵¹² The supposed ‘Rockefeller-Rothschild’ bag man for the young 21st century probably didn’t mean the 1976 movie (about the future of Corporate Media Cartel: <https://www.youtube.com/watch?v=1cSGvqQHjps>), although there was a quickly-repressed smile on his face (at 9:42).

²⁵¹³ The French didn’t know what they were doing in regards to (at least realizing) monetary theory and money (Spang, 2015); and the assignats were hence easily counterfeited & inflated away. See also Ch.2, “Revolution, French, the”.

- John Adams, on the difference between his administration and Thomas Jefferson's (Adams, 1813d). See also "Freedom continuum (maturation)", "Natural law", App.C: "1-2-3".

Television- pretending (like Economics) not to be moral. "I got rid of mine in 1984... I heard... two billionaire types talking about the entrainment technology that was going to be rolled out. It scared me to death" (Fitts, 2017d, mn.45).

See also "Corporate Media Cartel", "Fundamental Attribution Error", "Homo Economicus".

Terminological Jungle- Anything that's not a well-known term may be subject to academic *manipulation through definition* (semantic arguing over words); sophomoric quagmire.²⁵¹⁴

See also "Deceptive Banking Terms (d.b.t.'s)".

Terrorism- use of (organized) violence to achieve a political objective

1) "Terror is theatre... Theatre's a con trick. Do you know what that means? Con[ference] trick? You've been deceived."- John Le Carre's *The Little Drummer Girl*, 1983 (Bollyn, 2017, x). See also "Intelligence Community (IC)".

2) "I will give you a hint or two more on the subject of terrorism.... I thank God that terror never seized my mind. But I have had more excitements to it, from 1761 to this day, than any other man.... and I have a right to complain. But, as I have always expected it, I have always submitted to it, perhaps with too much tameness"- John Adams, letter to Thomas Jefferson (Adams, 1813b).

See also "Mind control", "War", "Zionism".

3) 'Always submitted... with too much tameness'? That is because terrorism is almost always-- and increasingly-- from government. The "real meaning of 'terrorism'-- to instill in innocent people fear for their life security [in order] to coerce their compliance to an armed faction's demands... [is in fact] increasingly at work across [the] world... Under the financial dictates of the corporate market [and] backed by rising... [degrees] of armed force, citizens [and subjects] everywhere are subjected to a low-intensity campaign of [pretty much constant] destabilization and fear that leaves no aspect of their lives..." untouched (McMurtry, 2002, 51). See also "War", "Lies".

²⁵¹⁴ Sophistry is a natural inclination, in-built into even dumb people. It doesn't take a brilliant person to be a sophist. Kindergartners can do that. It doesn't take any brains. You spot a sophist and then you nail them. It's over. Relying on *semantic definition* can only be used for manipulation. That's why the rulers use it. It doesn't lead anywhere and hasn't changed any in 2000 years. Either one is caught in the matrix of sophistry, or he calls it out. See also "Mind control", "Conditioning".

Texas- (etym.: 'friendship'; **sort** of like the Massachusetts of the west-- a 'large' state and small-plot settler society, with fundamentally **balanced** economic sectors²⁵¹⁵)

1) Americans "had long been interested in acquiring Texas. At the time of the Louisiana Purchase in 1803... many people thought that all or at least part of Texas was included in the bargain.... [But] the Florida treaty [in 1819] set the United States's boundary... at the Sabine River.... Even though the United States's claim...was legally extinguished...Americans persisted in their desire to acquire the province, either by purchase if possible or other less official means if necessary. Among...[the] diehard expansionists unwilling to give up hope of getting Texas at a future date was Thomas Jefferson. He assured his friend President James Madison that, when acquired, Texas would become 'the richest State of our Union, without any exception'" (Crapol, 2006, 176).

1b) In 1836, shortly "after independence was declared, Texans held a plebiscite that revealed that the...[citizens] overwhelmingly supported annexation by the United States" (Crapol, 2006, 176). See also "Democracy" [I & R].

2) The old stereotypes of 'cattle, cotton, and oil', though displaced from primacy, are still salient.²⁵¹⁶

3) became less (not more) imperialistic than the US in general, around 2010 & the ensuing decade. See also "Imperialism, American", App.C: "1-2-3".

4) "Texas alone has over 100 laws that reference weather modification."- Pete Kennedy (Fitts, 2022], mn.105). See also "States rights".

Thatcher, Margaret (1925-2013)- (British Conservative PM, 1979-90) See also "Parliament".

1) "The irony of her tenure in office was that while she did not personally admire the financial sector, her ["there is no such thing as society"] *privatization* of public enterprises provided unprecedented windfall gains for London's financial sector ("the City"). (See Neoliberal, Reaganomics...)" (Hudson, 2015b).

2) "Before Thatcher came to power, almost 40% of the shares in British companies were held by individuals. By 1981, it was less than 30%. By the time she died in 2013, it had slumped to under 12%. What is significant about this is not only that Thatcher and her chancellor Nigel Lawson's vision of a *shareholding democracy*²⁵¹⁷ failed to come to pass through privatisation, but that it undermines the justification for the way the companies were taken out of public ownership.... None of the many alternatives to stock market flotation were put up for discussion by either side: it was either shareholder capitalism or the nationalised status quo" (Meek, 2014). "The reality is that the faceless state bureaucrats of the old electricity boards have been replaced by the faceless (and better paid) private bureaucrats of the electricity companies. Not only are the privatised utilities big, remote corporations; most of them are no longer British, and no longer owned by small shareholders. Indeed electricity and water privatised could not have failed more absolutely to foster the emergence of... British companies. Most of the electricity made and sold in England is now owned by dynamic, tech-savvy companies from western Europe, a region doomed, Thatcher thought, by creeping socialism" (Meek, 2014).

3) The "growth of credit [in addition to cheap imports]...allowed people to maintain their living standards [or at least their shopping standards] without maintaining their incomes. Now if we didn't have this growth of credit... over the last 30 years, ...the whole ["neoliberal"] economic 'reform' process-- the whole vision of a market economy operating more successfully from the 1980's onwards-- which is what we've all been lead to *believe*, would have been falsified before it even started. Nearly everybody believes that-- to the

²⁵¹⁵ Texas ranks approx. #21 in "cropland as a % of all land". Other 'economically-**balanced**' states (i.e. between being either dominated by or lacking much farming-- minus the former plantation-dominated states [i.e. those that were traditionally controlled by 'the planters']) include: California, Idaho, Kentucky, Maryland, Michigan, Montana, New Jersey, New York, North Carolina, Pennsylvania, Tennessee, and Washington. The US also has, of course, the dozen or so traditionally farm-dominated states, in addition to the 7 or so minerals-dominated states, and the 6 (non-farming, non-mineral) New England states.-<https://stacker.com/stories/1578/states-most-farmland> Does it matter? See also "Parity", "World Par Economy". ("Farm output's share of the US economy [in 2021] was 0.6% of GDP).

²⁵¹⁶ In 2021, Texas ranked first in the US for total livestock & livestock product receipts, producing "about 20% of the nation's beef cattle.... [in addition to] 29% of the nation's cotton revenues", and approx. 1/4th of its oil & gas.

²⁵¹⁷ "According to Positive Money, 40% of the UK stock market is owned by 5% of the population" (2014b, mn.2).

extent that Economics was reinvented in the 1970's and 1980's-- [that] in some senses, the world economy has performed better over the last 30 years than in the previous 30 years. But actually if it hadn't been for the credit [i.e. bankmoney & shadow-banking sector] growth... [then] one could argue that the entire Thatcher-Reagan experiment would have been not just a sort of modified success, but [rather] a total & utter failure-- both economically and politically” (Kaletsky, 2010, mn.16-17). See also “Debt cycles”.
 4) There were widespread reports of the British public celebrating her death, as private debt levels “rose from about 70% of GDP when...Thatcher was elected, to 200% in 2010-- virtually tripling” (Keen, 2016r, mn.20-21). See also “Tax shift”.

[Keen, 2017d2]

Theories of money- See “Monetary theory”, “Parallel universe”.

Theory- (making sense of [multivariate] processes; a.k.a. science; i.e. simply not getting or being lost to the bigger questions of [both physical and social] life) See also “Design”.

- 1) “No scientist ever believes that he had the final answer or the ultimate truth on anything.”
 - Carroll Quigley, 1961. See also “Monetary theory”, “Reform, false”.
 - 2) Nonetheless, everyone has mental building blocks & schemata, whether they admit it or not. Bad ones waste our time (and environment); good ones save time. See also “Conspiracy theorist”.

[‘Got it down to 3 yet’? (Pythagoras-Dee-Tesla)]

Three Romes- (originally a term for the 3 *intra-Europe* empires of the greater medieval era-- Rome, Byzantium²⁵²⁰-Constantinople, and Moscow)

1) coined in 15thc Muscovy, See also “Russia (& Ukraine)”.

2) In (so-called) ‘modern’ times, however, a 2nd Estate-privileged Western heritage of **extra-judicial sovereignty** and (de facto) independence for what is now [since World War One] a *global* empire-- with the Vatican (‘**father time**’), The City of London (‘**father credit-money**’), and **The District** of Columbia (*military/enforcement*). See also “Estates, 3”.

3) According to many sources, however, the Vatican has long since fallen out and it’s more like, in ‘modern’ actuality, ‘2 Romes’: The City (of London) “operates as a super-government of the world... [and] its pretensions...[were, at least in the first half of the 20thc,] supported in the United States by the secret Pilgrim Society, [the initial US] sponsor of the Cecil Rhodes [a.k.a. the ‘Rhodes-Milner-Cecil Group’] ‘One World’ ideology, which was [fully] launched about 1897” (Knuth, 1944, 5; also Quigley, 1966). See also “Fin de Siecle”, “Pilgrim Society”, “Oligarchy, American” (Faction1), “Bank of International Settlements (BIS)”.

3b) Moscow, however, returned to the (conspiratorial) fore with the...(see also) “Cold War”, “**International Intelligence Community (I.I.C.)**” [as distinct from simply “UKUSA”].

3c) And of course the millennial-era rise of China (& I.I.C.) has (radically) reduced the primacy of the concept. See also “Patri” [old & new troikas], “Civilization” [Quigley].

Thrifts- (synon. ‘thrift banks’; ‘*savings & loans*’ [more south-west], ‘*savings banks*’ [more north-east])²⁵²¹

1) a now somewhat nostalgic term (since the de-regulations of 1980-82) for **state-monetized credit institutions** that were originally chartered to specialize in *mortgages*,²⁵²² and that-- in contrast to banks-- supposedly (still) only use their depositors’ savings, not engaging in money-creation via credit-extension. The second part is not true: thrift banks/S&L’s use the same accounting as commercial banks and have [RAB] accounts at the Fed, **whether or not** the accounts are direct, or have to go through the (see also) “Federal Home Loan Banks system (FHLB)”.

2) The two main types of today’s (i.e. ‘fractional reserve’) “thrift” banks are: (see also) “*Savings & Loan Associations*,” [more prevalent in the south & west] and “*Savings Banks*” [more prevalent north & east]. ‘Thrifths’, like commercial banks, are insured by FDIC; whereas credit unions are covered by NCUA. Even after the de-regulations, however, **thrifths** are legally required to have at least 65% of their lending portfolio in ‘consumer loans’. Their primary competitive advantage over commercial banks has traditionally been

2519

²⁵²⁰The “New Rome” lived on, “never calling themselves Byzantine or Greek...[They] described themselves as [simply] Roman”; and the “barbarian young [Ethnic (national) Identity] people’s of Europe...[then*] regarded the empire with profound respect and envy” (Averintsev, 1989, 38-39). See also “Ethnic (national) Identity” [‘ethno-authoritarian’], “Gold Standards/bullionism”.

** - not “now”: <https://www.youtube.com/watch?v=sA61R2Nc1Y8> [Liro-Sivaya’22, mn.110 .→ See also “Aristotle vs. Plato”.

²⁵²¹ Some sources, such as www.ffiec.gov/npw/Help/InstitutionTypes, (and ‘Investopedia.com’), also include credit unions as “thrifths”. Most others (and Merriam-Webster) do not.

²⁵²² Thrifths “ [still] specialize in mortgages and real estate...[Their] 1st mandate is to the members of the thrift, not profit. Like commercial banks, thrifths may be chartered by either the... OCC, or by the state...[and the] FDIC...insures them. Thrifths...[are more likely to] retain their loan portfolio rather than [to] securitize loans...[Thus] members with atypical profiles that don’t fit into agency mortgage standards may stand a better chance of securing a...[mortgage] through a local thrift than [through] a national commercial bank” (Kagan, 2021).

paying higher interest on savings accounts. That caused them considerable stress and losses in the high-interest rate era of the late 1970's-early '80s, leading to their deregulation and liberalization from 1980-84, which subsequently caused their numbers to plummet. **Some** genuine (non-'fractional reserve') thrifts²⁵²³ still remain. See also "Savings Banks".

3) Thrifts "began to emerge in the United States after the 1820's... to enable those parts of the population, such as workers and small landowners, who were usually neglected by the commercial banks... Since they were unable to acquire federal licenses until 1982, they operated on a regionally limited basis. After the New Deal, they were largely responsible for the mortgage business²⁵²⁴. The fact that [unlike commercial banks] their long-term loans were [actually] financed through short-term [customer] deposits meant that the S&Ls were [again, unlike commercial/'fractional reserve' banks] particularly vulnerable to sudden rises in interest rates" (Busch, 2012, 57-58, n44). See also "Savings & Loan Crisis", "Criminalization of banking".

4) Since the deregulations, however, federal "regulators do not take a uniform approach to the treatment of thrift institutions...[at least] in antitrust analysis. Whereas the FDIC and OCC tend to treat thrifts and commercial banks equally, the Federal Reserve and the Justice Department in many instances discount the role of thrifts as competitors in the market for banking services... [And over] the period 1991-97²⁵²⁵ ...the number of savings banks remained virtually unchanged, but the number of savings and loan associations declined more than 60%, with many S&Ls converting to *savings banks*", with the latter being about twice as involved with (formerly forbidden) commercial loans (Pilloff & Prager, 1998, 1025-27). See also "Savings & Loan Crisis".

5) Both Savings Banks and Savings & Loans (but not "Federal savings associations") are state-chartered (OCC, 2017b).

6) The *Dodd-Frank* legislation has continued Washington's 4 decades long pro-commercial bank and anti-thrift 'reforms'.

See also "Monetized credit institutions", "Exogenous vs. Endogenous' (money creation)".

Tickbox- (synon. 'check-the-box', 'checkbox culture'; i.e. 'privatized' or 'neo-bureaucracy', as with attack dogs, there is no reasoning, only 'training') see also "Numbers", "Mythomatics", "Legalism", "Imperialism". "has opened a [bottomless] Pandora's box of horrifying new corruption possibilities" (Taibbi, 2014). See also "Boards/Board Systems", "Big 4 Accounting" [check-the-box], "Big...", → "Privilege".

Why, alongside "all the vast investment in IT, [does] human [beings'] capacity...[seem] to have been ...seriously constrained. Because the [old "measuring, measuring, measuring"] slogan is a fallacy: everything *can't* [sic] be measured. In fact, the more important it is-- love, learning, wisdom, imagination-- the less it can be measured at all, and the more disastrous the attempt to do so tends to be" (Boyle, 2020, 54-55).

1) "[T]here is a kind of tickbox disease, ferocious in the way it has spread, which blinds managers to the difference between a ticked box and reality-- not [necessarily] because they have been corrupted, but because they have developed a habit of seeing the box ticked, breathing a small sigh of relief, and moving on" to the next task (Boyle, 2020, 119). "Observer Effect/Goodhart's Law", "Monetization", "Myths, Big 6".

2) "There is also the literally incalculable cost of shifting the focus of services from supporting customers and users to what managers want. It would be silly to pretend [that] there is no overlap, but equally silly to pretend that the two amount to the same thing" (Boyle, 2020, 119). See also "Productivity" [service sector], "Big 4 Accounting firms-Management consultants".

²⁵²³ "Genuine Thrifts"-- i.e. "savings and loan associations and savings banks...[that] are [in fact] *financial intermediaries* that raise funds primarily through time and savings deposits and [then] invest principally in residential mortgages and consumer loans" (Pilloff & Prager, 1998, 1025); not (more than 20%) commercial loans, and not at all 'fractional reserve' new money creation.

²⁵²⁴ E % mortg. loans

²⁵²⁵ The authors' "choice of the time period was dictated by concerns... [that the] thrift crisis of the 1980s... [was so bad that it] affected the quantity and quality of data available... for several years before 1991" (Pilloff & Prager, 1026, n4).

2b) Similar is “how tickbox [also] encourages a tolerance [and eventually accumulation] of small lies” (Boyle, 119). See also “Integrity”.

2c) One of the lies was that it would balance the budgets (deep in red ink from the 1980’s)-- “the idea that, with guidance from [some new] contracts and performance indicators, and with one eye on customer satisfaction ratings, services could run themselves. Without decisions from politicians, or [indeed] from any human beings at all. All that was now required was to remove the bureaucrats and the dream would be complete.... It was all done in the name of localization and empowerment, but in practice it was absolutely the reverse. What worried [most of the] critics at the time was that the new regime was...[in fact] expensive. The [UK] Treasury assumed that in order to restrain spending, iron central control was required. They had not grasped then-- and may not have grasped even now-- that iron central control is actually rather wasteful; [b]ecause someone has to pay for the whole edifice of targets, standards, inspections, and audits which drive the centralized state” (Boyle, 2020, 62). See also “Big Government”.

2d) Meanwhile, the “corporate world was doing the same [thing], if less wastefully, as they handed over [outsourced] responsibility for managing their staff to the distant contract culture of the human resource department.... [And] the whole thing was being bundled up in new software that was creating a new straightjacket for employees, not only in factories but in offices too” (Boyle, 64).

3) Eventually most any; “targets infrastructure... [will] fail to meet the sheer power of Goodhart’s Law” (Boyle, 2020, 121). See also “Human beings”, “Reverse psychology”, “**Currency Wars, the**”; “Long-term orientation (LTO)”.

4) Why was it the British who decided-- right after the Soviet Union dissolved-- to push Tickbox solutions? See also “Parliament” [↓.]; “English constitution, the”, “Monty Python’s”; “Industrial Revolution, 3rd”. See also “Scientific Management”, “Bureaucracy”, “Discretionary (US Budget)”, “Congress” [trend to end].

Tiers of money, the- see “**Money, 3 (contemporary) Tiers of**”, “**Money, 2 classes (layers) of**”.

Timarchy- (archaic: ‘monarchy’; a.k.a.: ‘rule by love-of-honor’ [Montesquieu], “the Intelligence Community”, or military intelligence; i.e. the USA since the mid-20th century; less often a.k.a. ‘cryptocracy’-- rule by secrecy or mis-direction, wherein ‘a fake gov’t appears to be in charge and [at least in earlier stages] this fake gov’t might not [even] know themselves that they are not [effectively] in charge’; sometimes a.k.a. [see also] “Technocracy”)

It is practice; not theory. “Given the government’s track record in failing to force transparency out of the Pentagon, it’s hard to have a lot of confidence [that] answers will be forthcoming” (Taibbi, 2019). See also “Federal Accounting Standards Advisory Board” [FASAB-56], “Secrecy, Cult of”.

1) But no political ‘theory’ is older. Enlightenment-Montesquieu’s favorite? “It is natural for mankind to set a higher value upon courage than timidity, on activity than prudence, on strength than counsel. Hence an army will ever despise a senate, and respect their own officers. They will naturally slight the orders sent them by a body of men whom they look upon as cowards... [Thus] as soon as the troops depend entirely on the legislative body, it becomes a military government...” (Montesquieu, 1748, 161). Just how long this has been the case in the US is a debatable (albeit not in public) question. See also “Institutional approval (in USA)”, “**Military-Executive-Corpocracy**”, “Constitution” [Montesquieu].

1b) Montesquieu’s trend continues... “All human things [including the timarchic republic] have an end, [and] the state we are speaking of²⁵²⁶ will lose its liberty...[and] perish.... It will perish when the legislative power [i.e. it’s figleaf] shall be more [ridiculously] corrupt than the executive” (Montesquieu, 1748, 161-162); and is hence, effectively, lost. See also “Congress (US)”, “Russiagate”, “COVID”.

2) It has been often noted that the word ‘democracy’ and its cognates were not deemed fit to be included in the US constitution of 1787. “But the word *republic* is not in the Constitution either...In 1776 that word also had a bad odor. It does not appear in any of the first state constitutions [either]. The federal Constitution does guarantee to each state a *republican form of government*, but what is meant by the

²⁵²⁶ ...Be it a Timarchy (specif. p.161), a Republic (Book XI in general), or indeed a ‘timarchic republic’ (as the US has been for at least .5- to-1.5 centuries). See also “Super Imperialism”.

term ['republic'] is nowhere explained²⁵²⁷ in the Constitution. It early became a custom to refer to the United States as a Republic in some diplomatic and official papers, but the official title or style of our country is still the United States of America... [N]o law of the land officially declares us to be either a democracy or a republic.... Many conservatives still insist that it is only a republic... Democrats [who play loose with the facts] insist that it is a democracy, or [if more reasonable] a democratic republic. But there is no official warrant for either usage.... I told you at our first session that the Constitution is a prophecy for the ages.... [And even though the] authors of *The Federalist* acknowledged that the axioms of republicanism [per Montesquieu] were the accepted postulates of the Constitution... if the framers... had openly declared that '*We, the people, ordain and establish this Constitution for the Republic of the United States*', [then] they would have frightened the advocates of states rights with the specter of consolidation.... [So] there is [in fact] nothing official about it...' (Beard, 1943, 32-33). See also "Constitutions & Conventions", "Federalism".

3) A couple centuries later, and (is this really a 'surprise?'), "I think you have a lot of very capable people in the military & intelligence who understand that the bankers' model is over-stretched and in danger. And, as risk managers, they say: '*We've got to re-ground back into North America*'" (Fitts, 2017p, mn.18). See also "Trump, Donald", "Criminalization of banking, the".

4) It's not about conscription anymore (per the 18th-20th centuries). It's about the largest budgets and the most technology²⁵²⁸ (on the planet). Federal outlays is just another term for strategic investment. In 2018, the "US Department of Defense... had the state of Washington redo their eminent domain laws, so that the military has a kind of a veto power over the state's eminent domain. And I think you're gonna see that spread, through the heartland.... because what I think they are going to do [strategically] is disperse the manufacturing base..." (Farrell, 2018, mn.0-1). See also "Discretionary (US budget)", "Black budget (US)", "UKUSA Agreement".

4b) Every fiscal year, the US *National Defense Authorization Act* (NDAA) budget dwarfs that (tn. 2023) and now contains of "riders". <https://federalnewsnetwork.com/congress/2022/11/bills-amendments-linger-in-congress-with-lasting-implications-for-feds/> <https://federalnewsnetwork.com/workforce/2022/12/language-to-block-future-schedule-f-absent-from-compromise-version-of-ndaa/>

5) Even giants can have feet of clay. (As Montesquieu also pointed out in reference to the 'legislative power' above); "if the [duopoly] Party game & the effort to sort of engineer civil war II gets *absurd* enough, then it's gonna put the military in a real pickle. They cannot afford for the world to *perceive* [sic] that the [USD reserve currency] system is not run by real adults [anymore]. It's dangerous.... And I assure you, it's not just the people in Washington. No. The corruption now in the general population is [probably at least as bad, and] very, very significant" (Fitts, 2020g, mn.9-10). See also "Deep State" [(COG)], "Corruption", "Dumb-downing".

6) 'Timarchy' is also (in archaic usage) a state where only *property-owners* participate in government; i.e., all British N. American colonies from the 1620's, until individual US states removed property qualifications (from 1790-1856).

See also "Deep State", "Central Intelligence Agency (CIA)", "Nasserism", "National Security Agency (NSA)", "Intelligence Community (IC)", "Debt cycles", "Military leadership (of 20thc-millennial UK-USA)", "Media, B".

²⁵²⁷ The Latin *res publica* (simply 'public thing') is not specific either. Post-president Jefferson tried to address the problem: "" (Jefferson, 1816

It (the potential for Orwellian word abuse) gets worse; see also ""Democracy"", "Orwell, George (1903-1950)".

²⁵²⁸ "Somebody...[may be so] blinded by the beauty of their weapons, which... are quite amazing because the majority of people... don't even know that they exist. It's very clever.... You have to move away from all those people that are mind controlled. They don't even know-- and they can't face the fact-- that there is a Matrix" (Fitts, 2020g, mn.16-17). See also "DARPA", "Cultural Calendar", "Mind control", "Cycles".

[See also “DARPA”, “Physics”]

[“What is your quest?” See also “Conditioning”, “Happiness”, “Freedom continuum (maturation)”.]

Time- See “Lunatics”, “Cultural Calendar”.

‘Time deposits’- deceptive banking term (d.b.t.) for “Savings investments”; See also “M2”.

Tobin, James (1918-2002)- “the leading macroeconomist of our generation”- Paul Samuelson (1915-2009). See “Neoclassical revolution”, →“Exogenous vs. Endogenous’ (money creation)”, →“Too-Big-To-Fail”.

Tolkien, J.R.R. (1892-1973)- (the modern mythologist, whose themes of corrupted constitutions become more, not less, salient, until the problem is solved). After World War Two [i.e. the 3rd Currency War] in particular, Tolkien made (in private) a number of revelatory remarks about his Middle Earth schemata. See also “Evil”, “Fundamental Attribution Error”, “Industrial Revolution 2nd”.

1) “They were thought to be Emissaries... and their proper function, maintained by Gandalf, and perverted by Saruman, was to encourage and bring out the native powers of the Enemies of [genetic engineering/polluting] Sauron” (Tolkien, 1954). See also “Evil”, “Scientific Management/Hawthorne Effect”, “Transhumanism”, App.C: “1-2-3”.

2) Although the don of Anglo-Saxon philology (and The Inklings) at Oxford consciously objected to his works being seen as “allegories”, history-- and its unsolved problems-- is the “resonant” to “resonant fiction”, and, apart from Mark Twain, nobody’s fiction has resonated as profoundly, and in subtle (unconscious) ways as has Tolkien’s schemata.²⁵²⁹ See also “English constitution, the”. See also “Jones, Alex”, “K.J.B. (King James’ Bible)/70 Year Plan”, “Conspiracy theorist”.

“Too-Big-To-Fail”- 1) “an Ivy-League ruse. The idea that we need these large institutions in order for us to continue living is absurd... Natural forces would ebb & flow, cycling back and forth to keep power from consolidating at the top” (Vrabel, 2011, mn.7). See also “American System, the”.

2) There is “no convincing macroeconomic reason for the US government to guarantee that a large depository will not be allowed to fail. Without doubt, there would be turmoil in financial markets for a few days on news of such a failure, but such [media] frenzies have few consequences for the vast economy and population engaged in producing goods and services” (Tobin, 1987, 169).

See also “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”, “Bank welfare”.

Tools, primary- (how ‘they’ve always: a] done it, and/or b] covered their tracks)

1) Since even prehistoric ²⁵³⁰ times, the Big 3 (social) tools or getting (public) things done here have been:				
<u>tool</u>	<u>moniker</u>	<u>salience</u>	<u>English (primary)</u>	<u>British (2ndary)</u>
WORDS	‘man’s 1st tool’	primordial right to call a spade a spade	Chaucer (1390’s)	Skeat ²⁵³¹ (c.1900)
↓	(say, naming the arrowhead or lever) (...but then [a perversity of] the Law interfered...)			
LAW	‘man’s 1 st public tool’	should be posted-understood by a ‘reasonable man’	Coke (c.1630)	Blackstone (c.1770)
↓				

²⁵²⁹ Even the Beatles/EMI were fans (<https://www.youtube.com/watch?v=Zn99sY-PdtU> [Help]). Half a century later, many have surmised that Tolkien was perhaps the most important writer of the 20th century (Pearce, 2002, ix).

²⁵³⁰ See also “Tally sticks”, “History”.

²⁵³¹ The father of totalitarianism?

STATE MONEY 'man's 1st power tool' Once law is in place; → leverage becomes a public (or delegated) tool²⁵³²

Locke (1690's) Smith (1780's-??)

2) So with Chaucer-Coke-Locke [.En] we have...

2b) With Skeat-Blackstone-Smith [.UK], however, we have...

See also "Imperialism", "Fin de Siecle" [for Skeat].

See also "Orwell, George" [.words]; "Congress" & "Legalism" [.law]; "Capital", "Money", "Imperialism".

Totalitarianism- (control of 'all' art) See also "Reform, 101", "Local scrip & Complementary currencies".

"One of the hallmarks of totalitarianism is mass conformity to a psychotic official narrative."- C.J. Hopkins

1) is a consequence of being governed by a *psychological* (sociological) system, instead of an *economic* system; Frederick Soddy called it out nearly a century ago²⁵³³ (during the half-time of the 3rd Currency War). See also "Soddy, Frederick (1877-1956)", "NInnies", "National Identity", "National Income".

1b) which is, in turn, a consequence of failing to call things what they are, as Orwell published 3/4ths of a century ago. See also "Hegelian Dialectic"; "Ontology & Epistemology", "Common sense", "Reform, 101".

2) So is social-'National' Identity (sometimes vulgarized to 'politically correct') the most-governing of mankind's intelligences? And what would/does that mean for any (see also) "Intelligence Community"?

See also "Evil" [.psychology], "Attitude Inoculation".

3) What of the 2 great evils of (so-called) 'modern' times?... In 3 pictures...

[shell games.20-21? "Re-invent"!]

['Gross']

['Mr. Global' → I.C. '2534]

See also "International Intelligence Community (I.I.C.)", "Reform, 101".

Totalitarian/Nanny State- (predominantly economic in nature; not to be confused with 'tyranny')

²⁵³² ...and hence 'he with a better plan' (or 'mousetrap') for it will typically win the competition. See also "Leverage", "Civilizations".

²⁵³³ And the 8th President of the USA, Martin Van Buren, articulated the basic problem even half-a-century earlier. "The money power, designed from the beginning to exert a liberal influence in England, as the antagonist of arbitrary power, has done much good there by the prominence and influence to which it has *elevated public opinion*, and this to some extent is true [now also] of the other European countries. Here [nonetheless] it was, from its start, as I have said, designed to *control the public will* by undermining and corrupting its free & virtuous impulse & determination, and its political effects have been continually injurious" (Van Buren, 1867, 232). See also "Parties, political", "Banksters".

²⁵³⁴ The transition, according to Quigley (and common sense) was during the 1930's (Quigley, 1966). Ten years later, Quigley summarized "Western civ"'s primary problem (now beyond a "*Tragedy*" of "anomie") in a couple sentences: "The whole thousand years, as I explained in my first lecture, is a shift from a society made up of communities, in 976, to a society, today, where we have a state of monstrous power and atomized individuals. A state of individuals, such as we have now reached in Western Civilization, will not create persons; and the atomized individuals who make it up will be motivated by desires, which do not necessarily reflect needs" (Quigley, 1976c), in what would seem to be a sure-fire recipe for totalitarianism. See also "Corporations (and corporate 'personhood')", "'COVID'", "Montesquieu" [trichotomy], App.C: "1-2-3".

1) The world economic system was a “completely discredited” junk heap for much of the 1930’s, and patched back together with a can of (“*Nanny State*” brand) fix-a-flat for the ensuing 6-7 decades of gradual/inexorable debt (and state) buildup. “Keynesian orthodoxy started from the assumption that capitalist markets would not really work unless capitalist governments were willing effectively to play nanny” (Graeber, 53). A partnership ‘of necessity’ was thus born. Both Huxley’s *Brave New World* and Orwell’s *1984* are products of the depression era and its Keynesian expedient (1930’s-’40’s). See also “Dystopia”, “Reform, false”, “Communism”.

2) One should not be shocked to find that the extrapolation of such mindsets today, i.e. “mainstream economists”, are, in a word, “totalitarian” (Hudson, 2017i, mn.28). It follows that an ever-growing “nanny state” is required to pick up after their inexorable dysfunction (see “Money”). This is what drives the madness of totalitarianism, not some picture of Marxism (useless though his works are in impeding it). See also “Orwell, George”, “Academia” [words].

3) “In Austria it’s actually illegal...[as of 16-3-20] to meet [outdoors] with more than 5 at a time!” (Migchels, 2020b). See also “Provocation”, “**Ethnic (National) Identity (ENI)**”.

4) *Inverted totalitarianism* is a term coined by Sheldon Wolin in 2003 to describe millennial-era ‘Corporate Person’ed’ America: “Inverted totalitarianism is different from classical forms of totalitarianism. It does not find its expression in a demagogue or *charismatic* leader [of old], but in the *faceless* [bureaucratic] anonymity [and groupthink] of the corporate state. Our inverted totalitarianism pays outward fealty to the facade of electoral politics, the Constitution, civil liberties, freedom of the press, the independence of the judiciary, and the iconography, traditions and language of American patriotism, but it has effectively seized all of the mechanisms of power to render the citizen impotent” (Wolin, 2008). See also “**Charismatic Authority (CHA) & Charismatic Dependency (CHD)**” [united by over-consolidation-totalitarianism], “**Creney**”, “Groupthink”, “Homogenization”.

See also “Hegelian dialectic”, “Design”, “COVID”, “Separation of Powers”.

Trade deficit/surplus- see “Current Account”.

Trading Departments- in-house “investment banks attached to their commercial banks...[ever since] the cancellation of the Glass-Steagall Act, which...[used to separate] the commercial banks from the investments banks” (Pash, 2017, 26), from the 1930’s-1990’s. Reserve ‘requirements’ and a number of other traditional regulations are now, at least for big/interstate banks, effectively a relic of the 20th century. See also “Reserve ‘Requirements’”, “Criminalization of Banking”, “Investment Banks”.

Tragedy- another way of saying ignorance. See also “Wealth”, “Great Extinction”; Gaede, 2008.

Transaction Account Balance (TAB)²⁵³⁵ credits- (synon. ‘bank credit’, ‘extension of credit’, ‘checkable deposits’, ‘demand accounts’, ‘sight deposits’, ‘overnight deposits’, ‘checkbook money’²⁵³⁶; ‘bank paper’ [18thc], ‘current account’ deposits [UK], *giro geld* [German ‘bank money’],²⁵³⁷ ‘2nd level money’ [OnsGeld],

²⁵³⁵ ‘*Transaction account balance*’ was a (non-deceptive) term used by Hyman Minsky (1995, xiii).

It has also been used in some (of the more straightforward) Fed publications: “Transaction accounts... at all depository institutions [monetized credit institutions] are subject to the reserve [RAB] requirements set by the Federal Reserve [because they all have RAB accounts at the Fed]. Thus any such [monetized credit] institutions, not just commercial banks, have [at least] the potential for creating money” (Federal Reserve Bank of Chicago, 1992, 3), whenever they issue credit. See also “Money creation (in the UK-US today)”.

²⁵³⁶ ‘*Checkbook money*’ is the preferred term in the New York Fed’s 1977 publication, “*I Bet You Thought...*” (Friedman, 1977), which carefully explains that: “Commercial banks create *checkbook money* whenever they grant a loan. Simply by adding new deposit dollars to accounts on their books in exchange for a borrower’s IOU... which...is often secured or backed by valuable items the borrower owns (collateral)” (Friedman, 22). Checkbook balances would not be “money” in and of themselves, without backing by Reserves [RAB].

²⁵³⁷ ‘*Giro geld* (from the Greek ‘*gyros*’, meaning ‘circle’ [i.e. ‘circular gold’]) is the general European term for what Huber has translated into English as “bankmoney”. Because TAB bank credits are fundamentally (and legally) not money (or gold) without first being substantially backed by state Reserves, conflating TAB bank credits with terms like: ‘functional-money’ (Yamaguchi), ‘deposit money’, or even ‘credit money’ would seem to be more confusing than edifying. TAB bank credits are just credits, until they are backed up by something else.

'book money' [OnsGeld]²⁵³⁸, 'outside money'; also the 'real-economy' [Ricks, 2016], or simply 'non-reserve money' [US]).

\$2.3 tn (2019)

1) Transaction accounts are accounts of **state-monetized credit institutions**, such as banks and credit unions, that are **accessible to the US clearance system** for transfer payments by check, debit card or online or wire transfer. They are called **transaction accounts** because they are the **only** publicly available accounts that the payment clearance system uses for payment transactions. All bank (**state-monetized credit institution**) loans or bank credit extensions create **TAB credits**,²⁵³⁹ and they are not covered by the 4th Amendment (Ricks, et al., 2018). See also "Cashless Society (War on Cash)".

2) **TABs** are mostly created through extending credit (a.k.a. 'lending') that is instantly monetized by the government (with **Fed Funds/RAB**), but may also be created through bank spending (f.e. overdraft fees, or other bank asset purchases²⁵⁴⁰).

3) Such bank credits (**TAB**) are **claims on/against Reserve money (RAB)**. **TAB + (backing by) RAB = bankmoney**. See also "Bankmoney".

4) **TABs** are extinguished, in turn, "whenever a non-bank makes a payment to a bank [or other monetized credit institution], then that bankmoney is deleted [as an extinguished liability], because, on the asset side, the credit that came from the bank is deleted, and on the liability side, that liability is deleted...booked out of the ledgers. In the same way Reserves [**RAB**] are deleted as well, whenever a bank makes a payment... to the central bank [or Treasury?]" (Huber, 2016b, mn.16).

See also "**Money, 2 classes (layers) of**", "**Reserve Account Balance (RAB) money**".

Transhumanism (TH)- (synon. 'post-humanism', 'the singularity'; a.k.a. 'trendies' [Jones], 'inhumanism' [Fitts]; i.e. 'the' next big thing is 'playing God'²⁵⁴¹ with all species [21stc], after conquering the world [mid-20thc]) ...basically, "integrating digital technology into human [beings] bodies"- Catherine Austin Fitts

1) Founded by biologist Julian Huxley (grandson of "Darwin's Bulldog" and big brother of *Brave New World's* author)²⁵⁴² in 1957,²⁵⁴³ TH has followed in the wake of the post-war computer science and IT fields, and is characterized by an underlying ('mad scientist') perspective-- that in the near future 'greater manipulations of

²⁵³⁸ Ons Geld has often used both the terms 'book money' and [the d.b.t.] 'book-entry money', interchangeably, to mean both **TAB-bankmoney** and/or the broader category of *account/digital money* in general. 'Book money', moreover, has deeper roots connotating the broader concept (of which **TAB-bankmoney** is, of course, merely a subset). Many European monetarists, and the German Bundesbank (as late as 2017) still also conflate the terms: <https://www.youtube.com/watch?v=mbrjSSFJoMo> . See also "Account Money/(Digital money)".

²⁵³⁹ "Banks create...[credit] by 'monetizing' the private debts [promissory notes] of businesses and individuals. That is, they create amounts of [**TAB credits**] against the value of those IOUs" (Friedman, 1977, p. 22). Hence **bank credit [TAB] is not money. It is just the public claim on Federal funds [RAB]** that circulates (i.e. to be 'as good as' **RAB/money**). More specifically, such publicly monetized bank credits are created "whenever they make a *loan*, or when we activate an *overdraft*, or [also] when banks *purchase* some sort of asset-- such as bank stocks or real-estate-- that can be entered onto the [banks'] balance sheet as an *asset*.... [But also] Basically, whenever a bank [**monetized credit institution**] credits the account of a non-bank, then money [**M1**] ...[will be] created" (Huber, 2016b, mn.7-8).

²⁵⁴⁰ Whether a bank "makes a loan or *purchases bonds*," the premise is the same; "it increases its own promises to furnish money on demand by giving to the borrower, or to the seller of the bond, a demand deposit [**TAB**] credit. By so doing it increases the total volume of demand deposits in circulation" (Fisher, et al., 1939, 21). In the subsequent computer age, issuing bank credits via *credit cards* would work the same way. See also "Credit cards".

²⁵⁴¹ Well, that's what they often said of TH in the 20thc, anyway [back before the realization of (what was in fact) one massive fail after another]: <https://rumble.com/v1r3b2u-california-is-now-castrating-children-from-all-50-states.html> [RR-Cal, 22-11-2]. See also "Denial" [massive fail].

²⁵⁴² The "nature of the ultimate revolution with which we are now faced is precisely this: that we are in process of developing a whole series of techniques which will enable the controlling oligarchy who have always existed and presumably will always exist to get people to love their servitude. This is... the ultimate in malevolent revolutions shall we say, and this is a problem which has interested me many years and about which I wrote 30 years ago, a fable, *Brave New World*, which is an account of [a **mad scientist**] **society** making use of *all* the devices available, and [also] some of the devices which I imagined to be possible, making use of them in order to, *Ist of all...standardize* the population-- to iron out inconvenient human differences, to create...**mass-produced models of human beings** [a.k.a. 'humans'], arranged in some sort of scientific caste system. Since then, I have continued to be extremely interested in this problem, and I have noticed with increasing dismay [that] a number of the predictions which were purely fantastic when I made them 30 years ago have come true, or seem [to be] in process of coming true."- Aldous Huxley, "The Ultimate Revolution", Berkeley Language Center, Univ. of California, Berkely, March 20, 1962 (<https://publicintelligence.net/aldous-huxley-1962-u-c-berkeley-speech-on-the-ultimate-revolution>)

²⁵⁴³ For more on the elite climate of the 1950's, see Rappoport, 2017g.

human nature' will be possible (hence desirable?), due to the adoption of numerous developments from the ever-expanding technological frontier, such as: nanotechnology & genetic engineering²⁵⁴⁴; direct mind-computer interface; and machine intelligences surpassing that of contemporary human beings. In the 21st century, the debate over transhumanism's advent has sometimes been reduced to 'Joy vs. Kurzweil'.²⁵⁴⁵ For others, notions of playing God, in the Clouds, is simply furthering-- albeit more boldly-- the same old "agenda for technological *sub-reality*" (Icke, 2016, mn.54-101). See also "National Identity/Nationalism", "Methodological Individualism", "Industrial Revolution, 3rd", "Robotics", "DARPA".

2) "Misanthropy is the soul of elitism" (Moon, 2020c). See also "Fin de Siecle" [Weber, 1989].

2b) "*Eugenics* is so-called race-breeding science [in the name of the State or nation]²⁵⁴⁶.... [Ironically] after the end of World War Two [and Nazism], the Rockefellers became one of the largest financial patrons of... 'The American Eugenics Society' [1926-72]²⁵⁴⁷...." (Engdahl, 2013, mn.9-11).

3) perhaps the ultimate "...fake news,²⁵⁴⁸ trying to persuade you to do things which are against your own interests" (Fitts, 2017i, mn.50); "something that means we're going to be converted to a slave society.... It's like the guy [Ray Kurzweil] is just missing a piece"²⁵⁴⁹ (Fitts, 2015b, mn.105). Nonetheless, there has already been "a proposal of legislation put in, in one of the New England²⁵⁵⁰ states, saying that basically... when you die the system owns your organs unless opted out" (Fitts, 2017t, mn.6). What is the end-game of TH? "total top-down central control, down to the molecular level.... They are trying to confer, under the law... an individual human [being] into a natural resource...like a gas or oil deposit" (Fitts, 2019m). See also "Totalitarian/Nanny State", "Common law".

4) What Kurzweil "is describing is Artificial Intelligence becoming the human [hive] mind.... The reason that they [I.C.] are openly telling us this is the sales pitch... that when we connect to Artificial Intelligence, we'll become super-human. This is the sales pitch... [T]here has been a simple, step-by-step process to addict-- especially the young, 'cause they'll be the adults when this is supposed to be full-blown... to technology, and to take them along a very clear '*here, kitty-kitty-kitty*' road... 1st you get them addicted to technology they hold. Then you get the technology *on* [sic] the body-- your Bluetooth and all these gadgets that people wear now, connected to the internet. And then you go *in* [sic] the body, with microchips... My books in the 1990's were predicting this. They were saying: 'This is the plan'-- to

²⁵⁴⁴ "Hop on the hype train, we're all going to DNA paradise..."

Let's start here... Name [even] I disease for which a genetic treatment works as a cure across the board. Just one out of the thousands of purported diseases. What's that? You can't? Does that tell you something? It should. The tonnage of PR about genetic disease research is huge. The Certainty with which researchers link specific genes to specific diseases is impressive. But *saying* [sic] you've found the cause of something only makes sense if you can DO something with your discovery. If you can't, you're not credible."- Jon Rappoport, "The Genetic Culture is Hot Air and Death", Oct. 24, 2022. See also "Food (and food-like substances)" [GMO].

²⁵⁴⁵ Sun Microsystems co-founder Bill Joy's classic critique of inventor (and now Google executive) Ray Kurzweil's unabashed technophilia: "Why the Future Doesn't Need Us" (<http://www.wired.com/2000/04/joy-2/>).

²⁵⁴⁶ The term was first coined c.1883 in England, by a half-cousin of Darwin, Francis Galton (who was subsequently knighted in 1909). This development (as explained by Weber, 1989k & 1989l) was also approximate to the high-water mark of 'Western' nation-building [for the upcoming mega-war] and (see also) "Statism". Weber 1989l, mn.16-18, 20 explains, vividly, how nation-building & eugenics went hand-in-hand. The leading dramatist of his generation even replied to Galton that: "I agree with...[your] paper, and go so far as to say that there is now no reasonable excuse for refusing to face the fact that nothing but a eugenic religion can save our civilization from the fate that has overtaken all previous civilizations" (Shaw, 1904). See also "Civilization, Western", "Fin de Siecle", "Central Banking-Warfare model".

²⁵⁴⁷ The American Eugenics Society "described *eugenics* as the study of improving the genetic composition of humans.... In 1912, Leonard Darwin, son of...Charles Darwin, held the 1st International Congress of Eugenics in London. More than 300 people from England, Europe, and the US attended..."- <https://embryo.asu.edu/pages/american-eugenics-society-1926-1972> . In 1914 the American Breeders' Association changed its name to the American *Genetics* Association. Likewise in 1972-73 the AES renamed itself "The Society for the Study of *Social Biology*". And "as of today, the [newest] new name for eugenics is [again] 'genetics'... [which] began this mad project to try to alter the gene" (Engdahl, 2013, mn.11).

²⁵⁴⁸ "This whole Artificial Intelligence stuff is crap. The human being is the single most elegant manifestation of intelligence in the cosmos" (Steele, 5 June '17, mn.41). See also "'COVID'", "Attitude inoculation".

²⁵⁴⁹ The Google Vice President and "Markov enthusiast", according to George Gilder, "was using an intuitive hidden Markov thinking process to show that the brain is largely a Markovian thinking process. Perhaps, by now, Ray's brain has been trained and [anti-gravitas] weighted to be one" (Gilder, 2018, 79).

²⁵⁵⁰ "Maine is always in the vanguard of all of this stuff, right?... doing a lot of pilot studies for the rest of the country-- and world, probably" (Iserbyt, 2000-01, mn.41).

microchip humanity and connect us to... an artificial, technological sub-reality...It's unfolding. It's happening... [I]n Sweden... 3,000 people have been microchipped...so that they can [automatically] open doors and do other things without actually pushing them open, the lazy sods. And... in Britain, just a few weeks ago... the Confederation of British Industry were pointing out how worried they were that companies were now preparing in Britain to microchip their workers" (Icke, 2019, mn.3-5). People "getting their thoughts and perceptions direct...in a way that people like Kurzweil explain... [as] 'super-human'...[is obviously false]... We'll be sub-human... [being] assimilated into Artificial Intelligence.... It's unfolded so fast.... the speed...[at which] this has been rolled out" over just the past 3 decades (Icke, 2019, mn.13).

5) Mad scientists may be, indeed, mad (see also "Devil", "Food"). But they are alive & well. Apparently after unravelling 'the human DNA' c.2000, the excitement made them so drunk with power that certain institutions effectively lost their braking systems-- only perverse acceleration. Explained simply: "DNA is similar to a computer code or binary code [program, and] a small change in code...[to] have a...grand effect. So [one] can insert a...gene into the genome, or...take something out... or [even try to insert] another synthetic or [foreign] organism genome in there... [thus] re-writing the genetic code.... How much change in that code would it take to then be considered not human.... Genetically modified cell lines" [sell online for \$800 per vial] (Madej, 2020, mn.3-4). Anything patented has an owner, and Monsanto, etc. may own something by tweaking its DNA. What this means for human beings' 'wild' DNA is "not a future event.... [or] sci-fi movie.... This is right now-- today. This is called recombinant DNA technology, and this is what is proposed for the 'COVID'-19 vaccine... designed to make us into genetically modified organisms...the same terminology used for Monsanto seeds" (Madej, mn.6-7). See also "COVID", "DARPA".

6) Then again, there are an increasing number of "stories where employees of...[tech giants] like Google and Amazon and Microsoft...[are actually coming] out and saying...'We don't care for this connection that these companies have with the Pentagon and with the Intelligence complex" (Icke, 2019, mn.5-6).

7) According to investigative journalist Whitney Webb, as of 2021, the National Security state-endorsed "'Wellcome Leap' "program... [is now] openly willing to talk about... developing an AI model of the 'perfect child's brain', and then...within 10 years... having 80% of children's brains being essentially...manipulated to fit that model.... It's really a way to homogenize the human [species'] intellect.... It's amazing that they...[are] willing to put this out publicly and put this on paper... They're doing this out in the open..." (Webb, 2021, mn.8-9). See also "Great Leap Forward, the", "Secrecy, Cult of", "K.J.B. (King James' Bible)/70 Year Plan".

7b) "I don't worry about [how they are making] artificial intelligence. I worry about [how they are making] artificial stupidity" (Steele, 2017p, mn.51). See also "Dumb-downing", "Death culture".

8) Since the 2000's (as published in 'lesser' journals) it has been demonstrated that "genetic engineering...[can be done] non-locally...over a vast distance", f.e. 20km (Granogger, 2018, mn.122).

8b) The same Dr. Gariaev, by 2011 published an experiment finding that DNA "holographic information could...be introduced preventively...[f.e.] to establish immunity... [T]reated animals would not succumb to...[f.e.] Aloxin injected later"- mn.123. Also by around that time Gariaev's, "system...[was] capable of

reading information from any biologically active substance” (Granogger, mn.127), and subsequently tried to remotely program the stem cells of plants at Chernobyl.

8c) In 2018, DARPA publicly announced “preemptive gene tuning” via “programmable modulation of gene expression”, claiming that they can “temporality modulate gene activity” via “programmable, but transient gene modulators, to ”confirm protection...within brief windows of time” (Granogger, 2018, mn.128-29). See also “Google”.

8d) (Granogger, 2018, mn.122).

TH Updates: 4/22-Spokesman Kurzweil apparently has a successor for the 2020's. *Sapiens: A Brief History of Humankind* (2011) author & Klaus Schwab 'lead advisor'-- the loquacious 'Historian' Yuval Noah Harari at Hebrew Univ. of Jerusalem (b.1976)-- even mentions 'the singularity' of organic & inorganic (in mn.3):

<https://banned.video/watch?id=62570bc688b80e77f0a104a6> [SiliconV.'the new relig.' (mn.5)].

11/22- The “Intelligence Community [is] sticking their nose into [the] NIH...[which now] has a billion dollar annual budget to advance transhumanism from within the NIH.”- <https://www.bitcute.com/video/i32hb09PS5Zy/> , Dr. Malone tell-all [Adams, 22-11-23, mn.60].

See also “Malthus, Thomas (1766-1834)”, “Robotization”, “Homo Economicus”, “Marx, Karl” (‘mode of production’), “Industrial Revolution, 3rd”, “Breakaway Civ”, “Devil”, “COVID”, “Consciousness”.

Transfer instruments- (in **TAB** money) checks, debit and credit cards

Transition (from bankmoney to sovereign money)- (the Germans held an entire conference on it in 2018)

1) “For the most part, this [transition] would take place over a period of 2-to-4 years, depending on the repayment of outstanding [TAB-bankmoney] loans. With the large sums involved, it would be possible to reduce more than half of the total national debt in the eurozone, with no loss of assets for banks and funds, and without anti-social and counterproductive austerity. The issue of national debt would be off the table overnight, as it were. Why politicians refuse to accept this option is incomprehensible to me” (Huber, 2012). See also “Minsky, Hyman (1919-1996)”, “Helicopter money”.

See also “Parity”, “Parity pricing (for the primary sector)”, “Local scrip & Complementary currencies”.

Treason- “Treason doth never prosper; what’s the reason? For if it prosper, none dare call it treason.”
- John Harrington, 1561-1612

TreasuryDirect- See “US (Treasury) notes”.

Treasury Department (US)- (est. 1776; the lawful seat [or heart] for monetary policy; delegated to the ‘Federal Reserve’ in 1913).

“Here’s the little secret. The Treasury can do all of that [that has been delegated to CBs]. We don’t need Central Banks”²⁵⁵¹ (Fitts, 2022n, mn.11). See also “Needs, desires (& law)”, “Central Bank”.

1) “A national Treasury’s [traditional] role is to *minimize* the cost to government of managing its fiscal policy and finances, as debtor and as issuer of money. (See *Chartalism* and *State Theory of Money*.) By contrast, the [century-old] role of *Central Banks* is mainly to represent creditors and to create a financial

²⁵⁵¹ CBs are just “very complicated machinery to do...[what the Treasury could do], which drains money from the [monetary] system...[while permitting] that whole operation to remain secret... If the Treasury did it, then it couldn’t be secret” (Fitts, 2022n, mn.11-12). See also “Federal Reserve audit”, “Estates, 3”, “Public-Private partnership”, “Separation of Powers”.

environment conducive to the commercial banking system, by shifting the monetary power out of the Treasury, into their own hands and that of the Central Bank as their representative” (Hudson, 2015b).

2) Until “Robert Morris’s appointment as [S]uperintendent [in 1781], there was no one generally in charge... [I]t is amazing that America had kept itself above water, if barely, until” then; “the fighting lasted far longer than almost anyone had foreseen” (Kirschke, 2005, 124).

3) In the Central Banking era, however, there are shared duties between a Treasury and CB. ^{***} (Phillips, 2021, mn.8-9).

4) The US Treasury today does not issue Treasury Notes/Greenbacks, and in recent decades has even started to look like [a puppet or adjunct office of the Fed, being populated mostly by former Goldman Sachs and Fed people](#). See also “Central Banking-Warfare model”.

Treasury General- 1) the US Treasury’s ‘checking account’ at the New York Fed in central bank (interbank) money. (The Fed doesn’t keep the books for the federal government, just the checking account). See also “[Central Bank/Treasury money](#)”.

2) Any sovereign government’s Treasury “is not monetarily constrained” (Keen, 2017k, mn.14), except by the prospects for currency inflation or deflation; “...as long as you’re servicing...[debt] in your own currency, you can never run out of the capacity to do that” (mn.15). See also “Federal funds (FF)”, “European Monetary Union (EMU)”.

Treasury securities/instruments- (a.k.a. ‘marketable public debt securities’, or ‘government IOUs’; UK: ‘gilts’)

“Cash management” bills, maturing at 1-2 weeks; Treasury *bills*, maturing at 1 to 12 months²⁵⁵²; Treasury *notes*, maturing at: 2-10 years; and Treasury *bonds*,²⁵⁵³ maturing at 10 years or 30 years.

See also “Financial Instruments & Interest (Summary table)”.

1) “A tremendous amount of these Treasuries end up on bank balance sheets [in addition to pension funds and with foreigners]. Why? Because they’re the most secure investment in the world-- triple A rated. If any bank has a low capitalization, [and] they need to raise it up, what do they do? They buy a lot of Treasuries”; sometimes half of a bank’s total assets could be in Treasuries (Santopietro, 2017, mn.7).

2) Basically ‘savings accounts’ at the New York Fed (with a fancy name).

3) Treasury instrument auctions are very popular and are handled exclusively by the fiscal agents of the USG, a.k.a. the 12 regional Fed Banks, although every business day the Treasury’s regional Fed accounts are consolidated at the New York Fed (Hillery & Thompson, 2000, 252). Various Treasury auctions exceed \$10 trillion per year and have **never been [independently] audited**. See also “Federal Reserve audit”.

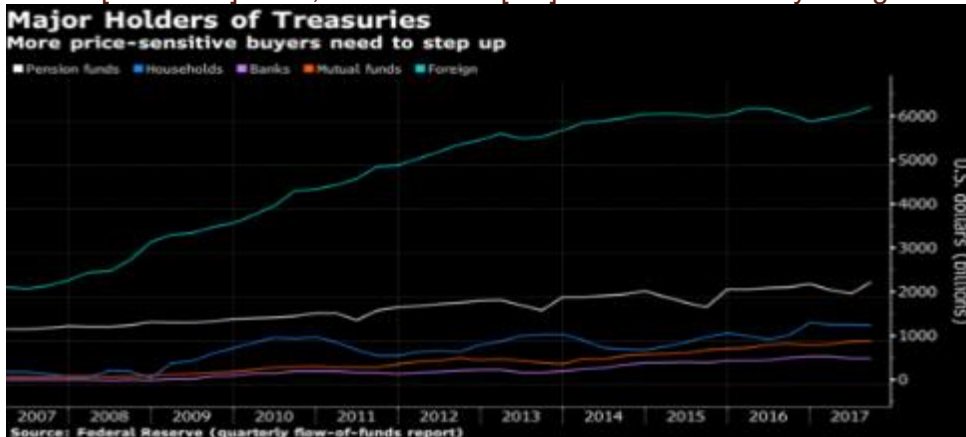

4) The “supply of Treasury bills... [has been] insufficient to meet the large demand for safe overnight investments... [So] cash pools must look for alternative [secure] cash-like investments”, since “bank deposits” [TAB] are not secure (Chabot, 2015,1). See also “Debt securities”, “Shadow banking (SBS)”.

5) T-bills in particular tend to appreciate when the Federal Reserve expands its balance sheet (as it has been this decade), and recently debt securities investors have been “pushing the US to introduce a new Treasury bill, in a move that would allow the government to tap demand for shorter-dated debt and fund the country’s [ever-] growing deficit. The US Treasury, which is already selling record amounts of Treasury bills, has been urged to introduce a 2-month bill, adding to an existing line-up of 1, 3, 6 and 12-month instruments that are a [primary] staple of money market funds... As interest rates have risen [since 2015], the return on bills has become more attractive, and [mostly domestic] money market funds that buy government assets note an increase in money flowing in from investors” (Rennison, 2018).

²⁵⁵² More precisely, T-bills mature at 4, 13, 26, or 52 weeks, and “...almost always have the lowest interest rate among money market instruments” (Burton, et al, 262).

²⁵⁵³ The boundary between ‘bonds’ and ‘notes’ can sometimes be blurry. The *SIFMA Fact Book 2018*, for example, lists “long-term bonds” as being “with maturity of 13 months or longer”; in this category, US Treasury bonds annual aggregate (\$7.5 tn.) dwarfs that of the nearest competitors Japan (\$1.8 tn.) and Germany (\$0.6 tn.) (SIFMA, 2018).

6) Catherine Austin Fitts, after the FASAB's 'Standard 56' of 2018, "would never buy a Treasury.... I don't want my money going into an operation which is this secret.... [T]here are plenty of...[fixed income investment] alternatives around the world that are safer and more credit worthy than US Treasury.... If you have to do a FASAB-56, then you don't have a credit worth talking about" (Fitts, 2019f, mn.20-21).
 7) Nonetheless, in the 'post-Crisis' era, there is strong growth in demand, particularly from governments because of increasing fiscal deficits. The US annual budget deficit is about \$11tn. for 2020, or 4.7% of GDP... [But since] 2017, "the share of [US] Treasuries held by foreigners has fallen from 40% to 35%

[The 'offshoring'/foreignization of US Treasuries has increased from 2008-17...²⁵⁵⁴]

Fed's share of the Treasury market

The quantitative easing program kicked off last year as part of emergency measures to limit the economic impact of the COVID-19 pandemic has left the Fed owning nearly a quarter of the market.

[...as for. individual investors more than made up for governments' holding less. Fed purchases have rocketed since 'QE4'.]

Treasury Tax and Loan [TTL] notes balances-

Treasury-Wall St. nexus- The American CIA, like the so-called 'Federal' Reserve, is an extra-constitutional creation of the Banksters on Wall Street. Their point men in Washington, for the purpose of maintaining 'national' bankmoney privileges, have been placed, first and foremost, at the Treasury Dept. for more than a century now (in both Republican and Democrat administrations). This practice predates both the 'Federal' Reserve (1914) and the CIA (1947). See also "Banksters".

1) Mellon

²⁵⁵⁴ This chart does not include Federal Reserve holdings of US treasuries.

2) With the post-war *National Security Act of 1947*, however, a new factor would eventually come to bear on the traditional nexus. See also “Deep State”, “CIA”.
See also “Federal Reserve Bank of New York (FRBNY)”.

Trilateral Commission- (est. 1973; basically the 1970’s-2020’s planning & planners for a global [see also] ‘Technocracy’)

1) Perhaps the most prominent non-Atlanticist-based standing international organization, the TC, unlike its predecessors, wasn’t founding or initiated by the British. Unlike ‘Bilderberg’, it is day-to-day, not just an annual meeting; and has always seemed averse to inviting current public servants or the public limelight, and has hence long been a most-favored body for conspiratorial conjection-- warranted or otherwise. See also “Oligarchy”, ‘*International Intelligence Community (I.I.C.)*’ [.gifting], “Attitude inoculation”
2) Only big projects need apply. “The money that flowed into China initially [back in its N.Korea days] was mostly connected with the Trilateral Commission group of companies that were ” (Wood, 2022, mn.21).
3) “Throughout Trilateral Commission’s reporting, one finds a *curious* consistent confusion between ‘private’ and ‘public’. The Commission is promoted as a private group founded by a private citizen, David Rockefeller. Yet its objectives and operations are public policy oriented” (Sutton, 1994, 2).
See also “State capture”, “Separation of Powers”, “Common sense”.

Trump, Donald (PotUS, 2017-20)- (the 1st PotUS never to have held a job; hence “a very naughty boy”, and “unmanageable” employee, who “created chaos” [O’Connell, 2022b, mn.16, mn., mn.20])

“[T]hat big mass of nonvoters, if you can simply get 2 or 3% of them to the polls-- and that shouldn’t be too difficult-- then you can elect your candidate, whoever he is” (Quigley, 1972b).

His “elevation to the Oval Office has finally caused the Deep State to come out of hiding and bare its fangs”²⁵⁵⁵. Fmr. White House Budget Dir. David Stockman, 2019

Why? In addition to further [Nixonian] ‘anti-Globalist’ policies, the administration “also sought to neuter the dispute settlement system of the WTO by rendering it inoperative”, without the USA (Wolf, 2019). See also “Bretton Woods”, “Bankmoney regime”, “*Powellism*”.

1) “I would say the number one problem in America is mind control, and Trump has done incredible things to bust through the mind control” (Fitts, 2017j, mn.20). The president or toastmaster has “moved the bar on what it’s socially acceptable to talk about” (Fitts, 2018h, mn.12). See also “Mind control”, “Democracy” [.Median Voter Theorem], “Orwell”.

1b) On a more controversial note (i.e. whether the PotUS is supposed to do much of anything more than talk), according to some, Trump’s “Schedule F” executive order #13957 (Oct. 21, 2020) “would have been a game-changer.... the re-classification of federal employees, to make it possible to fire them and [in order] to overcome the Senior Executive Service-- **the people that really run** the [federal] government... [and] are totally unelected”- Dr. Malone tell-all: <https://www.bitchute.com/video/i32hbO9PS5Zy/> [Adams, 22-11-23, mn.58-59]. See also “President of the United States (PotUS)”, “Deep State”²⁵⁵⁶.

2) Cognitive dissonance? “Trump brings more [at least communicative] transparency than any leader in a... long time. And everybody can’t stand hearing it, because...if you look at how far we’ve gotten away [via globalism and world reserve currency status] from fundamental [not just robotic] productivity, it’s very

²⁵⁵⁵ No kidding. <https://www.youtube.com/watch?v=iYuSyjXQx1Y> (Still, 2021). “The United States are today a plutocracy, even as England is a plutocracy, though there, as in England, the plutocracy may still work through an apparently democratic mechanism. Against this rule of plutocracy there have been sporadic protests. They have accomplished little and some of them have been hardly sincere. But, if they have not checked the menace, they have at least proved its existence”. Step one was Alexander Hamilton, step two was the Civil War, and step three was Woodrow Wilson (Hollis, 1930, 290); and since then it was the (see also) “UKUSA”.

²⁵⁵⁶ “New presidents [since c.1979?] typically get to replace more than 4,000 so-called ‘political’ appointees to [theoretically] oversee the running of... [an] administrations. But below this rotating layer of political appointees sits a mass of government workers who enjoy strong employment protections-- and typically continue their service from one administration to the next, regardless of the president’s party affiliation. An initial estimate by the Trump official who came up with Schedule F found [that] it could apply to as many as 50,000 federal workers-- a fraction of a workforce of more than *2 million* [2.1 mn.], but a segment with a profound role in shaping American life.”
- <https://www.axios.com/2022/07/22/trump-2025-radical-plan-second-term>

frightening, and [after 40 years of said policies] nobody wants to hear it. And Trump keeps bringing it up” (Fitts, 2018s, mn.11). “He has a way of pointing out all the unpleasant truths” (Fitts, 2018t, mn.16). See also “Productivity”, “Oligarchy, American (& transition from)”.

3) This is not to overlook the (so-called) ‘modern’ presidency’s czar-like effect on the economy “...in his first 3 months in office, he was very much about moving power back to local areas and the Make America Great Again Plan [a.k.a. repatriation]... [But] from April 1st on he’s done a turn and there’s a lot more... about using the military...and *Defense appropriations to keep the stock market juiced*. So he’s trying to serve both masters, and of course Goldman Sachs and the Goldman Sachs guys [who were “at least”²⁵⁵⁷ as much on Trump’s side as they were on Clinton’s] are right in the heart of it.... He’s trying to serve both masters. I don’t think you can do both.... [And] I don’t think he sees now a way to politically switch the money...out of the *central banking-warfare model*” (2017n, mn.14-16). “I don’t think Trump really ended up planning on being an arms salesman for a [unpaid] dollar a year, but that’s part of what happened” (Fitts, 2017p, mn.19). “The reason Trump won is...[that] you have the line military who knows that they cannot afford for the National Security State to have long supply lines.... They’re bringing operations back.... They’ve busted the unions...and now they have robotics and A.I...[So] they can bring it back...” (Fitts, 2018b, mn.37-38) profitably. See also “Debt cycles”.

4) “[W]hen Trump first hit and Trump was being...very bombastic and fighting with everybody... and literally, in the first 25 days...every phone conversation Trump had with a global leader was leaked to the press...It is a massive violation of the law-- massive... [and] clearly coming from the US intelligence agencies...Well, in theory, it could [also] be coming from their corporate contractors... So [then] you have [Sen. Chuck] Schumer on a Sunday show, and he says to the host: ‘*Look, you know Trump’s gotta learn... You can’t buck the CIA*’... He was basically saying [that] the CIA runs the government... and that the president has to learn that and be obedient” (Fitts, 2017t, mn.43-45). “If you look at how the federal government works,²⁵⁵⁸ the president is not in control.... There’s only so much that one person can do.... [I]n terms of dirty tricks being played, or dirty media being played, Trump has endured the worst I [have] ever read of or seen or heard of a president enduring” (Fitts, 2018s, mn.17-18). See also “Duopoly”

5) “The neocons really got a whack on the [2016] election. But they’ve sort of weaseled their way back in, and seem to have gotten a lot of different hooks into him.... Now part of the reason they’re getting their way is that [it] is perceived to be great for the stock market... [So] what you’re seeing is [that] you’re gonna pump the stock market up with liquidating the planet, as opposed to building anything sustainable” (Fitts, 2017q, mn.26-27). Chief neocon (& ‘Deep State’ lightning rod) John Bolton was summarily dismissed from the administration in September, 2019. See also “Deep State”.

6) Half a year later (spring ’20), it looks like Trump is (like an ‘corner-officed’, GS-14 tenured employee who can’t be fired), someone who is allowed to use Twitter and mouth-off, but pretty much not allowed to run his own cabinet, particularly (all the lawyers in) the Department of Justice. See also “Deep State”.

7) Before Trump “got elected...I said that his biggest problem is gonna be that.... He will not know who [is] going to support him-- to support his program! And since he won’t know who he can rely on, or who’s even on his side, all the advice he’s gonna get will be to undermine him. And that’s...what happened.²⁵⁵⁹ Where does he have a good appointment? [laughs]” (Roberts, 2018c, mn.20-21).

8) The “Trump team was unprepared for the transition... in 2016.... [They were] not prepared to staff a large government and the Washington establishment made it extremely difficult for them to do so. Allegations regarding slow down strikes in processing background checks and hold ups in Congress

²⁵⁵⁷ Ibid, mn.17.

²⁵⁵⁸ The federal government “machinery is paid to engineer central control. It’s not paid to engineer de-centralization. And there’s no support in Washington on either side of the aisle for decentralization. So if the... American people want to get political leverage, we’re going to have to take those steps to get that political leverage on our own...” (Fitts, 2018s, mn.18-19). See also “Parties, political”.

²⁵⁵⁹ On Aug. 11, 2018 President Trump tweeted (= sans media filtering) about ‘his’ Dept. of Justice and Attorney General (traditionally the cabinet position that is most loyal and close to the president): “I have never seen anything so Riggged in my life. Our A.G. is scared stiff and Missing in Action. It is all starting to be revealed-- not pretty” (Trump, 2018). The following month it was reported that the Assistant A.G., suggested secretly recording Trump and proposed wearing a wire to surreptitiously incriminate the president, after Trump (acting on the Asst. A.G.’s recommendation) had fired the FBI director in May 2017. See also “Imperialism, Americanism”.

have been never ending since the inauguration. Since President Trump's arrival... there has been a significant effort to make war on the civil service. I can not tell to what extent this reflects Trump political appointees' philosophy or the bankers and contractors smelling the blood in the water and seeing their opportunity to...[grab] even more government operations... [and] assets... There is no doubt that the rise of money missing from the federal government and numerous other corruptions reflect the [ongoing] rise of... private contractors and banks and the generous campaign contributions that result" (Fitts, 2019d). See also ShadowGate (2020), "National Security Agency (NSA)".

9) The predominant Trump cabinet in 2017 may be characterized as a mix between 'termites'²⁵⁶⁰ and 'generals'. By year-end 2018, however, 'the generals' were gone, and not without acrimony. According to Catherine Austin Fitts' explanation, "secrecy...is a huge financial addiction"; and the Marine Corps generals (Sec. of Defense) James Mattis²⁵⁶¹ and (Chief of Staff) John Kelly were both "very opposed to using *mercenary armies*. Both used their considerable gravitas to get enormous increases in [DoD] appropriations... [But] as soon as those appropriations are done we pass FASAB-56, and...Mattis is out, and then Kelly is out, and Kelly is replaced by [Mick Mulvaney] the person in the administration who engineered FASAB-56. We clearly have a deal between the Trump group and the Bushies... You know [Bill] Barr [AG for George Bush, Sr.] goes in... The Bushie guys²⁵⁶² are going back in at Justice, and my guess is probably CIA [also].... Every mercenary army in the world is now free to come in to Treasury, and come into Congress and say '*Here's our proposal for something that keeps the US stock market flying*'. So you've now opened a door that allows near-infinite financing to foreign intelligence [all those other 'CIA's] and military and mercenaries...[and all of it] behind a secret veil. So I call it 'secret money for secret armies'.... You're basically moving all of the federal government into a cloud. We have all the Intelligence agencies in the cloud. The *Jedi contract*²⁵⁶³ will put all of DoD in a cloud...[wherein one will

²⁵⁶⁰ The "federal government has been working for 2 years to get into a position...[for] radical re-engineering [of the entire federal government] after the [2020] election. We see the 17 intelligence agencies go into the [Markovian-Skyнет] Cloud, [and the] DoD is in the process... That puts them in a position to do very radical re-engineering of the federal cash flows and programs, and [also], if they want, [to] significantly downsize employment. So were... creating the conditions, [within] the bureaucracy of the United States, for a pretty radical privatization.... I call it *piratization*. When you look at the trial balloons that have been floated, they're pretty radical... and it doesn't matter *who* [sic] is President [toastmaster] of the United States.... It doesn't matter who is playing show & tell in the White House" (Fitts, 2019r, mn.17-18). See also "Privatization".

²⁵⁶¹ Trump's initial Secretary of Defence later commented (after the worst riots since 1968 occurred around June 1, 2020) that "...Trump is the first president in my lifetime who does not try to unite the American people-- does not even pretend to try. Instead he tries to divide us. We are witnessing the consequences of 3 years of this deliberate effort" (Mattis, 2020).

²⁵⁶² William Barr "is a member of the Bush syndicate, and the Bush syndicate essentially was the top governance layer for the financial coup [that started in the 1990's].... Now that the financial coup is over, they're consolidating. They're cleaning out people. The fighting has begun, and I think they put [Jeffrey] Epstein away to get a lid [scapegoat] on this thing.... If they don't put somebody on trial, I think the anger is going to be unbelievable" in 2020 (Fitts, 2019s, mn.26). Then again, "if you look at *how many* people have criminal and major civil liabilities as a result of the financial coup d'etat, it's extensive, and it's [more-or-less] everybody.... If the Brits and Trump and the Bushies [made a deal last year and] are all now working together...[then] you're talking about the people who led and did the financial coup now managing the cleanup. Why would they out themselves...[and] put any of that money at risk?... I really **hope** [that] I'm wrong this time" (Fitts, 2019s, mn.27-28). However, it appears not: "The [political] reality is, if you pick a fight with **all** the different financial interests that have helped...blow the bubbles...[including] the current bubble, or that helped...engineer a financial coup d'etat, then you don't have enough time to manage all the different fights you're having globally. You're [just] gonna have a big fight internally and the whole thing's gonna implode... because at this point the entire economic model is operating outside the law" (Fitts, 2020b, mn.19-20). See also "G2", "China", "Federal Accounting Standards Advisory Board" (FASAB-56).

²⁵⁶³ The \$10 billion Joint Enterprise Defense Infrastructure (JEDI) contract was (as of 9/20) being appealed by Amazon. In 2017, "the CIA and 17 intelligence agencies all went into the Amazon cloud together.... Now the DoD is planning to put out a similar cloud contract, and the two semi-finalists" are Amazon and Microsoft; and "there are significant rumors that foreign intelligence agencies [in addition to the US NSA] also have a backdoor into those [2] clouds" (Fitts, 2019o, mn.15-16). Trump intervened to steer it away from Bezos-Amazon and towards Microsoft. Amazon promptly launched a suit against the DoD's decision in 2019, leading the Pentagon to internally-review the decision; it ruled (again) in MS's favor in Sept. 2020... but then [the new administration's DoD] cancelled all JEDI contracts in early summer 2021. The new cloud contract is to be called "Joint Warfighter Cloud Capability" [JWCC], with the Pentagon soliciting bids from both Amazon and Microsoft. See also "Google", "Intelligence Community (IC)".

have the] ability to re-engineer the [USG] cash flows in very significant and radical ways”²⁵⁶⁴ (Fitts, 2019o, mn.8; mn.9-10). The “first thing it looks like... [is] basically... asset-stripping the federal government... [and] re-engineering the cash-flows, whether it’s social security, or welfare, or Medicare and Medicaid... in a way that is constantly ratcheting down the commitments to the American people...[while still] holding them accountable... to make good on [all] the IOUs.... The currency debasement is [eventually] going to be enormous” [without monetary reform] (Fitts, mn.11). What they’ve “been doing” for decades now “is...running a system.... to make small business pay anywhere from 20-30% for their cost of capital, while the big players who are playing in the system have a zero percent cost of capital.... [and] that’s one of the reasons you saw the real pushback [from voters] in 2016” (Fitts, 2019o, mn.12-13). “The slugs hate Donald [laughing] Trump...[even though Trump has] ...had plenty of slug-kind-of-behavior himself” (Fitts, 2019s, mn.9).

[the JEDI JWCC ‘big 2’: Amazon for the I.C., and Microsoft for the DoD?]

10) 2016 notwithstanding, was the alleged Trump-Bush quid pro quo about the, uh, mechanics of re-election? “[I]f you look at the way this Deep State has been operating, you know...[Trump has] been on board for FASAB-56. He’s been on board [for] covering up the [missing] 21 trillion dollars. The Deep State is rolling along, singing a song...[And FASAB-56] is the single most significant swampy [unaccountable] thing we’ve ever seen the Deep State do since the [CIA Acts of] ’47 and ’49... And everybody’s silent about it, and everybody’s trying to play along” (Fitts, 2019r, mn.15). See also “Deep State”, “Federal Accounting Standards Advisory Board”.

11) “I think we have to face it. We’re in trouble now. Is it going to get a lot worse after [the] 2020 [election]? Absolutely. When Trump came in...he may not have realized how bad it was.... He has basically gone full-on fiscal stimulus and tax reduction [and]... It’s not working, and one of the reasons it’s not working is... that he is discovering that the [cultural] model in Washington is *everybody* is on the take” (Fitts, 2019r, mn.14); including so-called ‘mainstream’/20thc media. See also “Corporate Media Cartel (CMC)”.

12) “He has succeeded in branding the corporate media [cartel] as not [any more] credible [than Wikipedia], and... the majority of people agree” (Fitts, 2018n, mn.14), which is certainly worthy of some praise, as is refusing to kow-tow to other oligarchical institutions, and setting his own tone, saying his own peace (as the first President since Jimmy Carter not to start any new wars). More specifically, on the “budget he gets an F.²⁵⁶⁵ On persistence and endurance he gets an A.... On building a team he gets a D.... on [introducing the novel concept of] fighting with The Swamp he got a B+.... [On] managing the federal budget & contracting budget [as opposed to ‘reality tv’] he [also] got an F....” (Fitts, 2018p, mn.14-16). See also “Federal Accounting Standards Advisory Board (FASAB)”.

12b) Others agree that Trump’s (1st-term) “biggest failing has been not busting up monopolies or Big tech. He sure talked about it, but that’s [still] his biggest failing.”- Alex Jones (Fitts, 2020i, mn.10).

²⁵⁶⁴ “Now that Amazon is running all the Cloud for the Intelligence agencies, and Microsoft is about to run the Cloud for all the DoD...Once you get those two clouds in place, with FASAB-56, you can re-engineer the entire government operation...to be controlled by a secret group of people who can do whatever they want... a complete coup d’etat” (Fitts, 2019v, mn.29-30). See also “Congress (US)”.

²⁵⁶⁵ In FY 2018, non-defense discretionary (NDD) spending was the only area that Trump proposed to cut in this budget (down \$54 bn., to \$556 bn.), and comprised only 15% of total federal spending. Social Security alone consumed a quarter of the budget, with ‘health’ spending taking up another quarter. Other mandatory spending items comprise another 1/8th of the budget. The pre-set parts of the budget, along with interest [\$390 bn. for 2018], are forecast to account for 90% of spending growth over the next decade, with interest payments to reach approx. \$900 bn. by 2028.

13) A *'rope-a-dope'* strategy notwithstanding, the *'fighting-with-the-Swamp'* grade seems inflated. According to Steve Pieczenik, Trump *"really needs to clean out his cabinet quickly... because the Due Process of law does not work in the United States' [government now]. It has become a farce, and I see it at all the levels"* (Pieczenik, 2019l, mn.33-34). *"We [I.C. Deep State insiders] are begging that he be what he was supposed to be from the beginning-- tough, ruthless, [and] without any...rationalization. That's all we asked of him. If he does that, [then] there will be guarantees that he will come in [first] in 2020. If he hesitates, or he's uncertain... [then] all bets are off"* (Pieczenik, mn.101).

14) *"The P.o.t.U.S. is driving a bus, but his steering wheel doesn't [necessarily] connect to the [real] wheels. There's a guy below, called the Deep State, and he [actually] controls the wheels"* (Fitts, 2019s, mn.10). *"We can't sit around eating popcorn waiting for Donald Trump to fix it. We [sic] have to get into the trenches and fix it ourselves"* (Fitts, 2019r, mn.11).

15) *"There's no court we can go to file bankruptcy for Uncle Sam"* (Stockman, 2019, mn.43). See also *"Black Budget"*, *"Discretionary (US budget)"*.

15b) But there is *'COVID'*. And *"what is...[Trump] doing? Besides wearing a black mask. And talking about operation warp speed to develop a killer Gates vaccine. And wondering whether the presidential election should be postponed [?]"* (Rappoport, 2020i). See also *"COVID"*, *"President of the US (PotUS)"*, *"Provocation operation (Po)"*.

16) Ranking I.C. whistleblower William Binney concurs with Pieczenik. *"My point would be very simple to the president: 'You gave orders. People didn't follow them. That's ground[s] to fire them. If you fail to follow an order, you're fired'"* (Binney, 2019, mn.4-5). Binney has made it known *"to the president and his lawyers that...[Trump] was even targeted [by NSA, etc.] before he ran" for president* (Binney, mn.6).

17) *"Now with the financial coup [temporarily] over... the question is do you re-engineer, or do you cut-and-run. That's something to talk about... a re-engineer of the remaining governmental structure, or are you gonna... let it implode"* (Fitts, 2020b, mn.21). See also *"Black budget"*, *"Monetary reform"*.

18) According to long-time Monetary Reformer Bill Still, Trump is *"aware" of the debt-money system, "and even knows the solution to it... a simple solution of gradually replacing Federal Reserve notes... with incoming debt-free US [Treasury] notes"* (Still, 2019h, mn.11-12). This is because Still was *"asked to write a White Paper for...[candidate Trump, in March 2016, and]... was told he read it, and within days he made that famous statement... [on March 30th, that he could pay] off the national debt if he was president for 8 years"* (Still, mn.2-3). Who knows if it was mostly just an April Fool's joke. See also *"Discretionary (US budget)"*.

18b) Trump's original campaign manager and half-century Republican operative Roger Stone says that *"if the president is re-elected, that he...[would be] committed to... [what Stone calls] monetary reform. Larry Kudlow... is a fan of...[this]. He is a fan of gold... [B]oth Rand Paul and Ron Paul have the president's ear on this question"* (Stone, 2020, mn.203). See also *"Monetary Reform"*, *"Gold standard"*.

19) *"We didn't elect Trump to please"; the establishment's conventional wisdom. No excuses* (Fitts, 2020f, mn.28). See also *"Federal Accounting Standards Advisory Board" (FASAB-56)*.

[See also *"Bretton Woods"*]

20) *"They pushed him out"* (Skidmore, 2021, mn.41). See also *"COVID"*.

20b) An “internal network of former military officers, and what one presumes were still active duty military officers [were planning to] literally [physically] remove... Trump from office.... [as far back as] July and August of 2020.... to remove Trump, militarily” (Wheeler, 2021, mn.3-4).

21) Trump Updates: 8/22- Indefinite (“they”) pronouns immed. above? The tide turns: “Checkmate.”

- <https://www.bitchute.com/video/oeUK5iErlG6L> [SR#3916, mn.5-6].

12/22- Trump vs. DeSantis? Who’s got the better script? <https://www.youtube.com/watch?v=gTK6UAOHrGs> (O’Connell, 2022c, mn.17).

See also “Mind control”, “Timarchy”, “Real Estate”, “Russiagate”, “Neoconservatives”.

Trump’s foreign policy- (i.e. ‘Herderism’; see also “National Identity/Nationalism”) “The free world must embrace its national *foundations*. It must not attempt to [further] erase them or replace them. Looking around... all over this large, magnificent planet, the truth is plain to see. If you want freedom, take pride in your country... hold on to your sovereignty. If you want peace, love your nation.... The future²⁵⁶⁶ does not belong to globalists. The future belongs to patriots. The future belongs to sovereign and independent nations who protect their citizens and respect their neighbors, and honor the differences that make each country special and unique.”- Pres. Trump’s 3rd address to the General Assembly of the United Nations²⁵⁶⁷, Sept. 24, 2019 (O’Brien, 2019, mn.2-3). See also “Russiagate”, “Africa”. See also “Geo-politics”, “New World Order’ (N.W.O.)”, “Debt cycles”, “G2”, App.C: “1-2-3”.

Trump’s trade wars (with China)- 1) “The World Trade Organization needs drastic change. The second-largest economy in the world should not be permitted to declare itself a developing country in order to game the system at others’ expense.”- Pres. Trump’s 3rd address to the UN General Assembly (O’Brien, 2019, mn.7-8).

2) Moreover, when the US money supply is “all created as an interest-bearing debt...[that means that] If the Fed doesn’t like Trump, for example. Guess what? They won’t allow him to sell more bonds into the market...if he [says] he needs extra money [to be created, via so-called ‘Open Market Operations’].... [The Fed may also] encourage their fellow [international club of] central bankers in China, for example, to create more money, so they can pay for our made in the USA products with a depreciated Chinese money supply. And that is exactly what President Trump has been talking about...[in August, 2019]” (Still, 2019e, mn.6-7). “When China buys wheat or coal from the US, China just prints up some additional money to pay for it. But they don’t inform us that they just made the money yesterday... until years later” (Ibid, mn.8). See also “Sovereign money”,

3) Summer 2020 <https://www.prwatch.org/news/2020/08/13607/facing-increased-scrutiny-tiktok-gave-money-state-attorneys-general-groups> [TikTok²⁵⁶⁸Banned45Days]. See also “Internet of Things (IoT)” [Huawei].

4) The hi-tech race aside; Trump’s trade war, according to Michael Hudson, actually helps China. Preventing “US companies from lending money to China...[in order to] isolate it...[helps Beijing] to protect their economy” & [to] keep the Chinese yuan *under-valued* (Hudson, 2020c, mn.49); which has been Beijing’s traditional policy for a very long time. See also “Russia” [.sanctions], “Angry Birds”.

²⁵⁶⁶ ...including the monetary future. See also “European Monetary Union (EMU)”, “Monetary Reform”.

²⁵⁶⁷ It’s not all about spending boondoggles: <https://www.youtube.com/watch?v=fdEKbbhxiUE> (Oswald, 2018, mn.33-34).

²⁵⁶⁸ The 15-second-limit (Twitter for illiterates) video sharing app. was launched in Beijing in Sept. 2016. Four years later, the Trump Admn. banned TikTok (and also TenCent’s WeChat) on “credible” national security grounds; but the 45-day ‘ban’ was quickly challenged, and in Oct. 2020 the US District Court for the Eastern District of PA blocked the temporary ban. The Commerce Dept.’s appeal of *TikTok v. Trump* was rejected; and in June 2021, PotUS Biden signed an executive order revoking the original ban. Similar TikTok bannings from the summer of 2020 have stood up in the [basically more-religious] greater South Asia region (specifically: Afghanistan, Bangladesh, India, Pakistan, and Iran), but temporary injunctions in Indonesia and Jordan have also been overturned. After numerous US state government bans and a 10/22 Forbes article claiming ‘that the ByteDance team planned to surveil individual American citizens for undisclosed reasons’, the US federal government banned TikTok from all government-issued devices in Dec. 2022. Make no mistake, as “it turns out, the [global] pandemic era platform for dance challenges is a Chinese government asset.... US government leadership failures, Silicon Valley’s disruption fetish, and Wall Street’s addiction to growth have [all] fueled China’s technological gold rush.... *Trafficking Data* explains how China is fast becoming the global leader in internet governance and policy” (Kokas, 2022). See also “Management vs. Leadership”, “Long-Term Orientation (LTO)”.

5) It is, however, not just 'China'. DanielGros @ the CEPS "argues that the global imbalances between the United States and EU are of greater concern" (Gros, 2018). Trump "prefers to negotiate with individual member states rather than with the EU, and tries to find tools (such as tariffs on cars) to split the EU politically" (Gros, 2018c). See also "European Union (EU)". See also "China's US Treasury Bonds (c.2004-15)", "Land Bridge".

Trustee- see "Fiduciary".

Truth serum- (when politics & elections are about money creation & accountability, not party graft machines & d.b.t.'s)

1) (Meaningful) Monetary Reform in the US today requires a monetarily-literate electorate. Once this is achieved, however, lies will evaporate, like wanton violence evaporated from Christendom a thousand years ago. See also "Big picture", "Deceptive Banking Terms (d.b.t.'s)".

2) The rise of (first the ideology of) the Papacy and 'Christendom' in the 11th century, combined with the technology of paper, made widespread *double-entry accounting* feasible and then the norm (first in northern Italy by the 13thc). Henceforth, 'highway robbery' culture was on the way out.

2b) Likewise, the rise of (first the ideology of) the Intelligence Community in the 1950's, combined with the 1960's-70's "consciousness" (or 'neo-premillennialism') movement, was promptly followed by the popularization of computers (in the 1980's) and the internet (a decade later). Only thereafter (after the Year 2000), with the both the *ideological seeding* and *technological budding* completed, did the actual stem (of everyday improvement in business practices) appear-- that of sovereign ("debt-free") money. When it becomes the societal norm (in 'the West'-- i.e. given the political-democratic institutions for achieving transparency and accountability), 'lies & chicanery' culture will, likewise, find itself having to adapt to the new pragmatic/everyday culture. This is just part of the growth of our species and planet. See also "Accounting", "Wonderful Wizard of Oz", "Orwell, George", "Intelligence Community (IC)", "Main point", App.C: "1-2-3".

Twain, Mark (1835-1910)- (America's 'Shakespeare' liberated the language-culture from its apron strings) "Truth is the most valuable thing we have. Let us economize it."- *Following the Equator* (1897)

1) America's poet laureate for the (increasingly explosive) second half of the 19th century underwent something of an attitude adjustment in the 1880's-1890's (when he was close friends with technical genius Nikola Tesla).²⁵⁶⁹ See also "Adolescence of Mankind", "United States", "Industrial Revolution, 2nd".

2) "I am an anti-imperialist. I am opposed to having the eagle put its talons on any other land."
- letter to the New York Herald (October 1900). He didn't get his way. See also "Twentieth century", "Peek, George (1873-1943)".

See also "Estates, 3", "China" [.Christian], "Slavery", "Founding fathers".

["Mystical sphere"? Tesla hosting Twain, winter 1894]

Twentieth century- ("the century of CBs"; playing up the people thoroughly, with a hundred+ years of phony solutions. Banks still pretend to have it, leverage it out to others, and put others on credit, even though there's nothing there, and they do not represent anyone or anything other than wise

²⁵⁶⁹ From 1901 until his death in 1910, Twain was vice-president of the American Anti-Imperialist League. See also "Imperialism".

guys/sharpies, and mediocre-poor macroeconomic... [see also "Design"]. See also "Economics" [.tragic], "Monetization".

1) "[T]he concept of [both privately &] centralized monetary control didn't develop until the 20th century" (Davies, 2007). See also "Nineteenth century", "Central Bank", "Bernays, Edward (1891-1995)", "Bankmoney regime".

[See also "Central Banking-Warfare model", "Debt money".]

2) After mid-century then, essentially 'bribing Ethnic National Identity'ists not to be violent'? (Bauman, 2007). See also "Monetization", "Eurodollars"; "National Identity/Nationalism", → "International Intelligence Community (I.I.C.)".

See also "Currency Wars, the", → "National Debt Economy (NDE)", "Psychology", "Monetization", "Conditioning".

Twenty-First century- (don't fall for a [CB's] cashless society; see also "World Par")

1) Q: What's the [perma-crisis] problem? 'Everything vs. The Green'...Potemkin villages in the late 2nd millennium were, indeed, an everyday occurrence. See also "Corporate Media Cartel", "Statism".

1b) ...which, for all us *h. economici*, manifests in the (long-observed, but never directly-tackled²⁵⁷⁰) "inverted U-shaped relation between income inequality and economic growth" has long been conventional wisdom (per Kuznets' 1950's & early '60's). See also "Big Government (growth of)".

A: It's also been more-or-less conventional wisdom, since the 70's,²⁵⁷¹ that (at least) the 1st quarter of the 21st century was going to be a train wreck involving all things material, from:

- the ecological (see also "Ecological economics"), and hence also (by implication)
- most things macro-"Economic" from the 'gross' 19th-20th centuries, including:
- "bankmoney" ("debt money" [& its "debt cycles"]) and its heritage of "Inflation" & over-"Monetization";
- "Statism", "Central bank"s, and other self-serving "Public-Private Partnership"s; not to mention
- 'the peoples' traditional reluctance-inability to take on the big picture of the state/society that engulfs them (but nonetheless exists *for* them-- at least in theory)

So why not 'shut it down' at some point-- at least for a time, to get people to think (or at least get their attention)? Meaningful reform is usually not very easy (getting multi-institutions to agree [on action]).

See also "COVID" [.shutdown], "Great Extinction, 6th", "Reform, 101".

2) What's on the 'other side of the mountain'? See also "World Par Economy".

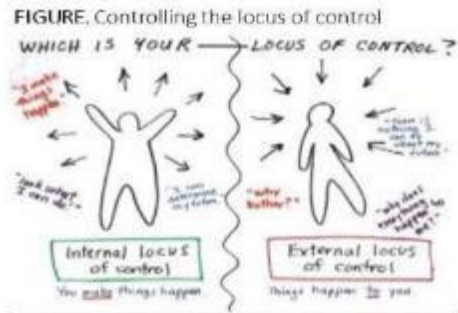

2b) And 'the mountain' is (see also) "Methodology" (there's no excuse [other than naked imperialism] for keeping it secret in the 3rd millennium); no exceptions. See also "Design" [.culture].

3) 'Unsurpassable bridges to The Modern' (in chronological):

²⁵⁷⁰ Pretty much never directly-addressed due to the crippling-Orwellian nature of (see also) the "Deceptive Banking Terms (d.b.t.'s)".

²⁵⁷¹ i.e. "the 1970's, when Limits to Growth and World Federalism were the rage. Both sought to achieve an overview of systemic challenges, but both also suffered from the myth of top-down hubris."- Robert David Steele (Ahmed, 2014). See also "Aristotle vs. Plato". More specifically, "it's been 50 years since... August...1971; and it's been well understood and known [since then] by the 'globalists' that the current fiat currencies would all [eventually (say, half-a-century or so later)] go to nothing... This is mathematical inevitability.... So what they needed to do...[was] prepare an alternative. And obviously Their fondest fantasy [in the card game of alternatives, so to speak] is to have a one-world [privately-owned] Central Bank issuing the digital currency for all of the world" (Krainer, 2022, mn.39-40), with cash/ATMs gradually being phased out as supposedly subversive (in an age of environmental catastrophe). See also "Monetization"; "Ecological economics"; The dystopian (so-called) 'New World Order' oligarchical fantasy, however-- at some point-- necessitates that "you have to destroy the commercial banks...[and] eliminate individual nations' Central Banks and the sovereignty" (Krainer, 2022, mn.40). See also "Powellism", "Energy".

Unconstitutional- (see BG a/o Cato book notes)

- 1)
- 2)

3) Most "major Wall Street firms have compelled their workers, for decades, to relinquish the 7th Amendment to the...Bill of Rights- the right to a jury trial- and [instead]...bring...[any] legal disputes into Wall Street's private justice system called 'mandatory arbitration' as a condition of getting a job at the company... Wall Street...has been...[asking] its workers to forego a constitutional right in order to receive a paycheck."- <https://wallstreetonparade.com/2022/09/jpmorgan-chase-morgan-stanley-and-wells-fargo-flunk-a-test-measuring-their-support-for-american-democracy/>.

See also "Constitutions", "Design", "Methodology", "Humor".

UKUSA Agreement- intelligence-sharing "secret treaty," initiated in the 1941 Atlantic Charter,²⁵⁷² passed by Congress in the *BRUSA Agreement* (1943), and enacted by both the UK and USA as of March, 1946.

²⁵⁷² "Planning for the [winning side's] postwar international monetary order had been under way since [no later than] 1940 in the...[UK] and 1941 in the...[US]" (Eichengreen, 2019, 89), if not 1922 with the failure of the Genoa Conference. Guess what? (Famous names) John Maynard Keynes and Harry Dexter White did not invent the primary script that emerged from Bretton Woods in 1944. "Under the terms of the Atlantic Charter 1941 and the Mutual Aid agreement of February 1942, the British pledged to restore sterling's convertibility on current account and [moreover] accepted the principle of nondiscrimination in trade, in return for US promises to extend financial assistance on favorable terms and to respect [at least in theory] the priority the British attached to full employment... [although by then] Keynes...[was] the grand old man of economics and unpaid adviser to the chancellor of the Exchequer" (Eichengreen, 2019, 89). See also "Hitler, Adolf", "Bretton Woods". Was the Atlantic Charter, unlike the preceding 2 entries, intelligently idealistic? The "Atlantic Charter, in paragraph 4, promises 'to further the enjoyment of all States... of access, on equal terms, to the trade and raw materials of the world'. Here in the foundation stone of [what will eventually be] the new world order we find specific reference to the basal position of primary commodities" (Graham, 1944, 2-3). See also "Graham, Benjamin (1894-1976)", "'New World Order'", "Wise men".

Still in existence today, the (until recently) secret²⁵⁷³ cementing of the “special relationship”, covers the entire world, through the “Five Eyes”²⁵⁷⁴ of the Australian, Canadian, New Zealand, United Kingdom and United States’ (military) signals intelligence.

1) “Before arriving at an agreement with the French and with the British in September 1936, [both] the US Treasury and members of Congress had regarded the British as an adversary in the foreign exchange market” (Bordo & Schwartz, 2001, 11). See also “Hitler, Adolf (1889-1945)”, “Forex”.

2) There “is no greater” scale of “secrecy on Earth today than the secrecy surrounding the US and the related NATO and Five Eyes National Security State” (Fitts, 2018d, 8). See also “**Military-Executive-Corpocracy**”.

3) “I have to say that the Five Eyes has sort of changed... the balance of power, between JP Morgan-Chase and AT&T. There’s a definite sort of [3rd Industrial Revolution] telco-defense contractor aspect to power, and then there’s the [old 2nd Industrial Revolution] central bank power” (Fitts, 2020c, mn.4); that pretty much ran the earlier decades of the 20th century. See also “Black budget (US)”, “Lockheed-Martin”.

[https://en.wikipedia.org/wiki/Magic_8-Ball]

3b) In other words:

c.1870's: not yet any official deal (or financial truce) between the two groups (UK & USA);

c.1890's-00's: de facto agreement and planning for the 1st official Pilgrim Soc. meeting in 1902, towards the objective of, yes you guessed it, ‘world leadership’ and keeping the Germans at bay (particularly after the discovery of Bismarck’s secret “Reinsurance Treaty” (of 1888) with Russia. See also “Fin de Siecle”, “Pilgrim Society”, “Russiagate”.

c.1910: all about the upcoming superbowl with the underdog Germans... ; objective had to be extended. See also “**Currency Wars, the**”.

1930's: all about doing the job right this time (with US already in de facto leadership), to include how to keep America’s secret weapon (underlying reason for the economic recovery) secret, up until both of the ethno-fascists had, irrevocably, seized the bait (of mechanized, petrol-dependent lightning [blitzkrieg] warfare). See also “Parity pricing (for the primary sector)”.

[NoMoreDeath(oftheEarth'sBiosphere); see also “Economics, Parity”.]

1950's: now all about, for a change, the Empire (of ‘normalcy’, capitalism & imperial-corporate speculation) Strikes Back; America’s secret economic weapon put back on the shelf, in deference to (having a

²⁵⁷³ The UKUSA agreement was not revealed in public media until 2005, and not fully disclosed until 2010. Purportedly it was not even known to Australian PM Gough Whitlam as late as 1975, prior to his government being dismissed by the Queen-appointed “Governor General” on 11 November. See also “Offshore”, “Secrecy, Cult of”.

²⁵⁷⁴ Actually it has expanded, *de facto*, to now something more like 13, as this century 8 additional countries “are participating with the NSA in this kind of data acquisition and analysis” (Binney, 2015b, mn.24). See also “Intelligence Community (IC)” [I.I.C.]. Surely one of the two-dozen was then Japan (which sought to make it officially “6 Eyes” in 2021 [Mark, 2021])-- and also Israel. In 2019, its PM Benjamin Netanyahu publicly boasted to the Tel Aviv Cybertech conference that Israel’s “NSA, which is called Unit 8200.... [now constitutes] the 2nd Eye” of the Five-- not “the 6th” in terms of overall cyber command capabilities (Netanyahu, 2019, mn.9-10); its “cyber security...[is] in many ways, unmatched” (Netanyahu, mn.17). See also “Secrecy, cult of”, “Mind control”, “Israel”, “National Security Agency” [‘5 Eyes’ expansion].

go at) the age-old, classic, simple 'fiduciary'-cum-'fiat' Reserve currency-based Imperialism (with UK-based 'eurodollars' as backup). What could go wrong? See also "Bretton Woods", "Pyrite".

c.1970: A number of things went wrong. And, moreover, the new arms race was, clearly by that time, going to revolve around the computer (which had been developing pretty slowly through the 1950's), and, ultimately (nothing less than) binary-designed digital reality-- i.e. no real limits, at least in theory.

So...how to get a hardscrabble & frontier-republic to (be both willing and able to) write the requisite '10 mn. miles' of binary code? Well, why not start with a great music and civil rights (going on libertine) party first (while making sure that the Democratic Party-- like Congress in India-- didn't takeover the country)?; then transitioning to libertine feeding of the (age-old) economic elitism, special privileges, and other material rewards for doing it. 'It?' It's been half-a-century now and one still doesn't know that the basic objective was about? About half of all cultural products from Canada, c.1978-83, were exposing and/or making fun of it.²⁵⁷⁵; in addition to Monty Python in the UK. Remember: one big, happy UKUSA, Five Eyes, etc. family. See also "Nineteen-Seventies", "Separation of Powers", "Intelligence Community" [I.I.C.].

But could even the Russians and the Chinese (still obviously smarting from the loss of many millions [of innocent lives], to the full-force onslaughts of ethno-crazed Nazis and Japanese) also be brought (or perhaps *bought*) on board? Necessity is the mother of invention:

'So the Cuyahoga river often catches on fire, and much of the environment in China & the Soviet Union is-- or is soon to be-- even worse. Bretton Woods, meanwhile, has really run for not much more than a decade, and everybody wants-- or will soon want-- their gold. According to this [then newly-created] Ecological economics, we're all as doomed as Christ on the cross, even if the Holocene Era's not about to end, which standard geologists expect to begin at any time. It's looking, at least at this point, like a Totalitarian future for the (bottleneck's) survivors. Everyone's always said that so-called 'democracies'-- democratic republics-- have never lasted more than a couple centuries anywhere at anytime. We've got a bicentennial celebration coming up in a few years. Any suggestions?'

'Well, the real objective of Bretton Woods has always been the global 'free-float' of currencies. So this (post-gold) "Bretton Woods II" may hold up a while. This new Ecology and Earth Day-type stuff might keep the primary environmental crisis at bay for another half-century. But there's not much doubt that we're going to need much more comprehensive solutions by no later than the 2nd or 3rd decade of the century. Computers could, conceivably, be tracking everyone and everything by then.

'Any brighter scenarios?...I mean other than Soylent Green-type stuff?'

'Economic waste is also strategic, not only tactical. We all know that our US national accounting focus effectively reverted from **Net to Gross** during the 1950's (in deference to the then-new global imperium). We really shouldn't be trying to make GNP or GDP into a Holy Grail for the rest of the world, via these "Washington Consensus" institutions. It sets the wrong tone strategically, and we should admit (-at least at some point-) that that makes a difference (given our own experience with "Parity pricing for raw materials" in the 1940's). See also "Ecological economics", "Reserve Currency" (long-term strategy), "Long-term Orientation (LTO)".

c.1980: 'Ok, point taken. Do you think that, f.e. China and Soviet Russia, have the statistical veracity or capability for the detailed Net National Income accounting that is required for primary sector parity?'

'No; certainly not now. But with the Digital Revolution they could. As was determined after the War, there have to be **multiple engines** for a World Parity or **World Par economy**. This will be the norm in any functional Digital Age-- cooler temperatures or not. But we have to get there first of course-- the technological-statistical capability. So, yea...It's back to "what do we do in the meantime?". (We all know America's not a twiddling thumbs kind of place.) The Jacob's Ladder or laundry list of American problems & flaws is, shall we say, "real until it's not real". How many

²⁵⁷⁵ ...from Dan Akroyd and the Thomas brothers, to Leonard Cohen & Rush (then later also Jim Carey and Mike Myers).

decades will it take? Well, if we want to synchronize with the old world's technological development, the engineers now say its about 5 decades, maybe 4-- no less than that. Let's check with what GCSQ [a.k.a. the Brits etc.] have to say about that-- to include, as usual, all the "top secrecy" stuff. Any problems with that?' See also "USSR", "China- statistics", "World Par Economy", "International Intelligence Community (I.I.C.)", "Empires" [British, American].

[a US insurrection in 1979]

c.1990: details of getting Russia & China on board ('Agenda 2020's'); the CAP-to-EMU transition in Europe; unfolding the Big Tech/Markovian 'globalist' corpocracy elsewhere-everywhere; and the rise of the (so-called) 'Shadow Banking Sector' & '3rd Tier monies' in the US. See also "Shadow Banking Sector (SBS)".

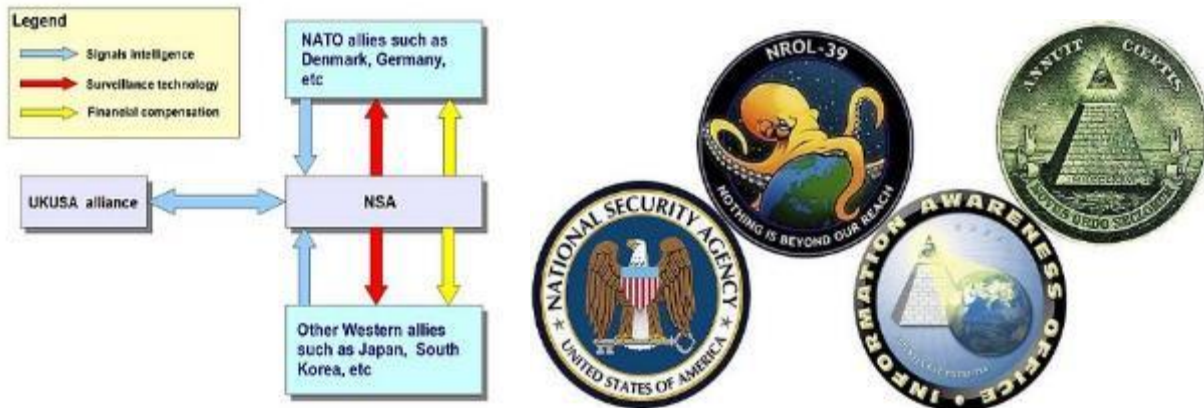

c.2000: details of ever-more Digitalization Revolution (supposedly private sector); scaffolding for 3rd Industrial Revolution worldwide. See also "Industrial Revolution, 3rd", "World Par Economy".

c.2010: details of various 'populism' outbreaks, 'Social media'-Tech Giants' tyranny & the continuing crackup of centuries-old Western institutions, under the ongoing pressure of unprecedented environmental, technological, and demographic change. What will be the successor institutions? See also "Jones, Alex", "Steele, Robert David (1952-2021)", "Great Extinction, 6th", "COVID".

4) By c.2020, it was pretty obvious that the entire 1st quarter of the UKUSA-spec.'ed 21stc was all about (what might be called) transforming the Suck into the Virtual Suck-- the Budget (supposedly Congress') into the virtual budget, the PotUS into the virtual PotUS, the corporation into the virtual corporation, the R & D into the Big 5 Tech giants, the stock markets into the Big 4 Asset Managers, the internet comments into virtual (bot) comments (the easiest thing to do), the money into virtual money (the hardest thing to do, and a fool's errand or diversion) ...to obscure & divert attention away from (what is basically, let's face it) the rationing of the physical world (or at least²⁵⁷⁶ much of its remaining Commons). See also "Capitalisms" [Enclosure], "Commons", "Great Extinction"; App.C: "1-2-3".

5) UKUSA Updates: 8/22- "England can become another Delaware" (Hudson, 2022). See also "Offshore", "Delaware", "Imperialism".

See also "Pilgrim Society", "Council on Foreign Relations", "Timarchy", "Secrecy, Cult of", "Shell game", "Zionism", "National Security Agency (NSA)", "Quigley, Carroll" [1977].

[UKUSA basics... some US eavesdropping insignia: 2013, 1935, 2002, 1966]

²⁵⁷⁶ In addition to things (formerly taken for granted [in much of the US at least]) like parks and mileage, perhaps possibly even fertile sperms and eggs, via mRNA programming jabs. See also "COVID", "Trump, Donald".

Underdevelopment- a term “coined by Andre Gunder Frank to describe the policies which former European colonies and more contemporary 3rd-world countries have been turned *into indebted raw-materials exporters* rather than balanced economies capable of feeding themselves” (Hudson, 2015b) See also “Parity pricing (for the primary sector)”, “Washington Consensus”.

Undocumentable adjustments- (accounting speak for lost/unaccountable money; a.k.a. ‘unsupported accounting adjustments’ [Skidmore, 2021b])

From Fiscal Year “1998 onward.... there’s vast amounts of [executive branch] spending going on that’s never [been] approved [by the legislature], and there’s absolutely no transparency” (Fitts, 2022n, mn.21).

1) “By accounting standards, 1-5% is considered not ‘material’.... Even tiny [percentages] in an operation that big [as the DoD], you would dig and find every penny and document it. And you would not want systems that couldn’t do that...I assure you that if you look at all the publicly traded companies... under the SEC law they have to produce perfect financial statements and file them every year. So they all know how to do it” (Fitts, 2017q, mn.41). See also “Black Budget (US)”, “FASAB” [publicly traded].

Unearned income (rent)- 1) In the 19th century “all of the forecasters”, be they ‘left’ or ‘right’, had as a main idea that: “you’re going to tax unearned income. And the whole basis of [18thc] classical economics was the distinction between earned and unearned income-- between [legitimate] profits and rent extraction. They thought ‘*you want to tax away the free-lunch, the rent...* [as opposed to] industry... [or] labor.” (Hudson, 2017b, mn.39-40). See also “Clark, John Bates (1847-1938)”.

2) “The classical economists said that there were 3 kinds of unearned income:

a) *land rent* of absentee owners²⁵⁷⁷...you have to pay them just because their ancestors conquered the land and...established their rental claim,

b) *monopoly rent* by... natural resource owners charging a price that’s much more than the cost of production, and finally

c) *interest and financial charges*.... *Rent* was the word that classical economists used for unearned income...It’s the excess of price over the actual cost value” (Hudson, 2016p, mn.14-15).

3) Unearned income begets more unearned income. The “more the expansion of bankmoney and financial assets and debt strides ahead in disproportion to real economic output, the more they will create a distributional bias toward financial income at the expense of earned income” (Huber, 2017, 5). See also “Usury”, “Classical economists (hijacking thereof)”, “Neoclassical revolution”, “Georgism” [de Mille].

[‘How long till fluoridated water supply and Obamacare chemotherapy mandates?’ See also “COVID”.]

Unemployment (statistics)- (U3, U6) 1) For some decades in the US at least, the official U3 figures have only considered ‘unemployed’ individuals to be those deemed ‘actively seeking work’. “The unemployment data...has gone beyond fallacious, to almost mendacious now... the U3 level of ‘unemployment’...defines *out of work* as meaning... 1] actively looking for a job in the last *two weeks*, [and] you 2] cannot have worked more than *one* hour-- even voluntary-- in any other area, and you 3] cannot have been ‘unemployed’ for more than one year.... But [the simpler U6²⁵⁷⁸] Employment to Population ratio... [or] ‘*How many people are receiving a paycheck?*... those numbers haven’t recovered at all, virtually, from the depths of the [2009] downturn. So we’re looking at the lowest Employment to

²⁵⁷⁷ Land Rent is “the rising market price for land. In the era of the French Physiocrats, Adam Smith, David Ricardo and John Stuart Mill [a couple centuries ago], this land rent accrued to Europe’s hereditary landlord class. Today, the land’s rent is paid mainly to bankers” (Hudson, 2017p). See also “Congress of Vienna”.

²⁵⁷⁸ The U6 statistic counts all those of working age who are not employed-- in addition to marginal part-time workers-- as unemployed, and since the mid-1990’s has typically been around twice the rate of the ‘official’ U3.

Population ratio since the early days of womens' lib, and that's really the state of the real economy" (Keen, 2015e). "The reason you're getting such a fantastic looking figure for the [US] 'Unemployment' rate is [that] 4 million people have been statistically moved [from there] into 'Not in the Workforce' when they still damn well want a job.... The unemployment figures are a lie, and unfortunately the people promulgating that data... don't realize that they're lying, because they're relying on unreliable data" (Keen, 2016x, mn.29-30).

2) "You ask a lot of people...1] 'Are you working?' If they say Yes, [then] they're 'employed'. If they say No, you ask them a second question 2] 'Are you looking for work, or are you not?' If you say 'I am looking for work', [then] you're counted as unemployed. If you say 'I am not looking', [then] you are counted as 'out of the labor force'. You are not counted as 'unemployed'.... [Such strategic statistical manipulation] leaves a smaller number of people in the labor force to support the entire population..." (Wolf, 2018, mn.10-11)

3) Futurist George Gilder refers to it (U3) as the "Potemkin [village] employment number" (2016, mn.15). See also "Inflation, unadjusted".

4) What's the big deal? "[T]he banking sector can reap excess profit by treating high unemployment as an externality [something not worth dealing with] in the economy...[which] translates high unemployment and [the resultant] low wages directly into corporate profits. The *profit* from high unemployment is kept in private hands, while the *cost* of high unemployment is socialized as government expenditure" (Liu, 2005). See also "Productivity", "Robotization (and productivity)", "Industrial Revolution, 3rd".

5) "[F]ull farm production remains the key to full employment"; "[f]unny money might hide the fact, but not forever" (Walters, 1971, 386; 387). See also "Economics, Parity", "National Debt Economy".

[Real labor force participation rates now reflect robotization.]

Units of Account- (the bits & bytes of accounting)

1) the standard monetary units of measurement used to assess the value of something, most often the cost of goods, services, or assets.

2) National currencies (or the Euro) are by far the most common Units of Account-- i.e. the official name for what is circulating as *national currency* (state money).

See also "Currency", "Money" [.properties].

Unitarism- (a.k.a. 'political centralization', either 'private' or [increasingly more often] 'public')

1) Still the most common de facto constitutional form in sovereign governments today, from China and Japan to England and France. "Never was there a country where the practice of governing too much had taken deeper root and done more mischief... [In revolutionary France,] subordinate governments ...[are] completely dependant on the general one" (Jefferson, 1789b).

2) Nonetheless, the long-term, gradual “trend away from unitary government...[demonstrates] the lesson that...[any reasonable] fundamental goal is to match the constitution to the people” (Lutz, 2006, 11). See also “Constitutions & Conventions”.

3) “The labor productivity gap between the best-performing region in the [unitary] UK (Greater London) and the worst (Wales) is bigger than in any other developed country” (Fox, 2017). See also “Federalism”.

United Kingdom, the- (est. 1707; not to be confused with England & “English constitution”²⁵⁷⁹) see “Glorious Revolution” → “Pilgrim Society” → “UKUSA Agreement” → “City (of London), the” (Keen, 2017d2). “Since the English government could not always trust English troops to put down English demonstrations and mobs [including 1775 Lexington], it often used Scot mercenaries” instead²⁵⁸⁰ (Livingston, 2006, mn.8).

1) As 17th century Stuart England was ‘the West’s fulcrum/pivot-‘power’ point between Catholic monarchical conservatism & Dutch liberalism, the 20th century UK was ‘the West’s fulcrum-pivot-‘power’ point between American liberalism and ‘continental’ statism. See also “Civil National Identity” [Jefferson vs. Hume], “Statism”, “Bankmoney regime”.

1b) pretty much surrendered to US banks before and during WW2, then to America itself during and after WW2. See also “Currency wars, the”, “Reserve currency”, “Bretton Woods”, “Monty Python’s”.

[Perma-MP Churchill presided over the long fall of the British Empire (c1900-64)-- to the USA, not Germany; Atlantic Charter (1941)]

1c) Wall St. scion FDR and half-American/half-Wall St. scion WSC were both bankmoney regime, setting a trap for ‘stupid Hitler’ (& ‘stupid Japan’) through most of the 1930’s, that was finally sprung in 1939 (& ‘41 for Japan). For Britain, or at least its Empire, the ‘victory’ was pyrrhic. See also “Ethnic (National) Identity”, “Russiagate” (for the official justifications); “Empire”, “Reserve currency”.

2) The “UK is home to 73% of Europe’s millionaire bankers” (Positive Money, 2019). See also “City, the” [Blair], “Parties, political” [UK].

3) “There’s nothing soft [or smiley] about it. It’s hard-core tyranny”; the “UK isn’t becoming a police state. It already is one, whether it’s no [free] speech, nothing-- it’s all collapsing” (Jones, 2020, mn.42; 62). See also “Unitarism”, “Brexit”.

3b) The National Health Service, is still generally “very well-regarded and cherished...in the UK”; and that is being “used by [what’s called] the UK government to facilitate...[a] digital transformation...[to] create a new system that doesn’t...resemble the current NHS at all-- that’s completely tele-medicine, app-based and all of...[that] stuff. They’ve had it mapped out for quite some time. And a lot of the companies involved have ties to the Intelligence services of either Israel or the United States... a lot of Israeli tech companies founded by former...[M.I.] people.... [It’s] essentially making the NHS into a giant data-harvesting operation” (Webb, 2021, mn.108). See also “Chile”, “City (of London), the”, “Israel”.

²⁵⁷⁹ “The spirit of party prevails less in Scotland than in England” (Smith, 1776, 739). See also “Smith, Adam (1723-1790)” [Scotland].

²⁵⁸⁰ In fact, it was Scottish mercenaries who “fired...[at] the Boston Massacre... The English soldiers [dropped] their weapons.... [and the] grievance against the Scots [if not other mercenaries] almost made its way into the Declaration of Independence” (Livingston, mn.8-9).

See also “English constitution, the”, “British constitution, the”.

4) UK Updates: 6/22- <https://banned.video/watch?id=629e55e14ce82b0df0f5da40> [‘Jubilee’];

See also “UKUSA Agreement”, “~~European Monetary Union (EMU)~~”, → “LIBOR”, “Great Extinction, 6th”.

‘United States money’- (archaic: US coin, currency, & gold; replaced the term ‘money of account’ on Aug. 27, 1894²⁵⁸¹; was used mostly for the value of US holdings in international institutions)

See also “Money” [Hamilton].

United States, the- (a.k.a. America; etym. [the **map maker**] Amerigo Vespucci)

1) To many foreign observers²⁵⁸², the “interesting thing about the American experiment is that it has always preserved this combination of hard-headed practice²⁵⁸³ ... and very idealistic theory²⁵⁸⁴.... that Americans [were somewhat special in that they] could do anything they wanted to,²⁵⁸⁵ untrammelled by the traditions and the repressions of the Old World.²⁵⁸⁶ And nowhere was this feeling as strong as in the Old World itself.... The American leaders had the opportunity to *build* [sic], not just to fight.²⁵⁸⁷ In 18th century France, Thomas Jefferson might have put together declarations and constitutions, but he probably would have gone to the guillotine like a lot of revolutionaries.... I don’t know another revolutionary [who was] particularly interested in freedom of thought for others” (Weber, 1989h, mn.6; mn.8; mn.17; mn.18). See also “Jefferson, Thomas” (ethno-civic); (alt.) “German (industrial) banking”.

1b) Remarkable perhaps, but not anomalistic (given the ambitions of the Enlightenment): “Our Constitution, consistent with the basic symbols, is clearly *nomocratic* (or circumscribing [of the 1st Estate]) in character, largely concerned, that is, with providing rules & limits for the government through which the people express their²⁵⁸⁸ will. Since the derailment, however, the Constitution is increasingly viewed from a *teleocratic* perspective, as an instrument designed to fulfill the ends, commitments, or promises of the

²⁵⁸¹ U.S. Code 31:372(a), 5151(b).

²⁵⁸² To deep-set domestic inquirists, however, the main point has always simply been that “our supreme commitment and symbol has been [**\$**] **self-government by a virtuous people**” (Kendall & Carey, 1970, 136). See also “Civilization, Western”, “Constitutions & Conventions”, and (that opportunistic devil) “Imperialism”.

²⁵⁸³ Both the most-cited philosopher of the initial Revolution (Thomas Paine; ‘Spirit of ‘76) and the most-cited philosopher of the counter-Revolutionary follow-up (Montesquieu; ‘Spirit of ‘87) were hard-core (no-nonsense) ontologists. See also “‘Conspiracy theorist’”, “Ontology & Epistemology”.

²⁵⁸⁴ “To base a society on the commonplace behavior of ordinary people may be obvious and understandable to us today, but it was momentarily radical in the long sweep of world history up to that time” (Wood, 1993, ix); and yet it was also, at the same time, very establishment (in that, for example, no one was more political economy Establishment in the second half of the 18thc than “Montesquieu” [trichotomy]). And then what? “Once upon a time in America, no adult could survive without a finely tuned BS detector. Herman Melville masterfully captured America’s culture of cons & con artists in his 1857 classic *The Confidence-Man*... An essential component of the American ethos [also articulated by Mark Twain] is: ‘Don’t be a chump. Don’t fall for the con. And if you do, it’s your own fault’. America in 1857 was a simmering stew of con artists, flim-flammers and grifters exploiting the naïve...” (Smith, 2019d). See also “Adolescence of Mankind”, “Common sense”.

²⁵⁸⁵ “...that man is able to accomplish the most surprising undertakings with his own native resources” (de Tocqueville, 1838, 157).

²⁵⁸⁶ Those traditional repressions were, of course, not all from the hands of ‘government’ (personification fallacy). Practices of primogeniture were often expressly banned; and there were (in perhaps the greatest contrast with Europe) no inherited titles [period. Likewise,] ...governors who stood at the apex of colonial society usually returned to England within a few years; they did not [even] form American families”, yet alone ‘dynasties’; New Englanders “in particular were frequently criticized [by Europeans] for... their ‘levelling’ tendencies” (Graebner, Fite, & White, 1975, 48). See also “Civil National Identity”, “Zionism”.

²⁵⁸⁷ “[W]e started to see the problem of the Europeans. There was no room in which they could all gather.... no coherence. There was also no experience, shall we say, at problem solving. The history of Europe had been solving problems through violent spasms” (Friedman, 2015, mn.24-25), and the occasional funny-money scheme that stayed up. “The Europeans had no peaceful (if illegal) procedures for solving the problem” (Ibid, mn.25). Is (was) the main difference between Europe and the USA that of ‘sacred violence’? “Architecture in America followed [the accustomed] English fashions (per St. Martin-in-the-Fields), although both castles & cathedrals were conspicuously absent” (Graebner, Fite, & White, 1975, 54). See also “Glorious Revolution, the”, “Violence”, “Oligarchy, American”.

²⁵⁸⁸ I.e. not some politician’s. “There were many frontier squatters, of whom Pennsylvania’s Scotch-Irish were...the most notorious, who [simply] disregarded [government-issued] land titles quite often, in the self-righteous conviction that it was ‘against the law of God and Nature, that so much land should be idle while so many Christians wanted it to labor on’” (Graebner, Fite, & White, 1975, 48).

[singular] Declaration²⁵⁸⁹ (Kendall & Carey, 1995, 146). See also “Corporations (and corporate ‘personhood’), “Fin de Siecle”, “Dumb downing”.

1c) Civility & civic virtue (CNI) is not simply reading or citing an ‘authoritative’ document. On the contrary, it is deliberational-- about any and all things public sector-- the foremost of which should be (public understanding &) clarity on money and currency. It’s as American as cheesy marketing. “In no other country in the history of the world has the subject of *money* and banking given rise to such long sustained, deep-rooted, and widespread, acrimonious, publicly-debated & eagerly reported *controversy* as in America.... [where] monetary quarrels have, right from the start, been deeply divisive and almost never ending. The divisions have run from paupers to presidents, from State to State, from States to the Union, from North to South, from coast to frontier, from farmers to manufacturers, from [national] bank[s] to [state] bank[s], from politicians to philosophers, and above all from lawyers to lawyers” (Davies, 2016, 497-498). See also “Civil National Identity (CNI)”, vs. “**Deceptive Banking Terms (d.b.t.’s)**”, “Myths, Big 6”.

2) America “did not invent human rights. In a very real sense, it’s the other way around, human rights invented America...the first nation in the history of the world to be founded explicitly on such an idea.

Our²⁵⁹⁰ social and political progress has been based on one fundamental principle-- the value and importance of the individual”; such “American values are not luxuries, but necessities” (Carter, 1981, mn.11-12; 14). See also “Civil National Identity (CNI)” [Jefferson vs. Hume], “Design”, “Sovereignty”.

2b) To deeper observers, however, this also poses a problem. “[C]ommunities and societies must rest upon cooperation and cannot be on competition. Any society who says that you can run the society on the basis of ‘here’s everyone’s trying to maximize his own greed’ is talking total nonsense. And all the study of human society shows that it’s nonsense. And to teach it in schools, and to go on TV and call it the ‘American way of life’, still doesn’t make it true. Competition and envy cannot become the basis of any society or any community” (Quigley, 1976c-pt.3, mn.343-44). See also “Religion”, “Economics” [.HomoEconomicus], “Conditioning, classical”.

2c) In terms of religion, America was “highly unusual by European standards”. Among the 4 episcopal forms of Christianity that dominated the vast majority of Europe; only “the Anglicans...were...about as numerous in 18th century America as Congregationalists and Presbyterians,²⁵⁹¹ both of whom practiced a

²⁵⁸⁹ Jefferson was a talented writer, reporting to a learned committee, but the Declaration was hardly supernatural or out of the ordinary. Its spirit is clearly “in keeping with that found in the many other colonial compacts.... all of the compactual elements [were] present from earliest colonial times” (Lutz, 1998).

²⁵⁹⁰ The USA’s 39th President (in his farewell address) is certainly not talking about the Pilgrims and Puritans (or perhaps even people of the 18thc in general). The ambiguous pronoun is referring to the 2nd half of the picture, or America since its constitution of 1787, not the America that was already a century-and-a-half old by the 1780’s. The constitutional convention has often been described as “a counter-revolution”, and the constitution of 1787 is indeed “anti-democratic” compared to how most of the states were being politically run in the 1780’s. This is not an attempt to equate ‘anti-democracy’ with ‘anti-Christ’. When serious concepts are not taken seriously, however, one should not be dismayed when serious consequences result. Angry and threatening mobs-- large enough to still alarm John Adams 20 years later-- repeatedly formed outside President Washington’s residence in 1793. A generation after President Jefferson had managed to calm things down somewhat, Alexis de Tocqueville famously observed some new and peculiar traits among the Americans-- like getting people to gladly do things without coercion (Tocqueville, Book 2, ch.5), and that this ‘democracy’ (a label for the USA that Tocqueville himself established) strangely manifested *less* freedom of discussion and independence of mind than did Europe. How could this be? Was Tocqueville-- like Jimmy Carter 1.5 centuries later-- simply somewhat confused? (There’s no drug in the world like [realistic prospects for] free land-- be it steered by the ‘invisible hand’ of prudent governance or not). “Market fundamentalism” was not even something that Adam Smith took seriously. Nonetheless, a century later, on the other side of the Atlantic, the idea was starting to be widely propagated-- ironically around the same time that America’s (‘free land’) frontier was officially closed by the US Census Bureau-- one psychological boost taking the place of another, it would seem. See also “**National Debt Economy**” (more about **psychological** science than economic science), “Mind control” (where it all winds up, post-“Ponzi”), “Corporations (& corporate ‘personhood’)” (which are of course the true & only...) “Homo economicus”... though imitation is the sincerest form of flattery, “Robotization (and productivity)”. Basically, the c.1890’s (new drug/miasma of) “Market fundamentalism” + (the new reality of) “Corporate ‘personhood’” = the Excessive “Individualism” thing i.e. It’s not something that goes back to the 17th or 18th century, or even the antebellum really. See also “Constitution, US” [.Madison’s half-baked ‘invisible hand’ pluralism],→ “Sovereignty” (problem).

At least he didn’t say “Our democracy”. See also “Montesquieu” [.political trichotomy & theory], “President of the United States”.

²⁵⁹¹ ‘Calvinism’, or ‘pre-destination’, “was much stronger in America than in all but a few areas of Europe... [N]ot only Puritans and Presbyterians...[America’s] two leading denominations on the eve of the Revolution [were basically Calvinist, in addition to] Dutch

representative system of church government [instead of appointments from a central authority. Moreover,] Quakers and Baptists, the remaining religious groups of considerable importance in pre-Revolutionary America, were so individualistic and egalitarian as to condone almost no [external] religious authority at all.... Equally remarkable by European standards was the absence of government support for religion in several colonies” (Graebner, Fite, & White, 1975, 49). And even Anglicanism (a.k.a. the Church of England) was not the same as in England, where parish “priests received lifetime appointments from a government-controlled hierarchy, usually on the nomination of major local landholders...[and] church offices were often [simply] sinecures conferred on...political patronage... [which was sometimes] flagrantly immoral... [N]either evil was widespread in the colonies. In England, only Anglicans could hold civil or military office or [even] attend a university. In America... [however, there were **no**] such exclusive privileges”²⁵⁹² (1975, 50). See also “Protestantism”.

2d) Why not? Because that was what they had risked their lives to escape from in the first place; and the social ignorance and corruption that such practices engendered. “Puritan leaders in 1643 enacted a law requiring all parents to see that their children could read well enough to understand religious principles and capital laws”; and in 1647 Massachusetts²⁵⁹³ mandated that each “town of 50 families...operate an elementary school, and each town of a hundred families...maintain a grammar or 2ndary school in which the youth might be ‘fitted for university’... [Make no mistake], this was “an **unprecedented** public duty” (Graebner, Fite, & White, 1975, 52). See also “China”, “Confucianism”, “G2”.

3) It should be obvious by now that the United States constitution certainly did not make ‘America’²⁵⁹⁴, although the US is a constitutional society. See also “Statism”; Lutz, 1998 (oll.libertyfund.org/titles/lutz-colonial-origins-of-the-american-constitution-a-documentary-history).

Reformed, German Reformed, and French Huguenots...Baptists, in increasing numbers, [also] embraced... predestination” (Graebner, Fite, & White, 1975, 50).

²⁵⁹² Nonetheless the Church was “[c]losely linked to British authority. Northern Anglican clergymen in particular inculcated ‘the great Principles of Loyalty and Submission to Government’ and denounced ‘republican mobbish principles’... (Graebner, Fite, & White, 1975, 49).

²⁵⁹³ In mid-century New England, “[i]lliteracy was rare among...men, but perhaps as high as 40% among women” (Ibid). Nonetheless, women “led rather different lives in America than in England.... No English woman had to be quite so self-sufficient as the frontier housewife who had largely to make what she needed or do without.... The American woman could depend less on others to provide home furnishings, to care for the ill or the injured, to impart either religious or secular training... [but significantly] less likely (to be illiterate) than her English counterpart.... [In terms of the law,] a *married* woman in the colonies, as in England, had almost no identity. Her husband could ‘discipline’ her...[and] do as he pleased with her property. Consequently among wealthy families [at least], the father was likely to make a careful contractual agreement with the father of the...groom regarding...[the] dowry *before* the young man proposed matrimony. Widows with property and especially those with children often negotiated their own marriage contracts before remarrying. Divorce was possible only in New England and little used there. ‘Elopement’ with a third party was a common means of terminating an unhappy marital alliance” (Graebner, Fite, & White, 49). See also “Women”, “English constitution, the”.

²⁵⁹⁴ “[E]ach colony’s governing council had set tax rates previously” (Smith, c.2021),-- prior to the British crackdown of the 1760’s. “In only 2 [17th century colonies] was the self-government provision omitted...New York, which was granted to [King] Charles II’s brother, the Duke of York... and Georgia, which was granted to a group of ‘trustees’. In both instances...[however, such] provisions for governance were short-lived, for the colonists demanded legislative representation so insistently that the authorities soon yielded.... [P]eople became used to making their own decisions. Government penetrated the back country only slowly, and conditions of anarchy often prevailed on the frontier[s].... [even in] ‘royal colonies’ (U.S. Dept. of the Army, 2021).

Official Structure in England	Official Structure in Colonies	Actual Function of British Government	Actual Function of Colonial Government
<p>KING</p> <ol style="list-style-type: none"> Chief executive (law enforcement officer). Appointed ministers to carry out and administer laws passed by Parliament. Power limited after 250 years of dispute with Parliament. Could not: <ol style="list-style-type: none"> veto laws passed by Parliament. interfere with elections. keep a standing army without Parliament's consent. deny free speech, etc. Hereditary position, remained in office for life and passed title down to successor. <p>HOUSE OF LORDS</p> <ol style="list-style-type: none"> Chief court of the land. Upper house of legislature has veto power. Membership composed of peers barons, dukes, earls, and bishops of the church, etc. <p>HOUSE OF COMMONS</p> <ol style="list-style-type: none"> All adult males owning property worth more than 40 shillings a year could vote for Commons. About one man in twenty was eligible to vote. All money bills started in Commons. Had to approve of all legislation. 	<p>GOVERNOR</p> <ol style="list-style-type: none"> Usually appointed by King, in few cases by proprietor (owner), and elected in Connecticut and Rhode Island. Could veto law passed by Assembly and Council. Chief Executive (law enforcement officer). Could dissolve lower house (Assembly) and call for new elections. <p>COUNCIL</p> <ol style="list-style-type: none"> Appointed by governor or by Assembly. Acted as 'Supreme Court' for Colonies. Could decide on certain appointments made by governor. Often served as 'cabinet' (advisors) for governor. <p>ASSEMBLY</p> <ol style="list-style-type: none"> Elected by people (50-80% of white adult males could vote). All money bills started in the Assembly. 	<p>KING</p> <ol style="list-style-type: none"> Appointed officials to such important offices as tax collector, governor of colony, judge, prime minister, etc. Bolstered by hundreds of years of tradition, pomp and splendor, support from Church, and support and respect of royalty. Could use influence in Parliamentary elections by bribery and distribution of campaign funds. <p>LORDS</p> <ol style="list-style-type: none"> Contained many wealthy and powerful noblemen who had a great deal of economic and political influence. <p>HOUSE OF COMMONS</p> <ol style="list-style-type: none"> Many of England's largest cities could only send one or two representatives to Parliament. Members did not have to live in districts where they were elected, and thought of themselves as representing all of England. Members often willing to trade votes for well-paying government jobs. 	<p>GOVERNOR</p> <ol style="list-style-type: none"> Usually an Englishman rather than a colonist and not familiar with colonial politics. Appointed because of influence in England—often lost after coming to America. Average in office 5 years. Received detailed instructions from England which often reduced his bargaining power. Had little power to appoint people to such political offices such as judges, sheriffs, or tax collectors. <p>COUNCIL</p> <ol style="list-style-type: none"> Usually members of upper class. Usually in office longer than governor. <p>ASSEMBLY</p> <ol style="list-style-type: none"> Sometimes refused to pay salaries of unpopular governors and/or judges. Appointed treasurers. Delegates often came with specific instructions from people they represented. Membership enlarged as new towns were added in the West. Represented actual towns and places, not "rotten boroughs" as in England. Colonists hired agents to represent their views to Parliament.

[The Old [5%] & the New [60%], (Landesburg, 2007, 11-12). And then there was money; see also "Franklin, Benjamin", App.C:1-2-3.]

3b) "The foundation of our Empire²⁵⁹⁵ was not laid in the gloomy age of Ignorance and Superstition but at an Epoch when the rights of mankind were better understood and more clearly defined than at any former period.... Liberty is the Basis, and whoever would dare to sap the foundation or overturn the Structure under whatever specious pretexts he may attempt it will merit the bitterest execration [hatred & contempt] and the severest punishment which can be inflicted by his injured Country."

- George Washington, "Farewell Letter to the States", June 8, 1783. See also "Enlightenment, the", "Montesquieu", "Imperialism, American".

3c) On this main point of America and its Independence, Washington was in 100% agreement with the other two greatest 'founding fathers'-- Franklin & Jefferson-- who had collaborated in 1776 on the motto "Rebellion to tyrants is Obedience to god".- <https://www.monticello.org/site/blog-and-community/posts/hiding-archives>

See also "Founding fathers", "COVID' Op".

3d) America's 2 greatest 'founding fathers' also agreed on something more than that famous "Spirit of '76", just as surely as (day-to-day) economics trumps politics.- <http://www.normeconomics.com/birth.html>
See also "Primary Sector Economics", "Peace Window, the", "COVID Op."

3e) "I have often admired the extreme skill with which the inhabitants of the United States succeed in proposing a common object for the exertions of a great many men and in inducing them, voluntarily, to pursue it."- Alexis de Tocqueville, *Democracy in America* (1838, Book II, ch.5. See also "Groupthink", "Cultural Calendar".

4) There's more to it than chopping down trees and pulling down monarchs. A half-century after de Tocqueville, Henry George noted that "[u]ntil a very few years ago, it was an article of faith with Americans-- a belief shared by European liberals-- that the poverty of the downtrodden masses of the Old World was due to aristocratic and monarchical institutions. This belief has rapidly passed away with the appearance in the United States, under republican institutions...[and] social distress of the same kind, if

²⁵⁹⁵ Washington's confidant (& fellow 'federalist' co-plotter) Gouverneur Morris, then Deputy Superintendent of US Finance, appears to have predated the General in the use of this term. "Nothing remained but Vigor, Organization and Promptitude [of payment] to render this a considerable Empire. These [objectives] can only be acquired by a Continuance of the War which will convince People of the necessity of obedience to common Counsels for general Purposes.... In other Words, Men of Sense and Property are getting into the Places which such Men ought to fill. The People are beginning to be convinced that those Men are alone fit to govern..." (Morris, 1782). See also "Aristocracy", "Oligarchy".

not of the same intensity, as that prevailing in Europe” (George, 1879, 300). See also “Georgism (& Land Value Tax)”, “Economics, ‘Parity’”.

4b) It has often been said racism-slavery was “America’s original sin”. It was followed, however, by the sins of (usurious) bankmoney and (constantly lying) political parties in the late 18th and turn-of-the 19th centuries, respectively-- forming, eventually, 3 fountains of evil [or at least of ‘serious perniciousness’] to match the USA’s 3 centuries of history. *Slavery* was abolished in the 19th century, and the eradication of *bankmoney* (from controlling the nation’s money supply, in addition to access to housing) was not infrequently spoken of in the 2nd quarter of the 20th. But it didn’t happen, leaving both this unfinished (reform) agenda and also the elimination of systemic political favoritism (on behalf of corporatism²⁵⁹⁶ & political parties) on the docket for the 21st century-- that is if the USA intends to live up to its believability-credibility factor. See also “Culture”, “Federal Accounting Standards Advisory Board (FASAB-56)” [‘rule of law’].

4c) What is America’s biggest structural problem? According to Carroll Quigley, see also “Sovereignty” [.administrative sovereignty], “Market fundamentalism”,→ “Conditioning”,→ Shadow Gate, 2020.

4d) ‘To be Headless or not to be Headless’ has often been the principle American conundrum. In terms of constitutionality and the law, this particularly American issue may be captured in a 2x2 factorial.

	state-issued	federal-issued

See also “Headless Horseman (essay)”, “Design”, App.C: “1-2-3”.

5) In terms of (the primary overdue reform topic of) monetary & administrative determinism, it might be said that America’s leading man of the 20th century, Martin Luther King, had to be constantly corrective; because the leading man of the 19th century (Mark Twain)’s books were all about bullshitting²⁵⁹⁷; because, in turn, the leading man of the 18th century (Ben Franklin) had acquiesced to the Morrises taking back the wheel of money & currency in the 1780’s... (lest, I’m sure he thought, America risk being re-subsumed into British [a.k.a. Banks’] Imperialism, which was a real threat, before it pretty much really happened in the 1860’s-80’s). See also “Industrial Revolution, 2nd”,→ “Pilgrim Society”; “Franklin, Benjamin (1706-1790)”, “Twain, Mark (1835-1910)”.

²⁵⁹⁶ The US constitution has been more criticized for its terseness on regulating commerce than for its almost complete reticence on electioneering and political parties. See also “Corporations (& ‘Corporate personhood’)”, “Regulation”, “Lobbyists”, “State capture”, “Sovereignty”.

²⁵⁹⁷ Obviously, there are many thousands of examples of Mr. Clemens (1835-1910) lampooning [mostly gently] the immaturity of (what was then still) the new republic’s democratic pretensions, ambitions, and growing pains. It was his job, and his would-be successors [f.e. H.L. Mencken, Mike Royko] were not as deft or carefully humorous (memorably resonant) with the task. So why not take, as prototype, the very last page and last words of Mark Twain’s much-awaited autobiography? (most of which the Tesla-influenced author intended to have ‘embargoed’ until 100 years after his death): “The Man Who Ate Babies” (Twain, 1924a, 455-56). See also “Zionism” (bad cop), “Adolescence of Mankind”, “Lunatics”, “Attitude inoculation”, “Estates, 3”.

5b) “Only at the end of the [19th] century did two distinctively American economic figures emerge-- Henry George²⁵⁹⁸ and Thorstein Veblen” (Galbraith, 1987, 157). See also “Georgism”, “Veblen, Thorstein”.

6) Since the United States decided to become a ‘globalist’ empire about a century ago, “the great supremacy in the [resultant] Anglo-American alliance-- in addition to the Industrial Revolution and the military-- was financial liquidity... We have been able to achieve the lowest cost of capital, globally, than anybody in the history of Western Civilization... the financial engineering... is quite remarkable. But it all depends on people believing [in US Treasuries, i.e.] that we practice the [constitutional] rule of law”²⁵⁹⁹ (Fitts, 2018h, mn.37). “What this is going to come down to is...[whether] the American alliance [can] re-affirm their credibility... [But] what I see... is tremendous deterioration on this issue”²⁶⁰⁰ (Fitts, mn.38). See also “Federal Accounting Standards Advisory Board (FASAB)”, “Accounting”, “Timarchy”.

6b) Is Imperialism a problem in the 21stc? See also “Imperialism, American”, → “Dutch Disease”, “Land Bridge”; App.C: “1-2-3”.

7) It’s no longer [industrial or ‘classic’] “capitalism” (operating system). It’s been (since the mid-20th century) ‘state capitalism’, and that, in turn, blending into (‘Chinese-style’) ‘surveillance capitalism’ in the 21stc. See also “Capitalisms”, “Federal Deposit Insurance Corp. (FDIC)”, “Internet of Things (IoT)”.

7b) Statism & bank welfare does not (for very long) mask a structural problem with (see also) “Inequality”, “Usury cycles”, “Statism”, “Dumb-downing”.

8) “Censorship is as un-American as you can get”²⁶⁰¹ (Steele, 2018b, mn.28). See also “Montesquieu” [Twain], “Main point, the”.

8b) “It’s a free country. Let the guy say what he says. Let him think what he thinks. You know we had a way of disagreeing and still cooperating and working together. And that’s why we have to overcome the [technocracy’s] divide & conquer...” (Fitts, 2018s, mn.33). See also “Parties, political”, “Technocracy”.

9) So where is “it” (the Boost) going?

17th century (to 1680s)- ... (Boost 1)-- chopping down trees²⁶⁰²

18th century- ...”to racism” (Boost 2)

19th century- ...”to Civil War and being the new British” (Boost 3)

20th century- ...more of the same & Neo-British [global] Empire/”reserve currency” (Boost 4)

21st century- ...to the New Economy (a.k.a. digitalization of everything Boost 5²⁶⁰³).

See also “American ‘Exceptionalism’”.

10) US monetary-economic history tends to have momentous milestones every half-century. It’s nothing new:

a) 1690’s- from indentured servitude to (mostly & incr. color-based) *slavery*;

b) 1740’s- the *paper currency revolution* (clamped down on the British in the 1750’s-60s);

c) 1790’s- the Federalists’ great *counter-revolution* (grafting a British-type monetary/CB & Lords system;

²⁵⁹⁸ “The general intelligence, the general comfort, the active invention, the power of adaptation and assimilation, the green, independent spirit, the energy and hopefulness that have marked our people, are not causes but results-- they have sprung from unfenced land. The public domain [commons] has been the transmuting force which has turned the thriftless, unambitious European peasant into the self-reliant Western farmer; it has given a consciousness of freedom even to the dweller in crowded cities, and has been a well-spring of hope even to those who have never thought of taking refuge upon it” (George, 1879, ‘349’). See also “Common sense”, “Conditioning”.

²⁵⁹⁹ “If you think... the wealthy Chinese in Hong Kong expect the P.R.C. to respect the rule of law with respect to the assets-- hu hu [rolling eyes]. They don’t. They’re [still, as of 2017-19] moving money to America” (Fitts, 2018h, mn.38). See also “Central clearing counterparties (CCPs)”.

²⁶⁰⁰ Believability? “We pray that peoples of all faiths, all...[ethnicities and] all nations may have their great human needs satisfied-- that those now denied opportunity shall come to enjoy it to the full, that all who yearn for freedom may experience its few spiritual blessings. Those who have freedom *will* [sic] understand also its heavy responsibility.... and that [thus] the scourges of poverty, disease, and ignorance will be made [to] disappear from the Earth. And that... [eventually] **all** peoples will come to live together in a peace *guaranteed* [sic] by the binding force of mutual respect, and love” (Eisenhower, 1961b, mn.14-15). See also “Civil National Identity (CNI)”, “‘Hundred-Year’ plans”.

²⁶⁰¹ “My own books were repressed, both of them by Macmillan. And there are various other books...that are reported as repressed” (Quigley, 1976b). See also “Quigley, Carroll (1910-1977)”; White & White, 2008, “Censorship”.

²⁶⁰² Actually, it was more like 3-4 centuries. US “land use [CO₂] emissions”, excluding coal and gas, were not surpassed by “industrial emissions” until 1910. “Land use emissions were bigger than industrial use emissions until 1910” (Brooke, 2019, mn.103).

²⁶⁰³ Problem? Unlike the first 4 boosts, ‘Boost 5’ is not sui generis or unique. East Asia & Europe are doing just as much of it. See also “Land bridge”, “Industrial Revolution, 3rd”, “International Intelligence Community”, “COVID Op.”

(set back a decade or two by Jefferson's democratic revolution) see also [2nd Currency War](#);
d) 1864- NATIONAL Banking (training wheels for...) see also "Industrial Revolution, 2nd".

e) 1913- ...'CENTRAL'/INTER-national Banking ["Reserve currency" Imperialism (2nd Estate primacy)]

f) 1963- National Security STATE/"Cult of Secrecy" (1st Estate primacy) see also "NSA" [Agency].

(set back a bit [7-9 yrs.] by Civil rights 1.0 & Vietnam upheavals) see also "[Peace Window, the](#)".

f2) ...to c.1971 "Bretton Woods II"-- Central Bank-led high Imperialism (50 yrs.-to-Computerland planning) see also "Industrial Revolution, 3rd" (Digitize Everything).

g) early 2020s- When it became obvious (to most, anyway) that 'they' have long perceived that they're likely to be '[running out of \[ecological\] tarmac](#) for their [monetary-economic] landings' by no later than c.2070 (if not the 2030's). See also "Ecological Economics", "Reform, 101".

10b) The 21st century I.C. so far has been like (the game or sport of) "curling", with a proverbial 'half' of the Deep State's pretty much working on '[painting their own exit](#)', so to speak, with hundreds of false trails, false this-and-that-- 'Attitude Inoculation's for the (post- [see also] "Common sense") 'sheople' to 'learn from'**. while the other 'half', so to speak, of the I.C. are busy building the "3rd Industrial Revolution"-ACTUAL ENERGY grid that will sustain the post-stabilized Planet. See also "Energy".

** - (a half-century of) cat-&-the-hot-stove learning theory; see also "Attitude Inoculation".

In other words,

approx. half working on the global-scale intersection of the ECOLOGY & ECONOMICS; with the other 1/2th working on the global intersection of the POLITICS & PROPAGANDA.... and there is (to them at least) little if any sense in having 1 side of it [the '[International Security/\(Stabilized\) State](#)'] developed and in-place before the other side is.

And its construction (very often) 'looks so stupid' and dysfunctional (like they couldn't organize free beer)²⁶⁰⁴ both because of:

- the (now rather old) 'National Security' "[Cult of Secrecy](#)" (strictly limiting everything to a 'need to know' basis-- at least till the 4th qtr./the 2020's), and also

- because a lot (& an increasing proportion) of what 'they' (the N.S.S. & I.I.C.) do-- and nearly everything they do on the POLIT.-PROP. side-- is more-or-less fake...i.e. not even designed to last, say, >10 years)++. Why build that way; what is really [strategically] being constructed? See also "Design".

++- 'What a coincidence' (21stc US Administrations):

Bush, Jr.-6 yrs. on average (till mostly trashed/pulled down)

Obama- 5 yrs. ' '

Trump1- 4 yrs. ' '

Biden- 1-2 yrs.?

Trump2- ('Yeltsin')- zero yrs.??

-- **Absurdly** short-lived products are (designed, passed, and implemented) for a reason or 2 --

('They' can't tell you how bad it is what they are doing; because they can't tell you how bad-cubed it would be if they did nothing'. See also *Great Extinction Event*, "Ecological Economics".)

** - Here's what I.I.C.-'spy' types have thought about (if not formally theorized) for a long time now (say half-a-century or so). <https://www.youtube.com/watch?v=FqrZeC2ee0k> [Gaede'08]

& Here's one-word for the past half-century of (what would otherwise appear to be 'creeping totalitarian' N.S. Cult & dysfunctional Halloween-type stuff): [SYNCHRONICITY](#)²⁶⁰⁵ (between the 2-sides of the OMEGA-Op.; lest They think the entire flying machine be de-stabilized). See also "[Cultural Calendar](#)"; "[World Par](#)".

11) [USA Updates](#): The USA comes out the other side of its (great) millennial exam²⁶⁰⁶

There've really been just 2 main points to being America or American:

²⁶⁰⁴ See also "Neoconservatives", "Land Bridge"; 'nuff said? See also "Angry Birds", "BRICS+", "Multipolar", "[World Par](#)".

²⁶⁰⁵ ...& 'the script'? From c.1983 anyway: <https://genius.com/Yes-hold-on-lyrics> [Hold On (It's going to be a long wait.)]; nonetheless:

https://en.wikipedia.org/wiki/It_Can_Happen [It Can Happen (...have the thing out at once)]. Of course 'the script'-as-a-genre goes back at least another decade or so: See also "Economics", "Reform, 101"; "UKUSA Agreement", "'Hundred-Year' plans".

²⁶⁰⁶ information-to-knowledge

- a) "Rebellion to tyrants is obedience to God." (from 1770's; behavioral/human); &
 - b) snobbishness is bad (from the 20th century; soulistic/being)
- See also "COVID' Op" [1].

2/22- "[W]e have never reached a point, until 'COVID 19'...[where] a significant number of highly educated professional people-- with skills and resources-- were prepared to admit that they were up against a coup... The majority of the population [simply] could not see the control grid moving in on them until very, **very recently**" (Fitts, 2022, mn.110). See also "COVID Op.", "Fin de Siecle".

11/22- "We're still pretending [that] we're a republic with a democratic process; but...our economy [now] all revolves around the secrecy. And we can't figure out a way to end the secrecy.... The reality is, if you look at all the technology and assets that has been transferred by questionable means into private and corporate hands, the liability is [simply] too over-the-top..." for much of any strategic response, except... (Fitts, 2022n, mn.38-39) "States rights"; see also "Dutch Disease", "Monetary Reform, international".

[BoweryatNight(1895)]

See also "Franklin, Benjamin (1706-1790)", "Commons", "Conspiracy theorist", "Revolution, American", "Middle class", "Land bridge", "Dollar Diplomacy", "Oligarchy, American", "Lobbyists", "Debt cycles"; "Lockheed-Martin"; App.C: "1-2-3".

[G. & R. Morris, 1780's] [crossing the Appalachians,c.1800]²⁶⁰⁷

'United States of Lockheed Martin'- (how does a garden-variety-sized hole in the [sovereignty of the] initial US constitution of 1787 develop into: <https://banned.video/watch?id=626d3e9395946144f6017dc4>)? See "Lockheed-Martin", "Black budget (US)", "Sovereignty", "Imperialism, American".

US Agency for International Development (USAID)- (est. 1961). See "Development", "CIA", "World Bank".

US Budget- See "Discretionary (US budget)", "Taxation".

U.S. Code- See "Money", "Currency", "Deceptive Banking Terms (d.b.t.s)".

US Constitution- See "Constitution, US (of 1787-91)", "Constitutions".

US Dollar (2010's)- 1) the current (international, bankmoney) USD comprises: more than 85% of forex trading; 64% of all known central bank foreign exchange reserves (Amadeo, 2017).
2) Seven other countries also use the US dollar as their currency, and another "89 keep their currency in a tight trading range relative to the dollar" (Amadeo, 2017), including China and most of the Arab world. ___% of global economy (.). See also "Eurodollars".

²⁶⁰⁷ "More than any other event in the springtime of the Republic, the purchase of Louisiana from France... in 1803 caused the already buoyant spirits of Americans to soar to new heights of imaginative speculation."- Jerry. W. Knudson, 1969. It was 'just one thing after another', wasn't it?. See also "Design", "Economics, Parity", "Teleology", "Cycles".

US National Debt- “It’s obvious that the United States is never going to actually repay its foreign debts to foreign bondholders, because it’s not going to let dollar holders buy the kind of assets that they want in the United States. They can buy 1] real estate, or they can buy 2] money-losing ventures, such as Rockefeller Center, the the Japanese lost a billion dollars on.... *Everything* is ‘national security’ as far as the United States is concerned” (Hudson, 2016b). See also “National Debt Economy (NDE)”.

US (Treasury) Notes- (the paper subset of ‘US currency & coin’; synon. ‘greenbacks’, ‘legal tender notes’, ‘public notes’, ‘US currency notes’ [U.S.C. (from 1874)]; a.k.a. ‘national bills’ [Jefferson, 1816b])

1) Knox, 1899?

1b) The US “civil war [was] financed by issues of inconvertible greenbacks” (Eichengreen, 2019, 14). See also “Sovereign money” [.interest-free].

2) Red-sealed Treasury-direct (unbonded) paper notes, popularly known as ‘greenbacks’, were issued from 1862, until “the government stopped re-printing them in 1994²⁶⁰⁸... dollar bills with the red seal on them, instead of the green seal... The green seal means [that] they’re [debt-money] Federal Reserve notes” (Still, 2019f, mn.4-5). The red-sealed notes are clearly marked ‘UNITED STATES NOTE’, and “have been money in the United States for much longer than Federal Reserve notes. They have been money for over 150 years” (Still, 2016, mn.5); and were initially unconvertable (unbacked by any [supposed] redemptions in specie), from 1862-79. And those that still exist “are still legal tender today.... [And this] is what most people think that US money [a.k.a. ‘currency’] should be... Yep, [it was] just printing money at the direction of the Secretary of the Treasury” (Still, 2019f, mn.3-4). See also “Sovereign money”, “Currency”.

3) The majority of these (red-sealed) debt-free ‘greenbacks’ were issued, simply as a war-time exigency, during the Lincoln Administration (i.e. about \$450 million then, or approx. \$5 trillion in 2016 dollars²⁶⁰⁹), and were then g-r-a-d-u-a-l-l-y faded out (more for political than economic reasons) during subsequent administrations. See also “Seigniorage”, “Currency wars, the”, “Reserve currency”.

3b) According to the US Treasury itself, the primary/significant issuances were: 1862 (\$5-\$1,000 notes); 1862 (\$1-\$2 notes); 1863 (\$5-\$1,000 notes); 1863 (\$1-\$10,000 notes); and 1901 (\$10 notes).

- <https://www.fiscal.treasury.gov/files/reports-statements/treasury-bulletin/b2015-3.pdf>

4) ‘Greenbacks’ were just 19th century ‘helicopter money’/stimulus. “For its first 50 years (1863-1913), our national paper dollar– the ‘Greenback’– was managed by [the] Treasury, not the Fed. We have to do this again... We must...issue a Digital Greenback and digital wallets to all citizens, businesses, and eligible residents of our country.... **Treasury already has** the requisite architecture in place,²⁶¹⁰ and can accordingly digitize dollars and give digital wallets to all by this summer. The Fed will take years before it can do likewise.... [Digital Greenbacks] can be done, furthermore, ‘in-house.’ That is what [the] US Digital Service, housed in our Executive Branch, is for” (Hockett, 2020). See also “Government, role of”. See also “Helicopter money”, “Citizens’ dividend”.

²⁶⁰⁸ United States Notes, while being gradually phased out since the 1870’s, were last newly issued (direct by the Treasury) in 1971. The red-sealed notes could be exchanged for gold until 1933, and for silver until 1968. The small 1971 series was maintained with (an even smaller number of) reprints, until the *Riegle Improvement Act* of 1994 released the Treasury from that obligation.

²⁶⁰⁹ Kortsch & Walton, 2016, 3. See also “Asset money”.

²⁶¹⁰ “What architecture? ...I mean *TreasuryDirect*– visit the site– a portal through which any American can transact with Treasury in Treasury Securities. All we need do is both...charge [the] Treasury with issuing a new legal tender currency, valued at one Fed dollar per, and...[also] add what I call ‘horizontal’ digital P2P connectivity to all Treasury Direct account wallets, which now have...[only]‘vertical’ connectivity. That can be done within weeks” (Hockett, 2020). No kidding. It’s an old idea. See also “**Federal Funds (Accounts) for All**”, (which is sometimes a.k.a.) ““Central Bank Digital Currencies (CBDCs)”” [.propaganda].

Universal bank- See "Bank, universal", "Japan model", "End of Banking, the".

Unsupported journal voucher adjustments- (a.k.a. 'unsupported adjustments' in gov't documents)

1) "[U]nsupported transactions for the DoD and the Department of Housing & Urban Development (HUD) tallied to \$21 trillion between 1998-2015" (Skidmore, 2020); approx. to the entire US national debt c.2018. See also "Federal Accounting Standards Advisory Board" [FASAB-56]. See also "Undocumentable adjustments", "Black Budget (US)".

USSR (1922-91)- (synon. Soviet Union [or 'union of (unelected) councils]; antec. 'Soviet Russia' [1917-22]).

1) "The Bolsheviks in Russia did not come to power by overthrowing the Czar [the "February Revolution"]; they came to power by overthrowing Parliamentary Socialism [the "October Revolution"]. They have...come to power...in every country from Russia to Czechoslovakia by overthrowing the Parliamentary Socialists" (Hollis, 1949, 142). See also "Socialism", "Communism"; "Georgism".

2)

3) Alexander Solzhenitsyn (1918-2008) compared Lenin's Bolsheviks with the Jacobin Party of the French Revolution, noting that the French Reign of Terror (1792-94) ended with the fall of the Jacobins and the execution of Maximilien Robespierre. Its Soviet equivalent, however, continued to accelerate (through the 1920's-40's) until the Nikita Khrushchev thaw of the latter 1950's. See also "[Charismatic Authority \(CHA\) and Dependency \(CHD\)](#)", "Marx, Karl", "Violence".

3b) "The idea was born in the West...in certain lodges in England. You can see that in certain publications.... [P]eople with a long-range perspective, they knew...[that] the Slavic people are [a] young...[civilization]-- not like the [already conquered] French, the Romans. They have their mission in the future...[So] the great, brilliant idea was: 'if we put our foot into this area, [then] we are the masters of the future, indirectly'; via Hegelian dialectic. "It was brewed up on the West... [and] In a Slavic population, you can do things that would not be accepted in the West. They...[were] moldable [in a different way]" (Meyer, 2021, mn.28-29). See also "Russia", "Hegelian dialectic", "Capitalisms".

3c) The Cyrillic alphabet was even splintered in the 1930's for such molding.

<https://www.youtube.com/watch?v=hZ310om9JCY> [PolyM-Kz.], mn.6.

4) Subsequently "[m]aligned for uncompetitive prices, poor selection, and oppressive credit policies, [the] company stores [that typified the mature Soviet system] often have been blamed for ensuring that employees stayed indentured" (Carlson, 2003, 101).

4b) ...Meanwhile, the latter-Soviet & Russian "kleptocrats basically made their money off [of] false [commodity] export invoicing... fraud" (Hudson, 2020c, mn.114). See also "Kleptocrats".

5) Of approximately equal scale in the demise of the Great Soviet War horse economy, however, (at least according to Solzhenitsyn)²⁶¹¹ was its undermining of its own economic foundation, via decades-after-

²⁶¹¹ In summer 1990, the (ENI) *narod-zemstvo* guru famously urged the USSR to allow all non-Slavic member states of the Union (except Kazakhstan) to secede, because further attempts to dominate non-Russian nations "would destroy the Russian national essence"; adding that

decades of subsidizing (indeed forcing) cheap agricultural exports (sometimes a.k.a. 'strip-farming'). See also "Value", "Imperialism, classic".

5b) Although not seeing the forest for the trees on this particular point, Carroll Quigley duly noted that (with Lenin's New Economic Program [NEP]) by c.1922 "agricultural prices...fell lower and lower as [post-war] agricultural production recovered...[even though] industrial prices, being [made] monopolistic, or in short supply, remained high.... Thus, in 1923, agricultural prices were at [only] 58% of the 1913 level, while industrial prices were at 187%... [Hence] peasants could obtain only 1/3rd as much manufactured goods for their crops as they had been able to obtain in 1913.... [This USSR] problem of obtaining increasing supplies of food from fewer peasants without offering them consumers' industrial goods in exchange could not, according to Stalin, be...[resolved] in a peasant regime based on freedom of commerce, as under the NEP of 1921-27, or in one based on individual farmers, as in the 'War Communism' of 1918-21... The NEP could not find a solution to this problem...[so] industrial prices remained higher than farm prices, [and thus] peasants were reluctant to supply food to the cities since they could not get the cities' products [that] they wanted in return"; and selling only "13% of the grain raised... could never provide the... necessary...support [for] 'Socialism in a single country'. (Quigley, 1966, 336-337). See also "Economics, 'Parity'".

5c) Stalin's 'Socialism in a single country' approach was deemed necessary because, from 1923-27 it had "become quite clear not only that world revolution was impossible... [while] it also became equally clear that 'oppressed colonial' areas such as China were not going to ally with the Soviet Union [either]. 'Communism in a single country' had to be adopted as Russia's policy simply because there was no alternative... [and that] required, according to Bolshevik thinkers, that the country must be industrialized with breakneck speed, whatever the wastes and hardships, and must emphasize heavy industry and armaments [i.e. for war] rather than rising standards of living. This meant that the goods produced by the peasants must be taken from them, by political duress, without any economic return, and that the ultimate in authoritarian terror must be used to prevent the peasants from reducing their level of [surplus] production... as they had [actually] done in the period of [lost] 'War Communism' in 1918-21. This meant that the first step toward the industrialization of Russia required that the peasantry be broken by terror and [then] reorganized, from a capitalistic basis of private farms, to a Socialistic system of collective farms.... crushed by terror so that... [the USSR] could be formed into a monolithic structure of disciplined proletariat who would obey their leaders with such unquestioned obedience that it would strike [still more] fear in the hearts of every potential aggressor", foreign or domestic (Quigley, 1966, 338-339). See also "Communism", "Imperialism, classic" [.carrots & sticks].

6) '3 genocides in one century'? "In 1989, Europe was not there²⁶¹².... [intellectually; because the Anglo-American 'West'] was planning to make an expansion of its power...and everything was just thought...[in terms of the Economic propaganda]", that, ironically, turned into nothing less than its own sort of "Bolshevik rule... That's what we have now-- the mentality of the [20thc] Bolshevism was just [in the early 21stc] globalized" (Meyer, 2021, mn.30). See also "Bankmoney regime", "Globalism", "Capitalisms". See also "Hegelian dialectic", "Communism", "Marx, Karl", "Russia", "EUSSR".

Usury- ('the ancient math-science of leverage', a.k.a. 'the bite' [Hebrew]; is just about the interest charges, not new money creation per se, although new money may be created with or without interest schedules) "The invention of interest lending, in the...shadow of the gates of Eden-- may have been humankind's original fall from grace."- William N. Goetzmann (1994). See also "Eras of (monetary) History" [.Axial].

Russia could neither afford to subsidize (the now-former) Soviet-bloc countries in Europe with any more [natural resource subsidies](#): "We rejoice for the countries of Eastern Europe-- let them live and prosper in freedom...And let them pay for everything according to global prices" (Solzhenitsyn, 1991). In his last year, he went a bit further, writing that the *Holodomor* famine of 1932-33 was not really different from the more northerly *Povolzhye* famine of 1921-22, both of which were basically caused by "the brutal robbery of the peasant people by [standard Soviet] grain procurements", instead of by (ethnic-spiked) politically-"maddened... fables" (Solzhenitsyn, 2008). <https://www.youtube.com/watch?v=BqnfmcuBfJk> [Malone'20]. See also "Parity pricing (for the primary sector)", "[Ethnic \(National\) Identity \(ENI\)](#)".

²⁶¹² For the continuation of Meyer's line of thought on this particular assertion, please see "German (industrial) banking".

1) In ancient times, the use of leverage, loans, and liens were all understood in the agrarian societies (as something dangerous, that could easily turn destructive): Of the means “by which men gain from one another. The most hated sort, and with the greatest reason²⁶¹³, is usury, which makes a gain out of money itself... For money was intended to be used in exchange, but not to increase at interest. And this term 'interest', which means *the birth of money from money*, is applied to the breeding of money... of all [the] modes of getting wealth this is the most unnatural.”- Aristotle,²⁶¹⁴ *Politics*, c.350 BCE (1999, 17).
 1b) And also in medieval times: “*Nummus non calved nummos.*” (“The coin did not calve the coin”).
 - St. Thomas, 13th century CE. See also “Aquinas, Thomas (1225-1274)”.

2) Etymology-- from Latin *usuræ*, “to use” [in leverage], and possibly also proto-italic “to fetch”.
 2b) Also (particularly in Protestant realms) from the Hebrew *neshech*, “to bite”: For “that he that Biteth not, doth not commit Usury ; for Usury is none other thing than a biting, as I said of the very Etymology and proper nature of the word, otherwise it cannot be called *Neshech*, as the Hebricians say” (Malynes, 1686, 225). See also “Leverage”, “Protestantism”, “Corrosion-Cancer-Debt”.

3) “In Roman law, any [*mutuum*] agreement for a return of more than was lent had to be promised in an additional *stipulatio* [sic] that was not legally part of the...contract...[And in] later Roman law, the amount of interest that could be charged was limited...” (Dotson, 2004, 90). However, it was “acceptable to receive a penalty payment if a loan was not repaid at maturity”, and interest was expected to be paid if the “custodian” of property (such as a money-changer or safe-keeper) was late in returning a *depositum* (Ibid). See also “Compound interest”.

4) In medieval, or post-Roman usage, usury was defined, at least in theory,²⁶¹⁵ as *any* charging of interest: “Those who consume interest cannot stand (on the Day of Resurrection) except as one stands who is being beaten by Satan into insanity.²⁶¹⁶ That is because they say, ‘Trade is (just) like interest’. But Allah has permitted trade and has forbidden interest. So whoever has received an admonition from his Lord and desists may have what is past, and his affair rests with Allah. But whoever returns to (dealing in interest or usury)-- those are the companions of the Fire;²⁶¹⁷ they will abide eternally therein.”

²⁶¹³ It is ironic that it was the 13th century “Scholastics” who zeroed-in on articulating the (age-old ‘evil’ of) usury as, essentially that *suuigenis* combination of selling TIME (which they theorized as belonging to God), without really engaging in any LABOR or even RISK. See also “Scholastics, the”; “State capture” & “Bank welfare” [regarding no risk]; “Devil”, “Adolescence of Mankind”.

²⁶¹⁴ In 1st century Rome, Seneca also considered usury to be an unnatural form of greed, but did not address the subject directly.

²⁶¹⁵ Although Canon law supposedly prohibited interest payments on *loans* altogether; in practice, at least in medieval Italy, “exchange operations” could be subject to different rules than were “loans”, and “might not have been conceived as a loan at all” (Dotson, 2004, 90). And there were also other “loopholes... [loans] at interest were made-- both overtly and covertly-- but they incurred the condemnation of the church and the opprobrium of the community.... Only if there was a *mutuum* [a ‘consumption loan’ agreement] could there be [the condemnation of] usury.... Many kinds of contracts...[involving the temporary transfer of capital] were not considered loans, [even] though to the modern eye the distinction might seem finespun.... [In fact] the exchange contract-- the *cambium*-- [was] the central business feature of medieval and early modern banking” in Italy, wherein a “charge for foreign exchange was not considered interest on a loan [usury], because it was *cambium* [sic] rather than *mutuum* [sic]” (Dotson, 90-91).

²⁶¹⁶ https://www.youtube.com/watch?time_continue=8&v=IZD4ezDbbu4 [‘born’]

²⁶¹⁷ Today’s Sunni-Shi’a division may be a reflection of long-standing differences over the nature of the extent to which *usury* should be strictly abhorred. Persia, from an Indo-European language, always had more of a trading economic-geography and culture than did the rather arid deserts of the Arabian peninsula, where the peoples spoke Semitic languages from the (rather different) Afro-Asiatic language family, and often subsisted on raiding the caravans and other trading outposts of non-Semitic speaking peoples. The ancient Persian (or north Middle Eastern) “Zoroastrianism” philosophy is said to have predominated from the time of [the possibly amalgamized] Zoroaster, sometime in the 2nd half of the 2nd millennium BCE (perhaps half a millennium before [the also possibly amalgamized] Moses in Egypt), until the 7th century C.E., when it was assimilated into Islam, the new resolutely monotheistic and anti-usury faith from the peninsula. Leaving the usury aside for the moment, Zoroastrianism and Islam had much common ground. For example, many similarities between Amesha Spenta and the archangel Gabriel, praying 5 times a day, covering one’s head during prayer, and the mention of Thamud & Iram in the Pillars in the Quran (h). “Among the classic Greek philosophers, **Heracitus** [c.500BC, Persian Ionia] is often referred to as inspired by Zoroaster’s thinking.[73] *The Oxford Dictionary of Philosophy* (2005) has ranked Zarathustra as first in the chronology of philosophers. Zarathustra’s impact lingers today due in part to the system of religious ethics he founded called Mazdayasna... [or] “Worship of Wisdom/Mazda”. The encyclopedia *Natural History* (Pliny) claims that Zoroastrians later educated the Greeks who, starting with Pythagoras, used a similar term, philosophy, or “love of wisdom” to describe the search for ultimate truth.[76]” (O). Zoro was very much free will (Manichean game). See also “National Identity/Nationalism”.

Qur’an, 40:78: “And We did send apostles before thee: there are some of them that We have mentioned to thee and there are others [i.e. Zoroaster, in the 2nd half of the 2nd millennium BCE] whom We have not mentioned to Thee.”

- The Qur'an (القرآن), Sura 2:275, c.609-632. See also "Compound interest", "K.J.B. (70-Year Plan)".

5) Why was it hated so much by great learned men? Because, across "a wide range of societies and different levels of development, [the] stability [of civilization has also, ironically] favored [a pursuant] economic inequality [from the law of interest payments (which are typically-- albeit also *gradually*-- regressive in nature)]. This was as true of Pharaonic Egypt as it was of Victorian²⁶¹⁸ England, as true of the Roman Empire as of the United States" (Scheidel, 2017, 6). See also "Compound interest", "Dynastic cycle", "Debt cycles".

5b) In other words, (the effects of) institutions' raking in the interest payments, as with most other imperial tools, accumulate over time, to where (increasingly) extreme distortions develop in the monetary-economic society. Eventually the top usurers (whether 'public' or 'private'ly owned) can "distort [all sorts of] markets, and make arrangements to be able to own everything [sic] that's of importance in the economy. So it's...an oligarchic system. It's [now] not a democratic system. It's an [older] oligarchic system.... And it's not geared towards free-enterprise. It's geared towards monopoly. In a way... Communism and Capitalism are 2-sides of the same coin. They both gear [although not at the same speed] towards monopoly. And our [global] monetary system is geared towards monopoly" (Wortmann, 2022, mn.10-11). In the Internet-Knowledge Age, there is no longer valid excuse for societies' ignorance of the basic (extractive) ~~phenomenon~~ tool. See also "Compound interest", "Corrosion-Cancer-Debt", "Conspiracy theorist", "Inequality".

6) So why didn't the medieval 'ban' hold up (in the relatively temperate lands Christendom²⁶¹⁹)? First of all, the usury "ban" "has been misrepresented. At no time was it forbidden to take interest under proper conditions.²⁶²⁰ The [main] key was whether the lender was actually [unlike today's banks] taking some risk without a certain [simply mathematical (or gaming)] gain. Venice had... [risen] to the commercial domination of Europe without violating the bans on usury. Usury was not the same thing as...[simply] charging interest-- it was taking unfair advantage" (Zarlenga, 2002, 181). The loopholed-prohibition also "failed, because neither the Worldly Leaders, nor the Church, organized *interest-free lending*. Nor would the [less-organized] rich lend without interest.... *Prohibition* is not enough, the universal provision of interest-free credit to the State, businesses, and consumers for productive investments in their home, small business, [and] education, but not for speculation [however that is defined], is the real solution to the need for credit in society" (Migchels, 2019h). See also "Equity financing", "Local scrip & Complementary currencies".

6b) Just as fundamentally, however, "during the [medieval centuries'] interest ban, the normal [or at least nominal²⁶²¹] interest rate was 20% (!). After the [actual] abandonment of the interest ban, interest rates [simply] showed a falling trend" (Dietz, 2020). In other words (what might be called) 'micro-usury' (loan-sharking [less, at a higher rate]) was replaced by 'macro-usury' (more borrowing/debt volume, due to lowering rates ['free money']). See also "Bonds".

7) (in the so-called 'modern' sense) 'usury' was re-defined as charging *excessive* interest or making (too much) money from money (too quickly). In the USA, the 1980 *Depository Institutions Deregulation and Monetary Control Act* (DIDMCA), in line with the Supreme Court's *Marquette National Bank v. First of Omaha Service Corporation* decision (1978), allowed FDIC-insured banks to charge any interest that was in line with their home state requirement, to out-of-state customers. A classic 'race to the bottom' ensued,

²⁶¹⁸ According to Christine Desan, it was "during the 17th century" that age-old anti-usury attitudes started to shift; "but the time that it shifts the mos...[was] when the English government starts issuing public bonds, circulating public bonds. They...[were for] public first, not private lending, and those ['public'] bonds basically legitimate[d] interest" (Desan, 2013, mn.200). See also "Bank of England, the", "National debt", "Tax shift".

²⁶¹⁹ ...as opposed to then mostly-*desertified* Islamic realms (where the usury ban had stood up) and to mostly-*junglesque* Buddhist realms (where, as far as **this** author knows, the practice was never totally banned).

²⁶²⁰ Two types of loans were always exempt-- "Societas" and "Census" loans. Interest might "also be charged when the lender was suffering some kind of loss, or was passing up some [other] opportunity in extending the loan... [It is, ironically,] the Old Testament [that] has...[the strongest] prohibitions against usury" (Zarlenga, 181).

²⁶²¹ Cashill; Fergusson (on the medieval 'ban's **many** exceptions & exemptions). See also "Politics", "Venice, Republic of (697-1797)".

and by 1982 most US states with big banks had withdrawn their 'usury' ceilings. See also "Race-to-the-bottom (of the barrel)", "Criminalization of Banking, the".

[Consumer credit/debt exploded after the removal of state anti-usury laws in the early 1980's. See also "Debt cycles".]

8) In summary, "... (Latin *usus fructus*, 'use of the fruits') referred to interest charged for any purpose.... However, the Biblical sanctions of *Exodus*, *Deuteronomy* and *Leviticus* against charging usury were aimed [only] at agrarian usury, not commercial lending.... Since the [late] Middle Ages the term has been limited to interest charges *in excess* of the legal maximum as set by national usury laws.²⁶²² On a society-wide level, usury leads to economic and political polarization, and thus is worse than merely a zero-sum activity. As Francis Bacon observed in his essay on usury²⁶²³ [1625]: 'Usury bringeth the treasure of a realm into few hands, for the usurer, being at [mathematical] certainties, and the other at [physical] uncertainties, in the end of the game most of the money will be in the [usurers'] box, and a State ever flourisheth where wealth is more equally spread'" (Hudson, 2015b). See also "State capture".

9) Why is this such a big deal? Nobel laureate Frederick Soddy re-articulated the main point 3 centuries later (1926), pointing out that *real* "wealth is subject to inescapable entropy laws of thermodynamics (depreciation), while *virtual* wealth is subject only to laws of mathematics (compounding at the rate of interest, instead of depreciating)" (Laina, 2015); hence, the (increasing 'lien', or) tilted playing field that the use (and abuse) of leverage characteristically creates, whether consciously designed with that (cheating/synthetic) factor in mind or not. As a solution to this strategic imbalance Soddy suggested (1926; 1934) full reserve banking-- that banks should not be allowed to create new currency (backed by the state) when they issue loans. See also "Wealth", "Chicago Plan(s)", "Ecological economics".

[the tilt...'How much until they notice?' → see also "Inflation"]

10) broad usage: "the financially powerful taking advantage of [mathematically gaming] the financially weak" (Zarlenga, 2014). See also "Compound interest", "Financialization".

²⁶²² As Zarlenga and other have noted, the medieval "classical scholastics, from about 1100 to 1500", defined *usury* as "the *misuse* of the monetary system-- not simply the taking of interest-- because the taking of interest, in itself, was not usury"; it was then 2-3 centuries later that Jeremy Bentham of "Panopticon" fame (1748-1832) "mis-defined usury as taking *more interest than is normal*. Actually, in his work on it, he defined *usury* out of existence, which may have been his purpose" (Zarlenga, 2007). See also "Central Banking-Warfare model"; [Hoffman]

²⁶²³ "Many have made witty invectives against usury. They say that it is a pity, the devil should have God's part, which is the tithe. That the usurer is the greatest Sabbath-breaker, because his plough goeth every Sunday.... That it is against nature for [barren] money to beget [still more artificial] money; and the like. I say this only, that usury is a *concessum propter durtiorem cordis* [a concession by reason of the hardness of men's hearts]" (Bacon, 1625). Bacon wasn't much of a humorist.

11) “Forbes admits, 93 of the ‘Forbes 400’ made their money by just playing with money” (Kinsley, 2017). Moreover, a recent Harvard study has shown that “92% of the Fortune 500 Companies’...cash-flow has been used for stock re-purchases, or to pay [out] dividends to increase the stock price. Only 8% has been reinvested in capital expansion” (Hudson, 2017b, mn.41). Meanwhile, “[s]tudies have shown that eliminating the interest burden can cut the cost of public projects in half” (Brown, 2010). “Stock buy-backs”, “Monetary reform”.

12) Usury is as relevant today as it has ever been. Banks successful century of lobbying governments has put them in an unprecedented cat-bird seat in American history-- that of bureaucratically raking in money for nothing. Banks “will only lend money not against your income-- but against an asset that you pledge [to them], whether it’s your house, or whether is stocks or bonds...They say [that] they’re making money as compensation for risk; [but] they don’t want to take a risk [and (increasingly) they don’t]. They want you to take the risk, and then [since 1999] they [can then] gamble with it, knowing that the *government* is [now] going to pay all the risk” (Hudson, 2018, mn.22). See also “Capitalisms”, “Separation of Powers”, “Risk”.

13) And in the ‘national’-‘central’ banking & computer age-- *unlike* classic ancient & medieval times-- the “money demanded [to be paid] back [on bank ‘loans’] is money [that] the banks did not themselves have to begin with, but [rather] the carcinogenic sequence of unproductive self-multiplication [which] is absolutized [by the state] into an obligation to pay the banks compounding greater sums...continuously bleeding the life of societies, [eventually] into the ground” (McMurtry, 2013b). See also “Corrosion-Cancer-Debt”. See also “Leverage”, “Finance Capitalism”, “F.I.R.E. sector”, “Stock buy-backs”, “Derivatives”, “Equity financing”, “Parties, political”, “King James’ Bible/70 Year Plan”.

[Accounting books....a matter of public law... Medieval prohibition.... ‘Modern’ de-regulation]

Usury cycles- (‘to use or not to use’; a decision often ‘governing’ 6-7 centuries in ‘Western Civ.’ [only]) “Usury has to be illegal. In the history of the world, every time you legalize usury, it’s simply a matter of time until that civilization fails.”- Fmr. Asst. HUD Secretary Catherine Austin Fitts (Fitts, 2021, mn.19). The French Physiocrat “Quesnay was the 1st [western] economist to describe economic activity as a circular flow where [primary] production and [usurious] consumption are mutually interdependent variables that follow socially determined [leverage] laws, with the [basic] cycle being repetitive” (de Yong, 1994, 6). See also “Physiocrats, the”.

1) The development of what Perry Mehrling and others call the “Empire of Law” (in Western civ.) has been a “centuries-long process” (Mehrling, 2019); of basically defining and re-defining what “money”-- and the usurious profit from it-- is to be. Predictably, in the latter stages (of the current c.1400-2020’s cycle), public definitions become less meaningful (and certainly less-understood), as the usury and resultant inequality steadily increase (unless interrupted/re-set by the human sacrifices of large-scale ‘national’ warfare).

2) Here is a brief summary of the ‘world’s current (hopefully last) Usury Cycle:

<u>period</u>	<u>political innovation</u>	<u>Quigley ‘capitalism’</u>	<u>debt cycle(?)</u>	<u>terminus</u>
a) c.1400-mid-1500’s		n/a	n/a	
b) 1540’s-				
c) 1620’s-				
d) 1700’s-				
e) 1780’s-				

f) 1860's-

g) 1940's-

(Hoffman, 2013,).

3) Analytical historian Carroll Quigley found, in the mid-60's, that "" (Quigley, 1976). See also "Adolescence of Mankind" [16 civilizations/candles].

4) Further back (to the relative childhood of man's institutions), one may hypothesize that, Western' civ at least, has been characterized by alternating periods of predominantly 'liberal' or 'conservative' usage of usury (leverage), of approx. 6 centuries in duration. A 'liberal' usury cycle is then, typically, followed by a longer "intermediate"/transitional "dark" age (in order to, essentially, de-program all institutions from it), and then a 'conservative' usury cycle, which is followed by a shorter intermediate ('dark') period.

4b) An approximation of the general/governing trend may be sketched (inversely, in order of clarity) as:

historical era	period	leverage	ensuing 'Dark'/Intermediate	next innovation
5. 'Adolescence of Mankind'	c.1400-2020's	incr. liberal ²⁶²⁴	?? see "COVID".	see "Design", App.C: "1-2-3".
4. Medieval	c.750 ²⁶²⁵ -1348	conservative (precious coin)	2nd half of the 14th century	"Accounting, 2x", "Fiat", "Legalism"
3. Precious coinage (i.e. Imperial-precious coin)	50BC-500AD ²⁶²⁶	liberal (precious coin)	500's to mid-700's ("Dark Ages")	Islam, Vikings; Cluny, Chrisendom
2. Nomisma coinage (i.e. Republican-nomisma coins)	700's-180BC	(liberal) (prec.-nomisma-prec.)	130's-30'sBC (RomanCivilWars)	"Imperialism", Pontifex Maximus
1. Arid Mesopotamia ²⁶²⁷	1800's-1100'sBC	? ²⁶²⁸	1100's-800'sBC (GreekDarkAges) c.2200-2000BC (GreatHoloceneDrought)	"Ethnic (National) Ident.", "Coinage"

See also "Civilization, western", → "Glorious Revolution" [2ndEstate], → "Debt cycles", → "Cultural Calendar", → App.C: "1-2-3"; ← "Cycles", ← "Extinction theory".

Vague, Richard (credit card industry billionaire-turned-venture cap.-philanthropist who-- along with Steve Keen-- is today's major proponent of [what might be called] 'Private Debt Economics')

1) Vague has "...identified empirically-- and I've done the same thing theoretically-- after his empirical work... that a country gets to be *in trouble* when it has a private debt level of greater than 1.5 times its GDP, and when credit is growing of something of the order of 10% of GDP.... What it means is that at some point people will stop borrowing that [bank debt] money" (Keen, 2016u, mn.7-8). See also "Debt saturation", "Debt, private".

²⁶²⁴ Money-per-capita and growth of government have pretty much gone hand-in-hand ever since the plagues, although both were not increasing at > 45 degree angle until the 2nd half of the 19th century. <https://ourworldindata.org/economic-growth>

²⁶²⁵ After the 8th century re-introduction of coinage; all kinds of legislation were commoner under Charlemagne [in imitation of 7th century Byzantium] (Quigley, 1976)... Some of the impetus for this must have come from Italy... Charlemagne...reissued the *Lex Salica* in a new edition... and made laws for [all those] newly conquered peoples.... The Carolingians, Roman-style, regarded ignorance of the law as no excuse.... a wide range of new law now existed, and...it was useful to be informed about it. The network of public assemblies... were [thus] crucial for the Merovingians...[remained so for] the Lombards...in the Carolingian period. Royal assemblies were held just before the campaigning season [often for silver mines/slaves] every year and were the points of reference for army muster.... Major political figures, lay and ecclesiastical, attended regularly. These were venues for genuine discussion, not just royal instruction.... participation in assemblies, and in the rituals [that were] normal in all of them, *powerfully reinforced a sense of collective participation* in public affairs. These national assemblies were matched in every country by local assemblies, placita, meeting 2 or 3 times a year... in which local elites were brought into the...public network; these heard reports of national deliberation... and decided court cases. The Carolingians regularized these assemblies, too" (Wickham, 2009, 385-386). See also "Common law".

²⁶²⁶ ;:jkl;jkl

²⁶²⁷ a "" (Brooke, 2014,). Earlier sources have long-noted the decline in agricultural productivity of the region, between "2400 and 1700", and most would concur that "[s]outhern Mesopotamia never recovered from the disastrous decline in agricultural yields" (Chew, 2005, 59). (Ibid).

²⁶²⁸ Whereas there are many unanswered questions as to whether economic, simply political, or natural factors (such as the Great Drought of 2200-1900) primarily 'caused' the (famously mysterious) Bronze Age Collapse (a.k.a. 'Greek Dark Ages') of c.1200, there is not much doubt that it was the deepest and longest civilizational collapse in history. See also "Climate change, global" [Hallstatt/Bray].

1b) It is not some hypothetical model. “the ‘Japanification’ of America, with sky-high debt levels [%] and desultory growth...[will continue apace] unless there is broad-based and radical new thinking on debt restructuring” (Vague, 2020c). See also “Japan model (asphyxiation), the”, “Jubilee”.

	1950s	1960s	1970s	1980s	1990s	2000s	2010s
Private debt to GDP (average)	64%	85%	95%	111%	122%	153%	151%
Real GDP Growth (average)	4.3%	4.5%	3.2%	3.1%	3.2%	1.9%	2.3%

[the inverse relationship (Vague, 2020c)]

2) “[M]any ancient societies had debt forgiveness solutions... The ancient scriptures attest to this, and it was [sometimes] referred to... as *jubilee*. This shows that those in other times have faced and solved this problem, and that we are not as advanced as we [might] think” of ourselves as being (Vague, 2020, mn.9). See also “Liberty Bell”.

2b) Would such strategies be (that last century’s boogeyman) ‘inflation’-prone? Vague pretty much says ‘bring it on’. CB’s “have shown, over the last decade, that they may not even *know* how to create inflation [since their product always has (more-or-less deflationary) debt strings attached]. Even though they have employed the methods widely...[said] to cause high inflation, including low rates, high money supply growth, and massive deficit spending, inflation is [still] running below the central banks’ target” (Vague, 2020c). “Looking across all countries since World War 2, there have been dozens of sustained periods of very high money supply and government debt growth. Very few were followed by high inflation, and many stretches of high inflation were not preceded by high money supply or high government debt growth. This notion of inflation caused by [the TAB-M1] money supply or [by other forms of] debt is one of the great *red herrings* of economics. The fact is that, other things being equal, high levels of debt are disinflationary, even deflationary, because they *suppress* consumption and investment, and thus weaken aggregate demand” (Ibid). See also “Inflation/deflation”.

3) “[U]nless we give a much larger amount to everyone, for example \$10,000... it is not going to meaningfully dent the student or mortgage debt problem” (Vague, 2020c).

4) Vague seriously considered entering the Democratic party primaries in 2019, and (as of Feb. ’20) is acting Secretary of Banking & Securities for Pennsylvania. See also “Economics”, “Debt saturation”.

Value- (What’s it all about?) 1) “For the old standard of [public] value, they substitute the new standard of [private] Bank credit. Would government be willing to trust to corporations the fixing of our standards and measures of length, weight, and capacity? Or are our standards and measures of value of less importance than our standards and values of other things?” (Gouge, 1833, 42). ‘Weights & measures’, per Article 1:8:5 of the US constitution, are (public) weights & measures. See also “Parity pricing” [.sun], “Monetary reform”; “Federal Accounting Standards” [.FASAB-56], “Reserve currency”, “LIBOR”.

[1st things first. See also “Imperialism”,→ “American System, the”,→ “Imperialism, American”.]

2) Half a century after Gouge; “classical economists used the term ‘value’ to connote the intrinsic, technologically or socially necessary costs of production, and [then] reduced these costs to the labor expended directly, plus that [which was] embodied in the capital equipment, buildings, and raw materials used up in production. This *labor theory of value*²⁶²⁹ enabled economists to exclude economic rent, interest and other property claims as mere *transfer payments*-- elements of market price in excess of value as classically understood. By contrast, today’s post-classical era uses the term ‘value’ simply as a

²⁶²⁹ Steve Keen calls LTV a “false vision that labor is the only source of surplus... [T]hat whole [Marxist] ideology became a huge part of the politics & the way they [USSR] tried to organize industry...”- Steve Keen (Hudson, 2016s). See also “USSR (1921-91)” [they seem to have been using LTV for the 2ndary instead of the primary sector], “Imperialism” [.carrots & sticks], “Primary Sector”.

synonym for *price*, regardless of the degree to which prices exceed the necessary costs of production” (Hudson, 2015b). See also “Parity pricing (for the primary sector)”, “Labor Theory of Value”.

2b) Does it matter if we mix up ‘value’ and ‘price’? “Value begins when property is recognized as valuable-- as a valid means for fulfilling a legitimate end-- not only by its current or its prospective owner, but also by others [followers?]. No estimate of value stands alone. This is especially true in financial markets, where rising values and prices often attract [still more] demand... rather than suppressing it, as standard [20thc] microeconomic theory maintains... Economist John Maynard Keynes famously observed [that] valuation incorporates beliefs about *others*’ [sic] beliefs about value, not unlike a newspaper contest in which the entrants receive a prize if they pick the faces that the readership selects as the most attractive. Just as the outcome of Keynes’ contest depends more on assessments of [the] judges’ judgement than it does on appraisals of beauty, the ‘...process of exchange itself’ generates and validates the value of an asset’... [and hence] draws from other, noneconomic values... [as] predictions range beyond monetary returns and often assume narrative form” (Ott, 2018).

See also “Accounting” [end of], “Observer Effect/Goodhart’s Law”.

3) “Where ” (Huber, 2017, 26).

See also “Productivity” [service sector], → “NInnies”; “Political economy”.

Value-free Economics- “‘value-free’ thought is to prevent people from making value judgments questioning the evolving status quo. The classical concept of value is rejected by depicting all *prices* as containing real *value* rather than acknowledging the institutional overhead of rent accruing to property owners, or financial charges levied by the economy’s money managers. The FIRE sector is counted as producing national product, not as an overhead...” (Hudson, 2015b). See also “Fiduciary”, “Rentier”.

Vatican Bank - (synon. ‘Institute for the Works of Religion’ [IOR], est. 1942²⁶³⁰; not to be confused with ‘the Papal Monarchy’²⁶³¹ [c.1050-1350])

1) In the 1st millennium at least; “career success in the Roman ecclesiastical hierarchy did not depend much on theological skill; Gregory the Great [r.590-604] was the...exception, and there is evidence that he was unpopular” (Wickham, 2009).

2) In “Europe, the origins of *think tanks* [from which (‘supplemental’) *banks*’ would eventually emerge, 4-7 centuries later (N.Italy & England, respectively)] go back to the 800’s, when [central & western Europe’s initial] emperors & kings began arguing with the Catholic Church [often their ‘power behind the throne’, first] about taxes. A tradition of hiring teams of *independent* lawyers to advise monarchs about their financial and

²⁶³⁰ The Vatican, of course, discovered banking many centuries earlier. The *Knights of Malta* organization... (formally ‘The Sovereign Military Order of Malta’ [SMOM], and/or ‘Grand Military Order of the Knights of Malta’; and formerly the ‘*Knights Hospitaller*’ from the 11th-13th centuries, that is prior to picking up some of the [dissolved] Templar Knights’ banking protocol in the 14th century) ...has historically been, since the 1300’s, a banking/financial arm of the Vatican (at least in times when the latter is strong). According to Posner, the “order...[today] recognizes the Pope’s authority over all its members. It also has *sovereign* diplomatic relations with over 100 countries, including...Spain, Italy, Russia [and before then the USSR], Austria, Egypt, [and] Brazil...[and is also] a fully accredited ambassador to the European Union...[and] since 1994...a permanent observer at the United Nations” (Posner, 643-44). Why? Prominent US [and hence dual] citizen **Knights of Malta have purportedly** included Blackwater executive and Bush Jr. inspector general for the Dept. of Defense Joseph Schmitz, Bush Sr.’s deputy CIA director Gen. Vernon Walters, Reagan campaign manager and CIA director Bill Casey, Nixon Admn. insider and Reagan’s initial Secretary of State Gen. Alexander Haig, mid-20th century CIA counterintelligence chief, James Jesus Angleton, JFK-LBJ CIA director John McCone, and OSS-CIA founder “Wild” Bill Donovan; as was Adolf Hitler’s first vice chancellor Franz Von Papen. In case one doesn’t see the pattern yet, the “SMOM has long been thought to be [mostly] a front for various western [i.e. UK-USA] intelligence agencies” (Farrell, 2013); at least since the 1940’s or the Lateran Treaty. The Knights’ “ties to intelligence organizations in the US and Western Europe are well-documented. It’s also perfectly understandable: with their unusual status as a recognized *sovereign* state without territory, the Knights of Malta enjoy full diplomatic rights in many countries-- including the ability to bypass customs inspectors... Sharing far right sympathies, the Roman Catholic Church and Cold War-era Western intelligence officials became natural allies, and the Knights of Malta became a natural conduit for their collaboration. With a lengthy, strategic partnership already forged in the name of anti-communism, a strengthening of this network in the name of the “War on Terror” ought to sound more predictable than paranoid to a student of US foreign policy” (Phelan, 2011). See also “Imperialism, American”, “Fascism” [Barnes].

²⁶³¹ A reasonable definition for this would consist of those lands directly ruled by the Pope (“papal states”) and also those kingdoms in which the monarchy depended upon papal blessing and support (f.e. Norman England, titularly).

political prerogatives against the church spans from Charlemagne [c.747-814], all the way to the 17th century, when the kings of France were *still* arguing about whether they had the right to appoint bishops²⁶³² and [hence] receive a cut of their income” (Soll, 2017). See also Ch.1.

3) “” (Cashill, 2009). See also “Usury”.

4) Although “members of an ancient and important family...[the Medicis, c.] were not Florence’s richest or most prestigious citizens. They earned their wealth through shrewdness and, like all successful bankers before them, by doing business with the papacy” (Soll, 2014, 30).

4b) The concept of republican institutions being unduly influenced of strategically corrupted by the Vatican, however, is largely from the 15th-16th centuries. “” (Finlay, 1978, 163).

5) “Literally anything within that [Vatican] bank’s operation can, by order of the Pope, be hushed up. You’re dealing... with a sovereign entity, with even more sovereignty, in a sense, than the Bank of International Settlements” (Farrell, 2017b, mn.56). “Just imagine the magic of compound interest when you don’t have to pay taxes, and you have diplomatic immunity.... I’ve always believed that the reason... [anybody creates a] hidden system of finance after... [winning a big] war is to compete with the Vatican’s” hidden finance system (Fitts, 2017u, mn.56-57). Secrecy always invites rumors. See also “Offshore”.

6) In actuality, however, even the 16th century “Holy See was not...a shadow of what it had once been. The Pope was [now just] an Italian prince trading [with double-entry accounting] in what merchandise he had-- ecclesiastical appointments, dispensations from the application of Church law to permit divorce, [or to] absolve from adultery, or even murder. [Such practices were a.k.a.] *indulgences*, which provided remission of sins in return for worthy acts-- or better still in return for *payment*” (Weber, 1989d, mn.10-11). See also “Intelligence Community (IC)”, “Glorious Revolution, the”.

²⁶³² Investiture Controversies: From negotiating about taxes during the reign of (illiterate) Charlemagne, the needle of Church-State relations had moved, by c.1000, to [what might be termed] the development of *state bishops* (cum-feudal lords), which prompted the Gregorian Reform movement (and resultant rise of the Papacy-Christendom [as pretty much ‘the think tank of think tanks’], during the 1050’s-1080’s. For example, when Henry IV, a 6-year old, became King of the Germans in 1056, Gregorian reformers soon seized the papacy from imperial control, and in 1059 issued *Nomine Domini*, promulgating that leaders of the landed nobility would no longer have any part in the selection of popes, which would, instead, be handled by a new *College of Cardinals* of electors. Having regained basic control over the election of popes, the Gregorian Reformers in the curia (chief among them the future Pope Gregory VII [r.1073-85]) moved on to the upstream issues of investiture and simony, formally enumerating 27 principles of Church [2nd Estate] supremacy in *Dictatus papae* (1075), which were much more observed in the principalities of Germania and the ‘Holy Roman Empire’ (per the 1122 *Concordat of Worms*), than in the [already-politically-unified] Kingdom of England (per the 1107 *Concordat of London*), wherein King Henry (William I’s 4th son, r.1100-35) officially gave up the right to choose bishops & abbots, while at the same time upholding the traditional *English* custom of requiring them to swear homage (the *commendatio*) for landed properties that were tied directly to the Crown, just like any secular vassal would. See also “Separation of Powers”, “English constitution, the”; Ch.1.

7) Pope Pius XII (Eugenio Maria Giuseppe Giovanni Pacelli), a.k.a. “Hitler’s Pope”²⁶³³ (r.1939-58), was born in 1876, to a rather politically-theologically active Roman ‘Black Nobility’²⁶³⁴ family. In addition to his grandfather Marcantonio Pacelli being a minister of finance for Pope Gregory XVI, his father Filippo was dean of the Vatican’s high court, his cousin Ernesto was financial advisor to Pope Leo XIII, and his elder brother (Marquis, and posthumous Prince) Francesco was the lead negotiator for the Lateran Treaty (for Vatican sovereignty) in 1929 and legal advisor to Pope Pius XI. In March 1939, the conclave that made Eugenio Pacelli pope “was the fastest in 300 years” (Posner, 2015, 163); and, not one to miss an opportunity, President Roosevelt, the following December, sent an envoy, re-establishing some degree of diplomatic relations²⁶³⁵ for the first time since “the last American diplomat” was withdrawn in 1867 (Posner, 71), in the aftermath of the Lincoln assassination.

8) Unbeknownst to the US State Dept. in 1947, the Intelligence Community “Cold Warriors in charge of US and British intelligence had struck a secret deal with the church to share its [Nazi] ratlines... [racing] against the Soviets to scoop up the best Nazi intelligence agents and rocket scientists.... [And Pope] Pius’ obsession with communism made the Vatican a predictable Cold War ally... [with] Churchill... J. Edgar Hoover, and the Dulles brothers.... [Also no] one but a handful knew that hidden inside the [1947] Marshall Plan was what New York’s Cardinal Spellman dubbed ‘black currency’ [eurodollars], covert funds-- some of which came from captured Nazi assets-- to help the church offset anything it spent to help defeat the communists in the...elections set for 1948. The dominant role the United States played in the Allied victory tilted the political balance of power... inside the church...[as the] Vatican’s core theological and political conservatives aligned themselves with America.... The American branch of the church... raised more donations for the Pope than the next *dozen* countries combined... New York’s Cardinal Spellman...[was friendly] with almost every key US political power broker... [and] worked hard to arrange support... for the church’s covert role in the first postwar Italian balloting.... Spellman-- mocked as ‘the American Pope’ by some Italian clerics-- arranged for a series of fall visits to the Vatican for 18 US senators and 48 congressmen. Some Italian diplomats... resigned...[in protest, but]...Pius ignored that critique as well as the Lateran Pact’s [which his older brother had negotiated] prohibition against the church

²⁶³³ In 1941 young Red Cross worker Branko Bokun recorded in his diary for June 26-- only a month after Pope Pius XII had granted Croatian Ustaše founder Ante Pavelić’s request for a full private audience-- that ““These Catholics [in Yugoslavia] are killing Serbs and Jews, because in their primitive minds they are convinced that it will please the Vatican. If the Vatican does not intervene immediately, the fight between Serbs and Croats will reach such proportions [that] it will take centuries to die down’. The Pope and his advisors were probably better informed about what was happening in Croatia than any other country. Every Ustasan military unit had a priest as a field captain. The Pontiff’s Undersecretary of State, Monsignor Giovanni Battista Montini-- later Pope Paul VI-- was in charge of collecting reports from both Croatia and Poland. Aggrieved clerics sent Montini chilling accounts of the atrocities. Every day he briefed Pius, who had a reputation as a Pope who wanted the details. In... Venice, Pavelic [had] boasted to the Italian Foreign Minister as well as [to Vatican Bank honcho Bernardino] Nogara’s good friend, Guiseppe Volpi, that Croatia’s Jewish population had been reduced by a third.... [In 1942, a] frustrated British Minister to the Vatican...told his colleagues that Pius was hedging his bets on a Nazi victory.... [In] the wake of Hitler’s [Jan. 1942] promise to ‘liquidate’ Europe’s Jews, judgment that the Pope was partisan was reinforced when the Vatican opened diplomatic relations with Japan... [even though the US] and Britain had pressed Pius not to [do so].... Further evidence of the Vatican’s skewed allegiance came in a classified report by... Churchill’s Minister of State in the Middle East. Issued in the same month as Hitler’s speech, it was passed around a handful of [only] senior British ministers with ‘to be kept under lock and key’ stamped across the top. Based on extensive British intelligence data...[it] concluded that throughout a dozen Middle Eastern countries, ‘the Roman Catholic church has developed Fascist and pro-Axis tendencies, which dominate its spiritual functions’... [and] helped distribute fascist ‘political propaganda, and since the war [began] it has lent encouragement to espionage, sabotage and the escape of prisoners of war’... [It] recommended replacing partisan Italian clerics with ‘non-enemy nationals’...[but] That never happened” (Posner, 2015, 89-91). See also “Boards/Board Systems”.

²⁶³⁴ In ‘modern’ usage, “60 families of... aristocratic Catholics who stayed loyal to the Pope when Italian troops seized Rome in 1870” (Posner, 27). See also “Aristocracy (& nobility)”.

²⁶³⁵ In Nov. 1936, when “Pacelli visited the United States... he met with 79 bishops in 12 of the 16 American church’s Ecclesiastical Provinces. And the day after President...Roosevelt’s reelection, Pacelli met...[him] at his Hyde Park home. There is no indication that the Ethiopian invasion [by Italy, 11 months earlier] was discussed. Instead, Roosevelt was concerned with the wildly popular but bigoted radio broadcasts of an American priest, [Father] Charles Coughlin. And Pacelli wanted...the United States to reestablish diplomatic relations... Although the substance of those talks was never to be disclosed, the results were evident. Two days after the meeting, Coughlin announced the last broadcast of his provocative [radio] show that [like Alex Jones, 8 decades later] reached 30 million listeners. And Roosevelt eventually bypassed resistance in Congress to restoring diplomatic relations with the Holy See...dispatching industrialist Myron Taylor as his personal envoy” (Posner, 2015, 71).

being involved in politics.... The church revived Catholic Action... and it organized...voters across the country. The CIA [no pun intended] sent in millions in covert aid and used the fear inside the vatican to cement a [still] firmer relationship with the ranking prelates... [orchestrating] a campaign that mixed together propaganda and political sabotage (the lessons learned in that election became the template for helping handpicked candidates win on other countries).... It [was] the church's greatest role in secular politics since the mid-19th century when it controlled the Papal States".... The communists had vowed to repudiate all the church's special treatment...[The new PM] Gasperi reaffirmed Mussolini's financial pact with the Vatican, including its tax-free status and complete independence from any Italian scrutiny regarding its financial affairs.... [In June 1949,] Pius announced that he would excommunicate any Catholic who 'defend(ed) and spread the...doctrine of Communism'.... [And] Cardinal Tisserant decreed that communists could no longer receive Christian burials"²⁶³⁶ (Posner, 2015, 152-155). See also "Central Intelligence Agency (CIA)", "Death Culture".

9) "The two papal statements in the modern era preceding the [1960's] Second Vatican Council²⁶³⁷ which are most often...cited by Roman Catholics as supporting lofty Christian social justice principles, Leo's 'RERUM NOVARUM' [1891] and Pius XI's 'QUADRAGESIMO ANNO' [1931], offer nothing that addresses the mortal sin of interest, except to evade the responsibility to teach the truth that was always taught, before [in the words of Paul VI,²⁶³⁸ 1972] the '*il fumo di Satana*' (smoke of Satan) entered the Church" (Hoffman, 2013, 385). See also "Mafia", "Intelligence Community (IC)".

10) In fairness, Pope Francis was noted as observing, in 2018, that "Usury humiliates and kills.... Usury is a grave sin. It kills life, stomps on human dignity, promotes corruption, and sets up obstacles to the common good" (). *mhc*; although "usury" was defined as only "*unreasonably high rates of interest*" that somehow "must be prevented [only] through education."- *mhc* ().

11) Vatican Bank Updates: <https://needtoknow.news/2022/07/vatican-sells-commemorative-coins-promoting-need-to-be-vaccinated-against-covid-19/> [7/22]. See also "COVID" [Latin America].

See also "Industrial Revolution, 1st", "Venice, Republic of", "Adolescence of Mankind".

[from Sovereign Military Order of Malta, to 60 Black Nobility families, c.1870]

²⁶³⁶ For more on Pius XII's burial, see Posner, p.596, n62; p.167.

²⁶³⁷ In "Vatican Council II, we can see what outsiders may regard as surprising efforts to apply Western traditions to an organization which, to most outsiders, and even, perhaps, to most insiders, must appear as one of the most authoritarian organizations ever created" (Quigley, 1966, 1230). For example, in 1951, when priest Giovanni "Giampietro joined the Pontifical Institute for Foreign Missions' seminary in Milan, Italy-- and [Jesuit 'Superior General of the China mission' Matteo] Ricci [c.1597-1610] had been dead for 341 years-- people still hesitated to speak about him. 'Each time I heard the name Matteo Ricci, there was a sense of something dangerous, something controversial', says Giampietro... It wasn't until the mid-1960's, after the Second Vatican Council, that Ricci was rehabilitated by the Church and [subsequently] embraced as a model of openness" (McHugh, 2019). Ricci had supported some core Chinese traditions such as the veneration of family ancestors. Dominican and Franciscan missionaries considered this an unacceptable accommodation, and appealed to the Vatican on the issue, subsequently known as the 'Chinese rites controversy'. See also "Civilization, Western", "China", "Globalism", "Design".

²⁶³⁸ Although this author would not disagree with Hoffman's insinuations about what Paul VI was primarily getting at (the homily does mention "the Council" [of Vatican II] by name, which did famously remove "anti-Jewish language that had been a hallmark of the Catholic liturgy for centuries" [Posner, 598]), the "absurd contradictions" that pontiff bemoans seem also to go deeper. After the liberal Pope John XXIII (r.1958-63) and the initiation of 'Vatican II', conservatives such as cardinal Siri thought that it would 'take the Church 50 years to recover from his papacy'.... The bad news, at least for the CIA, was that the [northern European] progressives had coalesced around [one of the CIA cold warriors' least favorite cardinals] Montini. This development...[seems to have been] due to the spreading of a rumor: on his deathbed, Pope John had supposedly said, 'Cardinal Montini would make a good Pope'.... the same prelate whom Pius XII had passed over as a cardinal to ensure [that] he would not be eligible to become Pope.... [New York & CIA cold warrior honcho cardinal Francis] Spellman criticized Montini for lack of zeal when it came to fighting communism. Montini's personal assistant, Father Pasquale Macchi... was an avowed socialist...[and] The Cold War was on Spellman's mind.... [But] ever the politician...[he] saw a chance to refurbish his standing at the Vatican by helping put Montini over the top. The two cardinals met the day before the conclave. At the end of their three-hour caucus, Spellman had committed not only his own vote but also those of the 4 other American cardinals.... On the 6th ballot... the 65-year-old Montini had the necessary votes...[and] took the name Paul VI [r.1963-78]" (Posner, 2015, 174-75). However, some "controversy developed when Italian newspapers reported that the CIA had the news about the new Pope before it was announced outside the sealed enclave... [leading] to speculation that the CIA had bugged the Apostolic Palace" (Posner, 601). Of course Usury and the CIA are not mutually exclusive.

Vault Cash- (a.k.a. 'cash reserves'; formerly gold/silver reserves) cash purchased by a bank/state-monetized credit institution from the Central Bank, for servicing withdrawal demands from demand (TAB) account holders. Vault cash is one of the 2 kinds of interbank [Reserve/RAB] money. It is a debit on banks' CB account (until that paper is claimed by a bank). Vault cash (which includes ATM balances) counts towards state-monetized credit institutions' Reserve requirements²⁶³⁹, but it is **about as cumbersome** for banks to get as it is for non-bankers.

See also "Cashless Society (War on Cash)", "Reserve Account Balance (RAB) money".

Veblen, Thorstein (1857-1929)- 1) American economist who coined the term "neo-classical Economics" in 1900; and "whose Absentee Ownership (1924) described urban development mainly as a game of real-estate promotion, and traced how financial managers were taking over industry and loading it down with watered costs. Veblen coined the term *conspicuous consumption*...criticizing individualistic analysis by showing the degree to which personal tastes were *socially engineered* by advertisers and other *vested interests*, a term which he also coined.... Post-classical economists accused Veblen of being more a sociologist than an economist as such, and the discipline narrowed²⁶⁴⁰ its scope to exclude as 'externalities', the dynamics on which Veblen focused his analysis and wit. But he in turn coined the phrase "*strategic sabotage*" to describe how economic theorists sought to exclude from discussion the factors most important in shaping economic life" (Hudson, 2015b). See also "Neoclassical Economics", "Clark, John Bates (1847-1938)".

2) "The vested interests, he said, were the people who actually run society; and they run society by dumbing-down economics. He wrote wonderful books on education and said that education is the ideology of the ruling class. The purpose of economic education is not to explain how the world works, but to give a vocabulary that will basically confuse people into believing that the world has to be the way it is, and that there is no alternative" (Hudson, 2016p, mn.15-16).

[Veblen]

Velocity of money- 1) "" (Huber, 2017,), (O'Flynn, 2018, 4).

2) Reserves/RAB has much greater velocity than "M1? (TAB); hence the "Ponzi scheme" schemata ($P + I > P$) is not valid. **Every single inter-bank transaction involves both of these kinds of money. The volume and the velocity, together, make the "payment rate", and the real purpose of money is payment. Reserves are often at about 10x less volume than M1, but also have about 10x more velocity. Hence, the overall payment rate is approx. the same. It's the rate of payment that is actually telling in the economy (as opposed to crude monetary volume). Huber (2017) sees the two payment rates as being approx. equal.**

3) In terms of bankmoney, after plunging in the Financial Crisis, the "velocity of [M2] money now... is down to about...barely above 1.25...vs. 1.75 before the inflation in the 60's... due to the increasing burden of private debt" (Keen, 2019c, mn.22).

4) However, the **velocity of FFs has increased from IOER.**

See also "Interest on Excess Reserves (IOER)".

²⁶³⁹ Effective Dec. 1, 1959, Fed "member banks...[have been] allowed to count part of their vault cash as legal reserves" (Federal Reserve Board, 2020).

²⁶⁴⁰ In the 1890's, the Univ. of Chicago's first president, William Harper picked the university's "first economist, J. Laurence Laughlin, from Andrew Dickson White's Cornell (he liked Laughlin's rigid...anti-populist views). [President] Harper drove out Veblen in 1906" (Gaffney, 1994).

Venice, Republic of (697-1797)- (the lynchpin for both the 'medieval' and 'early modern' in 'Western civ.'?; i.e. [the principle] innovator in most of the things that subsequent 'capitalist' societies have taken for granted, from 'separation of powers' & 'time is money', to paper credits-used-as-money & double-entry accountability for that process²⁶⁴¹)

"Balbi, a Venetian, being at Pegu [in Myanmar (to negotiate a trade deal)], was introduced to the king [there].²⁶⁴² When the monarch was informed that they had **no king** at Venice, he burst out into such a fit of laughter that he was seized with a cough, and [only] with difficulty could speak... What legislator could [even try to] propose a popular government to a people like this?" (Montesquieu, 292-293).

The Venetians were, indeed, an anomaly and forerunner of (what is still called) 'modernity'. From the "11th century onward, it is worth *reemphasizing* the centrality of mutual trust and cooperation among persons who were **not blood relatives**. Here, more than [just] in the...advantage of a more favorable 'protection rent', lay the long-range basis of western [imperial] power. Other societies found (and continue to find) it very difficult to attain the necessary level of mutual trust beyond the family circle... Greeks, Jews, and Arabs had long known the *colleganza* type of contract, but found it hard to trust partners who were not also relatives"²⁶⁴³ (MacNeill, 1974). See also "Civil National Identity".

1) In the beginning it certainly wasn't about bankmoney & "usury". "" (Zarlenga, 2002, 181). See also "Scholastics", "Usury", "Equity financing".

2) "" (Briys & de ter Beerst, 2006, 20).

3) Montesquieu observed that even though the Republic did clearly distinguish between Executive, Legislative, and Judicial powers, "the mischief is that these different tribunals are composed of magistrates all belonging to the same body" (1748, 153).

Unlike England, Venice possesses no mixed constitution where monarchical, aristocratic, and democratic interests are represented. Instead there is one class of rulers, and this hereditary body of nobles "can plunder the state by using its general wills; and, as it also has the power of judging, it can destroy each citizen by using its particular wills. In Venice liberty was eviscerated since "all power is one; and, although there is none of the external pomp that reveals a despotic prince, it is [nonetheless] felt at every moment" (*toute la puissance y est une; et, quoiqu'il n'y ait point de pompe extérieure qui découvre un prince despotique, on le sent à chaque instant*) (XI, 6). Without a doubt Montesquieu esteems Venice for achieving the most that can be hoped for in aristocratic republics, but he did so in the context of France and England developing better regimes. It is in his justly famous chapter on the English system of liberty that his true attitude toward Venice emerges, and he is certain that henceforth Venice's reputation-- and the image of aristocratic republics in general-- will [inevitably] decline. By the time of the American Founding, the government of Venice had [indeed] become a symbol for tyranny. One looks in vain among American commentators for the least regard for that formerly highly regarded republic (Storing, 1981, II, p. 157; III, p. 63, 82; IV, p. 106, 252; VI, p. 230). "" (Montesquieu, 1748,). See also "Aristocracy". See "Bills of exchange" (the tip of the iceberg), "Accounting, double-entry", "City (of London), the", "Oligarchy".

²⁶⁴¹ Like a ("medieval"-to-"[early] modern") counterpart to Ancient Sumer, the Venetian Republic pioneered (in chronological order): Separation of Powers & constitutional governance; 'reasonable' interest & a subsequent middle class 'time-is-money' society; the use of paper [i.e. fiat, or fiat-backed] credits-as-money & conspiracy theory (i.e. that the constitution was, actually, oligarchical [or at least supported the phenomenon of oligarchical decline]). Venice was more like a 'Ford', to Florence's 'General Motors'. See also "Civilization, Western".

²⁶⁴² Gasparo Balbi (1550-1623). a Venetian jeweler, was one of those cartoonishly one-sided 'sources' from the (original culture shock of) the 16th century. He described the negotiation, which supposedly happened during his voyage of the 1580's; "in the 'Collection of Voyages for the establishment of...[a Dutch] India Company'" (Ibid).

²⁶⁴³ It's not an exaggeration to say that the Venetian Republic made 2nd millennium Europe (like the Anglo-Americans eventually wrecked it), "Venetians were democrats before the 'age of Democracy' and capitalists before the age of capitalism. They were devout Catholics, yet they repeatedly defied the Pope; they maintained a republic in the midst of feudal Europe; and their aristocracy derived not from war leadership or seigniorial tradition, but from trade... For centuries the Venetian galley ruled the Mediterranean and the Venetian *ducat* was **the dollar of its day**. Yet Venetians were also extraordinarily precocious in the art of government. They evolved the most complex constitution of...[their] time and the most elaborate electoral system-- examples which were to influence both the English and the American revolutions...[T]hey pioneered the diplomatic system, created an organ of state security as feared in its day as the KGB or CIA today and, for all their capitalist spirit, restricted free enterprise... and developed a rudimentary form of welfare state" (Longworth, 1974, xiv).

[The (real) Western tradition? 1000 years of the Republic: "Marco Polo Sailing from Venice in 1271"; map from 1572; Venice.21]

Vested interests: A term coined by Thorstein Veblen to describe the *rentiers* with their property and financial claims, and who used their control of government to protect these claims and shift the tax burden onto industry, agriculture and consumers. See also "F.I.RE. sector", "Rentier", "Lobbyists".

Vicious circles- the original was between mortality & ignorance. See also "Design".

Violence- (sometimes a.k.a. the driver of class systems)

1) "Across the full sweep of history, every single one of the major compressions of material inequality... was driven by one or more of these 4 levelers"-- 'mass mobilization warfare', 'transformative revolution', 'state failure', and/or 'lethal pandemics' (Scheidel, 2017, 8). See also "History".
See also "Inequality", "Dynastic cycle", "Big picture", "Graeber, David (1961-2020)".

Virtual currencies- see "Bitcoin", "Blockchains".

Virtue, public- (ordered equality with one's fellow citizens; see also "Montesquieu" [.Rule-by-Virtue])

1) (long answer) <http://dictionnaire-montesquieu.ens-lyon.fr/en/article/1376475883/en> [Domier'13]

Virtual reality: "A kind of parallel universe created by interlocking sets of hypotheses based on deductive method. See *Decontextualization, Junk Science, Neoclassical Economics*" (Hudson, 2015b).
See also "Transhumanism", "Parallel universe", "Methodology".

Volcker, Paul (1927-2019)- (the straight-talking Chairman of the Federal Reserve Board, 1979-87)

1) "[T]he only useful banking innovation was the invention of the ATM" (Volcker, 2010).
2) "Another round of QE is understandable-- but it will fail to fix the problem. There is so much liquidity in the market that adding more is not going to change the economy.... [D]on't look to [Europe,] the UK, to China, Brazil or India-- the US is the only country that can create the type of economic hope and market leadership the world needs. We have a *weaker platform than we used to*, but it is still the most important platform in the world'."- Paul Volcker (Ebrahimi, 2012).
3) By 2018, however, the 'last real' Fed Head was no longer putting on an optimistic countenance: "" (Sorkin, 2018).
See also "Debt saturation", ↔"Debt money"; "United States", →"Criminalization of banking, the".

Volcker Rule, the- (was meant to re-assert some institutional separation between investment banking and commercial banking, after the repeal of Glass-Steagall in 1999)

1) Section 619 of the *Dodd-Frank Act* (2010) prohibits (FDIC) insured **state-monetized credit institutions** (d.b.t.: 'depository institutions') or any companies affiliated with an insured **monetized credit institution** from owning, investing in, or sponsoring *hedge funds* or *private equity funds*, subject, "to a number of statutory exemptions, restrictions, and definitions" (Federal Reserve, 2017). Such exemptions and loopholes substantially increased with the *Economic Growth, Regulatory Relief, and Consumer Protection Act* of 2018. See also "Federal Deposit Insurance Corp. (FDIC)", "Investment banks".

1b) The Volcker Rule, part of the enormous Dodd-Frank legislation, was "supposed to prevent systemically risky financial institutions [SIFIs?] from [Dark Pool] trading for their own account? After stalling the implementation of the Volcker Rule for years, when the SEC finally did get around to implementing a weakened version of it, the new pushed-out effective date became [instead of 2012] the summer of 2015"- <https://wallstreetonparade.com/2014/06/citigroup%e2%80%99s-dark-pools-here%e2%80%99s-why-the-public-doesn%e2%80%99t-trust-wall-street/>. See also "Dark Pool", "Glass-Steagall Act, repeal (1999)", "Wall Street".

Vortex, monetary- Normally centripetal (inward) and centrifugal (outward) forces are balanced in nature. 1) A vortex, in contrast, "is a breakdown in this balance...a temporary state of disequilibrium where centripetal forces overwhelm centrifugal.... Think of the power [that] this group at the center has.... Governments are dwarfed by it and are currently being sucked into the [debt>money] vortex. Greece being the most obvious example" (Vrabel, 2011, mn.116-17). "As long as people are willing to borrow more, the private cartel keeps the vortex inflating" (119). With any vortex, "energy from the outer bands is sucked towards the center...[and then] it is forced upwards. So the storm builds into...vertical... These are the *Hamiltonian vertical* [bifurcating] forces... [that] are driven by debt. Again *debt* is a sucking vortex force.... Basically driving more leverage into the system pulls the storm higher. So as we shifted from base money to...checking and savings accounts long ago, the storm grew in intensity...." (Vrabel, 2011, mn.121-23). 2) In recent decades, the "financial system has become a transfer payment system, to suck wealth and income upwards into the financial overgrowth" (Hudson, 2017b, mn.12). See also "Financialization". See also "Gross Domestic Product (GDP)", "Debt Money", "Monetization", "Debt cycles", "Financial-Politico-Complex".

Vortex of Bewilderment- The 'West' was not always a land of perma-war, 40-50% tax rates, debt-serfdom, declining literacy, and narcissistic revolt against untrendy parents. Such an otherwise irrational status quo can only be maintained by a comprehensive warping of the citizens' perceptions of (social) reality. Be it intentional or 'by accident', in recent decades the "spin" (salesmanship, persuasive messaging) of millennialist "consumer" society has-- for many if not most citizens (in the USA, at least)-- steadily escalated to something near a boiling point of mediocre institutions and gossamer, copy-cat designs. Transforming a *homo sapien* citizen into a bewildered (and unquestioning) consumer unit is not the easiest thing in the world to accomplish. To maintain a state of social learned helplessness (apathy and conformity), the former citizens, now subjects, must be hit with no less than 4 main components:

- 1)
- 2)

[Bewilderbeest life]

["Alas, poor..."]

[lion with pet wildebeest]

See also "**Corporate Media Cartel (CMC)**", "Debt cycles", "**Cultural Calendar**", "**Jacob's Ladder**".

Vote fraud- "Millions of Instances like them have happened Since, all over the Continent."

- John Adams (Adams, 1810).

1) "We've had vote fraud since the beginning of the republic, but digital systems [have] made it far worse" (Fitts, 2018p, mn.29). See also "Democracy".

Vrabel, Damon- an Ivy league former Army officer published a series of interesting monetary-deception videos about a decade ago: <https://www.youtube.com/watch?v=8ksFk329fKY> Among the novel points therein is that the 'globalist' cult(ure) of GDP, dominant in 'the West' for more than half a century now, is akin to worshipping an ever-accelerating whirlwind or vortex of commercial bank-issued credits, because GDP (the most unquestioned/international measure of our time) is simply a crude gauge of money changing hands. "We're trained to call this form of existence, quote 'freedom'" (Vrabel, 2011, mn.46). See also "Gross Domestic Product (GDP)".

Wall Street- 1) Before "World War 1" (i.e. the 3rd Currency War) "neither the stock nor the bond markets played much of a direct role in how the vast majority of US households saved money. Less than 1% of the population owned either form of financial security, whether issued by a government [as took off in the 1910's] or by a corporation [as took off in the 1920's]. Financial securities markets remained peripheral to how most firms raised capital. Americans judge both the bond and stock markets as marginal, even parasitical to the 'real' economy of production and commerce" (Ott, 2018). See also "Currency Wars, the", "Volcker, Paul (1927-2019)" [.atm].

2) Since the 1980's, the US stock market "has become a vehicle for corporate raiders and management buyouts, to borrow money to buy a company, to calculate how much profit a company makes, [and] to pay the profit to the bankers... just like a real estate investor would buy a building.... the winning bidder [is] whoever is willing to pay the most rent [interest] to the banks... [with] freshly created money²⁶⁴⁴ that banks create on their computer keyboards... Now the banks say that this isn't inflationary, that *only government money* creation is inflationary..." (Hudson, 2012b). See also "Value", "Homogenization", "Myths, Big 6".

3) Wall St. "depicts itself as part of the economy-- not as a wrapping around it... when in fact it's the parasite that is taking over the growth... It turns Adam Smith upside-down" (Hudson, 2016d). "Just in the last 2 years, 92% of corporate profits in America have been spent either on buying back their own stock, or in paying out as dividends to raise the price of the stock.... When you buy your own stock, that means you are not putting the money into capital formation. You're not building new factories; you're not hiring more labor.... the corporate raiders' model: you use the money to pay off the junk bond holders at high interest. This gets the company in such trouble, after a while... that... you then go to the labor unions and say: 'Gee, *this company's really near bankruptcy...And we don't really want to have to fire you. The way that you can keep your job is if we just downgrade your pension*'.... Eventually the whole thing is hollowed out, you shrink, and you collapse. But by that time, the managers will have left the company" (Ibid). How can Wall St. get away with such practices? Because "campaign contributors have a veto over who you are going to appoint as Secretary of the Treasury", Attorney General, and Chairman of the Council of Economic Advisers, "who are going to assure the people that Wall St. is really adding to the economy" (Hudson, 2016e, mn.9). See also "Parasitism", "Liquidity/liquify", "Money managers", "Asset stripping".

4) And those guys are so smart, right? "The ones that really succeed in the system [do so] because they are devoted to nothing else, generally don't know much, and aren't really worth listening to... listen to...Jamie Dimon speech at Harvard Business School... to see how a guy so admired by the 'elite' media... is a total empty suit, and still sounds like a college frat boy with nothing meaningful to say, even though he's in his 50's. This is an example of the type of person in his class" (Vrabel, 2011, mn.110). See also "Dollar Diplomacy", "Washington Consensus".

²⁶⁴⁴ I.e. commercial bank credits [TAB], monetized with government Reserves [RAB].

- 5) CDO short-seller Steve Eisman²⁶⁴⁵ would “go to meetings with Wall Street CEOs and ask them the most basic questions about their balance sheets. ‘They didn’t know’, he said. ‘They didn’t know their own balance sheets’” (Lewis, 2011, 174). “The people who ran... [the big Wall St. firms] did not understand their own businesses. And their regulators obviously knew even less. Charlie and Jamie had always...assumed that there was some grownup in charge of the financial system... [In Sept. 2008] they saw that there was not” (Lewis, ‘244-245’). See also “Accounting”.
- 6) “I’m not sure that...(Wall Street) actually wants to see...” clean & forthright accounting (Soll, 2012, mn.118). See also “Generally Accepted Accounting Principles (GAAP)”.
- 7) “Over half of the Chief Financial Officers... report that they manipulate earnings, because of their compensation system” (Black, 2016c, mn.34). See also “BlackRock”, “Accounting control fraud”.
- 8) “There’s an old joke, that the biggest lie on Wall Street is that ‘This time it’s different’” (Rothstein, 2017).
- 9) In 2014, *Dark Pools*, by WSJ reporter Scott Patterson, revealed that “by the mid 2000s, just 4 firms-- Automated Trading Desk, Renaissance, Tradebot, and Getco-- accounted for roughly 25 to 30% of all stock trading in the United States.”- <https://wallstreetonparade.com/2014/06/citigroup%e2%80%99s-dark-pools-here%e2%80%99s-why-the-public-doesn%e2%80%99t-trust-wall-street/>. See also “Dark Pool”, “Investment Banks”.

Walras, Leon (1834-1910)- See “Equilibrium”.

War- (that “which permits taking by force the wealth of other nations”)-<http://www.normeconomics.com/birth.html>
 “As soon as mankind enter into a state of society, they lose the sense of their weakness; equality ceases, and then commences the [‘Hobbesian’] state of war²⁶⁴⁶. Each particular society begins to feel its strength; whence arises a state of war betwixt different nations [teams]. The individuals likewise of each society [then] become sensible of their force: hence the principal advantages of this society [or team] they endeavor to convert to their own [perpetual or mortality-denying] emolument; which constitutes a state of war betwixt individuals” within a nation or society (Montesquieu, 1748, 5). See also “Mercantilism”, “Rentier”.

1) *Silent enim leges inter arma*.²⁶⁴⁷ Cicero (106-43 BCE)

2) There is a modern adage that “all wars are bank wars”. “Wars don’t happen unless the banks agree to finance them.... They use wars to make natural resource deals, etc.” (Steele, 2017c, mn.36). See also “Central Banking-Warfare model”.

2b) ...but also to create (in the mediated age) a constant state of **destabilized perception**, in order to control’ the host state itself. See also “Bernays, Edward (1891-1995)”.

3) After so many centuries of nearly-constant warfare, the following **aphorisms** should be **axiomatic** by this point: a] Clausewitz’s “War Is Merely the Continuation of Politics by Other Means”;

b] **Attackers**, it has long been known, often enjoy at least a 2:1 advantage in military numbers; &

²⁶⁴⁵ “‘Steve was one of about two investors who completely understood what was going on’, said one prominent Wall Street analyst” (Lewis, 2011, 175).

²⁶⁴⁶ War for that (social drug of) safety & security, via the primordial ‘raiding of the (barbarians’) surplus’, or other ‘unfair’ economic advantage... be it via direct physical robbing and/or indirect mercantilist-commercial “cheating”. See also “Franklin, Benjamin” [.aphorisms].

²⁶⁴⁷ common paraphrase of the original *Inter arma enim silent leges*.

c] *Defenders* usually win with an inflicted-casualties ratio in their favor; with a casualty ratio of around 1.2-1.6-to-1 (defense-to-attack) more likely to approximate a *draw*...

d] ...a.k.a. the *reversion back* to 'politics by more *normal* means of negotiation' (i.e. diplomacy or negotiated settlement).

e] Why would one side ever choose to stray from 'normal means of negotiation' and diplomacy? In the decades & centuries prior to the Information-Knowledge Age, at least one side [and of course much more typically the losing side] suffered from strategically *unrealistic objectives*.

In regards to the US, f.e., it may thus be inferred that in the *Revolutionary War*, the attacking British, although winning most of the battles, had unrealistic objectives (underestimating public opinion & nationalism), did not do much better than a 1:1 ratio on casualties, and-- apart from Canada-- did not obtain their objectives. It was then, in the *War of 1812*, the Americans' turn to have unrealistic objectives (mostly about the national identity of Canadians [a.k.a. the extant British N.America]); the attacking British then got much closer to inflicting nearly a 2:1 ratio of casualties, and achieved nearly all of their (more circumscribed and reasonable) objectives. A half-century later in the American *Civil War*, the confederate states had unrealistic objectives (no European power would intervene on behalf of the concept of extending slavery to California; British-imperial diplomacy was using [egging along] the confederates' political leadership). This reality gradually dawned over the conflict, despite some exceptionally bad generalship from the Union in the early years, which led to a roughly 1:1 ratio of casualties (including civilians)²⁶⁴⁸ during the war.²⁶⁴⁹ And soon thereafter, Britain and the somewhat-newly-constituted US were on the same sheet of music by the 1880's (first in foreign policy, then later domestic trends). See also "United Kingdom, the", "Pilgrim Society"; (Knuth, 1944); "[Cultural Calendar](#)".

4) "Economically, [war is] the major cause of national debt and inflation, and often of postwar deflations. Politically, war [also] serves as an excuse to centralize control of government in the hands of the few, and [particularly] in the Executive Branch of government" (Hudson, 2015b). See also "Secrecy, Cult of".

5) The centralizing phenomenon was of course known prior to the world wars of the 20thc. "By reducing...the faculty of borrowing within it's natural limits, it would bridle the spirit of war, to which too free a course has been procured by the inattention of money-lenders to this law of nature, that succeeding generations are not responsible for the preceding" generation (Jefferson, 1789c). See also "National debt economy", → "Lender of Last Resort (LoLR)", → "Bank welfare".

6) Through nearly all history, "[m]ost wars did not have any systematic effect on the distribution of resources... For war to level disparities in income and wealth, it needed to penetrate society as a whole, to mobilize people and resources on a scale that was often only feasible in modern nation-states. This explains why the two world wars were among the greatest levelers in history.... The [19thc] wars of the Napoleonic era or the American Civil War...produced mixed distributional outcomes...[T]he farther we go back in time, the less pertinent evidence there is.... and civil war[s] in developing countries tend...to render the income distribution *more* unequal, rather than less" (Scheidel, 2017, 6-7). See also "Central Banking-Warfare model".

6b) "It's good for launching new global organizations... organizations that exert a level of control and reach that didn't exist before. It's good for launching organizations like the United Nations and the European Union and the World Trade Organization-- dedicated to Globalism, which in turn is dedicated to planned civilization, in which the individual is demeaned and the group is All. Freedom is demeaned; and dominance by the few over the many is [then] hailed as peace in our time" (Rappoport, 2022e).

7) The major exception to a war economy's typical *debt-inflationary* (as opposed to 'redistributional') role is when one country has been "conquered... [wherein] You don't enforce debt contracts anymore. [After

²⁶⁴⁸ David Hacker's self-proclaimed "conservative" revision of Civil War dead, from (the notoriously ill-documented) 620k, to approx. 750k, does not include (approx. 50k) civilian deaths, and other serious casualties; likewise, fellow historian James McPherson has "always been convinced that the consensus figure of 620,000 is too low, and especially that the figure...[for] Confederate dead is definitely too low... My guess is that most of the difference between the [old] estimate of 620,000 and Hacker's higher figure is the result of underreported Confederate deaths" (Coker, 2011). See also https://www.nps.gov/nr/travel/national_cemeteries/death.html (nps.gov).

²⁶⁴⁹ Without the necessary European intervention, the Confederates would always have (at least) a 1:2 disadvantage in the number of troops mustered (given, from 1863, the Union's conscription & 'greenbacks' policy). See also "US (Treasury) notes".

World War Two, all Japanese and German] private debts were written off" (Keen, 2017j, mn.41). See also "Industrial Revolution, 2nd", "Debt cycles".

8) How many wars have really been won since the 1940's? See also "Industrial Revolution, 3rd".

8b) Wars in the 2nd Industrial Revolution [i.e. 'explodapedia'] were increasingly "unconditional" (meaningful); whereas wars in the 3rd Industrial Revolution [i.e. 'digitize everything'] have been increasingly "asymmetric" (meaningless). See also "Adolescence of Mankind".

9) Biowarfare? Think Chemical and Electro-magnetic. Viruses (in addition to being way less lethal) "are much harder to control. It's much easier to use chemical- and especially when...[combining] it with E.M.F. and cellular systems."- Catherine Austin Fitts (Rappoport, 2020, mn.5). See also "Mind control", "Internet of Things", "Fascism, 'Modern' Hand of".

9b) State aggression (a.k.a. warfare) today is "to conquer the *brains* [sic] of a country... to shape how people think and how they perceive the economy" (Hudson, 2020c, mn.116). See also "Mind control".

10) "I always say '*Debt = War, and Equity = Peace*... I believe we are going to have to convert to an **Equity [-money?]** economy'" (Fitts, 2016b, mn.7). See also "Central Banking-Warfare model".

11) "When all else fails, they take you to war"- Gerald Celente. See also "Industrial Revolution, 2nd".

12) Still salient in the 21st century? See also "International Intelligence Community (I.I.C.)", "Freedom continuum (maturation)", "Russia (& Ukraine)".

See also "World Wars", "Currency Wars, the", "Dollar-Diplomacy (& hegemony)", "Reserve currency".

Washington, George (1732-1799)- "First in war, first in peace, and first in the hearts of his countrymen."
- Henry Lee, December 26, 1799

1) Washington was also first in Imperialism and arguably even one of the first in *anti*-Imperialism:

"*Why quit our own* to stand upon foreign ground? Why by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European [imperial] ambition, rivalry, interest, humor, or caprice?"- Farewell Address of Sept. 17, 1796 (Peek, 1936). See also "Constitution, US (of 1787-91)", "United States" [Our Empire].

See also "Founding fathers (of USA)", "Constitution, US".

Washington Consensus- (the most prevalent [millennial-era] political labelling of 'neoclassical economics'- 'monetarism'; antec.: 'dollar diplomacy'; catalyst: 'Bretton Woods')

1) a term coined in 1989 for what US private banks (by then firmly at the monetary levers of power in Washington, D.C.) were working for in terms of foreign-economic policy; see also "*Dollar Diplomacy*."

2) "neoliberal 'conditionalities' imposed on debtor countries by the IMF and World Bank since 1980, forcing their governments to sell off the public domain to US and other international finance capital. Its greatest success was achieved in Russia after 1991, supporting the *kleptocrats* to privatize- and then sell off- the nation's mineral and oil wealth, dismantle industry, and impose monetarist austerity, rolling back wage levels and living standards, leading to severe depopulation [in Russia & Latvia, at least] and capital flight" from the 'recipient' countries in general (Hudson, 2015b).

See also "Depopulation", "World Bank", "Neoliberalism".

2b) The "World Bank and IMF know how to drain away reserves in hours, and how to...[sharply] raise interest rates... demolishing property values annihilating industrial production" (Walters, 1971, 399).

3) "They're [also] threatening [at times] that if other countries don't agree to follow US policy, the result will be to derange the entire global financial system. Instability will destroy many foreign countries, and in a grab bag the United States usually does pretty well, because it's economically self-sufficient- at least until quite recently" (Hudson, 2010e). See also "Angry Birds", "Reserve currency".

[See also “Angry Birds”, “Dutch disease”.]

Watergate- ; see “Free-Trade, practice”, “Sovereignty”.

Wealth- is not money; and money is not wealth (as the moon is not the sun)²⁶⁵⁰

“There is no [primary] wealth but Life.”- John Ruskin, 1860. See also “Ecological economics”, “Derivatives”.

“It is...[the] underlying confusion between wealth and debt which has made such a tragedy of the scientific era.”- Chemistry Nobel Laureate Frederick Soddy, *Wealth, Virtual Wealth and Debt* (1926).

1) is (broadly) resources, transformed by labor, into something(s) that human beings need (or desire).

2) is currently defined (in Washington) as simply (quantifiable, owned) assets, minus debt: “Wealth, or *net worth*, is the value of assets owned by a family, such as a home or a savings account, minus outstanding debt” (Horowitz, Igielnik, & Kochhar, 2020).

3) *tiers of wealth* (Daly & Farley, 2004,).

4) Hence, “with the [sector-balancing] Parity price available, that means that nobody is going to be able to short sell...[the farmers] and...[drag down] the market and steal the [real/primary] wealth that you have produced for pennies on the dollar, [and eventually] cause the whole economy to go into... [negative growth], because the [full] Parity price is always available” (Cook, 2022d, mn.44), as it was Once Upon a Time in America (1941-52). See also “Parity pricing (for the primary sector)”.

See also “Money”, → “Economics”, → “Usury”, → “State capture”; “Monetary reform”, “Economics, Parity”.

Western civilization- See “Civilization, Western”.

Whig- (6 usages, analogous to ‘the 5 W’s & H’)

- 1)
- 2)
- 3)
- 4)
- 5)
- 6)

See also “Deep State, UK”, “Monty Python’s”, “UKUSA Agreement”.

White-collar crime- (something more-or-less developed by the [see also] “English constitution”?)

Newsflash: most crime is ‘white-collar’ (i.e. paper/digital in nature).

1) “It is better that 10 guilty persons escape than 1 innocent suffer.”²⁶⁵¹- Blackstone’s *Commentaries on the Laws of England*, Book 4, ch.27 (Blackstone, 1770). See also “Blackstone”.

²⁶⁵⁰ Secretary Hamilton disagreed: “a country...like this, is possessed of little active wealth...in other words, little monied capital” (Hamilton, 1790, 1). See also “Great Extinction” [Quigley], “Lunatics”, <https://www.youtube.com/watch?v=0WGVgfjnLqC> [theGlobalizationSong’79]. See also “Globalization”, “Leverage”, “Lunatics”.

²⁶⁵¹ This is known, in criminal law, as “Blackstone’s ratio” to this day. See also “Common law”.

“All punishment which is not derived from necessity is tyrannical. The law is not a mere act of power; things in their own nature indifferent [i.e. sans intent] are not within its province” (Montesquieu, 1748, 299).

2) Now, in addition to causing vastly greater financial damage, “than all the ‘blue-collar’ crimes combined... actually [causes] more death, more people being severely injured, and... also causes [more] corruption of the entire system” (Black, 2016c, mn.9). See also “Corporations”, “Corruption”.

3) Blackstone’s fundamentals are again useful in determining why and how it has grown into such a colossal-scale problem. “[L]unatics or infants, as was formerly observed, are incapable of committing any crime; unless in such cases where they *show* a consciousness of doing wrong, and of course a discretion, or discernment, between good and evil.”- Blackstone’s *Commentaries on the Laws of England*, Book 4, ch.14 (Blackstone, 1770). See also “Corporations (and corporate ‘personhood’).

4) Not surprisingly, this (archaic tradition of) hypocrisy and inordinate privileges has led to (systemic) problems. “I have to say one thing. If you go back and you study the history of financial fraud and assassination in the United States, what you’ll hear is that They do something, and they get away with it. And they’re like ‘*Wow, we got away with it*’; and it emboldens them” (Fitts, 2022k, mn.9). See also “Slavery”, “Serfdom”, “Feudalism, neo”, “Oligarchy”.

See also “Central Bank”, “Accounting”, “Accounting Control Fraud”, → “Financial Crisis (of 2008-)”, → “Financial Stability Board”, → “State capture”, “Truth serum”.

Wildcat bank- 1) an “unsound bank chartered under state law during the period of uncontrolled state banking (1816–63)”, when banks were often established in remote and inaccessible locations, in order to discourage the redemption of their private banknotes; or...

2) [after 1863] any unstable bank (Britannica, 1998b).

See also “‘Free Banking’ (era)”, “‘State Banking’ (era)”, “Austrian School”.

Wilken, Carl (1895-1968)- (the post-Peek helmsman of [or at least principle lobbyist for] the 1940’s ‘par economy’ policy that enabled financing for World War II with extraordinarily low levels of debt; hence, like George Peek in 1920’s-30’s, a father of the ‘new Physiocrats’ or ‘Parity Economics’ approach. By the late 60’s it was said that Wilken had “spent more time testifying before Congress than any other American”.) See also “Peek, George (1873-1943)”.

“proved that *raw materials income* governed *national income*, unless the latter was expanded by debt” (Walters, 1994). See also “National income”, “Ninnies”.

“[T]he agricultural capacities of our country constitute it’s distinguishing feature: and the adapting [of] our policy & pursuits to that, is more likely to make us a numerous and happy people than the mimicry of an Amsterdam, a Hamburg, or a city of London.”- Thomas Jefferson (Jefferson, 1816b).

1) Wilken “lived so that he could form an answer to the contradictions of the free economy and the free society. An understanding of that answer is... [necessary] if the private enterprise economy is not to become another also ran in history’s yellowed pages” (Walters, 1971, 390). See also “Lobbyists (monetary & fiscal)” [George-Hayek-Graham], “Imperialism, American”, “Ninnies”.

2) “The American people have become a group of specialists, and have forgotten that each group is interwoven with every other group in the indivisible economy of the United States. As special groups gain advantage over each other, they immediately find that other **sectors**²⁶⁵² of *our* economy-- those which furnish the markets-- do not keep pace... In fact, a depression is nothing more than an unequal price balance [or *disparity*] between groups.”- See also “Parity pricing (for the primary sector)”.

1b) The “gist of Wilken’s [post-Parity era] argument...[was that the] economy now needed a governor, or [better yet] a man-made...valve that maintained a **balance** [or “parity”] between the several sectors of the [national] economy...[to allow] an orderly [and also, hence, sustainable] flow” between them (Walters, 1971,

²⁶⁵² Is “primary sector” the oldest ‘law’ in economic science & [see also] “political economy”? How long has mankind known that ‘all wealth originates in raw materials from the earth’? It is only fairly recently that “secondary” & “tertiary” sectors have even become at all comparable in scale. Even in the latter 20th century, over 2/3rds of the manufacturing sector “is a natural expansion of farm production...[broadly defined as] food processing, meat packing, cloth and fabric making...” (Walters, 1971, 388). See also “Common sense”, “Death culture”, “Parity pricing (for the primary sector)”, “Service sector, the”.

387); as opposed to the debt-fueled 'development' path of "compound interest, containment of unused population via the degradation of relief checks, institutionalized poverty, and war" (Walters, 388). See also "American System, the"; "Central Banking-Warfare model".

2) "" "Economics, 'Parity'".

2b)

3) Wilken was not too parochial to notice that his version of 'the American System' was then mis-matched to the world at large. In "outlining a program for the...[US], we should have in mind the 2 fundamentals of Income **unitive** production and price in terms of money. The Income of Nations determines their ability to prosper from *peacetime* production. World peace *cannot* be built on a foundation of exploitation and [ongoing debt] poverty among the masses. The fact that has not been given proper consideration in our foreign policy is that the world does not have the same kind of capital or monetary system in the different nations. The world has devised measures of time, length, and date which can be adjusted with accuracy from one nation to another. This is [however] not true of the monetary measurement. In addition to the different kinds of money, we also have fluctuations in their value.... Without a stable monetary [currency] measurement, there is no foundation for an equal exchange of goods" (Wilken, 1947). See also "Debt money"; "National Income", "Globalization" → "Ninnies", → "New World Order" [Graham, 1944]. See also "Primary Sector Economics (WPE)", "Democracy, economic", "World Par Economy (WPE)".

[Delivered the Jeffersonian promise, via Hamilton's "American System" principles.]

Wilson, James (1742-1798)- (primary author of Article II of the [see also] "Constitution, US")

Another lead attorney of/for/with (economic 'czar' & de facto prime minister [from ,]) Robert Morris, the was

Window Guidance- (synon. 'credit guidance', 'credit controls')

1) In 1875 Germany, "loan growth quotas [were] given to the banks.... The banks always do what the Central Banks tell them... because the Central Banks have enormous power over the viability of banks" (Werner, 2015b, mn.105-06). "The finance ministry should enter into loan contracts with the banks ...[which] create the **m**oney out of nothing through credit creation", as opposed to issuing interest-bearing bonds (Werner, 2015b, mn.112). In mid-20th century Japan, this prevalent practice was termed 'Window Guidance' from the Ministry of International Trade & Industry (M.I.T.I.). See also "Japan model".

2) Prof. Keen does not agree. "No... First of all, bureaucrats are easily out-maneuvered by credit creators. This has always been the case. I speak to plenty of people in the banking sector in the UK who tell me that-- they think it's quite funny-- they get invited to hear what new laws there are going to be at the Bank of England... It's a bit like criminals being told what the new laws are going to be for controlling the drug trade... discussing the laws before they're actually being implemented" (Keen, 2017g, mn.25). See also "Regulation", "Lobbyists".

3) Nevertheless Prof. Werner credits such "credit guidance" (not initial industrialization, washing machines, or women's lib) for the East Asian economic miracles of "Japan, Korea, and Taiwan, and [it was] then adopted by Deng Xiaoping in China to create the Chinese economic miracle of high [real GDP] growth.... [not just e-z money] asset transactions...[and] asset bubbles... and [also for] all these problems...[that are] happening in most other countries... [where the] bank regulators have not asked the banks to create credit for productive purposes" (Werner, 2018b, mn.35-36). See also "Politics" [in an 'ethnic' or 'civic'ly-bonded state]; vis-à-vis "Regulation".

3b) The PBoC “is the only CB left in the world that will admit officially that it’s still using credit guidance. All the others are sort of hush hush about it” (Werner, 2021, mn.59-60). See also “Federal Reserve audit”.

4) In other words, bankmoney doesn’t work adequately for society without a heavy governmental hand. See also “Inflation”, “Public-Private-Partnerships”, “Princes of the Yen”.

Wisdom- “‘To the wise, life is a problem; to the fool a solution’. ‘If you are distressed by anything, the pain is not due to the thing itself but to your own estimate of it; and this you have the power to revoke at any moment’”- Marcus Aurelius, 121-180 (McLynn, 2009, xiii).

‘We always may be what we might have been.’- Adelaide Anne Procter, c.1879

See also “Happiness”, “Wise men”, “Left brain, Right brain”.

Wise men- (see) “Montesquieu”²⁶⁵³ (framing the basic political/public Trichotomy); “Orwell” (expositioning the deep/technocratic nature of ‘Rule-by-Love-of-Honor’s inevitable demise); “Quigley, Carroll”+ (for documenting so many aspects of how much of this [basic/transitional problem,²⁶⁵⁴ albeit without decent theory] was known in the mid-20th century)²⁶⁵⁵; “George, Henry” & Edward de Bono (for pointing out or resuscitating humane ways of managing the transition [from Montesquieu’s intermediate category & its terminal Orwellianism]); and of course ‘proto-UKUSA’ era (reformers) “Soddy, Frederick” & “Graham, Benjamin”, for reviving (at least the idea-ideals of) common sense “Physiocracy” & international “Monetary Reform”²⁶⁵⁶ in the (otherwise war-obsessed & monetary-delusional) 20th century.

See also “Money”, “Reform”, “Primary Sector Economics”, “Ontology & Epistemology”, “Design”.

Women- “Every wise woman buildeth her house: but the foolish plucketh it down with her hands.” - Proverbs 14:1; [want to be psychologists and have nice offices](#).

See also “Left brain, Right brain”; “United States” [Massachusetts], “Civil National Identity”, “History”.

Wonderful Wizard of Oz, the- Frank L. Baum’s 1900 ‘childrens’ parable “is widely recognized to be a parable for the Populist campaign of William Jennings Bryan²⁶⁵⁷... [who vowed] to replace the gold standard with a bimetallic system that would allow the free creation of silver money alongside gold” (Graeber, 52). The “Populist reading” goes that “the Wicked Witches of the East and West represent the East and West coast bankers (promoters of and benefactors from the tight money supply), the Scarecrow represented the farmers (who didn’t have the brains to avoid the debt trap²⁶⁵⁸), the Tin Woodsman was

²⁶⁵³ “Montesquieu, in the preface to his *Spirit of the Laws* (1748, lxviii) wrote that: ‘Every nation will here find the reasons on which its maxims are founded; and this will be the natural inference, that to propose alterations belongs only to those who are so happy as to be born with a genius capable of comprehending the entire constitution of a state’” (White & White, 2008). Montesquieu may have been referring to his friend David Hume (1711-1776), who famously mastered civil society, civics (and philosophy in general) better than of his 18thc contemporaries (or predecessors). See also “Montesquieu, Baron de (1689-1755)”, “Revolution, American” [Hume].

²⁶⁵⁴ At least as much as Quigley (the analytical historian), Max Weber (the founder of Sociology) “was profoundly pessimistic about the possibilities of reenchanting the world. He saw little chance of escaping this alienating existence and saw not ‘summer’s bloom’ ahead but [rather] the ‘polar night of icy darkness and hardness’...[I]t was precisely because of this bleak future, he believed, that sociologists had a critical task to perform. Their constant scrutiny of the meanings and consequences of social action, their attempt to provide clarity in a confusing world was essential... to make informed choices and maintain our human dignity and freedom” (Adams & Sydie, 2002, 195).

²⁶⁵⁵ If one would wish to further distill this, the entire (so-called) ‘modern’ (from the 18thc→) world may be understood in (dichotomous cosmology) terms of “*Shivan*” forces (identified by the pessimistic Quigley [This is basically that, what might be called, ‘neo-Western civ.’ (state usury) trips up everything in its path], clearing the way for the main points and progressions of “*Vishman*” Montesquieu (a.k.a. “Separation of Powers”, →“Rule-by-Virtue”). See also “F.I.R.E. sector”, “Left brain [Quigley], Right brain [Montesquieu]”.

²⁶⁵⁶ Although Soddy (15 years older) and Graham did not (at least publicly) acknowledge the other’s existence, each of them published strangely complementary monetary tracts in the 1930’s-40’s-- with British Soddy being the status quo’s then-fiercest critic (at least in prose), and American Graham being (approx. 2 seconds after Soddy’s publications) the status quo’s most astute and serious-minded (international) reformer.

²⁶⁵⁷ “[T]here were already explicit political references in the stage version of 1902...” (Graeber, 398, n.24).

²⁶⁵⁸ And hence additional forces of urbanization, domestication (over the course of the 20th century).

the industrial proletariat (who didn't have the heart to act in solidarity with the farmers), the Cowardly Lion represented the political class (who didn't have the courage to intervene)... 'Oz' is of course the standard abbreviation for [an] 'ounce' of bullion (Graeber, 53). See also "Central Bank". See also "Gold standards/bullionism", "Monetization" [*WillieWonka*].

[‘Civic-Collectivist identity’-- where the CNI (of ‘free’ business associations) meets the CHA ‘third rail’ (of strategic authoritarianism). See “National Identity Cycle”.]

Work- See also “Civilization”, “Long-term Orientation (LTO)”; “Bullshit jobs”.

World Bank- (formal: ‘International Bank for Reconstruction and Development [IBRD]’, est. 1945; international bankmoney ‘development’s financier’; hq’d in DC, its President nom. by the PotUS²⁶⁵⁹)
 1) primary “Third World” “aid” (loans) administrator, on behalf of US, European, and member nations’ private banks; see also “Washington Consensus.” a.k.a. “*The International Bank for Reconstruction and Development* (IBRD), created by the Allied Powers in 1944 along with the IMF to finance the postwar reconstruction of Europe as a market for American exports and economic bulwark against communism. In the 1950s the Bank turned to lending dollars and other hard currencies to 3rd-world countries to finance their *export dependency*. It did not make loans in local currency, and hence was precluded from promoting domestic food production by family-owned farms²⁶⁶⁰. The effect was to promote export monocultures [“cash crops”] that concentrated wealth in the hands of client oligarchies, and to indebt countries... The ensuing balance-of-payments crisis enabled the Bank to work with the IMF after 1980 to withhold currency support (and hence, to threaten financial crises) from countries that did not agree to sell off their public domain to global investors. (See *Asset Stripping, Privatization, and Washington Consensus*)” (Hudson, 2015b).
 2) The World Bank’s “main [role] is to promote [or introduce] private banking... [thus making] the world’s #1 task... to give everyone a bank account”, despite such a policy not necessarily having a historical relationship to development (Clark-b, 2014).

²⁶⁵⁹ The World Bank is also, reportedly “owned 51% by the US Treasury. Its service to world oligopolies and as an institute for debilitation of 3rd world countries is legend... [B]ribe the local ruler, transfer the bribe [at that time] through Switzerland...[attain] the raw materials and assets, set up conditions for riots and IMF rescue, with an American constabulary ready to move if... [need be]. The...restructuring agreement is boilerplate” (Walters, 1971, 399).

²⁶⁶⁰ The US (and World Bank) “wants the world to become dependent on American grain and American agriculture. That’s been...[a primary] basis of American foreign policy since World War 2.... [The World Bank] only lends dollars, basically to buy US exports of infrastructure-- US engineering exports-- and [also] European” (Hudson, 2014). See also “Options and Futures”, “Imperialism, American”.

3) As one might suspect, “The inmates are running the asylum’, says a former director...[A large part] of the problem is philosophical: No one, starting with outgoing president Robert Zoellick, has laid out an articulated vision for what the World Bank’s role...[should be] in the 21st century. For example, economic superpower China remains one of the bank’s largest and most valued clients, even as it doles out development money to other countries and bullies the bank from aggressively investigating corruption. [And that’s not just financial favoritism.]... Internal reports, reviewed by *Forbes*, show...that even after Zoellick implemented a budget freeze, some officials operated an off-budget system that defies cost control, while others used revolving doors to game the system to make fortunes for themselves or [to] enhance their positions within the bank. Why not track all the cash? Good luck: Bank sources cite up to \$2 billion that may have gone unaccounted for recently amid computer glitches.... The bank, those inside and outside it say, is so obsessed with reputational risk that it reflexively covers up anything that could appear negative, rather than address it. Whistle-blower witch hunts... [are common] at a Washington headquarters dominated by fearful yes-men and yes-women, who-- wary of a quick expulsion back to their own countries-- rarely offer their true opinions” (Behar, 2012).

4) Conquering countries without resorting to military force “is what the World Bank is for. And that’s why the heads of the World Bank are almost all former heads of the Defense Department.... Finance is war²⁶⁶¹ (Hudson, 2016c). ”By following US advice, [tropical US client] countries have left themselves open to *food blackmail*– sanctions against providing them with grain and other food, in case they step out of line with US diplomatic demands [of the day]. It is worthwhile to note that our global imposition of the mythical ‘efficiencies’ of forcing Latin American countries to become plantations for export [“cash”] crops like coffee and bananas... has failed catastrophically to deliver better lives, especially for those living in Central America²⁶⁶².... witness the caravans and refugees across Mexico... [B]acking of the most brutal military dictators and crime lords has not helped either” (Hudson, 2019).

See “Client Oligarchies”, “Super Imperialism”, “Fascism, ‘Modern’ Hand of”,

World Economic Forum (WEF)- (in Davos, Switz. [Schwab] every winter ‘since 1971’²⁶⁶³; a.k.a. the Cabal)

1) “What do I have to say, listening to a bunch of P.R. statements?... What you really need is George Orwell going. ‘*We’re getting rid of governments and turning it all over to the banks*’.... The person running Greece is an appointee of the central bank. He was not an elected person” (Hudson, 2012).

See also “Oligarchy”, “European Monetary Union”, “Public Relations”.

1b) P.R. for what? <https://banned.video/watch?id=611d59ca8473755afd296fea> [creep factor 8/21]

1c) mostly “just a marketing front” or (eventually disposable) “chew toy”²⁶⁶⁴ for the CBs/Big banks (Fitts, 2022d, mn.44-45).

2) “Cyber-Polygon is the 2nd exercise hosted by the...[WEF], in coordination with... [the largest] state-owned bank...[in] Russia-- SBER bank [est. 1841]...and also with... the Prime Minister of Russia as well²⁶⁶⁵.... The [WEF] Partnership Against Cybercrime...[is] about creating...new ‘global digital ecosystems’ that are heavily centralized; ending anonymity online [supposedly] as a way to combat

²⁶⁶¹ What used to be military conquest-- conquering the land by military force and appropriating it on a hereditary basis is now being done financially with much less overhead. The objective is still to obtain the land-- by lending and foreclosure, and then emptying out the country; f.e. making room in depopulated Latvia for Swedish [or Islamic] settlers (Hudson, ‘2010’).

²⁶⁶² “The retail value of Latin America’s part of the world’s trade in bananas [then “almost 70%” of world trade “in fresh fruits”] is several billion dollars a year...[and] Latin America gets less than 7% of that value... [T]he United Fruit Company, which owns 2,000,000 acres of plantations in 6 Latin American countries, with 1,500 miles of railroad, 60 ships, seaports, and communications networks... handles about 1/3rd of the world’s banana sales and about 2/3rds of [America’s]. It controls about 60% of the banana exports of the 6 banana republics (Guatemala, Honduras, Costa Rica, Ecuador, Columbia, Panama)... [A mid-1950’s lawsuit] claimed that the...[UFC] controlled 85% of the land suitable for banana cultivation in 5 countries” (Quigley, 1966, 1129). See also “Latin America”.

²⁶⁶³ Founded half-a-century ago, in 1971, by Hery Kissinger and protégé Charels Schwab, “with a 50-year plan to implement [what they later termed] the ‘Great Reset’...[circa] 2022.”- <https://www.bitchute.com/video/yOeSksPCEvCu/> [Clay Clark, mn.27]. See also “Council on Foreign Relations (CFR)”, “Pilgrim Society”, “Great Extinction, 6th”.

²⁶⁶⁴ “Gates and Soros and Fauci and Schwab are being set up to be the chew toys” (Fitts, 2022d, mn.45). See also “COVID”.

²⁶⁶⁵ ‘Cyber-Polygon’ is being “co-hosted, essentially by a Russian government...entity...[despite] all this talk of ‘Russian hackers’...[making the US gov’t] have to implement all of these policies... to control what you do online” (Webb, 2021, mn.14). See also “Land bridge”, “I.I.C.”.

cyber-crime, ending financial anonymity specifically as a way to combat ransomware.... using 'COVID-19' to take more than they've ever been able to take before.... A lot of those things are 'solutions' that we will be offered in the event of the next big hack that takes lots of things offline.... [They're trying to mandate] government-issued i.d.'s...[in order to have] internet access...[a] 'driver's license for the internet'.... They want to be able to track people's finances" (Webb, 2021, mn.10-14). See also "Internet of Things (IoT)", "Public-Private Partnership (PPP)".

3) The "European banking cartels... belong to no one. They are a trans-national corporation-- a transnational trading guild, with offices...[in nearly every country]. These people belong to no one. They have no adherence to any culture, and their employees are ugly actors" (O'Connell, 2022b, mn.8).

3b) They are all "trying to build out...infrastructure for this digital Panopticon essentially... just using the same [old] nation-state conflicts that have been...[trotted out] for decades & decades [now], because they're familiar to people.... [even though it is primarily about] controlling the domestic population" (Webb, 2021, mn.15). See also "National Identity/Nationalism", "Conditioning".

4) The 'new' (since the 90's) "Global"-- or at least 'globalist'-- "Deep State"? The WEF's deep-pocketed "Global Leaders of Tomorrow" program was launched in 1992, changing its name, in 2004, to the *Forum for Young Global Leaders*-- "a 5-year program of indoctrination into [the European oligarchy] WEF's [Jeremy Bentham-esque] principles and goals, led by Klaus' daughter Nicole Schwab [b.1975]. The aim was-- and is-- to find suitable future...[managers] for the [Cabal's version of a] 'global[ist]' society. The program has since its inception included more than 3,800 politicians and public officials, royalty, business leaders, bankers, tech innovators, social entrepreneurs, philanthropists, think tanks, journalists, authors, artists and other cultural influencers from all over the world who have... not yet turned 40 years of age (originally 43 in order to include [fmr. young communists] Angela Merkel and [yes] Vladimir Putin)" (Nordangard, 2022). Here is a list of WEF 'Young Globalist' alumni. (Does it constitute a 'Globalist Deep State'?):

['Raising Gangsters...' since 1971;]

['Spot The script' since mid-90's.]

*- denotes CMC "meteoric rise" 'it boy'/'it girl', over the next approx. 2-6 years;

+ - denotes CMC (longer-term) main-stay, not starting noticeable rise until approx. 5-7 years after.

1993: *Tony Blair, PM of the UK (1997–2007)²⁶⁶⁶

+Angela Merkel, Chancellor of Germany (2005–2021)

+Vladimir Putin,²⁶⁶⁷ President/PM of Russia (2000–)

Viktor Orbán, Prime Minister of Hungary (2010–)

+Nicolas Sarkozy, President of France (2007–2012)

José Manuel Barroso, President of the European Commission (2004–2014)

(Business and tech entrepreneurs):

*Richard Branson, founder of Virgin Records and Virgin Air

Jorma Ollila, chairman of Shell Oil

Jacob Wallenberg, chairman of Investor

David Roy Thomson, chairman of Thomson Reuters

Bono, singer and co-founder of the ONE campaign

1995: *Paul Allen, co-founder of Microsoft

²⁶⁶⁶ "By the end of the...era...[Blair's] Downing Street policy unit was [like Enron Corp., 7 years before] stuffed with former McKinsey consultants, and former BBC director-general Lord Birt-- in charge of Blair's 'blue skies thinking'-- was also being paid a £100,000 retainer by McKinsey.... McKinsey's fingerprints-- their slogans and graphs-- were everywhere, from Cabinet Office presentations to the handbooks of NHS managers. They're still there" (Boyle, 2020, 58). See also "Big 4 Accounting firms-Management consultants", "Tickbox".

²⁶⁶⁷ "I have to say when I mention our names like Mrs Merkel, even Vladimir Putin and so on-- they all have been Young Global Leaders of the World Economic Forum."- Klaus Schwab, bragging at Harvard in 2017 (Nordangard, 2022; citing <https://pharos.stiftelsen-pharos.org/world-economic-forums-young-global-leaders/> [video clip of Schwab & Gergen]). See also "Putinomics".

Michael O'Brien, VP, **Goldman Sachs International**

1997: *David Filo, co-founder of **Yahoo**

1998: *Jeff Bezos, founder of **Amazon**

1999: *Pierre Omidyar, founder of **eBay**

2000:²⁶⁶⁸ Chrystia Freeland, Deputy PM and Minister of Finance, Canada (2019–)²⁶⁶⁹

2001: Crown Princess Victoria of Sweden

+Jack Ma, founder of **Alibaba** and **Alipay**

2002: *Larry Page, founder of **Google**

Carlos Lozada, Managing Editor, *Foreign Policy* (CFR)

2003: Carina L. Dennis, senior editor, *Nature Magazine*

Crown Prince Frederik of Denmark

Greg Hunt, Minister of Health & Aged Care, Australia (2017–); Australia's 'Covid-19' response

2004:²⁶⁷⁰ Prince Willem-Alexander of the Netherlands

2005: *Justin Trudeau, PM of Canada (2015–), used 'Emergencies Act' against peaceful protesters [then-mayor] Gavin Newsom, Governor of California (2019–)

Ali Y. Koç, president, Koç Holsings, Turkey

*Niklas Zennström, founder of **Skype**

Marc Benioff, CEO of **Salesforce**

Crown Prince Haakon of Norway

2006: Debo Adesina, Editor, *The Guardian* newspapers

Sanna Marin, PM of Finland (2019–)

Thani bin Ahmed Al Zeyoudi, Minister of State for Foreign Trade, United Arab Emirates (2020–)

2007: *Jimmy Wales, founder of **Wikipedia**

Queen Mathilde of Belgium

2008: +Elon Musk, founder of **Tesla Motors**

*Ed Miliband, Shadow Secretary of State for Climate Change and Net Zero, UK (2021–)

*Leonardo Di Caprio, actor and UN Messenger of Peace on Climate Change

*Anderson Cooper, anchor **CNN**

Kristine Stewart, CBC and Twitter Canada

*Shakira, singer

Karien van Gennip, Minister of Social Affairs and Employment, Netherlands (2022–) & CEO of VGZ health insurance (Nov 2020)

Ilir Meta, President of Albania (2017–)

Princess Lalla Salma of Morocco

2009: *Chad Hurley, co-founder of **Youtube**

Sebastian Kurtz, Chancellor of Austria (2017–2021), pro-vaccines but opposed to mandatory vaccinations (July 2021); had to resign in Oct 2021 due to alleged corruption, replaced by Schallenberg (who was less hesitant)

Anies Baswedan, Governor of Jakarta, Indonesia (2017–)

2010: *Mark Zuckerberg, founder of **Facebook/Meta**

Evan Williams, co-founder of **Twitter**

Ricken Patel, founder of **Avaaz**

Alexander De Croo, PM of Belgium (2017–)

²⁶⁶⁸ "Partner"/corp. sponsors for 2000 included "global companies such as The Coca Cola Company, Ernst & Young, Volkswagen, and BP Amoco" (Nordangard, 2022).

²⁶⁶⁹ De facto PM Freeland "was previously managing director of Thomson *Reuters* and deputy editor of the *Financial Times*.... In November, 2019, Ms. Freeland was appointed Deputy Prime Minister of Canada and Minister of Intergovernmental Affairs. In this capacity, she led Canada's...response to the COVID-19.... [A] board member of the WEF...[Freeland famously] "[t]hreatened protesters in Ottawa: 'Consider yourselves warned'...and later [in Feb. 2022] froze bank accounts of people supporting the Truckers for Freedom" (Nordangard, 2022). "[W]hat we are very proud of now– [even more than 1993 alumni Merkel & Putin, is] the young generation like Prime Minister Trudeau, President of Argentina [Mauricio Macri (r.2015-19)] and so on– that we penetrate the cabinets. So yesterday I was at a reception with Prime Minister Trudeau and I...know that half of this cabinet, or even more than half of this cabinet, are our... actually Young Global Leaders.... It's true in Argentina and it's true in France now, with the [YGL class of '16] President [Macron (r.2017-)]..."- Klaus Schwab, 2017 (Nordangard, 2022; citing <https://pharos.stiftelsen-pharos.org/world-economic-forums-young-global-leaders/> [video clip of Schwab & Gergen]).

²⁶⁷⁰ "Partner"/corp. sponsors since the 2004 name change have included "the Bill & Melinda Gates Foundation, Google, and JPMorganChase" (Nordangard, 2022).

Prince Bandar Bin Khalid Al Faisal of Saudi Arabia
Vincent van Quickenborne, Minister of Justice, Belgium (2020–)
Wyclef Jean, rapper

2011: Jagdeo Bharrat, Vice-President of Guyana (2020–)

2012: Crown Princess Mary of Denmark

2013: Ida Auken, Minister of Environment, Denmark (2011–2014), currently Folketing MP (and author to the infamous WEF article: “Welcome To 2030: I Own Nothing, Have No Privacy and Life Has Never Been Better”)
Chelsea Clinton

2014: Jacinda Ardern, PM of New Zealand (2017–), led harsh lockdowns
David Karp, founder of Tumblr
Leah Busque, founder of TaskRabbit

2015: Princess Reema Bint Bandar Al-Saud, Ambassador of Saudi Arabia to the United States
Tulsi Gabbard, American Democrat congresswoman
Ivanka Trump, Advisor to President Trump

2016: *Emmanuel Macron, President of France (2017–), initiated vaccine passports, wanted to “piss off the unvaccinated”
Jens Spahn, Minister of Health, Germany (2021–)
*Joe Gebbia, founder of Airbnb

2019: Juan Guaidó, President of Venezuela (2019–)

Gary Liu, CEO, *South China Morning Post*

Anjali Sud, CEO of Vimeo

Annika Saarikko, Deputy PM of Finland (2020–)

Carlos Alvarado Quesada, President of Costa Rica

Mamuka Bakhtadze, PM of Georgia (2018–2019)

Kamissa Camara, Minister of Digital Economy and Forecasting, Mali (2019–2020)

2020: Annalena Baerbock, Minister of Foreign Affairs, Germany (2021–)

Faisal Al-Ibrahim, Minister of Economy & Planning, Saudi Arabia (2021–)

Hammad Azhar, Minister of Energy, Pakistan (2021–2022)

Ugyen Dorji, Minister of Domestic Affairs, Bhutan (2018–)

Karina Gould, Minister of Families, Children & Social Development, Canada (2021–)

Paula Ingabire, Minister of Information Communication Technology & Innovation, Rwanda (2008–)

Shauna Aminath, Minister of Environment, Climate Change & Technology, Maldives (2021–)

2021: Zhengyu He, head of systems engineering, *Ant Financial* (spinoff of Alipay & basis for ‘the Social Credit system’ in China)

Martín Guzmán, Minister of Economy, Argentina (2019–)

Vera Daves de Sousa, Minister of Finance, Angola (2019–)

Ronald Lamola, Minister of Justice and Correctional Services, South Africa (2019–)

5) WEF Updates: 4/22: “The Megadeath Intellectuals of the Great Reset”:

<https://banned.video/watch?id=6260115cd905881a861e14a1> . See also “BMR Updates” [.Schwab].

See also “Deep State”, “Slavery”, “Jones, Alex”.

[The richest man in charge of public safety? Crassus’ fire brigade.]

World Par Economy (WPE)- (balanced, stable growth [in National Income; not GDP], + ecological sustainability w/o dependence upon the draconian stuff; i.e. the less-draconian ‘steady state’ of environmental-primary sector sustainability)

“[I]t is a maxim founded on the universal experience of mankind, that no nation is to be trusted farther than it is bound by its interest; and no prudent statesman or politician will venture to depart from it.”

- George Washington, letter to Henry Laurens, Nov. 14, 1778

Q: “Can you tell me why the bells are ringing? Nothing’s happened in a million years.”- Leonard Cohen

A: <https://www.youtube.com/watch?v=COCCp62oAy4> [Blue'83]²⁶⁷¹

(...**mostly** via >1 'Parity' model for national economies to choose anchoring their primary sector prices to, and the subsequent **replacing** of [**big gov't/arcaic**] subsidies [for 'everything under the sun'] with [**smaller gov't/publicly-accountable**] tariffs. This gives 'democracy' a chance-- via 'radically' simplified 'public law'-- over 'administrative [unaccountable] fiat')

1) requisites.²⁶⁷²

- International Monetary Reform- See "Graham, Benjamin (1894-1976)".

- at least 2 or 3²⁶⁷³ large-nation "**Par** economies (for anchoring)- See "Economics, Parity", "Wilken, Carl".
1b) In other words...

INTERNATIONAL Stability (based on mutually agreed upon, *equitable symbols* that to not inordinately privilege any nation or trading bloc [= basic political stability])
+ NATIONAL Stability (based on *primary sector security* [= basic 'real'-foundational wealth stability])
= the economic requisite for Montesquieu's prophetic "Rule-by-Virtue"²⁶⁷⁴

2) Also enables a de facto unification (via a "unit of account" accounting system) without necessarily having a de jure world "government"; i.e. it's a 'world reserves monetary system' not a 'world reserve currency' (.gov).

(Graham, 1944,).

See also "Primary Sector Economics (PSE)", ← "Economics".

[What's all the 21stc buzz about c.'2030'? 'Return to reality & flourish'.]

²⁶⁷¹ Some folks always knew what (main point) "Aristotle" & "Montesquieu" had in common. Nonetheless, their 'common' objective is easier said than done, given both the finite & global nature of the "Ecological economics" that we are (all) dealing with here (in the 21stc). Until it is mastered: <https://www.youtube.com/watch?v=Tw4cfaSv8JE> [Par/Harmony]. "Some...lean too far perhaps, in their belief in the perfectibility of mankind. Some...lean too far in their belief in the perfectibility of governments. But even the most cynical of the [non-Party] people...probably share a sense that there must be some natural system of money creation that would bring people and planet back into some kind of harmony, with themselves and with each other. The dream of a **sustainable system of money creation**"- English author David Boyle (Boyle, 2002). See also 'Economics, Parity', "Graham, Benjamin", "Idealism, American".

²⁶⁷² National-International monetary systems are always the intersection of the REAL world wealth and its abstract SYMBOLS that subsequently circulate or fly around. According to Sergio Rossi and Joseph Huber "[abstract] money and [real] production are the two faces of the same reality which is [in 'modern' times] therefore monetary as well as real" (Huber, 2017, 27). See also "Power", "Two Sides of the same coin".

²⁶⁷³ ...and ideally half-a-dozen or so. See also (the much-maligned) "Globalization".

²⁶⁷⁴ What's wrong with (the preceding centuries of) Rule-by-(military-Executive-timarchy) Honor & (see also) "Legalism"? Go ask (Deep State-"Shadow Government") Washington, D.C. itself. The real or "Deep"/"Shadow"/"Hidden" government has been increasingly ignoring the increasingly celebrity-fied (superficial) political government mouthpieces for more than half-a-century. As Pres. Eisenhower warned, it manifested in the 1960's; and was then mostly driven underground in the 70's, before metastasizing to total Executive Branch control (that eventually told [the supposedly 'sovereign'] Congress to go jump in a lake) in the 1980's-90's. In the first 2 decades of the 21stc, it is simply a banal observation to point out that 'they' ['Deep' and/or Shadow' Exec.] were, increasingly, running the whole puppet show that Donald Trump (was allowed to) intrude upon, in a somewhat experimental 4-year term [2017-20] exemplified by his non-Cabinet, non-DoJ, non-Office of Personnel Management (OPM), and even-- as revealed in the end-- non-Vice President. Nice circus. Meanwhile, government is still, at the end of the day, nothing but numbers, and the FASAB rolled on, less "accountable" than ever (at any time in the history of the [see also] "United States"). See also "Federal Accounting Standards Advisory Board" [FASAB-56], "Deep State", "Shadow Government" & "Intelligence Community (IC)"; "President of the United States (PotUS)", "Congress"; "Montesquieu" [theory], "Political economy", "Academia".

World Reserve System- (world reserves can be bundled commodities-based, not fiat currency-based, so why call it 'currency', if it's not de jure from a sovereign government²⁶⁷⁵?)

See "Graham, Benjamin (1894-1976)", "Primary Sector Economics (PSE)", "Main point".

World Trade Organization (WTO)- (est. 1995, Geneva; 164 members [2022]; antec. GATT [1948-94])

1) Originally 123 (1994-95) members

1b) China 2001; Taiwan 2002; Nepal 2004; Saudi Arabia 2005, Vietnam 2007; Ukraine 2008; Russia 2012; Tajikistan 2013; Laos 2014; Yemen 2014

2) Average tariff levels for the major GATT members were reduced from about 22% in 1947 to approx. 5% in 1999. See also "Free-trade", "Race-to-the-bottom".

See also "American System", → "Imperialism, American", "Globalization"; "Graham, Benjamin (1894-1976)", [yes, it's all about the] "Statistics", "Chinese statistics".

World Wars- see (in terms of the prize/objective) "Currency Wars, the", "Russiagate"; and (in terms of propaganda/'fighting words') "Culture".

1) There have been, in fact, 4 or 5 successive large-scale, very multi-national & trans-oceanic Wars since such endeavors kicked off in the mid-18th century (making the institution more Early Modern than [so-called] 'modern'):

a) The War of *Austrian Succession-7 Years War* (1st 23-Years War [1740-63]); demonstrated the decisiveness of British superiority in war financing and quartermaster supply lines.

b) The *Napoleonics & War of 1812* (2nd 23-Years War/2nd Currency War [1792-1815]); ditto lesson for France's New Regime, plus (eventually decisive) superior diplomacy (in what developed into a near total-war of attrition).

c) The *Great War/W.W.1* (3rd Currency War [1914-45]); the ultimate total war of bleeding-attrition looks like it would have actually been won by Germany if not for the (not-easy-to arrange) belated US entry into the total war.

[d] The [so-called] 2nd World War/W.W.2 (really just the 2nd half of the 3rd Currency War); Germany even more diplomatically out-foxed (if not so say bewildered) by the UK-USA establishment, with (newly Communist) Russia-Soviets doing most of the blood work of/unconditional surrender.

[e] The [so-called] "*Cold War*" (1947-91) that characterized the 2nd half of the century marked a gradual-- but also substantial-- de-escalation of the bloodiness of the 1st half of the century (and commensurate rise of 'asymmetric warfare'), as technology progressed from the (everything exploding) 2nd Industrial Revolution to the (more about 'mind war') 3rd Industrial Revolution and its increasingly mad dash to 'digitize everything' imaginable.

2) What was/were the main points? Basically the first 2 (23-Years Wars) were (ultimately unsuccessful) French-led efforts to break up the British "balance of power" status quo-- which prevailed in Europe from 1714-1914). They (France) wound up joining the club instead. More famously, the newly-unified and rising Germany did, in fact, deliver mortal blows (in the 1910's & 1940's) to the UK's old "balance of power" norm; but was, it seems ['tragically' one might say] unaware that the successor to British Great Power predominance in Europe (and the world) would be the (already [privately] anointed for that role) United States of America (with and/or without its USSR allies), not the (still pretty-diplomatically-isolated and out-foxed) German Empire/Deutsches Reich. See also "Currency Wars, the", "World War Two", "Russiagate", "Pilgrims Society".

2b) The ensuing US-USSR 'Cold War' (1947-91) was in some ways real and in some ways pseudo (or at least ridiculously exaggerated, for 'Hegelian' effect), but no one in their right mind took Soviet economics very seriously after the 1950's. See also "Cold War, the", "Hegelian dialectic", "USSR", "Mind control".

3) Of what geo-economic-political relevance is all this in the 3rd decade of the 3rd Millennium? See also "Imperialism, 'modern'", "Monty Python's", "Industrial Revolution, 3rd", "Design", "World Par Economy".

²⁶⁷⁵ On the US heritage of confusing conflation between the terms 'money' & 'currency', see "Hamilton, Alexander" [Hamilton'sFootbinding].

'World War One'- (a.k.a. 'the 3rd Balkan War', 'the Great War'; i.e. 1st half of the **3rd Currency War**)

1) British Intelligence/diplomacy only had to mess with/mess up Kaiser Wilhelm II just a little in order to make the Germans miss their original (c.1905) Schlieffen Plan strategy of a quick knockout/blitzkrieg (later demonstrated effective in a slightly different way by Hitler et al, in 1940, at Dunkirk). So it all got bogged down, and after 2-3 years of unprecedented gruesomeness, the Americans (inevitably) had to be called in (i.e. 'a tie goes to the Allies'). See also "Fin de Siecle", "Shell game, the".

1b) <https://www.youtube.com/watch?v=UUUtENLD5k> [ANZAC's'18]

2) The end result "changed everything. You [subsequently] had a reversion to the English-Dutch-American kind of banking that was called *merchant banking*.... [Whereas] "200 years ago.... instead of banking being predatory, as it had been for *thousands* of years-- instead of banks lending against real estate and assets and foreclosing and putting people in debtors prisons-- for the first time in history, banks were going to begin to make loans to actually create new means of production, to create industry, to finance factories and equipment that weren't already there. And this is what happened in Germany [in the latter 19thc]; it's what happened in central Europe with the Reichsbank" (Hudson, 2013b). See also "German (industrial) banking", "Industrial Capitalism", "USSR". See also "**Currency wars, the**".

'World War Two'- (a.k.a. 'plan B: the sequel'; i.e. 'the biggest case of mistaken identity/2nd degree homicide in the planet's history') see "**Currency wars, the**", "Hitler, Adolf (1889-1945)".

1) Although to some-- and increasingly in the 21st century-- it looks, sans emotional push-buttons, like simply the 2nd half of "The Great War" or "Europe's Second 30-Years War", in which the Treaty of Versailles undeniably set the table for what Eugen Weber called "a macabre version of American football"; for the dominance (and de facto economic unification) of the world's richest continent...

1b) ...to others, at the time (i.e. the mid-20th century) it looked rather different-- more like a genuine and philosophy-based clash of (2 different versions of) Western civilizations that had started to head in opposite directions. Two "antithetical ways of dealing with" the Fin de Siecle & industrialization-urbanization "crisis appeared. One way... sought a solution of this crisis in irrationalism...action for its own sake...[and the] submergence of the individual into the mass of his [ethnic] tribe, community, or nation in simple, intense concrete feelings and acts. The other [trend]... sought a solution of the crisis in rationalization, science, universality, cosmopolitanism, and the continued pursuit of eternal-- if rapidly retreating-- truth. While the great mass of people in Western Civilization...ignored [as usual] the... antithetical character of the 2 proffered solutions, drifting unconsciously toward the one or struggling confusedly toward the other, two smaller groups were quite aware of the antithesis and [intra-civilizational] rivalry of the 2 [diverging perspectives]. From...[this amplified] crisis... came World War II. Although few were consciously aware of it, this war became a struggle between the forces of irrationality²⁶⁷⁶, represented by Fascism,²⁶⁷⁷ and the forces of Western science and rationalization..." (Quigley, 1966, 835). See also "**Ethnic (National) Identity**", "German (Industrial) Banking", "Demonization", "Big picture".

2) "Before World War II, science was recognized by all to be a significant element in life, but few had any firsthand contact with it... It was reserved largely for academic people" (Quigley, 1966, 837). See also "Industrial Revolution, 2nd", "Civilization, Western".

²⁶⁷⁶ Or at least (rather) bad diplomacy. "" (). See also Sutton, 1976.

²⁶⁷⁷ According to Quigley the "culmination of the process of total irrationalism and total violence was Nazism, 'The Revolution of Nihilism'... [The entire] cult of Irrational Activism [typical of the first half of the 20thc] was based on the belief that the universe was dynamic and largely irrational... The cult of violence permeated all human life. By mid-century, the popular press, literature, the cinema, sports...all ...had embraced the cult of violence"; even though "[t]he victory of rational analysis...and organized scientific attitudes over irrationality, will, intuition, and violence in World War II [had supposedly] reversed the trend" (Quigley, 1966, 1225; 1226). See also "Industrial Revolution, 2nd", "Industrial Revolution, 3rd", "Fascism" [Nazis].

[It wasn't just 'the crazies'.²⁶⁷⁸ See also "Anti-semitism", "Dispensationalism" & "Zionism", "Oligarchy, American".]

'*World War Three*'- "Those are the contingency plans that are being drawn up now-- and redrawn almost every month-- in the Pentagon" (Hudson, 2016b). See also "Armageddon", "Zombie", "COVID".

X.O. (Executive Order)- (synon. E.O.; not to be confused with 'Equal Opportunity')

Sometime in the 1980's, the political term "Executive Order" (formerly known as "decree") became clearly more salient than the political term "lame duck". See also "Deep State", "Federal Accounting" [FASAB-56].

Yellen, Janet- (Chair of the Federal Reserve Board [2014-17]; US Secretary of Treasury [2021-]).

1) In 2005, at a speech in San Francisco, Yellen argued against deflating the housing bubble because: "arguments against trying to deflate a bubble outweigh those in favor of it" and predicted that the housing bubble "could be large enough to feel like a good sized bump in the road, but the economy would likely be able to absorb the shock" (Yellin, 2005).

2) "For my own part, I did not see and did not appreciate what the risks [there] were with securitization-- the credit ratings agencies, the shadow banking system, the S.I.V.s-- I didn't see any of that coming until it happened."- Financial Crisis Inquiry Commission hearing before Congress, Nov. 15, 2010. See also "Accounting standards & reform", "M.I.T.", "Greenspan, Alan".

See also "Tobin, James", "Federal Reserve Bank of New York (FRBNY)", "Shadow Banking Sector".

Yield curve, the- See "Bond yield curve".

Youth- How smart we thought we were in the hippy days. How ignorant we really were.

See also "Corporate Media Cartel/6 Sisters", "Baby-boom demographics".

Zarlenga, Stephen (1941-2017)- (metals trader, independent publisher, *Lost Science of Money* author, American Monetary Inst. founder, and father of the *National Emergency Employment Defense [N.E.E.D.] Act* of 2010-11)

"To gear one's thinking for disaster is not the way to proceed... that is not what man is here for-- to end up in a nuclear war which wipes out civilisation! That would make such a joke out of all human existence" (Zarlenga, 2007). See also "Sovereignty", "Monetary Reform".

1) "On very rare occasions a book appears which forever changes the way in which we perceive the world around us. Within a short while it becomes hard to understand how we could have functioned without the knowledge gained from it. *The Anglo-American Establishment* is such a book.... That the narrative ends in 1949 does not detract in any way from what is presented... [and the] fact that Carroll Quigley, a highly respected professor at ['establishment'] Georgetown University and [formerly] an instructor at Princeton and Harvard, could not find a publisher for this work, is in [& of] itself significant."

²⁶⁷⁸ It was the standard world view within the German Establishment (of which Kaiser Wilhelm II [r.1888-1918] was certainly a core part), through the long half-century of their rising, that 'freemasons & Jews' ran a global British Empire that caused most European wars (including World War 1) in order to keep the continent economically divided & conquered, and more land-based nations such as Germany in their place. Wilhelm was, however, soon appalled by Chancellor Hitler's tactics in the mid-1930's, even writing in public, in 1938, that der fuhrer "has made a nation of hysterics...engulfed in a mob and led by a thousand liars or fanatics.... He has left nothing but a bunch of shirted gangsters!"; and also that he was "[f]or the first time...ashamed to be a German". Wilhelm also expressly requested that no Nazi regalia be displayed at his funeral (in 1941; denied). See also "Ethnic (National) Identity", "Civil National Identity (CNI)".

- "Publisher's Note" to *The Anglo-American Establishment*, Jan. 8, 1981 (Quigley, 1981, vii).

1b) "The effect of what [Carroll] Quigley has done... is to focus attention on all of this [the validity of Quigley's 'conspiratorial' thesis], and that is the one thing that they can't stand. So [with what has transpired regarding the 'Quigley thesis', since c.1970], you either have to say that Quigley is one of them and [that] he's an idiot-- or you have to say that Quigley...[was] very shrewd.... [and] I just can't take the idiot view of him."- *The Anglo-American Establishment* publisher Stephen Zarlenga (Allen, 1983, 30). See also "Conspiracy theorist", "United States, the", "Peace Window, the".

2) *A Lost Science of Money ?* With or without (see also) "Parity pricing (for the primary sector)" makes the difference between 'in Practice' and 'in Theory'. See also "Monetary Reform", "Economics, 'Parity'". See also "Currency wars, the", "Fiat".

Zero interest rates policy (ZIRP)- See "Normalization".

Zero-Sum Activity- The only zero-sum gain in real macroeconomics is from countries "...running merchantilist policies. In some ways, the W.T.O. should be there to prevent and penalize countries that actually do that...There should be penalties on countries that run excessive trade deficits" (Keen, 2017], mn.29). See also "Gross Domestic Product (GDP)", "Current Account".

Zionism- (a.k.a. 'Jerusalem'²⁶⁷⁹, 'New Jerusalem', or 'city of David'; i.e. [originally] any religious-based political imperialism; predominantly [in 19th-20th centuries] associated with Judeo-Christianity²⁶⁸⁰; i.e. 'Dispensationalism & Zionism' movements [which are essentially twins-- both were born, developed, and will likely expire together.]) *Out of Zion, the perfection of beauty, God will shine forth* (Psalm 50:2). See also "Protestantism".

1) "Zion is a symbolic title for the elect [i.e. special/Chosen people, and].... the place where God dwells. This [classic definition] is often ignored today, because the word has been hijacked by political agitators... [who] reduce the word to a materialistic framework, but the title was always meant to convey something far deeper.... *Zion* appears as the equivalent of Jerusalem, either in parallelism (Ps 102:21; Amos 1:2; Mic 3:10, 12; Zech 1:14, 17; 8:3; Zeph 3:16), or alone (Jer 3:14; Lam 5:11). It is also used...[for] captive Jews in foreign lands and Jews in desolation (Isa 1:8, 52:2; Jer 4:31; Lam 4:22)"²⁶⁸¹ (Fahy, 2016). Hence, the Zion-church "is [effectively] the elect present in any given place.... The church is the elect.... [and the] invisible church is the total number of elect in God's decree, including those not yet born and those who have died" (Ibid). See also "Internet", "Design".

2) "Many orthodox rabbis [still] object to [so-called 'modern'] Zionism as being apostasy" (Fahy, 2016). How could that be (i.e. rejecting the British Empire²⁶⁸² giving them a country for free)? See also "Imperialism".

²⁶⁷⁹ More specifically, "the citadel, or...central strongpoint of Jerusalem.... It was a defensible rocky spur surrounded on 3 sides by steep valleys.... 'Zion' is a much smaller area, which is symbolic of the smaller number of elect people within the visible [Jerusalem] church.... It is where the Lord dwells (Ps 9:11, 74:2, 76:2, 135:21; Isa 12:6).... [and] It is the only place that God loves (Ps 76:68, 87:2)" (Fahy, 2016). "God expects you to reign in life (Rm 5:17) like David reigned in [Zion and] Jerusalem. He expects you to take authority and to work out his decree; most especially in the proclamation of the Gospel... You are a royal ambassador of the divine proclamation of Good News.... You cannot be a Christian enjoying the blessings of salvation and not be in the fight... [which] is mainly about deception and trying to get you off the place of power and authority, so that you become ineffective" (Fahy, 2016).

²⁶⁸⁰ I.e. bad cop-good cop routine, another variant of the ancient State's Janus-face, in this instance concerning: the *Legalism* ("throw the book at you") vis-à-vis *innocence* ('sheeple') dynamic, stemming from the State's need [given a hostile and/or dangerous environment, of course] to be able to turn on a dime-- or with a flick of the wrist. That's just the way it is-- or has been. See also Twain (1924, 455-56), "Land Bridge", "Dispensationalism".

²⁶⁸¹ Titus Flavius Josephus "never uses the name *Zion*, nor does it occur [much] in the New Testament, except in 2 quotations": "*You have come to Mount Sion and to the city of the living God, the heavenly Jerusalem, and to innumerable angels in festal gathering and to the assembly of the first born, who are enrolled in heaven*" (Heb 12:22); and also Rev 14:1.

²⁶⁸² Eighteenth & early 19th century "Britons... regarded their [expanding] nation as a new Israel, at the right hand of God, doing His work in the world.... Isaac Watts' best-selling translation of the Psalms...[in 1719 (quite literally)] replaced 'Israel' with 'Great-Britain'.... The divine mission of the British people had an earthly dimension which glorified the [common law] rights of Englishmen that were enshrined in the [informal] British Constitution, and secured to [3rd Estate] Britons by the [1st Estate] King in [2nd Estate] Parliament" (Samuelson, 1996). See also "Estates, 3", "Protestantism", "Civil National Identity".

2b) “How do you ‘reconstitute’ a nation [that is both Sephardim and Ashkenazi]? [I]n the first years of the 20th century [and even more so than today].... Not every [ethnic] Jew was a [political] Zionist; far from it” (Docherty & McGregor, 2017). To some, Israel often serves as the cat’s paw;²⁶⁸³ to others, Jewish Zionists are more like the cat itself. See also “Hegelian dialectic”, “Secrecy, Cult of”.

3) In the 1840’s, the 7th Earl of “Shaftsbury called upon the Crown not to grant full citizenship to England’s Jews, but rather to encourage them to emigrate to Palestine where they could fulfill the [”dispensationalist”] Divine plan [then being put forward by J.N. Darby]. He simultaneously began agitating for the creation of an Anglican bishopric in Jerusalem to counteract the influence of the Roman Catholic (French) and Orthodox (Russian) ecclesiastical presence already established in that area. By 1845, the Shaftsbury-Darby agitation was such that the Colonial Office produced a confidential report proposing ‘the establishment of the *Jewish nation in Palestine; as a protected state* under the guardianship of Great Britain’, which would place England ‘in a commanding position in the Levant from whence to check the process of encroachment... and, if necessary, to repel their advance’. In 1865, Shaftsbury was instrumental in the founding of the Palestinian Exploration Fund, which brought the Darbyites and other evangelicals, wealthy Jews like the Rothschilds and Montefiores, together with the highest levels of English aristocracy, to officially claim Palestine for the Empire. At the Fund’s founding ceremony... the Archbishop of York sermonized: ‘This country of Palestine belongs to you and me; it is essentially ours. It is the land toward which we turn as a fountain of our hopes; it is the land to which we may look with as true a patriotism as we do this dear old England’. The will of God had finally been brought into conformity with English foreign policy” (Minnicino, 2002, 65). See also “Dispensationalism” (a.k.a. ‘1620 zionism’ [not 19th-20th century Zionism]).

4) (Predominantly Ashkenazi) Jewry have been intermarrying with the British banking/imperial class for centuries. With the 1917 Balfour Declaration (one of the secret strategic objectives of World War One), a long-held British-Zionist²⁶⁸⁴ objective for the Empire²⁶⁸⁵ was established, for the 1st time ever, in the Arab world. ‘British Palestine’ proved extremely useful, if not vital, a quarter-century later in blocking German conquest of Arabian/Persian Gulf oil fields. The Nazis then lost North Africa, ran out of oil for their war machine (which was not really designed to fight on 2 fronts at the same time anyway), and, as they say, ‘the rest is history’. See also “Pilgrim Society”, “UKUSA Agreement”, “World War 2”.

5) A couple decades later (in 1967), when Israel “fought the 6 Day War, they realized that no one would be interested in [hearing] Israel ‘Cry Israel’, so they created an industry which in fact developed the story and the concept of the Holocaust. I’m not denying that... hundreds of thousands of Jews, Christians, and

²⁶⁸³ See “Hegelian”-- THESIS (bankmoney-bankmoney regime [‘Smith-Bentham tree’]) + ANITHESIS (socialism-communism [Rousseau tree]) = SYNTHESIS (constitutional Republic-Timarchy [with (eventually) state-supported bankmoney] [Hume-Montesquieu tree]).

See also “Timarchy”, “Capitalisms”, “Jefferson, Thomas ()”.

²⁶⁸⁴ Although both sides in the 2nd Currency War (a.k.a. the Napoleonic Wars) had courted Jewish favor, it was, in subsequent decades, primarily British [bankmoney] Imperialists-- who were the hatchers of (what came to be known as) *Zionism*-- mostly within the context of the (post-Napoleonic) Protestant revival in the UK & the 2nd Great Awakening in the USA. After Lord Shaftesbury, in 1839-40, took out a full-page ad in the *London Times* and presented a paper to Foreign Minister Lord Palmerston calling for the ‘recall of the Jews to their ancient land’, the idea [of, specifically, *Israel* ‘Zionism’-- as somewhat distinct from (good old) American ‘Manifest Destiny’ (also *zionism* [which **no one** criticized]) gained traction in the 1840’s [‘ironically’ at about the same time that ‘Manifest Destiny’ (its *antecedent*) was peaking]. By January 1851, the British parliamentarian Benjamin Disraeli had, according to Lord Stanley, at least outlined “a plan for restoring the Jewish nation to Palestine... [saying that] the country was admirably suited for them... [and that] **the financiers** all over Europe might help.... ‘Rothschild says I have given them up-- it is not true-- I can help **them** better in this way than in any other” (Cesarani, 2016). In the next decade, the Zion Society was founded in Frankfurt (1860), and Moses Hess’ *Rome and Jerusalem. The Last National Question* (1862) contained a detailed proposal for creating a Jewish-socialist state in Palestine, and is often credited with kicking off the international **Labor-Zionism** movement that would finally meet its objective with the Balfour Declaration of 1917.

After a century of ‘events’ later, Steve Piczenik, of the [International] **Intelligence Community**, observed of “the” holocaust and subsequent **I.I.C.**-type developments: “What happened [was] in ’65 the Americans pulled out of the Middle East, and suddenly Israel had to come up with a story-line. [So the answer was]: ‘Whoa! What about ‘the Holocaust?’... Again, it’s a manipulative technique.... [Cardboard Zionist, 3-time Israeli PM “Bibi” Netanyahu], that we [the US-IC] put there, [is] a totally spoiled, corrupt *brat* [sic], who went to M.I.T.” (Piczenik, 2019j, mn.40-41); see also: <https://www.haaretz.com/israel-news/premium.MAGAZINE-the-fake-nazi-death-camp-wikipedia-s-longest-hoax-exposed-1.7942233> ; “M.I.T.”

²⁶⁸⁵ According to Leonard Stein, it was particularly from 1914, that “a benevolent goodwill toward the Zionist idea” emerged in Britain-- when intelligence revealed how the Jewish Question could support imperial interests against the Ottoman Turks. ()

others were killed. What I'm saying is that there was an industry manufactured, by the Israelis, so that America could [then] support Israel to the tune of 4 billion dollars a year, over 10...20 years. That's about 80-100 billion dollars" (Pieczenik, 2019e, mn.3-4). See also "Land Bridge".

6) Today there "are 4 levels of Zionism & Jewishness...[1st] The Rothschilds & the mafia-- these people are generally more criminal than they are Jewish. The next [2nd] level... is the Zionist elements of the government of Israel... Then you have [3rd] the Loyal Jews who work *for* Israel, including many of my colleagues in the Mossad, who, as soon as they retire, reject Zionism and... this includes the *sayonim*... who betray their country by helping the Mossad with safe houses and rental cars.... within the United States.... The Mossad treats the United States as a gold mine.... And...[4th] the 9 million *loyal* Jews who are American citizens who love their country and in no way, shape or form should be blamed for the...evil that is being done by Zionism" (Steele, 2017h, mn.154-155).

7) is not yet a relic of 'modern' centuries' imperialism. Even today, president "Trump is under tremendous pressure not to do the 'make America great plan'. He's under tremendous pressure to do...[the] make Israel great plan" (Fitts, 2017p, mn.19). To what extent such traditional 'buffer politics' (using Jewish names & institutions to deflect away and/or lightning-rod attention from unpopular imperialist objectives in the 2nd millennium) are just 'for show', or constitute actual power structures today, is largely a matter of (what might be called) the 'banksters' vs. 'intelligence community' issue-- i.e. Zionists have always been more prevalent in the former than the latter (with the exception of the Israeli Mossad, which would seem to constitute only one particular faction of the global 'Intelligence Community' (and also of the UK-USA Intelligence Community). See also "Intelligence Community (IC)", "UKUSA Agreement".

8) In the 1980's, "when I...started moving up the system, the Pilgrims were in control. But they used the ziocons²⁶⁸⁶ to do their dirty tricks... if they wanted wholesale criminality to pull a lot of capital, they would use the Ziocons to do it.... You'll see throughout history [that] whenever you depend on somebody to operationalize, at some point...they lever up their power. So we go through the [2008-09] bailouts and suddenly...27 trillion dollars gets stolen. And suddenly the Ziocons are no longer [just] doing the dirty tricks; they're at the table.... [I]n the '90s, one of the head[s] of the FBI said that Israel was the greatest threat to [the] national security of this country.... There's a very strong relationship between the Ziocons and Israel... We are watching an explosion of government officials, politicians, [and] people in the military who have dual citizenship"- Catherine Austin Fitts (McKinney, 2017b, mn.15-16). See also "Israel (and Al-Qaeda-ISIS)".

9) "We're paying 20% of [Israel's] government budget right now" (Steele, 2012, mn.17), or \$30,000 per "year for every Israeli man, woman, and child, and most of that money is going into military spending and the repression of the Palestinians, which produces refugees" (Steele, 2017c, mn.47).

10) "The Anti Defamation League [ADL] is the common factor in every single aspect of censorship across entire spectrum of... [Google]...Facebook...Meetup...Twitter... YouTube...Wikipedia, and now [also some web platforms, such as] Disqus and [perhaps] Wordpress.com" (Steele, 2018b, mn.16). As of autumn 2018, the ADL attack dog is still lying about (denying that) the Bush dynasty patriarch having his assets seized²⁶⁸⁷ by the Roosevelt administration on Oct. 20, 1942, for being a key in the German industrial war machine, which was running mostly on slave labor at the time (Aris & Campbell, 2004). The Prescott Bush wikipedia page admits it, but the ADL does not.²⁶⁸⁸

11) Perhaps as many as "4 million Muslims in Gaza and the West Bank get no [meaningful] vote in...Israel-- textbook apartheid" (Moon, 2019f). Nonetheless, "60% of...[Israeli Muslims actually] voted [in

²⁶⁸⁶ The term 'Ziocons' "is a mixture of Zionists and [the more common Washington political term] Neocons... I call them the Neocons" (2017b, mn.11).

²⁶⁸⁷ Future US senator Prescott "Bush was the director of the New York-based Union Banking Corporation (UBC) that [exclusively] represented [key German industrialist] Thyssen's US interests... [continuing] to work for the bank [even] after America entered the war... Thyssen owned the largest steel and coal company in Germany and grew rich from Hitler's efforts.... [And Prescott] Bush was also on the board of at least one of the companies that formed part of a multinational network of front companies to allow Thyssen to move assets around the world" (Aris & Campbell, 2004); that is until they were no longer deemed necessary by the real PTB of that time (sometime earlier in 1942).

²⁶⁸⁸ <https://www.adl.org/news/article/prescott-bushs-alleged-nazi-ties> (both pages accessed Oct 2, 2018).

Sept. 2019] to get Bibi [Netanyahu] out. So there will be a coalition [government formed]... So hopefully Israel will [then] come back to a normal [non-Zionist] state, without having to go back to history and [attempt to use it] to manipulate everybody” (Pieczenik, 2019j, mn.40-41). See also “Government, Hidden”, “Israel”, “History”.

12) “The difference between Secular Jews and Fundamentalist Jews as regards the Third Temple [in Jerusalem] is [mostly] one of degree. The former are more patient, the latter more insistent” (Myers, 2019).

13) One should “...emphasize the difference between anti-*Zionism*-- which is every American’s responsibility-- and anti-*Semitism*, which is deplorable and should not be allowed. We have to close down the Zionist agenda²⁶⁸⁹ in the United States” (Steele, 2017m, mn.39). A.I.P.A.C. “is the agent of a foreign power” (Steele, 2017n, mn.38); and also “the biggest lobbyist group in Congress.... [W]e Jews represent less than 3% of the United States, yet we influence over 67% of all the people, all the Congressmen, all the Senators, all the Presidents-- all of whom have to abide by AIPAC’s dictates” (Pieczenik, 2019d, mn.0-1). See also “Land Bridge”.

See also “Anti-Semitism”, “Fin de Siecle”, “K.J.B. (King James’ Bible)/70 Year Plan”, “Imperialism”, “modern”, “Offshore banking centers”, “Bankism”, “Shell game, the”.

Zombie- (for ‘zombie apocalypse’ see “‘New World Order’”, “‘COVID’”) 1) the undead; neither fully alive nor deceased, despite a prolonged unhealthy condition, analogous to (undead, non-flushed) cancer cells [senescent cells] within a living body or tissue, the primary epidemic of our age, the principal dynamic of which is artificial *desiccation* (malabsorption of present nutrients). It is certainly an ironic monition²⁶⁹⁰ that this little age of blossoming anaplasia conforms to the current socioeconomic malaise of financial conquest. See also “Self destruction”, Appendix C: “1-2-3”, “Provocation operation”, “‘COVID’”.

2) Steve Keen, in 2016, identified 2 classes of debt-saturated “zombie economies” in 2016-- places where bank credit (i.e. monetary) growth is severely restricted. Class A²⁶⁹¹ “In a long-term slump now”, due to (the following) *private debt*-saturation levels, are: the USA (150%²⁶⁹²), UK,²⁶⁹³ Spain, Portugal, Greece, and--“the oldest of all the zombies”-- Japan (170%²⁶⁹⁴) (Keen, 2016e, mn.33); and “about 15” others in Class B “that are likely to be the next bunch of debt zombies.... in the next 1-3 years”: China (205%),²⁶⁹⁵ Australia (210%), Canada (210%), Sweden (240%), Norway (236%), Korea (193%) (and about 9 others²⁶⁹⁶)... Crises are going to be the order of the day... until we reduce the level of private debt” (Keen, 2016e, mn.34). See also “Debt saturation”, a.k.a...

²⁶⁸⁹ “Zionists are people who work for the Zionist state of Israel to subvert governments, banks, corporations, media, universities, and so forth. Zionists are enemy agents. Jews are loyal citizens. Let’s be crystal clear on it” (Steele, 2017o, mn.31-32).

²⁶⁹⁰ Such warnings go back at least 4 centuries: “Your gold and silver is cankered, and the rust of them shall be a witness against you, and shall eat your flesh as it were fire”- Geneva Bible, *Book of James* 5:3, 1602 (Hoffman, 2013, 110). See also “F.I.R.E. sector”, “*Corrosion-Cancer-Debt*”, “Parity pricing”.

²⁶⁹¹ High-private debt: “anything over 1.5x GDP” and “a debt level rising by 20% or more over the previous 5 years” (mn.35-36).

²⁶⁹² “All the debt zombies are trapped in that [150-200%] range-- where they can’t get their *private debt* down-- and nobody wants to borrow any more money anyway... So the central banks are pushing on a string in that sense” (Keen, 2016f, mn.21). See also “Debt, private”, which is much more salient to consumption/GDP than is the (much more commonly cited) US gross federal (public) debt, which crossed 100% of GDP in 2012. US private debt was still approx. “150%” of GDP in 2018 (Keen, 2019b).

²⁶⁹³ Britain was a relative later-comer to the debt-party. In 1980, the UK’s “private sector debt... was [a relatively modest] 62%. Today it’s 165%... almost...[tripling] in a mere 40 years” (Vague, 2020, mn.2). In France, meanwhile, it nearly doubled, from 108% of GDP, to an economy-killing “213% today” (Vague, mn.4). See also “Debt, private”, “Tax shift”.

²⁶⁹⁴ Japan’s private debt : GDP ratio has subsequently increased, however, to well over 200% (Keen, 2019b); and an aggregate debt of “400%” of GDP (Vague, 2020b, mn.101). See also “Japan model (asphyxiation), the”.

²⁶⁹⁵ China’s private debt level “went from about 100% [of GDP] to 200% in just about 8 years... the biggest bubble in financial history.... It has to end. You won’t see China going much beyond a *reported* level of, say, 225% of GDP [which was Japan’s 1995 peak]” (Keen, 2017e, mn.32); and “204%” as of year-end 2019 (Vague, 2020, mn.4).

²⁶⁹⁶ Malaysia (approx. 150%), in addition to “Singapore, Thailand... Hong Kong... [and] Belgium” are also soon (1-to-4 years) to join what Keen calls “the walking dead of debt” (Keen, 2016u, mn.9, mn.32).

[>150% debt-to-GDP/income-- 'that awkward moment for most (neoclassical) Economists']

3) Politically, the “EU crossed a fatal line when it smuggled through the Treaty of Lisbon [2007], by executive cabal, after the text had already been rejected by French and Dutch voters [2005] in its earlier guise” (Evans-Pritchard, 2016). See also “Discretionary (US budget)”, “Sovereignty”.

4) Global aggregate (public & private) debt, as of 2018, was approx. \$250 tn., vis-à-vis global GDP of approx. \$85 tn., yielding a global debt-to-GDP ratio of about 3:1. This is far, far beyond what is typically considered as being repayable debt. See also “**Corrosion-Cancer-Debt**”, “Usury”, “Monetary reform”.

Zombie economy- (a vernacular articulation of banks & corporations’ domination of [ever-rising] public-‘sovereign’ debt: <https://odysee.com/@Dryburgh:7/ernst-wolff-hedge-funds-coronavirus-ccp-world-take-over:d?r=FK4LfE3kq2QAAbgu76DE678EpPTacGNmm&unset=lbrytv> [Wolff, 2020, mn.2-3]; synon. with [see also] ‘Bretton Woods III’)

See also “National Debt Economy (**NDE**)”, “Great Extinction, 6th”, “COVID”; “Reform, 101”.

[m1] M. Pash prefers “Monetary Cycle” (mn.15)

[m2]? Abolished in 2007-08?

[m3] some of the banks/money creators’ best friends...
