

This "lexicon" is intended as "appendix" (and/or supplementary online) material, and does not include the first 8 chapters of the book (which is to be slightly shorter than the Lexicon material).

Color Codes for interpreting the various colors of font used in the "Lexicon" documents.

BLACK- White and Kenaga's original collaborative document as of Feb. 2016

BROWN- White's additional entries since then

BLUE- Dennis Kenaga's entries, and comments, mostly verbatim (or a website URL)

Light BLUE- Allen Smith's comments, mostly verbatim

RED- red-flagged material that must be revisited/revised-- more like a post-it note than a finished entry at this time

GREEN- newly coined Lexicon terms , f.e. "debt-free national money"

PURPLE- for a particularly salient point or key word

.....
Lexicon¹

*"English banking terms are designed to deceive people."*²

-- 'No rubber words here'³ --

"Don't only practice your art, but force your way into its secrets, for it and knowledge can raise men to the divine."
- Ludwig van Beethoven⁴

THIS PDF COPY HAS NO (MS Word) 'COMMENTS'

A.P. vs. A.T. (Advanced Placement, Aversion Therapy)- (only the lightning of knowledge may place one out of [having to go through another millennium-century-decade of] 'History as pretty much Aversion Therapy'⁵)
See "History", "Del Mar, Alexander (1836-1926)", "Wise men".
[the history of History': ancient-medieval, (early) 'modern', and millennial-era:]

[Basically how one deals... 'with animals' ('those who cannot speak' [ya'll's lingo]), '...with nations' ('those who will not listen' [to ya'll's lingo]), and 'with consciousness' ('those conspiracy theorists' [of the mediated-- and increasingly derivative-- world])⁶

¹ This "Part 1" (of 2) of the "Lexicon" definitional project was started over the winter of 2015-16, after the American Monetary Institute conference of Sept. 2015. Seven years later, the 1,060 page file became effectively unworkable in Jan. 2023. Henceforth, "Lexicon II" was started in Feb. 2023, and is current for subsequent developments and findings in (the comprehension of) political economy in the 21st century. Both Lexicon I and Lexicon II are online at: moneypedia.us and politicaleconomy.help .

² "How strangely will the tools of a tyrant pervert the plain meaning of words."- Samuel Adams, January 1776

³ "There never has been a time in our history when we have needed so sorely to hear good sense, to learn to define terms exactly, [and hence] to draw reasonable conclusions.... We are on the brink. It is possible to have another Dark Ages."- Agnes George de Mille, 1979

⁴ z English translation of excerpt from a letter to "Miss Emilie" (July 17, 1812). See also "Adolescence of Mankind" [7], "Music".

⁵ (i.e.) The further back you go, the more horrible it (the lesson/morals) gets. See also "Human beings", "Adolescence of Mankind";

"Conditioning", "Reverse psychology" (typ. how one deals with animals); "Eras of (Monetary) History", "'Conspiracy Theorist'", "Whig", "Freedom continuum (maturation)".

⁶ See also "Reverse psychology", "Adolescence of Mankind", and "'Conspiracy Theorist'", respectively.

Academia- “[T]his institution will be based on the illimitable freedom of the human mind. [F]or here we are not afraid to follow truth wherever it may lead, nor to tolerate any error so long as reason is left free to combat it.”- Thomas Jefferson, describing a university being constructed in Charlottesville, to assure English historian William Roscoe that the university's founders were “not afraid to follow truth” (Jefferson, 1820b).

In regards to money and economics-politics (however), [we still live in a book-burning society](#)⁷

“I don’t expect to talk in terms of sense.”- <https://www.youtube.com/watch?v=AeFYNMPMeWI>

[PetShopMorricone’87] See also “Orwell, George (1903-1950)”, “Gordian Knot”.

1) “...the dynamics of debt, and how the pattern of bank lending inflates land prices, or national income accounting, and the rising share absorbed by rent extraction in the...FIRE sector... are not taught in any university departments” in the US (Hudson, 2015, 2); “...I found academic theory [in economics at least] to be the reverse of how the world actually works. None of my professors had enough real-world experience in banking or Wall Street to notice” (2015, 5). See also “Learned ignorance”, “National Income”.

2) The “...world’s leading business schools...are endowed largely by FIRE-sector institutions⁸, as are the most influential policy think tanks. This academic lobbying steers students, corporate managers and policy makers to see the world from a financial vantage point. Finance and banking courses are taught from the perspective of how to obtain interest and asset-price gains through credit creation or by using other people’s money, not how an economy may best steer savings and credit to achieve the best long-term development. Existing rules and practices are taken for granted as ‘givens’, rather than asking whether economies benefit or suffer as a whole from a rising proportion of income being paid to carry the debt overhead...” (Hudson, 2011d). See also “F.I.R.E. sector”, “Usury”, “Groupthink”.

3) More recently, these traditional sponsorship problems have been compounded by banks’ usurpation of the deregulated student loan industry. Nowadays, a college education is priced “at however much a bank is going to lend against it, and the bank will lend” whatever it is said to cost, “because there is no risk or need for banks to say: ‘*Is this a junk education? Is this an educational loan that the student is really going to be able to get a job from?....*’ What’s happened is that the price of education has gone way, way up, because banks are basically funding an enormous growth in the *price* [sic] that universities can charge.... The idea was [that] with higher-priced education, you’d learn more. But that’s not what’s happening at all. The universities have been turned into profit centers. And they’re not hiring more professors. They are hiring... an enormous growth in middle-management and upper management.... The effect of student lending has been to *distort* [sic] the educational system.... [and] build up all sorts of extraneous things” like finance and administrative layers (Hudson, 2017k, mn.9-10).

4) In other words, universities’ “dominant [academic] specialty divisions have increasingly lost their life bearings, amidst [the ongoing/unarrested] planetary social and ecological collapse” (McMurtry, 2020). See also “Epistemological undergrowth (& the F.I.R.E sector)”, “Great Extinction, 6th”, →“COVID”.

5) During the last quarter of the 19thc, “Economists were called on to take sides-- and take sides they did. The American university system, particularly in the East, was dominated by strict apologists for the [European-UK] status quo. Simon Newcomb at Johns Hopkins, John Bates Clark at Columbia, J. Laurence Laughlin at Chicago, Charles Dunbar & Frank Taussig at Harvard, Arthur T. Hadley and

⁷ “I saw that publishing all over the world was deeply constrained by self-censorship, economics and political censorship, while the military-industrial complex was growing at a tremendous rate, and the amount of information that it was collecting about all of us vastly exceeded the public imagination.... knowledge will always rule ignorance. You can either be informed and your own rulers, or you can be ignorant and have someone else, who is not ignorant, rule over you.”- Julian Assange (Hastings, 2012). “The greatest obstacle to discovery is not ignorance-- it is the illusion of knowledge.”- Daniel Boorstin, 1984 (https://www.bitchute.com/video/Z_fGfjZrPfM [eBooks,mn.23-24]).

⁸ President Eisenhower warned that “the free university...[an important] fountainhead of free ideas and...discovery, has experienced a revolution in the conduct of research. Partly because of the huge costs involved, a government contract [euphemism: *grant*] becomes virtually a substitute for intellectual curiosity.... The prospect of domination of the nation’s scholars by federal employment, project allocations, and the power of money is ever-present, and is gravely to be regarded” (Eisenhower, 1961b, mn.9-10). Over the past half-century, however, privatization has led to corporate endowments surpassing government ‘grants’. See also “Groupthink”, “Public-Private Partnership (PPP)”.

William Graham Sumner at Yale⁹, all rose to defend the new industrial age and condemn the unions and populist causes. The provincial universities [however], with their roots in the agrarian and industrial Midwest, such as Wisconsin and Michigan...[were different]. It is important to note that many of the American apologists were not Manchester School-type [UK] liberals, but...[were] nurtured on 'American System' protectionism" (Fonseca, 2016). See also "Foundations", "American System, the".

5b) A century later, the *Bayh-Dole Act of 1980* (& its 1983 'amending') green-lighted the systemic corruption of scientific research, and the (formerly pristine) research institutions.¹⁰

6) American academia "is incredibly hierarchical... the ranking of 'mainstream' economists versus the rest.... [They] won't see it; they won't even look at the data."¹¹ Whereas in England... with a long history of being a truly liberal nation.... There's a tradition of letting other views be expressed here, and... of debate, which is certainly better than [in] America... that conformism in America..." (Keen, 2015d). See also "Dumb-downing".

7) This is "the fencing of the commons"; they've designed for intellectual and digital areas what they did to the land in the 18th-19th centuries, and it is "a very retarded...model" (Steele, 2017k, mn.28). Steve Keen (2017j, mn.27) agrees, that it is not just "specialization that gives you [productivity and economic] growth. It's diversity.... Collectively, for innovation to take place, you've got to have a diverse range of skills." See also "Productivity".

8) "I think peer review [..."simply a regression to the mean"] is hindering science. In fact, I think it has become a completely corrupt [oligarchical] system. It's corrupt in many ways, in that scientists and academics have handed over to the editors of these journals the ability to make judgment on science and scientists. There are universities in America, and I've heard from many [cookie-cutter] committees, that won't consider people's publications in low impact factor journals. Now I mean... it's not publish or perish, it's publish *in the right* [politically correct] *places* (or perish). And this has assembled a most ridiculous group of people.... [The system] puts the judgment in the hands of people who really have no reason to exercise judgment at all. And that's all been done in the aid of...[commercialization, groupthink, derivatives-think], because they [aca-publishers] are now giant organizations making money [accounts receivable] out of it"- Nobel Laureate biologist Sydney Brenner, 2014 (Lowe, 2014). See also "Big 6 (scientific publishers)".

9) "It's a fallacy to regard to regard universities as either a business or a government institution. They're something independent. They always have been... universities emanate from monasteries, where you had scholastic... individuals who would read and research and learn and teach... Attempting to corporatize it at one extreme, or bureaucratize it... undermines that...sheer curiosity basis, which is part of what makes education worthwhile.... learning for the sake of learnings (Keen, 2017j, mn.57). The "silozation" of universities has also been "amplified by the journal ranking systems...Because when you do cross-disciplinary work, you don't get published" (Keen, mn.59). See also "National Identity/Nationalism".

10) Money in particular has pretty much always been one of those black holes in academia, stretching back to the early 18th century Ivy League¹² colleges (Hoffman, 2013). The "problem that we really have is

⁹ Where...[have] they produce[d] the most CIA operatives? Yale."- <https://stevepieczenik.com/2021/10/22/oct-22-2021-war-room-w-guest-host-kristi-leigh-2/> ,mn.42.

¹⁰ "Before 1980, the Federal Government's consistent position was that the results of any research and development funded with taxpayer's money should be in the public domain...freely available to the public... [in contrast] to the intellectual property system The specific objectives of the *Bayh-Dole Act*... are to (1) encourage maximum participation of small business firms & nonprofit organizations in federally supported research and development efforts, (2) promote collaboration between commercial concerns and nonprofit organizations... and (4) protect the public against nonuse or unreasonable use of inventions.[n6].... A 1983 presidential memorandum expanded the scope of the *Bayh-Dole Act* beyond small businesses & nonprofit organizations to cover *any private party* to a funding agreement.[n8]... [and] extends to all 'funding agreements' for research and development" (Morrisson Foerster, 2002). See also "Transhumanism", "Corporations (and corporate 'personhood')". There's no corruption like institutional corruption. See also "'COVID'".

¹¹ A couple years ago at [research.pasteur.fr](https://www.research.pasteur.fr), someone posted: "Zinkernagel's theory about publishing papers:

Old method, old results, no way; Old method, new results, OK; new method, old results, OK; New method, new results, no way." See also "Groupthink".

¹² Monetary corruption, of course, did not predate (traditions of) being flat-out wrong. For instance, "Harvard still accepted Ptolemaic or earth-centered astronomy as late as 1670, and Yale even longer...[even though it was] Boston merchant [& Harvard's treasurer] Thomas Brattle

overcoming ignorance...[and] the fact that money is not taught... [F.e.] the fact that...[with] Larry Summers, the president of this university [Harvard, 2001-06], there was never a course here on money. When I say 'money' I mean the monetary system.... So overcoming that ignorance requires some sort of massive steps" (Bongiovanni, 2018'b', mn.9). See also "M.I.T. (Massachusetts Inst. of Technology)", "Minsky, Hyman (1919-1996)", "Eighteenth century".

10b) JP Morgan "certainly controlled the investments of Harvard, Yale, Columbia, and a number of other places. But not [of] Princeton. Princeton was controlled by the Prudential Insurance Company, through a man named [Edward Dickinson] Duffield [1871-1938]",¹³ Chairman of the Board of the Princeton Univ. trustees (Quigley, 1976b). See also "F.I.R.E sector".

11) The "bullshitization of academic life...is the degree to which those involved in teaching and academic management spend more and more of their time involved in tasks which they secretly-- or not so secretly-- believe to be entirely pointless"; "almost everywhere, academic staff find themselves spending less & less time studying, teaching, and writing about things, and more & more time measuring, assessing, discussing, and quantifying the way¹⁴ in which they study, teach, and write about things.... It's gotten to the point where 'admin' now takes up so much of most professors' time that complaining about it is the default mode of socializing among academic colleagues; indeed, insisting on talking instead about one's latest research project or course idea is considered somewhat rude.... Many editors at academic presses...tell me they haven't read¹⁵ even half the books they are supposed to have edited, since they are expected to spend almost all of their time drafting or reviewing proposals or marketing things to other members of the editorial board" (Graeber, 2018b). See also "Dumb-downing".

12) If a student "walk[s] in with a 45k-50k pound debt.... All the creative elements are constrained, and in fact it encourages people to be conservative about what they do with their minds and talents, rather than taking any risks, and that's the opposite of what capitalism is supposed to be about.... The market system fails when you talk about [more vital/(less volitional) matters like] health and education.... You think if you don't get the best education... so pay a fortune or remain on the scrap heap... which is absolutely unlike when you go down to the supermarket [perfect competition].... You simply can't accumulate knowledge about hospitals, about doctors, about schools/universities [monopolistic competition]" (Keen, 2016j, mn.1-2). In 1971-75 Australia, "students...didn't think they bought their degrees, okay? They paid the fees up front and they were over in one year... So they'd turn up to university and spend 3 days on campus... You'd be involved in discussions. You'd form your own dis-seminar groups, because you were there to be stimulated and educated... and you didn't expect to pass because you hadn't bought your degree.... But.... there's now a pressure to say '*I paid for it; why shouldn't I get it?*', and grade inflation¹⁶

[(1658-1713), who] made detailed observations of Halley's comet which...Isaac Newton...[would cite] in his *Principia Mathematica* [1687]" (Graebner, Fite, & White, 1975, 54). Maybe they were too busy with the Salem Witch Trials. See also 'Parity [earth-centered] Economics'.

¹³ How does it 'all' work? Chairman "Duffield put [15th Princeton Univ. Pres. (from 1933-57), Harold] Dodd in, and...[then] died-- leaving Dodd for years with no one to tell him what to do. So...[Dodd] had breakdowns every 2 years and they had to hide him away for a few months; yet he remained [like Woodrow Wilson] president of Princeton. I know these things because I knew these people. I lived with them, on a daily basis. I knew what was happening-- both at Harvard and at Princeton. My first job, 41 years ago, was at Princeton. Later on, I was asked to teach at Harvard. Now, this...[Rockefeller era] is a totally different system [from the (preceding) house of Morgan days]. All the universities' endowments were in bonds [back then], not in stock.... They set up foundations. Foundations were invested in bonds. If you are in bonds, then you want deflation, because you are interested in [maintaining] the value of [creditors'] money. But if you leave bonds, and cease being a creditor, and become an *owner*, then you have everything that you want, in what you call, [owner's] *equity*. And if you are [now] in equity [more than bonds], you want inflation. Today all the banks, all of the endowments [foundations] of the old universities, and all of the holdings of the Rockefellers are in equity" (Quigley, 1976b). See also "Stock markets", "Foundations", "Equity" [owners.], "Oligarchy, American", "Industrial Revolution, 2nd".

¹⁴ Are the lunatics running the asylum? "In American universities from 1985 to 2005... the number of full-fledged administrative positions [increased] by 85%-- and the number of *administrative staff* by 240%", even though student enrollments and faculty only increased by 50% (Graeber, 2018b). In the mid-20th century, "when people spoke of 'the university', it was assumed they were referring to the faculty. Nowadays it's assumed they are referring to the administration" (Ibid). See also "Bullshit jobs", "Usury".

¹⁵ Prof. Graeber himself, hardly an aca-bureaucratic careerist, confesses: "I can't remember the last time I read a book. I mean, like, a whole book, cover to cover. It basically never happens" anymore (Graeber, 2018b).

¹⁶ "In 1950... at Harvard, the average GPA was estimated at 2.55. Now, it's much closer to 3.80."- *Harvard Crimson*, Oct. 2022. See also "Dumb downing".

comes out of that.... The quality of students' focus on what they're learning has gone down dramatically over the years.... Marketization... has reduced its quality, quite significantly" (Keen, 2016j, mn.14-15). "In general the funding bodies remain hostile to pluralism, and because of that gate-keeping [groupthink] effect... pressure has to come from the students and the public to change Economics" (Keen, 2017, mn.27). See also "Economics", "Neoclassical revolution".

13) Basically "universities have gone from good places for being a rebel thinker, to lousy places for being a rebel thinker. I've had enough and I'm leaving" the universities (Keen, 2017l, mn.36). See also "Enlightenment, the", "Groupthink".

14) "My bottom line is: the schools are broken, and the universities are trash. I'm actually encouraging my 10th-grader to test out.... School is stupid.... [I]n the 1920's when Rockefeller and Carnegie... bought up all the public transportation companies and...created the school system intended to create docile factory workers" (Steele, 2012, mn.29-38), "who will sit still for 18 years and not question authority" (Steele, 2017j, mn.154). Is that a problem? "You just tell me the price and I'll buy...[the Boards] off...What you have are institutions that were...the *sine qua non* of liberalism & intellectual integrity [now being] totally corrupt-- *completely corrupt* [sic]! You have academics.... In the age of... the internet, you're telling me that... you're repeating the same PhD nonsense [that] you wrote 20 years ago? So they are [now] an anachronism.... [American] values are such that...[real American young people] want to make something of themselves. Going to Harvard doesn't mean anything anymore. You want to be Chinese? You want to go to Harvard? Go ahead. Pay them a couple hundred million. They'll take it.... These guys are basically whores.... 'We hire 23 more faculty'. What does that mean? It means nothing" (Pieczenik, 2019j, mn.48-49). See also "Industrial Revolution, 3rd", "COVID".

14b) Back in the 2nd half of the 20th century, "when there was less corporate money... you liked to believe that you could turn to the land-grant [state] universities..." for the discussion of financially controversial topics (Stauber, 2002, mn.55-56). See also "Enlightenment, the".

15) "He's not an intellectual by any stretch. He's an academic, not an intellectual" (Keen, 2020, mn.44).

16) 90% "of the errors in ordinary thinking are errors of perception... It is astonishing that in the last two thousand years education has done virtually nothing about perception. It is true that education tries to fill our minds with experiences from literature, etc., to enrich our perceptions. All this is pretty useless if we do not have a framework for taking charge of our perceptions" (de Bono, 1999, 44). See also "Physics, New", "Design".

17) de Bono, Stauber (and biologist Rupert Sheldrake) are not alone. "Only about a quarter of people getting science PhD's can hope to get a tenured [i.e. 'free'] academic position...[T]here's an [increasingly] intense competition for grants and for [even basic] jobs... all subject to peer review...a very conservative system...[that] favors conformity. [So] most people are very afraid to speak out in public; [but] in private they [often] have quite different views.¹⁷Actually the culture of science today is rather like Russia under [General Secretary Leonid] Brezhnev [r.1964-82]. The number of people who were [actually] committed Communists was [a] fairly small [minority]; but most people in public *pretended* to be, because that's the way you got ahead and got jobs and...promotions & stuff. And if you went against it [overtly] as a dissident, then you were sent to a psychiatric institution. It's getting like that in [so-called] 'modern' science.... [Although there are] lots & lots of scientists who are...open-minded.... yet, they don't tell their colleagues. They're afraid to mention it" (Sheldrake, 2021, mn.38-41). See also "Scientific method"; vs. "Science of assumptions" & "Oligarchy"/"Lobbyists".

¹⁷ "I know this for sure, for certain, because whenever I give a talk in a scientific institution.... when I give the talk, there's usually a very subdued...reception; you know, a few technical questions at the end, in a kind of tense atmosphere. But during the... reception afterwards, one after another, people come up to me very enthusiastically and kind of look in both directions to see if there's anyone listening; and then.... sometimes 6 or 7 people in the same institution say the same kind of things to me....", and then don't believe it when Sheldrake informs them that some of their colleagues have also done so (Ibid).

[to 'Love of Honor' or to 'Virtue' (Montesquieu, 1748); see also "Philosophy".]

See also "Design", "Economics", "Military-Executive-Corpocracy", "Dumb-downing" [.rankings], "Hegelian dialectic".

Account Money- (synon. 'money of account' [31.U.S.C.IV], 'book money' [EU]; numeric/symbolic money, abstract money that is on the payment system, that may be a claim [credit], an obligation [debt], or a gift/investment [equity])

1) Although 'account money' and 'digital money' have mostly the same denotation-- meaning non-physical/non-cash, "payment systems" money, the connotations are different: 'account money' is more suggestive of ancient/historical usage than is 'digital' (which is a common synonym for the computer age).

2) For example, records of debts & claims were already being transferred as abstract 'money' payments-- along with barley-- as far back as 5000 years ago in Mesopotamia; and symbolic, mnemonic memory aids (such as notched sticks) predate that. See also "Tally sticks", "Barter".

3) Today, both Transaction Account Balance (TAB) credits-bankmoney and Reserve Account Balance (RAB) money are obviously written/symbolic "Account" or "Digital" monies, whether they are written into computer or onto paper (and whether or not they are eventually asked to be exchanged into physical cash, which is also symbolic). See also "Digital Money", "Payment Systems", "Fiat currency".

4) "Credit money" is a subset of "Account money", and "Debt money" is the mirror-synonym¹⁸ of "Credit money". See also "Credit money", "Debt money".

(Account [abstract] money →

Credit-extended money→

Debt-owed money)

[Money has almost always been symbolic, hence dominated by (state) "currency"-- a creature of the law]

Accounting- (accounting & money have always been de facto governance; and if you don't understand the books, somebody will try to pull the wool over your eyes)

¹⁸ 'Account money' and 'credit money' are both from the perspective of the issuing institution. Credit and Debt, of course, are mirror opposites, and the term 'debt money' is simply that of credit-issued money-- as seen from the other side, from the debtor's perspective.

1) For “centuries, accounting itself was a fairly rudimentary process of enabling the powerful and the landed to keep tabs on those managing their estates¹⁹.... [It is, however] now led by men of business rather than watchdogs of business”²⁰ (Brooks, 2018). See also “Auditing”.

2) What might be called “[s]ingle-entry accounting existed in ancient Mesopotamia, Israel, Egypt, China, Greece, and Rome... [basically] limited to stores accounting” or basic inventory (Soll, 2104, 2). This is not to say that they (f.e. Hammurabi, et al) didn’t take it seriously. However, with the Iron Age “coinage revolution” (commencing in the 2nd quarter of the 1st millennium BCE), *political accountability* became more important; and from (at least the time of) “ancient Athens, accounting was seen as connected to [a new premium on this concept of]...accountability. From the beginning, a complex system of bookkeeping and public auditing was at the heart of [so-called] democratic government. The Athenian treasury was considered sacred and kept [*separate*] at Delos... [although, for] the most part, Athenians preferred public slaves as comptrollers and auditors, because they could be tortured on the rack and freemen could not.... In contrast to oligarchies... [the] accounts of all Athenian public officers were subject to audits in accordance with basic democratic political philosophy. Even members of the senatorial Areopagus (the high court of appeals), as well as [of course the 2nd Estate] priests & priestesses, had to [at least de jure] make a full accounting of funds” (Soll, 3).

2b) The Romans, of course, adopted (usually more than they adapted) the Greek concept of “*Oikonomia*... [simply] good stewardship of government and households... and...[accordingly] accounting began in private homes, where the *pater familias* was charged by the state to keep household [estate] books, which could [then] be audited by tax collectors.... [So-called] bankers kept the same basic single-entry books [i.e. no ‘legal’ money creation]... [And the entire] Republic and early Roman Empire were managed by a group of auditors called the *quaestores oerarii* [sic]-- oversight officers of the public coffers.... The quaestors...kept the keys to the public treasury in the Temple of Saturn, now the oldest holy site in Rome, which also contained the tablets of Roman law.... As in Athens [however], state accounting in Rome was haphazard, and fraud was common”-- a problem that Octavius-Augustus cleaned up for a while (Soll, 2014, 4-5). **Most** seem to agree that so-called ‘bankers’ in the Empire “were under state control; the law required them to keep books for the purpose of legal evidence in court and mandated that the books were open to inspection by city officials.... [Such ‘bankers’]²¹ were regarded with great respect [as state-imperial agents] and had correspondents in various parts of the empire... [and often collected] the public revenues [a.k.a. “tax-farming”]. Money lending at high interest rates [debt-slavery] was quite common” (Vangermeersch, 1996, 506). See also “Public Banking (idea)”.

3) It has become, over the past half-century or so, “a huge problem...[that people nowadays] feel *uncomfortable* [sic] talking about accountants.... It’s not sexy. It doesn’t go on the front page... [Do people still care] about fraud[?].... Today we have barely any accounting journals...[despite] 800,000 accountants [doing some sort of work] in the Big 4 accounting firms”, through which all credit card

¹⁹ Basically, it was the 1st Estate keeping tabs on (what was then ‘their’) 2nd Estate vassals & servants. The attitude started dying out in Europe in the 1600’s. Around the turn of the 17thc, Simon Stevin (1548-1620) was a pioneer in stressing to the Dutch Stadtholder, his friend Prince Maurice, that “the application of double entry for municipalities and [even sovereign] governments was very much needed, because supervision... was weaker there than in business... [Not just the Dutch Republic, but also the] Swedish government reorganized its accounting system and introduced double entry for government...[a few years after the Netherlands] in 1623....” (Volmer, 1996, 565). See also “Accounting, double-entry” (i.e. the 2nd Estate’s [+the Papal Curia (c.1115) & Magna Carta (c.1215)] declaration of independence).

²⁰ This is not hyperbole. In the UK “in 2017, *none* of the senior partners of the big [4] firms had built their careers in what should be the firms’ core business of *auditing*. Worldwide, 2 of the big 4 were led by men who were not even qualified accountants” (Brooks, 2018).

²¹ The question of whether or not substantial numbers of Roman ‘bankers’ were in fact practicing some form of “*double entry bookkeeping*” (as would be more likely in the latter centuries [when Roman money spun out-of-control]) has not yet been satisfactorily resolved. One the one hand, traditionally “trade was regarded as beneath the dignity of a Roman patrician and [even] held negative implications for his rights as a citizen...[and, at least in earlier centuries] only educated slaves maintained the business and the records through the use of a charge-discharge form of accounts”, scribed only in those famously-difficult to work with Roman numerals (Vangermeersch, 1996, 506). On the other hand, Roman law (including ‘banking’ law) was more “well-developed” than the Greek, and “certainly played a significant role in record keeping... [leading some scholars to conclude that this] well-developed [state]...may have led naturally to the self-contained scheme of dual entries in bilateral accounts. It is problematical [however] whether such knowledge survived in banking during the long Dark Ages...” from 476-1000, even if double-entry had been present “in embryonic form” in the Empire (Ibid). The case is not just conjectural. An “anomaly” or two have long been discovered in accounting records for the Empire, and also (more tenuously) for the late Republic (Vangermeersch, 506-507).

transactions now pass, “and yet these people remain invisible.... In many ways we’ve gone backwards” (Soll, 2014b, mn.36-37). “I find it [the regression] to be incredibly strange”²² (Soll, mn.47-48); particularly since there has (always) been “a large tradition of fudging the books” (Ibid). “We need some kind of basic [culture-wide] literacy... to get up against this beast which is running everything, and we have no handle on it.... It’s tricky out there” (Soll, mn.115). See also “Dumb-downing”, “White-collar crime”, “Black Budget (US)”, “Federal Reserve audit”, “Big 4 Accounting firms/Management consultants”.

4) This is because accounting is not reality, but more like art-- a depiction of reality. “[R]eal accountants... [say that] ‘We can’t be exact. We’re all about doubt.... We always try to tell people that what we do is inexact’... [You just] have to try to do as good a job as you can...[knowing] that you can’t fully control it. It’s such a remarkable cultural realization to get to that point” (Soll, 2014b, mn.52-53). And today’s accounts want even more footnotes and “explanations to say that...[they’re] not totally sure... and we don’t talk about it very much.... [Having] constructive discussions about...[problems on the balance sheet] is...almost as important as having those sheets to begin with” (Soll, 2014b, mn.112-113) See also “Mythomatics”, “Generally Accepted Accounting Principles (GAAP)”.²³

5) “Banks...including central banks, are nothing...but glorified accounting apparatuses” (Huber, 2019). See also “Federal Deposit Insurance Corp. (FDIC)”, “Bank welfare”.

6) “Targeting growth like any multinational corporation, despite their professional status, the big 4 continue to expand much faster than the world they serve. In their oldest markets, the UK and US, the firms are growing at more than twice the rate of those countries’ economies. By 2016, across 150 countries, the big 4 employed 890,000 people, which was more than the five most valuable companies in the world combined.... The big 4 now style themselves as all-encompassing purveyors of ‘professional services’, offering the answers on everything from complying with regulations to IT systems, mergers and acquisitions and corporate strategy. The result is that, worldwide, they now make less than half of their income from auditing and related ‘assurance’ services. They are [trendy] consultancy firms with auditing sidelines, rather than the other way round” (Brooks, 2018).

7) What’s the problem? Basically the world is being turned upside-down by the 3rd Industrial Revolution (i.e. ‘operation digitalize everything’). Baruch & Lev’s *The End of Accounting*²⁴ (2016) boldly asserts that today’s accounting hasn’t changed **much** since 2nd Industrial Revolution days in Fin de Siecle era, and-- as the rest of the business world has moved on-- is only providing less than 8% of the information that investors actually use in the 21st century. CPA Hall of Famer Ron Baker agrees that the profession’s “relevance” has plummeted for 3 “main reasons: 1] *Intellectual* capital is expensed under current [physical capital] accounting standards, 2] today, accounting is less about facts and more about managerial judgment, and 3] corporate value is [also] increasingly driven by unrecorded business events. So, what’s to be done? Attempts to supplement traditional financial reports with things like *key performance indicators*, *value reporting*, *intellectual capital reports*, the *Enhanced Business Reporting Model*, *integrated reporting*, and so on haven’t had much of an impact. The authors recommend adding a “strategic resources and consequences report” to...financial statements...[suggesting] voluntary adoption of their proposals. They also advocate *semi-annual* rather than quarterly reporting, treatment of *intangibles as assets (at cost)*, reducing the number of accounting estimates, and [generally] making accounting less complex... [L]oss of relevance is the top issue facing the accounting profession today...’using financial statements [most of which were invented between the 1860’s-1930’s] to run-- or invest in-- a modern-day intellectual capital organization is *the equivalent of timing your cookies with your smoke alarm*’...[Furthermore]...’the *stock markets* [should] select and pay the auditors of listed companies, once and for all tackling the sham” of “auditor independence” (Baker, 2016b). See also

²² For some reason...(or possibly 100 million or so reasons), the “very strong” British “image of the accountant”, c.1904, as “the impartial Sherlock Holmes of finance, who didn’t care about the money” (Soll, mn.50); did not long survive the 3rd Currency War (1914-45). See also “Big 4 Accounting firms-Management consultants”.

²³ Balance sheets seem to have **gotten worse** since c.2013 (McKenna, 2016). See also “Federal Accounting Standards” [FASAB-56].

²⁴ Baker (2016b) concludes that it is “the most important book that has been written on the irrelevance of accounting in recent times”.

“Industrial Revolution, 3rd” → “Accounting, ‘Fair Value’” → “Accounting standards & reform”, → “Accounting for public/‘sovereign’ money”.

See also

Accounting Control Fraud- 1) a term coined by white-collar criminologist William Black,²⁵ the primary form of which is "when the debt is larger than...what can be paid.... huge over-lending... [or] *liar's loans*" (Hudson, 2012h). "Basically, the last 30 years of American banking have seen an enormous control fraud, where the banks have *knowingly* turned away from productive lending, into what's best thought of as *asset-stripping*.... By lowering the interest rate, you increase the amount of debt that banks can load down the property" with (Hudson, 2010b, mn.9-10). See also "Black Budget", "Wall Street", "Asset inflation", "Debt saturation".

2) "[G]reat innovations in corporate mismanagement, deception, market manipulation, and fraud... [have been made over] the past 40 years" (Galbraith, 2007, xxiii).

3) "Criminologists know that accounting control fraud causes greater financial losses than all other forms of property crime-- combined" (Black, 2012). Nonetheless, ACF *disappeared* from Washington's regulatory lexicon sometime between 1983 and 2000: "Clinton administration economists 'knew' that a lender would never deliberately make a bad loan. They 'knew' that accounting control fraud did not exist-- even though it had so recently devastated the S&L industry. The June 20, 2000 HUD/Treasury report on lending abuses made *explicit* this [disingenuous] claim... 'In most respects, lending in the subprime mortgage market follows the same principles as lending in other markets. Basic economic theory, not to mention common sense, tells us that a lender will only lend money to a borrower if the lender expects to be repaid'" (Black, 2012).

4) The "recipe for how you run these accounting frauds...[is]...1) *Grow like crazy*-- this is 25-50% a year if at all possible; 2).... *Buy really crappy loans*...at a higher interest rate; 3) while using *extreme leverage*...a whole lot of debt compared to equity; and 4) while setting aside only *trivial amounts of Reserves*... for the inevitable massive losses that you're going to get. Now if you follow that recipe, there are 3 sure things: 1st the [buying] entity, like Merrill Lynch,²⁶ in the early years, is mathematically guaranteed... to report extraordinary earnings...the 2nd sure thing is-- under modern executive compensation²⁷-- the executives... all through an entity like Merrill Lynch, those officers are going to be made wealthy. And 3, down the road some years, it's gonna produce catastrophic losses, which is why 3 of the 5 [largest US] investment banks [in 2008, now] don't exist" (Black, 2016c, mn.58-59). Basically, a deregulated investment bank like "Merrill Lynch buys stuff from all these lenders who have *terrible* reputations...[for] creating fraudulent product, and there are these huge warnings..." that are ignored (Black, mn.100). See also "White-collar crime".

5) "What we always emphasize in fraud and abuse is [that] the key is not genius. The key is audacity, and that's what you're seeing time after time... *L'audace, l'audace, toujours l'audace*" (Black, 2016c, mn.139). See also "Exogenous vs. Endogenous' (money creation)", "Design, human".

See also "Generally Accepted Accounting Principles (GAAP)", "Savings & Loan Crisis".

Accounting, double-entry- (a.k.a. 'balance sheet accounting', 'Pacolian' or 'scientific accounting', 'the linchpin of capitalism'²⁸) [has got precision, unlike Economics, and is thus one of the things that we can hang on to.](#)

²⁵ "We discovered...a pattern that only made sense if it was fraud, and it was fraud that involved using accounting" (Black, 2016c, mn.5).

²⁶ "'Goldman Sachs was the big kid who ran the games in this neighborhood. Merrill Lynch was the little fat kid assigned the least pleasant roles, just happy to be a part of things'. The game as Eisman saw it was 'crack the whip'. He assumed [that] Merrill Lynch had taken its assigned place at the end of the chain'" (Lewis, 2011, '175').

²⁷ "The controls on pay and other internal incentives, they [executives] are always gonna get their way around" (Wolf, 2017, mn.22).

²⁸ At least before the state became the heart of *state capitalism*. See also 1. "Federal Deposit Insurance Corp. (FDIC)", 2. "Federal Accounting Standards Advisory Board (FASAB)" [FASAB-56]. "The linchpin of 'capitalism' is [also] it's Achilles' Heel" (Soll, mn.56). See also "State capture", "Bank welfare".

1) "What advantages does the merchant derive from Book-keeping by double-entry? It is among the finest inventions of the human mind."- Johann Wolfgang von Goethe, 1795

"Remember, God is an accountant, too... in the Judeo-Christian tradition"²⁹ (Soll, 2014b, mn.40).

[The double-edged sword: *Allegory of the Good Government; Allegory of the Bad Government*, (Lorenzetti, 1338); Peace, Fortitude, Prudence, Magnanimity, Temperance & Justice; Cruelty, Deceit, Fraud, Fury, Division, and War]

2) "With over 500 years of history, it seems hard to imagine that double-entry bookkeeping is going anywhere. Whilst new rules and systems for exactly how to record things-- from GAAPs to IFRS and beyond-- are always coming along, the underlying system seems set to last as a permanent framework. Some attempts to introduce various 'triple entry' systems [have] propped up from time to time, but nothing has really stuck in quite the same way" (Lyford-Smith, c.2015). All transactions of monetary value must have mutual consent (which is formal/written consent for account money; informal/unwritten for cash).

3) ...In this way, double-entry accounting served as the 2nd millennium's most valuable institution (or encourager of non-violence and honesty). Its prevalence also, however, empowered [and eventually radically empowered] private elite (2nd Estate) money-creation, and a pretty much commensurate growth in usury and debt. See also "Interest", "Leverage".

4) It was, however, only from latter 16thc Holland that double-entry accounting "manuals and books" spread across central and western Europe (Soll, 2014b, mn.19); and was still "very much in people's mind" in 18th & 19th century Britain (mn.34); even though "it's really only...[from] the 1940's that double-entry accounting spreads out across the world" (Soll, mn.40). See also "Freedom continuum".

5) From **at least**³⁰ as far back as late medieval Italy to today, "You had to classify everything as either assets, liabilities, or equity. The gap between assets and liabilities is your equity.... So banks are using what other businesses use to *record* transactions...[as] a way they actually *create* money" (Keen, 2017d, mn.23). See also "Debt money", "Debt saturation".

6) With banks, on the left side, *Assets* "fundamentally are the [TAB] loans [that the bank] creates, plus the RAB/Reserves the government puts in...[the] system... On the other [right] side are its *Liabilities*, which [are] fundamentally your Deposit [TAB] accounts. And then the gap between the two is the bank's *Equity*" (Keen, 2016m, mn.31). "Lending...[TAB] increases an Asset for the bank, and increases Liabilities at the same time. That's quite simple... what banking lending is all about"³¹ (mn.33). However, it is "logically impossible for banks to lend out their Reserves. They can't do it; which is why Reserves have now...[increased] as much as they have... the oil [Reserves/RAB] circulates completely separately of the petrol ['Deposit'/TAB]" (Keen, 2016m, mn.32). See also "Money, 2 classes (layers) of".

²⁹ This is no small beer. "The Father of Double-Entry Accounting", the Florentine Dominican Friar Luca Pacioli (1445-1517), began all inventories "In the name of God" (prior to the day's date), whereas polymath Simon Stevin of Bruges ([1548-1620], who might be called "The Father of Secular or *Public Sector* Accounting") purposefully "omitted all religious notations at the tops of pages or [even] at the beginnings of books.... [which] is one of the reasons" a statue of Stevin in Bruges drew "much opposition from the local clergy" in 1645 (Volmer, 1996, 566). Stevin also "made investigations into the antiquity of bookkeeping...[finding that] [d]ouble entry accounting...has many roots in Roman (or even Greek) times" (Ibid). See also "Three Romes", "Accounting" [The End of Accounting]; "Dutch Republic", App.C: "1-2-3".

³⁰ According to Brooks Adams, *Roman* (1896).

³¹ "Banks create [TAB-bank] money by double-entry bookkeeping. That's all there is to it" (Keen, 2016m, mn.38).

- 7) “a system that almost forces managerial attention not only on profit & loss but also on debt, net worth and solvency” (Grant, 2014); because “as soon as you start keeping books in double-entry accounting, you can *audit* [sic] people” (Soll, 2012, mn.10). See also “Auditing”.
- 8) Balance sheets (financial snapshots) are from the 1860’s; income & cashflow statements from the turn of the century.
- 9) “Our analysis indicates that today’s financial reports provide a trifling 5-6% of the information relevant to, and used by, investors” (Lev & Gu, 2016). See also “Industrial Revolution, 3rd”. See also “Exogenous vs. Endogenous’ (money creation)”, “Accounting, **universal-entry**”.

Accounting, ‘Fair Value’- (synon. ‘mark-to-market [MTM] accounting’; listing [potentially unilaterally] hypothesized assets or liabilities, before they are formally agreed upon as such; opp: ‘cost accounting’)

1) Both terms “refer to accounting for the ‘fair value’ of an asset or liability based on the *current* market price, or the price for similar assets and liabilities, based on another objectively assessed current ‘fair’ value. The key word is current. MTM differs from [centuries of traditional] ‘historical cost’ accounting which is often based on what was [actually] paid for the asset or [?] similar past transactions. Historical cost accounting is simpler, more stable and easier to perform, but it usually does not represent the *current* market value. Many large banks used this [traditional] form of accounting until MTM was mandated in late 2007, and banks [then actually] had to write-down the value of some or all of their assets, especially illiquid assets” such as credit default swaps and MBS’, which provoked the Financial Crisis of 2008. But then, when the stock market was bottoming in March, 2009, the Financial Accounting Standards Board [(FASB), on March 16th reversed its position and] proposed more *lenient* guidelines for [‘currently’] valuing assets under FAS-157...[and the] recession officially ended shortly thereafter” (Halbert, 2018). See also “Stock markets”, “Financial Accounting Standards Board (FASB)”.

2) “the practice of measuring [more liquid] assets and liabilities at estimates of their current value, in contrast to the centuries-old tradition of keeping books at [mutually agreed upon] historical cost. The argument for fair-value rules is that they increase the direct association between a firm’s accounting numbers and its [almighty] equity prices.... But fair-value rules can be less reliable... because they involve estimating conjectural profits... [and] are inconsistent with the... FASB’s original conceptual framework, because they can de-emphasize the [traditional] role of matching, conservatism, and verifiability in GAAP” (Ramanna, 2015, 13); i.e. dually-verified, or (see also) ‘double-entry accounting’.

3) “Fair-value accounting was blamed for some dubious practices in the period leading up to the Wall Street crash of 1929, and was essentially *banned by the SEC from the 1930s through the 1970s*” (Ibid). See also “Ebitda”.

4) However, with “the financialization of the US economy, particularly since the 1990s, we see a growing impact of investment banks and asset-management firms in accounting rule-making. These groups are more likely to propose rules that accelerate financial-statement recognition of anticipated [as opposed to actual] economic gains-- that is [what they call] *fair-value* accounting rules... [which] can result in higher compensation to executives in these firms...[Such] rules can be *difficult to audit* because they require [the] verification of conjectural profits. Large audit firms [all 3 or 4 of them, globally] have responded by lobbying for more check-the-box style rules (in contrast to rules that require subjective judgement). *Check-the-box-style rules* can lower auditors’ legal and political liability in case the conjectural profits do not materialize... [lowering] auditors’ overall accountability” (Ramanna, xviii); this is “due in part to their own successful lobbying” (Ramanna, 2015, 14).

5) “accelerate[s] the recognition of expected gains, particularly in periods of rising asset prices... financial-services executives reap richer rewards under fair-value rules” (Ramanna, 13).

6) “Some large private firms...concerned particularly about the *compliance costs* of fair-value accounting rules...[were] part of a successful coalition to create...[yet another] new accounting rule-maker for

themselves: the *Private Company Council*³² in 2012 (Ramanna, 2015, xix); effectively hamstringing the implementation of (the pro-'fair-value') IFRS-accounting in the US (Ramanna, 19).

7) To others, (perhaps it was the dismal economy of 2009 that, ironically, made the group-think-friendly "Fair Value" rules more appealing): "We do not want banks to become insolvent because of short-term declines in the [herd-like] prices of mortgage-related securities.³³ Nor do we want [with strict historical cost accounting] to hide bank losses from investors and delay the cleanup of toxic assets-- as happened in Japan in the decade after 1990. To meet the legitimate needs of both bankers and investors [a.k.a. Wall Street], regulatory officials should adopt new multidimensional approaches to financial reporting" (Pozen, 2009).

8) Ons Geld and others argue that it is the way of the future. Part of abandoning the Central Bank liability for bankmoney and applying instead distributed ledger-based "market forces to contracts" necessitates letting assets "be treated according to 'fair value'" accounting practices... That will make financial law much more simple... [without having] to deal with... [so many] special forms which are [currently] somewhere in-between...[TAB/2nd tier] payment instruments and...[near money/3rd tier] money market instruments. And... we shouldn't have them anyway, because we don't need...[so many special forms] anymore. We can just treat...[money market instruments] as if they were bonds, or shares. And... [*all*] financial institutions would not be special [monetized credit] institutions anymore" (Wortmann, 2018b, mn.25-26). See also "Parity", "Accounting for public/'sovereign' money". See also "Accounting standards", "International Financial Reporting Standards (IFRS)", "Asset money".

Accounting, Financial- (a.k.a. the big 4 financial statements; i.e. public/external accounting) See "Stock markets", "Financial Accounting Standards Board (FASB)".

Accounting for public/'sovereign' money- (whether to list it as [some form of] 'equity', or as a 'pseudo-liability'; neither of which should be confused with the term 'asset money', which, though not intentionally misleading, is a nonstarter in terms of traditional double-entry accounting)

1) "[D]ouble-entry bookkeeping cannot sensibly be applied to sovereign money creation" (Huber, 2017h). See also "Sovereign money" → "Asset money".

2) The Federal Reserve and US government have, this century, altered their definitions of "seigniorage", from "government revenue received through creating money...[which is] a relatively inexpensive means of raising funds" (Haslag, 1998, 10)... to "the difference between the face value and [the] cost of producing [only] circulating coinage...[which] measures [simply] the cost effectiveness of minting and issuing the United States' circulating coinage" (Mnuchin, 2020, 120). See also "Seigniorage".

2b) The GAO and CBO have listed "seigniorage" under "other means of financing" for many years. See also "Federal Accounting Standards Advisory Board (FASAB)".

3) Huber seems to have finally settled the issue, c.2020; see Huber, 2022, "Asset money" ; see also (Kumhof, et al, 2020,).

See also "Debt-Free National Money (DFNM)", "Equity", "Liability, pseudo", "Cashless Society (War on Cash)".

Accounting, Management- (synon. 'managerial accounting'; a.k.a. 'cost accounting'; i.e. internal accounting)

1) By the beginning of the 20th century, the "emphasis on earning power shifted the orientation of financial reporting to an *income statement*, especially in the United States, where [there were] large public stock holdings by small investors.... [And hence] professional management teams [then] developed and refined accounting methods for... day-to-day operations and [also] to communicate

³² The PCCC is now "charged with producing US GAAP accounting rules for *private* companies... not publicly listed... Previously, private companies used the same accounting rules as public [listed] companies" (Ramanna, 2015, 15-16).

³³ Pozen doesn't mention the (actually greater) counter-risk: that of banks becoming (still more) bloated, because of *increases* (after the initial transition to "Fair Value") in the herd-like/group-think prices of mortgage-related securities, and other forms of "shadow banking".

standard performance ratios, such as ROI... and EPS. Accordingly, management accounting (cost accounting) was developed, and... [furthered by new] tax laws... [that] made it necessary that companies maintain adequate records to support their cost computations in *tax returns*... and industry leaders attempted to educate all units within their respective industries about the value and...use of modern, scientific methods of cost determination.”- *The Oxford Encyclopedia of Economic History* (2003), p.4.

2) In the mid-20th century, as “the need for providing reliable information in capital markets became [ever] greater, the need for comparable accounting reports...[could no longer be denied, and] Accounting evolved into 2 branches:...*financial* accounting...[for] capital markets...[and] *management* accounting... to support the functioning of management.”- *The Oxford Encyclopedia of Economic History* (2003), p.5.

3) Its “target audience is all internal”, and whereas “financial accounting involves reporting on past transactions & events...managerial accounting is more focused on *the future*... [and also] might contain *non-financial* information.... Don’t management accountants have some rules to follow? Not really...[T]heir reports and analysis are confidential.... There’s no [beyond intra-company] framework to follow” (Hearle, 2019, mn.4-7). See also “Accounting, ‘Fair Value’”.

Accounting standards & reform- (what to do in a “digital age” wherein “data about money is worth more than money” [Fitts, 2022n, mn.33])

1) “Accounting rules cannot be determined without the substantive expertise and experience of special-interest groups that, by definition, also have strong commercial interests in the outcome and enjoy little political opposition from the general interest because of the abstruse nature of the subject matter” (Ramanna, 2015, xviii). Like America’s (similarly rampant criminal era of the) prohibition years, a de facto coalition of ‘bootleggers [criminals] & Baptists [fundamentalists]’ (i.e. corrupt accountants & fundamental ‘double-entry’ purists) have, for the past century now, prevented a consensus from emerging on how to account for (the ever-increasing precedence of) *non-tangibles* on financial statements.³⁴ Over the past “half century”, there’s been “a fast and continuous deterioration in the usefulness and relevance of financial information to investors’ decisions... [and it] has accelerated in the past two decades ... despite...regulators’ efforts to improve accounting and corporate transparency...” (Lev & Gu, 2016). See also “Legalism”,³⁵ “Industrial Revolution, 3rd”, “Separation of Powers”, “Regulation”.

2) ...To some observers, this decline in the status of accounting-- exacerbated by the (less-quantifiable) digital age economy-- is the path to wholesale corruption. "...economic reporting-- and seemingly empirical statistics-- have become fictitious. You've let the credit rating agencies fake things. Once you found that Arthur Andersen engaged in Enron type of accounting--³⁶ completely fictitious-- and they were closed down for fraud. The government then said: '*Wait a minute. Every accounting firm is doing fraudulent capital. It's called mark-to-model*'. In other words... to one's imagination... not to the reality, and that's what's happening now. Banks are all sort of pretending that they have enough assets to back... and the government is afraid to introduce a note of realism. Because if you introduce realism and stop the fiction, [then] the whole system will collapse" (Hudson, 2012c). We do live in economically revolutionary times. See also “Accounting”, “Accounting, ‘Fair value’”.

2b) For example, Boston Univ. Economist Laurence Kotlikoff’s “former brother-in-law... was...one of the 200 or so bankers...from JP Morgan who went into Bear-Stearns...[soon after it collapsed in March 2007]³⁷,

³⁴ It’s not a new phenomenon. See also “Balance of Payments” [Hall].

³⁵ “Who would have imagined, for example, that the accounting rules determining when a sale of a product should be recorded as revenue in the income statement would...[reach] over 700 (!) pages?” (Lev & Gu, 2016). Simply adding to the legal rule books is not reform.

³⁶ “In the early 2000’s, fair-value [accounting] rules were implicated in some of the accounting misdeeds at Enron that led to the firm’s collapse” (Ramanna, 2015, 13); even though A.A. had a “venerable” reputation up until that point. See also “Accounting, ‘Fair Value’”.

³⁷ In 2 out of the 3 years from 2005-07, Bear-Stearns was ranked by *Fortune* magazine as “the Most Admired” securities firm, in its prestigious annual survey of business innovation, quality of *risk management* and ‘employee talent’. And, also in 2007, “Bear-Stearns was in a position...” to pass one of its “stress tests” (Kotlikoff, 2021, mn.26-27). The SEC, by then, “know that Bear Stearns was using ‘outdated models that were more than 10 years old’ to value mortgage derivatives. Yet the agency did not force Bear to update its models... [and] was also lackadaisical about Bear Stearns stress tests. Incredibly, through early 2007... Bear Stearns’ stress test models for mortgages did not take falling house prices, consumer credit scores, or patterns of default rates into account... [And] the agency did not force...[the firm] to ‘add a

to figure out... what Bear-Stearns was worth. So they looked at all the books.... [to also find out] what Bear-Stearns was up to. Did anybody from JP Morgan have any idea, of what their assets... & liabilities [were]. You know what's really in their [real] books?... [and Kotlikoff was informed that, no] They had no idea" (Kotlikoff, 2021, mn.10-11). So the stock price of the 85-year old investment bank fell from 30-something; to "\$2 a share over that weekend, when the deal was struck with JP Morgan, to buy up the bank for less than [1/3rd of] what the building [alone] was worth" (Kotlikoff, mn.18).

2c) It wasn't an anomaly. Kotlikoff's personal friend Janet Yellin (Fed Chair from 2014-17; Treas. Sec. 2021-) expressed to him at one "dinner in Washington", c.2011-13, "how little the Fed really understood... even several years after the [great] Financial Crisis.... [Post-1990's 'reforms'] It's really hard for the Fed-- or any government institution-- to really have a hundred percent handle on what's going on. So you're gonna have a... Long Term Capital Management have an enormous hedge position.... and then a small thing happens like Russia defaults on its official debt, and all of the sudden this gap, which they [LTCM] were sure was going to narrow, [instead] widens-- and in 10 seconds they [LTCM] are in effective bankruptcy" (Kotlikoff, 2021, mn.11-13). See also "Yellin, Janet".

3) Double-entry accounting and proto-capitalism were both born together (with paper Reserves) around 6-7 centuries ago. Are they now both also in the process of dying from the same cause (that of no longer possessing particularly salient information)? Data-crunching meta-numbers does not necessarily produce knowledge. "If...investors do not understand the reasons for their success or provide significant original analysis, [then] they do not increase the knowledge that underlies all productive investment in capitalism" (Gilder, 2018, 84). Such knowledge is not to be found in "today's financial reports, [which] provide a trifling 5-6% of the information relevant to, and [actually] used by, investors" (Lev & Gu, 2016). See also "Industrial Revolution, 3rd".

See also "Financial Accounting Standards Board (FASB)", "International Financial Reporting Standards (IFRS)", "Federal Accounting Standards Advisory Board (FASAB)", "Credit rating agencies", "Accounting, double-entry".

[Temple priests³⁸ of the highly monetized world? See also "Pyrite".]

Accounting, universal-entry- (accounting entries are shared identically & permanently with every participant) 1) Any participant in a blockchain "can trace all [the] previous transactions, [thus] allowing for increased transparency and [for] the blockchain to 'self-audit'" (ICAEW, 2017, 2).

2) Double-entry accounting "could be substantially altered by blockchain[s]...[L]owering the walls around each company's internal accounting and making entries directly on the blockchain... might start as something for *intragroup* trading, but with time could grow to cross multiple entities, creating a kind of 'universal entry bookkeeping'" (ICAEW, 2017).

1) **Back in the zero days⁴¹ of anthropological/DNA [as opp. to national/cultural] development (to the 13th century in north Italy/Papal States, and to the late 14th or 15thc in England), there was, in central & western Europe, from the 10th century, a great church system that, when it wasn’t shaking its fingers at people, gradually developed a hypocritical stance on *usury* (the science of leverage), that other institutions-- thanks to the 15thc Medicis-- could also henceforth use (if they were militarily/diplomatically strong enough [to collect]), with varying degrees of transparency or opacity.⁴² The cat was out of the bag.**

2) This devil- er- development game⁴³ (usury & warfare) would be the primary factor in the next half dozen centuries of “Western” history (the 15thc-20thc, i.e. Europe’s “Warring States” era), prior to (not the

⁴⁰ The phenomenon goes back further than Abdu'l-Bahá (1844-1921), who seems to have coined the term (for those trend-slavish Westerners [of the Solar Calendar]). All across Europe (from Spanish-to-Russian) languages today still pretty much adhere to that peculiar, ancient Latin/Roman protocol of public (government [a.k.a. ‘a prostitute’-- *publica*]) and pubic (puberty [‘to ripen, to mature’]) being virtually the same word-- *pūblicus* & *pūbis*, respectively (The former goes back to ancient Greek, but the latter does not-- *pūbis* derives from Proto-Italic *poplos* [‘army’], of unknown origin). Other language families do not conflate (or play homonym word-games) with the 2 terms. See also “Civilization, Western” [Solar calendar], → “Separation of Powers” [Montesquieu], → “Make-It-Happen; Let-It-Happen” [Executive function]; “Timarchy” [Montesquieu], → App.C: “1-2-3”. Any questions? See also “MLW” [Ellis], “Cognitive dissonance” [Ellis], “NInnies”.

⁴¹ The “zero” here connotes pretty much “zero rights” for the non-armed, non-elite (perhaps because such an abstract concept [as rights for non-elites] was not deemed necessary. 3rd Estate/non-elites had the traditional ‘right’, so to speak, to lounge around for most of the day, unless it was harvest or sowing time. This really didn’t change much in Europe until the famously “disastrous” 14th century. For example, “eastern and central Europe... up to around 1300 were [still] areas of colonization, as land was opened up for [basic] cultivation and lordships were established. In these new lands the first priority for the lords had been to ensure that their lands were [sufficiently] populated... [It was Germans] at first, imposing lordship with its economic demands and restrictions; they [always] needed additional settlers... Eastern [European] lordship became oppressive [i.e., from “zero” to “one” categorization] only after 1348, and mainly in the 1400s.... in the first stages of what became centuries of peasant subjection and exploitation... [In much of Eastern Europe, even] the monarchy could not defend itself against noble demands... [One factor in this development was] the growing western European demand for grain, which was met by the harvests of the Polish noble estates... [Hence the Polish] peasants were [only then] reduced to serfdom” (Swanson, 2010). See also “Separation of Powers”.

⁴² ...not to mention also varying degrees of availability and honesty/accuracy in “the” historical records that we future generations of researchers have to work with.

⁴³ See also “World Bank” (development financier).

destruction of the world,⁴⁴ but rather) the discovery and development of the internet in the 2nd half of the 20thc and millennial era. There have been 6 primary phases (that is since the advent of the Age of Discovery & scientific method):

- 0 - 1 Pre-1400 was the N.Italian-Church era of usury-strategic leveraging (which is typically associated with 2nd Estate [privately issued]⁴⁵ “debt-money” [bankmoney], either for use in foreign warfare or for leveraging against the domestic state itself [see “State Capture”]).
Then through most of the late 16th and 17th centuries, in England at least, **underground** usury and exigency-leveraging **seems** to have predominated, a la “The Goldsmith’s Tale” and the also “classic” Hobbesian misanthropy of *Leviathan* (epitomizing the usurious Old World from which the American pilgrims and Puritans were, ironically,⁴⁶ trying to escape). [Quigley: W.Civ.as “Sci.Method” (& Age of Disc.)]
- 1.0 - 2 The Glorious Revolution of 1688, finished up what the Magna Carta of 1215 had started (i.e. the assertion of nobles→aristocrats’ [2nd Estate] rights vis-a-vis the monarchy [1st Estate]), constituting a de facto supplantation of the sovereignty (monetary authority) of English monarchy. For the first time ever there, parliamentarians & merchants were in control of the monarchy’s purse strings and, by the **mid-18th** century, they also controlled the United Kingdom’s money supply.
Although the monarchy was still responsible for foreign policy, in terms of domestic-monetary policy, the 2nd Estate merchants had effectively caught and captured the state. But they accomplished this (perhaps first-ever “color revolution”) only through expanding the powers of Parliament and its constituent political parties. Hence, to an increasing degree, these new 2nd Estate powers came to rely on support and backing from the 3rd Estate, or at least its more well-to-do segment, which comprised **_percent** of the electorate (that voted for parliament) by_. That may not seem like much (for the 3rd Estate); but it was a start-- a foot in the door; and the Glorious Revolution was, moreover, extremely popular and influential in the American colonies, where... (Graebner, Fite, & White, 1975).
- 2.0 - 3 The 1st and 2nd Currency Wars- The second quarter, more commonly known as the Age of Revolution, from 1775-1815...
The 3rd Currency War- The third quarter, more commonly known as World War One and World War Two or ‘The Great War’, or Europe’s ‘2nd 30 Years War’, from 1914-45...
- 4.0- The controlled, highly-mediated state, since the 1940’s, has constituted a **4th quarter** of mankind’s adolescence, of which the current Financial Crisis & Jobless Recovery-- a.k.a. ‘The Great Recession’, from 2008 to today, is its terminal phase.

⁴⁴ “The greatest thing the devil ever...[got over] was convincing the world that deceiving people was cool and funny” (Moon, 2019i).

⁴⁵ This is not to imply that “2nd Estate” money is synonymous with intentional counterfeiting for the purpose of “state capture”. In both ancient and medieval times, it was perfectly common, and legitimate, for international traders to melt down state coins that were depreciating (whether from being too far outside of their jurisdiction or other factors), simply because the underlying bullion content was worth more. Such liquifying of state coinage was typically, or at least “most notably”, used for the international-export economy, where “world price’s have long been around” (Desan, 2014, 63,n128), regardless of anyone’s stamp, and indeed before stamped money was invented in the mid-1st millennium BCE. For millennia, it was also predominantly in foreign trade that coinage would be valued according to its (‘private’) intrinsic weight, as opposed to its (public) stamp. See also “Money, types of”.

⁴⁶ The irony is that Hobbes (1588 –1679) was a Puritan; and that the “Puritan point of view tended to support political despotism... in a world where there was not sufficient wealth or space for different groups...[The zero-sum gain] meant that the basic struggles of this world were irreconcilable... This was part of the Puritan belief that nature was evil and that a state of nature was a jungle of violent conflicts” (Quigley, 1966, 1240).

[Planet Money⁴⁷ (the satellite before the primary sector) ...& Eco-Crisis “since the 60’s”]

3) Analytical historian Carroll Quigley found, half-a-century ago now, that Western Civilization had already removed from the face of the Earth, while also being (since at least the mid-20thc) in the process of destroying itself “” (Quigley,)⁴⁸ ‘16 candles’. The ‘events’ of the 21st century have thus far only accelerated this (long-term trend). See also “Monetization” [allowance], “Agriculture”, “Economics, Parity”.

3b) Much of the problem is simply that the initial “Scientific revolution” of the 17th century and “Enlightenment” of the 18thc (which then combined to make the “Nationalism” revolution of the 19thc) were simply more useful lenses (in the material sense) from which to perceive and systematically evaluate the world- not perfect or even mature vision itself. Institutions rest upon assumptions, and ‘winning’ institutions (even if embracing a love for superficial, tactical change) are typically loathe to challenge the assumptions that got them to where they are in a hierarchy. Nonetheless, they should:

https://www.youtube.com/watch?v=YdGAAC_SnEE (Sheldrake, 2012, mn.3-5). The scale of transition (from 2nd Industrial Revolution to 3rd Industrial Revolution) is unprecedented in history; and many, if not most, philosophical assumptions from the long 18th century won’t make it into the oncoming Knowledge Age. As poet Alexander Pope pointed out at that time, “A little knowledge is a dangerous [destructive] thing”.

science delusions

‘racism’ delusions

vicarious politics delusions

= (or at least adds up to) Imperialism Delusions. See also “Monetization & entropization”.

See also “Conspiracy theory” [.destination:maturation].

Adolescence is the time to enlarge the natural sentiments of pity, friendship, and generosity, the time to develop an understanding of human nature and the varieties of human character, the time to gain insight into the strengths and weaknesses of all men and to study the history of mankind.

— Louise J. Kaplan —

4) See also “Freedom continuum (maturation)”, “Usury cycles”, “Industrial Revolution, 2nd”, “Industrial Revolution, 3rd”, “Eras of (monetary) History”, “Twain, Mark (1835-1910)”, “Methodology” [.TheThing].

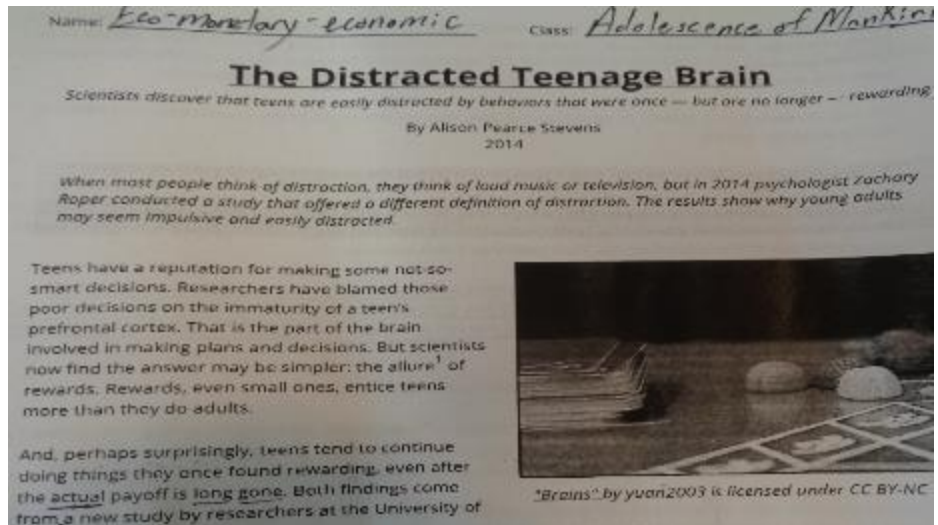

⁴⁷ It’s not just ‘the West’. See also “Putinomics” [.pensions].

⁴⁸ Quigley’s See also “Economics” [.Boulding].

We have the most prolonged adolescence in the history of mankind. There is no other society that requires so many years to pass before people are grown up ...

Adolescence is nurtured and prolonged by educational processes and by industry that has found a bonanza in embracing the adolescent population and fortifying 'adolescent values.' This prolongation of adolescence robs the country of the population group having the most risk takers, and the highest ideals.

Ralph Nader

[This is primarily from an anachronistic monetary/operating system (and 'globalism'); see also App.C: "1-2-3", "Monetization".]

Advanced/Advancement- See "A.P. vs. A.T. (Advanced Placement vs. Aversion Therapy)".

Advertising- the cheaper the product, the more subliminal or subconscious the appeal; and as monetization of society drives down cost, the young 21st century is awash in the stupidity of meaningless and inappropriate ads. 1) "They are not ads. They are minuses...only .06% of...smart phone ads are clicked on, and... (approx.) 50% of these clicks are in error.... This is a catastrophe. This is not a viable business, and Google is...coming to the end of the line in smart phone advertising..." (Gilder, 2018b, mn.19). See also "Zombie", "COVID".

2) In the meantime, however (2nd half of 2010's), 90% of the growth in internet advertising "goes to Google and Facebook.... and is fraught with fraud. In 2016 [alone], fake ads demand generated by internet bots cost advertisers...\$7.2 billion...[with] ad malware to trick users...[up] 132% since 2015. The advertising catastrophe is most acute in... [so-called] smart phones.... On average, smartphone users pay \$23 per month for ads, trackers, scripts, and other diversionary [dumb-downing] chaff that bears malware, slows harddrives, piles on data-plan costs, depletes battery life, and tramples privacy and property rights" (Gilder, 2018b). See also "Big 5 (on S&P 500)" ('tech giants').

See also "Inequality", "Bernays, Edward", "Google", "Dumb-downing".

Africa- ('so say the Beatles') <https://www.youtube.com/watch?v=2BQMsQ62zkl> [HeartedHana].

See also "Philosophy tree" [full circle]; "India".

Africa (political problems thereof)- "The [so-called 'sovereign'] debt of sub-Saharan African nations stood at \$177 bn. in 2008; yet the wealth that these countries' elites had moved offshore between 1970 and 2008 is estimated at \$944 bn.... [Hence] 'Sub-Saharan Africa is a net creditor to the rest of the world'" (Oswald, 2018, mn.32-33). See "English constitution", "National identity/Nationalism", "Offshore", "Capital flight".

Agio- Medieval European term for a money-changing fee (one of the legalistic substitutes for illegal usury). "Money was borrowed in one country or currency, to be paid back in another at an exchange-rate which incorporated the usury charge" (Hudson, 2013).

Aggregate Demand- "the sum of GDP, plus change in.... private debt" (Keen, 2016o, mn.14). When private debt (credit) expansion comprises approx. "20-30%" of this aggregate demand, a "peak level" of private debt (debt saturation) is reached, "and then the lending stops, suddenly" going from high credit demand to zero credit demand, "bringing on a crisis" (Keen, 2016o, mn.15).

See also “Keynesianism” [.demand-side].

Agriculture- (Why is it that the ‘primary’ [most important/foundational] sector of the economy is the most taken for granted?)

1) “A belief that agriculture is the first and primary step to survival has philosophical roots dating back to the [Neolithic] domestication of plants and animals. There was no need to question this basic premise, or even expand upon it, until the [state’s money &] market system had essentially replaced traditional and authoritative systems of organization. The emergence of national political units and the growth of national loyalties and spirit, in combination with increased participation in the market system, raised the question of how a nation becomes wealthy” (de Yong, 1994, 1-2). See also “National Identity/Nationalism”, “Smith, Adam” [.physiocrats], “Wealth”; “Monetization”.

1b) The abuse is nothing new. Agriculture, in the ancient eras, “was...a servile profession...generally practiced by the inhabitants of conquered countries, such as the Helotes among the Lacedaemonians, the Periecians among the Cretans, the Penestes among the Thessalians, and other conquered people in other republics”; “Plato, likewise, and Aristotle [also] require[d] slaves to till the land... [even though] Aristotle [had] observe[d] the best republics were those in which the citizens themselves tilled the land” (Montesquieu, 1748, 38; note z). See also “Physiocrats, the”.

2) “Every intelligent citizen recognizes the fact that agriculture is [in the United States] our greatest industry, and that on it depends the prosperity of every other legitimate industry, business, or profession” (Loucks, 1916, 7). Nonetheless, “[a]griculture...[has been] made the special [or ‘primary’] victim of inhuman greed and extortion by national bankers” (Loucks, 1916, 287). See also “Industrial Revolution”, “Great Extinction, 6th”.

3) New Deals: In Jan. 1936, the US Supreme Court declared (the notoriously crop-destroying) *Agricultural Adjustment Act of 1933* unconstitutional. By February, “the A.A.A. resurfaced as part of the *Soil Conservation and Domestic Allotment Act of 1936*... [which] amended the Soil Conservation Act...[of] 1935 (which [had] primarily supported soil conservation demonstrations) and created a new plan for *handling the overproduction* of certain crops.... [Now, instead] of paying farmers not to grow certain crops where there was a surplus... this new [A]ct provided [instead] an incentive to take *land* out of crop production and apply soil improvement & conservation practices to...[that] land. Farmers [still] received payments [but only for actually]...growing [mostly fallow field] legumes and grasses on former cropland.... Nearly 53 million acres were taken out of crop production using this approach... [and the] money to support the program came out of the US Treasury, not from food processors” (Moore, 2020).

3b) After the (1933-37) “5-year period of trial and error, President Roosevelt called the national agricultural leadership to a conference in Washington to develop a plan for the future of agriculture. Jointly, the national agricultural leadership, in coordination with Congress, developed the *Agricultural Adjustment Act of 1938*.... [The law’s] Title III [c]reated price supports (based on the concept of **parity**) for selected agricultural commodities and established marketing quotas for certain agricultural products to keep the supply in line with market demand”, and the Supreme Court’s *Wickard v. Filburn* ruling (1942) upheld the (Moore, 2020), unanimously. See also “Parity pricing (for the primary sector)”.

[AAA⁴⁹ rep's New Mexico office, 1941]

See also “Parity pricing (for the primary sector)” [Quigley], “Food”, “Geoengineering”, “Common sense”, “Primary Sector Economics (PSE)”.

[The 2nd Industrial Revolution finished it off; now what? (Gaede, 2008). See also “Ecological economics”.]

Alchemy-

Alibaba- (still the ‘Amazon of China’?)

1) Jack Ma set up a cashless cellphone payment system in China for the unbanked. It is huge. Will Bezos follow here? It depends on *intra*-bank transactions, where the vendors need an Alibaba account too. I assume it circumvents the point of sales terminals and is like peer-to-peer, but with an accounting back end at the Ma bank. Intra-bank payments do not need central bank money (**‘backing’**). The advertised benefits are cutting out the fees. If the (resultant ‘loanable funds’) bank is big enough, it starts to circumvent the central bank. I assume that Alibaba’s phone app prohibits payments to non-account holders, but allows direct deposits from and to other bank accounts (to get started or close out). Obviously Ma has invested in a bank himself and in a sophisticated payment system app. The trick in account money is the payment system. See also “Chinese Communism (CCP)”, “Payment Systems”.

2) “” (Chen & Vishnoi, 2022).

3) “” (Chen & Vishnoi, 2022).

See also “Shadow banking”, “Nonbank financial institutions (NBFIs)”, “Big 5 (on S&P 500)” (‘tech giants’).

America- See “United States, the”, “Enlightenment, the”.

American ‘Exceptionalism’- (a heritage from the 17th & 18th centuries, not ‘just’ the 20th-imperial era) “[B]y the mid-eighteenth century, if not earlier, the typical white household in the mainland colonies was almost certainly enjoying the highest standard of living anywhere in the globe.”- Edwin Perkins’ *The Economy of Colonial America*, 1988, p.14 (Morales, 2009, 34).

1) “Future preference came out of the Christian [and winter] outlook of the West and especially from the [American] Puritan tradition, which was [supposed to be] prepared to accept almost any kind of sacrifice and self-discipline in the temporal world for the sake of future eternal salvation. The process of

⁴⁹ Today’s *Farm Service Agency* “is a descendent of the [1940’s] *Agricultural Adjustment Administration*” (Moore, 2020).

secularization of Western society since the 17th century shifted that future benefit from eternity to this temporal world, but did not otherwise disturb the pattern of future preference and self-discipline. In fact, these became the chief psychological attributes of the middle class that made the Industrial Revolution[s] and the great economic expansion of the West. They made people willing to undergo long periods of sacrifice for personal training and [or] to restrict their enjoyment of income for the sake of higher training and for capital accumulation. This made it possible to develop an advanced technology with massive shifting of economic resources from consumption to forming capital equipment.... Other advances were based on these" (Quigley, 1966, 1184). See also "Culture", "Middle class".

2) Although it was not *necessarily* predestined that the early modern warring states of Europe would necessarily wind up destroying themselves⁵⁰, it is evident that the credible, constant external military threat that the British Empire (and to a lesser extent others) provided was the primary motivator and sociological 'other' that compelled the 13 American colonies (and eventually 35 other states) to overcome their smaller differences and unify for the sake of the greater good⁵¹ and rationality in general.

3) Though the levers of the resulting super-state/federation have since then often been captured by somewhat less-than-wholesome interests and enterprises, "the main challenge lay not in rejection of the old vision but in its redefinition... [for maintaining what has been] the nation's fundamentally middle-class culture... [In the 1940's], Franklin Roosevelt promised not only the defeat of the Axis powers, but also a postwar world free of want and fear.... When and how the nation would convert its technological and productive superiority into genuine triumphs over its human and physical disabilities [however] remained uncertain..... [while in the meantime, for decade after decade...] Technological feats challenged no private interests and required no expressed consensus; an administration [any/interchangeable administration] could pursue them undisturbed by Congressmen, lobbyists, or..." pretty much anyone else (Graebner, Fite & White, 1975, 918). See also "Corporations (and corporate 'personhood')", → "Intelligence Community (IC)".

4) "America has assumed a character upon the theatre of the world, which honour, fame, and political philosophy, call upon her to support. She is the inventor of principles, asserting the equal rights of man, and exploding king-craft, priest-craft, nobility-craft and minister-craft. It is incumbent upon her to prove by example, that her theory is practically sound. Otherwise she betrays mankind, after having constituted herself the vindicator of their rights. Instead of honour, she will then deserve reproach; and her future fame will be that of a general [Benedict] Arnold for instance, who has betrayed the cause he undertook to defend, and deserted over to the enemy he engaged to defeat" (Taylor, 1794, 49). See also "Macroeconomics".

See also "United States, the" [.boost], "Revolution, American", "American System, the", "Debt cycles", "Industrial Revolution, 3rd", "Monetary Reform", "Parties, political", Appendix C: "1-2-3".

[de Mille, 1979]

[American Insurance Group \(AIG\)](#)- (est. 1919 [in Shanghai]; long the world's largest insurer in 2008; now...)

⁵⁰ See also 'World Wars', → "Central Banking-Warfare model".

⁵¹ Hyman Minsky, in his later years, defined this as: "the broad based economic well-being that is a prerequisite for a strong and viable democracy.... [A] performance of the economy that is consistent with [not at odds with] the maintenance of a participatory democracy is the greater good" (Minsky, 1995, xxiii). See also "American System", → "Democracy" [scaffolding], → "Parity pricing (for the primary sector)".

1) AIG was (always) instrumental to 20thc American interests in the East Asia.⁵² The Japanese invasion forced AIG to temporarily (1939-45) relocate from Shanghai to New York; but: "They knew which factories to burn, which bridges to blow up, which cargo ships could be sunk in good conscience. They had pothole counts for roads used for invasion and head counts for city blocks marked for incineration. They weren't just secret agents. They were secret insurance agents. These **undercover underwriters** gave their World War II spymasters access to a global industry that both bankrolled [i.e. brought up] and [then], ultimately, helped bring down Adolf Hitler's 3rd Reich. Newly declassified US intelligence files tell the remarkable story of the ultra-secret **Insurance Intelligence Unit**, a [key] component of the Office of Strategic Services [1942-45]...[the] forerunner of the CIA, and its elite counterintelligence branch X-2."⁵³

Though rarely numbering more than a half dozen agents, the unit gathered intelligence.... [T]he unit mined standard insurance records for blueprints of bomb plants, timetables of tide changes and thousands of other details about targets, from a brewery in Bangkok to a candy company in Bergedorf.

"They used insurance information as a weapon of war", said Greg Bradsher, a historian and National Archives expert on the declassified records. That insurance information was critical to Allied strategists, who were seeking to cripple the enemy's industrial base and batter morale by burning cities.... Germany [reportedly] had 45% of the worldwide *wholesale insurance* industry before the war began and managed to actually expand its business as it conquered continental Europe. As wholesalers, or '*reinsurers*', these companies covered other insurers against a catastrophic loss that could wipe out a single company." (Fritz, 2000).

See also "F.I.RE sector", "Black Budget (US)", "**International Intelligence Community**".

American Monetary Institute (AMI)- (est. 2004; to be an antidote to centuries of bank-money propaganda)

AMI "came into existence 26 years ago to call attention to an immoral/unjust flaw in the Western banking system. Economic students...[have long been] taught [that] money is neutral, but in reality, it isn't, and the structure needs reforming."- Stephen Walsh, announcing the 2022 Conference (Oct. 5, 2022).

1) the *Lost Science of Money* and history-based AMI prescriptions have, since c.2003, consisted of 3 basic steps:

a) "bring the [new] **money creation process**⁵⁴ into the government... by *nationalizing the Federal Reserve Banks*, all 12 of them";

b) "banks...will no longer be able to *create money*.... Banks can lend money, but they **cannot re-lend credit that is deposited with them**"⁵⁵; and

c) "since it is still necessary to have *new money* in society as population and businesses grow, the government would spend new **money** into circulation on *infrastructure*" (Zarlenga, 2007).

See also "Monetary reform", "Positive Money", "Huber, Joseph".

American System, the- (Henry Clay's rebranding [1818] of Hamilton's 'American School' [c.1792-]; & pretty much standard Federalist-Whig-Republican economic strategy up until the Eisenhower Admn. & 1971)

1) Basically, it was always (slightly different versions of) 3 planks:

a) protective tariffs & select industry subsidies;

b) public investment in infrastructure (& monetization);

c) 'national' or 'central' bank-led regulation of credit and the economy

⁵² Company founder Cornelius V. Starr (1892-1968) was "behind the [O.S.S.'] insurance unit" in World War Two (Fritz, 2000). See also "Central Intelligence Agency (CIA)".

⁵³ AIG "today has its world headquarters in the same downtown New York building where the tiny OSS unit toiled in the deepest secrecy. [Spy-chief Cornelius] Starr died in 1968, but his empire endures.... More than a third of its \$40 billion in revenue...[in 1999] came from the Far East theater that Starr helped [to both] carpet bomb and liberate" (Fritz, 2000). See also "Financial Crisis (of 2008-)."

⁵⁴ With '*money*' this is (perhaps even literally) an impossibility; and with '*currency*' it already is largely 'in government', and is also already headed more in that direction. See also "Hamilton" [footbinding], "Money", "Currency", "**Money, 3 (contemporary) tiers of**".

⁵⁵ Why not just say 'end commercial & state banking'? If the first part is implemented (de-privileging banks from the US *currency* creation process), then also implementing the 2nd part leaves (what would no longer be) 'banks' with only a rather pared-down set of 'nonbank' abilities. Nonbanks, f.e., routinely "re-lend credit". See also "Nonbank Financial Institutions (NBFIs)", "Debt securities".

- 2) Washington Admn. Treasury Sec. Alexander Hamilton (Federalist Party; r.)
- 3) House Speaker Henry Clay (Whig Party), devised what he called the ‘American System’⁵⁶ in “the burst of nationalism that followed the War of 1812, [and it] remains one of the most historically significant examples of a government-sponsored program to *harmonize and balance* the nation's *agriculture, commerce, and industry.*” - https://www.senate.gov/artandhistory/history/common/generic/Speeches_ClayAmericanSystem.htm
See also “Economics, Parity”.
- 3b) It also favored a standing army and higher land prices⁵⁷ (for revenue). See also “Big government”.
- 4) Lincoln Admn. Chief economic advisor Henry Carey (Republican Party; r.1861-65) conducted “probably the most enlightened analysis of import taxes and the condition of the domestic economy that [emerged from the US, from] after the Constitution...[right up] to the Civil War” (Cook, 2021). See also “Physiocrats, the”.
- 4b) Nonetheless, circa 1850, approx. half of American workers were in the “raw materials” sector; down from “90%... on the farm” in the Revolutionary & Constitution era (Wilken, 1947, ch.14)⁵⁸. See also “Agriculture”, “Common sense”, “Fin de Siecle”.
- 4c) influence <https://lynge.com/en/economics/48130-principles-of-political-economy-4-parts-in-3-vols-part-the-first-of-the-laws-of-the-production-and-distribution-of-wealth-part-the-second-of-the/>
- 4d) Daniel Walker Howe suggested that, had he lived, Lincoln may well have shared Carey's deep disquiet over the economic developments of the post-war period:
 ‘The final estimate of Lincoln's second American revolution must take into account the unintended nature of its consequences. The triumph of the northern bourgeoisie ushered in an era very different from anything Lincoln could have expected or wanted. His objective, in the broadest sense, was to defend and extend the kind of free society, he had known in Springfield. This was a society of small entrepreneurs, market-oriented farmers, young men working for others until they could save enough to set up for themselves, and striving professionals like himself. It was the same “mixed” society that Henry C. Carey had celebrated’. [77]
 Henry C. Carey was horrified when he saw the new economy, and we may believe that Lincoln, too, would have been grieved by its oppression and its sordid materialism.[78]”
- 5) Carl Wilken, in the latter 1930's, also depending “mostly on Henry Carey”,
 See also “Wilken, Carl (1895-1968)”.
 See also “United States, the”, “American ‘Exceptionalism’”, “US (Treasury) Notes”, “Parity pricing (for the primary sector)”.

Anarchy- (the nothing that precedes something)

In states where “there are no laws, that is, none that can be properly called so, there are only manners and customs.... There is less communication in a country where each, either as superior or inferior, exercises or is oppressed by arbitrary power... They do not, therefore, so often change their manners and behavior. Fixed and established customs have a near resemblance to laws. Thus it is here necessary that a prince or a legislator should *less* oppose the manners and customs of the people than in any other country upon earth. Their women are commonly confined, and have no influence in society” (Montesquieu, 1748, 297).

1) I love anarchy, as long as it's in my enemy's camp.

1b) Who cares what he wants? If he's an anarchist, he's not going to get what he what he wants anyway.⁵⁹

⁵⁶ Presumably the name change was in order to underscore American differences from the (already extant) “*British System*” of (so-called) “free-trade” & (what would later be termed) *laissez-faire*. See also “Race-to-the-bottom”, “Imperialism”, “Market fundamentalism”.

⁵⁷ More revenue from land sales meant more funding to the states, which could then invest more for education, infrastructure projects, and other public priorities.

⁵⁸ And by the 1940's the “raw materials” sector was down to approx. “1 in 5” workers (Ibid).

⁵⁹ For example, “‘Bolshevism has found fertile soil in the base and anarchic instincts of the [Russian] people’”.- Prince Lvov, 1918 (Figes, 1998, 650).

2) (in the 'extremist' sense [tearing down]), "'Societies' are really states, [and] the logic of states is that of conquest⁶⁰, the logic of conquest is ultimately identical to that of slavery... transformed [since the 18thc] into a notion of a more benevolent 'social debt'; owed to 'society' [a euphemism for 'state'] (Graeber, 2009). See also "Graeber, David", "National Debt Economy", "Debt saturation".

2b) (in the 'reasonable' sense [just saying no]), "Once you embark on a road of imagination and creating, all bets are off. All preconceptions about what you must do, make, think, assume, and believe are yesterday's news.... People occasionally write to me and say the artist has no function in this society. Well, I'm not talking about function. Function is for machines" (Rappoport, 2013c). See also "Design".

3) 'Off-the-grid' Updates: 7/22: <https://www.youtube.com/watch?v=sNlsmAqmM0E> [Doug&StacyinMO.]

See also "[Freedom continuum](#)", "Adolescence of Mankind", "[Usury cycles](#)", "George, Henry (1839-97)".

Anchor currency- See "Reserve currency" (from the Dutch Wisselbank-to-US dollar),→ "Monetary reform".

Anglo-Americans' deepest cultural problem- (Zion's shadow?)

a) (de facto) Since the days of 'Gildas the Wise', & puritan pseudo-historians, the "squeaky wheel gets the grease" phenomenon...in History & media, to politics & education-- i.e. pretty much all public/social institutions.

b) (formally) This American proverb was not coined until humorist Josh Billings, c.1870;

https://en.wikipedia.org/wiki/The_squeaky_wheel_gets_the_grease

<https://getyarn.io/yarn-clip/279a74e1-d433-402a-b509-510087b32dce>

See also "United States" [Tocqueville], "Groupthink", "Common sense", "Imperialism", "Oligarchy".

Angry Birds- ("the largest mobile app success" [as of 2011-12] and highest-grossing video game-based motion picture in history [as of May 2016] is here meant to be confused with China, Russia, and other countries' efforts & designs, since the 2010's, to escape from being under a *de facto*/monetary yoke of "Dollar Hegemony") See also "China International Payment System (CIPS)".

1) It is conventional wisdom that no nation's national currency has been able to simultaneously serve as the global reserve currency for much longer than one century. See also "Reserve Currency".

1b) Dollar hegemony has never been (at least since the 70's) particularly popular, and a number of larger countries were forced to re-examine the entire currency picture-- whether they publicly admitted it or not-- in the wake of the global Financial Crisis of 2008, because the panic actually drove economic activity towards the dollar system, resulting in a kind of supernova decade⁶¹ for dollar hegemony and (see also) "Super Imperialism", "Land bridge".

2) China in particular immediately embarked upon what would become the biggest debt runup in the history of this planet, and by 2014-15 had already built up twice as much private debt as GDP. See also "Zombie", "Debt, private".

2b) Meanwhile, NATO was busy tightening its encirclement of Russia (despite Russia having allowed the UN Security Council to green-light the opportunistic ransacking of Libya during the Egyptian Revolution of 2011). Such post-Crisis aggressiveness from US "neocons" provoked Russia and China to abandon their (somewhat traditional) competitions in Central Asia (Escobar, 2020b); and to instead ramp-up their strategic partnership on the Shanghai Cooperation Org. (est. 2001), the BRICS summits (est. 2009), non-USD currency swaps (est. 2014), the merging of Russia's cash-strapped "Eurasian Economic Union" with

⁶⁰ Conquest Theory (of State formation) assumptions reveals someone who was brought up on Marx and Conflict theory (White & White, 2008e). See also "Marx, Karl (1818-1883)", "Communism" [conflict theory].

⁶¹ Michael Hudson called it at the time: The US Treasury & (so-called) 'Federal' Reserve "tried to 'save' the banking system from debt write-downs in 2008 by keeping the debt overhead in place while [simply] re-inflating asset prices. In the face of the repayment burden shrinking the US economy, the Fed's idea of helping the banks 'earn their way out of negative equity' is to provide opportunities for predatory finance, leading to a flood of financial speculation. Economies [that have been] targeted by global speculators understandably are seeking alternative arrangements. It does not look like these can be achieved via the IMF or other international forums in ways that US financial strategists will willingly accept."- <https://michael-hudson.com/2010/10/why-the-imf-meetings-failed>

China's [2014] "One Belt, One Road Initiative"⁶² (from 2017-19), to include even the "linking" of Russia's financial messaging system, "SPFS"⁶³, with China's cross-border interbank payment system "CIPS" (from 2019-20).⁶⁴ See also "Neoconservatives", "Land Bridge", "Provocation operation".

3) In autumn 2019, President Putin even went so far as to assert that the US dollar "will collapse soon. More and more countries are gradually abandoning it as a reserve currency. They impose restrictions on Iran, Russia and other countries. This undermines confidence in the dollar.... They are destroying the dollar with their own hands.... For some reason the US began using it as a tool of political pressure, imposing restrictions on its use. So they started biting the hand that was feeding them" (Putin, 2019).

3b) The following spring, Prof. Sergey Karaganov (sometimes a.k.a. 'the Russian Kissinger')⁶⁵, claimed that the new framework of Russian foreign policy is to "balance the 2 possible hegemonic powers...[as a] guarantor of a *new union of non-aligned nations*'.... So meet Russia as one of the supporters of a new multilateral, multi-vector partnership...moving from...[its traditional] status...[as] 'a periphery of Europe or Asia... [to being instead] 'one of the fundamental centers of *northern Eurasia*' (Escobar, 2020b). Karaganov then added that eastern Europe-- and also southern Europe-- are "'inclined towards the Eurasian project'" (Ibid). See also "CIA".

4) As if all that wasn't enough (monetary disruptions), the Trump Administration's decision "to pull out of the Iran nuclear deal in May 2018 highlighted how European companies remain dependent on dollar-denominated financial markets.... [and left Europeans to] fret at...[their perpetual] dominance...[by] the dollar" (Sandbu, 2019). See also "Stock markets", "INSTEX".

4b) This was compounded the following month, when Trump "took off early from the [June 2018] G7 summit in Charlevoix, Canada... abruptly [withdrawing] from a common communique... [It] left European leaders first 'speechless, then determined to work together... Trump boarding the helicopter in Charlevoix triggered the idea of European sovereignty'.... Just months later... [fmr. perma-PM of Luxembourg and then-President of the European Commission, Jean-Claude] Juncker vowed to make the euro 'play its full role on the international scene'...[and the new] incoming [C]ommission looks eager to pick up the baton" (Sandbu, 2019). Martin Selmayr, then-Secretary-General of the Commission, said that "Charlevoix... was a 'second Nixon moment' for Europe" (Sandbu, 2019); i.e. comparable to the closing of the gold window in 1971.⁶⁶ See also "European Commission".

5) Not to be outdone, in August 2018 Germany's FM Heiko Maas [r.2018-21] officially "called for 'payment channels that are independent of the US'" and its SWIFT system (Sandbu, 2019). See also "SWIFT codes", "German (industrial) banking", "'Digital Cash/Currency'".

⁶² China "doesn't want [to be paid in fiat]...money. It wasn't...[to be paid in] *raw materials* [sic]" on the One Belt, One Road Initiative (Hudson, 2020c, mn.100). "'We can print all the currency we want. We don't need to make a profit in Yuan'.... They're re-enforcing mutual gain [more than financial games]. Well that's what the West doesn't get: "*Mutual gain? What are we talking anthropology* [here]?'?... [I]t [isn't about] making toll roads to sell off to Goldman Sachs.... [That's just] the tunnel vision you get when you get a degree in Economics" (Hudson, mn.124-125). See also "Economics", "Land Bridge".

⁶³ "Russia began development of SPFS in 2014 amid Washington's threat to disconnect the country from SWIFT. The first transaction on the SPFS network involving a non-bank enterprise was done in December 2017."

- <https://economictimes.indiatimes.com/news/economy/foreign-trade/india-russia-china-explore-alternative-to-swift-payment-mechanism/articleshow/72048472.cms?from=mdr>

⁶⁴ Cui bono (from all this)? In April 2019, Putin said that Russia-China relations were "the best they have been in their entire history".

- <https://www.voanews.com/europe/putin-demands-role-eurasian-part-belt-and-road> . In June 2020, President Xi seconded the notion, adding that: "I have had closer interactions with President Putin than with any other foreign colleagues. He is *my best and bosom friend*... built on a high degree of mutual trust. That is the solid foundation of our close friendship. We treat each other with respect, candor, understanding and trust. We share similar views..." (TASS, 2020). This does not mean that the duo constitutes an eastern approximation of the UKUSA Agreement. A week after Xi's interview with TASS, the president of the Russian Arctic Academy was accused of working for Chinese intelligence and charged with treason (TASS, 2020b).

⁶⁵ Karaganov, honorary chairman of Russia's Presidium of the Council on Foreign & Defense Policy and a current Trilateral Commission member (since 1998), was also on the CFR Advisory Board from 1995-2005. See also "Kissinger, Henry".

⁶⁶ Federal Reserve notes were, in theory, convertible for domestic holders from the establishment of the Federal Reserve System, (only) until March 1933, but remained convertible for certain *foreign* institutional holders until August 1971.

5b) Coincidence? According to Thomas Meyer, Vladimir Putin “knows more about German culture than most current German politicians.”- <https://home.solari.com/coming-thursday-magnolia-intermezzo-russia-the-threifold-social-order-and-the-present-age-with-thomas-meyer/>

5c) Four years later (in 2022), Russia was officially kicked out of the US-founded “SWIFT” system.

Dollar's share of China-Russia trade settlements
(In percent)

*As of Q1
Source: Russia's Central Bank and Federal Customs Service, Investia

See also “Reserve currency”, → “World Par Economy (WPE)”.

6) In 2021 Russia’s MIR payment system accounted for approx. “27% of all of the transactions [in Russia]... or about \$680mn. worth of revenue”, compared to the trillions of the world’s top 10 Payment Providers- <https://www.youtube.com/watch?v=bLT9lZPw8Nc> [JoeBlogs,10/22, mn.7]. See also “Payment Systems”.

7) AngryBirds updates: 2/22- <https://asiatimes.com/2022/02/chinas-swift-alternative-may-undercut-us-sanctions/>
3/22- Washington confiscating the RCB’s foreign reserves and gold in late Feb. 2022 seems to have provided (what might be called) ‘the final push’: <https://thecradle.co/Article/columns/7975> : “The Russia-led Eurasia Economic Union and China[’s BRI]...agreed [in mid-March] to design the mechanism for an independent financial and monetary system...[to] bypass dollar transactions....”.

10/22- By autumn, it was obvious to thoughtful Europeans that “the Germans fall into a pit, which it is designed, especially for them, to fall into” (Meyer, 2022, mn.39).

11/22- “It’s no wonder that so many nations...the list is getting longer & longer. So many nations are now vying to join the BRICS club, and also to join the Shanghai Cooperation Organization [SCO]” (Krainer, 2022b, mn.10).

12/22- The Biden Administration forced it (as an inevitability in 3/22); and has even united Saudi Arabia and Iran... Assad and Erdogan.

Anti-Semitism- What is a "Semite" (language family-culture)? 1) The Ancient Sumerian [a non-'semitic' language] innovation of lending money at interest seems, inexorably, "to have come to a social crisis-- not so much leading to popular uprisings, but to common people abandoning the cities and settled territory entirely and becoming semi-nomadic 'bandits' and raiders... [Thus, it] soon became traditional for each new ruler to wipe the slate clean, cancel all debts, and declare a general amnesty or [debt] 'freedom' (*amarga*), so that all bonded labourers could return to their families" (Graeber, 2009). Over the centuries and millennia, of course, this (policy game) wasn't good enough for everyone.

2) In the medieval centuries, after usurious Rome had fallen and usury was (with a loophole or two) strictly banned [on both sides of the Mediterranean], Jews "were selected by princes as the [new]⁶⁷ bankers. If you're a prince, you want to keep authority in your own hands. The last thing you want to do is assign the most important function of government-- [new] money creation and the treasury-- to one of the other aristocratic families, because they're going to overthrow you.... Anti-semitism was the *perfect* [statecraft] vehicle for [maintaining] how European governments financed themselves, because the Jews did not own land. And you wanted the whole... [purpose] of early capitalist policy... [to be] to separate the financial functions from the land-owning functions" (Hudson, 2017b, mn.14); i.e. the (urban) merchants from the (rural) aristocracy. It was "like a nuclear reactor. You have to keep this financial thing separate from the land-ownership" (Hudson, mn.15). Jews then "were not in the position that Goldman Sachs is today-- to protest when you cancelled the debts.... The ending of anti-semitism meant that for the first time [in the West], you ended the separation... of finance from landholding, and from the [larger] asset and wealth structure society. Well needless to say, Germany is not ready for a discussion like that yet" (Hudson, 2017b, mn.16). See also "Civilization, Western" [separation of powers].

2b) Further east, in the late medieval centuries, the aristocracy & landed Estate-elected kingdoms of Eastern Europe had first fallen "backward into a [de facto] colonial area... [with its] trade and... middle class more or less vanished... [as] cities became more & more [insignificant]; and [then] the trade in the

⁶⁷ In other words, before "Jews had assumed the reputation as the world's great usurers, that honor-- or dishonor, depending on one's perspective-- belonged [simply] to the Italians. [It was] Italians [more specifically, Venetians, who first] brought Arabic numerals to the Western world, [likewise] introduced the revolutionary concept of double-entry bookkeeping, and gave us the very word *bank* [sic] from the old Italian *banco*" (Cashill, 2010, 41).

cities was largely taken over by foreigners & aliens, many of them Jews. And this is where the ghettos... came [from].... It went on in many other places [too], because this was a regular problem. Where you have a landed group in control of a society, they are very likely to destroy commercial activity and [hence] allow it to fall into the hands of foreigners and aliens...[as did also] the Ottoman Empire..." and the Russian Empire (Quigley, pt.2, mn.200-201). See also "Sovereignty".

3) 'Anti-Semitic' "lazy answers always flourish in times of deflation" (Varousfakis, 2018, mn.26). See also "Debt cycles".

4) ...And "[t]he Jews... have repaired their continual losses and destructions, by this single hope, which reigns amongst all their families, of seeing the birth of a powerful king, who shall be lord of the whole earth" (Montesquieu, 1721, 250). See also "Zionism".

5) "If [bank] money had a religion it would be Jewish, but fortunately it doesn't have one, as a result of which it can be venerated by everyone."- Banco di Roma founder Ernesto Pacelli (Lai, 1979, 178).

6) Generally, the rise of the term (over [what remains of] 'Western' civilization) during the past half-century or so has been concurrent with the rise of Israel-- and its socialist 'Ashkenazi elite founders' [almost all of whom were from Soviet family backgrounds]. Were-- and are-- the Israeli elite more "Russian" (ethnicist) in identity than whatever (the much newer construct of) 'Israeli' is supposed to mean? There are, after the fall of the USSR in particular, now "a million hard-core Russians...[many] of whom don't even identify as Jewish" now residing in the state of 9 million, and often move "into the highest positions of power...within Israeli society...[T]he Ethiopian Falasha Jews are not running the Intel factories", Talpiot, and the rising Israeli hi-tech sector (O'Connell, 2020d, mn.54). See also "Israel", "Intelligence Community" [I.I.C.] See also "Zionism", "Pilgrim Society", "Ethnic (National) Identity (ENI)".

Appendix C: "1-2-3" (preview)- (a.k.a. 'thinking outside-the-boxes [of the prev. century]'; i.e. how the great dilemma[s] of the young 21stc become false)

"the alternatives to reclaiming the commons are too dismal to contemplate" (Ahmed, 2014). See also "Common..."

1) The oldest (extant) theory-cum-governing paradigm in (now most of) the World? First, the 1st Order/Estate (government-public sector) wrote about it (in England) in the 9th century. Second, the 2nd Order/Estate (non-governmental [intellectual-media-business] elites) developed a "very clear" and thorough articulation of the theory-paradigm, from c.1000-1300 (Quigley, 1976c-pt.2).

1b) Next, by the 1680's & "Glorious Revolution", a new ~~world~~word had been coined in England: *Whiggish*- (adj.) "characteristic of Whigs or Whiggery...[i.e.] of, relating to, or characterized by a view which holds that *history follows a path of inevitable progression* and improvement, and which [less famously] judges the past in light of the present. First Known Use: 1684."- <https://www.merriam-webster.com/dictionary/Whiggish> See also "Whig".

1c) Did this new word catch the attention of political economy theorists in (Enlightenment Era) Europe? Yes, it did (or at least the greatest of them⁶⁸). See also “Montesquieu, Baron de (1689-1755)” [‘separation of powers’→ ‘trichotomy’]⁶⁹, “Constitution, US (of 1787-91)”.

2) And Montesquieu’s resultant political & historical/developmental theories certainly caught the mind’s eye of (the then-developing) international freemasonry, and-- a century later-- (the famous Italian civil nationalist leader) Giuseppe Mazzini (1805-72); and then-- after another century-- served as the muse for great Italian filmmakers-screenwriters-composers (f.e. Pontecorvo, Solinas, Morricone)

2b) A more-or-less ‘1000 year guiding light for ‘Western civ.’ & civil-civics-- and its long, slow path of bringing increasingly-inclusive “Estates” to the fore (...in 200 minutes here:):

[See also “Eras of (monetary) History”, “Coined money” (.1st)⁷³ “Glorious Revolution” (.2nd)]. “Money, 3 (contemporary) Tiers of”.]

⁶⁸ In addition to his geographic, literary, and historical insights, Montesquieu fully theorized what had already happened in the 1600’s (with the English, and Whiggishness, and political sustainability) and the long-term developmental implications. Part of the durability of ‘Montesquieu’s’ prophecies are due to the fact that he was (as usual) simply pointing out long-term historical trends. Some substantial ‘separation of powers’ in Western civ goes back to the 11th century; and the ‘Despotism-to-Love of Honor-to-Virtue’ trend would simply seem to have a lot to do with (a very big zoom-out on) long-term population and literary development (which is simply another way of saying ‘without any particularly catastrophobic or shattering developments’;→ see also “Separation of Powers”,→ “Civil National Identity”, “Constitutions”). It’s a boat (or spaceship) that floats. See also “Lexicon Test, the”.

⁶⁹ Montesquieu’s friend & correspondent David Hume (1711-76) was (as someone recently born into the recently-purchased Scotland) more skeptical of all things ‘Whiggish’, especially Whiggish (‘Merry Old England’-type) mythology dressed up as history. See also “Civil National Identity” [Jefferson vs. Hume]. Nonetheless, the basic long-term “1-2-3” developmental theory has held, and continues to hold. See also “Estates, 3” [Wang].

⁷⁰ ‘Let’s do something’. Monetization as building the basic skeletal-bone structure; see “Coined money”, “Eras” [Axial].

⁷¹ ‘Let’s do something powerful’. (Without 2E/non-state elite, society pretty much wouldn’t move.). It’s not just pluralism & greater movement; but also monetization-as-teaching/building the (next stage, of) proto-cartilage; see “Central Banking-Warfare model”, “Intelligence Community (IC)”, “Angry Birds” [thrown out of the nest].

⁷² ‘Let’s do something that doesn’t depend upon (emotional) pain’. (Without a politically-salient 3E/non-elite, pretty much all societal movement is pain & stressful). What happens ‘after all movement is pain’ (that is unless one possesses sufficient \$\$\$ to smooth over the access and grace)?

⁷³ Coined money was basically the (1E monetary) norm, from the Iron Age up to the rise of the 2E-- alongside “Accounting, double-entry”, and the resultant “Renaissance”, “Enlightenment”, and Romantic eras of Western Civ.-- culminating in (what most scholars agree was) “State capture”, via “corporate personhood” by the late 19th century. The 3rd *Currency War* was such a catastrophe that ‘state capture’ went to “Statism”, “Socialism”, and widespread reversion to “Secrecy”. So it is unclear, at this time, to what extent the ‘post-war’ decades were simply a continuation of 2E ‘money politics’ as usual, and/or also a deeper (and more profound) scaffolding for a (soon-to-be) future era of 3E self-governance. See also “Reform, 101”.

Aquinas, Thomas (1225-1274)- (a.k.a. St. Thomas; “the greatest theologian of the Middle Ages” [Blaug]; reconciling [the newly discovered] Aristotelian philosophy with [the traditional] ‘NeoPlatonism’ of St. Augustine) “Whence if men were silent against usurers, the stones would cry out if they could.”

- Prof. William of Auxerre⁷⁴ [1160-1220] (Zarlenga, 2002, 177). See also “Leverage”, [vs.] “Religion”.

1) The “greatest Dominican...was one of the most atypical... [He] reconciled reason and faith.”

- <https://www.youtube.com/watch?v=QuHoRgs9UkQ> [WT, pr.23, mn.22]. Aquinas’ “masterpiece, *Summa Theologica*, provides a complete and authoritative statement of medieval economic thought that has remained the official Catholic view [through the rest of the 2nd millennium]... St Thomas had a decisive influence on economic thought in at least 3 broad areas: the theory of private *property*, the theory of the *just price*, and the doctrine of *usury*. St Thomas’s great contribution to economic thought, as to theology, moral philosophy, and politics, lies in his emphasis on *ratiocination* on the Greek ideal of accepting **nothing** unless good reasons can be given for it” (Blaug, 1991). Yes, the traditional ‘West’ had no qualms about saying No, first, foremost, & without reservation.

See also “Civilization, Western”, “Imperialism”.

2) One “can see how well this fitted an age that was still deeply religious, but [also] one in which men were beginning to take their fate into their own hands.... Ironically [at the time], it was...the great Catholic theologian who provided a solid intellectual foundation for a state that was secular and rational... [i.e.] not purely arbitrary, but based on logical, predictable, codified procedures, as in the Roman law that the 12th century was rediscovering in the new [concept of] universities... [H]uman right was not destroyed by divine right.... [L]aw and justice... part of the reason on God, were [in fact] accessible to us, simply by using our own human [being’s] reason.”- <https://www.youtube.com/watch?v=QuHoRgs9UkQ> [WT, pr.23, mn.23-24]. See also “Protestantism”.

2b) In addition to Thomas’ direct accomplishments, “disciples”⁷⁵ such as Dante Alighieri (c.1265-1321) actually got (what would come to be known as) ‘Thomism’ rolling, “one step further.... In Dantes’ eyes, the state had a providential mission toward the human race.... This exaltation of the state was almost unique in medieval literature.”- https://www.youtube.com/watch?v=1Vac50_uUhl [WT, pr.24, mn.1-2].

3) “argued that money is [simply] a measure, and [that] usury ‘diversifys the measure’...[meaning] that placing additional functional demands upon the money mechanism, as usury does, harms its [primary] function as a measure” (Zarlenga, 2002, 185). “Observer Effect/Goodhart’s Law”, “Usury”.

See also “Vatican Bank”, “Accounting” [temple priests].

Arab Spring- See “Nasserism”.

Argument- See “Logical fallacies”.

Aristocracy (& nobility)- (historically: ‘class’ or ‘caste’-- a.k.a. ‘private’/de facto or ‘government’/de jure)

1) Etym.: (Gk.) *aristos*- ‘the most fitting’⁷⁶... [or] best of its kind’.

Originally: “rule of many”⁷⁷ men, who are all of them *good*’- Aristotle, *On Politics* (Book III, ch.15).

⁷⁴ A professor (of Theology) at the Univ. of Paris (back before there were common surnames in Europe), William was ‘one of the first theologians to be influenced by [the recently found works of] Aristotle. His *Summa Aurea*...[like Aristotle] advances...ontological argument... [with a final] insistence on the physical that had not been seen [there] earlier.... In 1231...[William was] a member of the commission appointed by Gregory IX to examine Aristotle’s writings on the natural sciences, and to offer amendments where *religiously necessary*.’ - wiki (22-10-1). See also “Academia”, “Enlightenment, the”.

⁷⁵ Dante corresponded heavily with the Dominican theologian Nicholas Brunacci (1240–1322), who had been a student of Thomas Aquinas in Rome and Paris. Later Dante’s *Divine Comedy* (1320) glorified the soul of Thomas residing in “the Heaven of the Sun”, with the other great exemplars of religious wisdom, beginning Aquinas theology’s rise to official RCC orthodoxy. By the mid-16thc Council of Trent, St. Thomas’ “*Summa Theologiae*... was placed upon the altar beside the Bible and the Decretals. Only Augustine [of Hippo (354-430)] has had an equal influence on the theological thought and language of the Western Church.”

-https://www.cs.mcgill.ca/~rwest/wikispeedia/wpcd/wp/t/Thomas_Aquinas.htm#:~:text=Aquinas%20made%20a%20remarkable%20impression,great%20exemplars%20of%20religious%20wisdom.

⁷⁶ ...from the proto-Indo-European root ‘*ar*’-- “to fit together”.

⁷⁷ He didn’t (unlike Plato) say or mean “the few”. Unconvinced? See also “Middle class”.

1b) Hence, it originally denoted government by the best citizens, but then later by the rich and well born; hence the term's migration towards (a more caste-like) 'nobility', regardless of the form of government (mid-17th century). See also "Oligarchy" (rule-by-wealthy).

1c) After the *social revolution* of Europe's a) great plagues, b) discovery of the Western hemisphere, and c) resultant monetary revolutions, however, *aristocracy's* meaning migrated towards more authoritarian and hierarchical definitions, such as rule by those 'distinguished by rank & wealth', or 'the privileged class', in a century-long transition that began no later than the 1570's. Aristotle would not have been pleased. See also "Middle class".

1d) "I often laugh at it too, for there is nothing in this laughable world more ridiculous than the management of it by almost all the nations of the Earth.... [Witnessing, however] the unfeeling Cruelty of a majority of those (in all Nations) who are allowed an aristocratical influence; and on the other hand, the Stupidity with which the more numerous multitude, not only become their Dupes, but even love to be taken in by their Tricks: I feel a Stronger disposition to weep at their destiny, than to laugh at their Folly.... I dislike and detest hereditary honours... So do you."- John Adams, letter to Thomas Jefferson (Adams, 1813f). See also "United States, the"; "Imperialism, American".

2) Peerage-Baronages aside; the "landed oligarchy"⁷⁸ of England was different from that on the continent ...[most fundamentally in that] it was not a [caste] nobility⁷⁹.... On the continent, a *noble* was excluded from marrying outside his class or from engaging in commercial enterprise...[and] access to the [formal] nobility... could hardly be achieved in much less than 3 generations" (Quigley, 1966, 128). See also "Public Banking (idea)", "Bank, universal".

2b) Again in contrast to the continent, "*aristocracy*...[or (by that time)] an upper class distinguished by traditions and behavior... in England [& its colonial-imperial progeny, was distinguished by the following:]... 1] that it should be trained in an expensive, exclusive, masculine, and relatively spartan educational system... 2] that it should imbibe from this ...system certain distinctive attitudes of leadership, courage, sportsmanship, team play, self-sacrifice, disdain for physical comforts, and devotion to duty...[and] 3] that it should be prepared in later life to devote a great deal of time and energy to unpaid tasks of public significance" (Quigley, 129).⁸⁰ See also "English constitution, the".

3) "One of the key elements in the lifestyle of the [landed] aristocracy [throughout the 1st millennium] was ...the potential violence to social inferiors that our sources constantly stress. This was taken for granted when dealing with the highest aristocrats... [and also] milites... establishing seigneuries by a liberal use of force"⁸¹ (Wickham, 525). See also "Violence".

Charismatic Authority-Dependency→**Nobility**→**Aristocracy**→**Aristocrats**→**Oligarchs**→**Oligarchy**→**Revolution**
(the basic attitude-assumption) (closed *caste* ('open' *class* (from land-based to (aristocrats + (oligarchs + (...or [some 'clever'
system) system) *bankmoney*-based) public control [nat'l/*de jure*] form of] serfdom)
[local-*de facto*]) gov't control) See also "Civilization.
(1st Estate.*gov*) [clergy] (2nd Estate.*pvt*) [E/2E local-regional] [E/2E nat'l-int'l] Western", App.C: "1-2-3"

4) The (aristocratic) Clergy made its divorce from the 'violent' governmental nobility official in the 11th century advent of the "Papal Monarchy", the "Great Schism" (of 1054), and 'Investiture Struggle'/ 'Controversies' of the 11th-12th centuries (back before Popes started getting kidnapped by France).

Henceforth, in what would be known as 'Western' Civilization or 'Christendom', [mostly state-independent] clergy were to be formally-officially known as "Lords *Spiritual*", and [mostly state-dependent] nobles-nobility were to be known as "Lords *Temporal*". See also "Estates, 3", "Civilization, Western".

⁷⁸ "There were [also] lesser landlords, who were not noble.... They are frequently called the *gentry*... in England [and] they...[became] a very vitally important group.... around 1400 or certainly [by] 1450" (Quigley, 1976c-pt.2, mn.137); a.k.a. after the Great Plagues. See also "Malthus, Thomas".

⁷⁹ *Nobility* is defined by Quigley as "a caste based on exalted birth" (Quigley, 1966, 128). See also "Primogeniture".

⁸⁰ All this was not particularly new knowledge, but more like reverting back to the original Aristotle. "[S]ome persons say that even the education of the ruler should be of a special kind; for are not the children of kings instructed in riding and military exercises?... [M]en are praised for knowing both how to rule and how to obey, and he is said to be a citizen of approved virtue who is able to do both" (Aristotle, Book III, ch.iv). The British state (in contrast to the continent) was simply *able* to, in fact, implement such a regime. See also "English constitution, the".

⁸¹ ...and often, like Vikings, drawing complaints, "particularly by vocal ecclesiastical victims" (Wickham, 525). See also "Estates, 3".

4b) What is not so well-known (at least in the West) is that Tang Dynasty China had also undergone a similar 'separation of powers' transition, at least *de facto* [i.e. not officially recognized by most of the relevant regimes], some 2-4 centuries earlier. Neo-Confucianism founder Han Yu (768-824), however, didn't like the pluralism or de-centralization (or the lost tax revenue); and the future Emperor Wuzong (814-846), as part of his 840's all-around battle with what might be called the 9th-century Tang 'deep state', "dealt Chinese Buddhism a blow from which it never really recovered"⁸² (Jordan, 1996). See also "Separation of Powers".

See also "Dynastic Cycle", "Montesquieu, Baron de (1689-1755)".

Aristotle (384–322 BCE)- ('classical civilization's greatest ['western'] philosopher'; i.e. mister 'middle class'⁸³; not to be confused with [his oligarchical predecessor] Plato)

1) For some reason, it is all-too-often overlooked that Plato's successor (& Alexander the Great's tutor) was quite explicit in describing his ideal state of government or "*best constitution...[and] best life*"-- that is at least "for most men... [regarding] the [actual] life in which the majority are able to share, and to the form of government which states...can attain" [sometimes a.k.a. the real world]-- (and this differed radically from Plato's child-like monarchical totalitarianism). "[G]ood fellowship springs from friendship; [but] when men are at enmity with one another, they would rather not even share the same path...[A] city ought to be composed, as far as possible, of equals and similars; and these are generally the middle classes.... for they do not, like the poor, covet their neighbors' goods; nor do others covet theirs... and as they neither plot against others, nor are themselves plotted against, they pass through life safely. Wisely then did Phocylides pray-- 'Many things are best in the mean; I desire to be of a middle condition in my city'.... [W]hen there is no middle class, and the poor greatly exceed in number, troubles arise, and the state soon comes to an end. A proof of the superiority of the middle class is that the best legislators have been of a middle condition; for example, [both] Solon, as his own verses testify; and Lycurgus, for he was not a king; and [also] Charondas, and almost all legislators.... [T]he poor and the rich quarrel with one another, and whichever side gets the better, instead of establishing a just or popular government, regards political supremacy as the prize of victory, and the one party sets up a democracy and the other an oligarchy...[B]oth the parties... looked only to the interest of their own form of government... they thought... of the public not at all. For these reasons the middle form of government has rarely, if ever, existed..."- *On Politics*, c.350 BCE (Book 4, ch.xi). See also "Middle class", "Conspiracy 'theorist'".

1b) "The legislator should always include the middle class in his government; if he makes his laws oligarchical, to the middle class let him look; if he makes them democratical, he should equally by his laws try to attach this class to the state. *There only* can the government ever be stable where the middle class exceeds one or both of the others.... Many even of those who desire to form [Aristotle's supposedly "good"] *aristocratical* governments make a mistake, not only in giving too much power to the rich, but in attempting to overreach the people. There comes [from that] a time when, out of a false good, there arises a true evil" (Book 4, xii). See also "Oligarchy" [Locke], "COVID", "Totalitarianism".

⁸² "Perhaps it would have been extinguished completely if Wūzōng [r.840-846] had reigned longer. However in 846, a year after the restriction of Buddhist temples to one per city, he was experimenting with Daoist elixirs of immortality and poisoned himself.... [His successor] immediately lifted the prohibitions on Buddhism...[but] the damage had largely already been done, and in any case he was not about to restore the massive tax and labor exemptions" of the previous decade and century (Ibid).

⁸³ This is not hyperbole. In (the sharpest) contrast to Plato; "[T]wo or three...remarks are suggested by the study of his [main political] book. We may note 1) the real enthusiasm with which Aristotle speaks of the middle class, and of the constitution which is based upon it; no other government is equally praised by him. It seemed to him, not like the Republic of Plato to be out of the reach of human nature, but well adapted to a Greek state which was unwilling to be at the mercy of every invader and to be the true remedy for the [ENI] evils of Hellas. Of the invidious connotation attaching in modern times to the term 'middle class', which has been equally obnoxious to those above and those below them, there is no trace in Aristotle" (Jowett, 1885, lxxxv). "The rich [simply] know not how to obey, nor the poor how to rule; and thus arises a city of masters and slaves... But the middle class are to be trusted.... Yet one man only, of all who ever ruled in Hellas, thought of establishing this middle constitution" (Jowett, 1885, lxxxi).

Aristotle's Basic Forms of Government

	Correct	Deviant
One Ruler	Monarchy	Tyranny
Few Rulers	Aristocracy / Republic	Oligarchy / Plutocracy
Many Rulers	Direct Democracy	Anarchy

[Aristotle defined *aristocracy* (from the root word 'best') as both "rule by many" citizens (Book 3, xv), a.k.a. the (see also) "Middle class"; but he seems to have settled upon: "that in which more than one, but not many, rule" (Book 3, vii). And *democracy*, in contrast, was simply rule by too many (for *virtue*).]

2) He did not seem, however, to grasp "[virtue]" (Book 4, ch.ii). See also "Montesquieu, Baron de (1689-1755)" [.trichotomy], "Civilization, Western" [as distinct from "civilization, classical"], "Statism", "Freedom continuum (maturation)".

2b) Classical Aristotle and early modern Montesquieu sharply disagreed on what would be the latter's notions of (de jure) Monarchy & (de facto) Timarchy (sometimes a.k.a. Montesquieu's Anglophilism). Aristotle didn't have time for monarchy. "The conception of the perfect man whose single virtue exceeds that of all other men put together, and who therefore has a natural right to rule, is even more extravagant than the rule of philosophers in the Republic of Plato" (Jowett, 1885, xix). See also "English constitution, the" [.monarchy], "UKUSA Agreement" [.timarchy].

3) According to some, English Franciscan Scholastic William of Ockham (1285-1347 [in the wake of Thomas Aquinas]) took (Aristotelian) empiricism too far. "" (Dugan, 2021). See also "Nominalism".

3b) Judge for yourself: <https://www.youtube.com/watch?v=M5WDdvkFaDg> [mn.0]. See also "Physics" [.Ball], "Corporations (and corporate 'personhood')", "Patri", "Plato vs. Aristotle" [Orthodox, Western]. See also "Money" [.Ethics], "Happiness", "Ontology".

Aristotle vs. Plato- see "Plato vs. Aristotle".

Armageddon- actually not very likely, despite-- or perhaps *because* of-- the multiplicity of crises already confronting us in this larger 'millennialist' era. 1) "We do have alliances-- believe it or not-- that are far stronger than the one Secretary [of State] Kerry has. Our generals have a very strong alliance with the Russian soldiers and the Russian intelligence, going back for decades. So, in effect... our intelligence in our military have their separate relationship [with foreign militaries] which is devoid of civilian oversight. So our militaries know exactly how much they can go forward, and how much they can push... [Certain] general[s]... just... dispel [tell] their own command and control system 'Look, it can't work'." (Pieczenik, 2016, mn.32). *Dr. Strangeloves* need not apply for the highest ranks in the empire that enjoys approx. 800 military bases⁸⁴ in more than 70 foreign countries and territories. See also "Intelligence Community (IC)" [I.I.C.], "Zombie", "COVID".

2) Nonetheless, *if* "the US and Russia [were to] destroy each other... then they ['zicocons'] are ascendant...be it from Israel or wherever. So they've got a place in mind...[if] they've all got second passports"- Catherine Austin Fitts (McKinney, 2017b, mn.18). See also "Land Bridge". See also "Zionism", "Food", "Internet of Things (IoT)".

Art- Approx. 40% of life is spent dreaming; need one say more?⁸⁵ See also "Totalitarianism", "Design". See also "Cultural Calendar" & "Corporate Media Cartel", "Monty Python's", "Jacob's Ladder".

Articles of Confederation- (de jure: 1781-89; informal: from back to late Nov. 1777; i.e. back when Virginia, Massachusetts, and most other states. claimed land across the continent, to [what they called] the 'South Sea' [Pacific Ocean])

"I'd rather be a free citizen of the small republic of Massachusetts than an oppressed subject of the great American Empire.... These violent partisans are for having the people gulp down the gilded pill

⁸⁴ The next 3 most imperialist nations-- Britain, France and Russia-- have "about 30 foreign bases combined" (Vine, 2015). See also "Reserve currency", "Super Imperialism".

⁸⁵ "Let no one ignorant of geometry enter".- legendary motto of Plato's Academy. See also "Aristotle vs. Plato", "Civilization, Orthodox".

blindfolded, whole, and without any qualification whatever. These consist generally, of the NOBLE [sic] order of C[incinnatus], holders of public securities, men of great wealth and expectations of public office, Bankers and Lawyers: these with their train of dependents form the Aristocratick combination. The Lawyers in particular, keep up an incessant declamation for its adoption...”- ‘Antifederalist No.1’, “General Introduction: A Dangerous Plan of Benefit Only to The ‘Aristocratick Combination’”⁸⁶

1) Even after full war had started, “no settlement [between the colonies] was reached... Not until November 1777, when France refused to lend the United States any money unless there [actually] was [sic] a United States, did Congress finally *approve* the Articles” (Raphael, 2013, 7).

2) Mostly due to major British counterfeiting (not some shoot-yourself-in-the-foot political mismanagement); “the currency Congress issued lost more than 99% of its value [by 1780], and... in order to remain solvent, Congress granted full authority over the nation’s finances to a single individual” (Raphael, 7), and his able “deputy”. See also “Sovereignty” [monetary], “Constitution, US”.

3) In the bleak (for patriots) winter of 1781, only “after France threatened [this time around] to withdraw [all] military support unless the states pulled it together” did the 13th state, Maryland, finally ratify⁸⁷ the Articles; and “a few people” in 1781 were now using the term *United States of America* (Raphael, 7).

4) The Articles “themselves [however] did not use the word ‘nation’...[but instead] the term ‘firm league of friendship’... [which] differed little from a [conventional] military alliance”, although it did “establish a minimal national infrastructure... [including] fixed standards for coinage [and other] weights & measures ...but it provided no means to raise revenues other than [war economy-like] requisitions... [with] no mechanisms to enforce compliance” (Raphael, 2013, 7-8). Hence the league was bound to fall apart, into fiscal-economic chaos, when the war ended.

4b) The matter of (the primary measure of) currency was left, however, to the (semi-sovereign) States; and it wasn’t working. “[Many] Americans saw their country stricken by a serious sickness.... The fluctuation in the value of money... was putting a premium on selfishness... Instead of bringing about the moral reformation they had anticipated from victory, the Revolution had only aggravated America’s corruption...” (Wood, 1969). See also “Constitution, US (of 1787-91”.

See also “Government, role of”, “United States, the”, “Constitutions”.

Articles-to-Constitution (transitional riots/rebellions)- (it was’t just ‘redcoats’)

1779- Oct. Philly mob attacks R. Morris & James Wilson at Wilson’s residence (ultimately with cannon); only the arrival of the ‘City Troop of Light Horse’ dispersed the mob (leaving 4 dead and 14 other casualties).

1780-

1781- Jan. “*Pennsylvania Line Mutiny*” of rank-and-file soldiers, ‘ultimately refused to defect to the British after Gen. Sir Henry Clinton made them an offer’ to do so.

1782-

1783- Mar. NY “*Newburgh Conspiracy*”⁸⁸; then June *mutiny from Lancaster, PA* makes Congress flee the entire

⁸⁶ Anonymous author, in *The Boston Gazette and Country Journal*, Nov. 26, 1787.

⁸⁷ Smaller states had long “wanted other states to relinquish their [gargantuan] western land claims before they would ratify the Articles. [Holdouts] New Jersey and Delaware eventually agreed to the conditions of the Articles... on Nov 20, 1778 and...Feb 1, 1779 [respectively, leaving]...Maryland as the last remaining holdout. Irked by Maryland’s recalcitrance, several other state governments [had] passed resolutions endorsing the formation of a national government without the state of Maryland, but other politicians such as Congressman Thomas Burke of North Carolina persuaded their governments to refrain from doing so, arguing that without unanimous approval of the new Confederation, the new country would remain weak, divided, and open to future foreign intervention... Meanwhile, in 1780 British forces [had] began to conduct raids on Maryland communities in the Chesapeake Bay. Alarmed, the state government wrote to the French minister...De la Luzerne asking for...naval assistance. Luzerne wrote back, urging the government of Maryland to ratify the Articles... [and] Marylanders were given further incentive to ratify when Virginia agreed to relinquish its western land claims, and so the Maryland legislature ratified the Articles of Confederation on March 1, 1781.”- <https://2001-2009.state.gov/r/pa/ho/time/ar/91719.htm>

⁸⁸ Robert Morris “thought that... Congress could impose taxes on the ground that authority to spend implied the power to collect revenue. Capitalizing on [general] discontent within the army, especially among officers to whom Congress could not make good its compensation commitments, the Morris group encouraged the issuance of ominous [sounding] pronouncements from Washington’s camp at Newburgh, New York. Washington...however squelched his more aggressive subordinates, including [again] General Gates, so that the ‘Terror of a mutinying Army’ lost some of its effectiveness as a pressure tactic. Suspected...[as usual] of self-interested economic motives as well as indifference to public opinion, [Robert (and also Gouverneur)] Morris [both] resigned in 1784, in the hope that [in the words of Robert] ‘the people

state, relocating to Princeton, NJ, beginning a 'nomadic Congress era' which continued until they settled on Wall St. in NYC (from 1785-90), not returning to Philly until Dec. 1790 (to May 1800).

1784-

1785-

1786- Aug. N.W. MA *Shays' Rebellion*,

1787- Philly *Const. Conv.* meets in Soviet-type secrecy (25 May-17 Sep.)

1788- Apr. NYC "*Doctors' riot*" claims 5-20

1789-

1790-

1791- Sep. W. PA taxes uncollected after 2 successive collectors tarred & feathered. The anti-tax rebels called themselves (per the colonial tradition) "Regulators", but Alexander Hamilton preferred to call the ensuing 3-year insurrection the (more-yahoo!-sounding) "Whiskey Rebellion", and the somewhat pejorative label stuck.

1792-

1793- N.W. PA ; daily Philly mobs threaten

1794-

1796-

1797-

1798-

1799- E. PA; Frie's Rebellion

1800-

Artificial Intelligence (A.I.)- 1) "The estimated bit processing rate of the human brain is approximately 10^{16} bit flips per second.... a hand held artefact could flip at 10^{40} bits per second. An asteroid sized artefact could flip at 10^{52} bits a second. Thus the raw bit processing rate of the artefact could be a trillion trillion (10^{36}) times greater than the human brain. If the artefact can be made intelligent, using neuroscience principles, it could be made to be truly godlike, massively intelligent and immortal."

- Physicist Hugo de Garis (Fitts, 2018e).

2) The "G2"s "A.I. Race"-- "China and the US maintain significant leads in AI that have the potential to shift significant wealth from the rest of the world, further concentrating wealth in these 2 superpowers... [and] the quality of AI Deep Learning applications are driven by the volume and richness of the data accessed. Whether efforts to force 5G or smart meters, or to ionize the sky, there is a reason for the rapacious hunger for data, as the US tries to generate richer data streams than China...[and] its much larger population" (Fitts, 2018l).

3) "Most of what's being rolled out [today] is what's called *deep learning A.I.*, which in one sense is not [really] A.I. It's just...millions of algorithms.... We're basically turning over control of the planet to [not particularly wise] A.I. on an out-of-control [new arms race] basis, and Asia... is gonna [continue to] rock our world" (Fitts, 2018t, mn.13-14), because A.I. and most of the other high-technologies are, like knowledge, essentially borderless. See also 'Industrial Revolution, 3rd', "Breakaway Civ."

4) Like 'big data', A.I. has its limits. But "in the Google [Markovian] system of the world, technologists imagine that computer velocity conveys computer intelligence, that if you shuffle the electrons fast

will... more easily believe when they hear Truth from some other Quarter'" (Graeber, Fite, & White, 1975, 141). See also "'Conspiracy theorist'".

enough, you can confer consciousness and creativity on dumb machines” (Gilder, 2018, 90). Didn’t everyone learn this in *Frankenstein* a couple centuries ago? People hate it.

4b) In order “to become the world’s primary AI innovation center by 2030. Chinese policymakers are paying increasing attention to *ethics* in... AI governance,... [Beijing has] expressed its intention to tackle ethical issues arising from AI systems...[Its 2017] plan states that by 2025 China will set up an initial system of laws, regulations, ethical norms & policies as well as a security assessment framework to ‘ensure the safe, reliable and controllable development of AI’. A comprehensive system...[is to] be established by 2030” (Arcesati, 2021). See also “Technocracy”, “Land Bridge”.

Asian Crisis of 1997-98- 1) “Asia thought it was getting rich off the dollar inflows, and then the IMF and the all the creditors pulled the plug... [and then] bought up Korean industry, [etc.] at giveaway prices” (Hudson, 2020c, mn.116).

2) The only exception in the region “...was Malaysia under Prime Minister Tun Mohamad Mahathir. He would not sell the domestic currency to the foreign speculators.... But [most] countries [were] like Korea, where... the IMF went [in] and said, ‘*You owe money you can’t pay. George Soros has raided you. You have to sell Americans your electric companies. You have to sell Americans your car companies*’. And this was a grab that, in the past, in past centuries, there would have had to [have been] a military invasion to take over. And now they’re doing it financially. And they’re angry over there.... America will not get any of what it’s asking for from them [at the 2010 G20], because they’re going to say, ‘*Look, we’re not going to let you create electronic keyboard credit and buy out our real estate and our industry and empty out our bank reserves like you did in the 1997 Asia crisis*’. That’s never going to happen again” (Hudson, 2010d). See also “Angry Birds”, “Land Bridge”.

3) The Crisis “demonstrated the danger of basing one’s economy on a money system & monetary unit that someone else controls.... by cutting the value of Indonesia’s currency by 75%, the wages paid to these people was also reduced by 75% in dollar terms.... almost 5 years after the Asian currency debacle, the Indonesian government is still in tatters” (Zarlenga, 2002, 640).

Asian Dollar Market, the- See “Eurodollars”.

Asian Economic ‘Miracle’ (1950’s-1997)- 1) see “Window Guidance”, “Princes of the Yen” [.Jp-.Kr];

2) see “Georgism (& Land Value Tax)” [.Hk, .Sg, Tw] (Sullivan, 2021)⁸⁹, “American System”.

Asian Infrastructure Investment Bank (AIIB)- issues loans in USD.

Asphyxiation, economic- see “Compound interest”, “Debt saturation”, “Japan model”.

⁸⁹ “To abolish the taxation which, acting and reacting, now hampers every wheel of exchange and presses upon every form of industry, would be like removing an immense weight from a powerful spring. Imbued with fresh energy, production would start into new life, and trade would receive a stimulus which would be felt to the remotest arteries” (George, 1879, 434). See also “Physiocrats, the”.

“For this simple device of placing all taxes on the value of land would be in effect putting up the land at auction to whosoever would pay the highest rent to the state...[Since the] demand for land fixes its value... the man who wished to hold land without using it would have to pay very nearly what it would be worth to any one who wanted to use it [more intensively]. And it must be remembered that this would apply... to all land... [I]nstead of operating...as a fine upon improvement...[taxes] would [now] operate to force improvement. Whoever planted an orchard, or sowed a field, or built a house, or erected a manufactory, no matter how costly, would have no more to pay in taxes than if he kept so much land idle. The monopolist of agricultural land would be taxed as much as though his land were covered with houses and barns, with crops and...stock” (George, 437).

[death by hypertrophy]

Asset-Backed Securities (ABS)- (the 6th largest class of bond-trading in the US, at approx. \$1.5 tn.)

- 1) "Asset-backed securitization (ABS) involves the pooling of similar assets into a special purpose vehicle (SPV) ...created for bookkeeping purposes to exploit regulatory capital and tax advantages... [and] have permitted an enormous expansion of private debt. Their use by commercial banks, or other mortgage lenders, represents an important link between [the merging of TAB] retail banking and [SBS] financial markets" (Phillips & Roselli, 2009, 5-6). See also "Shadow banking (SBS)".
- 2) "were a very minor segment of the market... until the early 2000s" (Phillips & Roselli, 9). See also "Collateralized debt obligations (CDOs)", "Financial Markets".

Asset inflation- (inflated prices for stocks, bonds, real estate, and/or other high-end investments)

- 1) "Money that does not flow into the real economy... has no direct impact on producer and consumer price inflation [a.k.a. the CPI]. Money that flows into the *financial* economy [however], whether in ['real economy'] GDP finances or non-GDP finances, influences asset prices (asset inflation)" (Huber, 2020b).
- 2) "It's not economic [GDP] growth, simply because the value of your house went up" (Hudson, 2017, 2017l, mn.9). When land prices go up, it's also raising the debt "by an equal amount, because all of this is borrowed money...pushing it up. And the higher the land prices go, the more interest rates have to be diverted from the [actual] economy, to pay mortgages on this higher-priced real estate" (Hudson, 2017l, mn.11).
- 3) "House prices and securities markets⁹⁰ are artificially inflated with loose monetary policy" (Wortmann, 2019b, 10). In "the US, England, and other countries... [with] very low taxes on capital gains... low interest rates simply make housing more expensive,⁹¹ and make stocks and buying a flow [of] retirement income (in the form of stocks or bonds that yield dividends and interest) much more expensive" (Hudson, 2017o). See also "Quantitative Easing (QE)".
- 4) "There tends to be an inverse correlation between interest rates and asset values" (Vague, 2020b, mn.30). (i.e. Capitalism is all about moving the cost of capital to zero, regardless of consequences & side effects.) See also "Interest rates", "Capitalisms", "Economics", "Dutch disease".

⁹⁰ The Federal Reserve's recent "balance sheet expansion...is [mostly] just being recycled in[to] the stock market[s]" (Titus, 2020d, mn.47).

⁹¹ In Knoll, et al's data set of 14 "advanced countries", real housing prices basically *tripled* (3x) between 1960 and 2008 (Jorda, Schularick, & Taylor, 2016b, 13); while the "M1" US bankmoney supply increased approx. 1000% (10x). The substantial difference may be broadly attributed to both increased fiscalism (public spending) and the [hitherto secret] rise of global "eurodollars".

5) “[W]e’ve restructured the financial system so that credit *doesn’t flow through entrepreneurial channels* any more, and as a result inflation shows up as asset price inflation rather than producer/consumer price inflation”⁹² (Sossoko, 2020b). See also “Debt cycles”, “Inflation/deflation”.

6) With the ‘COVID’ “policies’...[increased] bank credit creation... [mostly] for unproductive purposes.... [even the] property markets...in Germany are getting red hot” (Werner, 2021, mn.14-15).

7) “What must follow [asset inflation] is banking crises” (Werner, 2018, mn.17); a.k.a. debt-saturation, over-consolidation. See also “Gross Domestic Product (GDP)”, “Real Estate”.

Asset money- (a.k.a. ‘Debt-Free National Money [DFNM]’, ‘sovereign money’, ‘public money’, ‘virtual money’ [nl])

1) When the currency “itself is not credit & debt... [this] shields the money [system] against problems in the financial sector, and... the *financial sector* [should] be built on a safe and stable *monetary base*” (Huber, 2022, mn.157). See also “Monetary Reform”, “Financialization”.

1b) Money should **only** be initially created/issued “as an asset, one that continues to circulate, unlike ‘debt-money’ which [banks account for as a liability, and is, thus] extinguished as the loan is paid. [Under the current ‘debt-money’ system], when loan payments exceed loans being made, we have a recession or worse...which, you may have noticed, happens regularly [and typically prompts the growth of ever-more big finance and big government]. Real asset money, not usurious [bank] credits, continues to circulate, serving society” (Switzer, 2017).

2) Public/sovereign money may be likened to costless digital currencies, or even to gold, silver, oil, “or any other *asset/resource*...[of the public sector], and that might help us see how the accounting for public/sovereign money [already] works and makes sense... [W]hen oil is struck, it is: booked as an asset, with no corresponding liability on the balance sheet... This is analogous, as [the initial creation of] public/sovereign money is [also] unencumbered by real debt” (Kortsch & Walston, 2016, 4). See also “Accounting for public/‘sovereign’ money”.

3) This is, in effect, how ‘sovereign money’ such as coinage is already accounted for. The amount that the government creates in coins (or any other money) is always greater than the cost of production, and the difference is revenue for the government. See also “Seigniorage”.

4) “It is important to keep in mind that [Ons geld’s] *virtual money* is not a money claim, and not a bank liability. It is an *intangible liquid asset*. It differs fundamentally from [TAB] bank money, which is [just] a contractual *claim* (financial asset), with a corresponding liability, recorded on a bank balance sheet” (Wortmann, 2017b). Hence, “when digital cash [a.k.a. sovereign money, CBDC] is added, this is not a substitution [or swap]. It is [simply] an addition, accounted [for] as an *asset* of the government, acquired for free” (Wortmann, 2019b, 14).

5) “The introduction of digital currency would be a suitable opportunity to change accountancy for sovereign money on a central bank’s balance sheet. The change would be to enter [newly created] sovereign money into the books as an asset only, thus not only coins, as is the case today, but also [all] notes and reserves, and in addition now also [all] central bank digital currency in public use” (Huber, 2018d).

6) According to international **monetary lawyers**, however, CB money “is not an asset of central banks... and it is not central bank shareholder equity, because it does not confer the same ownership rights as regular shareholder equity. Based on comparisons across a number of legal characteristics of financial instruments, we suggest that an appropriate characterization of CBM...[should be] ‘*social equity*’ that confers rights of participation in the economy’s payment system...” (Kumhof, et al, 2020). See also “Accounting for public/‘sovereign’ money”, “Liability, pseudo”. See also “Accounting, ‘Fair Value’”, “FASAB” [FASAB-56].

⁹² In other words, there “is no self-limitation of financial-market dynamics in terms of [so-called] efficient-market equilibrium economics. Instead, over-investment and over-indebtedness recurrently occur... exceeding the limits of financial carrying capacity and resulting in financial crises.... [as earned] income is increasingly left behind by *non-GDP financial income*” (Huber, 2020b). See also “Equilibrium”, “Interest rates” [trend], “Inequality”.

Asset Stripping- “Corporate raiders take over companies, cut back research and development spending and other lines of business that do not produce short-term returns, and downsize their labor force in order to make the remaining employees work harder to pick up the slack. This practice is euphemized as wealth creation when its effect is to improve reported earnings. This raises stock prices over the short term, but undercuts long-term growth in production and competitiveness. (See *Free Market*.) International asset stripping occurs as the IMF and World Bank oblige governments to sell off the ‘crown jewels’ of the public domain– mineral rights, public land and buildings, and enterprises long held in the public sector as natural monopolies– as a precondition for obtaining the credit needed to service their foreign debts and avoid currency destabilization. (See also *Conditionalities, Washington Consensus*)” (Hudson, 2013).

Assumptions (of basic Economics theory)- The “small print” of Economics admits that even its most basic theories are tenable “if and only if the following assumptions hold... 1. Perfect information; 2. Complete markets; 3. Perfect competition; 4. Instantaneous price adjustment; 5. Zero transaction costs; 6. No time constraints; 7. Profit maximisation of rational agents; 8. Nobody is influenced in any way by the actions of others... autistic robots⁹³.... Then we can use *equilibrium economics*” (Werner, 2015b, mn.43). See also “Economics”, “Robotization (and productivity)” [.service sector], “Equilibrium”. See also “Myths, Big 6”, “Science of Assumptions”.

Atlantis (essay)- See “Franklin, Benjamin” [(copyist) Bacon]. See also “King James’ Bible/70 Year Plan”, “Intelligence Community”, “Death Culture”, “COVID”.

Attitude inoculation- (making ‘the’ argument look stupid) a ubiquitous **Corporate Media Cartel** technique, first identified and explained by social psychologist William McGuire in 1961, to discredit or dispel a certain meme or notion, by making it look stupid. See also “Conditioning”, “Cognitive dissonance”.
 1) For example, “Occasionally you see rumours, that the Fed is owned or controlled by ‘the Rothschilds’, or ‘the Morgans’, but that kind of statement really serves more to stop us [from] examining carefully what the Fed does and how it operates” (Zarlenga, 2007). https://en.wikipedia.org/wiki/Mahatma_Gandhi#/media/File:Mahatma_Gandhi_on_Rumours.jpg
 2) “Don’t worry about all the films that depict...[the ‘New World Order’] as a result of evil demons and macabre forces. It’s actually a very real, very human, and quite simple system being used to expand ‘our’ monetary system to the rest of the globe” (Vrabel, 2011, mn.113). See also “Reserve currency”. See also “Conspiracy theorist”, “Strawman”, “Bonds”, “Compound interest”, “New World Order”, “Hegelian dialectic”, “**Corporate Media Cartel (CMC)**”.

[some arguments last longer than others]

Auction rate security- 1) “a long-term instrument for which the interest rate is reset periodically at auctions. The instrument was introduced in 1984 as an alternative to long-term debt for borrowers who need long-term funding; but [it actually] serves as a *shortterm* security. In 2007, outstanding auction rate securities ...[in the US were] \$330 billion.... The main issuers... have been municipalities, hospitals, museums, student loan finance authorities, and closed-end mutual funds.... [In 2008, the] market became chaotic with different rates resulting for basically identical auction rate securities” (Schwartz, 2009, 21-22).

⁹³ Life imitating art? (Scutti, 2015) <http://www.medicaldaily.com/autism-rates-increase-2025-glyphosate-herbicide-may-be-responsible-future-half-316388>

2) Like “[s]ecuritization produced products that were difficult to price, [a]uction rate securities could not survive the inherent falsity⁹⁴ of its conception. Both [have] proved disastrous for credit market operations. See also “Securitization”, “Criminalization of banking, the”.

Auditing- (Latin: *audire*- to listen⁹⁵) 1) In 1622, “shareholders of the Dutch East India Co. write something called ‘The Necessary Discourse’, and in it they make a call for a ‘Reckoning’-- which is...Dutch [for audit]. They want well-kept books... [complaining] that the books of the Company have been smeared with bacon and eaten by dogs”, and demanding open and public books. Fortunately for all parties, Stadtholder Maurice (r.1585-1625) knew accounting well and his solution to the crisis (of the new system) was accepted⁹⁶ (Soll, 2014b, mn.23-25). See also “Liability, double”.

2) has always been essential to double-entry accounting. From the turn of the 16th century, Luca Pacioli, ‘the father of accounting’, “insisted that a good merchant kept good books so that they could be easily audited by city officials... [and] so there would be no suspicion that they were false” (Soll, 2014, 52). See also “Federal Reserve audit”.

3) “In Republics, you get a lot of auditing.... [even though] You don’t see a standardized governmental [auditing] practice in the West [matching, f.e., that of 15thc Republic of Siena] until the 19th century” (Soll, 2014b, mn.56-57). See also “Federal Reserve audit”.

4) “[C]orporate managerial interests are mitigated, in theory, by [‘external’] auditors” (Ramanna, 2015, 11).

5) In practice, however, the “auditing industry in the United States (and in...[most] countries...) is [in fact] an oligopoly... a few large firms [and most of those with foreign headquarters] are responsible for over 95% of the audits of listed companies in America... [And] the number of players has declined from 8 in the 1970s to 4 today.... ‘too big’ or ‘too few to fail’” (Ramanna, 11).

6) Auditing Updates:

a) Germany- (2/21) <https://twitter.com/BJMbraun/status/1364284125474156551> [Wirecard]

See also “Big 4 Accounting firms/Management consultants”, “Accounting standards & reform”, “Federal Reserve audit”, “Credit rating agencies”.

Austerity- see “European Monetary Union (EMU)”, “Gold standards”.

Australia- 1) “Over last 10 years Australia has become a fascinating experiment: highly sophisticated, multi-cultural...democracy, with major resources/energy/ag...[primary sector], 1/3rd of whose exports go to China” (Tooze, 2020). See also “Food”, “Real Estate”, “UKUSA Agreement”, “Keen, Steve”.

1b) “Education is now Australia’s 3rd largest export...[way ahead] of tourism, and behind only iron and coal.”- <https://www.youtube.com/watch?v=TVCEvx8JCTQ> [Edinger, 2019b, mn.11].

⁹⁴ The relatively new market, like so many other ‘innovations’ from the post-Bretton Woods [i.e. 1971] era, proved structurally-flawed. “A funding instrument that appears *long*-term to the borrower but *short*-term to the lender is an illusion. A funding instrument that is long-term for one party must [also] be long-term for the counterparty” (Schwartz, 2009, 22). See also “Criminalization of banking, the”, “**Deceptive Banking Terms** (d.b.t.’s)”.

⁹⁵ The use “of Roman numerals...[perpetuated this] narrative [verbal] form of account in which no attempt was made to *tabulate* figures or even to bring receipts and expenditures face to face in parallel columns.... This lack of position value made [Roman] arithmetic cumbersome and errors hard to find” (Chatfield, 1996, 505). This Augustan (or “basic inventory”/‘single-entry’-type) “accounting legacy to the Middle Ages was tenacious, but [nonetheless] of doubtful value. The preference for Roman numerals continued among bookkeepers until the (explosive) 16th century, hundreds of years after the introduction of Arabic numbers...[because] Roman numerals were considered the proper...[status] for official [1st Estate] or public documents. They were also judged [incorrectly] to be less subject to fraudulent alteration” (Ibid). Even the “Medici bank did not use Hindu-Arabic numerals exclusively until about 1500.... [and] in 1520... Freibrug [still] refused to accept accounts as legal proof of debt unless they were made in Roman numerals or written out in words” (Gleeson-White, 2012). See also “Coined money” ([the 1st Estate’s] “coinage revolution”), App.C: “1-2-3”.

⁹⁶ The Company’s books were “mildly reformed, and the Company [got] back on its feet, and...[the worst] practices stopped” (Soll, mn.25).

2) The “Crown [a.k.a. City]...absolutely owns Australia...We’re a Crown colony. And maybe for a lot of people that suits them. They don’t want to grow up and be a Republic”⁹⁷- BoC, #71, mn.38, (as was publicly demonstrated in 1974, and 1999, respectively).

2b) “Don’t ever make the mistake we made. Never give up your guns. If you look at what is happening here, it could never have happened if we had not given up our guns.”- Australian Solari Report subscriber, 2021.

3) Australia Updates: 8/22- <https://www.youtube.com/watch?v=7iOMdCCDv-I> [standing up to CCP]
See also “United Kingdom, the”.

Austrian School- (basically a continental-ized and then US-propagated version of the 19thc British “Banking School”/“Bank teachings” doctrines, + ‘commodity money nostalgia’ or ‘Luxemburg mentality’)

1) In simple terms, **just a theory...**that in fact **doesn’t interfere with monetary reality much.**⁹⁸ See also “National money”, “National Debt Economy”, “Commodity money”.

2) In over-educated terms, “...believe[s] that capitalism is a system which *tends* toward [the neoclassicists’] ‘equilibrium’, but [that] its strengths come from how it behaves in *disequilibrium*. So they emphasize that the economy is always [in fact] out of ‘equilibrium’, and that gives opportunities to entrepreneurs⁹⁹... And they tend to blame sustained problems on the governments’ sector” (Keen, 2016e, mn.21). See also “Equilibrium”, “Neoclassical Economics (NCE)”.

3) Nicholas Oresme’s 14th century “commercial [internationalist] conception” of money’s origins and nature was set out in the 19th century by Carl Menger... [principal founder] of the Austrian School of Economics, and later, recurrently adopted [copied] throughout the 20th century.... [despite their being] “no known [solid] evidence for the supposed private inception of money” (Sanahuja-Anguera, 2017, 58). See also “Gold Standards/bullionism”, “Industrial Revolution, 2nd”, “Fin de Siecle”, “Barter”, “National money”.

4) **The main purpose of the Austrian school economics, as promoted by the banks today, is to promote deregulation of banker crimes, so that banks can extract more money for the banking sector from the public, faster. Bankers-- and their puppets like the Austrians-Libertarians-- stand shoulder to shoulder in**

⁹⁷ “You had it good for a long time...It...[was] Sweden on the beaches; the dole was incredible. They...[gave] you free housing or cheap housing... Man, life was good...[only] complaining about your...beer wasn’t cold. Even the prisons were good compared to the rest of the world. We’ve had it too good for too long, [and] now people are shitting their pants.”- BoC, #71, mn.38-39. See also ‘China’.

⁹⁸ Even hypothetically, **Austrian theories are loopy, and of no practical use.** See also “Commodity money” (the most primitive).

⁹⁹ The School’s initial founder (in the 1870’s), Carl Menger, “was not quite as mathematical as [Neoclassical co-founder] Walras, but [he] also spoke about the beauty of Capitalism being that the market lets you decide with *limited* information. And that’s what the Austrians picked up on... that Capitalism’s real strength is how it handles a *disequilibrium*... I think the Austrians are wrong on many other points, but their fundamental vision of Capitalism as a disequilibrium, evolutionary system-- that’s valid” (Keen, 2017d, mn.16). In terms of history, however, Menger’s assertions are not just incredulous, but actually impossible (in addition to self-contradictory). F.e. “Money has not been generated by law. In its origin it is a social, and not a state institution. Sanction by the authority of the state is a notion alien to it”; and even in those cases that it is not (Menger then wrote, in self-contradiction) “All these (institutional) measures nevertheless have not first made money of the precious metals, but [state measures] have only perfected them in their function as money” (Menger, 1892). See also “Luxemburg”, “Barter”.

their passionate opposition to bank regulation, and have done so since the days of Adam Smith. I have never seen the slightest understanding among libertarians and Austrians that the primary reason that most currency is in fact national is because of the credit worthiness that it receives from the tax revenue stream. Austrians imagine that gold and silver were a private money invention (which was never true, mining was always a government controlled enterprise). 'Who controls the government issues the money, and who issues the money controls the government' has been true since the Neolithic. Why play games with it? See also "State capture"; Titus 2017.

5) Ron Paul reformers want to 'end the Fed'. They imagine that the banking system is a snake that will die after severing the head. This is a childish view. The banking system is a parasitic organism. It does not need a visible head. Like a centipede it can grow a new head any time, no matter what they call it, as long as the underlying accounting laws & rules are still all the same. See also "Reform, false".

6) Since Quantitative Easing by the Fed increases Central Bank (Reserve) money, but not TAB ('deposit') money directly, this explains why massive "printing" of "money" by the Fed has not caused the hyperinflation expected by the deceived Austrian-Libertarians¹⁰⁰, who have been fooled by their 20th century leaders, Ludwig Von Mises and Murray Rothbard, agents of the Rockefellers, into believing that there is no distinction between TAB ('deposit') money and RAB (Reserve). Basically all the Austrians were wrong about the increases in the Reserve/RAB supply causing inflation in the TAB/public supply.

7) More than a century earlier, Henry George reached the same conclusion: "...the Austrian School...[i]f it has any principles, I have been utterly unable to find them... This pseudo science gets its name from a foreign language... words that have no place and no meaning in an English work. It is indeed admirably calculated to serve the purpose of those powerful interests [endowments] dominant in the colleges... that must fear a simple and understandable Political Economy, and who vaguely wish to have the poor boys who are subjected to it by their professors rendered incapable of thought on economic subjects..." (George, 1898, 208). See also "Deceptive Banking Terms (d.b.t.'s)".

8) Classic "'Austrian' economics is *disinformation* that bank lobbyists use to depict a happy-face world where lending is productive, not parasitic" (Hudson, 2011d, n26). See also "Usury", "Leverage".

9) "The only sensible reason for increasing debt is to finance investment when it exceeds your retained earnings. That's when you use it productively. That's what [Austrian economist Joseph] Schumpeter thought banks did.... Instead what they are [actually] doing is financing asset speculation, [just] driving up asset prices" (Keen, 2016n, mn.22). See also "Asset inflation", "Usury".

10) More recently, however, many "*neo-Austrian* economists... consider fractional reserve banking to be fraudulent-- for example Huerta de Soto, 2006, (ch's. 2-3), or Köhler, 2015" (Huber, 2017h). 2nd generation Austrian Ludwig von Mises (1881-1973) seems to have started the split in the mid-20th century; criticizing fractional reserve banking for being fraudulent and dysfunctional (Huber, 2013). See also "Parity pricing (for the primary sector)".

11) "Surprisingly, however, the [*neo-Austrians*]" causation of related problems is not [also] attributed to the banking sector, but to central banks and government. The two... are depicted as a tandem of incorrigible money printers and habitual debt takers; not without reason, but far from representing the whole picture. The biggest money printers, and the actual centerpiece of it all, are the [commercial] banks [i.e. state-monetized credit institutions, that own the central banks]... [Today's] *Neo-Austrian* monetary reform program... is... [more] in line with [1970's] Hayek: radical denationalization of currencies, closing down central banks, and free banking on a [structurally impossible] 100% gold standard. This is [a return to] outright [classic] banking doctrine... on a gold hoard, as a quixotic relic from a vanished world" (Ibid). See also "Gold Standards/bullionism", "Libertarians", "Free Banking", "Exogenous vs. Endogenous" (money creation)", "Commodity money", "Barter", "Neoclassical", "Fin de Siecle", "Banking School".

Authoritarianism- control of all (viable) politics & political discourse. See "Charismatic Authority (CHA) & Charismatic Dependency (CHD)".

¹⁰⁰ As money and politics are two sides of the same coin, "Austrians" [theory] is to "Libertarians" [party] as "Neoliberal" (.economics) is to "Neoconservative" (.politics).

See also "Totalitarianism".

Automatic Teller Machine- the only good financial innovation for a generation, according to Paul Volcker (Federal Reserve Board Chairman 1979-87).

Baby-boom demographics- (the last of the 'me-me, now-now' generations?)

1) Declining rates of population growth "will...end...this system if it's not changed" (Vrabel, 2011, mn.33), because debt-money/bankmoney systems, since the 18th century, have been propelled by rapid population growth. "Basically, we're on a perpetual motion machine [that is still geared] towards bigness", i.e. consolidation, be it into big business and/or big government; "It never reverses itself" in regards to this most fundamental setting (Vrabel, mn.34).

2) "Coming out when there was the end of the 2nd World War- no more depression, a total full-employment policy. The whole thing was about making things as good for the working class, who had risked their lives... Everything was about social security for them, guaranteed jobs, full employment. And they just didn't realize that they...[had] jumped on a rising debt bubble... The whole crisis from the end of the Great Depression through the 2nd World War drove down... private debt levels so much [that] they started at trivial levels [after WW2], and they [baby-boomers] could then [simply] lever their way to wealth. And they don't realize that the only way they can continue working [now] is if the person who borrows money off them borrows *more* than they did to buy whatever asset they are selling.... Now you can't do it anymore, because... [there are] kids coming out of universities in America... with debts of over \$100,000" (Keen, 2015g, mn.10-11). In Australia, "the ratio of house prices to income is now 12 times", as opposed to the mid-20th century's 3 times (Keen, mn.11).

[Swift (1729) was only joking; and only tigers are supposed to eat their young. See also "Zombie", "Reverse psychology".]

3) Quantitative Easing policies in the 2010's "drove up **asset prices** and bailed out baby-boomers at the profound political cost of *pricing out millennials* from that most divisive of asset markets, property. This has left the former comfortable, but the latter with a fragile stake [if any]¹⁰¹ in the society they are supposed to build.... [This is because soaring] asset prices, particularly property prices, drive a wedge between those who depend on wages for their income and those who depend on rents and dividends. This... [unprecedented] monetary policy [substantially]¹⁰² penalises the young and subsidises the old" (McWilliams, 2019). See also "Quantitative Easing", "**Peace Window (and great compromise), the**".

3b) Hence, millennials in the US "(defined as those born between 1981 and 1996) are the only generation in which a majority (57%) hold 'mostly/consistently liberal' political views, with a mere 12% holding more conservative beliefs" (McWilliams, 2019). See also "Liberal", "Socialism".

¹⁰¹ If (balloon economy) "asset prices rise much faster than [real economy] wages, [then] the average person falls further behind. Their stake in society weakens. The faster this new asset-fueled [Reserve-subsidied] economy grows, the greater the gap between the insiders [quite literally, only the 1st and 2nd estates can even use Reserves/RAB] with a stake, and outsiders ["the 99%"/3rd estate] without [a stake]. This [phenomenon] threatens a social contract based on the notion that the faster the economy grows, the better off everyone becomes" (McWilliams, 2019). In US urban areas at least, property prices in the 2010's, have thus far risen at approx. twice the rate of wages; and, predictably, "[s]imilar developments in the UK have produced comparable political generational divides" (Ibid). More specifically, at "a median age of 35, Gen Xers owned...[only] 9% of the nation's wealth in 2008-- less than half [of] what boomers had at that age. And Millennials will have to triple their net worth in the next 4 years [just] to catch up to Generation X at 35 [9%], and increase their wealth *7-fold* to catch up to Boomers" 21% share. 4 in 10 Americans "under age 30 described their financial situation as 'poor' in a recent Associated Press...poll. And half doubt their ability to pay for an unexpected bill, which is twice the proportion of people ages 60 and older (Pesce, 2019). See also "Discretionary (US budget)", "Ponzi".

¹⁰² According to Steve Bannon, Millennials are "essentially Russian serfs...You're better fed. You're better-clothed... You have more access to information. But you don't own anything, and you are not going to own anything.... only what is passed down- nothing that you earn yourself. You can't save, because... [the rates are] zero. You can't get any assets. You can't buy a house... You are 20% behind... [where] your parents' generation" was economically at the same time in their lives" (Bannon, 2018, mn.11-12).

4) Make no mistake, the “rejection of self-exploitation in service of further enriching the already-rich is [a] global [phenomenon]: The most descriptive[ly concise] terms are [as usual] from China-- ‘laying flat’ and ‘let it rot’-- but they apply to youth around the world.... As the [international] charts below indicate, the population of elderly living off the labor of the younger generations will soar, putting increasing financial pressure on governments and [still extant?] pension plans. Scrape away the hype and obfuscations and all pension/healthcare for the retired cohort are [simply] pay as you go, i.e. funded by taxes on the current workforce. As that workforce shrinks, the burden will quickly become unbearable. Promises made when there were 4 workers for each retire break down when there's only 1.5 workers per retiree. Wages' share of the economy has a long way to climb to reach [(any non-ridiculous notion of) “parity” or par with] previous levels. As wages rise, capital's share of the economy will have to shrink. The already-rich will become less rich” (Smith, 2022). See also “Pension funds”, “Entitlements”, “Discretionary (US budget)”.

[Fake projections; global demographic revolution; & “Disbursements to persons” as a % of “Gross Domestic Income (GDI)”] See also “Dystopia”, OECD, 2019, 26, “Great Extinction, 6th”, “Constitutions”.

‘Backing’- (synon. ‘backed by’, ‘bottomed on’ [Jefferson, 1816b], a.k.a. ‘backstopping’, ‘anchoring’; support for a currency in the sense that it is lawfully ‘redeemable’ [fiduciary] for something else; anton. ‘fiat’)

1) In the earlier stages of state [i.e. large, ‘imaginary communities’] formation, the state’s fiat, *sui generis*, did not need to be ‘backed’ or redeemable into something else (other than what it was-- tax credits that circulated widely in various markets). With the growth of the idea of monetization, however, different kingdoms’ and nations’ currencies came into direct competition with one another-- and much resultant power was often at stake with these currency competitions (whoever won the currency wars usually, though not always, also won the military wars). Henceforth, as monetary manipulations, ‘cheating’, and the resultant instability became common, kingdoms & nations sought out currency prestige (stability)-- which was most easily recognizable by all in the form of bullion coins. Eventually laws were passed to further reassure the public that such precious metal coins could be redeemed (traded in) back into bullion.

2) With the Dutch (public) and English (private) central banks of the 17th century however, monetary experts began to see that very large (i.e. government) debt securities could also ‘back’ the stability of a public currency. This development of this cardinal aspect ‘central banking’ seems to have been something of a [valuable] secret for the next two centuries, as evidenced in particular by the many archaic monetary catastrophes of the French Revolution. See also “Graeber, David”.

3) In the mid-to-late 19th century; “the late metal age of money, so to speak-- gold was [still, after many centuries] seen as that anchor, notwithstanding the [increasing] backing of currency by government [i.e. debt] securities to a certain extent”; although by “around 1900...the presumption of an ‘intrinsic’ value of money [was] fading away and statistics [only systematically kept since the mid-1800’s] largely improved...[Hence many] economists tried to replace [‘backing’ by] gold with [‘backing’ by] the average price of some baskets of commodities-- whether raw materials, initially including gold, or the prices of consumer goods and services... [H]owever... [m]oney buys commodities...[and] itself...is neither a commodity nor a basket of commodities” (Huber, 2013, 3).

4) “The quantum leap” from the ‘basket of commodities’ construct was made in the 1920’s, with the idea “to relate the existing stock of money to the entire [gross] national product”, because, at the end of the day, the value of money is simply “its purchasing power, which is ultimately derived from [the economy’s] productivity” (Huber, 2013, 4). See also “National Debt Economy”, “Robotization (and productivity). See also “Fiduciary money”, “Adolescence of Mankind”, “Graham, Benjamin”.
[photo- Bank of Amst., 18th Bank of England: “Modern’ Alchemy: transforming ‘backing’ of the currency from bullion, to debt securities]

Bail-in- (bank customers’ claims to the balance on their accounts are subordinate to the claims of other bank [state-monetized credit institution] ‘creditors’)

2) In accordance with 2009 BIS-G20 rules, as stipulated in the *Dodd-Frank* legislation of 2010, and practiced in Cyprus in 2012, upon bankruptcy of an insolvent bank, the *derivative* holders stand as preferred creditors. 1) Ordinary demand (d.b.t. ‘deposit’) account holders are unsecured creditors at the end of the line. They are slated to have a haircut, or to have their account balances converted into worthless bank shares, because the insolvent banks have too much TAB credits (liabilities), and too little Central Bank reserves (assets). At that point, the public will discover what the bankers already know now, that CB (Reserve/RAB) money-- an asset to the banks-- is worth more than TAB (‘deposit’) credits-- a liability of the banks-- even if they are supposed to be on a par in cash exchange.

3) Bail-ins “prove that your money is not in fact yours”; prior to Monetary Reform (Walton, 2014).

4) As of summer, 2017, [everything has been in place](#), for them to take place in the EU-UK-USA. See also “COVID”.

Bailout- euphemisms for- ‘liquidity support’, ‘bills swap’ (Chinese); ‘recapitalizing’ (bankerese)

Bair, Sheila (& Citibank)- ([2006-11] FDIC Chair Bair was in favor of ‘winding down’ Citibank)

1) “all of the...depositors could have been easily covered with Citibank assets, but... whenever she tried to do it, Treasury Secretary Geithner and Larry Summers would tell Obama: ‘*No. We have to save Citibank. We can’t let Wall St. lose a single dollar*’. [To them] It was worth letting the economy and taxpayers lose \$13 trillion dollars, just so Wall St. would not lose a dollar.... All the gamblers-- the casino capitalists-- would have been wiped out, in order to save Finance Capitalism and Industrial Capitalism. And instead, the casino capitalists took over, and have done policies that are undercutting the real economy” (Hudson, 2011c). See also “M.I.T. (Massachusetts Inst. of Technology)”.

2) A Bush appointee, Bair was “advocating exactly what Bernie Sanders is advocating today-- to break up the big banks and [to] treat them as what they are-- engaging in massive fraud” (Hudson, 2016f). According to Michael Hudson, the Obama Administration’s propping up of Citibank “was the turning point in America” (Hudson, 2017g, mn.55). See also Oswald, 2018; “Derivatives”.

3) “Just weeks after receiving its first \$25 billion taxpayer investment, Citigroup returned to the Treasury to confess that, lo, the markets still didn’t trust Citigroup to survive. In response... The Treasury granted another \$20 billion from T.A.R.P., and simply guaranteed \$306 billion¹⁰³ of Citigroup’s assets. Treasury didn’t ask for a piece of the action, or [for] management changes, or for that matter anything at all, except for a teaspoon of out of the money warrants and preferred stock.... The Treasury... [never explained] what the crisis was, just that the action was taken in response to Citigroup’s... ‘*declining stock price*’” (Lewis, 2011, 261).

4) Bair noted that Citibank was both broke and corrupt, “and a free market would be that the incompetent bank gets wiped out. But Citibank was where Robert Rubin, Clinton’s Treasury secretary had taken over...[and] was the root of where all the Clinton crime family was centered-- not only with Rubin, but also with his protege [and Obama’s Treasury secretary] Tim Geithner” (Hudson, 2017i, mn.46). Basically, the

¹⁰³ \$306 billion was about “2% of US domestic product, and roughly the combined budgets of the Departments of Agriculture, Education, Energy, Homeland Security, Housing & Urban Development, and Transportation, and was presented undisguised as a gift” (Lewis, 2011, 261).

“economy was sacrificed in order save the Clinton crime group [at] Citigroup and Goldman Sachs... There was very little discussion... of where the money was going.... You’d think that this this would be the center of political discussion [in the 2010’s], but when Bernie Sanders tried to raise it [within the Democratic Party], you saw what happened to him” (Hudson, mn.46-47).

5) The FRBNY now has at least a quarter-century of history of propping up its (own & Citibank’s) owners. In the 90’s, it was “propping up the wealth of one of Citigroup’s largest individual stockholders– Sanford (Sandy) Weill, the former Chairman and CEO [...] Weill became a billionaire as a result of ginned up stock options at Citigroup. Weill had been a Director on the Board of the New York Fed [...]. He became close to New York Fed President, Tim Geithner. Weill’s stock riches grew out of what corporate compensation expert Graef “Bud” Crystal called the Count Dracula stock option plan– you simply could not kill it; not even with a silver bullet. It worked like this: every time Weill exercised one set of stock options, he got a reload of approximately the same amount of options. Crystal explained for Bloomberg News that between 1988 and 2002, Weill ‘received 96 different option grants’ on an aggregate of \$3 billion of stock. Crystal says “It’s a wonder that Weill had time to run the business, what with all his option grants and exercises. In the years 1996, 1997, 1998 and 2000, Weill exercised, and then received new option grants, a total of, respectively, 14, 20, 13 and 19 times. When Weill stepped down as CEO in 2003, he had [easily] amassed over \$1 billion”- <https://wallstreetonparade.com/2022/11/the-latest-digital-token-scheme-from-hell-new-york-fed-teams-up-with-citigroup-and-sullivan-cromwell/>. See also “Insider trading”.

6) Citibank Updates: 2/22- Citibank had approx. “500,000 customers in Russia...operating...in 10 Russian cities.”- <https://wallstreetonparade.com/2022/03/barbarians-at-the-gate-in-russia-and-on-wall-street/> See also “Investment bank”, “Big 5 (High St.) Banks” [JPMC].

[a new meaning for ‘underwater’ (if not ‘conservatorship’) in the 1stqtr. of the 21stc?]

Balance of Payments- (‘current account’ + ‘capital account’; includes net finance/investments)

1) Because the *current account* and the *capital account* add up to the total account, which is necessarily balanced, a deficit in the current account is always accompanied by an equal surplus in the capital account, and vice versa.

2) a comprehensive¹⁰⁴ snapshot or “accounting statement” of a nation’s “international credits or inflows– such as export receipts, the run-up of debt, and payments to foreigners for imports, or to buy foreign companies. The formal term should be ‘balance of international transactions’, because many transactions do not [really] involve payments. US foreign aid is [often] extended ‘*in kind*’ (military hardware, food dumping, etc.) rather than involving dollar payments, while many exports are financed on credit.... For the US, the ‘balance’ used to consist of gold sales, but today it is [basically] the run[ning]-up of Treasury debt to foreign central banks... [in order] to settle the imbalances on trade and investment accounts. The difference between the US and other countries is that it can settle these imbalances in its own fiat currency... whereas other countries must depend on the US monopoly of dollar creation to finance their deficits” (Hudson, 2013). See also “US Agency for International Development (USAID)”.

¹⁰⁴ “In the 1930’s, Roy Ovid Hall...[in] the US Commerce Department, wanted to include criminal movements in the Balance of Payments statistics...[But] Congress got very upset. I was told...[that] the argument was ‘*We’re a Christian country. We don’t want to report crime*’... And they forbid him to include criminal money in the Balance of Payments. I guess now you call it ‘errors & omissions’...”- Michael Hudson (Oswald, 2018, mn.40). See also “Statistics”.

3) Nations “with strong currencies act somewhat like banks, creating money in their own currencies to buy the assets of weaker countries, hoping that the created currency will *stay abroad*, circulating, or in storage (because if it comes home, it will be used to buy assets of the home country)” (Mosley, 2017b). See also “Bretton Woods” [‘clearing union’], “Super Imperialism”.

4) “The big fiction is that the United States’ Balance of Payments [deficit] is caused by trade. The deficit is [actually] caused by a capital outflow of money managers here putting their money abroad, and the *military deficit*” (Hudson, 2010d, mn.3). See also “Dollar-diplomacy (& hegemony)”.

Balance-of-Payments Economist- a measurer of “how much revenue might be paid as debt service on new borrowings from US banks... [as] international banks view the hard-currency earnings of foreign countries as potential revenue to be capitalized into loans... The implicit aim of bank marketing departments... is to attach the entire economic surplus for payment to debt service” (Hudson, 2015, 3). When such countries were already fully “loaned up.... These countries could only pay what they already owed if their banks (or the IMF) lent them the money to pay the rising flow of interest charges. This is how loans to sovereign governments were rolled over through the 1970s... at compound interest...[anticipating] the real estate bubble that would crash in 2008” (Ibid).

Balance of Trade- see “Current Account”.

Bank- (from Latin ‘bancus’ & ancient Greek τράπεζα) 1) according to the *Competitive Equality Banking Act of 1987*, and 12 U.S.C. § 1841 (c), “any institution insured by the FDIC”¹⁰⁵ (Hester, 2008, 78, n44); banks in the US comprise most of the *state-monetized credit institutions* (any institution with an RAB account at the Federal Reserve). See also “Federal Deposit Insurance Corp. (FDIC)”, “*State-monetized credit institutions (SMCIs)*”.

2) All banks have owners... the shareholders. They’re just a way to hide the rulers of the world... like corporations were founded...to be able to conquer the world and not be known... The main purpose is secret control... the real government behind the apparent government. See also “Shell game, the”. See also “Banks”, “Federal Funds (Accounts) for All”, App.C: “1-2-3”.

Bank credits/loans- see “Transaction Account Balance (TAB) credits”, “Loans, bank”.

Bank Holding Company (BHC)- (mostly 20thc lingo for [what are now known as] ‘financial institution holding companies’; as of 3/21 there were 152 US-based BHCs with ‘reported total assets >\$10 bn.’) See “Investment banks”, “Bank, universal”, “Regulation” [self].

BHC POWERS & ACTIVITIES: A LITTLE HISTORY

- 1900 to 1956: Emergence of BHC structure, but no restriction/regulation of BHC activities (other than Glass-Steagall barriers and affiliate transaction rules)
- 1956: Bank Holding Company Act (“BHCA”) enacted, limits activities in which BHCs and their subsidiaries can engage
- 1970: BHCA amended to eliminate “one bank holding company” loophole
- 1999: Gramm-Leach-Bliley Act (“GLBA”) enacted, creates new “financial holding company” designation and substantially expands permissible activities

[OCC, 2017b. See also “Capitalisms”.]

Bank loans- See “Loans, banks”.

Bank notes- 1) Centuries ago it “became clear that [physical] gold need be held on hand only to the amount needed to cover the *fraction* of [paper gold] certificates likely to be presented [at any one time] for

¹⁰⁵ The FDIC, in turn, limits its definition to nationally or state-chartered “banks”. Traditionally, the older definition (from the *Bank Holding Company Act of 1956*) defined a *bank* simply as an “institution that accepts demand or checkable deposit accounts and is engaged in the business of making commercial loans.”- <https://www.fdic.gov/regulations/laws/rules/6000-1880.html>

payment; accordingly, the rest of the [physical] gold could be used for business purposes, or, what amounts to the same thing, a volume of certificates could be issued greater than the volume of gold reserved for payment of demands against them. Such an excess volume of paper claims against reserves we...call *bank notes*. In effect, this creation of paper claims greater than the reserves available means that bankers were creating money out of nothing” (Quigley, 1966, Ch.5). Does this sound unstable and/or inflationary? See also “‘Free banking’ (era)” (which ended in the UK in the 1840’s, and in the US in the 1860’s), “‘Exogenous vs. Endogenous’ (money creation)”.

2) Today modern ‘depository’ institutions (**monetized credit institutions**) purchase their national (or Euro) notes from the Treasury or central bank, against their Reserves. See also “Base money”. See also “Cashless Society (War on Cash)”.

Bank of England- (a.k.a. ‘the Old Lady of Threadneedle Street’ [instead of, say, the Opium Wars & HSBC]) A primary institution of the Dutch-English “Glorious Revolution” of 1688-94, the founding of the private-merchant-owned Bank of England in 1694 represented, at the time, **something of a perversion of the publicly-owned (DFNM-issuing) Bank of Amsterdam**.

“Before the establishment of the Bank of England in 1694, banking in England had been virtually restricted to the goldsmiths in London” (Bank of England, 1969). See also “City (of London), the”.

1) The English oligarchs (merchants who openly dominated Parliament) had plans for a global Empire at the time, not a democratic or constitutional Republic. Thus something more along the lines of a radically expansionist debt-money (Ponzi) scheme, congruent with the interests of the then politically-dominant English East India and Hudson's Bay Companies¹⁰⁶, was approved by a majority of Parliamentarians (After all, they had to have a more motivational or expansionist monetary system than did their Dutch or French imperialist rivals).

2) More than 3 centuries (and one nominal nationalization^{107 108}) later, “94% of banking in the UK [is done by] 5 Banks” (Werner, 2014c). As of 2015, these are (in order of assets): HSBC [way out front], Barclays, Lloyds, RBS [nationalized in 2008], and Standard Chartered. See also “Oligarchy”, “Big 5 (High St.)”.

3) There is no known official delegation of the state’s money-creation (“sovereign”) power to privately-owned institutions prior to the BoE in 1694.¹⁰⁹ See also “Glorious Revolution, the”, “Modernity”.

4) Given some reflection, not everyone (who was monetarily literate) back then saw the arrangement as ideal. By 1823, even the ‘Bank Teachings school’ founder; David Ricardo “worked up the courage to propose establishing an English *National Bank*. He explained why the government should issue its own [bank] money... ‘the only difference would be with respect to interest.... I propose [as would the *Federal Reserve Act of 1913*] to place this trust in the hands of [three] Commissioners” (Zarlenga, 2002, 287). See also “Full Reserve banking”, “Ricardo, David (1772-1823)”.

5) In the mid-20th century, the BoE went through the motions of being (**ostensibly**) ‘nationalized’ again.

6) In 1997, it “did seem to come as a surprise, *even to the Treasury*, that the monetary policy operational competence of the [UK] Treasury was going to be transferred [at least so *quickly*] to the Bank of England”

¹⁰⁶ The Hudson’s Bay Co. (est. 1670) “essentially ran huge swathes of North America as its own private fiefdom” (Koram, 2022, mn.13). See also “Canada”.

¹⁰⁷ The world’s original globalist-private central bank “was half-heartedly nationalized” in 1946, and for most of the 20th century, the BoE’s “approach reflected its social and cultural affinities with the community it supervised, and, at key moments, it was difficult to determine whether the Bank operated as the government’s enforcer within the City, or the City’s representative in government. Certainly, the bank encouraged informal... self-regulation on the part of a coherent group of bankers.... Critically, this regulatory form was strongly spatially constituted: banks were all headquartered within a...[square mile] in the City [as] proscribed by the Bank of England [owners]. The City...today is a very different environment from its...[imperialist era] predecessor... [with] a more codified, rules-based system ” (Tickell, 2003, 123), perhaps due to the post-war influence of the (more stipulatory) Americans.

¹⁰⁸ Nonetheless, much of the UK’s bureaucratic post-war regulatory regime lost favor with the rise of the European Economic Community (EEC), and American bank-corps’ need for a relatively “free” (de-regulated) platform [some would say ‘Trojan Horse’] from which to operate in the new European environment... after Britain joined the EEC, on its own monetary terms, in 1973 (confirmed by referendum, ‘75), and elected the de-regulationist Margaret Thatcher as PM in 1979.

¹⁰⁹ The BoE “didn’t have...[any] sort of proper, [publicly] articulated mandate until 1998.”

- David Scholey, <https://www.youtube.com/watch?v=aANly4Guy1E>, mn.201.

(Marsh, 2020, mn.207); in return for (the broader-theoretical concept of) “financial stability” policy being outsourced. See also “City (of London), the” [Blair], “Financial Services Authority (FSA)” [2001-13].

6b) New Labour inner-circle politician (& Economic Sec. to the Treasury [2006-07]) Ed Balls says that the larger stratagem was “to have a reform of the Bank of England that...[simply did] not comply with Maastricht Treaty, and [was thus] an alternative to joining the Euro, rather than a stepping stone towards it... [Plus] the constitutional arrangements were [already] in place to move to [BoE *regulatory independence*], and it was done so with the need for greater “transparency” and more “clear...[and circumscribed monetary] targets” in mind (Balls, 2020, mn.207; mn.210). “It wasn’t inevitable. It required a big change” (Balls, mn.211). See also “Financial Services Authority (FSA)”.

6c) A quarter-century later, fmr. BoE governors speak of its “independence, in 1997” (King, 2022, mn.27).

7) The Cameron government dismantled the FSA¹¹⁰ in the wake of the great Financial Crisis; and now the BoE “is *unique* [sic]...in the world, in having *so much authority* [over “macroprudential” policy] in one place” (Kohn, 2020, 224).

7b) Given the (apparently always-widening) wealth-gap between the economic ‘classes’ in the UK, questions often arise concerning Bank of England “independence”. Make no mistake, even the Bank’s most regular critics, such as fmr. Gov. Mervyn King (r.2003-13), quickly dismiss such vague talk as constituting no “threat...[A]ny government that tried to undo legal independence would immediately see a very adverse reaction” (King, 2022, mn.25-26). See also “Estates, 3” [a concept from England], “City (of London), the”.

8) The BoE (c.2020) is now generally regarded as the most technically-competent of the world’s CBs (and also one of the most independent). To “its very, very great credit, the Bank of England didn’t need to ask BlackRock or anyone like that to come and help it manage collateral, because it could grow the expertise itself” (Tucker, 2020, mn.247). See also “BlackRock”, “Securitization”.

8b) According to Ed Balls, monetary “information flows” have now become less “regular”, and are “all mediated through one individual-- the Governor... and...that is a reason for concern.... [With] something complicated like Financial Stability, it needs to be clear, that... the Treasury...is...tasking the Bank of England, and...kind of absorbs the political risk... [So] I’ve advocated...[more than just a] simple inflation target.¹¹¹ What we need is some kind of Standing Committee... chaired by the Chancellor, with the Governor and the deputy governors.... Once a year is fine, to set the detailed remit for the FPC...[and] monetary inflation target...[making] it clear [that] this is owned by the government, and... the buck stops with the Chancellor.... [T]he inflation target is set by the Chancellor, [and] the MPC is given a remit...[for it]... And for Financial Stability we need the same thing... the remit is...set by the Treasury... and the Bank of England is...[only] the agent to deliver that” (Balls, 2020, mn.253-55). See also “Monetary Authority”, “Separation of Powers”.

9) In April 2020, however, when the BoE announced that it would ‘directly finance’ the UK treasury’s extra spending, it did *not* also announce that the resultant new creation-- the “Covid Corporate Financing Facility”-- quickly doled out £7.5bn to some of Britain’s biggest businesses completely in secret. See also “Monetary financing” [direct].

See also “Big Five (High Street) Banks”, “City (of London), the”, “Usury”, “Criminalization of Banking”.

¹¹⁰ “Many British politicians have personal and business ties with the City of London and British secrecy jurisdictions. Former...Prime Minister David Cameron’ father Ian...was an expert in offshore funds, and was involved in offshore trusts from the 1980’s onward” (Oswald, 2018, mn.56). See also “Privilege”.

¹¹¹ Some comments @ the Financial Times agree. “*Price stability* is sought in the real [TAB] economy where [“2%”] wage inflation is also [usually] sought. Central banks have no control over this and the [UK’s official] 2% inflation target doesn’t measure it. But what is [even] meant by ‘*financial stability*’? Does it just mean 1) a stable currency or 2) stabilising money markets to ensure [that] banks can borrow amongst themselves to cover demands for cash, or does it mean 3) a steadily rising equity market? Central banks are in a tough position. All their activities all occur in financial markets, [even though they are] seeking price stability in the *real* economy, with few and uncertain mechanisms between the two. Worse still, post-Reagan pension policies that have directed our pension funds towards [the] equity markets, globally, [which] has put equity markets within many central banks’ field of [policy] vision, but [actually] securing ‘financial stability’ in those markets has...[rarely, if ever] proven possible. So central banks are [operating] in a wilderness of mirrors”- <https://www.ft.com/content/3a33c7fe-75a6-11ea-95fe-fcd274e920ca> (Bailey, 2020). See also “BlackRock”, “Monetary reform”.

Bank of International Settlement (BIS)- (est. 1930; with no Committee on Banking Regulation until 1974)

1) 'the central bank to central banks', where, supposedly, international loaning and regulatory guidelines are set (by invitation and consensus), since the 1930's and the demise of London's gold standard. See also "Basel Committee Accords".

2) According to John Titus, it "has an agreement with Switzerland that basically confers...[sovereign] immunity on the bank"¹¹². Why Switzerland agreed to that, I don't know; but they did... The people, if... they're inside the Bank...[of] International Settlements, they cannot be prosecuted; their assets cannot be reached; and *Switzerland has no right to look at any of their documents*" (Titus, 2020d, mn.27).

3) Since the 2008-09 Financial Crisis, the BIS has been fostering the rise of independent Chinese and Russian international payment systems, the Shanghai Gold Exchange, and perhaps eventually (in theory, anyway), the supplantation of dollar hegemony with SDRs.

See also "Special Drawing Rights (SDRs)".

4) "We don't have an international monetary system. We have an international monetary *non*-system. There is *no* discipline arising from the center-- from the IMF, or [from] rules, or whatever-- to prevent [bank] people from doing whatever they want" (White, 2018, mn.29). "We've got to think about international monetary reform, as well" (White, mn.30). See also "Bankism".

[The BIS is no lion tamer.]

5) Nonetheless, in 2013, after the International Monetary Fund "was invited for F.S.B. [the B.I.S.' Financial Stability Board] membership...[the FSB's international] information exchange [protocols] made the [the more US-centric] IMF hesitate over full participation", officially stating that of "particular concern was the FSB's "initiative on international cooperation and *information exchange*" that contemplated the imposition of *coercive* measures'.... This.... reveals far more about the FSB than it does about the IMF" (Titus, 2017, mn.25-26). The FSB's "charter expressly allows the Chairman [usually from Goldman Sachs], and no one else, to invite representatives of the private sector to *plenary* meetings, which are [always] closed to the public, and have no public transcripts or minutes. [Thus, by] having [current] cabinet-level officials answer to former Goldman Sachs executives and their friends in secret meetings, the FSB provides perfect cover"¹¹³ for the criminal banking cartel" (Titus, 2017, mn.27). See also "Financial Stability Board (FSB)".

6) Before the mid-2010's, "I'd always thought that they [BIS] were [just] a [self-]regulatory body [and white-shoes talking shop (per the 1930's-50's), just] a place where everybody met and built consensus. I had no idea how big they were potentially, in terms of holding and moving money.... [I]f you take [into account the BIS]...[inaub.] loans, bank deposits, securities, and [secret] documents... and digital data, they can move all these things for [the benefit of] themselves and their 63 member Central Banks & Monetary Authorities. But then...[the BIS balance sheet also] says that they can do...[such things] for 'Others'"¹¹⁴So.... they can do investment pools 'off balance sheet... [with] sovereign immunity and secrecy... [T]hat means [that] they can hold a near infinite amount of assets and money, or gold, [etc.]; you name it, off balance sheet, [a.k.a.] secretly" (Fitts, 2022m, mn.1-2), and not one government in the world has (a legal right) to know about it (see above; "sovereignty"). See also "Privilege", "Central Bank"; "International Intelligence Community".

¹¹² And also, according to Titus, "on the Bank's assets...possessions...documents, and on its personnel" (Titus, 2020d, mn.28).

¹¹³ For example, Article 3.2 of the BIS "Basic Texts" declares that the "archives of the Bank and, in general, all documents and any data media belonging to the Bank or in its possession, shall be inviolable at all times and al places.... By itself, [BIS & SIFI] documentary immunity [to the extent that the DoJ goes along with it] is a license for the Cartel to commit crime, since crimes that aren't investigated can't be prosecuted...", and the BIS' self-stipulations for "individual immunity" are just as outrageous (Titus, 2017, mn.52-53). See also "Mafia".

¹¹⁴ This is even though "[t]he private investors [in the BIS] all get squeezed out, in about 2000" (Fitts, 2022j, mn.1-2).

6b) ... Understand this to comprehend “what’s been going on in the last 30 years.... *The Tower of Basel* [2013] changed my mind about a lot of things” (Fitts, *Ibid*). See also “City (of London), the”, “UKUSA Agreement”, “[International Intelligence Community \(I.I.C.\)](#)”.

6c) “To my knowledge, the BIS has not yet established a list of ‘systemically important offshore havens’, nor created an Innovation Hub in Antarctica, in the suborbital platform, or on the moon. I am suspicious, however” (Fitts, 2022i). See also “Systematically Important Financial Institutions (SIFIs)”.

See also “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”, “Feudalism, neo”, “Financial Accounting Stability Advisory Board” (FASAB-56).

Bank of North America (1781-85)- (America’s 1st chartered bank; % Fr. ownership?) See “Morris, Robert (1734-1806)”.

1) “[L]ook at the Pennsylvania delegation” that hosted the 1787 Constitutional convention; “except for 1 person they were all stockholders or Board members of the [Morris’s] Bank of North America. And boy did they carry a lot of weight. Even Ben Franklin was given-- *given* [sic]-- stock in...[America’s 1st chartered] Bank... for which he would benefit if [when] the stock price rose. And the stock price *rose* [sic], when the Bank of North America didn’t have to compete with the Pennsylvania state legislature for issuing the...[[currency](#)]. I’ve [already] argued elsewhere that the monied interest... wanted...to basically allow private banking to control [the] issuing of [paper](#) money, through [what was then a] fractional reserve [monetary-currency] structure” (Grubb, 2013, mn.133). See also “‘[Currency](#)’ or ‘[money](#)’ (essay)”, “Salomon, Haym” [Virginia], “Constitution, US (of 1787-91)” [Holton]. See also “Morris, Gouverneur (1752-1816)”, “Bank”, “Central Bank”, “History” (setting twigs).

Bank of the United States (1791-1811)- See “Hamilton, Alexander (c.1756-1804)”.

Bank rate (UK)- (the BOE’s equivalent of the US Fed’s ‘discount rate’ is a.k.a. ‘the Bank of England base rate’ [BOEBR], or simply the ‘Bank of England Base’)

1) the interbank/[RAB](#) rate that the Bank of England charges [state-monetized credit institutions](#) for secured, ‘overnight’ loans, as determined by the BOE’s Monetary Policy Committee. See also “Discount rate”.

Bank runs/panics- (“widespread redemptions of [banks’ and/or] the [larger] financial sector’s very short-term or demandable debt” [Ricks, 2020], may **not** necessarily be relegated to the past.)

1) “In the 19th century, the banks had equity ratios of 30 to 50%-- and went bankrupt anyway. Today’s fixed capital of around 10% are quickly gone in an emergency.... [Although] In the [new century’s] money-rich system, banks could go bankrupt and nobody has to save them” (Huber, 2018c).

2) All “bank deposits” are in bankmoney, and are (thus), according to the Federal Reserve, “considered an *unsecured overnight investment*” (Chabot, 2015), belonging to the bank, to do with as it pleases.

3) “The bankrun is bankmoney’s fateful writing on the wall, always shining through from the background of that system which recurrently needs new auxiliary supports [blood] so as not to be constantly threatened with collapse” (Huber, 2018d). See also “Debt saturation”, → “Zombie”.

4) Bankmoney “*panics*”-- the 18th-19th century antec. of large-scale 20thc ‘crashes’ and depressions-- were “abrupt culminating stage of the [pre-mixed economy] business cycle, in which inflated asset prices collapse in price, as financial securities and properties are sold to pay off debts” (Hudson, 2015b).

5) The USA’s notable “panics”/depressions started in: 1785, 1792, 1797, 1807, 1815/19, 1837, 1857, 1873, and 1893. See also “Debt cycles”, “Market fundamentalism”.

6) “The classic ‘bank run’ is ‘depositors’ running on banks; but more recently [since FDIC] we’ve had banks running on banks. That’s what we had in 2008, and... would’ve had” in 2020, “had the Fed not jumped in in March in such a vigorous manner” (Kotlikoff, 2021, mn.16). See also “Repo (Repurchase) agreements”.

See also “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”, “Federal Deposit Insurance Corp. (FDIC)”, “Banking consolidation”, “Capital Adequacy Requirements”.

Bank, universal- (traditional Asian term for [what would become (post-2000)] investment bank-bank holding co. combines in the US or UK; synon. 'full-service financial firms'; Japan: '*keiretsu*'; a.k.a. 'Wall Street banks')

"Most other nations have cartels still in place and they are operating.... [F]rankly, no major nation has our financial system at all.... [W]e are pioneers in competition."

- FDIC Chair William Seidman, testifying before Congress (Seidman, 1991, 41).

1) Universal or full-service banks were long the norm in Europe and (particularly) in Japan, Inc.¹¹⁵, but have only been allowed in the US since the deregulations of c.2000. "Although it originated in Europe, universal banking is similar to the Japanese *keiretsu*.... [which features] the main bank at the center...[forming] the backbone of corporate Japan... [and its] cross-shareholdings.... A key mission of the *keiretsu* is to provide a safety net when corporate relatives get into trouble. Moreover, Japanese banks, unlike their US counterparts, can hold the borrowing company's common stock.... In most countries, this sort of bank influence on corporate affairs would be unacceptable... [And indeed there has been] a reduction in cross-shareholdings and...[a] weaker *keiretsu* system... in Japan" itself (Kim & Kim, 2015, 178-79); which sometimes has bank regulations more in line with "strict" America than with Europe (Allen, 2009, 141). See also "Aristocracy (& nobility)", "Investment banks", "Monobank".

[See also "Privilege", "Corporations (and corporate 'personhood')"]

Bank welfare- (i.e. 'the giant sucking/consolidation sound'; sometimes a.k.a. 'liquidity provision operations' [Bailey])

1) Within just a few years of the establishment of the USA's first bank, it was already apparent to serious observers that: the "egregious impositions of a bank, cannot expect a long continuance, but by the help of ministerial influence" (Taylor, 1794, 26). See also "State capture" [Jefferson], "France (and the EU)".

2) "The government prosecutes other trusts, but supports the money trust. I have been waiting patiently for several years for an opportunity to expose the false money standard, and to show that the greatest of all favoritism is that extended by the government to the money trust."- Congressman Charles Lindbergh, 1912 (Mullins, 1954, 23).

Only the scale is new... "The [early] modern world has been living for [the past] 150–300 years with the conflicting situation arising from the coexistence of sovereign money and bankmoney, at first in the form of private banknotes alongside sovereign coin, and subsequently in the form of bank [TAB] deposit money alongside [RAB] central-bank money (legal-tender banknotes and reserves)" (Huber, 2018e).

3) "Bankmoney would have perished as a private means of payment at the latest around 1930 and the Great Depression, had it not been supported to an ever-greater extent by the national central banks, collaborative treasuries, and government guarantees" (Huber, 2020). But it didn't. See also "Regulation", "Federal Deposit Insurance Corp. (FDIC)".

4) Hence, by at least turn of the 21stc; "the system...effectively mutated into a *state-backed regime of private bankmoney*, where the banks proactively determine the creation of money, reactively and

¹¹⁵ Where there are no glitches in the matrix.

residually backed by the central banks, and [then further] warranted by the governments if [and when] need be” (Huber, 2017, 72).

4b) “In these ad hoc rescue [‘bailout’] actions, the ‘feudal calculus’ reigns overtly; but it is equally present in every exemption and special treatment [private law] that capital and its holders enjoy.... The logical result of such a system is rising inequality and the disenfranchisement of... ‘we, the people’” (Pistor, 2019, 223). See also “Privilege”, “Inequality”, “Revolution”; Gilens & Page, 2014.

5) Further warranted? A century after Lindbergh, a “bank [today]¹¹⁶ is about as unsound a financial structure as you can imagine. I think they would be impossible without the government guarantees. 150 years ago... banks normally had leverage ratios of 4 or 5 to 1, not 20-to-1” (Wolf, 2017, mn.20).

6) It has become like no other sector. “This endless list of protection[s] from] the state to the banks.... Only banks enjoy this mega-protection¹¹⁷...”; all because “the [TAB] money created by the bank is unsafe”; hence all the “monstrous and suffocating regulation is *fully* [sic] justified” (Ordonez, 2019, mn.5; mn.10). See also “Big Government (growth of)”, “Quantitative Easing (QE)”.

7) “*All* [sic] the benefits of a bank are sustained by our taxes... If the profits are...[reduced], they are [first] going to ask regulators and [the] central bank to protect” them (Ordonez, 2018b, mn.24); that is, until “the general public...intervene[s]. The general public is important.... I don’t think this is going to come [gesturing top-down] like a political perform[ance]. It’s probably coming from people who say ‘*Why can’t I [also] have an account at the Central Bank?*’” (Ordonez, mn.25-26). See also “**Federal Funds (accounts) for All**”, Ch.5.

8) While monetized “bank deposits [TAB-bankmoney] *appear* to be the liabilities of private sector firms, the existence of... [massive] official support from the state means that they are [in effect] really contingent liabilities of the state (and ultimately of the taxpayer).... Firstly, ‘liquidity guarantees’, such as the central bank’s Lender of Last Resort function, ensure that banks can [in fact] always borrow from the central bank even if no other entity will lend to them, ensuring that they can still [almost always] settle their payments. Secondly, [state] ‘credit guarantees’ [in the post-war era] include schemes such as the Financial Services Compensation Scheme (UK) and Federal Deposit Insurance...(USA), which promise to repay deposits [up to \$200k in the US] in the event of a bank failure, effectively guaranteeing the liabilities of private companies with the full backing of the state” (Dyson, Hodgson, & van Lerven, 2016b, 7). See also “Lender of Last Resort (LoLR)/Too Big to Fail”.

9) In addition to the direct mega-subsidies, bank welfare’s indirect costs to society also “...include the **a**] distortion of securities markets by the central bank, **b**] distortion of the housing market,¹¹⁸ **c**] distortion of lending, **d**] over-regulation, **e**] over-indebtedness of society, **f**] impediment of prosperity growth, **g**] [economic] instability, **h**] [policy] uncontrollability, **i**] [hidden-structural] inflation, and [**last but not least**] **j**] [ever-increasing] concentration of [economic and political] power”¹¹⁹ (Wortmann, 2019b, 5). See also “Dumb-downing”, “Fascism, ‘Modern’ Hand of”, “Big Government (growth of)”, “Food”.

¹¹⁶ ...at least in Britain and much of Europe (see also “Big 5 (High St.) banks”). In the US (and more so in Germany) the problem is not necessarily quite so acute. “Investment banks” in the US led and caused nearly all of the 2008 “mortgage meltdown” (Selgin, 2020). See also “Glass-Steagall”, “Investment banks”, “Mortgage-backed securities (MBS)”.

¹¹⁷ Expected direct state support for TAB-bankmoney in the 21st century now includes: **1**) *suigeneris* direct access to (“Reserve”) accounts at the central bank, **2**) guaranteed *deposit insurance* schemes, **3**) “liquidity support” & taxpayer-funded *bailouts*, **4**) lax policing of *bankruptcy laws*, **5**) profits from *seniorage*, **6**) lax policing of competition & *antitrust laws*, **7**) *de facto guardianship* of their “profitability” from central banks, **8**) [regulatory focus on] capital adequacy requirements [that favor large banks], and other **9**) “*too big to fail*” supports (Ordonez, 2019). These factors are all in addition to **10**) approx. \$0.5 trillion in direct federal government interest payments on the ‘national debt’ [for. for FY 2020], not counting (also unnecessary) **11**) state & local government interest payments to banks. Has anyone attempted to add all of the numbers up yet? (Is it even possible?) Do they already (c.2019) account for a majority of government spending-- even before rising interest rates [fees to private banks] are forecast to make such aggregate totals substantially higher (throughout the 2020’s)? See also “National debt economy”, “Lender of Last Resort (LoLR)”, “Discretionary (US budget)”, “Separation of Powers”.

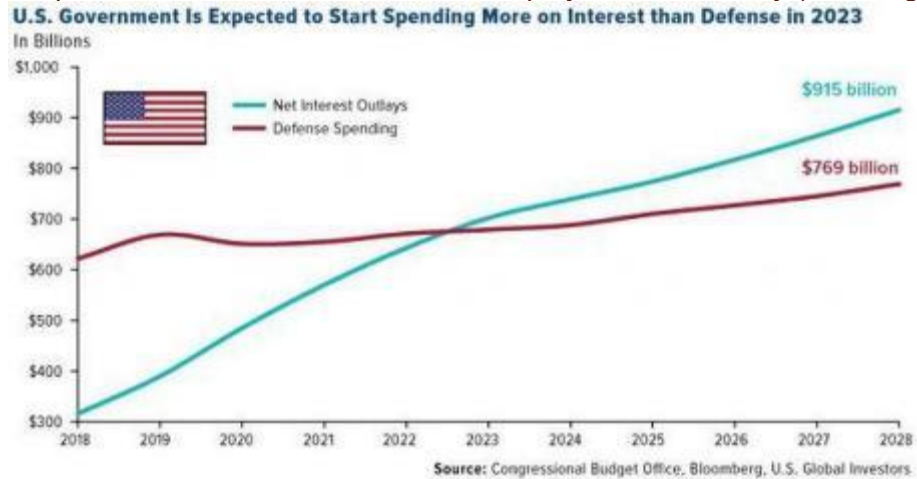

¹¹⁸ Housing bubbles are just the tip of the iceberg, as banking sector leins have gotten into pretty much every ‘national’ industry, not the least of which is farming and the food supply (or at least the “industrial food” supply). See also “F.I.R.E. sector” [crop insurance], “Food”.

¹¹⁹ In other words, the “costs in terms of loss of GDP, increase in unemployment, destruction of companies, etc., are [perhaps unquantifiably] immense. These costs are the [inevitable] consequence of the pricking of the credit & debt bubble [that is] produced by a monetary system that can only create *money* if at the same time it creates *debt*” (Ordonez, 2018). See also “‘Debt money’”.

10) Even though "...the results have been vague...governments and supervisors, companies and citizens are almost always worried about the wellbeing of the [coddled] banks: [this is because] in the current system, if the banks do not make money, society will have serious problems" (Arenillas, 2018).

10b) ...which of course leads, eventually, to the destruction of that (peculiar) relationship. In 2020, US banks had arguably "...their best year ever, raking in \$125 billion in underwriting fees, at a time when the rest of the country...[was] dealing with record unemployment [& insolvency, homelessness¹²⁰], thanks entirely to massive Federal Reserve intervention that turned a crash into a boom" (Taibbi, 2021). See also "Parasite".

See also "Parity", "Financial Crisis (of 2008-)", "Interest on 'Excess' Reserves (IOER)", "Capital Adequacy Requirements", "Gutfreund, John", "Duopoly", "Discretionary (US budget)".

[What America is all about? It would cost the US a grand total of approx. \$476 billion to phase in, over 20 years, "a secure, 21st century, digitized, distributed smart grid [for electricity] underground" (Rifkin, 2014).]

Bankers' Acceptances- (banks co-signing for the international payment for one of their customers)

1) "Legally, both the issuer of the BA... and the company using it to make the purchase are obliged to pay at maturity.... [which is usually] from 30 to 270 days. Since there is [still] some risk of default, BA rates are typically higher than T-bill rates.... [and] there is a secondary market, albeit limited" (Burton, et al, 2010, '259').

2) US banks were prohibited from participating in bankers' acceptances prior to the *Federal Reserve Act of 1913*. The fed then "provided stability and liquidity to this market by regularly buying BAs from 1914 to the 1930s and again after World War 2 until the 1970s", after which time it was no longer required (Burton, et al, 2010).

3) The "Fed stopped outright purchases of BAs in 1977 and their use in repurchase agreements in 1984... [when BA's total outstanding volume was about]...\$75 billion... [as opposed to year-end 2008's] less than \$.5 billion. We discuss them here only because of their historical significance" (Ibid).

4) Although there were certainly many factors in the decline and fall of bankers' acceptances, it is ironic that the income derived from these investments is *fully taxable*, even though bankers acceptances are primarily found in the *institutional* [or largely public sector investment] arena (Sloan, 1984). (Most governments don't like to pay taxes.)

See also "Money markets & Money market funds (MMFs)", "Burien, Walter".

¹²⁰ Even pre-Financial Crisis, the "proportion of people in poverty in London...[was already] broadly similar to what it was in the 1880's... and the proportion of national income [that the UK]...spend[s] on welfare is broadly similar to what it was in the 1820's" (Boyle, 2002). See also "K.J.B. (King James' Bible)" [Jefferson].

Bankcor- (European economists' J.M. Keynes & E.F. Schumacher's World War Two era plan for a global currency lost out at the 1944 Bretton Woods conference, in deference to a more US dollar-centric system of pegged exchange rates).

1) Bancors would have been "issued by an international institution,¹²¹ like the World Bank was in 1945.... That then gives you the limit people want to have [in order] to control domestic spending...[in] countries which are running trade deficits" (Keen, 2016u, mn.22).

2) The Schumacher-Keynes "'Multilateral Clearing"/Bankcor proposal, however; "couldn't stop the [then-nascent] IMF from degenerating into a strong-arm collection agency for the [world's] big banks" (Zarlenga, 2002, 610). See also "Bretton Woods", "International Monetary Fund (IMF)". See also "Special Drawing Rights (SDRs)".

Banking- (a.k.a. 'money augmentation' [Ricks], or getting private credit extensions stamped as public money; i.e. that special 'license [from the state] to create [its] money')

1) "Banking in its *best* [sic] view, is only a fraud, whereby labour suffers the imposition of paying an [private] interest on the [public] circulating medium.... the aristocracy, as cunning as rapacious, have contrived this device to inflict upon labour a [private] tax, constantly working for their emolument.... The profits of the bank are then a tax upon the community. But a miserable excuse for this public imposition is urged, in the assertion that it is voluntary."- John Taylor of Caroline (Taylor, 1794, 18-19). See also "[Deceptive Banking Terms](#)"¹²², →"Big Government (growth of)", →"[National Identity cycle](#)".

2) "A particular banker lends among his customers his own *promissory notes*, to the extent, we shall suppose, of a hundred thousand pounds. As those [private] notes serve all the purposes of [public] money, his debtors pay him the same interest as if he had lent them so much [real] money."
- Adam Smith (1776, II.2.29) See also "[Creney](#)".

3) "has corrupted the purpose of money from that of an exchange medium to that of an interest-bearing debt" (Soddy, 1926, 296). See also "Money", "Corruption".

3b) A banker is "'a man who keeps your money by lending it out to his friends'. Today the banker can plead that this is no longer a breach of faith, since you and the modern law gives him permission. But, though no longer a breach of faith, it is still against [honest & straight forward] public policy"
- Irving Fisher, America's most famous economist, c.1920's-40's (1936, 12). See also "Legal 'money'", "[Deceptive Banking Terms \(d.b.t.'s\)](#)".

4) "Modern apologists...assert that bankers are generally of 'high moral character'. But why would moral people seek to gain an unfair advantage [usury] over their fellow citizens, through a little understood [semi-] legal¹²³ privilege...?" (Zarlenga, 2002, 662). Perhaps the traditional rationalization (from the 18th & 19th centuries) still holds-- that bankmoney creation is necessary for a meaningful Separation of Powers in society. But 'the father of 'modern' Separation of Powers himself, Baron de Montesquieu, didn't see it that way. Montesquieu "strongly supported the circulation of paper money ...[and] condemned the circulation of paper credit", i.e. [TAB](#)-bankmoney (Zarlenga, 322). See also "National Debt Economy (NDE)", "Separation of Powers", App.C: "1-2-3".

5) In the 21st century, "[p]rivate banks issue [as [national currency](#)] the [initial 'loan'] debt,...[and collect] compounding interest charges [on it]... the more the better, with the [pledged] security of people's homes, wages, or whatever can be sold for more than the debt, [and] then...[(at least the larger banks) package] the risk of myriad debtors into sliced-up 'financial products' to sell across the world...as still more...[money begetting money]...ad infinitum... until the pyramid scheme collapses, as in 2008. Then government bails out the biggest bank money...[usurers], who go on doing it [extracting from the rest of

¹²¹ ...from foreign exchange reserves held by central banks.

¹²² "The loss is the same, whether a daring robber... or whether a midnight thief secretly filches... [one's property] away. Are my misfortunes palliated, because I cannot unravel the fraud by which they were brought upon me? A wise nation and an honest man, will view with contempt an apology, founded in a distinction between secret fraud and open violence" (Taylor, 1794, 19). See also "Corruption", "Leverage".

¹²³ For "little understood", see "[Deceptive Banking Terms \(d.b.t.'s\)](#)", "Neoclassical Economics". For 'semi-legal', see "Money" [Bindewald, 2018], "Federal Accounting Standards Advisory Board (FASAB)" [FASAB-56].

society], shifting from [the exploitation of] broke home buyers, to [leveraging] food or [since 2000] other derivative speculations, or whatever [else] multiplies fastest in deregulated conditions” (McMurtry, 2013b). See also “Sovereignty”, “State capture”, “Capitalisms”, “Casino capitalism”.

6) Nonetheless; the “redeeming feature of the banking system” is that one must “ensure” that “the majority of... bank credit... creation is used not for asset purchases... [and] not for consumption, but...for *business investment* [sic]. That’s the Golden Rule of Banking” (Werner, 2021, mn.34).

See also “Bankmoney”, “National Debt Economy”, “Exogenous vs. Endogenous’ (money creation)”.

Banking consolidation- “The bigger a bank, the smaller is its relative need to refinance. Smaller banks lose out in cost competition related to refinancing, and thus dwindle in number” (Huber, 2018, 2). See also “Bank runs/panics”.

Banking, end of- (i.e. squeezed between the concurrent revolutions of [non-bank] ‘shadow banking’ and CB or government ‘digital currencies’; euphem: ‘limited purpose banking’ [Kotlikoff])

1) Since the (so-called) ‘modern’ era at least; “Bankers have never been particularly good business persons” (Dodson, 2009); yet alone runners of nations (with the possible exception of “German (Industrial) Banking”). See also “Interest” [finance], “Equity” [finance], “Negative Interest Rates”. See also “Criminalization of banking, the”, “Parity”, App.C: “1-2-3”.

Banking School/Bank Teachings- 1) There is **no** known formal/intellectual antecedent (since the Congress of Vienna proceedings were mostly secret¹²⁴) to the *Banking School vs. Currency School* debates of the 1820’s-1840’s.¹²⁵ The latter, coming from a bullionist-mercantilist perspective, presumed that the causes of money supply instability came from the quantity of money; whereas the Banking School theorized that the money supply (in the new age of bank credits) resulted from interest rates and prices. See also “Interest rates”.

2) Central to this argument was the “real bills” doctrine (mostly from Tooke and Fullerton), which asserted “that as long as bankers write out credit and banknotes against [so-called] real bills [i.e. limiting banks to issuing notes only against (collateralized) equally-valued assets] at short notice, [then] the [resultant bank-created] money...[would] surely be put to good use. [And upon] maturity of [such] credits, the [bank-created] money will be taken out of circulation, [thus] making sure that there is no more money [in circulation] than there is ‘real’ [collateralized] demand for it.... They considered bankers [who were then substantially more decentralized and local] to be honorable merchants of impeccable judgement. Interestingly, this is a moral and behavioural [a.k.a. political] argument” (Huber, 2013, 4); that would also seem to ensure that “banks will only lend if you really don’t need the money” (Pash, 2014). See also “Big Government (growth of)”.

3) Even though “the term ‘real bills’ is not used any more... [its underlying] doctrine... [has undoubtedly been] a mainstay of...Banking theory from the early 19th century to the present day. It is also a core principle of [20th century-style] central banking (prime quality assets eligible for monetary policy operations). The Banking doctrine today is hardly different from what it was 200 years ago. It says, [then as now] let banks freely create money...[and the] money supply takes care of itself [because money] and capital markets continually readjust and thus establish *equilibrium*.... The Banking School rationale is based on the axiomatic classical belief in the ‘invisible hand’ of markets, which is a modernized version of the medieval Scholastic theology of God’s wise *manus gubernatoris* unfailingly creating a *harmonia*

¹²⁴ For an approximation of ‘Their’ mindset and methodologies, one may consider seeing also “Smith, Adam (1723-1790)”, certainly not Kissinger, 2017.

¹²⁵ American Perry Mehrling (i.e. not just Europeans) also noted that “the history of monetary theory...largely consists of a dialogue between [these] 2 points of view...[also known] as the *Currency Principle* versus the *Banking Principle*.... which emphasize, respectively, the importance of scarcity [i.e. monetary control, when the (so-called) ‘business cycle’ tide is receding] and the importance of elasticity [i.e. credit liquidity, when the ‘business cycle’ tide is rising]” (Mehrling, 2012). Basically, for going on 3 centuries now, in “the contraction phase, the distinction between more money-like [cash] and less money-like forms of [dodgy] credit is [time & again] re-established”, simply on the basis of whether the ‘business cycle’ tide is coming in [boom] or flowing out [bust] (Mehrling, 2012). See also “Deceptive Banking Terms (d.b.t.’s)”.

mundi unless distorted by devilish machinations.... To bankers, the power of banks has always been a non-issue. This is in line with the neoclassical view of money as... simply mediating business and trade, not being constitutive of them...[a.k.a.] the doctrine of neutrality of money” (Huber, 2017, 44-46). See also “Equilibrium”, “Market fundamentalism”.

4) And it said that banks freely creating money would not, in any way, be inflationary. “It was the position of the Banking School that [since] bank notes are issued to meet the needs of trade... that bank notes could [thus] never be excessive, so long as they were redeemable [for specie] on demand,¹²⁶ and, thus, that no other restrictions on [banks’] note issue would be required” (Wray, 1998, 25). See also “Inflation”, “Big Lie, the”.

5) Banking theory, today as then, “reflects the unreflecting idea of...(neo)classical economics that markets [personification fallacy] would have some sort of absolutist private status [ever] beyond the [legal apparatus of the] state” (Huber, 2013, 6). See also “Neoclassical Economics”, “Neofeudalism”.

6) Stephen Zarlenga considered the early-to-mid 19thc Bank Teachings vs. Currency Teachings ‘debate’ to have been mostly a sham, or an orchestrated false dilemma debate¹²⁷: **Subsequent** false dichotomy debates in the nearly 200 years since then have **been**:

See also “Hegelian dialectic”.

7) ‘Bank Teachings’ other intellectual offspring include (in chronological order):

See also “Bankmoney” (Hamilton), “Free banking” (Hayek), “Commodity money” (Menger), “Neoclassical Economics” (Jevons, Clark), “Credit Theory of Money” (Innes), “Chicago School” (Rockefeller, Friedman), “Bankism”.

Bankism- Ever wonder how banks got to be ‘the tallest building in every city on this planet’? How can that be without philosophy? Here is how what might be called “Bankism” (see also “Banking School/Bank Teachings”) or “Zio-Bankism” fits (#4) into a zoom-out on Western Civilization’s preponderant philosophical systems:

<u>system:</u>	<u>era/origin:</u>	<u>problem:</u>
 #1. <i>Inanna</i>	3rd millen.BCE/Uruk	‘Are you joking? She’s not that smart!’
 #2. <i>Stars, vaguely</i>	1st millen. BCE/Chaldea	‘Vague-schmague. Anything can be justified!’
 #3. <i>Roman Catholicism</i>	300’s-1600’s/Rome	‘How can you build an empire w/o leverage/usury!’

¹²⁶ Zarlenga had earlier pointed out that this peculiar notion goes back to Adam Smith and the 1770’s, when “[n]early everyone else realized that adding substantial amounts of paper notes to the money supply caused the value of money to drop. Why not Smith?...Smiths’ theories protected those ‘idle people’ of the Bank of England” (Zarlenga, 2002, 328).

¹²⁷ Possibly because David Ricardo, whom Huber calls “the most prominent representative of the Currency School” [c.1820] (2017h) was also playing both sides? Hudson, in polar contrast with Huber, often says that (at least the younger) “Ricardo was the bank lobbyist of his day. He [originally] went into parliament [1818-19] to be the arguer for the bank. His brothers... ran the capital firm. They [later] underwrote the Greek debt after 1832 that bankrupted Greece...in the 19th century.... You still had a landlord class in England, so... [banks back then] didn’t make their money [by] making mortgage loans. Banks made their money mainly in international trade and international financial transactions” (Hudson, 2016s), and greatly profited from Ricardo’s (1810-17) popular ideas on free-trade. See also “Smith, Adam.”

#4. *Zio-Bankism*¹²⁸

1700's-1900's/London

'How can you transit from post-Industrial/Info.Age, to Knowledge Age!' (see "History")

[Supple Veda-to-(‘a world made safe for demœcra’... Google-Dalles?) See also "Design".]

Bankmoney- (a shorthand for "bank credits *used as money*" or "bank-created money"; a.k.a. 'debt-money', 'debt-borne money', 'credit-issued money', 'bank paper', 'commercial bank money' [IMF,2019], 'contractual money claim' [Ons Geld], 'pseudo-money' [Ordonez], **TAB-bankmoney** [this book], 'checkable liabilities', 'checkbook money', 'bookmoney', 'money surrogate', 'current/checking accounts', 'loan swaps', or 'Bank-Originated-Money&Debt' [Keen]; not to be confused with "**Transaction Account Balance [TAB] credits**"¹²⁹, which are not officially 'money' until such 'credits' are state-sanctioned/supported with **RAB** [interbank money] backing. *Bankmoney*, unlike 'bank credit' [TAB], is not an accounting term.¹³⁰ The basic formula for this "money on bank account"¹³¹ is simple: bank *credits (TAB)* + Reserve *backing (RAB)* = 'bankmoney' (Huber, 2017, 18). *Central banks* may also create bankmoney, (as was demonstrated in 2020) **without this first [TAB] component**.

1) Commercial bank credits **(TAB)** plus interbank/Reserve money **(RAB)** are the 2 components of bankmoney, which comprises over **95%** of the US M1 money supply today. "The bankmoney [creation] automatically¹³² accompanies the extension of [Reserves, which are now also automatic upon the extension of] bank credit" (Huber, 2017h). **TAB-bankmoney** has always been the legal property of the **state-monetized credit institution** [a.k.a. 'bank'], not of the so-called 'depositor'¹³³. See also "Bank runs", "**Money, 2 classes (layers) of**".

2) what "nonbank agents hold in... electronic bank deposits"¹³⁴ (Macro & Siebenbrunner, 2019, 9)...

3) ...**is just a claim on federal funds/base money** (as banks are the [unnecessary] middleman between nonbanks and **base money**). Due to this structural dependency, "bankmoney is not only of unstable value, but is unsafe in its very existence. When a bank fails, the money perishes together with the bank,

¹²⁸ Banks in the 21stc, of course, are not what they were in the 19thc. 'Central Banking' gradually took over from traditional banking in the 20thc. Hence 'central bankism' has been a necessary link between stages 4 and 5. See also "Capitalisms", "Lender of Last Resort".

¹²⁹ Bank "*credit*" [TAB] or (d.b.t.) 'deposits' in and of itself is not the same thing as "bankmoney" [TAB, + RAB backing]. Bankmoney has also been, since the 1930's, state-supported with "federal insurance" schemes (backing). See also "Bank welfare".

¹³⁰ And according to Richard Werner's empirical investigation of contemporary money-creation practices (in Germany), the Reserve/RAB backing is-- in actual practice-- not always necessary: "In fact" the central bank "didn't care about their [loan-issuing bank's] Reserves. They didn't even look at how much they had. The Reserves were not affected" (Werner, 2018b, mn.17-18).

¹³¹ More specifically, *bankmoney* "is a promissory accountancy note to convert a deposit [credit] into [real money] cash on the customer's request, in the same way as a former private banknote was [just] a promise to *redeem* that paper note in silver coin" (Huber, 19). See also "'Free banking' era", "'Creney'".

¹³² Hence, in recent decades, "bankmoney has to a large extent become detached from [RAB] central-bank money.... [and] one result...[has been that] the effectiveness of conventional instruments of monetary quantity and interest-rate policy has...deteriorated" (Huber, 2017h). See also "Reserve 'Requirements'".

¹³³ With a "fractional reserve system...any actual money...deposited in a checking account, the bank has the right to lend...out as belonging to the bank, and not to the depositor. The legal title to the money rests, indeed, in the bank" (Fisher, et al., 1939, 29).

¹³⁴ This does not include cash (which is only withdrawn or deposited into accounts). "Nonbank agents can 'swap' commercial bank money into physical cash back and forth" (Macro & Siebenbrunner, 9); which banks consider to be a nuisance. See also "Cashless Society (War on Cash)".

since that money is nothing but a mere liability on a bank's balance sheet" (Huber, 2017, 5). See also "Criminalization of Banking, the", "Credit money".

4) The "monetary importance of bankmoney was not generally recognized before about 1900... [when, in Europe, its] share... had grown to about 1/3rd of the public money supply"¹³⁵ (Huber, 2017, 19); and it "...has only become predominant only in the last 200...250 years" (Huber, 2013b, mn.35). The boost provided, like a drug, has been educational, but at the expense of resorting to an entrenched war economy and/or debt-saturation (see Piketty, 2014, 97, fig.2.3). See also "Bullshit jobs".

5) The 19th century "Bank teachings", or (synon.) "Banking School" (bankmoney) "theory stands for the commodity theory of money, which considers money to be a commodity, like any other, based on private contracts" (Huber, 2013b, mn.7). "They say '*money and credit cannot be separate because they are identical by their very nature*'. This is certainly true [today] from the Banking perspective of loaning money [commercial bank credits] into [public/stamped] circulation" (Huber, mn.8). And the harmful practice of leaching was standard medical practice in the 18th century. See also "Commodity money", "Compound interest".

6) Over the past 100 years, "bankmoney has driven out central-bank money [a.k.a. cash or 'real money'] by about 90–97%" (Huber, 2018). See also "Gresham's law", "Federal Deposit Insurance Corp. (FDIC)".

7) But it was only after World War Two "that [TAB] credit-borne bankmoney established itself as the customary general practice" (Huber, 2017, 97). "Advanced economies over the last 40 years have experienced an unprecedented shift...[towards] bank lending relative to GDP after a preceding century of near-stability" (Jordà, Schularick, & Taylor, 2016b, 32). And although more dependence upon TAB-bankmoney "credit is associated with less volatility in growth, consumption and investment... the decline in mean growth is much sharper" (Jorda, et al, 35). See also "Japan model (asphyxiation), the".

8) "The [official] idea behind it was that [money-creating] banks should be: **a**] more able to assess and evaluate [macroeconomic monetary] risks than any central institution. By **b**] granting loans only against adequate collateral, the newly created money should be of high recoverability and scarce at the same time. Since banks had an intrinsic interest in their own economic survival they should act cautious, **c**] always hold enough equity to offset potential losses and **d**] only create credit cautiously **e**] for investments in the real economy. This is the theory which many of the opponents of...[public money still] use" (Stelter, 2018); despite none of the 5 premises being reliable today, and at least 3 or 4 of them now being (since the 2000's) absurdly false.

9) New bank deposit money "is literally the cheapest, simplest thing to produce [that] you can possibly imagine.... It is the simplest thing in the world to create money-- if you're a [chartered] bank... Because it's so simple, they're encouraged to create as much as they can... [and] to ignore the risks, because even if they do make a bad loan, if they have increased the volume of turnover of the company... they can leave with a nice large golden... parachute... and somebody else has to wear the consequences further down the line" (Keen, 2016j, mn.4-5). See also "Debt saturation".

10) The "majority of bank credit [TAB] creation in the UK is not even used for transactions that contribute to and are part of GDP, but instead is used for **asset** transactions" (Werner, 2016c). See also "Japan model (asphyxiation), the", "Quantitative Easing (QE)". In layman's terms, this means that when "banks decide where to 'lend' [extend credit]... the easiest thing [for them] is to lend to finance the stock market bubble, through margin loans, and [more commonly]... to finance real estate bubbles, though mortgages. And that's brain dead stuff...that ultimately has to collapse, because.... [such an] increase in 'lending'.... actually causes the increase in [asset] price[s]" (Keen, 2020, mn.38).

11) Why do we still, after 2008, supposedly want a "...money system which is directly connected to [dependent upon] bank balance sheets-- the assets that banks have?" (Wortmann, 2018b, mn.13)

12) Banks are, in fact, already "losing their [20th century] exclusivity with regard to money creation. Non-banks, too, can [increasingly] create liquidity ([via] 'money market instruments'), based on financial

¹³⁵ "A wallet is of course more practical than a coinbag attached to the belt... [and] notes were, and still are, much easier and cheaper to produce than coins" (Huber, 2017, 18).

assets, thereby affecting the money supply. With digitisation this will take-off, as new liquidities administered on distributed ledgers emerge” (Wortmann, 2019b, 3).

13) The term “*debt-money*”, although a synonym, herein connotes a historically broader, more abstract useage than the (more specific) ‘*bankmoney*’ of the past couple centuries.

See also “[Transaction Account Balance \[TAB\] credits](#)”, “[Debt money](#)”, “[State Theory of Money](#)”, “[Austrian School](#)”, “[Inflation](#)”, “[Gross Domestic Product \(GDP\)](#)”, “[Money, 3 \(contemporary\) Tiers of](#)”.

[The rise of [TAB-bankmoney](#) (Huber, 2020); but since 2008 it's being merged into [RAB/Reserve-CBmoney](#) (see also Titus, 2021e).]

Bankmoney Regime- (i.e. “state-backed rule of private bankmoney” [Huber, 2016b, mn.31]-- which is the only way that it can work [see also “[Tax shift](#)”, “[Taxation of income](#)”, “[Debt saturation](#)”, “[Monetization](#)”])

“If you or I were to attempt to preach against this Abuse, We should Soon hear a Cry not only of the baser Sort, but of the better Sort, of ‘Great is Mammon’ of the Aristocrats, which No Town Clerk of Ephesus could ever Silence.”- John Adams, letter to Benjamin Rush (Adams, 1810). See also “[Monetization](#)”, “[Aristocracy](#)”, “[Corporate Media Cartel](#)” [.Mockingbird].

“President [Theodore Roosevelt] had ordered the suppression of that motto [“In God We Trust”] because a coin carried the name of God into improper places, and this was a profanation of the Holy Name.

[Industrialist Andrew] Carnegie said the name of God is used to being carried into improper places everywhere and all the time, and that he thought the President's reasoning rather weak and poor. I thought the same, and said, ‘But that is just like the President. If you will notice, he is very much in the habit of furnishing a poor reason for his acts while there is an excellent reason staring him in the face, which he overlooks. There was a good reason for removing that motto; there was, indeed, an unassailably good reason-- in the fact that the motto stated a lie. If this nation has ever trusted in God, that time has gone by; for nearly half a century almost its entire trust has been in the Republican party and the dollar-- mainly the dollar. I recognize that I am only making an assertion and furnishing no proof; I am sorry, but this is a habit of mine; sorry also that I am not alone in it; everybody seems to have this disease.’- Mark Twain, 1907 (Twain, 1940). See also “[Estates, 3](#)” [.1stvs.2nd], App.C: “1-2-3”, and (BMR's successor state, the) “[Military-Industrial-Intelligence Complex](#)” [.Eisenhower].

1) Prof. Huber's term for economies that are “pro-actively led by the banks' primary credit and deposit [[TAB](#)] creation¹³⁶.... [Subsequent 20th century development] was] driven by the trend toward cashless

¹³⁶ In other words, “the private banker...[becomes] a manager of other person's funds, rather than a lender of his own. He now controlled billions where formerly he had controlled millions, and... no longer in his own name, but acting from the background, concealed from public view by the plethora of financial and credit institutions...” (Quigley, 1966, 518); and then large government agencies to (attempt to) regulate them. See also “‘[Exogenous vs. Endogenous](#)’ (money creation)”, “[Deceptive Banking Terms](#)”, “[Big government \(growth of\)](#)”.

payment... [which] has marginalized central-bank money [RAB] to a large extent, thereby challenging the role of central banks, and capturing the sovereign monetary prerogatives to a considerable degree.... A sovereign state's monetary prerogatives comprise the rights to:

a) determine the currency of the realm (the official monetary *unit of account*),
b) *issue the money* denominated in that currency [of account], and
c) *benefit from the seigniorage* thereof, that is, the gain from creating new money...[B and C] have by now largely been captured by the banking industry” (Huber, 2018). See also “Economics”, “State capture”, “Huber, Joseph”.

1b) In other words, digital/account “Bankmoney has displaced central-bank money [cash] in public circulation...[and] pushed it back operationally in interbank circulation (required reserves [are no more]). So in the course of time [2 centuries], bankmoney has first become system-*relevant* and *finally* [like a super-nova] completely system-*defining*” (Huber, 2021). See also “Governance”, “Sovereignty” [.monetary], “Money, 2 classes (layers) of”.

2) Another indicator is the development of “ever more state agencies, especially the revenue office, [demanding] to be paid in bankmoney and [refusing] to accept cash... This is not without irony considering that the major financial state authority [f.e. the UK tax office, as of Dec. 15, 2017, officially] rejects what is left of the state's sovereign currency [a.k.a. cash & coin]” (Huber, 2018). See also “Legal tender”.

3) Is bankmoney inherently monopolistic? Most astute observers of its childhood thought so. “Bank currency, being in its nature a monopoly, must inevitably be governed by the innate law of monopoly. This is to enhance its own value, by diminishing value in some other quarter. It cannot otherwise subsist” (Taylor, 1814, 310). See also “Usury”, “Bank welfare”.

4) Two centuries later, it “is a head-spinning innovation, one that rearranged authority over the money supply, created a powerful industry out of modern banking, anchors investor activity with the safe asset of public debt [and insurance], and [also] determines the everyday distribution of credit” (Desan, 2019).

5) However, on “the grounds of its economic dysfunctions and its questionable legitimacy, the bankmoney regime [BMR] cannot last forever”¹³⁷ (Huber, 2017, 97). See also “Monetary reform”, “Minsky, Hyman”, “Angry Birds”, “Zombie economy”.

5b) Nonetheless, due to its success in the technology sphere; c.2020 “there’s only one thing between them and a totalitarian, scientific dictatorship...the United States of America, the United States’ military... and the US constitution” (O’Connell, 2021b, mn.30), particularly its 1st three words.

5c) It ends in either (see also) “Technocracy”, and/or “Monetary reform”. See also “Soddy, Frederick” [.bankmoney regime].

6) How long have UK-type “bankmoney regimes” been in existence?

UK (original)- (no later than) 1850’s (Quigley, 1966 [quoting Gladstone]).

France- (no later than) 1870’s (Quigley, 1966)

US- (no later than) 1880’s

Germany- 19??’s

See also “State capture”, “Goldsmith’s Tale, the”, “City (of London), the”, “Bank of England”, “Desk, the”.

7) (Analytical historian) Carroll Quigley surmised that it (BMR) ended c.1931, pretty much at the hands of (what would come to be known as) the Intelligence Community (Quigley, 1966, 58, 60-61). See also “Secrecy, cult of”, “Military Executive Corpocracy (MEC)”, “Timarchy” [Montesquieu’s trichotomy].

7b) Can a “bankmoney regime” do stuff like this (2017 leaked-prophecy-parody)?

<https://www.youtube.com/watch?v=PkHjzV2JRA4> [Simpsons-LisaVsSmithers].

BMR Updates: 12/21- <https://banned.video/watch?id=61b8b80ec57f571cc3e5dd4e> [Schwab’s’04Leaders].

See also “Estates, 3”, → “Separation of Powers”, → App.C: “1-2-3”.

¹³⁷ So how long has BMR been in place? Since turn of the 18th century in En.-UK (de facto); and de jure since the 1820’s-30’s. Apparently the American Revolution got under its skin (at least a little). In the USA, since the 1820’s-30’s (de facto); and de jure from the *National Banking Acts* & the drawing down of ‘greenbacks’ and silver specie in 1865-80? There has been, however, (increasing) ambiguity about the BMR’s relationship with the Intelligence Community since the mid-20thc, a.k.a. the Pentagon (est.1943). 20th century France, etc. are “blue states” (de jure) by comparison (to the imperial US & its DARPA seeder). See also “Currency Wars, the”, “Big picture” [France, etc.].

See also “Federal Deposit Insurance Corp. (FDIC)” (insurance regime), “F.I.R.E sector”.

[(classic) mid-20thc Bankmoney regime (when transportation & industry were still bigger than the media cartel). See also “Sectors of the...”]

Bankruptcy- (The 2 primary ways that businesses shield themselves from illiquidity are Ch.7 [‘liquidation’], and Ch.11 [‘reorganization’])

“In England, the Magna Carta rules out seizure of the lands or revenues of a debtor when his movable or personal assets suffice for the payment and he offers to yield them; at that point all the assets of an Englishman represent [liquidation into] silver” currency (Montesquieu, 1748). See also “Separation of Powers”.

- 1) Banks ~~ge~~ used to go insolvent mostly from a) bad **TAB**-bankmoney loans, but also from b) **RAB**/Reserve shortfalls, and/or c) poor real estate and other investments.
- 2) Bankruptcy “law rests on abrogating *creditors’* existing private-law entitlements” (Ricks, 2020, 67).
- 3) Without bankruptcy there is no Capitalism. Yet current bankruptcy laws enable corporations to shed “their long-term commitments to their workers and retirees in order to pay their bondholders and other creditors” (Hudson, 2013). See also “Capitalisms”, “Jubilee”.
- 4) Present bankruptcy & resolution laws, hence, constitute “a system for triggering panic” (Wolf, 2017, mn.22). See also “Minsky, Hyman”.
- 5) None of America’s approx. 5000 banks failed in 2018. See also “Quantitative Easing”, “Bank welfare”.

Bankruptcy, state- 1) “First of all, there’s a serious question as to whether [US] states will be allowed to go bankrupt” (vis-a-vis their relationship with the US government); but
2) “If they run out of money, what we’re talking about is preserving tax revenues for the bond-holders, and slashing services... while raising taxes, or... literally confiscating property”; for resale to the State’s creditors (Fitts, 2020j, mn.4). See also “Bonds, public”.
3) And US migration trends already make it readily apparent that those state “governments that are in bad [financial] shape are seeing exits-- the lab rats are escaping” to other states; “[t]his is not just a higher-income phenomenon.... [These] migration trends... will help the Day of Reckoning come sooner, rather than later.”- Bill Bergman (Fitts, 2020j, mn.5-6). See also “Monetary reform”.
See also “Feudalism, neo”, “Regulation”, “Taxation of income”.

Banks- (a.k.a. “commercial banks”, “member banks”, **d.b.t.** ‘depository institutions’). For the purposes of this book, commercial and investment banks, in addition to credit unions¹³⁸ and deregulated thrifts.
“nurseries of national wealth”

or

“liens & leeches on [national] sovereignty”

¹³⁸ *Credit Unions* differ from (the post-1999 blurred category of) commercial-investment *banks*, in that they are:

1) owned by their members/depositors, 2) have different regulations and lower capital adequacy requirements, and 3) are usually locally based, as opposed to (the deregulated) US commercial-investment banks.

1) “A bank is simply a double-entry bookkeeping engine”¹³⁹ (Keen, 2016o, mn.12); in other words, quite literally “a money creation business” (Ricks, 2016, 10). Through the 18th-19th centuries, **banks have stolen-- by bribing** [(and fooling) the sovereign] **Legislatures-- the** [traditionally sovereign] **right to monetize things**. This “extraordinary legal privilege”, i.e. prohibited ‘counterfeiting’ to all other private¹⁴⁰ institutions & individuals, “...might be described, both logically and historically, as the ‘first law of banking’¹⁴¹ (Ricks, 5). See also “‘Exogenous vs. Endogenous’ (money creation)”, “Privilege”.

1b) Do they admit it? Historically-- and basically-- no. “[B]ankers themselves did everything they could to make their activities more secret and more esoteric. Their activities were reflected in mysterious marks in ledgers, which were never opened to the curious outsider” (Quigley, 1966, 46). See also “Federal Reserve Audit”, “Monetary reform”.

1c) Is something fishy going on? “Banks are like counterfeiters who lend false money, accept their own false money in repayment and destroy it, but receive the interest in real money transferred to them by the rest of the community, and which is not destroyed.... [B]y continually changing the value of money as they create and destroy it, the banking system converts the pound sterling into a *rubber yardstick*, in effect making a mockery of...measurement standards” (Daly, 1980). See also “Counterfeit”, “Government, role of”.

2) May be “[c]onsidered as an aristocratic engine, I have no great predilection for banks. They may be considered, in some measure, as operating like a tax in favor of the rich, against the poor, tending to the accumulating in a few hands; and under this view may be regarded as opposed to republicanism....¹⁴² Bank bills are promissory notes, and of course” not currency (Maclay, 1790). See also “Interest”, “Conspiracy theorist”, “Aristocracy (& nobility)”, “Currency”.

3) Banks today are “entities that create *new* [TAB] money to finance the purchase of *pre-existing* assets (which do not contribute to GDP), rather than entities that finance the production process.... [B]anks are profit-seeking businesses, and their main product is debt. They use incentive schemes... to encourage their staff to ‘sell’ (lend) more, whilst using marketing and sales strategies to encourage households to ‘buy’ (borrow) more. At the same time, they are in competition with other banks, aiming to increase both their market share and absolute size. At no point is the bank obliged or incentivised to consider the impact of its [so-called] lending...[of what is actually new] money creation on wider issues such as the sustainability of household debt¹⁴³ levels, housing affordability, or financial [or political] instability” (Dyson, Hodgson, & van Lerven, 2016, 9-10).

4) A bank is “in the delightful position of living on the interest of what it owes” (Graham, 1936).

5) Banks today “make more money in penalties than they do in interest” (Hudson, 2016s).

¹³⁹ “Engine”-- as in the primary engine(s) fueling warfare and state capture games in (the famously un-unifiable) Europe of the mid and late 2nd millennium.

¹⁴⁰ “Don’t get the wrong impression by the [old school] government-type seals on their windows”- the FRBNY’s “*I Bet You Thought...*” (Titus, 2020b, mn.9). See also “Public-Private Partnership”.

¹⁴¹ Commercial/deposit banks, however, “are basically limited to holding diversified portfolios of credit assets-- [just] loans and investment-grade bonds... [and] may not buy equity securities [stocks] or junk bonds” (Ricks, 2016, 7). See also “Big 3-4 (Asset managers)”, “Stock markets”.

¹⁴² “[H]aving no principles but that of avarice [extraction], which dries and shrivels up all the manly-- all the generous feelings of the human soul’...[constantly fomented] the ruin of small traders by handing them over to usurers” (Wilson, 1942, 22). See also “Nationalism/National Identity”, “Usury”, “Philosophy”.

¹⁴³ Household debt “is about 80% mortgage debt, and 20% credit card [debt] and short-term loans and stuff like that” (Keen 2018c, mn.21).

6) Anglo-American banks today¹⁴⁴ mostly just lend money against (collateralized) assets¹⁴⁵ that are already in place. This is not *industrialism*. It is, rather, something more like ‘bureaucratic cronyism’.¹⁴⁶ Approx. 70%¹⁴⁷ of bank loans are for (mostly auto-processed) mortgages; and “80% of bank loans are to the real estate sector.... The value of a home or a commercial office building is worth whatever a bank is willing to lend against it” (Hudson, 2017g, mn.12). See also “Usury”, “Criminalization of Banking”.

7) “Banks over time get larger and larger.... [and] when they get larger, they lend less to small firms. So... there is always this problem that the very small businesses... will get, over time, less funding. So we need to actually create new banks, even in countries [like Germany] where we have small banks” (Werner, 2015b, mn.146). See also “[Monetized credit institutions](#)”.

8) With, however, the UK and (even the) US “Big 5” banks controlling most of the market, “banks sit at the top, inside the eye [of the monetary vortex], sucking everything else in the system towards themselves” (Vrabel, mn.124); lest the entire monetary system collapse. See also “Bank welfare”.

9) A “bank is only finally held back from making new loans [and hence new money] if it runs out of Reserves, or [by] the high cost of borrowing” Reserves (mostly from other banks) (O’Flynn, 2018, 5).

10) “...have converted from [new] money-creation entities which *should* be creating for the sake of entrepreneurial activity and working capital for corporations-- to institutions that [now] create money on the back of a Ponzi scheme about rising house prices. And we’re letting them get away with it every damn time” (Keen, 2016r, mn.7). “Expensive houses don’t make a wealthy society. They impoverish it” (Keen, 2017d, mn.25). See also “Globalization”.

11) In the US, “the biggest...[[monetized credit institutions](#)] sector in the world, over 15,000... The very large banks deal with the very large customers, [and] give very large loans. The medium sized banks give medium sized loans. Who’s ‘lending’ [i.e. extending [state-monetized credit](#)] to small firms? It is only the small banks...[And] the UK doesn’t have those” (Werner, 2017, mn.3). See also “City (of London), the”.

12) “With more people they get [‘COVID’] vaccinated, the higher the bank stocks go.... The bank stocks [in 5/21] are flying” (Fitts, 2021c, mn.34). See also “COVID”.

[4,300 US commercial ‘banks’ comprise < half of ‘[monetized credit](#)

[institutions](#)’.]

See also “Big 5 banks”, “Vortex (monetary)”, “Parasitism”, “Finance Capitalism”, “[Federal Funds \(Accounts\) for All](#)”.

¹⁴⁴ The “main business of banks in the early 1900s [and until the 1930’s] consisted of making *unsecured corporate* loans. Today, however [and since the 1990’s], the main business of banks is [simply] to extend mortgage credit... Mortgage loans now account for somewhere between one half and 2/3rds of the balance sheet of a typical advanced-country bank” (Jorda, Schularick, & Taylor, 2016b, 9).

¹⁴⁵ Only non-mortgage lending is “unsecured” and was surpassed, in (an aggregate data set of 17 “advanced” economies) the first half of the 1990s, by skyrocketing mortgage lending to households and firms (Jorda, Schularick, & Taylor, 2016b, 9). See also “Criminalization of Banking, the”.

¹⁴⁶ As with political communism; there “are often charlatans running banks, because you can make a huge amount of money if you [simply] create lots of debt.... Your rewards are driven by the amount of ‘loans’ you’re creating... pretty much without regard to its quality” (Keen, 2020, mn.42). See also “Federal Deposit Insurance Corp. (FDIC)”, “Double liability”.

¹⁴⁷ Richard Werner and City of London veteran David Buik ([Werner, 2017, mn.10](#)). On both sides of the Atlantic, however, most bankers today, or at least “many people working in banks [still] tend to think of banks as pure *intermediaries* (middlemen between savers and borrowers), and are generally unaware that bank loans create new deposits” (Dyson, Hodgson & van Lerven, 2016, 9). This is because of Economics and CB’s traditional (20th century) domination of the *monetary economics* sub-field in particular (Still, 2013, mn.5-6).

[Banking consolidation in the US (Economist, 2017)]

Banks, foreign- In the 1970’s (after Bretton Woods), “foreign banks were the fastest growing segment of the American banking industry, with a market share of 40% in New York alone. Whereas in the 1970s 6 of the 10 biggest banks in the world were American, by 1980 there were only 2 in the top 10.... [and] Japanese banks in particular expanded their market share, controlling 25% of the California market alone [in the 1980’s. They] ...began to lobby American legislators for further liberalization of the US financial market” (Busch, 2012, 62; 64). See also “Bretton Woods”.

Banks, large/very large- (a.k.a. ‘systemically important financial institutions’ [SIFIs]) 1) In Spring 2018, the *Economic Growth, Regulatory Relief, and Consumer Protection Act*, increased the Dodd-Frank era threshold for SIFIs (a.k.a. ‘Too Big To Fail’ banks) from \$50 bn. to \$250 bn. See also “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”.

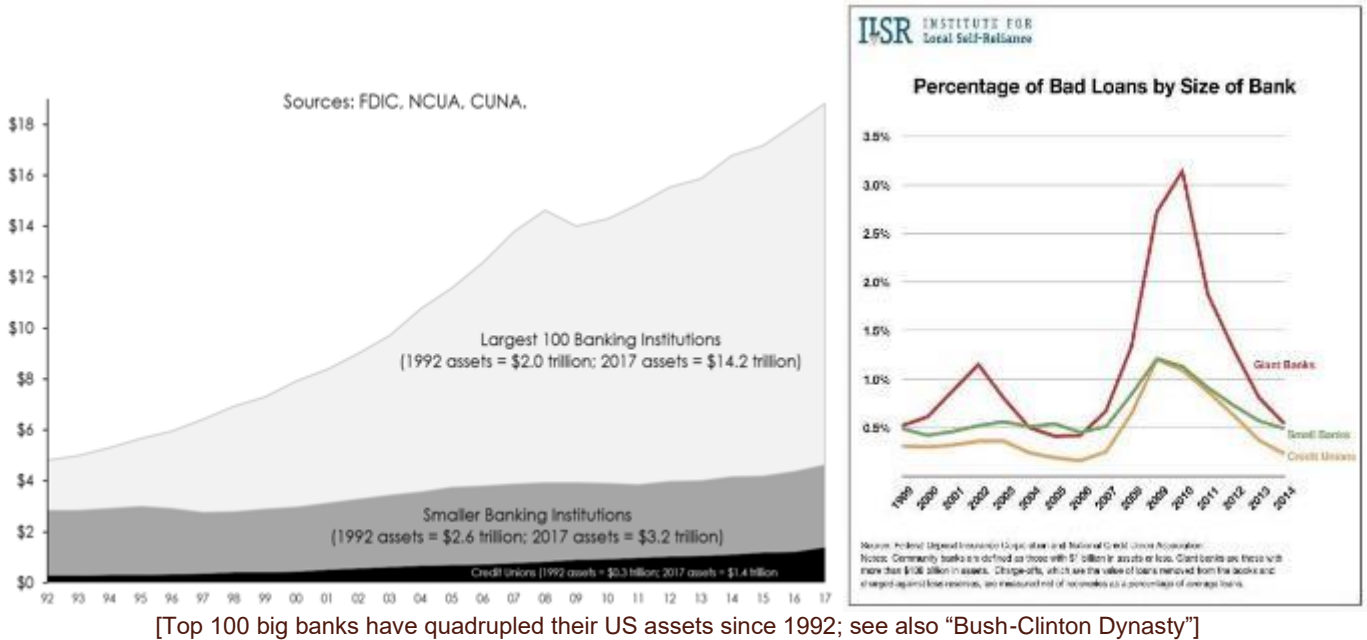

1) A large (though not “very large” or TBTF) bank is “considered a \$50 billion bank” (Dore, 2019, mn.4).

¹⁴⁸ All chart data, unless indicated otherwise, is from (Congressional Research Service, 2017).

2) Between 'large' and 'very large' these days, a "100 billion-dollar bank would have a maximum credit line of 800 million [at an 8% C.A.R.] to 1,200 million dollars [at 12% C.A.R.]" (Minsky, 1994, 23).

3)

See also "Big 5 (High St.) Banks", "Capital Adequacy Requirements (CARs)".

Banks, medium- (the post Dodd-Frank rule has generally been 'between \$1 bn. and either \$10bn. or perhaps \$50 bn. total assets)

1) A "1 billion-dollar bank will have an 80 million-dollar capital [at 8% C.A.R.] and a maximum credit line of 8 to 12 million dollars" (Minsky, 1994, 23); at an 8% and 12% C.A.R., respectively.

"Banks", "Capital Adequacy Requirements".

Banks, small- (a.k.a. 'community banks', typically defined in 21stc as having <\$1 billion¹⁴⁹ in total assets) Small banks are exempt from many regulations, including and (from 2018) the Volcker rule.

1) "At congressional hearings, the ABA [American Bankers Association] and ICBA [Independent Community Bankers of America] are the most important players and are regularly invited to testify, though the ABA has at times had to send 2 separate delegations in order to properly cover the interests of both its smaller and...larger members. The biggest banks [in contrast] often have their own [permanent] representative offices in Washington" (Busch, 2012, 49).

See also "German (Industrial) Banking", "Dodd-Frank Act of 2010", "Duopoly".

Banksters- (synon. 'the Money Power' [old], 'the Cartel' [new])

1) large financial institutions, operating in the globalist London and/or Washington, D.C. or other capitals; named in Washington since 1932 (Nordin, 2017); and in London about a century earlier. See also "Big 5 (Hight St.) Banks", "Bank for International Settlements"; Titus (2017).

2) a term denoting the big Wall Street banks' (white collar criminals) collusion in setting and managing the overall issuance and broader flows of the commercial bank credits that we use for money. In some ways like the referees/scorekeepers of a certain sport gradually taking it over with kickbacks,¹⁵⁰ gambling,

¹⁴⁹ Minsky defined small, two decades earlier, as any bank with a million dollars or less for its "maximum credit line" (Minsky, 1994, 23).

¹⁵⁰ According to a co-founder of US Marine Corps. Intelligence, "It doesn't matter what the money buys, as long as Congress gets a 5% kickback. That's the standard kickback [tip] on the Hill" (Steele, 2012, mn.6).

points-shaving and the like: “As the banks increased their leverage...during the 1950’s, ‘60’s, and ‘70’s, they got to the stage where they became the advisers to the president[s], rather than the industrialists... So, I’m glad to see innovation stifled in the financial sector. I want to see it re-created in the *industrial* economy, and the best way to do that is to put the bankers back in the boxes where they never should have escaped from in the first place” (Keen, 2010). See also “Financial Accounting Standards Board (FASB)”.

3) “Banksters... bankers cause crises for one simple reason-- and that is they make money by creating debt. And if they can persuade us to take on more debt than we should take on, there’ll be a crisis, and the easiest way to persuade us to do that is to start an asset price bubble.... So the more debts there are, the better off they are. And we were *silly* enough to let them get away with it yet again,¹⁵¹ when the Great Depression should have taught us that-- once and for all-- bankers have to be kept inside boxes, not let out (Keen, 2011b). Today’s “politicians...entire social milieu is being surrounded by bankers. They’ve come to believe that banks are an essential part of capitalism and the bigger your banking sector the better; and so the whole mental framework of the politicians is ‘If there’s a banking crisis, we have to rescue the banks” (Keen, 2016d, mn.6). See also “Economics”, “Homo Economicus”.

4) “Banks create money out of nothing and thus [eventually] reshape the economy in their image” (Werner, 2016c). “If you have banks extending loans [that] you then are required to repay-- when they create that money by double-entry bookkeeping-- not by having to save it up themselves, [then] they can gradually take over the claim on all the assets...just by the fact that they’ve got the right to create money in the economy, and this is what has been happening with rising levels of private debt over time.... Now it has created that money out of nothing [ex nihilo]¹⁵².... There are costs of course involved in running a bank. But the actual act of creating the money is¹⁵³ virtually costless. And yet that gives them the capacity to take over what...[was] created by us from blood, sweat, and tears...” (Keen, 2017h, mn.24-25). See also “Leverage”, “Mafia”, “Deutsche Bank”.

5) those who are working for a (‘bankmoney’) Creditocracy, instead of for a constitutional or democratic republic. See also “State capture”, “Reform, false”.

6) Hyperbole? <https://www.youtube.com/watch?v=fdEKbbhxiUE> [Oswald, 2018, mn.43-44]. “Hegelian dialectic”. See also “Creney”, “Parasitism”.

Barter- (for the goldfish and possibly beavers, not human beings [except in extraordinary/moneyless circumstances]);

i.e. simply trading object for object, without any money¹⁵⁴ or accounting symbols (or tally sticks or other pre-literate tabulation/credit devices that human beings used in prehistory); not to be confused with trading bulk [see also] “Commodity money”, or trading ‘household mode of production’ items that are not on the grid (if there’s any writing or tally involved).

1) the “direct exchange of goods or services without using money as a... [means of payment¹⁵⁵]. It is [or would be] very inconvenient...” (Daly & Farley, 2004, 429); to conduct trade without any use of agreed-upon symbols (such as writing or tallies).

¹⁵¹ “The history of the last century shows... that the advice given to governments by bankers, like the advice they gave to industrialists, was consistently good for bankers, but was often disastrous for governments, businessmen, and the people generally” (Quigley, 1966, 62).

¹⁵² Actually only “base money”/Reserves (RAB) are ‘*created from nothing*’. Bank credit is extended on promissory notes and then only monetized into official “money” with state-backing (in *Reserves*, which actually are created ex nihilo). Economics almost always tries to obscure this monetary reality. See also “Loan swaps”, “Economics”.

¹⁵³ Please note the qualifying words “is” (as in the present tense [only], since all the 1990’s deregulation and especially the 2010’s Quantitative Easing), and “virtually”. This is not denying that banks (monetary credit institutions) pay for their [TAB] credit extensions with their own equity [a.k.a. RAB/Reserves]. See also “Quantitative Easing (QE)”.

¹⁵⁴ Money symbols & mnemonics are by no means limited to (state/stamped) currency. See also “Money”.

¹⁵⁵ Defining money as a “*medium of exchange*” leaves room for the possibility of “barter”, because an exchange transaction need not always be symbolic or mnemonic. “Payment”, however, implies the settling of a debt (no matter how small), which is always written-symbolized and/or remembered, or else it wouldn’t be a debt claim.

2) “This mythical world that never actually existed, where we all walk around, some of us are carrying pigs, some of us are carrying apples, and we [all] work out [our own] exchange rates” (Keen, 2016j, mn.17). In reality, “We bond with each other by actually giving gifts to each other”, and then, sometime later, keep tabs or “tallies of who’d been generous to whom” (Keen, mn.19).

3) Of the 19th century “giants” that set up the western world of the 20th century, both Karl Marx and Max Weber (no word yet on Freud) “were of the opinion that money had emerged from barter between societies”, as opposed to emerging from more normal economic relations¹⁵⁶ *within* societies (Graeber, 2012, 401, n.5). “Rarely has an historical theory been so absolutely and systematically refuted... At this point, just about every aspect of the conventional story of the origins of money lay in rubble... We did not begin with barter, discover money, and then eventually develop credit systems. It happened precisely the other way around. What we now call virtual [account] money came first. Coins came much later, and their use spread only unevenly, never completely replacing credit [account] systems. Barter, in turn, appears to be largely a kind of *accidental byproduct* of the [discontinued] use of coinage or paper money: historically, it has mainly been what people who are used to cash transactions do when for... they have no access to currency”^{157, 158} (Graeber, 40). Indeed, “...in the century or two before Smith’s time¹⁵⁹, the English words ‘truck & barter’, like their equivalents in French, Spanish, German, Dutch, and Portuguese, literally meant ‘to trick, bamboozle, or rip off’. Swapping one thing directly for another... is, ordinarily, how one deals with people one doesn’t care about and doesn’t expect to see again” (Graeber, 2012, 34). See also “Homo Economicus”, “Smith, Adam (1723-1790)”.

4) Hence, “barter theory” and its resultant “commodity theory” of money’s origins-- first lastingly articulated by the Bishop of Lisieux, Nicole Oresme (c.1323-82)-- is not ridiculous in terms of *international* (beyond national symbols) trade, which is typically larger bulk-volume trade-- and often conducted with actual boatloads full of commodities like grain. There has always been *intranational* [1st Estate] and *intemational* [2nd Estate] money systems of sorts-- that is prior to the (national) US dollar’s de facto supplanting of the role that had formerly been held by (international) gold, over the 2nd half of the 20th century. 2nd Estate nostalgists have been slow to recognize this development (and have controlled nearly all publishing on direct ‘monetary’ topics for many decades now). Does this sound bizzare? See Still, 2013 (from mn.4), “Fin de Siecle”.

4b) To this day, the Bank of England “evoke[s] gold and barter [in] their elucidations of “what money is”, “in communications aimed at...[the] wider non-expert audience” (Bindewald, 2018, 202). See also “Austrian School”, “Commodity money”.

¹⁵⁶ I.e. everyone within the clan-tribe or polity “simply keeps track of who owes what to whom” (Graeber, 36).

¹⁵⁷ I.e. where no state money (or even an approximation thereof, like a tallystick) is in existence. Actually, “there is good reason to believe that barter is not... ancient... at all, but has only really become wide-spread in modern times... most recently Russia [and other fmr. Soviet states] in the ‘90s, and in Argentina around 2002”; although even in such odd cases (of sudden currency disappearance) “one can even find some kind of currency [i.e. widely-accepted or ‘state-like’ money] beginning to develop: for instance, in POW camps and many prisons, inmates have indeed been known to use cigarettes as a kind of [proto-] currency.... The more frequent solution [however] is [simply] to adopt some sort of credit system” (Graeber, 37). See also “Tallysticks”, “Eras of (Monetary) History” [BronzeAge].

¹⁵⁸ Michael Hudson sees the reversion theory of “barter” going back to the Iron Age, f.e. when Rome “deteriorated into a barter economy when the volume of debts grew so large, under imperial Roman asset stripping, as to break down the [Empire-wide, symbol-based] exchange system into the [famously currency-less] Dark Ages-- when economic units were obliged to become self-sufficient” (Hudson, 2015b). See also “Hypertrophy”, → “Feudalism”.

¹⁵⁹ Smith’s time was basically a transition from traditional (Iron Age-Medieval) 1st Estate monopolization of currency (at least in Britain), to (the so-called) ‘modern’ age (with the 1st Industrial Revolution) of 2nd Estate (private banks & central bank cartels) management of (pretty much) both the State’s currency and (increasingly prevalent) non-state money networks. His (monetary) strategy was to adhere to traditional bullion-esque definitions of ‘money’ (per Locke), while arguing that private banks could manage that better than the State (Smith, 1776). See also “Fiduciary”; Still, 2019e [.:redSantaClausSuit’].

Base money (synon. 'monetary base', 'mother' money [Cn.]; 'M0' [UK]; basic government money or 'money-proper' [Keynes, 1930, 5]; 'real money' is simply that money which does not require 'backing' by any other form).¹⁶⁰

[If or when it is not honored, the entire gov't is called into question. See also "Statism".]

1) basically **all** liabilities of the Central Bank/Treasury, which consist of all government accounts at the CB/Treasury (a.k.a. '*federal funds*'/FF), in addition to all **state-monetized credit institutions'** accounts at the CB/Treasury (a.k.a. '*reserves*'/RAB), some of which have been transformed by public demand into public/circulating *cash*. (i.e. 'cash + Reserves')

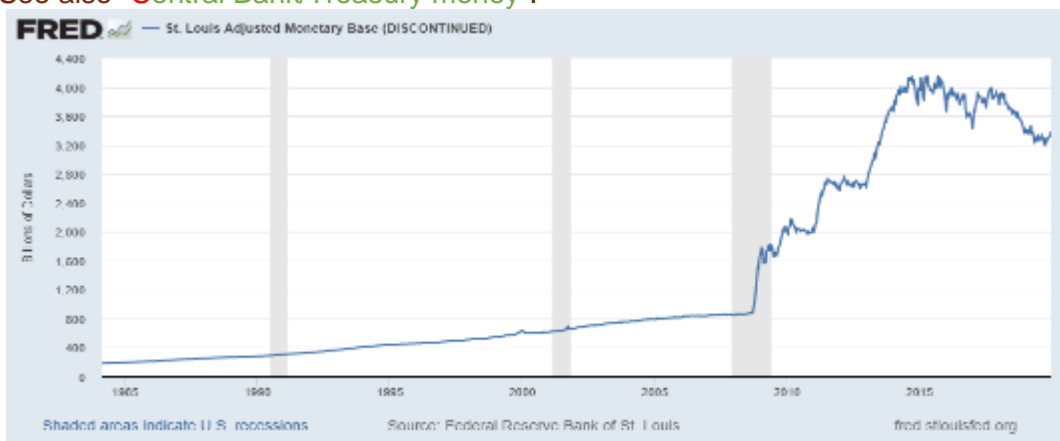

2) In the common vernacular, this is often simplified to: "currency [cash] in circulation + central bank reserves", the most stable kind of money (Yamaguchi & Yamaguchi, 2017, 9); unlike the **TAB**-bankmoney-dependent 'M1' money supply. Kaori Yamaguchi coined the term "*Bullwhip effect*"-- for '*base money*' (M0) leading the '*money supply*' (M1) (Ibid).

3) In industry jargon, the term *base money* is sometimes even further circumscribed, to mean only paper or coinage "physical currency... issued directly by the central bank" (Ricks, 2016, 9); or Treasury.

4) is *real, unbacked* money; the rest is just claims (on the monetary base).

5) is typically somewhere around 90% Reserves & federal funds, with (physical) cash at approx. 10%.

See also "**Central Bank/Treasury money**".

[President Trump was angry with Chairman Powell in 2018. See also "Repurchase (Repo) Agreements".]

Basel Committee Accords (I,II,III)- (the international coordinator for the post-Bretton Woods floating exchange rate environment)

The Group of 10 (back then they were called) 'industrial' economies established this international body for the usual volitional (insider) regulation of bank practices in 1974, after the failure of Bankhaus Herstatt in West Germany. Housed at the BIS central bank, the international committee is most renown for its "capital adequacy" accords (I, II, and III). See also "Capital Adequacy Requirements".

1) The replacement of Bretton Woods with floating exchange rates in 1971-72 "altered parameters on world financial markets substantially... and constituted a major challenge to state regulation... [So] the Basle Committee...[was set up in 1974 to attempt] to coordinate regulation on the international level. After many years of negotiations, 1988 eventually saw the agreement...[or] *Basle Accord* [sic] which contained...[a new regulatory regime of] capital requirements" (Busch, 2012, 19). See also "Dodd-Frank Act of 2010".

¹⁶⁰ In other words, "[t]he digital money deposited in Central Banks [or the Treasury] does *not need* any protection from the State, since their [State] deposits are not 'promises' to return money; rather they are simply money" in and of itself (Ordonez, 2018), sometimes a.k.a. (see also) simply "Currency".

2) *Basel I* was a 1988 agreement among the “major central banks...that commercial banks should have a minimum ratio of capital to assets of 8%, of which at least half should consist of capital, surplus, and undistributed profits. Further, banks should have...capital... [at least equal to] the sum of 1.6% of interbank risk exposures and agency securities, 4% of residential mortgage loans, and 8% of all other loans and risky assets” (Hester, 2008, 84, n6). Was only originally intended for “internationally active banks”, before the EU got a hold of it (Werner, 2018b, mn.52).

3) Within “all Basel regulations, including *Basel III*, there is not one single reference to banks serving the needs of the real economy, much less an effort to see that happen” (Kurowski, 2014). Basel II and III have only been adopted by the European Union, not by the US (Werner, 2018b, mn.53); where “small banks” are exempt from “Basel requirements” (Werner, 2021, mn.48-49).

4) Basel Accords 1-3 were “all *capital-based bank regulation*, and it clearly doesn’t work. The main reason is that banks create money, and they also create the money that becomes bank capital. So [laughs] how could capital restrictions prevent a banking crisis. They can’t” (Werner, 2018, mn.28-29). It’s just “a way for America to regulate Europe, really, in a way that is very costly and incurs a lot of damage in Europe” (Werner, 2018b, mn.53).

See also “Exogenous vs. Endogenous’ (money creation)”, “Capital Adequacy Requirements (CARs)”, “Technocrats”, “Bank of International Settlements (BIS)”.

Basic income- (synon. ‘universal basic income [UBI]’) See “Citizen’s/national dividend”.

1) The business of handouts is always playing with fire (that’s just life on this planet). The Social Security program has been, by many accounts, an exception to ‘welfare’, or ‘transfer payments’ in that it is:

a) ‘universal’ (not stigmatized);

b) based upon relatively few, easily comprehended rules; and

c) materially significant [for most people, anyway]. Even with these stabilizers, however, the program has still been politically messed around with or “raided” by some administrations, and has also generally contributed to mindless (unforeseen) inflation within certain industries.

2) “You don’t want to give people income [just] to buy what should be public goods and services... [or] to pay monopolistic public utilities for extortionate charges¹⁶¹ for water, sewer, electricity, cable TV, education and schools.... [Just] provide the schooling [for free]. These are things that should be taken *out* of the market place” (Hudson, 2017g, mn.59). “You don’t want to... [just] bloat this F.I.R.E sector that is sucking [75% of most people’s] income up to the 5%” (2017g, mn.100).

2b) “You can’t fund...[UBI] without doing Land Value Tax and monetary reform-- otherwise the rent will just go up...[from being passed along] , especially in the poor neighborhoods.... So you have to collect the land value and prevent people from holding that land out of use, or the Universal Basic Income will get swallowed by the landlords” (Sullivan, 2017, mn.25).

3) “Universal Basic Income is not ‘Universal parity’, because it puts money ahead of [primary sector] wealth, inverting the laws of nature to the detriment of community. Wealth first, then money” (Cook , 2020b). See also “Wealth”, “Labor”

4) “It’s easy to sympathize with the Basic Income.... [but it] breaks the fundamental relation between work and consumption. This break is just as fundamental as when men were driven off their ancestral lands, losing their autonomy, into the cities and wage slavery. Not even being able to market his labor [anymore], will destroy the last part of sovereignty & independence that normal men have. States have been known to give men of disenfranchised populations some sort of low handout to survive¹⁶².... Too little to maintain a family; too much to die. These men typically waste away as alcoholics and small-time hustlers.... Economic liberation comes not [sic] with some sort of ‘living wage’; it comes when a man can

¹⁶¹ Richard Werner goes further in his suspicion of unlimited [as opposed to, say, more specific ‘food’ or ‘housing’ credits] basic income schemes (at least under the current/banks’ regime), calling “universal basic income... the bribe for microchipping” (Werner, 2017b).

¹⁶² “When I was still...in [the federal] government, they used to float the idea of a \$600 a month stipend, because it would help control. People would [then]...be [more] quiet... One of the reasons that most people don’t yap is between [the acceptance of] disability payments, food stamps, welfare, farmers’ subsidies, government contracts, [and] government employment...[Basically that] everybody’s on the dole” (Fitts, 2019s, mn.5). See also “Race-to-the-bottom”.

consume as much as he produces, instead of having his production robbed by his employer, the Bank, the Landlord, the State... Basic Income does nothing against the highway robbery of...[today's system], and in fact consolidates it. It has us say: 'Ok, you can have everything; just give us a few pennies so we can at least not starve'". How is that different from 20th century-type mad dreams of state dependency? The World Bank supports Basic Income and it "is definitely an important scenario for the Powers That Be that control both the [political] Left and the Right.... It's simply folly to...give away our fundamental economic rights and sovereignty, for pittance" (Migchels, 2019b). See also "Parties, political", "Chile". 5) If, however, it is structured instead as "a *National Dividend*, based on...paying out...the profits of the Commons to the People, then it [c]ould be quite nice" (Migchels, 2019b). See also "[Citizen's/national dividend](#)", "[Helicopter money](#)".

Basis points- bankerese for .01; f.e. 50 'basis points' = 0.5%, or half a percentage point.

Bentham, Jeremy (1748-1832)- See "Usury", → "Neoclassical Economics", → "Modernity".

Bernanke, Ben- (14th Chair of the US Federal Reserve Board [2006-14]).

Just because one knows more than (13th Chair) Greenspan doesn't mean that one has an adequate-- yet alone optimal, or even sustainable-- way to run the US & global monetary-circulatory system. See also "Fischer, Stanley", "M.I.T."

- 1) "an expert on *explanations* of the Great Depression that are consistent with Neoclassical economic theory" (Keen, 2015e). "He overstated the role of the Federal Reserve in causing the Great Depression; and he overstated the role of the Federal Reserve in preventing this one" (2015e, mn.8:55).
- 2) "Said that *debt-deflation* represents, and I quote, '*no more than a redistribution from one group-- debtors-- to another group-- creditors-- and therefore should have no significant macro-economic effects*'" (Keen, 2015). See also "Debt, private".
- 3) Bernanke's paper "Credit Creation and the Macroeconomy" (1992) does use the term '*the intermediation of banks*'.... that is his definition of credit creation.... Then his career started to take off... [his] career as a Central Banker"; The Federal Reserve "has really disregarded research on the monetary system" (Werner, 2014c). See also "M.I.T.", "Japan model, the", "Helicopter money", "Federal Reserve Board (in Washington)", "Exogenous vs. Endogenous' (money creation)".

[endogenous creations'r US]

Bernays, Edward (1891-1995)- 1) The "Father of Public Relations" (propaganda), Bernays was a double-nephew of Sigmund Freud (see "Fin de Siecle"), and a pioneer in what he termed 'psychological warfare' in the US Committee on Public Information (C.P.I.) during World War One and the ensuing Treaty of Versailles. Not one to mince words, Bernays admitted later in life that: "There was one basic lesson I learned in the C.P.I.-- that efforts comparable to those applied by the C.P.I. to affect the attitudes of the [foreign] enemy, of neutrals, and people of this country could be applied with equal facility to peacetime [domestic] pursuits" (Cutlip, 1994, 168). Two decades before the dystopian 'fiction' of Orwell, Bernays was imagining, in the real world, a "democratic mission for public relations as a form of social control by elites.... [suggesting] that his readers need to be aware of and participate in 'the conscious and intelligent

manipulation' lest they become part of the [cannon fodder] masses who are controlled..." (Kirsch, 2016, 32). See also "Democracy", "Politics", "National Identity/Nationalism".

2) Regarding "the organized habits and opinions of the masses... in [a] democratic society. Those who manipulate this unseen mechanism of society constitute an invisible government¹⁶³ which is the true ruling power of our country. ...We are governed, our minds are molded, our tastes formed, our ideas suggested, largely by men we have never heard of. This is a logical result of the way in which our democratic society is organized" (Bernays, 1928, 9). Death is also an inevitable (or 'logical') result of life on Earth. That doesn't necessarily also make it desirable. Deception is not and cannot be a democratic ideal. Bernay's *democracy* (a term not often tossed around prior to 1914 and the preceding bankers' coup of 1912-13) was a proto-Orwellian misnomer, just invented as a useful exigency by the Department of War. See also "Fascism", "Corrosion-Cancer-Debt".

3) Under the influence of scientific propagandists¹⁶⁴ like Bernays (who was not averse to taking the blame for all of them¹⁶⁵), the 'Allied' forces (of 'finance capitalism' and bankmoney) let forth a brutal crime spree during the World Wars (1914-45) far in excess of what this planet had ever witnessed or probably ever will. This hideousness, in its various forms, revisits some families more than others.

4) Through the 2nd half of the 20th century, it was increasingly clear (to many serious observers) that: intelligence agencies... were [even outright] writing the [news] coverage sometimes. They were the inheritors of 'public relations' as an [20thc] art and [21stc] science... They were painting pictures of What Exists as surely as artists of the Renaissance were depicting the mythological stories of the Vatican" (Rappoport, 2022). CIA "spymaster" Ellis Medavoy, operating "behind his pseudonym and other covers... used the CIA and other conduits to spread disinformation on...[a very large] scale... He called it 'inserting systems'. At other times, he called his work 'inventing paradigms', and 'directing progressions of thought and perception'. I call Ellis a spymaster because that's what he was. In retirement, there were subjects he refused to address, but what he did reveal to me was stunning in its scope. He took the position that mind control was basically 'a rearrangement of space and time'. His understanding of psychology made [P]sychology look like kindergarten in a playpen. I came to see the media, academia, the medical cartel, education, governments, and elite foundations as mid-level operators in a long-term operation.... [where] society... would look, feel, and be far, far different from what it is now, down to its very core. [CIA] Ellis was, as far as I could tell, retired from a career in which he'd worked on contract with an inner circle of men at the Council on Foreign Relations and similar organizations. But those men... weren't able to design the details of the necessary illusions... [So] Ellis, and other people on his level, took over that task in important respects... Ellis [once] said to me, '*What world do you want for breakfast? World A, B, C, or Z? I can paint any of those pictures. But the more important thing is, I can create the PREDISPOSITION [sic] for you to see and accept any of those pictures. That's a different level of trick...*' A major covert operation always has a cover story to obscure what has really been launched. 'The basic unified reality that a few billion people perceive in common... is both the cover story and the covert operation itself. They're the same... My job was being able to get a person to look in the mirror and see himself as far less than he is...'" (Rappoport, 2022). See also "Mind control".

5) In the 21st century; "the pervasiveness of P.R. really can't be over-stated" (Stauber, 2002, mn.55). See also "Dumb-downing", "Corporate Media Cartel (CMC)", "CIA", "Mockingbird", "Debt cycles".

¹⁶³ Bernays once defined *propaganda* as "the executive arm [branch] of the invisible [(or after WW2) "secret"] government (Bernays, 1928, 20).

¹⁶⁴ It has been said [f.e. in Still Report #1917b] that, just like rat poison, effective propaganda needs to be *at least* 70-90% 'inert' (more-or-less truthful), or the folks won't swallow it. Anything not up to that standard should be questioned for perhaps other crooked motives. See also "Attitude inoculation". Thus far in the 21st century, however, the ratios seem to have gone off the rails. More recent estimates of the formula are closer to "12-25% [lies], laced with 75-88% truth, or it will not be swallowed"- Christine Pretkel (Moon, 7-26-19). See also "Provocation operation (Po)", "COVID".

¹⁶⁵ Similarly, the post-war CIA seems tasked with taking the blame for the UK-USA Empire's larger military-financial-complex.

[c.1785: “In their quest for education, efficiency, rationalization, these new bureaucratic states relied on anybody who would help them.... Some of the central & eastern European princes [even] introduced a certain freedom of the press.... But you have to bear in mind that the *last* thing they wanted was a real social revolution” or ‘democracy’ (Weber, 1989f, mn.18-20).] See also App.C: “1-2-3”.

[1995: dangerous river of half-truths is identified.... ‘may as well just jump on in...’]

Biden, Joseph- (PotUS 2021-; i.e. ‘Why don’t we work on this “vote for money” thing?’)

1) In 2020-21, both the Biden Admn.’s chief economist (National Economic Council Dir. Brian Deese) and undersecretary of Treasury (Adewale Adeyemo) were a [Delaware-based]¹⁶⁶ BlackRock, Inc. “Head” or “senior advisor”.

1b) “With the help of their senator, Delaware expanded to become the largest financial haven in the world. This includes an extremely...corporate constitution (extremely low liability)” (Rügemer, 2021). See also “BlackRock”, “COVID”, “Offshore banking centers” [Delaware], “Flags of convenience”.

2) DoJ: <https://wallstreetonparade.com/2021/07/bidens-crime-chief-had-screaming-red-flags-on-his-financial-disclosure-form-senators-ignored-them>

3) The PotUS is also, however, primarily executor of the federal budget; and, at least at base “I think a lot what Biden is...[signing off on] is needed. We [actually] need to pay for everything [that] we’re spending” fiscally (Kotlikoff, 2021, mn.130). See also “Discretionary (US budget)”, “Inequality”.

4) Biden was not legitimately elected (either in the [early] primaries or the general) in 2020. The list of disrespecters keeps on growing. American football stadium crowds (2021), Russia (winter ’22), China (summer ’22), even the [now legitimately-elected] president of Mexico (summer ’22)¹⁶⁷.

¹⁶⁶ The “the largest corporate tax and financial haven in the US... The number of shell companies numbers at least twice that of the number of eligible voters.... Well-paid trustees manage the corporate mailboxes... Delaware’s signature industry. Tens of thousands of companies and banks from all over the world... have their legal domicile in Delaware (a state that was the creation of the Dupont Chemical Company). The list of holdings of Deutsche Bank alone shows several dozen shell companies in Wilmington, the small capital of the little ‘Luxembourg of the USA’, as Delaware is often called” (Rügemer, 2021). See also “City (of London), the” [voting], “Luxembourg (legal address)”, “Oligarchy”. It’s not really much of anything new. The du Ponts, “through the courts today... Oh, they control Delaware...[and] they have very significant, very significant political power in Florida” (Quigley, 1976b). See also “Corporations (and corporate ‘personhood’)”.

¹⁶⁷ July 21, 2022: <https://mexicodailypost.com/2022/07/21/amlo-mocks-american-leaders-and-goes-oooo-im-so-scared/> . See also “‘New World Order’ (N.W.O.)”.

4b) On “the similarities between the United States [in the 2020’s] and Chile & Allende [in the 1970’s]” (O’Connell, 2022b, mn.14)¹⁶⁸.

Biden Updates: 4/22- <https://blog.nomorefakenews.com/2022/04/21/as-president-i-wouldnt-shake-hands-with-air/9/22/>- “The real goal is in the introduction to...[the Biden Admn.’s Sep. 12 Executive Order], and it should set your hair on fire:

‘We need to develop genetic engineering technologies and techniques to be able to write circuitry for cells and predictably program biology in the same way in which we write software and program computers; unlock the power of biological data, including through computing tools and artificial intelligence; and advance the science of scale-up production while reducing the obstacles for commercialization so that innovative technologies and products can reach markets faster’” (Wood, 2022b). See also “Technocracy”.

In early Sept., “the FDA also put out medically false and misleading COVID booster campaign messages that prove we’ve officially entered the era of transhumanism” (Mercola, 2022). See also “COVID”.

10/22- It’s not an anomaly. Executive Order #14,081 “establishes a fast-tracked pipeline of mRNA shots and other gene therapies that will further the transhumanist agenda to create augmented humans... [if not to say] a post-human world. Drug makers have clearly expected this free-for-all, as they have loads of mRNA candidates in their pipelines...[On 9/14] 2022, Pfizer initiated a Phase 3 study that will test a quadrivalent mRNA-based flu shot on 25,000 American adults.... Ultimately, Moderna wants to create an annual mRNA shot that covers all of the top 10 viruses that result in hospitalizations each year” (Mercola, 2022). See also “Transhumanism”.

12/22- It rolls on (into year 3):

Big 3-4 Asset managers- (a.k.a. ‘the big 4...[+Fidelity Investments] index-fund investors’, or simply ‘the big hedge funds’)

¹⁶⁸ The “rhetoric coming out of Trump’s mouth is not good.... nothing about all the problems that need to be faced” (O’Connell, 2022b, mn.15).

“These guys, especially the [biggest] hedge funds, are trying to get into...of pole position for when the restart [a.k.a. end of (the latest) Bretton Woods] happens” (Wolff, 2020, mn.5-6). See also “Great Reset, the”.

1) BlackRock, State Street¹⁶⁹...and Vanguard, the Big 3 index-fund investors (as of winter, 2020) cast, on average, about 25% of [all] proxy votes in all S&P 500 companies (a common benchmark for large, publicly held corporations)”, and their share is increasing (O’Donnell, 2020). Leo Strine, fmr. Chief Justice of the Delaware Supreme Court, adds that workers & investors today are “particularly affected by the Big Four’s lack of intervention...on unchecked corporate spending for political purposes, another area of [the Big 3/Big 4’s increasingly renown] ‘total deference to management’... [Strine] calls for all political spending by companies to be made public, and recommends a proposal first championed by Vanguard’s [founder John] Bogle: that any political spending by public [i.e. listed] companies should require obtaining yes votes from 75% of the stockholders.... ‘If Vanguard, BlackRock, State Street, and Fidelity voted to restrict political spending by public companies, it would happen’”(O’Donnell, 2020).

2) Political speech? As early 2017, “the Big 3, taken together, have become the largest shareholder in 40% of all publicly listed firms in the United States... In 2015, these 1,600 American firms (the 40%) had combined revenues of about...\$9.1 trillion...market capitalisation of more than...\$17 trillion, and employed more than 23.5 million people... [And in] the S&P 500... [it] is even more extreme. Together, the Big 3 are the largest single shareholder in almost 90% of S&P 500 firms, including Apple, Microsoft, ExxonMobil, General Electric and Coca-Cola.... [T]hey have to be perceived as de facto owners by corporate executives... Whether or not they sought to, the Big 3 have accumulated extraordinary shareholder power” (Rappoport, 2020e). See also “Stock Markets”, “Debt cycles”, “Corporate governance”.

3) For example, if “the CEO of a corporation whose main shareholder is The Big 3 thinks about rebelling against the official medical consensus...And he knows that The Big Three bosses are heavily wired into the US medical complex [as they are]...That CEO has one more reason, among others, to forget about being an old-time hard charger. He has one more reason to swallow his anger when he’s told to lock down and shut down...one more reason to knuckle under and play the game.... He has one more reason to stand down and stand aside and watch economic devastation sweep over the land” (Rappoport, 2020e). See also “BlackRock”, “Groupthink”, “COVID”, “Intelligence Community (IC)”.

Big 4 Accounting firms-Management consultants- (synon. ‘big 4 auditors’, ‘big 4 management consultants’)

1) The “big 8” as recently as 1989, now only 4 privately-held firms-- Deloitte¹⁷⁰ (est. 1845 in London), PricewaterhouseCoopers (hq-London), Ernst & Young (hq-London), and KPMG (hq-Amsterdam)-- account for about 95% of the audits of publicly traded firms in the US or UK.¹⁷¹ See also “” [publicly traded].

1b) The big 4 also accounted for 37.4% of the world’s consultancy market in 2018. The largest US-based management consulting firm is (6th-ranked) McKinsey & Co., noted for its “extraordinary old boys network that extends around the globe. Once inculcated into the McKinsey way, and steeped in the McKinsey fallacy (that everything can be measured, and so on), former consultants find their way into the highest echelons of government and corporate positions, and then employ their old colleagues for support in [the]

¹⁶⁹ BlackRock & State Street are publicly traded. Vanguard & Fidelity are privately held. Vanguard is also Rothschild & Co. (approx.) 1% owned (6/21): <https://m.marketscreener.com/quote/stock/ROTHSCHILD-CO-5306/company/>

¹⁷⁰ Deloitte, in addition to being the world’s largest and most-established accounting firm, is also the world’s top global consultant and management consultant in terms of revenue. ‘Consulting’ about what? <https://www.youtube.com/watch?v=fdEKbbhxiUE> [Oswald, 2018, mn.43]. See also “Accounting standards & reform”.

¹⁷¹ More specifically, the Big 4 audit “97% of US public companies and all [of] the UK’s top 100 corporations” (Brooks, 2018).

boardroom...or when making strategic leaps of faith. What their customers seek is a whiff of...unworldly, monkish objectivity.... McKinsey consultants never speak publicly... We merely glimpse them in the distance, as the authors of learned articles in the *Harvard Business Review* or on their own blogs” (Boyle, 2020, 56).

[The coaching often brings in more than refereeing.]

2) “The corporate world has lost its way, and nowhere is this more true than with the Big Four accountancy firms” (Shaxson, 33); “the private police¹⁷² forces of [cartel] capitalism” (2011, 202).

3) The Big 4 were the Big 5, prior to the 2002 closing of Arthur Andersen. In the mid-90’s, one of its new accountant’s assignments was to audit Salomon Brothers, the mammoth Wall St. investment bank: “He was instantly struck by the opacity of an investment bank’s books. None of his fellow accountants was able to explain why the traders were doing what they were doing. ‘I didn’t know what I was doing,’ said [the accountant]. ‘But the scary thing was, my managers didn’t know anything either. I asked these basic questions-- like, *Why do they own this mortgage bond? Are they just betting on it, or is it part of some larger strategy?*’ I thought I needed to know. It’s really difficult to audit a company if you can’t connect the dots’. He concluded that there was effectively no way for an accountant assigned to audit a giant Wall Street firm to figure out whether it was making money or losing money. They were giant black boxes, whose hidden gears were in constant motion” (Lewis, 2011, 11). See also “Investment Banks”.

3b) “‘Just like the mafia has penetrated the state; accountancy firms have also penetrated the state.... They are running the Treasury’.”- Prof. Prem Sikka [<https://www.youtube.com/watch?v=fdEKbbhxiUE>] (Oswald, 2018, mn.106, mn.103). See also “Accounting standards and reform”, “Parasitism”.

4) “There are no serious rivals to undercut them. What’s more, since audits are a legal requirement almost everywhere, this is a [de facto] state-guaranteed cartel... the bean counters perform their duties with relative impunity. The big firms have persuaded governments that litigation against them is an existential threat to the economy.... [And some] companies have been audited by the same firms for more than a century: KPMG counts General Electric as a 109-year-old client; PwC stepped down from the Barclays audit in 2016 after a 120-year stint. As professionals, accountants are generally trusted to self-regulate– with predictably self-indulgent outcomes” (Brooks, 2018). See also “Racket, the”.

5) In Britain, the Big 4’s “consultants counsel ministers and officials on everything from healthcare to nuclear power. Although their advice is always labelled ‘independent’, it invariably suits a raft of corporate clients with direct interests in it. And, unsurprisingly, most of the consultants’ prescriptions– such as marketisation of public services– entail yet more demand for their services in the years ahead... the big 4 have become a solvent, dissolving the boundary between public and private interests¹⁷³.... They are too few to fail” (Brooks, 2018). Also too interwoven? See also “Debt cycles”.

6) The big accounting firms themselves “have become more concerned about decreased ‘reliability’ in accounting rules.... [because] as the number of large audit firms declines, they become more visible targets for political intervention and litigation... [and are hence] more concerned about decreased reliability in accounting rules.... [So they] have focused their lobbying... on opposition to decreased reliability in financial reporting... [in order to] protect their own wealth from political and legal scrutiny... [Hence] the increasing incidence of accounting rules that are ‘check-the-box’ or compliance based rather

¹⁷² Sometimes pretty much “all the local police forces have gotten addicted to Homeland Security money” (Steele, 2012, mn.146).

¹⁷³ In “fact, the differentiation between public and private law may be less important than trying to understand the access points that different constituencies have to either” (Pistor, 2020b). See also “Politics”, “Lobbyists”, “Congress”.

than based on... professional judgment... [which is now in fact] a major source of concern in US capital markets” that could put the integrity of the entire accounting system at risk (Ramanna, 2015, 11-14), because reliability is one of its key comparative advantages. See also “Tickbox”.

7) Although one would typically expect the Big 4 auditors “to be concerned about...[the] growth in fair values [accounting] (particularly, fair values that are unverifiable) and therefore to resist that growth, the data... suggest that these auditors have not opposed fair value’s rise. This is partly because the auditors’ liability under such [new] rules may be limited in several circumstances” (Ramanna, 2015, 105); **perhaps posing** a factor in whether they need to go publicly-listed, or maintain their private status. See also “Accounting, standards & reform”, “Credit rating agencies”, “Auditing”, “Black Budget (US)”, “Privelege”.

[3 of the globalist Big 4 are headquartered in London; see also “Glorious Revolution, the”; trendiness-“Cultural Calendar”]

Big 4 Advertisers- (WPP [.uk], Omnicom¹⁷⁴, Publicis Groupe [.fr], and Interpublic Group; >50% of sector revenue since 2002)

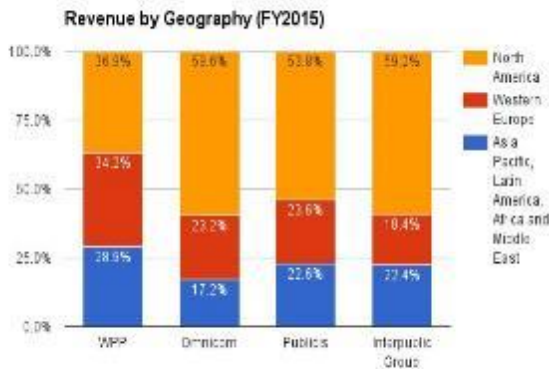

1) “Besides dominating *commercial speech*, a \$500-billion-a-year industry, these 4 agency companies and the men who run them... also hold incredible sway over the media. By deciding when and where to spend their clients’ ad budgets, they can indirectly set *network television schedules* and starve magazines to death or help them to flourish. “Now you have 4 megacompanies with revenues that are staggering, bigger than some of the companies they serve’... Driving this concentration of power is an assumption that ad agencies *must* have a *global* presence, enormous size and a full range of marketing services simply to survive. That has led to decades of mergers & acquisitions, during which, for example, [the holding company] Omnicom bought more than 150 agencies” (Elliott, 2002).

2) The “advertising world [is] becoming increasingly more complex... [and] this can only play into the big players.... the [big] *data* aspect of these agencies is pulling in more customers” (Drive, 2016).

3) An unremarkable portfolio for a Big 4 advertiser in the 21st century might include “30 to 40 smaller American-- and overseas-based ad shops; three global direct-marketing agencies; and 16 to 18 agencies focused on services like public relations, health care marketing, entertainment and sports marketing and consumer research.... Many [Big 4 clients] have changed their marketing strategies to rely less on [20thc] television and print ads and more on other [21stc] avenues like coupons, direct mail, sports sponsorships, in-store promotions and [last but not least] product placements in movies and on television shows” (Elliott, 2002). See also “Big 6 (US Corp. Media Cartel)”.

4) “The entrepreneurial-minded on both the creative and business sides of advertising also contend that the expansion of agency [holding] companies has smothered originality under a blanket of conformity. “You have a holding company dictating what can and can’t be done, which stifles creativity, and the corporate culture numbs individuality’, said Paul Cappelli... who now runs the Ad Store, a boutique based in New York. ‘We call those agencies “*notworks*” instead of “*networks*”, because if you’re not one of the biggest clients, you get lost in the shuffle’. And many media company executives worry about the concentration of buying power in the hands of so few advertising companies...[while] smaller publishers and broadcasters worry that additional consolidation on Madison Avenue will force them to sell out...” (Elliott, 2016). See also “Big 4 Accounting firms/Management consultants”, “Groupthink”.

¹⁷⁴ In some ways, advertising holding co’s are more like a ‘Big 2’. “Both Omnicom and WPP are about 50% larger from a revenue perspective than their next biggest rival” (Drive, 2016). See also “Homogenization”.

Big 5 (High St.) Banks- “It’s very extreme here in England,¹⁷⁵ and the small firms don’t get the funding” (Werner, 2021, mn.45).

“a perfect monster in its principles, but a very convenient instrument of profit and influence.”

- Alexander Hamilton, on The Manhattan Corporation (bank) of Aaron Burr in the early 1800’s (the predecessor of what is now JP Morgan Chase). See also “Derivatives”, “Eurodollars”.

1) In the contemporary UK,¹⁷⁶ despite the nationalization of the Bank of England, “Lloyds, Barclays, HSBC, [RBS¹⁷⁷ and Standard Chartered]... these 5 banks... are 95%¹⁷⁸ of the banking sector.¹⁷⁹ In Germany, these [‘High St.’] banks... are only 12% of the banking sector” (Werner, 2015b, mn.117).

“That’s why we have no thriving...small, medium-sized firms sector in the UK, because the [big] banks don’t lend to them” (Werner, 2018b, 46). See also “Investment Banks”.

1b) Was the Cartel originally a ‘Big 3’ in China? “From the failure of the Taiping...[Civil War, until] the Sino-Japanese War...[i.e.] the 30 years from 1864 to 1894.... “[t]he financial life-line of China was in the

¹⁷⁵ A ‘systemic (& top-down) crime syndicate’? Pretty much “every UK bank...[including] the key players of Royal Bank of Scotland, HSBC, Barclays, Lloyds, and Clydesdale [instead of Standard Chartered].... Basically... they sold interest rate swaps to SME’s...small companies, many of which had *no* [sic] understanding of what it was they were buying. In fact they were told that it was something completely different. They didn’t [even] understand that if interest rates fell, they would actually...suffer huge costs...[with] huge break clauses if they wanted to exit.... It is literally destroying small businesses up and down the country.... It’s just obscene. These products should have never been sold” (Fraser, 2012, mn.20-21). See also “LIBOR”, “City (of London), the”.

¹⁷⁶ In Canada, the “Big 5”, as of 2015, were Royal Bank, TD Bank, Scotiabank, Bank of Montreal and CIBC.

¹⁷⁷ Publicly-owned RBS, “a very interesting case”, was responsible for “most” of UK banks’ colossal losses on US mortgages during the Financial Crisis.... (Wolf, 2017, mn.12).

¹⁷⁸ A couple years later, Werner revised this to the Big 5 UK banks accounting for “90% of deposits, which is [still] one of the most consolidated banking systems in the world. In Germany...[by contrast], 70% of deposits are accounted for by 1,500 local, not-for-profit community banks” (Werner, 2017, mn.2). See also “German (industrial) banking.” More recently, Fran Boait of Positive Money estimated that the Big 5’s market share in the UK is a slightly more humble “85%”; but “if any one of those banks failed in terms of...[not making] payments to each other, [then] overnight that would seize up the [UK’s entire] Payment System, and the whole economy would grind to a halt” (Boait, 2019, mn.3).

¹⁷⁹ “They don’t want to deal with their customers. Actually, they just want to focus on their large-scale customers. They focus on unproductive financial lending, because you can get the big numbers” there (Werner, 2016b, mn.46-47).

hands of a few foreign banks such as the Bank of Shanghai, Hong Kong, & Singapore...[a.k.a. HSBC], Syokin [Yokohama Specie] Bank [to Bank of Tokyo-MUFG (1946)]...and the First City Bank of New York...[to Citibank (1976)]” (He, et al, 2008, 439). See also “Japan model (asphyxiation), the” [a century later]; “Hegelian dialectic”, →“Communism”.

2) “In the UK, we are dominated [via Parliament] by 5 shareholder banks, whose obvious interest is to their shareholders, primarily” (Boait, 2017, mn.51). See also “Glorious Revolution, the”; Oswald, 2018.

3) In 2013, a Tory parliamentary inquiry¹⁸⁰ found that “payment protection insurance” schemes, featuring 78% commission rates, “represented *all* of the profits of British banks... for over a decade”, or about 50 billion pounds (Black, 2016c, mn.18-20).

4) Even a decade earlier, it was not uncommon knowledge that one primary “element in the stagnation of the British economy over the past century¹⁸¹ has been the ever-greater concentration of banking into a small number of national branch systems, even as a rich mix of fringe banking organizations, such as exist in Germany and Italy, never arose” in the UK for some reason (Minsky, 1994, 22). See also “City (of London), the”, “Offshore”.

5) The “Big 5” banks in the US (in terms of total assets, 2015) are: JP Morgan Chase, Bank of America, Wells Fargo, Citigroup¹⁸², and Goldman Sachs. In terms of market capitalization, the “Big 5” (with U.S. Bankcorp instead of Goldman) comprise about 44% of the US banking sector, a “drastic increase” from 1990,¹⁸³ when the Big 5 held less than 10% of banking industry assets (Schaefer, 2014).¹⁸⁴ In 2010, the first 4 of these are “among the top 10 stock holders of virtually *every Fortune 500* corporation” (Henderson, 2011). See also “Investment banks” (Big 9), “Decentralization”.

<u>USA</u>	(by total assets ¹⁸⁵ , 2019)	<u>UK</u>
1. JPMC (est.1799 ¹⁸⁶ , 1838)		1. HSBC (est. 1865; post-OpiumWars)
2. Bank of America (1922 ¹⁸⁷)		2. Barclays (1690; Lombard St. goldsmiths)
3. Citigroup (1812 ¹⁸⁸)		3. Lloyds (1765 [Lloyd];1695 [BankofScotland])
4. Wells Fargo (1850 [Amex]; 1852)		4. RBS (1825 [Nat.Bk.ofScotland]; 1969)
5. Goldman Sachs (1869 ¹⁸⁹)		5. Standard Chartered (1853 ¹⁹⁰)

6) According to Solari.com, over the past “two decades”, all of JP Morgan Chase’s “settlements for illegal, [or] immoral activities... that we could find [totaled approx.] 43 billion dollars... It’s flagrant, and unbelievable, and just goes on and on and on.... You can’t look at this and not come to the conclusion that whoever did this is a [formerly known as ‘white-collar’] criminal enterprise” (Fitts, 2020, mn.15-16). See also “**Corporate Media Cartel/6 Sisters**”, “Oligarchy”.

¹⁸⁰ <https://publications.parliament.uk/pa/jt201213/jtselect/jtpubs/writev/misselling/sj015.htm>

¹⁸¹ In Britain, unlike the US, the major banking consolidations started as far back as the 1880’s.

¹⁸² Many “large corporations with a strong incentive to influence public policy give [their] executives bonuses and other incentive pay if they take jobs within the government... Citigroup even... awards additional retirement pay upon leaving to take ‘a full-time high level position with the US government or regulatory body’” (Lofgren, 2014, mn.22-23).

¹⁸³ Whereas in the UK the term “Big 5 banks” goes back to at least the early 20th century, in the US it was not something that made sense until the 1990’s-millennial era, as the USA in general was not set up to be a banking corp. See also “Glorious Revolution, the”.

¹⁸⁴ Nonetheless, make no mistake. Even before the Volcker days, “the biggest 4 or 5 commercial banks in this country... can control every [nationally] significant corporation in the United States” (Quigley, 1976b).

¹⁸⁵ “Total assets don’t...adequately measure the full size of these institutions, because the measure does not take into account *derivatives contracts* or [other] *off-balance-sheet* items... If those assets were counted, JPMorgan’s size would rise [from \$2.44 tn.] to \$3.95 trillion, according to a worksheet prepared by [the] FDIC...” (Fitzgerald, 2013).

¹⁸⁶ The Chase side was originally Aaron Burr’s Bank of the Manhattan Company (est. 1799), the 3rd oldest banking corporation in the US; whereas J.P. Morgan & Co. was “originally founded in London as George Peabody & Company in 1838. See also “Pilgrim Society”.

¹⁸⁷ Italian immigrant Amadeo Pietro Giannini acquired *Banca d’America e d’Italia* in San Francisco, in 1922.

¹⁸⁸ The New York merchant’s bank was the nation’s largest by 1895, was the first contributor to the FRBNY 1913, opened the first overseas branch of a US bank (in Buenos Aires) in 1914, and was the largest commercial bank in the world in the late 1920’s.

¹⁸⁹ Founded in NYC by Bavarian investment banker Marcus Goldman, GS has been presidential advisors since (at least) the 1930’s, and America’s premier ‘blue chip’ IPO underwriter (Sears, 1906; Ford, 1956; Microsoft 1986), in addition to becoming, in the mid-80’s, the first US bank in the top 10 for (underwriting) mergers & acquisitions in the UK.

¹⁹⁰ *Economist* founder [1843] James Wilson opened the first branches [1853] in Mumbai & Kolkata, then Shanghai in 1858, followed by Hong Kong and Singapore in 1859. To this day, approx. 90% of its profits originate from Asia, Africa and the Middle East.

7) The largest 6 banks in the US own 85% of commercial bank deposits, 84% of assets of all the commercial banks, and control 96% of all of the derivatives that financial institutions...backed by the government, utilize... and [also] 45% of the world's derivatives" (Prins, 2014b, mn.9). See also "Derivatives", "Lender of Last Resort/Too Big to Fail".¹⁹¹

7b) They also own¹⁹² (at least the the largest share of) the Federal Reserve banks. The largest shareowners of the FRBNY are (in order): "JPMorgan Chase, Citigroup, Goldman Sachs, Morgan Stanley, and [in something of a surprise] Bank of New York Mellon. Those 5 banks represent 2/3rds of the 8 Global Systemically Important Banks (G-SIBs) in the United States. The other 3 G-SIBs are [#2] Bank of America, a [major] shareowner in the Richmond Fed, [#4] Wells Fargo, a [major] shareowner of the San Francisco Fed, and [#15] State Street, a [major] shareowner in the Boston Fed" (Martens & Martens, 2019). See also "Lender of Last Resort (LOLR)/Too Big to Fail (TBTF)" [SIFI banks], "Owners, the", "BlackRock".

8) "You have to keep in mind that when these big financial players are making statements, it's to set up some scheme of theirs... to create a situation that helps whatever scheme they've got in mind" (Roberts, 2018c, mn.26), for themselves, the shareholders, or perhaps the long-term interests of the sector; like falcons stirring up the smaller birds. That is their industry and that is who we (the people) have put in charge of the monetary-economic hamster wheel. See also "Monetary reform".

9) A "psychopath's dream world" (Icke, 2018b, mn.3-4), has, given a few centuries, "created the equivalent of a spider's web in which humanity is caught... [and] the spider... ultimately [is just a]...state of awareness, this [dysfunctional, a.k.a.] psychopathic state of awareness" (Icke, mn.6). See also "Design".

10) (JPMC &) Big 5 Banks Updates: 7/22- Dream world? <https://wallstreetonparade.com/2022/07/heres-the-orwellian-details-of-the-u-s-patent-jpmorgan-got-approved-for-its-sprawling-system-of-spying-on-employees/> ["Orwellian Details of the Patent JPMorgan Got for Spying on Employees"]; <https://wallstreetonparade.com/2022/07/there-are-three-separate-cases-in-federal-court-accusing-jpmorgan-chase-of-a-culture-of-fraud/> [There Are 3 Separate Cases in Federal Court Accusing JPMC of Culture of Fraud].

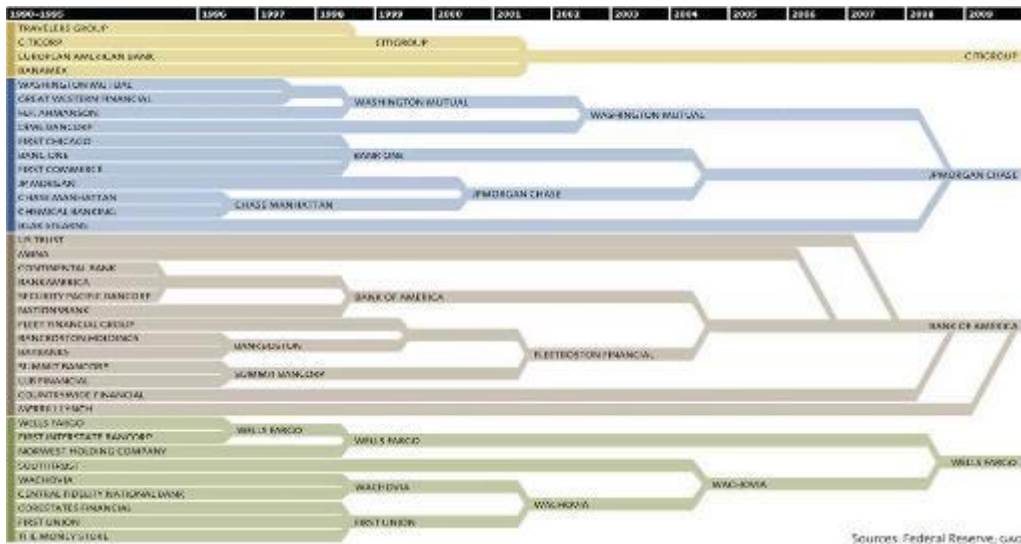

11/22- JPMC CEO (from 2005-) Jamie Dimon "donated [the FEC max] \$5800 to [incoming House Financial Services Chair (from Dimon's NC district)] Patrick McHenry.... Dimon can use a friend on that Committee since it has been calling him and other Wall Street mega bank CEOs to testify annually since last year."

- <https://wallstreetonparade.com/2022/09/jpmorgan-chase-morgan-stanley-and-wells-fargo-flunk-a-test-measuring-their-support-for-american-democracy/>

See also "Finance Capitalism", "British Bankers Association", "German (industrial) banking", "Gold".

¹⁹¹ By 2019, the failure of any 3 of the top 4 commercial banks in the US" would decrease the US M2 money supply by 30%, which could happen in a day (Titus, 2019d, mn.21-22).

¹⁹² ...And also often manage the (so-called) 'Fed' banks. "James Gorman, Chairman & CEO of Morgan Stanley, currently sits on the New York Fed Board. Jamie Dimon... of JPMorgan Chase, previously served two 3-year terms on the Board...[and the] same Wall Street banks also participate in various advisory groups with the New York Fed, where they hash out 'best practices' for their industry (Martens & Martens, 2019). See also "Regulation".

Big 5 (on S&P 500)- (a.k.a. ‘the Tech Giants’, or ‘FAANG-giants’, or ‘platform corporations’ -- Apple, Amazon, Alphabet, Microsoft, and Facebook)

1) “The internet wasn’t designed for transactions. It was designed for email and hypertexting and communication.... And today, since it’s becoming a *commercial* [sic] engine...it needs a security-first protocol... [to overcome needing passwords for all the] hundreds and thousands of possible web pages in which you might transact. It’s just an absurd system”¹⁹⁴ that has temporarily necessitated the big tech monopolies (Gilder, 2018c, mn.17), wherein “all the money and power rises to the top to companies like Google and Facebook and whatever” (Gilder, mn.18). “Ten years ago, the biggest corporations in the world by market cap were Exxon, Walmart, the... China Petroleum, and the Industrial & Commercial Bank of China (ICBC).... In the next 10 years, there’ll be a similar turnover, and there’ll be cryptocosmic companies who’ll dominate the list...” (Gilder, 2018c, mn.30).

2) And the tax man followeth? The French Finance Minister announced in March 2019 that a “taxation system for the 21st century has to build on what has value today, and that is data,” singling out tech giants Google, Amazon, Facebook and Apple, as well as Uber, Airbnb, Booking, and Criteo, for paying, on average “14 percentage points less tax than European small-and-medium sized companies” (Minkoff, 2019). See also “Intelligence Community (IC)”, “3rd Industrial Revolution.”

2b) According to others, “Amazon has not paid taxes for the past 2 years” in the US.

- <https://odysee.com/@Dryburgh:7/ernst-wolff-hedge-funds-coronavirus-ccp-world-take-over:d?r=FK4LfE3kq2QAbgu76DE67BEpPTacGNmm&sunset=lbrytv> [Wolff, mn.7].

3) David Icke doesn’t see all this, perceiving instead that “the central pillar of human society... [is mostly controlled by IC-front] near monopolies... Now the fishing line’s coming in, where... increasingly... perceptions are coming from the internet and that’s now algorithmically controllable. So you now have the more & more blatant censorship [a.k.a. provocations, and, moreover,] the [silent] manipulation of [the dominant] search engines...” (Icke, 2019, mn.9). He maintains that this current state of affairs is simply what the internet “was always meant to be.... [Remember when] the Internet of Things... sound[ed] crazy[?]. Now we’re...there. The next stage is to go from the Internet of Things to the ‘Internet of

¹⁹³ “At the end of all the rearranging [c.2010], the 12 largest banks in the country-- which had all contributed massively to the crisis and had maybe a week to live when the crash happened, as [then-Fed Chairman Ben] Bernanke [had] testified-- [then] suddenly controlled 70% of all bank assets in the United States” (Taibbi, 2019b); and their share has only increased in the decade since then. This is because the big-TBTF banks, primarily because of the new social contract, have henceforth “had *lower borrowing costs* than small community banks... This [practice of subsidization] turned into a so-called ‘*implicit guarantee*’ that...was [reportedly] worth \$83 billion a year by 2013” (Ibid). See also “Criminalization of Banking, the”.

¹⁹⁴ “[P]roper journalists should be questioning this stuff and asking why we have a world... in which 5 people at Google, You Tube, and Facebook can dictate what people see and don’t see worldwide” (Icke, 2018d, mn.1).

Everything as they [are] calling it. And that's when the human mind is also [directly] connected to the Internet.... I call Silicon Valley 'the Devil's playground. They are the point of delivery. You go back one step and you hit people like the Pentagon [DARPA \$] and the Intelligence networks, and they are the people behind...[strategically] what is delivered, and why it is delivered. And then you go back deeper into...[the onion] and you're dealing...with [private] networks of [probably 3-centuries-old] secret societies that don't put themselves on public display" (Icke, mn.10-11). See also "Oligarchy, American".

3b) IC-front monopolies? (In chronological order) Microsoft's (1998), Google's (c.2000), and Facebook's (c.2007-10) multi-billion dollar compromises with the Deep State are already fairly well-known. Amazon, also, is no exception to the **general rule**¹⁹⁵: the "first time Amazon ever made a profit was when they got their 600 billion dollar-plus contract from the CIA, and they now run the Cloud for the 17 Intelligence agencies. And with...[the initial 2013] contract [with CIA], Bezos turned around the bought the *Washington Post* [in 8/13]" (Fitts, 2021e, mn.5).

[[moving up in the world?), 2013; 2019]

[See also "CIA", "NSA".]

4) Section 230 () says that if "they censor [all sorts] of people, including the President of the U.S.... they can be sued.... They should be viewed the same way that the town square was viewed. They are not private entities...[That] silly story has to end. They are controlled entities that have multiple relationships with the US Intelligence Community...[which] makes them a public forum. And they should be told to behave, and the legal structures put in place... as the 1st Amendment...[stipulates] in this country... What's being done now against the President... is called a prior restraint of speech.... There is a conspiracy to restrain speech. And that has to be attacked head-on" (Boyd, 2020, mn.218-219). See also "Google", "Social media".

5) Amazon bucks? "[T]raditional institutions may not know about a lobbying coalition in Washington called Financial Innovation Now [FIN]. The organization has become involved in payments issues and has also supported the *Financial Services Innovation Act of 2019*... which seeks 'to improve regulatory coordination among federal financial services regulators and *promote new entrants*', such as fintechs... FIN's membership includes Amazon,¹⁹⁶ Apple, Google, Intuit, PayPal, Square and Stripe" (Cocheo, 2019). Facebook already has its own scheme. See also "Diem", "Money Services Businesses (MSBs)".

6) **Big 5 (on S&P)/(Tech Giants) Updates:**

7/22- disconnect between owner-managers and customers: <https://www.bitchute.com/video/bL6klC0Qq63G/> [FB's Chatbot (SR.#3900)]

¹⁹⁵ "It's really impossible to know where they begin and where the National Security state begins, because they've essentially fused... [T]he National Security Commission on AI...[sets] forth the [US govt's] entire AI policy... [and] was [originally] led by Eric Schmidt [from FY 2019, and] the current CEO of Amazon was [also] on there, along with top people from the Intelligence Community and top people from the DoD... a lot of these Silicon Valley companies and...[also] contractors.... And...pretty much all of the 'COVID-19' data and...vaccination data in the US and...UK is run by Palantir...[another] which was essentially set up by...CIA and the neocons...with the help of Peter Theil.... Amazon wasn't necessarily set up by...CIA, but they got in bed with the US government relatively early on... [But] Google...was [directly] set up with In-Q-Tel funding.... [And] Microsoft [sometimes a.k.a. neo-IBM], similarly, has a lot of Intelligence ties, and also Jeffrey Epstein ties, going back to the 1990's" (Webb, 2021, mn.6-7).

¹⁹⁶ "What troubles most traditional banking execs is that at any point, Amazon might just decide to... [offer] some sort of *quasi-checking* product. After all, the portion of Americans who belong to Amazon Prime-- roughly half the entire adult population-- is astounding.... [and] JPMorgan Chase...[already] issues Amazon Rewards cards.... [Among the Big 4 Tech Giants (Google, Apple, Facebook, and Amazon),] only Amazon was seen as a major threat for business banking.... 'far outstripping any of the other'" Tech Giants (Cocheo, 2019). Amazon "made over \$1 billion in [actual] small business loans [not *state-monetized credit*] in 2018.... Qualifying Amazon sellers can borrow from \$1,000 to \$750,000 for as long as a year. Amazon has the advantage... of knowing precisely what their sales and customer metrics are on the company's platform. The program began in 2011.... and any losses are handled by seizing inventory in the company's warehouses or from sales proceeds made into the sellers'...accounts" (Cocheo, 2019).

1/23- "...Apple is threatening Twitter's place in its app store because under Elon Musk the platform has begun to offer the very thing Apple is helping China stamp out: freedom'..... Am I missing something? Isn't Apple [Pinguo 苹] a Chinese company?"¹⁹⁷ (Rappoport, 2023b). See also "COVID" Updates [GMO]. See also "Alibaba", "Central Intelligence Agency (CIA)", "Feudalism, neo".

[Apple, Amazon, Alphabet, MS, and Facebook market caps. comprised \$4.1 tn. (or 50% of the S&P 500) in 2018]

Big 5 Revolutions- See "Revolutions"; "Glorious Revolution, the", → "National Debt Economy", → "Great Extinction, 6th", App.C: "1-2-3".

Big 6 (scientific publishers)- "In the 40 years between 1973 and 2013, decisions as to which scientific papers merited publication and which didn't fell to only 6 major publishers-- ACS; Reed Elsevier; Sage; Taylor & Francis; Springer, and Wiley-Blackwell-- all in the back pocket of Big Pharma and the medical industry¹⁹⁸ that profit[s] from sickness, not health" (Freeland, 2018). See also "Academia", "Fascism, 'Modern' Hand of"; "Physics, New".

Big 6 (US Corp. Media Cartel)- 1) General Electric, News Corp., Disney, Viacom, Time Warner and CBS control-own about 90% of the media in the US; that's up from about 50 companies controlling 90% in 1983 (Bishop, 2015). 2) Such "controlled ownership" of the "media... renders democracy irrelevant... a dance of death and destruction"; there is no "human civilization... until" it is replaced (Poteat, 2014b). See also "Corporate Media Cartel (CMC)", "Myths, Big 6".

Big 6 (monetary) Myths- See "Myths, Big 6".

Big 9 (globalist investment banks)- See "Investment banks".

Big Bang- Regardless of one's opinions on the intersection of cosmology and physics, the Thatcher government's de-regulation (re-imperium) of The City of London in the mid-1980's... (Clark, 2014, 15).
 1) "demolished the silo-like structures and the partnerships that used to exist within The City. In those days... it was less easy for conflicts of interest and corruption to occur" (Fraser, 2012, mn.14). See also "Regulation", "City (of London), the".
 2) 1992 "was also a key date, when there was the last criminal trial of high-level bankers from [the] City of London... [when] 3 senior executives of a bank were... given suspended sentences for rigging a rights

¹⁹⁷ "To understand Apple's relationship with China, you should first know that Apple now assembles nearly all of its products in the country and sells \$55 billion a year" there.- NY Times, Jun 17, 2021.

¹⁹⁸ "People think pharma's got power. No no no, the *medical device industry* has much more power than pharma."- journalist Jim Spencer. "We have more power in this room than most governments around the world."- Scott Whitaker, CEO of the lobbying group Advanced Medical Technology Association, at an industry convention keynote speech (BleedingEdge, 2018). See also "Lobbyists".

issue. And one stock broker... from UBS, Phillips & Drew was also given a suspended sentence” for the same thing; but all “this didn’t go down particularly well with the Establishment. So they organized a court of appeal case in July...[and] the sentences were quashed. And...[that] day... a friend of mine was phoned by a contact of hers in the... Serious Fraud Office¹⁹⁹... [who] basically said ‘The message has come down from on high. There will never again be a prosecution of a high-level banker or a mainstream City institution. It would appear, from that moment on...[that] a new agenda had been set, whereby people in The City and bankers in particular were given *carte blanche*... [to] include false accounting... defrauding their clients...[and] money laundering” (Fraser, 2012, mn.14-15). See also “City (of London), the”, “Offshore”, “Debt cycles”, “Eurodollars”.

Big data (in the Age of Thieving)- Thus far this century, 1) the “guy who wins is the guy who has the most data, because the machine[s] have such fast processing speeds with thousands of algorithms. It can just learn-- but it needs the most data to learn.... Smart people don’t matter. What matters is the most data.... Everybody is trying to suck up as much data as possible on every human being... That’s one of the reasons they are ionizing the sky... with these [metallic] particles” (Fitts, 2018t, mn.40).

2) Bill Binney “said we ought to teach all the kids how to build encryption systems. And in every community, all the kids just build 100’s of grass-roots *encryption* systems. He said it’ll drive them [big data thieves] crazy. They can’t manage it. They can’t handle it.... If we could build all of our [3000 or so] local encryption systems...[then] we could create [unconstitutional] local currencies that they can’t stop” (Fitts, 2018t, mn.43-44).

3) Then again, Big Data has its own ‘stop’. It “will face diminishing returns... It feeds on mathematics of randomness that blur the difference between *value* [knowledge] creation and *noise* [pollution] generation”; you “use big data...and Markov probability models when you don’t know what is really happening” (Gilder, 2018, 89; 91). See also “Design”, “Attitude inoculation”.

See also “Artificial Intelligence”, “Social media”.

Big Government (growth of)- (is approx. parallel to that of bankmoney²⁰⁰-- the king of all subsidies²⁰¹; that increasingly depends upon subsidation) See also “Monetization”.

“First [things first]. ” (Hume, 1752). See also “National Debt Economy” [‘all were against it’].

1) France, for example, had 12,000 civil servants in 1505, or 1 per 1,250 people. By circa 1900, there was 1 per 70, “and today there are almost as many state [supported] employees as there are citizens to be administered.... above all for war, which was the greatest industry of their time, as it often is of our time” (Weber, 1989d, mn.9). See also “Central Banking-Warfare model”.

1b) The British Admiralty, over the course of the most recent century, the British Admiralty has gone from employing 2,000 “civil servants” in 1914 (administering a navy of “146,000 seamen”), to 3,569 civil servants administering 100,000 seamen in 1928...[to, in the 2010’s] only 33,450 personnel in the navy, and they and the other 2 [military] services are managed by nearly 57,000 civil servants” (Boyle, 2020, 48). See also “National Debt Economy (NDE)”, “Numbers”, “Ponzi”.

2) For some reason it is not often observed that bank “credit, in a crisis, disappears. Nobody is willing to lend” new debt-money [TAB] into the economy (Walton, 2017, mn.30). Hence a debt-money system, with its inevitable breakdowns, is inevitably tied to various ‘rescues’ (further subsidation), bailouts, and the growth of bigger, more intrusive and/or totalitarian government. Just look at the 20th century (its

¹⁹⁹ The SFO (est. in 1987) “is a pretty incompetent institution and has a history of failure when it comes to prosecuting high-level financial crime” (Fraser, 2012, mn.23-24). See also “Regulation”.

²⁰⁰ Government expansion follows debt expansion, like [hell follows death] ↑ policemen follow ↑ inequality-iniquity & crime. Is hell too strong a word for zero-sum-gainism? “Bureau people [be it a public or private bureaucracy] bestow benefits... in exchange for votes...funds, for favors, for job offers, [and certainly for] bureau expansion-- all of which yield benefits indirectly to some at a cost to others” (Walters, 1982, 12). See also “Governance (rubric.21)”. “When the disaster of present...[disparity] brings banking and industry to the brink of collapse, the government will take over” (Walters, 12). Set your watch to it. See also “National Debt Economy”, “Capitalisms” [disaster], “Debt cycles”.

²⁰¹ See also “Bank welfare”.

structures, now combined with [‘requisite’] 21stc technology). See also “Lender of Last Resort (LoLR)”, “Inflation/Deflation”, “National Security Agency (NSA)”.

3) “Without grave government interference, money *claims* [a.k.a. ‘debt money’, TAB-bankmoney] cannot generally trade at par” (Wortmann, 2017b) with ‘federal funds’ (i.e. Central bank/Treasury money). See also “Hamilton, Alexander (c.1756-1804)” [footbinding].

4) “Do we need special financial institutions, such as banks, to serve both a depository and lending function? If so, then there...[must] continue to be extensive government regulation and supervision to mitigate the effects on the economy of their [prevalent] illiquidity or insolvency, as well as economic and political pressure to bailout those institutions” (Phillips & Roselli, 2009, 10). See also “Too Big to Fail (TBTF)”, “Bank”.

5) For example, during the banking crisis and Great Depression, the *Emergency Banking Act of 1933* granted the president the ability to declare a national emergency and to take control over the finances and foreign exchange of the US, in addition to requiring all US residents to turn in their personal holdings of gold (in all forms-- coin, bullion, or certificate) to the Treasury Department.

6) The “solution we’ve found to that [structural] problem [of financial crises] is to provide an *enormous* [sic] amount of governmental support-- many, many kinds-- to the financial institutions... For the financial institutions, that means [that] their liabilities are essentially guaranteed... by the state. They are in a perfect money-making machine. And this didn’t happen by accident. It evolved” (Wolf, 2017, mn.10). That’s not ‘capitalism’.²⁰² That’s gangsterism. See also “ConfUSURY”, “Parties, political”.

7) “Since the general civilization of mankind, I believe there are more instances of the abridgement of the freedom of the people [3rd Estate], by gradual and *silent* encroachments of those in power [be they from 1st or 2nd estates], than by violent and sudden usurpations.”- James Madison,²⁰³ “Speech to the Virginia Convention”, Richmond, Virginia, June 6, 1788. See also “Corruption”, App.C: “1-2-3”.

8) Hence, the 18th century invention ‘bankmoney’ is, like vinegar, inherently extractive in nature. “The goal is to extract as many minerals as possible out of the [private] bones [and eventually] into the [public] broth water” (Mercola, 2015) of ever-bigger government. The only trick is that the process is indirect (involving more than one step), as opposed to direct. See also “Economics”, “Bank welfare”.

9) How does the process work? “The profit maximizing activities of corporations reduce Americans’ [real] incomes, but not their debts. Thus, debt service becomes more difficult” (Roberts, 2019b); especially for businesses. “As debt service costs rise and wages continue to stagnate, the [typical] ‘solution’ of borrowing more reaches an endgame of credit contraction and...defaults...[leading to either grave government interference, or outright] government-enforced monopolies as the only dependably profitable corporations, and [then] the citizenry [unless horrifically dumbed-down] will soon tire of enriching [the] tech oligarchs who bought political cover and regulatory moats” (Smith, 2019c). See also “Monetary reform”.

10) As sure as debt is a private form of taxation, its acculation eventually winds up in larger and more centralized government. In the early 1990’s, David Osborne, from VP Al Gore’s “Performance Review...[team], estimated... that 20% of American government spending was devoted to controlling the other 80%, via auditors and inspectors... [finding] that 1 on 3 federal employees were there to oversee, control, audit, or investigate the other 2. In the UK... Michael Power...[also] estimated that 10% of UK public spending went on auditing” (Boyle, 2020, 64). See also “Tickbox”.

11) Take it from the Governor of the Central Bank of Spain (2006-12). When bank “depositors money is used [in order] to lend it to others without asking for their consent...[it] is no minor matter. *Consent* [informed consent] is an essential element for the market to work, because only if the citizens themselves... decide on the appropriateness of what they decide can they exercise what is called ‘*market discipline*’. In the current banking system, by using the [TAB-bankmoney] funds without the owners’

²⁰² “For the purist, capitalism without default is a bit like Catholicism without hell” (McWilliams, 2019). See also “Ponzi”, and [for what great gov’t debts are mortgaging] “Ecological economics”, “Hell”.

²⁰³ Nonetheless, James ‘Madison Avenue’ just 4 months earlier, in Federalist 48, belabored the point that *Legislative* tyranny was the greater threat than Executive tyranny: The plotters and planners of the Constitution of 1787 were most concerned with powerful, unicameral state Legislatures controlled by farmers-debtors-voters (Holton, 2016). See also “Constitution”, “Congress”, “Deep State”.

consent, there is no alternative but to resort to the State.... In the current system we know that the [banks'] profits are privatized but the losses are paid by others" (Ordonez, 2018). See also "Statism", "Civil National Identity (CNI)".

12) The growth of Big Gov't in the United States has, per 2020-21, already overwhelmed its (limited government) constitution. "Regulations [edicts] by bureaucracy", instead of actual laws, are "increasingly *everything* [sic] that you run afoul of... So you have no due process. You have no presumption of innocence. And you have no protection against [among other things] excessive fines.... Because...[the legislature] abdicated their authority to the bureaucracy"- David Knight https://ugetube.com/watch/the-david-knight-show-1-7-2021-full-show_aCJ3u3CdWrfUllf.html , mn.107. See also "NSA" [Bill of Rights], "Congress".

12) Why is bank money tolerated-- decade after decade, crisis after crisis, slap-on-the-wrist after slap-on-the-wrist? Perhaps it has been because of imperialist war objectives, or perhaps because-- after so much propaganda from Economics, academia, and media repetition-- that 'no one understands it sufficiently' to perform a significant reform operation. But one should not overlook the fact that government policies always have 'interests'-- including even (the ever-growing cadre of) people who consider themselves to be government **beneficiaries**. "In a stable society, [at least big] government ultimately becomes unnecessary; the restraints on people's actions are internal."- Carroll Quigley, "The State of Individuals" lecture, 1976. See also "Denial" [3Tiers], "Bank welfare", "Georgism", "Economics, Parity", "Monetization".

12b) "There is no credit in being a comedian, when you have the whole Government working for you. All you have to do is to report the facts. I don't even have to exaggerate"- Will Rogers (O'Brien, 1935, 157). See also "Parasitism", "Parties, political", "Lender of Last Resort", "Conspiracy theorist", "Burien, Walter", "Industrial Revolution, 2nd", "Adolescence of Mankind", "K.J.B. (King James' Bible)", "Debt cycles".

Big Lie, the- 1) a propaganda strategy, initially coined by Adolf Hitler's 1925 book *Mein Kampf*: "*The great masses will more easily fall victim to a big lie than to a small one.*" I.e. today, "If you don't give money to the top 1% of the population, the bottom 99% won't get by and will collapse" (Hudson, 2009).

2) It is axiomatic that the biggest of big lies have been perpetrated by [some would say 'overly ambitious'] governments²⁰⁴, which raises the question (as it always should) of 'Why certain individuals are attracted to governmental institutions in the first place?'. See also "COVID", "Government, role of".

See also "Exogenous vs. Endogenous' (money creation)", "Corporate Media Cartel", "Interest Rates", "Deceptive Banking Terms (d.b.t.'s)", "COVID".

Big picture (c.2019)- (i.e. 'strategic-developmental monetarism'; money-currency is made by man, and is the primary [or at least the most ubiquitous] tool of our age)

²⁰⁴ In terms of 'alpha & omega', the budding of Big Government & Big Lies [traditional (i.e. Roman, Chinese, etc.) 'Charismatic Authority'-type claims notwithstanding] goes back to the turn of the 18th century and (legal institutionalized) *racism*-- a term that was invented for the purpose of (Early Modern) governance. When did-- or does-- "it" end? "Racism" and over-reaching (early modern-type) governance were both born and will die together; c.1700 its alpha and c.2000 its omega. But-- as with 'money & politics'-- can one side of the structural injustice coin be successfully addressed while ignoring its twin? Not really. Hence, this young 21st century's (increasingly predictable) penchant for framing issues in terms of either ethnology-'race' and/or poor-overreaching governance (sometimes a.k.a. 'conspiracy theory'). This is no longer a public issue that can be avoided. Approx. half the global economy was shutdown (by overreaching governments) over dodgy claims in the spring of 2020, culminating in the USA's biggest 'protests' and public rioting since the 1960's in May-June. See also "COVID", "Intelligence Community (IC)" [I.I.C.], "Conspiracy theorist".

[in 3 Dimensions; 4 causal factors (of "governance"), over 4 centuries]

1) [nature/ontology] SUN → ECOLOGY → ECONOMY → & POLITICS (poly-ticks) → & "Public Relations" [...distilling into 'reforms' of] ↓ ↓ ↓ ↓ ↓

1b) [man's Reforms] Technocracy/IoT -- "Parity" Economics" -- "Georgism" [salt] -- "Truth serum".

1c) [acid test, thereof] Accounting & Academia [i.e. the 'business referees' & 'public word-smiths']

2) 'In the beginning'...of the Age of Discovery and large-scale (nation-centric) 'capitalism' in the 15th century and-- exponentially moreover-- with the discovery of the so-called 'New World' [not yet an 'Order'] and its romanticization in the 16th century (i.e. Weber, 1989c), the increasingly national-flag-based robbers and plunderers [especially after they came into contact with each other's flags] started accumulating larger-than-imagined surpluses of various booties or treasures (perhaps not unlike their ancestors' had accumulated unimaginable surplus fat from mammoths or whales). What to do? What to do with it all?

3) Well, first of all, keep it from being grabbed or sequestered by other European powers in what was still an age (pre-1648) of international lawlessness. Western Europe's money supply was radically increasing from minting the New World's bullion, and back then of course it was nearly all physical (sovereign) money-- thus inviting rampant thieving, robbery, and organized warfare. The 'warring states' era in European history, which had been building up for some time, was fully game on. See also "Adolescence of Mankind", "Commodity money".

4) Given the increasing demands (for both physical security *and* greater monetary volume), by the mid-17th century private banknotes were also a salient (and ever-increasing) supplement to the age-old traditional sovereign-minted²⁰⁵ coins. By the mid-18thc they were the norm in the UK, and then also by the second quarter of the 19thc in the US. What was the relative weight of bearing some risk of being flim-flammed (with paper) vis-a-vis the risk of physical robbery and theft (and, for the rich at least, the hassle of having to cart large amounts of coins in the pre-motorized era)? Capitalism, also sometimes known as 'checkbook money' (via book-money creation) was about to enter its golden age, and nearly a century of 'Their' political stewardship (mid-19th to almost-mid-20th century) would ensue. See also "Fin de Siecle".

5) Who's "They"? With the rise of the British Empire and Central Banks [a.k.a. "the Central banking-Warfare model"], after the Empire struck back with the 2nd Currency War (1790's-1815), the general monetary trend was for what had hitherto been genuinely private bank notes (involving the concept of

²⁰⁵ There is controversy to this day about the extent to which mints in the various European kingdoms of the 16th-18th centuries were genuinely 'public' and effectively controlled (more like England), or mostly sub-contracted out to local and/or 'quasi-private' institutions (such as bishoprics, which was more typical in France). Not even the French Revolution was able to unify France's famously fractious minting system (Spang, 2015). Fractious or not, however, coins were always minted in the sovereign's name and/or likeness.

genuine/individualized bank risk) to be-- let's face it-- socialized unto 'the nation' at large with what might be called 'central bankism'-- i.e. state-sanctioned and taxpayer-funded private bank [2nd Estate (private elite)] lobbying groups, working in conjunction with the [1st Estate (government)] Treasury/Exchequer in order to support private [TAB] banknotes with public [RAB] backing. See also "Parity", "Bank welfare", "Estates, 3", App.C: "1-2-3".

6) As Hyman Minsky might have pointed out, however, such state-supported central-bankism "stability" [actually most of the last quarter of the 19thc was deflationary and driving farmers off of their land] was illusory over the long-term. 19thc *Industrial* ["classic"] Capitalism was degrading (in the UK-USA; though not in Germany) into *Finance* ["gaming"] Capitalism, and then, by the 1910's-30's, into pretty much outright monetary whipsawing (reckless driving) of Europe and the US, into the planet's worst spasm of violence since, arguably, the Chicxulub asteroid impact of 66 m.y.a. The 1940's was really the last hurrah for such (destructive & self-destructive) attitudes-- the decreasingly bloody Korean and Vietnam conflicts that followed were more like 'aversion therapy' re-enactments (ratcheting down, instead of ratcheting up). See also "Industrial Capitalism", "Finance Capitalism", "Currency wars, the".

[66 million-- and 66-- years ago: pterodactyls; Frankfurt Bundesbank mural]

7) Nonetheless, the UK-USA (or, more accurately, the USA and its pretty much new global empire) stood astride most of the rubbish heap that was the monetary-political world in 1945, and, perhaps like some 16th century ancestors, had to figure out what to do next. State support (increasingly heavy) for TAB-bankmoney was still the order of the day (at least through the [already-started, ¾-century] "debt cycle" of that time, c.1938-2008)²⁰⁶. Who was/is the "They" at this point? CIA was formed, in part, as a red herring,²⁰⁷ to distract attention & publicity from the military-majority (of what might be called the inner Intelligence Community-- that which allows certain things to happen and other things not to happen).²⁰⁸ Getting back to monetary matters, through the 2nd half of the (I.C.-led) 20thc (i.e. Pax Americana [papered-over with 'Cold War' dramatizations]), *state-capitalism* [dumbed-down, inaccurately, as simply 'capitalism'] of an increasingly **Financialized** variety, came to the fore [either with plurality voter support or without] in one country and one region after another (France, Greece, Italy, S.Korea, Iran, Egypt, Venezuela, Brazil, Chile, Argentina, Spain, Canada, the United Kingdom, the USA itself, China, Panama,

²⁰⁶ After all, why rock the (monetary) boat when all the chips were heading your way, and global aggregate debt levels were rather low (and when the people were already stressed-out, no less, and just needed some relatively peaceful 'normalcy')? Indeed, reform of the monstrous monetary system that had lead to the calamitous 1st half of the 20thc could be safely placed towards the end of the queue-- behind such other (laundry list of) contributing (to the conflagration) factors as: communism (addressed during the rest of the 1940's-50's), blockhead-ism (the 1950's), 'racism' (the 1960's), sexism and homo-phobia (the 1970's), and environmental callousness (1970's-80's)... maybe even too much nationalism could be deflated (1990's-2000's), prior to the great TAB-bankmoney blowout of 2008 (and hence finally getting around to monetary matters, however obliquely at first). See also "Debt cycles", "Cultural Calendar", "Jacob's Ladder", "Jones, Alex".

²⁰⁷ Any student of history knows that the USA had domestic political assassinations and (probably at least one military-backed) coup-d'état[s] prior to the CIA Acts of 1947 and 1949. See also "Central Intelligence Agency (CIA)", "Intelligence Community (IC)".

²⁰⁸ Does anybody really think that David Rockefeller, until his 101st birthday, was telling America's dozen or so (and always gradually increasing number of) military (and CIA) Intelligence agencies what to do about, say, rock n' roll, Kennedy, Vietnam aversion therapy, how to treat women (in the post-agricultural age), what to do about nationalism & national identity, the computer-simulated maiya nature of reality, and how to manage a 1st Estate-2nd Estate-to-3rd Estate transition?... not to mention tapping all Washington phone calls since the Franklin Roosevelt administration, and then actually *storing all* telecommunications (from any device) in [at least] the Western world, since the 2000's. US Army intelligence (est. 1775) is older than the USA itself; but Henry "brasso" Kissinger once supposedly said that "they're all just stupid animals", so I guess that settles it. See also "Secrecy, Cult of", "Black Budget", "Military-Executive-Corpcocracy (MEC)".

Russia, Kazakhstan, the Baltics, Mexico, South Africa, New Zealand, Ireland, and the entire European Monetary Union club). That's a lot of work. What was it ["globalism"] all for? 'Big box stores', economies-of-scale, and evermore derivatives-Markovian numbers-crunch gaming? (see also "Communism", "Industrial Revolution, 3rd"). No. All of the above nations/tongues may now pretty much have the infrastructure (or at least the basic templates) for technocracy-based consumerism, and fully-literate, post-farmer-dependent societies. But that is not really a new development or change in-kind for **most** of these countries. It's not just about the "3rd Industrial Revolution" and the potential for near-zero cost unlimited energy utilization [a.k.a. *Brazil*, (1985)]. Something more is afoot. See also "Truth serum".

8) With the bankmoney-globalist blowout of 2008 (when, for a few days [before Washington stepped in], the New York markets didn't even exist anymore²⁰⁹), Intelligence Community-led state capitalism, the 'post-war' outgrowth of global-Financial capitalism, entered its **terminal** [or 'post-terminal'/zombie] phase, with 20th-century-assumptions-based Markovian tech giants (enabled both by DARPA research and by *Sarbanes-Oxley* Big Paperwork legal requirements) playing the role of (increasingly villainous) dinosaurs, although no match for the Washington Deep State's T-Rex (which is itself, in turn, a somewhat tame creature to the Intelligence Community-Deep State²¹⁰; see also "Government, Hidden"). Of course, the monetary policy of this brief little era has been the straight-out bank welfare of "Quantitative Easing". Are 'the people'/citizenry ready yet to take matters into their own hands and **D.I.Y.**, or are they still tethered, like elephants that never forget, to [what essentially amounts to] *early* 'modern' (i.e. transitional) institutions? See also App.C: "1-2-3". Technologists sometimes call this expected transition a "peer-to-peer" revolution. Distributed ledgers are just distributed ledgers (not the discovery of fire), but they will prove useful in enabling more of a **D.I.Y.** mentality, free from dependence upon ossified dinosaur institutions (see also "Trump, Donald" [OPFOR]).

9) Then, and only then, does one get an adequate "Won't Get Fooled²¹¹ Again" political moment from [the awareness of] the people/citizenry, as they take over from the hapless parties and monetary policy of the I.C.-hollowed-out institutions with the fact-check proto-truth serum of the internet... And political parties' duopoly, bankmoney, and the culture of lying are no more. Fanciful? *Double-entry accounting* was to the

²⁰⁹ Yes, that would be one definition of "state capitalism". Here's another describing (pretty much) the entire decade since then: "Trump has to allow the [stock] markets to have a *certain* [i.e. always increasing] amount of *certainity* [sic], otherwise the markets will go against him, and the [financialized] economy will do very poorly; and everything he wants to say or do will mean nothing. If the markets don't respond to...[this] certain amount of certainty... then...[any PotUS] is in trouble" (Pieczenik, 2018e; <https://www.youtube.com/watch?v=rRxlMBcxGXc>, mn.24). See also "Capitalisms", "Bank welfare", "Discretionary (US budget)".

²¹⁰ Whenever it was that "the spooks" got serious, one deep ontological question tends to lead up to another, not quite-so-deep as the preceding. For example: **1a** 'What is this (everything has a *timer* on it) matrix?' And then **1b** 'How did doing things "if you had the *time*" turn into doing things "if you had the *money*"?' This leads to **2a** "So what in fact is this '*money*'? Whatever they say it is-- like a 'world-class' game of Simon Says?" **2b** "Yea, pretty much. So is what they're saying about '*money*' lies (inconsistent/dodgy), or truth (stable)?" And **3** "What is the nature of this almighty prize-- global '*Reserve currency*' status (for which it seems tens of millions of people have been recently sacrificed)?" [Another "spook" steps in to answer]: "Well, maybe about 7 decades from now, you can ask Robert David Steele (.Empire), or Mark Carney (. "Synthetic Hegemonic Currency"); but for the time being, this here World Order = USD. **4** [Spook A]: "Then what is this '*national currency*'?" [Spook B]: Well, pretty much whatever they [2nd Estate], or we [1st Estate], agree to say it is. Again, maybe 70-80 years from now, our successors will have to choose between the path of an Orwellian *Brave New World* (ever-more dino's)...or the path of, rather, a brave *true* world (of post-dino's 'tiny mammals' and [democratic] accountability...something like a 3rd Estate understanding how the 'hamster wheel' has been run). See also "Monetary Reform", "Estates, 3", App.C: "1-2-3".

²¹¹ That 1970-71 writing on the wall notwithstanding, the entire "Statization" process (1880's-2020's) may be reduced to simply "3 Biggies":

- 1] Big IDEALISM- per the 1880's "Georgism (& Land Value Tax)"...blending, in the 1930's-40's into (a somewhat more modest) "Parity pricing (for the primary sector)"...
- 2] Big REALISM- per 1960's-70's "Quigley, Carroll" & 'Conspiracy Theory' [sometimes a.k.a. imperialism]: i.e. that 'Western Civ.', like all civilizations, was in big trouble...being cooked in a big pot of boiling water trouble. See also "National Debt Economy".
- & 3a] the Big DISTRACTION- per 1970's 'Laurel Canyon' type ops (sometimes a.k.a. 'music [like 'what women want'] leads culture'). With Vietnam in everyone's face c.1970, about '1/3rd' or so resisted the cultural programming, as it was loud. By 1980, however, this was perhaps reduced in half, to approx. '15-10%', then after another decade to '5%', and finally to about a mere '2%' by the year 2000. With the new 21st century & 3rd millennium, what had been "big distraction" turned into something more like
- 3b] the Big DESTRUCTION- From 2001-09, the old paradigm of c.1970-c.2000 was mortally wounded in self-destruction, and has been limping along on "Bank welfare" in the decade or so since then. See also "Imperialism", "Dutch Disease", "Debt cycles", "Reform 101".

11th century “Peace of God” movement (i.e. the institutional realization of the previous century’s [separation of powers] rhetoric) what the return of [accountable/straight-forward] sovereign money will be to the previous century’s “millennialism”. Before the former combination, it was said that politics ‘was violence and robbing’.²¹² Before the latter, it will be said that politics ‘was lying and thieving’²¹³; (Weber, 1989c, mn.25). See also “New World Order’ (N.W.O.)”, “Orwell, George”, “Anthropology, of credit & money”.

10) Q: What’s happening in the world, besides I.C. scaffolding for the above?

A: 3 dinosaurs²¹⁴ (like the big-box-stores or tech giants). Dino-“N.W.O.” (the USA) is ballooning Dino-Orient (China), as Dino-Occident (the E.M.U./EU) either falls to Islam demographics or gets its Ons Geld parachute [sovereign money, out of the EMU] right. See also “Helicopter money”, “Setting (assumptions)”, “Economics, Parity”, “World Par Economy (WPE)”.

See also “Tools” [.big 3], “Eras of (monetary) History”, “K.J.B. (King James’ Bible)/70 Year Plan”, “Truth serum”.²¹⁵

[a thousand-year era?; no knaves on stage]

Big picture (c.2022)- See “Nine Key (entries)”, “One/1”.

Bills of credit- (publicly ‘monetized credit’, somewhere between cheques and ‘cashiers cheques’; antec. for Reserve money?; not to be confused with ‘bills of exchange’)

Make no mistake, “[p]aper money was...seen during [American] colonial times, and not wrongly, as an antidote for economic discontent” (Galbraith, 1975, 53). See also “Constitution, US (of 1787-91)”.

²¹² ...when civilization was all-too-often about stealing & robbing the harvest stores; and then getting the Pope or whomever (could write something fancy) to “bless” it. Consensual-abstract double-entry accounting substantially reduced this practice.

²¹³ ...when civilization all-too-often rewarded deceptive & unthinking behaviors, about finagling someone’s expedient ‘consent’, and then getting Public Relations pros-- or better yet lobbyists & the (ever-increasing) government/legal code itself-- to bless the dishonest and/or coerced ‘consent’ with a legal stricture. See also “Legalism”, “Lobbyists”.

²¹⁴ For most of us, there’s nothing ‘brave’ (and not really much ‘new’) about a Markovian World Order. *Dino-Orient*, however, has really had nothing like the current situation in all of its history, as-- apart from the (not very nice) Yuan Dynasty-- they have not had any “highly monetized” eras in their entire history, and have almost always had, since Roman days, substantially less money-per-capita than Europe or (in more recent centuries) America. See also “Barter”. With *Dino-N.W.O.*, one should realize that the problem (of conflating ‘credit’ with ‘money’; or, a little more specifically, “the J.A.W.S. of the problem”-- Just Accounting-World Standards) does indeed go back to Alexander Hamilton and the 18th century (though no further back than, say, 1781)-- that ‘scamming mentality’ that Mark Twain (a century later) so often noted, and that gets less useful with each passing century. *Dino-Occident*, however, enjoys the status of being something more like a “pretend dinosaur”-- that they were really just joshing for the past 3 decades (of EMU dictates from Frankfurt). Wortmann (2019b; in addition to Varousfakis, 2018) reveals that the [to some degree US/‘Washington Consensus’-imposed] EMU could pretty much be jettisoned by individual member nations [or even, less likely, all of them at once] at any time, whenever the smaller (and/or tiny) mammals are ready to do their thing (money and politics have ‘always’++ been inseparable twins in Western civ.; one cannot be adequately addressed without [at least a realistic assessment of] the other). See also “Parties, political”, App.C: “1-2-3”. Did Jimi Hendrix prophesize ‘the 3 dino’s’ half-a-century ago? [https://www.youtube.com/watch?v=LVz9WvvF0Gk ; i.e. “wind”= audio/history; “traffic lights”= system/money; “emptiness”= saturation; “tiny island”= UK (‘downstream’ from the [freshwater] Rhine/NL); “Mary”= 2nd Estate public relations; see also “Cycles”].

++ ‘Always’ = at least since the Early Modern era rise of accounting in Holland and England. “There’s just an old maxim of Early...[Modern] finance, that the householder must know good [sic] accounting” (Soll, 2014b, mn.111).

²¹⁵ The microchip-as-ever-increasing [we can turn this into]-Truth Serum. Are the ‘dinosaurs’ in danger, or are only their *lies* in danger?

1) In 17th-18th century America, either: a) secured-promissory notes; or, more often, b) *unsecured-‘fiat’ bills*, intended to circulate as paper cash, upon the credit of the colony, state, or nation, based only on the faith of the issuing government entity and its users. See also “Legal tender”, “Sovereign money”.

1b) “On the whole, no Method has hitherto been found to establish a Medium of Trade in lieu of Money, equal in all its Advantages to Bills of Credit *funded on sufficient Taxes* for discharging it, or on Land Security of double the Value for Repaying it at the End of the Term, and in the mean time made a general legal Tender. The Experience of now near Half a Century in the Middle Colonies has convinc’d them of it among themselves, by the great Increase of their Settlements, Numbers, Buildings, Improvements, Agriculture, Shipping and Commerce. And the same Experience has satisfy’d the British Merchants who trade thither, that it has been greatly useful to them [too], and not in a single Instance prejudicial.”

- Ben Franklin, “Remarks and Facts Relative to the American Paper Money” (Mar. 11, 1767). See also “Legal Tender”, “Counterfeit”.

2) was one of the main topics at (and reasons for) the constitutional convention of 1787 (Art.1, Sect.8 of the US constitution). It was Gouverneur Morris who “moved to strike out [the phrase], ‘*and emit bills of credit of the U.S.*’ If the US had credit [with Europeans, then] such bills would be unnecessary; [and] if they had not, unjust and useless. Mr. Baker seconds the motion. Mr. Madison: Will it not be sufficient to prohibit the making them a [legal] tender? This will remove the temptation to emit them with unjust views. And [the gov’t then emitting (instead)] promissory notes, in that [same] shape, may in some emergencies be best. Mr...Morris: Striking out the words [‘emit bills of credit of the U.S.’] will leave room still for [paper or ‘promissory’] notes of a responsible manner, which will do all the [exigency] good without the [standing (army?)] mischief. [Plus (more importantly)] The moneyed interest [i.e. Robert Morris, et al] will oppose the [entire] plan of government, if paper emissions [which the colonies-states were then famous for] be not prohibited. Mr. Gorham was for striking out without inserting any [additional] prohibition...”

- Sec. Madison’s Notes of Debates at the Federal Convention (Knox, 1899, 960). See also “Fiat currency”, “‘State banking’ (era)”.

3) More than a century later, in the early 20th century, German banker and Federal Reserve architect Paul Warburg observed that: “The United States... is at about the same point that had been reached by Europe at the time of the Medicis”²¹⁶, at least in regards to the liquidity of commercial paper (Whitehouse, 1989). See also “Commercial paper”, “Bank, universal”, “Shadow banking (SBS)”.

See also “Fiat currency”, “Land bank”.

Bill of exchange- (Latin: ‘lettera di cambio’; the antec. of ‘**commercial paper**’?)

1) “The bill of exchange (lettera di cambrio) and the bank transfer (scritta di banco) were the 2 credit instruments of Renaissance businessmen.... The bill of exchange was widely used... to allow the transfer of funds between [locally] resident merchants and their foreign agents” with lower risk; but they “also served as a borrowing medium” (Gleeson-White, 2012, 54).

2) Venice

Bitcoin (BTC)- (a.k.a. ‘digital gold’, ‘bitcon’; a ‘**money services business**’ [FinCEN, 2014])

1) an up-down investment, like metals, and not at all “money”²¹⁶ in the public (utility) sense, widespread bitcoin usage in today’s system would (if that was even technically possible) strengthen the position of the commercial banks. Because of bitcoin’s “volatility of price, it has not been...seriously used as a means of transaction, instead, it has been regarded as an investment target similar to gold²¹⁷.... As long

²¹⁶ “There is nothing and nobody behind Bitcoins and similar cryptocurrencies. Therefore, while they may be suitable as tokens in the global casino or for money laundering, they have no chance of gaining general acceptance as a regular and commercially clean means of payment” (Huber, 2021).

²¹⁷ “Satoshi was trying to create a new gold” (Gilder, 2018c, mn.23). Gold is obviously not “currency” (except between criminal syndicates and in times of state breakdown), due to its extremely low velocity. This is also a characteristic that bitcoin shares with Au. Some claim that bitcoin “on average changes hands in a commercial (as opposed to speculative) transaction once **every 10 years**!!...Compare this to interest-free currency units like the Wörgl scrip... which changed hands 150 times in a year, during the early years of the Great Depression...” (Migchels, 2020). See also “Velocity of money”, “Local scrip & Complementary currencies”.

as bitcoin is used under the current debt money system, bitcoin cannot replace currency as legal tender” (Yamaguchi & Yamaguchi, 2017, 23). See also “Money Services Businesses (MSBs)”.

2) “was based on a false model that gold was money²¹⁸.... [and] it takes far too long to verify a transaction... But [the] blockchain works...” (Keen, 2016e, mn.4). Thus “...what it does give you is an alternative [albeit too slow/inefficient²¹⁹] way of doing transactions when the private credit system is breaking down” (Keen, 2017i, mn.11), despite its **best** transactions-per-second being something on an order of 5, when the norm for credit card transactions today is at least 1,000 times faster than that. See also “Distributed ledger”.

3) “To me, Bitcoin is just Mr. Global’s prototype on building out [hyping] his digital currency” (Fitts, 2017c, mn.134). “I think in Utah the NSA has a complete database of everybody who’s got any bitcoin, and probably knows exactly how much they have” (Fitts, 2017r, mn.35). And “when you talk to the activists who are doing all this crazy stuff, they’re all financed with Bitcoin.... [and] they’re gonna have a tremendous impact” on the 2018 elections (Fitts, 2017s, mn.13-14).

4) “One of the reasons the IRS has taken the position that digital currency is not currency-- [and that] it’s property... [is] because... if you want everybody to run around and prototype this for you, [then] you can’t declare it a *currency*. You have to declare it something else. Otherwise you’re in massive violation of the constitution.... [Art. 1, Sec. 8, Cl. 5] and have the bees coming down on your head like that, squashed like a bug.... There’s lot of winking and nodding by the regulators right now, but placed-based currencies can’t [ever] get to 1st base” (Fitts, 2017t, mn.27-28).

5) Is it a serious prototype? If so, why are transactions speeds still so slow, in addition to BTC’s energy usage being incredibly inefficient? (Keen, 2017l, mn.28). The answer seems to be No; and that BTC, launched the same year as the Financial Crisis (of 2008), is primarily an NSA ‘psypop’ in order to raise awareness that we can actually create money in new ways-- an essential notion for avoiding a dystopian 21st century. As of winter 2017-18, “Bitcoin is no longer seen as the future model of cryptocurrency because it is too energy-intensive and expensive, and much too slow to be useful as a modern means of payment. Bitcoin can carry out 7 transactions per second, while a payment service such as PayPal can carry out over 100 in the same timeframe. Visa and Mastercard can manage from 2,000 to 7,000.²²⁰ In addition there are unsettled technical questions... [concerning] data or money safety, and [of course] unsettled legal questions such as warranty and liability” (Huber, 2018, 7-8). See also ‘Diem’.

6) “Bitcoin and [private] cryptocurrencies... can be used to gain or lose a lot of money, but they will not alter our monetary and financial system” (Ordonez, 2018). See also “Digital cash/Currency”.

7) Nonetheless, to others, there is long-term promise in the larger “crypto” sector (for something more profound than mothballing public notaries and private goldbugs): “Virtual money (like bitcoin), is not a claim on the issuing entity. And payment with virtual money does not involve any bank balance sheet. Bank liquidity, bank balance sheets, and interbank settlement [in **RAB**] are irrelevant for virtual money. All operational functions of the central bank can be discontinued in a virtual money system” (Wortmann, 2017b). See also “Cryptocurrencies and Stablecoins”, “Blockchains”.

8) “I wish that people had put the same passion into building local food systems and local energy systems that...[they] put into building Bitcoin” (Fitts, 2022, mn.143). “What I am seeing is a group of people trying to... [say] that it’s ‘perfect and [that] it’s gonna work’ who don’t understand control, and [they] don’t have [a contingency] a plan to deal with it” (Fitts, mn.146). Since 2017 “one of the reasons...that I have avoided the Bitcoin community is [because] the culture that I hear from them is not

²¹⁸ Prof. Yamaguchi concurs that bitcoin today is being used “as Digital Ingot” (Yamaguchi & Yamaguchi, 2017, 6); and that the “[f]ixed maximum amount of bitcoin sooner or later imposes [a] deflationary trend of its quantity, pushing up bitcoin prices as [the] gold price used to be” (2017, 23).

²¹⁹ The main problem with Bitcoin is epistemological, in “that it wants to have a non-trusted system-- that you don’t need a trusted party. Well that’s [like] saying ‘*We don’t need money to do what money does*’. And [so] what has happened instead has been this enormous cost...[in the] verification process, to get proof of.... *Stake*, which is actually modelling ‘money’, and proof of ‘*Work*’ is modelling [the absurd concept of] ‘barter’.” (Keen, 2017l, mn.31-32). See also “Labor Theory of Value”.

²²⁰ According to Danezis & Meiklejohn (2016), there are some “airlines and railway companies, as well as today’s telecom and tech giants...[that] have comparable, or even bigger and faster, processing capacities” than do credit cards (Huber, 2018).

people-centric.... [But] I've certainly enjoyed Bitcoin people that I've met more than the crypto [people]. I will say that" (Fitts, 2022, mn.241). See also "Cryptocurrencies and Stablecoins".

Bitcoin Updates: 12/21- "0.01% of bitcoin holders control 27% of the currency in circulation"- WSJ, 20-12-21

Black Budget (US)- (a.k.a. 'national security cult' meets 'the missing money')

"If you knew how much we spend and how much money we waste in this area, it would knock you off your chair. It's criminal!"- Senator Allen Ellender, Intelligence Subcommittee Chair of the US Senate Appropriations Committee, commenting on United States intelligence activities, 1971 (Yale Law, 1975).

1) "Let no man say that there's not tremendous amounts of innovation in America, because when it comes to financial fraud to finance the black budget, the innovation is impressive" (Fitts, 2018o, mn.8). See also "Reserve currency", "Super Imperialism".

2) The global "financial system is really organized to harvest the entire...economic output of the globe. Think of the entire global economy [today] as sending a tithe into something that I call the Black Budget.... secret [off-budget] projects, secret technology" (Fitts, 2014, mn.5).

3) The basic system was established in the 1940's, after World War Two: "The first thing they said...[after] they took a look at the numbers was 'This [US economic dominance] can't last....[so] How do we extract the resources we need to stay in the lead, you know, come what may?', when the global...economy is more balanced, as it has been since [approx. 2000. The CIA Acts of 1947 and (particularly) 1949] created a mechanism that would allow Congress to appropriate money-- and then the Intelligence agencies to pull that money out-- for secret projects. Now that money was then levered with something called the *Exchange Stabilization Fund*, which was created in 1934. It's...an official slush fund, managed for the Secretary of Treasury, by the New York Fed.²²¹ So it's controlled by a private bank, but it plays and trades with the federal [US gov't] credit... The history on that is [that] you have the [private] banks running the Exchange Stabilization Fund, who are also the depository for the US government [via the NY Fed]. So you created a mechanism where the federal credit can be used [for] both appropriations and credit and leverage & trading by private bankers... They're using the federal [government's] balance sheet, but they are private bankers and they are not subject to...government disclosure [regulations, such as] *F.O.I.A.* And...finally... provisions for executive orders...allowed you to spend all of that money on private corporations [contractors]²²² controlling the most powerful secret technology in the world (Fitts, mn.18-20). This is how we have wound up with "a funding mechanism that would allow you to do incredibly powerful secret technology with sort of an infinite amount of government money...behind a

²²¹ The ESF "was set up... when the gold value changed from \$20 an ounce to \$35 an ounce...a huge arbitrage. The Treasury and [gold] Exchange Stabilization Fund came in and pocketed the difference of \$2 billion, and away they went, with the big slush fund" ever since (Titus, 2020, mn.12).

²²² U.S. Code 50, 403a, "part of the *Central Intelligence Agency Act of 1949*", currently defines a US "Government agency" as: "any executive department, commission, council, *independent establishment*, [or] *corporation* [that is] wholly or **partly owned by the United States which is an instrumentality of the United States, board, bureau, division, service, office, officer, authority, administration, or other establishment, in the executive branch of the Government" (United States Code, 2012).

** - "Partly" was, and still is, left up to (apparently Deep State) bureaucrats to decide/define, thus enabling the DoD's 'national security cult' or 'cult of secrecy' shield to be applied to any privately-owned corporation in which the US government has any share of the ownership, however minor or residual. See also "Mind control".

cloud of secrecy, [with] no transparency...” (Fitts, 2014, mn.20). See also “Exchange Stabilization Fund (ESF)”.

3b) “This is exactly... the sort of secret infrastructure, financing, [and] big corporations... [that Eisenhower] was warning people against.... [after] he discovered that he was being cut out of the loop” (mn.21). As far back as the 1950’s, “the most powerful corporations in the world had found a way to get an infinite amount of government financing-- off the books-- and with [that] to control the most powerful technology... out of [effective public] control, and with that you had the beginnings of the Breakaway Civilization. And then what happened.... in the ‘80’s and ‘90’s, we had an explosion of financial fraud.... a financial coup d’état” (Fitts, 2014, mn.22). See also “Central Intelligence Agency”, “Breakaway Civ.”, “Financial Accounting Standards Advisory Board (FASAB)”.

4) “The #1 financier of the black budget has been the American pension funds... [which] buy Treasury securities, and that money goes into the government [via its accounts at the NY Fed], and then it disappears out the back door. It’s no longer there. The [secret] technology... that is so...powerful and expensive has disappeared [from government accounts] and is now on a corporate balance sheet or...owned by private investors...[So] the pension fund beneficiaries... [now only] has a call on a Treasury security that they, as a taxpayer, are [also] liable [for]. So they converted 5 to 10 trillion dollars of *assets* [sic] into 5 to 10 trillion dollars of liabilities on themselves, or their children or grandchildren” (Fitts, 2018o, mn.36). See also “Pension funds”, “Feudalism, neo”.

5) “If you count up all the money that disappeared from the early 1990’s²²³ until the [2008-09] bailouts, that’s basically 40 trillion dollars” (Fitts, 2014, mn.23). At 5% annual interest, “that’s enough money... to finance a world government on a private basis.... a re-engineering of the global governance system” (mn.24). As of Sept. 2017, Fitts puts the aggregate missing federal budget money at “over \$50 trillion” (Fitts, 2017n2, mn.26).

6) Secretary of Defense Donald “Rumsfeld did a modified hangout on September 10th, at a press conference, about the 2.3 trillion dollars missing [from the 2001 Defense budget]²²⁴.... I said to the reporter... [that] it was a big cover story...going to hit every congressional office. And I made the mistake of saying to her, that Friday before 9/11, [that] ‘*nothing can stop this story from going national now*’” (Fitts, 2017d, mn.13). The next year, at a town hall meeting, Fitts asked Tennessee Congressman and gubernatorial candidate Van Hilleary, who was a member of “both the Appropriation Committee and the Budget Committee” about the “\$3.3 trillion... missing from the Department of Defense...3.3 trillion of ‘unaccountable adjustments’. And he said, ‘*Yes, I know*’. And I said, ‘*What are you doing about it?*’ And he said, ‘*Nothing. There’s nothing I can do*’” (Fitts, 2017d, mn.12). “I’m just telling you that the people in Congress *feel* that they can only... do what the establishment is comfortable doing, unless they have 80%” public/constituent support (2017d, mn.13-14). See also “Undocumentable Adjustments”.

7) “I mean after 9/11 [not to mention the anthrax attacks], it was amazing. Congress came out to NSA and said: ‘*Here’s a blank check. You fill in the amount*’” (Binney, 2018c, mn.14). And “literally, as the money was disappearing from...[the US DoD & HUD], the size of the assets under management in the...[offshore banks] was rising.... It almost looked, in some years, like a *direct transfer*”- Catherine Austin Fitts (Komisar, 2020, mn.4). See also “Offshore banking centers”, “National Security Agency (NSA)”.

8) According to some who pry, “construct[s] outside of the law” now “manage the federal money, and if you...look at the money pumping through that, [you will find that] it’s [now] the most significant flow of money in economy” (Fitts, 2018o, mn.20). Make no mistake, “it’s a plan, and it’s going on systematically ...[and the] corporate contractors and Washington law firms...have 21 trillion reasons to prove that you’re wrong” in revealing it.... The covert cash flows are rich and plentiful, and the money that’s disappearing is coming back up someplace else and is being invested, and is creating enormous amounts of economic

²²³ Fitts subsequently revised this, to: “since 1998, \$40 trillion has disappeared...and even more [than that] in Quantitative Easing... [It could be] up to \$100 trillion dollars” (McKinney, 2017b, mn.5). In 2020, Fitts says “lets’ just call it \$50 trillion.... since the mid-90’s” (Fitts, 2020h, mn.10).

²²⁴ That amount “is more than all the taxes that individual Americans paid that year.... It’s like you losing 100% of your budget for the year” (Fitts, 2014, mn.24-25). See also “Housing & Urban Development”.

activity” (Fitts, mn.21-23). “We’re talking about a real governmental push....” (Fitts, mn.25). See also “Breakaway Civ.”, “Federal Accounting Standards Advisory Board (FASAB)”.

9) In 2018, the Dept. of Defense “report on [its accumulative] undocumentable adjustments was more-or-less devoid of numbers. The “agency auditor is redacting the numbers in their reports.... In my entire life...I have never heard or seen [something like] this... I can just see the [DoD] Adjunct’s Office saying ‘No. We’re not gonna lie. We’re not gonna break the law and fake the numbers’. And so the Classified guys are saying, ‘Ok then. We’re gonna redact’...And that’s how they resolved [the intra-department conflict between Open and Classified government]. Because the career employees are smart enough to know...[that] if you break the law, somebody can come back around and get you for it, no matter who ordered you to do it. So they’re holding firm, and...the Classified guys are holding firm, and [the result is] we get a [DoD] published report that is [almost entirely] redacted”, apparently for the first time ever (Fitts, 2018j, mn.18-19). And “we don’t have an official explanation.... If you’re in the civil service, this [problem] is above your pay grade.²²⁵ This is a political issue. It’s got to be solved politically” (Fitts, mn.20). “What is it about secret money for secret, private armies that you don’t understand?” (Fitts, 2019, mn.12). “Congress passes a law that makes the stock market go up and they get a percent as their campaign...financing kickbacks. That’s...how the model works” (Fitts, 2019f, mn.23). See also “Pentagon Capitalism”.

10) “It’s not just the people at the top. America has 3100 counties. The narcotics trafficking and mortgage fraud is happening in each one of them and it’s being done by people who live there... dirty money... is in every neighborhood... If we [the people/citizenry] won’t push the red the button²²⁶ [of anti-corruption], then there’s no way Congress or the President can” (Fitts, 2017b, mn.36). “Our economy is deeply dependent on debt, warfare, and organized crime; and if we want to change, we’ve got to sit down and say ‘Ok, we’re all gonna have to change, and we’re all going to have to stop depending on this money from debt, organized crime, and war’...and ‘How do we make money the honest way?’... It’s going to have to be all of us, because everyone who gets a government check is dependent on the [‘central banking-warfare’] model” (Fitts, 2017b, mn.37). “The key to this is [(as always) public sector] transparency” (Fitts, 2020i, mn.42). See also “COVID”, “Provocation operation”, “Homo Economicus”.

11) “I’m quite sure [that] your [Norwegian] secret Intelligence Community is receiving money from the American secret intelligence services that is not being declared to your parliament and to your Prime Minister, okay? There is a vassal relationship between Norway’s intelligence service and America’s intelligence service.... You give me your top 10 Norwegian intelligence officers for 30 days and I will prove it. Do you understand?” (Steele, 2017c, mn.27). See also “Timarchy”.

12) “We can always find something to do.... You just don’t have to do the evil-doing. You know, you just don’t have to do it” (Fitts, 2018, mn.19).

13) “If you’re going to change that model, you’ve got to go to the New York Fed member banks, the big defense contractors. You got to go to Steve Mnuchin [at Treasury] and Gary Cohn [at the National Economic Council] and Mike Pompeo [then] over at the CIA, and the NSA. So you’ve got to go across

²²⁵ “They don’t have the legal authority [or] the legal power... They could get themselves in a situation-- and I’ve seen civil servants in a situation-- where... they and their families could get hurt” (Fitts, 2018j, mn.21) for going outside and beyond their contractual duties. See also “Deep State”; Shipp, 2017b.

²²⁶ According to Fitts, modern America’s (financial-political) “leadership has always been in a Prisoner’s Dilemma [game, wherein] if they’re the ones who don’t do the organized crime, then the guys who do it are the ones that win-- because that’s who the (“modern”) general population will support” (Fitts, 2018, mn.24). “The swamp that exists in Washington exists from sea to shining sea. It’s not just in Washington. It’s in every county, every statehouse in the country. And if we’re gonna change and cleanse ourself of enormous financial dependency on criminal activities, you know we’re talking about a very big change, and it’s not just in Washington. And it’s certainly not something that the executive branch or the Congress can do alone” (Fitts, 2017r, mn.12). Why? “The American people have made it very clear. They want their check.... At the end of World War 2, the United States had 6% of the...[world’s population] and 60% of the world’s resources. So George Kennan at the State department said ‘To keep this going we’re gonna have to drop a lot of bombs’ because that’s a big, you know, unfairness. And so Barry Goldwater ran for president and said ‘We’re going to have to drop a lot of bombs’. And the American people said ‘Oh, no. We’re good Christians. We don’t like that’. So Jimmy Carter came along... and he sat in front of the fireplace and he said ‘Ok, we’re going to have to cut back, because we can’t hog the resources, if we’re going to drop a lot of bombs’. And the American people said ‘Oh, no. We don’t like that. That’s not a plan’. So the Bushes came along and said ‘You know something? Ya’ll are good Christians. Here’s your check. Don’t ask questions’; [and] we said ‘Okay’... The folks at the CIA have been trained that the American people want their check, and then they want their story. I call it the story of ‘I Am Good’” (Fitts, 2018c, mn.24-25).

government and say: 'Are we prepared to turn the government model and how?'...You know, we've also got to [include some of] Warren Buffett-- the private guys-- too... 'How are we going to turn the model?' And you've got to get them all on board for the plan" (Fitts, 2017i, mn.10-11). "And what it depends on is it's going to depend on the general population taking responsibility and helping.... And I'm hoping the budget process can facilitate this-- when we [concerned citizens] all have to get down and look at the **math**, because it's all going to come down to the mathematics of time and money" (Fitts, 2017i, mn.12-14). See also "Usury", "Compound interest".

14) Then again, holding the military accountable is really nothing new in Western civ. "The idea of [a standing] civic audit of the military is unique [to Western civ.], where the civilians actually participate in the government of the army. I can't think of one general in the ancient world who at one time was not ostracized, executed, or had his property confiscated or [was] at least tried-- every single one of them, from Miltiades to Epaminondas. Even in Sparta, a Lysander or Gylippus found themselves in trouble" (Hanson, 2005).

15) Yes, it's gotten to the (so-called) 'mainstream' (legacy) media. "[O]ur government has not shared *any* underlying data or information regarding the nature of the undocumented transactions. For example, both Mark Skidmore and Dave Lindorff have repeatedly asked the [DoD's] Office of the Inspector General (OIG) to provide an addendum to a report published by the OIG in 2016, which indicated that the Army had \$6.5 trillion in undocumented transactions.²²⁷ Typically, undocumented transactions are a just small fraction of authorized spending. How could a \$122 billion Army financial statement generate undocumented adjustments that were 54 times [more than its] authorized spending?... [T]he most recent OIG report [2018] was fully redacted! Last year the Pentagon conducted its first ever independent audit, which it failed. During the audit process Pentagon officials became concerned that the audit would reveal potentially sensitive information. Several months after beginning the audit, the Federal Accounting Standards Advisory Board (FASAB) posted a new document, which recommended that the government be *allowed to misstate and move funds in order to hide expenditures* if it is deemed necessary for national security purposes.... In addition...[the FASAB-56] Statement allows a component reporting entity to be excluded from one reporting entity and consolidated into another reporting entity, and the effect of the modification may change the net results of operations and/or net position" (Kotlikoff, 2019). See also "FASAB" [FASAB-56].

16) **Black Budget UPDATES: 7/21-** "It appears that a FOIA request will be required to obtain any additional information regarding the nature of the \$94.7 trillion in accounting adjustments [that a Bloomberg article listed in 1/20]. Because we cannot ascertain what proportion of the \$94...trillion [as the article listed for only 3 years-- FY2017-FY2019]²²⁸ are *unsupported* accounting adjustments, we chose not incorporate these figures into the original \$21 trillion [from fiscal years 1998-2015]. In the earlier assessments, we focused our attention [only] on unsupported adjustments-- adjustments the government [itself] judged to be unverified. In summary, these figures are so wildly outside anything that could be expected using fundamental [GAAP] accounting principles that we simply have nothing further to offer other than to note the absurdity"²²⁹ (Skidmore, 2021b).

3/22- Basically, from "1998...a financial coup. And as of 2015...[it] had 21 trillion [dollars in] unaccountable adjustments... [And by] that time there [was also] 21 trillion [dollars] of [federal] debt on the [public] balance sheet. So I levered up the government...[while] I moved money out of the back door, and now I've got it sitting in my bank account [or land]. So the liabilities are on the government, and the assets are in my bank account, outside of the government. So now I've got to tell everybody No Healthcare or Retirement. But I just can't [straight out] tell them that, right? I need a story-- as to something other than: '*I stole your money, I still have it, and I don't want to give it back*'. That's not a ['national'-league] story. So what do you do?.... You attack them for what you're doing. And

²²⁷ The DoD's IG "has refused to provide any additional information, even with a FOIA request. Without any supporting documentation, we are all left with having to decide [USSR-style] whether or not we 'trust' that government authorities are sharing accurate information" (Kotlikoff, 2019).

²²⁸ "Focusing on fiscal year 2019, \$35 trillion in accounting adjustments is 47 times the \$738 billion in authorized DoD funding in that year, and 1.6 times US GDP of \$21.4 trillion. The enormity of the accounting adjustment defies any rational explanation" (Skidmore, 2021b).

²²⁹ The absurdity of 'lost money' equaling the 'national debt' is not unprecedented. "In 1929, a Paris newspaper estimated that... from [c.1899-1929]... more than 300 billion francs (equivalent to the total public and private debt of France...) had been taken from the French people by [the issuance of] worthless securities" (Quigley, 1966, 519-520). See also "Finance capitalism" [France].

you... [develop] a story [for it]-- 'now the magic virus has destroyed...[your] retirement and...[your] health care benefits, and...[your] pensions'.... [So] I want to reduce their number[s] and lock them down in *total* [sic] control.... That's what they're doing, as they're blowing financial bubbles...[to] seize or [eventually] buy up, for as cheap as possible, the remaining assets of that group.... They've [already] stolen \$21 trillion plus, and they're looking to double down.... It...[has long been] obvious... [that] they...[would eventually have to] do something like this"²³⁰ (Fitts, 2022, mn.41-43). See also "Secrecy, cult of", "Technocracy", "Financialization", "Asset inflation", "Middle class", "Propaganda"; "National Debt Economy (NDE)".

BlackRock- (a.k.a. 'world's largest financial institution',²³¹ 'the most powerful co. in the world',²³² 'the 4th branch of gov't'; not necessarily to be confused with Blackstone Group, nor Blackwater [mercenaries])

1) Founded by Larry Fink in 1988 as "an asset manager... [to help] pension funds and retirees manage their savings through 'passive' investments that track the stock market" (Brown, 2020), BlackRock's assets rocketed after the Great Financial Crisis of 2008, to where it was the world's largest financial institution for much of the 2010's. By c.2019, BR was directly managing "over \$7 trillion in assets... [with] another \$20 trillion managed through its Aladdin risk-monitoring software...[and] has...been called 'the 4th branch of government' and 'almost a shadow government'" (Brown, 2020). It's not entirely clear whether banks or asset managers wield more "financial power" today, but many would say it's the latter²³³ (Ibid). See also "Dodd-Frank".

2) BlackRock's "strategic importance and political weight were evident when 4 BlackRock executives, led by former Swiss National Bank head Philipp Hildebrand, presented a proposal at the annual meeting of central bankers in Jackson Hole...in...2019 for an economic reset... Acknowledging that central bankers were running out of ammunition for controlling the money supply and the economy, the BlackRock group argued that it was time for the central bank to abandon its long-vaunted independence... [proposing] the central bank maintain a 'Standing Emergency Fiscal Facility' that would be activated when interest rate manipulation was no longer working to avoid deflation... [to] be deployed by an 'independent expert'.... BlackRock itself [was] appointed to administer it...[in] March 2020...[and] was awarded a no-bid contract under the *Coronavirus Aid, Relief, and Economic Security Act*...to deploy a \$454 billion slush fund"²³⁴ (Brown, 2020). See also "Fischer, Stanley", "Great Reset, the" 'direct'.

3) How did that happen? BlackRock has been subcontracting for the Fed since the **early 2010's**, but "really made its fortunes...in 'exchange traded funds'.... [The] fast-growing ETF [Exchange Traded Fund] sector controls nearly half of all investments in US stocks, and it is... dominated by just 3 giant American asset managers- BlackRock, Vanguard and State Street... By 2017, the 'Big 3' together had become the largest shareholder in almost 90% of S&P 500 firms... [and] owns major interests in nearly every mega-bank and in major media" (Brown, 2020). BlackRock "and the other Big 3 ETFs vote the corporations'

²³⁰ "You attack before you can be attacked" (Fitts, mn.43). See also "Central Banking-Warfare model" (It's not gone yet.).

²³¹ "In 3 decades, BlackRock has risen to become the largest capital organizer in the...West, mainly by collecting and investing the capital of the super-rich. Business families or top managers that have at least \$50 million of discretionary wealth can become a customer.... BlackRock co-owns 18,000 companies... including all...[the tech giants] and... the 2 largest rating agencies, Standard & Poor's and Moody's. As the largest insider [shareholder], BlackRock can access decisive data the fastest-- before other...speculators.... [It] is also the largest organizer of shell companies.... [I]nvestors are [easily] made anonymous, nameless and invisible to the public, tax authorities and financial regulators.... [Its] ALADDIN [is] the largest robotic facility for the collection and exploitation of financial and economic data... [T]he values and performance of all stocks and other securities on all stock exchanges in the world are captured [there] and used speculatively" (Rügemer, 2021). See also "Rentier", "Insider trading", "Neo-feudalism".

²³² Think that "no decisions can be pushed through with...[only 5% of shares?] Yes...[they] can, because with BlackRock there are usually always, in varying composition, a dozen similar capital organizers who are also shareholders at the same time, for example Vanguard, State Street, Amundi, Norges, Wellington, Fidelity, Capital Group-- and they talk to each other" (Rügemer, 2021). See also "'New World Order'".

²³³ "Giant pension and other investment funds largely control the stock market, and the asset managers control the funds. That effectively puts BlackRock, the largest and most influential asset manager, in the driver's seat in controlling the economy" (Brown, 2020). All the "super-rich... have their discretionary capital invested with BlackRock & Co" (Rügemer, 2021).

²³⁴ As of May 30th, "the only purchases made under the Fed's new BlackRock-administered SPVs were ETFs, mainly owned by BlackRock itself" (Brown, 2020).

shares... 90% of the time in favor of management" (Ibid). See also "Big 3 (Asset managers)", "Wall Street".

4) The "Financial-State" stage of capitalism is akin to "looting". BlackRock "is after...capital gains. They would like to push money into the Chinese stock market-- and [substantially larger] real estate market-- and see the prices go up and...inflate the prices... and then sell out at a high price, pull the money out, get a capital gain, and let the economy...crash. I mean that's the business plan" (Hudson, 2020c, mn.51). See also "Capitalisms", "Financial Accounting Standards Advisory Board" ["FASAB-56"].

5) As a nonbank "fiduciary", BlackRock is (primarily) regulated by the SEC. See also "Nonbank Financial Institutions (NBFIs)", "Stock markets", "Regulation".

5b) BlackRock itself is also now something of a regulator. In 2020, the firm "voted against 69 companies and against 64 directors [supposedly] for climate-related reasons, and...put 191 [other] companies on watch" (Webb, 2021, mn.29) for the big thumbs down. BR calls this "stakeholder capitalism" (Ibid). See also "Internet of Things (IoT)", "Climate change", "Groupthink", "Market fundamentalism", "Feudalism, neo", "Capitalisms" [.disaster].

6) "[W]hat BlackRock is at the heart of doing is engineering a...complete takeover of the Treasury function, by the central banks... The electorate is getting pushed out. And that's why the issue is going to come down to 'taxation without representation'.... 'Why should we pay taxes for something that is destroying us, destroying our businesses?'" (Fitts, 2021e, mn.32). See also "Biden, Joseph", "Offshore", "New World Order", "Revolution".

See also "Shadow Banking Sector (SBS)", "Monetary reform", "Mutual funds" [EFMFs].

Blackstone (3.5 centuries of)- See "Natural law" [Blackstone]→ "Race-to-the-bottom"→ "BlackRock" [Blackstone].

Black market economies- (synon. 'informal sector', 'underground economy') pretty much a direct correlation with "inefficient [poor] tax collection" (Sivramkrishna, 2016). For example...

1) In Pakistan²³⁵ (which relies on foreign remittances for __%), "3 quarters...are employed informally." - <https://www.youtube.com/watch?v=255RmThqeAs> [CaspianReport10/22, mn.9].

2) In Chile (which relies on VAT/sales taxes for almost half its revenue), >25% of employment is black market/underground.

See also "Chile", "Russia" (both of which rely on VAT), "Cashless Society (War on Cash)".

²³⁵ (Public sector) debt, c.2021, is 75% "of GDP. Beginning in 2019, Islamabad sought loans from the IMF... [with] a second round in Jan. 2022, was [only] allowed on the condition [that] Islamabad impose [the usual prescription] regressive taxes and cut fuel subsidies. By March, however, popular discontent moved...Prime Minister Imran Khan [r.8/18-4/22; founder of founder of the Pakistan Tehreek-e-Insaf (PTI) party in the mid-90's] to re-introduce subsidies, creating tensions between him and the military, which wanted to stay in the IMG's good graces...[So] Khan was deposed in a no-confidence vote [in Parliament]. His replacement, Shehbaz Sharif, pulled back subsidies and imposed a levy increasing petroleum prices by 2/3rds and electricity prices by half... [pushing] inflation to 27%, the highest in 40 years.... Impoverished families have seen their incomes decrease by 2/5ths...[& a commensurate rise in child employment and] 'pay-day loans'"- (Ibid, mn.9-10). Pakistan also "owes more than \$1bn. to Chinese firms, due to deals related to the 'China-Pakistan Economic Corridor'... [and, yes, the] IMF...is concerned that repayments to Chinese firms could...[make things] unsustainable in the long-term." (Ibid, mn.12). See also "Washington Consensus", "China", "Monetary reform".

Blockchains- (the most successful implementations of distributed ledger systems to date)

1) The *Harvard Business Review* defines blockchain as a distributed ledger or database open to anyone; although so-called “private” or “permissionless” blockchains **are** also in development (2016). It is “not a single technology, but rather a protocol– a way of doing things– for recording transactions. Unlike the internet, in which data is shared, in a blockchain ownership can be transferred from one party to another” (ICAEW, 2017); thus enabling the “intricate property rights needed for complex digital assets... for which time-stamped proof of authorship is crucial” (Gilder, 2018, 185).

1b) According to other technologists, however, it’s simply more ‘the computer says...’: one simply has “to trust the cryptography, the protocols, the software, the computers, and the network. And you need to trust them absolutely.... When that trust turns out to be misplaced, there is no recourse. If your bitcoin exchange gets hacked, you lose all of your money. If your bitcoin wallet gets hacked, you lose all of your money. If you forget your login credentials, you lose all of your money. If there’s a bug in the code of your smart contract, you lose all of your money. If someone successfully hacks the blockchain security, you lose all of your money. In many ways, trusting technology is harder than trusting people. Would you rather trust a human legal system or the details of some computer code you don’t have the expertise to audit?” (Schneier, 2019).

2) Will *peer-to-peer* distributed ledger technologies be the **Payment System(s)** of the 21st century? Distributed ledger technologies (such as blockchains) may serve, first and foremost, as both secure and transparent ways to trace the ownership of assets. Herman Gref, the chairman of Russia’s largest bank²³⁶ and former Minister for Economics & Trade, has stated that blockchain technology has the potential “to turn all the spheres upside-down: that of state regulation, functionality of the state in general, finance– every single one”²³⁷ (Lavinskaya, 2016).

2b) More soberly, while “there are undoubtedly some technological and legal challenges to solve before blockchain can be fully bedded into the financial recordkeeping systems of the world.... [it will eventually] create certainty over rights and obligations and provenance, which in turn would empower the accountancy profession [in particular] to expand its scope to [simply] **record more** types of activity than

²³⁶ Sberbank’s current vice-president, Andrey Sharov, ventures even further, predicting that: “*In 10 years, there will be no banks....* [The] Bank of England has established a consortium of 50 English banks rebuilding their banking models completely... I’ll have no place to work at’. Sharov seems to have confused the Bank of England with [the] R3 blockchain consortium which now has over 40 member banks... [Although the BoE] has been increasingly showing interest in blockchain technologies” (Econotimes, 2016b). Olga Skorobogatova, current deputy chairman of the Central Bank of Russia, has chimed in that blockchain technology “‘is the future, and we need to prepare for it’”; with even Putin’s Bitcoin-phobic “Internet Advisor” adding that, with blockchains, “‘We cannot even imagine how different it will be. When every ruble has a recorded owner, it will become a truly different world’” (Econotimes, 2016).

²³⁷ In other words, if one considers “just the capabilities of blockchains without smart contract functionality, a full implementation [in terms of peer-to-peer accounting] could lead to [the] disintermediation of a large part of the financial system. Private blockchains between groups that often transact with one another could replace central authorities [and middlemen] such as banks, clearing-houses and lawyers. With the ability to directly interact, and with only 1 ledger that never requires reconciliation, businesses could save on both the costs of paying the ledger owner, as well as efforts spent reconciling with their counterparties.... The permanent [and unalterable] record of a blockchain reduces the chances for financial crime, thus making records more trustworthy” (ICAEW, 2017, 3).

before, and to drill down closer to **the economic reality** underpinning the transactions recorded” (ICAEW, 2017). See also “Tickbox”.

4) Increasing the liquidity of everyday assets is, nonetheless, an important concept. Hence, in a post-Monetary Reform environment, next to the new 1st-tier “official unit of value-- the currency, real assets... can trade much easier, by way of [blockchain] tokenizing it. So, next to...[the official, 1st-tier] money...you can have [still] more liquidity by way of transferring [such] real [value]” in what would effectively be **the new 2nd-tier money** (Wortmann, mn.20). One could thus store “shares and [private] bonds in a very liquid [and **secure**] way, and transfer them almost as easy as you could transfer [1st-tier] money” (Wortmann, 2018b, mn.21).

4b) (Wortmann, 2022).

5) According to fmr. NASDAQ CEO Robert Greifield, “100% of the stocks & bonds trading on Wall Street today could be tokenized,²³⁸ and in 5 years, 100% of the stocks & bonds on Wall Street *will* [sic] be tokenized” (Krystle, 2019).

5b) Investor Matthew Mellon **sees** “Bitcoin... protocol” (i.e. the decentralized peer-to-peer network) as “a game changer, world-wide.... I see you as paying everything with your I-phone, 5-10 years from now... It’s going to revolutionize banking” (Mellon, 2014, mn.23-24). “You know one way banks will look at it is, you have your social security number, and then you have your checking account number, and then you have your *wallet address*. And... with the blockchain being fully transparent, you can see...every transaction, going forward **and backward**... validation brings...light to that” (Mellon, mn.20).

See also “Payment Systems”, “Cryptocurrencies and Stablecoins”, “Cashless Society (War on Cash)”.

6) It is no secret that, as of 2019, a number of “**governments**...are prioritizing blockchain technology as a key component of their efforts to counter US financial power.... The Bitcoin software code enables users to send *non-copyable* digital assets, known [with some exaggeration] as [private sector] cryptocurrency or [government sector] digital currency, to another person without an intermediary, [thus eventually] removing the role of the traditional banking sector” (Fanusie & Logan, 2019, 6). Even though “blockchain ventures currently depend on real-world fiat currency and conventional bank accounts.... [that may no longer be the case, in] may be **2 to 3 decades**...[and] these actors are developing the building blocks now.... Iran’s central bank is highly motivated to develop an alternative to SWIFT [code international payments, and] ...China’s buy-in... would be a game-changer” (Fanusie & Logan, 7). The Foundation for Defense of Democracies report concludes that: “new financial pipelines are going to require innovative approaches to governance and compliance in order to maintain global financial integrity.... The way forward is not to just consider the threats emanating from various types of fintech, but to think more creatively about how the [entire] global financial system should adapt to technological change” (Fanusie & Logan, 2019, 23). See also “Monetary reform (international)”.

7) Professor Keen adds that the “flexibility of bitcoin [blockchain] is all very well, but a global [i.e. a nationless, or even a nation-tethered] bitcoin [even *if* it eventually worked] could wind up causing all sorts of regional catastrophes”, as has the Euro (Keen, 2016q, mn.23). See also “Dystopia” (unaccountability).

8) With blockchain, “Basically you can create an open-source ledger system... If you could get that going and have it work, [then] you could dramatically reduce transaction costs²³⁹.... The rollout... is going to be very organic. I don’t even think Mr. Global knows” (Fitts, 2016b, mn.40). But “Mr. Global never lets out anything that he doesn’t have a backdoor for” (mn.41). “I was just listening at a conference, to a presentation by an activist saying: ‘Here’s how we are going to use blockchain technology to implode the

²³⁸ Unlike encryption, which protect data in motion, *tokenization* protects data at rest (by disabling its exploitable meaning or value), in order to reduce the risk of unauthorized access or accidental exposure.. It is not possible to extract sensitive data from a token unless it has been decrypted.

²³⁹ ...but not before (dramatically) increasing costs. Blockchains are “expensive and [still] incredibly energy-intensive; as one IAFP speaker conceded, there must be mass participation for blockchain to make sense. Cybersecurity...[is] also...an issue... It is [still] unclear how well blockchain protects the confidentiality of proprietary information. Scalability, too, is an issue with blockchain; the required data storage capacity of the technology is huge. Further, blockchain is immutable once data are entered...& time-stamped, [so] *poor-quality data* can’t be rectified” (Kennedy 2022).

government and then re-privatize everything...basically the [1990's] rape of Russia plan" (Fitts, 2017o, mn.12). See also "Russia" [.post-Apocalyptic].

9) For the time being at least, the technology's actual use is still limited to authenticating collectibles, such as virtual baseball cards: "Think [of] the digital version of a rare or one-of-a-kind baseball card or Beanie Baby [or tulip]. How do you know it's real?...[from] a blockchain network, which can cryptographically verify its authenticity without... any central authority. Many people believe...[that this] concept is powerful enough to finally inspire the masses to use blockchains...[or] at least [to] play games with them.... Players of *Gods Unchained* must assemble their own personal [playing card] decks by collecting cards that offer advantages in the game.... Rarer cards are more valuable. Blockchain technology, which is notoriously slow and inefficient [i.e. still useless] at processing transactions, will only be used to keep track of the cards and who owns them" (Orcutt, 2019). Kind of like a half-baked E-Bay for intangibles, "Blockchain allows players to [more specifically] monetize their time" (Ibid).

10) And-- speed/utility aside-- there is still some degree of controversy over the security. "The transactions going in and out are not secure.^{240 241} The encryption, in my opinion, is not secure. Blockchain cannot be done on scale economically yet. I think we can certainly get there.... And the way you're gonna get [the 'formidable' amount of gigs] worked out... is to run...[the Bitcoin] price up and keep it up and going.... Getting...[blockchain] to something that is risk-managed and secure is gonna take a lot of invention, and the cheapest way to do that is to run the [Bitcoin] price up.... If you look in terms of what needs to be invented...I think they can take the [Bitcoin] price much higher. Why wouldn't they?...." (Fitts, 2017r, mn.30; 33-37). See also "Cryptocurrencies and Stablecoins", "Digital cash/currencies", "Accounting, universal-entry".

11) Meanwhile, in December 2019, "China's official Xinhua news agency reported that more than 3.1 million Chinese litigation activities from March to October... were settled through the blockchain and AI-powered smart internet courts. In these 'courts of the future', citizens [subjects] are able to [must] communicate with non-human, virtual, AI-powered judges [programs] in front of multiple screens, which negates the need for them to physically appear in court. The system also creates the possibility for citizens [subjects] to receive their court decisions [verdicts] by text or through major messaging services. After establishing the 'world first' smart internet court in the eastern city of Hangzhou in 2017, China [has] launched similar operations in... Beijing and Guangzhou.... According to a report released by the Supreme People's Court, more than 1 million citizens are already registered with the smart court system, along with 73,200 lawyers.... In...[2018] China's Supreme Court ruled that evidence authenticated with blockchain technology is binding in legal disputes" (Cant, 2019). See also "Tickbox".

12) Blockchain Updates: 7/22- More than 1600 computer scientists, software engineers, and technologists submitted an open letter to Congressional Banking & Financial Services Chairs, stating that: "We strongly disagree with the narrative-- peddled by those with a financial stake in the crypto-asset industry-- that these technologies represent a positive [anything for] financial innovation and are in any way suited to solving the financial problems facing ordinary Americans.... Blockchain technology cannot, and will not, have transaction reversal or data privacy mechanisms because they are antithetical to its base design. Financial technologies that serve the public must always have mechanisms for fraud mitigation and allow a human [being]-in-the-loop to reverse transactions; blockchain permits neither" (Martens & Martens, 2022b).

8/22- In the food sector, however, "hundreds of Chinese poultry farmers [have started] raising organic free-range birds...using the technology to combat fraud from factory farms that are also claiming their birds are free-range. The free-range organic birds are [simply] tagged with an anklet 'that tracks and reports every aspect of their lives'. Another blockchain product, the IBM Food Trust, [now] has over 80 brands using it. Consumers can use a QR code

²⁴⁰ E-security design is an ongoing concern: "Fundamentally, any kind of asset ledger will have to be designed around the limitations of privacy that a [particular] blockchain creates. While the data in each transaction *can* be encrypted, if [however] the provenance or ownership of assets is at stake, then [the] prior transactions must [all] be public to verify this. Finding a way to *balance* the competing [design] priorities of 1] decentralisation, 2] privacy, and 3] security is a current area of research among blockchain specialists" (ICAEW, 2017).

²⁴¹ The US DoD, however, in 2019, reached a different conclusion: "blockchain protocol...will [eventually] allow personnel from anywhere to transmit *secure* messages, or process transactions that can be traced, through numerous channels of a *decentralized ledger*. The application will be used in different ways, including facilitating communication between units and headquarters... DARPA also has been trying to develop an unhackable code-- which blockchain could facilitate..." (Norquist, 2019, 48).

to determine the processor and the farmer of the food they are eating-- a globalized virtual version of 'know your farmer, know your food'. Blockchain is also being used for beef to determine if the cattle are in fact grassfed, and it is being used to detect *food fraud* with products like olive oil. Foods that can show farm-to-fork traceability can get a **premium** price.... [The] FDA has employed blockchain in a pilot program to improve the traceability of seafood" (Kennedy, 2022). Then again, "I don't think that traceability buys you anything in terms of safety"; traceability "isn't going to solve....[what is] the problem of integrity.... It doesn't solve any of the [real] problems" (Fitts, 2022j, mn.29-30).

Boards/Board Systems- (a.k.a. "market forces" [euphem.], 'oligarchy' [negative connot.]); that which lies behind 'market forces', 'free markets', and other personification fallacies such as 'big government') See Introduction; "Freedom Continuum (maturation)", "Myths, Big 6", "Corporate Media Cartel"²⁴² → "Groupthink" → "Dumb-downing"²⁴³; "Debt cycles" → "Cultural Calendar"; "Oligarchy" → Appendix C: "1-2-3". 1) "People who live outside Disneyworld call the shots of what happens in Disneyworld" (Magarshak, 2021, mn.8). See also "Tickbox", "Monty Python's".

['Peak yang', c.1979]

Bond funds (global)- "primary creditors in [the] debt crises of 1980s and 1990s were [simply] banks and governments. Nowadays [the primary] creditors are largely a multitude of bond funds."

- Adam Tooze, Twitter, May, 12, 2020

Bond markets (global)- 'Bond' is often "used as a generic term" for debt instruments in general. "The security is [often] a contract to buy 3-month Eurodollar time-deposit futures at near today's prices at a specific date when the Fed moves. In...1998, when [Henry B.] Gonzalez left Congress, a \$1mn. contract, called the 'trading unit', could be purchased for \$470" (Auerbach, 2009, 219).

²⁴² more-or-less a joke of corruption, since (at least as far back as) the 1980's: <https://www.youtube.com/watch?v=-hJz3QX3st8> [Cabellero's board]

²⁴³ <https://www.youtube.com/watch?v=tnVKGgPpETs> ['look what']

See also “Debt securities”, “Eurodollars”, “Insider trading”.

Bond yield curve- (synon. ‘the yield curve’, or ‘the yield spread’ between 2 and 10-year T-notes)

1) “a graph of yields on bonds from short to long maturities, from as little as one day out to 30 years...[T]he typical shorthand is to describe the curve in terms of the spread... between the 2-year Treasury note, which reflects market expectations for future short-term rate changes by the Federal Reserve [steering], and the 10-year note...the benchmark for longer maturities. The *2s-to-10s spread* has contracted steadily, last week...[falling to only] 25 basis points (1/4th of a percentage point)...the flattest since July 2007. The Great Recession began in December of that year... A flatter yield curve is like a falling barometer and indicates an economic storm is brewing....” (Forsyth, 2018).

2) “People [simply] don’t want to be in longer-term bonds when interest rates are going to go up, because that means the long-term bond prices...[should] go down. So the way you protect yourself from the loss of a [medium or long-term] debt instrument is to hold very short-term debt instruments, like 90-day Treasury bills” (Roberts, 2018c, mn.22-23).

3) The 1-year-to-10-year yield spread [i.e. the difference] narrowed 43 basis points between 2013 and mid-July 2018 (Forsyth, 2018). “They just don’t want to get close to long-term capital risk” (Roberts, 2018c, mn.25). See also “Recession”, “Interest”, “Debt-Deflation”.

[.9 correlation]

Bonds- (synon. ‘fixed income’ investments/claims, which is a subset of ‘fixed income securities’)

1) The primary US bond markets are: Treasuries [\$14.5 tn.], Mortgage-Backed Securities [\$9.3 tn.], corporate bonds [\$8.8 tn.], municipal bonds [\$3.9 tn.], federal agency securities [\$1.9 tn.], and Asset-Backed Securities [\$1.5 tn.]²⁴⁴, totaling approx. \$40 trillion in 2017.²⁴⁵ Only the derivatives [since c.2000] and Forex [since the 1970’s] markets are larger.

2) are debt instruments that may be sold to anyone. The US Treasury sells bonds to ‘primary dealer’ banks for Central Bank (RAB) money creation, or to individuals and foreigners for TAB (‘deposit’) money. Banks may then use these bonds to buy RAB (reserve) money from the Fed through Open Market Operations. Banks may buy bonds from the Fed for Reserve in order to reverse the Reserve creation. Banks may also choose to borrow Reserve money from the Fed at the Fed’s Discount window. These are generally *one-day repurchase loans*, with US bonds as collateral. See also “Open Market Operations (OMOs)”, “Primary dealers (23)”.

3) Unlike stakeholders or shareholders, the “bondholders’ interest is solely to extricate as much as they can as quickly as possible with little concern for the social devastation they cause” (Hudson, 2015, 5). See also “Usury”, “Rentier”, “Monetary reform”.

4) In contrast to commercial bank [TAB] ‘deposits’, “bond financing” is a form of near money/shadow banking, and may be conducted by any “ordinary finance company-- a business model requiring no

²⁴⁴ All figures are for 2017 (from *The SIFMA Fact Book 2018*, p.29).

²⁴⁵ According to the B.I.S., the aggregate US bond market accounts for nearly 40% of the \$100 trillion “global bond market”, with the “EU28” a distant second at \$28.2 tn., Japan third at \$12.7 tn., and then China at \$11.8 tn. (SIFMA, 2018, 51).

special charter” (Ricks, 266, n11). If there is a breach of contract, a judge may order the debtor to pay the *face value* of the bond (pro-debtor), or the *present value* (pro-creditor).

5) The “bond markets are officially silent. Bond markets pose the same problem to a cultural anthropologist as a nonliterate tribe deep in the Amazon. In part this is due to the absence from the bond market of the educated classes... how unfashionable bonds once were. In 1968, the last time a degree count was taken at Salomon Brothers, 13 of the 28 partners hadn’t graduated from college, and one hadn’t graduated from the 8th grade. John Gutfreund was, in this crowd, an intellectual; though he was rejected by Harvard, he did finally graduate (without distinction) from Oberlin” (Lewis, 1989, 41).

6) The “presence of millions of small investors had politicized the stock market. It had been regulated and legislated to at least seem fair. The bond market, because it consisted mainly of big *institutional investors*,²⁴⁶ experienced no similarly populist political pressure. Even as it came to dwarf the stock market, the bond market eluded serious regulation. *Bond salesmen* could say and do anything without worrying that they would be reported to some authority. *Bond traders* could exploit inside information without worrying that they would be caught. *Bond technicians* could dream up ever more complicated securities... so many derivatives [have] been derived, one way or another, from bonds.... The bond market customer lived in perpetual fear of what he didn’t know. If Wall Street bond departments were increasingly the source of Wall Street profits, it was in part because... it was still possible [there] to make huge sums of money from the fear, and the ignorance, of customers” (Lewis, 2011, 61-62).

7) The stock market “is dwarfed by the bond market,²⁴⁷ and all the other international markets for debt instruments... a bond is... [just] a debt instrument. It gives the owner a claim on an underlying asset or organization... a company...a state, a country... at the end of the day... a claim on people... a claim on the value created... So [that] people’s labor is in effect owned by the bond-holders. And the people who are under the bond’s [claim] are forced to work in order to pay it off. And that’s because there are always more of these bonds in the system than dollars.... In fact there’s no money in this system unless the country is in debt... [O]n the Fed’s balance sheet, you’ll always see more bonds than Federal Reserve notes... [Thus] it puts the entire country in a state of scarcity, it forces the population to basically jump on the hamster wheel.... The Fed is able to keep the US government in a servitude relationship based on scarcity, which then forces about 310 million people to be customers of the commercial banks, in order to have [TAB] money. Brilliant” (Vrabel, 2011, mn.10-11). “This means that almost the entire population [98%] is working-- spinning on the hamster wheel-- to pay the [2%] owners of these bonds” (Vrabel, mn.12). Within the context of a government that sells bonds to these international markets, instead of issuing debt-free currency directly, politicians are employees, as a CEO is to the Board of Directors & shareholders. “Politicians talk about ‘hope and change’, [and] got us all excited. But they don’t really run things.... Hope & change from the mouths of politicians is no match for the power of the bond market” (Vrabel, 2011, mn.19). “The first thing to remember is that we are all stuck in a system that must continually grow, just based on the math of the bond market” (Vrabel, mn.56). See also “Derivatives”, “Usury”, “Hypertrophy”.

8) Moreover, ever “since the 1980’s, when the leading bond firm, Salomon Brothers, had made so much money that it looked as if it was in a different industry than the other firms, the bond market had been where the big money [is] made.... Just about every major Wall Street *investment bank* was effectively run by its bond departments. In most cases... the CEO was a former bond guy.... [Nonetheless most] people [on Wall St.] didn’t understand how what amounted to a two-decade boom in the bond market had overwhelmed everything else” (Lewis, 2011, 25). See also “Debt cycles”.

9) Bond markets are famous for leading the stock markets,²⁴⁸ and-- as with any debt-based instrument-- in the aggregate are subject to decades-long trends (which their promoters may still attempt to ascribe to ‘forces of nature’, unaware of the irony that that is what they were designed to counterfeit). For example,

²⁴⁶ See also “Big Government (growth of)”, “Burien, Walter”.

²⁴⁷ Like the conventional money supply (M1) is also now dwarfed by ‘near monies’.

²⁴⁸ But they don’t lead GDP growth. “[A]fter the sharp growth acceleration in 1983 it took over a year for bond yields to rise. For decades...US interest rates [bond markets] have not moved ahead of growth, but instead they followed it” (Werner, 2016c).

“The 35-year secular bull market in bonds ended this past summer. It’s over; and that’s due to Trump trade policy, Trump infrastructure-spend policy, Trump hates Janet Yellin policy. You know, you name it, there [are] a bunch of catalysts here... driving change” (Townsend, 2016, mn.9).

10) Of course, Trump or no Trump-- given some prescience of crude debt cycles-- one “could have [simply] bought the 10-year bond or the 30-year bond in 1981, gone to sleep for 37 years, done nothing useful that resembles human activity, and you’d be a rich man today, because the yields fell... year-after-year.... The false lesson of that 37-year run of ever-ever declining yields was that you don’t have to worry about getting too leveraged, because [first] you’ll never have to pay it back-- the market is so low... [that] you can [always] re-finance; and secondly, when you re-finance, your interest rate will be lower, and your carrying costs will be lower, and...[it’ll] be even easier than...the first time at bat” (Stockman, 2019, mn.25-26). See also “Bond yield curve”.

11) “[W]hat’s actually driven the decline in [bond] yields, which of course increases the value of the bonds, is the rising level of private debt...[signifying] that the world economy simply cannot tolerate anything much above a zero rate of interest” when debt levels are so high (Keen, 2017e, mn.20-21).

12) The tide turned in 2016: “Long bonds are going to be down, interest rates are going to rise, and the [ever-easier bankmoney] party’s over” (Fitts, 2017, mn.6). “The long-term bull market in bonds is over” (Fitts, 2018h, mn.12). See also “Debt cycles”.

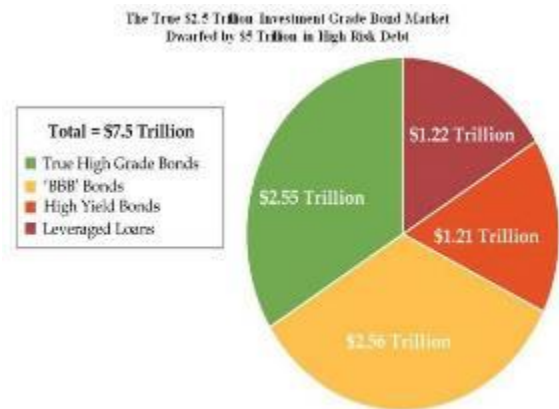

13) Is what’s actually driving the energy of the bond markets a perverse sort of fundamental dishonesty? “Eventually, they figured out that language served a different purpose inside the bond market than it did in the outside world. Bond market terminology was designed less to convey meaning than to bewilder outsiders.... Overpriced bonds were *rich*, which almost made them sound like something you should buy. The floors of subprime mortgage bonds were not called floors, or anything else that may lead... to...any concrete image in his mind, but [rather] *tranches*. The bottom tranche, the risky ground floor, was not called the ground floor, but the *mezzanine*, or ‘the mez’, which made it sound less like a dangerous investment and more like a highly-prized seat in a domed stadium. A CDO composed of nothing but the riskiest, mezzanine layer of subprime mortgages was not called a subprime-backed CDO, but [rather] a *structured finance* CDO. [Even on Wall St., there] was so much confusion about the different terms... that... we realized that there’s a reason why it doesn’t quite make sense to us. It’s because it doesn’t quite make sense. The subprime mortgage market [in particular] had a special talent for obscuring what needed to be clarified. A bond backed entirely by subprime mortgages, for example, wasn’t called a subprime mortgage bond. It was called an ABS, or *asset-backed security*... [W]hat assets actually secured an asset-backed security”? More acronyms: “RMBS stood for *residential mortgage-backed security*. HEL...stood for *home equity loan*. HELOC stood for *home equity line of credit*. Alt-A was just what they called ‘crappy mortgage loans’²⁴⁹, for which they haven’t even bothered to acquire the proper [verification] documents...” (Lewis, 2011, 126-127). All “this stuff inside the [subprime mortgage] bonds was pretty much...the same thing... The Wall Street firms just got the [credit] ratings agencies to accept different names for it...” (Lewis, 128).

²⁴⁹ More commonly known as N.I.N.J.a or “Liar’s” loans.

[US Fixed Income Asset Classes, 2016 (Rupp, 2017)]

[...by Rating, rising share for lower grades]

Bonds, global- c.1990, US treasuries were still a majority of it

Bonds, government- (a.k.a. ‘treasuries’ [US], ‘gilts’ [UK], ‘bunds’ [De], ‘sovereign bonds’ [Wall St.]; “no, we don’t own our national money; we are...renting it from the banks” [Still, 2019h, mn.13])²⁵⁰

1) “From the verb meaning ‘to bind’. The ancient meaning referred to the shackles by which creditors kept their debtors in personal bondage. Since debt bondage and debtors’ prisons have been outlawed, the term has connoted the legal financial shackles by which debtors are bound to pay their creditors, subject

²⁵⁰ ...because they’re still so much smarter than us (monetary constituents). Constituents? Yes, it is (yet another) myth that banks somehow give the government its (federal funds-RAB) money. While non-bank individuals and businesses do pretty much ‘rent’ (2nd-tier) TAB-bankmoney from the banking sector, ‘sovereign’ governments do not ‘rent’ (1st-tier) federal funds-RAB money. “The government creates the money by running the deficit...It’s not a case of needing to sell the [government] bonds to cover the deficit... [Such gov’t bonds simply] provide an income source for the finance sector” (Keen, 2020b, mn.35); and are not necessary for the federal funds-RAB (primary) money-creation process. See also “Big picture”, App.C: “1-2-3.”

to bankruptcy laws.... Government bonds reflect the political choice to refrain from creating public credit. This decision obliges the government to borrow from creditors at interest, and to let commercial banks monetize their own credit to extend to the government”²⁵¹ (Hudson, 2013). “It’s a silly [and unnecessarily complex] system that at some point must come to an end” (Still, 2019h, mn.13). See also “State capture”, “Owners, the”, “National Debt Economy”; Titus (2019).

2) And if, say, “only 10% of the [offered treasury] bonds were sold, [then] effectively the central bank would act as the underwriter for the other 90%” (Keen, 2018b, mn.43). But it’s easy/free money for the banks, as the US government has more-or-less never defaulted on bond payments, “so the bonds are *always* fully subscribed, and the government always gets the money that it wants” (Keen, mn.44).

3) “US savings bonds are not transferable by law. But if we made them transferable, they would be like a money” (Grubb, 2013, mn.35). See also “Shadow banking (SBS)”.

4) “Here is the point: If our nation can issue a dollar bond, it can issue a dollar bill. The element that makes the bond good makes the bill good... It is absurd to say our Country can issue bonds and cannot issue currency. Both are promises to pay, but one fattens the usurer and the other helps the People.... It is a terrible situation when the Government, to insure the National Wealth, must go in debt and submit to ruinous interest charges at the hands of men who control the fictitious value of gold. Look at it another way. If the Government issues bonds, the brokers will sell them. The bonds will be negotiable; they will be considered as gilt edged paper. Why? Because the government is behind them, but who is behind the Government? The people. Therefore it is the people who constitute the basis of Government credit. Why then cannot the people have the benefit of their own gilt-edged credit by receiving non-interest bearing currency... instead of the bankers receiving the benefit of the people’s credit in interest-bearing bonds?”- Thomas Alva Edison.²⁵² In a debt money system, the government borrows money that it could easily produce itself for free. It borrows either directly or indirectly from the private banks. It is the greatest source of corruption in the political world. See also “Monetary reform”.

5) Edison was ignored. “We had 7 big war bond drives in World War II. I never bought one, because they were a lie. And they had Bob Hope and everybody that you had ever heard of. In those days they really had some people.... The ‘Victory Drive’...[to go] over the top.... Every one of them...[was] a lie. What they did is, just before midnight on the last day, they [just] gave the rest of them to the banks; and the bankers paid [for] them in [bank] credit” (Quigley, 1976b). See also “State capture”.

6) Up to the late 1980’s, “just about everything written about Wall Street had been about the stock market... where most of Wall Street lived. My book [*Liar’s Poker*] was mainly about the bond market, because Wall Street was now making even bigger money packaging and selling and shuffling around America’s growing debts” (Lewis, 2011, xiv). See also “Debt securities”, “Nonbank Financial Institutions”.

7) “Don’t issue bonds”; governments should instead reduce monetary expenses by getting “...the money [directly] from the [current] creators of the money supply. Why get it from anyone else?.... The finance ministry should enter into loan contracts with the banks” (Werner, 2015b, mn.111). If fiscal stimulus “is funded through issuing bonds, then it’s [eventually] pulling the money out of the economy again...” with interest payments (Werner, 2015b, mn.113). See also “Window Guidance”.

8) The world’s Big 3 bond indexes are run by J.P. Morgan Chase, Citigroup, and Barclays (Hong, 2018). See also “Direct financing”, “Creney”, “Big 5 (High St.) Banks”.

²⁵¹ Hence, “selling bonds to people...is deflationary. But selling bonds to a bank...is inflationary-- because they can make the money to buy the bonds and add, therefore, to the supply of money.... [and] It’s [all] inflationary [at the end of the day], because that is what the small group of people who really dominate the system want. And they want it because they are in equity...[more than credit]” (Quigley, 1976b).

²⁵² *The New York Times*, December 6, 1921. Edison sounds like he may have read Henry George, who wrote: “What can be clearer than that a note directly issued by the government is at least as good as a note based on a government bond? Yet special interests have sufficed with us to institute and maintain a hybrid [semi-public/semi-private] currency for which no valid reason can be assigned [other] than private profit” (George, 1886, 12).

[War/bonds economy]

Book money- (a.k.a. *buchgeld* [.de], *monnaie scripturale* [.fr], *money of account* [U.S.C.]) See “Account money”.

Book-entry money- (century-long migration from meaning RAB to meaning TAB and/or ‘account money’)
1) Originally *fin de siècle*-era City-speak for “Reserve/Central Bank” (RAB) money, probably intended to deliberately conflate RAB and TAB, both of which are created as such.... because subsequently, by the 1980’s, the term was more often used as a synonym for TAB bankmoney *balances.
2) Over perhaps the past half-century, usage of the term has been split between TAB-bankmoney (a.k.a. ‘giro’ in Europe) in particular, and *account money* in broader usage.
See also “Deceptive Banking Terms (d.b.t.’s)”.

Bookkeeping- (archaic term for ‘accounting’) “Blockchain is a replacement for bookkeeping and reconciliation work. This could threaten the work of accountants in those areas, while adding strength to those [accountants who are] focused on providing value elsewhere.... bringing more areas into consideration [analysis] that are presently deemed too difficult or unreliable to measure, such as the value of the data that a company holds” (ICAEW, 2017).
See also “Accounting, double-entry”, “Accounting standards”, “Big 4 Accounting firms”.

Brains- See “Left brain, Right brain”.

Brazil- (alone among the BRICs) “...is still run pretty much by the banks” (Hudson, 2014b).²⁵³

1) “The United States hated [President (from 2010-16) Liuz “Lula” da Silva] and his successor... [Dilma Rousseff (from 2011-16)], and worked against them, and helped the frame-ups...the court cases. I regard your current president [Jair Bolsonaro (from 2019-)] as an operative of Washington...” (Roberts, 2020, mn.8). See also “Washington Consensus”.
2) In 2018, there were 20-something political parties in Parliament, but with only 3 polling anywhere near 10%. Such “[s]plintering can...[foster] graft. In Brazil politicians form new parties [in order] to get public subsidies and then demand more goodies to join coalitions.”- The Economist, Jan. 12, 2017. See also “Parties, political”.
3)
4) Brazil Updates: 11/22- “We The People” protests: <https://banned.video/watch?id=637907deef4ec349eaf13d40> [RR, 22-11-19].
See also “Canada”, “Latin America”.

Breakaway Civ.- 1) UFOology notwithstanding, a euphemism for the top-secret ‘Deep State’s genocidal, Malthusian ‘re-start’ of civilization, with a lot less population, no farmers, and robots/androids doing all labor... an attitude of acquiescence for which may predominantly arise simply from the (compounded) cognitive dissonance of constantly being told that countless white-collar criminals are better than you. See also “Moral hazard”, “Accounting Control Fraud”, “Economics, ‘Parity’”.
2) “It’s time for us to stop being bullied.”- Alex Jones (recurrent).

²⁵³ Hudson later remarked that when he “was brought down to Brazil to meet with the Council of Economic Advisors under [President] Lula, they said that ‘the whole problem is that Lula has been obliged to let the banks do the planning’” (Hudson, 2020c, mn.45). See also “Infrastructure”.

- 3) Consists of “the people leading this [Black Budget] ‘harvest’²⁵⁴, if you will” (Fitts, 2014, mn.6). “We are financing a Breakaway civilization” (Fitts, 2018o, mn.25).
- 4) “When you talk to the tech billionaires, which I have, they will literally say ‘...*We can replace all humans with A.I. and software*’. What they don’t understand is that they are massively subsidized by the government. They really don’t understand it. They are just living in their little bubble” (Fitts, 2017p, mn.25). Could such a program already be set to auto-pilot? It may sound daft, but, “if I was in Mr. Global’s shoes, I’d be in a [mad] rush to build a multi-planetary civilization...[too]. Because you never want to bet the ranch on one planet. You know: diversification, diversification, diversification” (Fitts, 2019w, mn.22-23). See also “Derivatives”. “This whole planet is [already] being controlled from space. All the most powerful weaponry is [now] in space” (Fitts, mn.23). See also “Malthus, Thomas Robert (1766-1834)”, “Technocracy”, “Transhumanism”.
- 5) “We must understand why the clearly defined numerical differences in the money values of different things motivate the daily activities of most of world’s 7 billion people more directly and immediately than ecological and social and [any] other real-life values generally do” (Robertson, 2012, 76). See also “Currency Wars, the”, “Neoclassical Revolution”, “Death Culture”; “Reform”.
- 6) This decade’s particular tandem of free RAB/Reserve money from Quantitative Easing and stock buy-backs have got “all the major corporations around the world...[using] that cheap money to incur [more] debt in order to buy their own stock. All of that’s artificial... [and] they don’t have... [an] exit plan.... They don’t have that conversation” (Prins, 2018, mn.11-12). See also “Transhumanism”. See also “Asset inflation”, “Deep State”, “Black Budget (US)”, “Scofield Bible”, “Fin de Siecle”, “Corporate Media Cartel (CMC)”, “Duopoly”, “Internet of Things (IoT)”.

[“You are a virus”, 1999]

[not really a serious concept: <https://www.youtube.com/watch?v=NLBzDd1zs0g> , mn.6-7 (Jackie Rogers)]

Bretton Woods- (the 1944-1971 Fixed-Exchange Rate system²⁵⁵, corresponding to a 3 decade *nationalist* era in global finance & economics; i.e. ‘Bretton Woods I’ [the training wheels]; not to be confused with the ‘Bretton Woods II’ free-float era; i.e. ‘the Rocky Horror “Super Imperialism” Show’ [see also “Pyrite”]) “Roman peace-- A peace imposed by the conqueror upon the conquered”²⁵⁶ (George, 1879, 575). See also “Currency Wars, the”, “United Kingdom” [.Atlantic Charter].

²⁵⁴ “20 years ago... the top tech companies chartered the future of humanity.... Saying they’re gonna transcend humanity with government-financed DARPA programs... building their Breakaway Civilization that is designed to make people poor and stupid, so that they can basically be phased out-- ‘saving the Earth’ from an infestation of humans. That’s all this is! It’s like an alien force came and did it, but it’s our own species.... It’s like robber-baron meets mad scientist”- Alex Jones (Fitts, 2017p, mn.31). See also “Provocation operation (Po)”.

²⁵⁵ The Bretton Woods regime was in many ways like a residual or “Half Gold Standard”, since the tighter version of a gold standard had crashed and burned in the early 1930’s. The 1943-44 Agreement “was a compromise between the strict discipline of the old gold standard, and the new freedom demanded for national economic policies. When the [(American) Dexter] White Plan and the [(British) J.M.] Keynes Plan were published...[a commentator at the time] suggested that they were [both] ‘essentially gold standard plans’, while Keynes declared that the new proposals were ‘the exact opposite of the gold standard’” (Halm, 1977, 2). Basically White & the Americans attained [right on time for the ‘44 elections] a world system based on bank credit that would (within a quarter century) shift into mostly free-floating/unpegged bank credit (see also “Eurodollars”), getting 80-something % of they wanted at the conference [vis-à-vis Keynes & the British plans], including of course the system being centered around the US dollar as the new gold (de facto from c.1949-71; then de jure from 1971--??). See also “Dollar hegemony”, “Super Imperialism”, “Dutch disease”.

²⁵⁶ “Who decided what the ratio of cattle to gold would be, and how did they come to this great financial decision of antiquity? Economists from Adam Smith down have assumed that the value of gold is determined by [aggregate (more than political)] supply and demand, the cost of production and market factors. However... [like] the gold/silver ratio, it is likely that...[the] decision...[s] were] much more arbitrarily made” (Zarlenga, 2002, 19). See also “National Debt Economy (NDE)”, “Productivity” (of nude cows); “Politics”.

1) All currency prices were fixed to the price of gold (with the USD pegged to that at \$35 per oz.),²⁵⁷ but only the US dollar was directly convertible to gold. Moreover, no country was allowed to devalue its currency by more than 10% (vis-a-vis the gold/dollar) without the approval of the BW-created International Monetary Fund, and daily up or down fluctuations were limited to 1%.

1b) In practice, it wasn't until a decade later (c.1958) that the salient BW rules were fully operational. And then, "once foreign dollar balances [a.k.a. 'eurodollars'] loomed large[r than]...US gold reserves, the credibility of...[the US government's] commitment [to the \$35 gold dollar] might [well] be cast into doubt... [Such] liabilities first exceeded US gold reserves in 1960" (Eichengreen, 2019, 108). See also "Eurodollars", "Reserve currency".

2) In theory, "*adjustable (currency) pegs*" were to be "the instrument for eliminating balance-of-payment deficits-- an alternative to the deflationary increases in central bank discount rates that had proved...[particularly] painful between the wars. *Controls* [on international *capital*] were [then] designed to avert the [known] threat...[of] volatile capital flows of the sort that had been so disruptive in both" the 1920's and 30's, with "the IMF [now in place, to] sanction [those] governments responsible for policies that destabilized the international system and [also to] compensate [the] countries that were adversely affected" (Eichengreen, 2019, 87). But was the adjective (Roman) stronger than the noun (peace)?

2b) In practice, the objective of so-called 'adjustable'²⁵⁸ pegs' mostly "proved to be an oxymoron: parity [peg] changes, especially by the...countries at the center of the system, were extraordinarily rare. [The] IMF surveillance [policing] turned out to have blunt teeth... and the 'scarce-currency' clause that was supposed to sanction countries whose policies threatened the stability of the system was *never* invoked. [Hence] *Capital controls* were the 1 element that functioned more or less as planned" (Eichengreen, 2019, 87). Without a valid "adjustment mechanism, the collapse of the Bretton Woods...system became inevitable. The marvel is that it survived for so long" (Eichengreen, 87-88).

2c) "'not a true adjustment system at all'..[because capital] Exchange controls [simply] substituted for the missing adjustment mechanism... [And then] starting in 1959.... the scope for utilizing.... [even capital controls] was greatly reduced" (Eichengreen, 2019, 88).

3) Actually the famous (supposedly) competing White Plan (.US) and Keynes Plan (.UK) were both finalized and even published in spring 1943 (more than a year before 'Bretton Woods' commenced in 7/44), with drafts more-or-less underway since 1940-42. See also "UKUSA Agreement", "United Kingdom, the".

3b) What was the difference? "The Keynes Plan would have allowed countries to change their exchange rates and apply [meaningful] exchange and trade restrictions...to reconcile full employment with payments balance" (Eichengreen, 89); in some substantial similarity to (what was actually promised with the original) '*Betton Woods I*'.²⁵⁹ The "White Plan, in [sharp] contrast, foresaw a world free of [capital] controls...[but also a world] of pegged [fixed] currencies superintended by an [not yet clearly specified] international institution²⁶⁰ [supposedly] with veto power over [the currency] parity exchanges"²⁶¹

²⁵⁷ Benjamin Graham "understood" the gold peg "as essentially as a sop to the gold producers (and holders). In effect it was no different from the various sops to silver producers that [in the 19thc] were a familiar part of the American monetary scene" (Mehrling, 2007). See also "Gold Standards/bullionism".

²⁵⁸ "not a true adjustment system at all"- William Scammell, 1975. Capital "[e]xchange controls substituted for the missing adjustment mechanism" (Eichengreen, 2019, 88). See also "Forex", "Capital controls".

²⁵⁹ The main difference was that "Keynes's Clearing Union...[to provide] for extensive balance of payments financing.... [p]redictably...[was vetoed by] the Americans... for 'involving unlimited liability for...creditors'", as the US then was (and would remain, up until c.1980); in 1978, when the EMU was "under discussion, the German Bundesbank was similarly reluctant to agree to a system that obligated it to [be on the hook for] unlimited support for weak-currency countries" (Eichengreen, 89-90). All Keynes really got at BW was *capital controls*. The Agreement's compromise 'adjustable currency pegs' were not [in fact] really adjustable as long as the USD's backing by gold was credible. See also "Balance of payments".

²⁶⁰ Eichengreen does not mention Dexter White's early plans for a "*International Stabilization Fund*" that eventually wound up as the "*International Monetary Fund*". See also "Exchange Stabilization Fund" (the IMF's forerunner)..

²⁶¹ In other words, "Keynes favored a kind of pure credit system, which would have deficit nations building overdrafts at the Clearing Union,

(Eichengreen, 2016, 89). The resultant International Monetary Fund, however, was famously toothless (and also small beer). See also “International Monetary Fund (IMF)”.

3c) In “retrospect, the belief that the system could work was extraordinarily naive. The modest quotas and drawing rights of the Articles of Agreement were dwarfed by the [post-war] dollar shortage.... [as evidenced by the] \$13 billion in...[US Marshall Plan (& OECD)]²⁶² intergovernmental aid [that was extended] to finance Europe’s deficits [c.1948-51]. This was more than 4 times the drawing rights established on Europe’s behalf and more than 6 times the maximum US obligation under the Articles.... [Yet in Sept.] 1949 Europe’s currencies were devalued by an average of 30%²⁶³.... Certainly there was inadequate appreciation in the...[US] of the damage suffered by the European and Japanese economies and of the costs of reconstruction” (Eichengreen, 2019, 91). See also “Super Imperialism”,²⁶⁴ “American ‘Exceptionalism’”.

4) The original BW (fully operational only from 1958,²⁶⁵ for less than a decade) never went according to plan, was abjectly dysfunctional by the 1960’s, and was replaced by (what the big banks had always wanted and) what should be called ‘Bretton Woods II’ in the 70’s. See also “Eurodollars”, “City (of London), the”, “Super imperialism”.

5) In other words, because the US “was unwilling to replace the dollar as the anchor of the new monetary system... the [plan’s ‘stabilization fund’]...was downgraded to a [simply] bailout fund [a.k.a. the IMF]; the [so-called] World Bank was [also] limited to lending from its own reserves (contributed by stressed member states) and, crucially, any possibility of the IMF leveraging the World Bank’s investments (like a central bank might have done) was jettisoned.²⁶⁶ Following large US trade deficits... August 1971 [marked] the effective end of the [first] Bretton Woods system...as Keynes had predicted” in the 1940’s (Adler & Varoufakis, 2019). See also “Bretton Woods II”, “Dutch disease”, “British disease”.

6) Nonetheless, “from 1948 to 1954 the gold and dollar holdings of the non-US members doubled. By 1958, 12 countries were able to establish external convertibility for the currencies...[and in] 1967 the [average] consumer price level was only 1.4 times the 1948 level, even though [most of] Europe and Japan had been rebuilt” (Zarlenga, 2002, 611) from the ground up. Moreover peace was the new norm. See also “Washington Consensus”, “Debt cycles”, “Petro-dollar”, “Forex”, “Graham, Benjamin”.

balanced by the swelling deposits of surplus nations. White, by contrast, favored [what was in some ways] a kind of 100% reserves [international] system, but with some provision for extending loans to deficit nations ([albeit] without expanding IMF deposits)” (Mehrling, 2007).

²⁶² (Originating from the Army & State Dept.), the Marshall Plan of 1947 provided 16 Western European countries with \$17bn. in grants. from 1948 to 1954. To encourage long-term adjustment, America scrapped policies for economic controls on the defeated former Axis countries, because-- given the post-war strategic shift towards economic ‘super imperialism’-- grants to (the recently-devastated) Europe and Japan were designed to rebuild their productivity & export capacity. Hence in the long run it was expected that European and Japanese recovery would benefit the US by broadening markets for US exports of all sorts of products. See also “Super imperialism”.

Its resultant “Organisation for European Economic Co-operation” (the subsequent OECD) is a ‘Marshall Plan’-- not ‘Bretton Woods’-- institution, has always been headquartered in Paris, and has gradually increased from 18 to 38 members (1948-2021).

²⁶³ The British Pound sterling led the way, with 18 others then following suit in devaluing against the USD: Australia, Belgium, Burma, Canada, Ceylon, Denmark, Egypt, Finland, France, Greece, India, Iraq, Ireland, Israel, Netherlands, New Zealand, Portugal, South Africa, and Sweden.

²⁶⁴ The “Marshall Plan lent Europe the equivalent of \$632 billion in 2004 dollars. Japan’s foreign-exchange reserves alone were \$830 billion... [in] 2004. In other words, Japan was lending more to the United States in 2004 than the Marshall Plan lent to Europe in 1947. And Japan did not get any benefits, because the loan is denominated in dollars that the US can print at will, and dollars are useless in Japan unless reconverted to yen, which because of dollar hegemony Japan is not in a position to do without reducing the yen money supply, causing the Japanese economy to contract and the yen exchange rate to rise, thus hurting Japanese export competitiveness” (Liu, 2005). Barry Eichengreen basically concurs, that what “the United States gave with one hand, it took away with the other” (2019, 97).

²⁶⁵ It “was only when the foreign-exchange markets opened...in Jan. 1959, with the major currencies fully convertible for current account transactions, that the ...System can be said to have come into full operation” (Eichengreen, 2019, 106).

²⁶⁶ From the start, IMF “loans to deficit countries were to be made by a swap of the country’s own currency (say British pounds) for some of the IMF’s [pre-existing] assets (say US dollars), not by an expansion of the IMF’s liabilities” (Mehrling, 2007). “Intermediation of Loanable Funds (ILF) Theory”, “Nonbank Financial Institutions (NBFIs)”.

[‘Old World Order’] (the ‘post-war’ national-currency era)

[not pretending that currency isn't politics]

Bretton Woods II- (a.k.a. ‘the Jamaica System’, the 1972-c.2020²⁶⁷ [or ‘free-float’] era based upon ‘the US Treasury-bill standard’, which is sometimes a.k.a. the ‘petrodollar standard’) See also “Petrodollar”.

1) “Immediately [after 1971], the private banks, which the Bretton Woods system had been keeping under a lid, sprang up and the world was taken over by financialization. Rather than supporting governments and prosperity, the World Bank and the IMF led the so-called Washington consensus: an orchestrated campaign of mass privatization, austerity and financial deregulation. ‘There are virtually no limits on what can be privatized’, wrote Mary Shirley, the chief of the public sector management and private sector development division, in 1992” (Adler & Varoufakis, 2019). See also “Greece”.

2) Although the original “Bretton Woods system of fixed exchange rates was dismantled in the 70’s, there has [since then (mostly)] been a *de facto* fixed exchange rate regime, with the dollar as the anchor currency. China [by c.2000] exemplified this arrangement more than others. This is called *Bretton Woods II*. It synchronised global economic cycles.”- <https://www.livemint.com/opinion/columns/prepare-for-economic-life-after-the-demise-of-bretton-woods-ii-11600701280830.html> . See also “G-2”.

3) (Eichengreen, 2019,). See also “Super Imperialism”, → “G2”, → “World Par Economy”.

[Unbacked or anchored by anything-- except for you & your productivity. See also “Backing”, “Robotization”, “Transhumanism”.]

Bretton Woods III?- (a.k.a. “New World Order” [i.e. corporations’ total/totalitarian control of the State])

1) “[F]iscal expansion might not only succeed in filling the gap in US domestic demand, but

²⁶⁷ When/if ‘Bretton Woods II’ (has) ended depends on how one defines it. A narrower definition of the era-defining construct is: the “hypothesis of *sustainable* global imbalances...[resting upon] a *quasi-permanent US current account deficit*” (Bibow, 2010). See also “Current Account”, “Dutch Disease”; “Ecological economics” [.sustainable].

also restart global arrangements along BW2 lines, albeit this time based on public [not private] debt-- call it 'Bretton Woods 3'" (Bibow, 2010); which is still, however, based mostly on (see also) "Dollar Hegemony".

2) How long will this phase 3 of "" the last? See "Special Drawing Rights (SDRs)"; "Globalization (8 Steps to)", "[World Par Economy](#)".

Brexit- (they were always ambivalent about the 'Community', & never in its C.A.P., or currency 'Union') The "small states want Britain, as a democratic counterweight to Germany, within any West European political structure.... [But the] abandonment of its 'special relationship' with the United States and with the Commonwealth, the 2 major concerns of the English Establishment for more than 40 years, was too heavy a price... and would have been an unacceptable reversal of established policy, in return for something that Britain sought without great enthusiasm" (Quigley, 1966, 1283). See also "European Union"; "Pilgrim Society",→ "UKUSA Agreement".

1) "If England had been part of the Euro when the crisis hit back in 2008, then unemployment here [London] might be 20%.... Because England didn't go down with the Euro... a huge wave of youth that have no prospect of getting a job in their own country come over here to work.... [and] there are less [public] services available for even the existing national population... And your jobs have been destroyed by the de-industrialization that's gone with the past 30-40 years of globalization" (Keen, 2016o, mn.4-5). "We're a release valve for the disaster of the Eurozone" (mn.6). "London in particular has sold its way out of the crisis by selling houses to foreign buyers who then don't live there" (Keen, mn.25).

2) "There was such an unleashing of a feeling of freedom-- a feeling of 'Yes, we can do it'.... [because] Europe is sort of like the Soviet Union in the 30's and 40's. There was an argument: '*Was it reformable or not?* There is a feeling-- and I think it's correct-- that the European Union, the Eurozone, and the Euro is not reformable, as a result of the Lisbon Treaties and the other treaties that have created the Euro. Europe has to be taken apart....'" (Hudson, 2016i. mn.8-9).

3) Pre-Brexit, "The Bank of England was doing very significant work with blockchain and what it could do; and it wouldn't surprise me if part of this [Brexit] was the Brits..." realizing that ""*We don't necessarily need the Americans to be a leader...*"" anymore (Fitts, 2016b, mn.40).

4) Nonetheless, "the Brexit deal is, clear enough, intended to prevent an exit.... agreeing to keep EU law, or aspects of it.... It shows you that [today's] British government *itself* [sic] is not committed to being a sovereign nation.... It's an absurdity.... How can you be British when the British government is not willing to be British?" (Roberts, 2019, mn.39-40).

Bribery (institutional)-

See also "Monetization".

BRICs- (Economic meeting club, est. 2009, of [what were then] the 4 largest 'non-1st world' economies: China, India, Russia, and Brazil); <https://www.hofstede-insights.com/country-comparison/brazil,china,india,russia> "What started as like a 40 person meeting [c.2009-10]... [is now] a 4,000 person conference.... The BRICS bank is headquartered in Shanghai" (Prins, 2018b, mn.24).

"China, Russia, even Iran, India, they're showing that what they've done is simply following the path that America... and Germany did in the 19th century. It's a mixed economy, they're using government to provide basic needs like medical care, education... whereas [in] America you have to go...into debt for both" (Hudson, 2022). See also "American System", "German (Industrial) Banking", "Debt money".

1) "They've been driven into a mutual economic defense alliance by the US sanctions against Russia, by the threats against China, not letting it invest in the US... They've forced other countries to.... [say] 'Yes, there IS an **alternative**. We don't have to be like *Neo-Liberalism*'... the IMF is subsidizing economic dependency...food dependency...basically anti-labor parties" (Hudson, 2014). See also "Angry Birds".

1b) In contrast to (a) Hudson narrative, James Corbett points out that the first use of the acronym BRIC was from none other than a 2001 Goldman Sachs white paper²⁶⁸, eight eventful years before its founding.

1c) In 2015, Corbett pointed out “that the BRICS’ New Development Bank-- touted in those same pro-Putin/pro-Xi circles as an alternative to the International Monetary Fund (IMF)/World Bank mafia-- was in fact staffed by the head stooges of that very IMF/World Bank mafia” (Corbett, 2022). And the BRICS 9th Summit-- held in Xiamen...China in 2017-- featured a [formal] reaffirmation of the group’s commitment to the United Nation’s Agenda 21/2030 scam, a recommitment to fostering a ‘global economic governance architecture’ and a renewal of...[the member states] subjugation to the World Trade Organization. In fact, nothing about this... group has ever lived up to the promise of ‘anti-globalist crusading’ (Corbett, 2022). See also “Intelligence Community” [.IIC].

1d) “The RICS, at any rate, have pushed the biosecurity nightmare as hard as any of the Western globalist regimes, which... [is not quite] ‘sticking it to the globalists’ and freeing the peoples of the world from the death grip of the technocrats” (Corbett, 2022). See also “Technocrats”.

2) From the get-go, , however, getting around US ‘dollar diplomacy’ was on the Agenda. When Luiz “Lula” da Silva “was still president of Brazil...many of his ideas deeply impressed especially [Chinese CCP President] Hu Jintao at the time. [It] was [primarily about] by-passing the US dollar... [But a decade later]... US dollar transactions...are 87% of international transactions still” (Escobar, 2020, mn.47). See also “Dollar hegemony”, “Angry Birds”.

3) BRICS countries (Brazil, Russia, India, China, [plus] *South Africa*) now have a combined GDP (measured in PPP...) larger than not only the G7 countries,²⁶⁹ but [also larger than] the US and Eurozone economies combined” (Hellevig, 2019). See also “AIIB”, “Reserve Currency”.

4) **BRICS Updates: 6/22-** <https://banned.video/watch?id=62bc73a1d6a5a751cb88d12a>

12/22- Egypt “ratified its participation in the New Development Bank...created by Brazil, Russia, India, China and South Africa (BRICS) in 2014.... Currently, about 60% of...[the forex] reserves of central banks and about 70% of global trade is [still] conducted using the petrodollar...[even though the] US accounts for about 20% of the world’s economic output” (Mahanta, 2022). See also “Bretton Woods”.

[The ‘official’-‘virtual’ fake photoshop stitching (Corbett, 2022)]

British Banking Association (BBA)- 1) A trade association for bankers oversees LIBOR-- the “globally rigged system for setting interest rates...that impact over \$10 trillion in consumer loans and \$350 trillion of interest rate derivatives purchased by municipalities around the globe....[impacting] everything from adjustable rate mortgages in the US [see “Financial Crisis (of 2008-)”] to what municipalities receive, or owe, in interest payments around the globe” (Martens, 2012). See also “Eurodollars”.

2) “Here is what the British Bankers Association... says it does on its web site: ‘We promote a legislative and regulatory system for banking and financial services– in the UK, Europe and internationally– which takes account of our members’ needs and concerns and provides an effective and competitive market place in which their businesses can prosper’” (Martens, 2012); i.e. not a very long list of stakeholders there. See also “Big 5 (High St.) Banks”, “City (of London), the”, “Regulation”, “LIBOR”.

²⁶⁸ The report’s author was “Goldman’s then-chief economist, Jim O’Neill... [who] suggested that ‘world policymaking forums should be reorganised’ to reflect this fact... O’Neill is now chair of the (see also “Royal Institute of International Affairs (RIIA; 1919-)” (Ibid).

²⁶⁹ At “its foundation in 1973, the G7 countries had a combined GDP PPP of 50% of the world economy...today it is down to 30%” (Hellevig, 2019).

The voice of banking
& financial services

[the voice of eurodollars & offshore banks at least]

British constitution, the- see "Locke, John", "City (of London), the", "British Banking Association (BBA)". Britain didn't have an Empire; "the *Empire had Britain*, in terms of the constitutional allegiance between... the Union [est.1707].... [It] was very much driven and inspired by the potential imperial wealth²⁷⁰... [C]ontemporary poets like Robert Burns of Scotland...make that very clear, that they consider the Scottish aristocrats and nobles to have essentially been bought by potential profits of England's already burgeoning Empire"- Kojo Koram (Koram, 2022, mn.6). See also "British Empire(s)".

1) "In public British politicians claim [that] they're cracking down on secrecy jurisdictions and corruption. But in practice they do the opposite... ' [P]oliticians in Brussels...say that they've had more lobbyists from London, including politicians...[coming] to them to protect the City of London's [offshore] interests than they've had from every other European [Union] member state combined... British politicians... [often] see themselves as essentially lobbyists for the City" (Oswald, 2018, mn.55). See also "Offshore", "City (of London), the".

2) "What kind of country to we want to be' ...[type questions and]...conversation should have happened when decolonization emerged in the middle of the 20th century. There should have been a national conversation... What kind of constitutional setup to we want to have? Should we have a written constitution... What do we want to do about the unelected role of the hereditary aristocracy... What do we want to do with the monarchy?...What's the relationship between Scotland and England, outside of... that Imperial project? These are all questions that are starting to determine our politics and our society today.... [A]s well as, what kind of economic structure do we want to have?" (Koram, 2022, mn.45). See also "English constitution, the", "Royal Institute of International Affairs (RIIA)", "UKUSA Agreement".

British disease, the- See "'Financial Separation of Powers", "Glorious", → "Financialization". See also "Dutch disease", "Reserve currency" [.barbarous relic].

British Empire(s)-²⁷¹ (making the world safe [risk-free?]²⁷² for non-governmental elite; see also 'Estates, 3') "Had the legislators of the Roman republic established the cession of goods, they never would have been exposed to so many seditions and civil discords; neither would they have experienced the... inconvenience of the remedies"- Montesquieu's *Spirit of Laws* (1748, 63). See also "Hume, David" [.Britishness].

Hence; compared to, say, "the French Empire...[or] the Belgian Empire... [what's] really distinctive about the British Empire is... [that so much of it] wasn't... a state-driven project. It was *outsourced* to these private...ostensibly private companies" (Koram, 2022, mn.13). See also "East India Co.", "Public-Private Partnership (PPP)". The historical mindset was also "outsourced.... Everything from Henry the 8th, to the Gunpowder Plot, to...World War Two-- all the things that are part of the British Islands' story... [in addition

²⁷⁰ "Being British is about driving in a German car to an Irish pub for a Belgian beer, then travelling home, grabbing an Indian curry or a Turkish kebab on the way, to sit on a Swedish furniture and watch American shows on a Japanese TV. He buys a holiday home in Spain, Skis in France, fancies Swedish birds and has a Romanian au-pair. And the most British thing of all?

Suspicious of anything Foreign. "- from a Swiss letter to the editor of a popular UK newspaper. See also "National Identity", "Adolescence of Mankind".

²⁷¹ Not to be confused with the pre-existing "English empire...[which] stretches from the time of...Shakespeare [4 centuries]...to around the time of the Beatles" (Koram, mn.7).

²⁷² Is the British Empire the world's foremost Empire of (risk-free) "Usury"? Predecessor Venice had a different predominant way of financing things. See also "Indirect financing" [.usury], "Equity financing" [.shares]., "Venice, Republic of".

to] what happened in India... Nigeria... Singapore.... This is [mostly all just] the story of the East India Company... [and] the private accounting details of...[this or that] company.... [And] a lot of these companies didn't [ever] disappear. The Royal Niger Company is [now] Unilever, and the Anglo-Iranian Oil Company is...BP²⁷³, and they still play major roles in the global economy" (Koran, mn.14-15).

"1st"- 1707-1783 (mercantilist)

"2nd"- 1783-3rd Currency War (increasingly 'globalist')

'3rd'- 'Post-Suez'; 1960's-to-today ([de jure] 'Commonwealth'; [de facto] Eurodollars). See also "Offshore", "City (of London), the".

1) Although the English oligarchy was generally more open than that of its rivals, the Empire wasn't particularly globalist (or '2nd-Estatey') at first. In the 17th-18th centuries, European powers "...imposed systems of regulation based on mercantilist [nationalist] assumptions. Believing that real money...[then bullion] was a finite commodity, mercantilist policy makers tried to direct commerce in ways that brought control of the money into national hands... Competition pitted *countries* [sic] against one another (not individuals or firms), and the point of the game was to keep the flow of money away from one's enemies [or rivals]. England's...[century of on-off] imperial wars with its Dutch, Spanish, & French rivals ([starting in] 1652, 1664, 1672, 1689, 1702, 1739, and 1754)... produced, by 1763, a state of effective British hegemony over the Atlantic commercial system" (Larson, 2009, 3), which was expanded over the next century-and-a-half. It was a considerable magnet...

2) The "uneventful life of the typical English village or county, completely controlled by the upper-class oligarchy, made it necessary for the more ambitious members of the [vast majority] lower classes to seek advancement outside the county and even outside England. From... [the aristocracy and such 'new men'] were recruited the men who acquired Britain's empire and the men who colonized it" (Quigley, 1966, 128-129). See also "English constitution, the", "Capitalisms" [EnclosureMovement].

2b) Initially something of a mercantilist; "outgrowth...[from] more than a century and a half of fighting Catholics both at home and abroad...[early British nationalism] drew [its] strength from the idea that their nation had a role to play in providence for the liberation of the world from both political and ecclesiastical tyranny. James Thomson gave this idea perhaps its best known expression in his play *Alfred* [1740]:

When Britain first, at Heaven's command,

Arose from out the azure main,

This was the charter of the land,

And guardian angels sung this strain:

'Rule, Britannia, rule the waves;

Britons never will be slaves'" (Samuelson, 1996). See also "Zionism".

3) With the end of the so-called "1st British Empire" in the 1780's, however, a new, financial strategy emerged. "If a number of the members of Congress are stock-holders, or bank directors, then an illegitimate interest is operating on the national legislature-- then the bank hath seduced away from their natural and constitutional allegiance, the representatives of the states-- and then, even foreigners... have obtained an influence on our national councils, so far as they have obtained **bank stock**. The English who could not conquer us, may buy us. Foolish English, to expend...[a] hundred millions in fighting for the power of [de jure] legislation, when a twentieth part of the money, will peaceably obtain it by [de facto] purchase! But you [British] have seen your error, whereas we [USA] are entering into ours" (Taylor, 1794, 24). See also "Currency wars, the", "State capture" [Jefferson].

3b) After the UK's victory (over all things 'revolutionary' [unless 'Industrial']) in the 2nd Currency War, the rise of the 2nd (or "Globalist") British Empire (of "balance of power" fame), wasn't just a matter of monetary alchemy and Industrial Revolutions. Via its geography, the UK "could make even a small commitment of its resources...decisive... [if it was used simply] in support of the 2nd strongest Power on the Continent against the strongest Power, thus hampering the strongest Power and making the 2nd Power temporarily the strongest-- as long as it acted in accord with Britain's wishes.... Britain was [in

²⁷³ The Anglo-Persian Oil Co.(name changed to British Petroleum in 1954) , was established in 1909, nationalized in 1951 (when it was, perhaps, the British Empire's biggest cash cow), and 'liberated' from that in 1953.

fact] able to...[do this]... leaving a considerable surplus of energy, manpower, and wealth available for acquiring an empire overseas... [This] limited commitment... [via] control of the sea... [also then contributed, in turn, to Britain's] unique social structure, its parliamentary system, its wide range of civil liberties, and [most of all] its great economic advance. The Powers on the Continent had none of these advantages. Since each could be invaded by its neighbors at any time, each had security, and thus freedom of action, only on rare and brief occasions.... ”²⁷⁴ (Quigley, 1966, 126). See also “Geopolitics”.
 4) British Updates: 11/22- “Debt money” currency systems tend to be good for some, not for others. “The Empire is merely a system of vested interests.... Even in Britain [today] the people, 20% of them, live in poverty, and 1 in 25 children doesn't have enough to eat, and so forth. It's always misery at home; mayhem abroad” (Krainer, 2022b, mn.21-22). See also “Parasitism”, “Hegelian dialectic”. See also “Congress of Vienna (1815)”, “Conspiracy theorist”.

[1921-'1/4 of the world']

Bubbles- 1) “...can occur in stocks and bonds, real estate or new ventures, but all are financial in origin, and are promoted by [debt-money] governments... [as] a way for governments [to] extricate themselves from public debt” (Hudson, 2013). See also “Bankmoney regime”, “Bankmoney”.
 2) “Basically, a bubble economy requires not only increasing debt, but...[also] massive bank fraud” (Hudson, 2017i, mn.12-13). For example, when the FBI, in 2004, said... [that] there was the largest wave of bank fraud in American history, the Federal Reserve refused to do anything.... [B]y 2007-2008... everybody knew there was a fraud, but all the investors thought [that] they could get out in a hurry-- or [that] they could have their guy in the government bailout the banks and make sure that all of the investors were repaid totally” (Hudson, mn.13). See also “Finance Capitalism”, “Deficits”.

Bucket(s) of crabs- most prevalent is still...

1) the “rust bucket” of usury-mentality (see “Leverage”, “Debt money”); which also pulls many into...
 2) the (not so bad) “corrosion bucket” mentality of false & half-baked ‘reforms’ (see “Reform, false”).

'the war mobile'; peace?]

See also “Central Banking-Warfare model”, “Industrial Revolution, 2nd”, “Corrosion-Cancer-Debt”.

Budget, US- See “Discretionary”.

Bullion- gold or silver in mass, typically in the form of bars or ingots; although “full-bodied” coins were also (supposedly/originally) made of unadulterated bullion. See also “Gold Standards/bullionism”, “Redemption operation”.
 See also “Commodity money”, “Fiduciary money”.

²⁷⁴ “France was unable to hold on to its possessions in India or in North America in the 18th century because so much of its resources had to be used to bolster French security against Prussia or Austria.... [A century later] Bismarck tried to discourage Germany from embarking on any overseas adventures in the period after 1871, because he saw that Germany must be a continental power or be nothing. Again France in [the 1880's] saw that it could not engage in any colonial dispute with Britain while the German Army stood across the Rhineland” (Quigley, 1966, 126). See also “France (and the EU)”.

Bullionism- See "Gold standards/bullionism", "Redemption operation (& bullionism)".

Bullshit jobs- 1) According to a UK.gov poll, 37% of employed Britons "agreed that if their job didn't exist, it would make no difference whatsoever.... 'The moral and spiritual damage that comes from performing tasks that one believes to be unnecessary is profound'.... If this is really common, it could explain why we don't have a 15 hour week, which Keynes said we're really supposed to have by now. It's fascinating, because this is exactly what is *not* supposed to happen in [early stage, I guess] capitalism" (Graeber, 2018, mn.17, 16). The "phenomenon has clearly [also] damaged a number of indisputably useful fields of endeavor. Nurses nowadays often have to spend at least half of their time on paperwork, and... school teachers complain of galloping bureaucratization" (Graeber, 2018b). Why? See also "Academia", "Productivity", "Industrial Revolution, 3rd".

2) When "output per head increases by 35 to 50 percent in 30 years, that means a very large fraction- between a quarter and a third- of what is produced today, and therefore between a quarter and a third of occupations and jobs, did not exist 30 years ago... [T]oday's societies are very different from the societies of the past, when growth was close to zero... as...[recently as] the 18th century. A society in which growth is 0.1-0.2% per year reproduces itself with little change from one generation to the next: the occupational structure is the same, as is the property structure" (Piketty, 2014, 95-96).

3) A generalization of the causal linkage tree of such (ever-increasing) bureaucratization is: "Debt saturation", ← "Debt money", ← "City (of London), the", ← [and its lack of] "Separation of Powers", ← [from the essentially medieval] "English constitution".

See also "Economics", "Productivity".

Bundesbank, the- (est. 1957; the CB of 'The Federal Republic of Germany' [1957-]; antec. 'Bank Deutscher Lander' 1948-57; since Maastricht & the 1990's also a key component of the EMS [1979-99] & ECB [1998-])

1) 100% publicly-owned; all members of the governing Executive Board are appointed by the President of Germany, for 8 year terms.

1b) is responsible, in tandem with the German financial regulatory agency (der Bundesanstalt für Finanzdienstleistungsaufsicht [BaFin]) for regulating the Germany 'commercial banking' sector. See also "Regulation", "Deutsche Bank".

2) has long "contribute[d] to balances of payments inequalities within Europe by its...[strategic] undervaluation of the Deutschmark, which is achieved through interest rate policies that are relatively high for the European Community. High German...rates attract capital... [and] Our neighbors are forced to respond by raising interest rates, too, or by agreeing to devalue their currency within the...[European Monetary System].... West Germany profits from this imbalanced situation", via cheap German exports and relatively expensive foreign EC-imports, "which are [then] increasingly replaced with domestic products. This is how the famous 'world export champion' developed. But this mercantilist illusion will someday be costly, because the necessary elimination of balance of payments surpluses...[should] affect many jobs in the supply and export" sector (Dziobek, et al, 1992, 46). See also "European Central Bank (ECB)".

3) The contemporary Bundesbank has 9 regional headquarters, in the respective Länder, with a grand total of 35 branches, and approx. 13k-15k employees.

See also "Reserve 'Requirements'", "German (industrial) Banking".

Bureaucracy- (can possibly be discretionary [.20th]; probably simply "tickbox" [.millennialist era])

"[I]nflexible bureaucracies dehumanize and...big organizations tend to underestimate their employees and waste their abilities" (Boyle, 2020, 49). See also "Big...", "Imperialism".

1) It's "no coincidence that it was [in] pre- and post-Napoleonic France, highly centralized and authoritarian, [that] the word 'bureaucracy' emerged...[N]ovelist Honore de Balzac [1799-1850]

popularized²⁷⁵ the word in his novel *Les Employes*, defining it rudely as ‘the giant power wielded by pygmies’” (Boyle, *Ibid*). See also “France (and the EU)”.

2) So the solution is, basically, that “the bureaucracy has reinvented itself as tickbox.... [So] we [now] have tickbox software instead. The bureaucrats have been pensioned off, leaving...a concreted system which takes decisions automatically when boxes are ticked. It is worse than bureaucracy in that there is now nobody at the controls” (Boyle, 2020, 51-52), with often less accountability, not more. See also “Tickbox”.

See also “Military-Executive-Corpocracy (MEC)”, “Deep State”.

Bureaucratization (process)- see Hofstede’s ‘Uncertainty Avoidance’ measure; “National Identity/Nationalism”, “Charismatic Authority (CHA) & Dependency (CHD)”, “Communism”, “Bullshit jobs”.

Burien, Walter- (state & local government accounts are at least as opaque as federal)

1) Former commodity trading adviser and accountant Walter Burien has been pouring over all levels of ‘public’ sector books since the late 1990’s. What is often called ‘the government’ (or US public sector) is, upon closer examination, “composed of 54,000 different state, county, and local government entities, including school districts, public authorities, and the like; and that these entities all keep their financial assets in liquid investment funds, bond financing accounts and corporate stock portfolios. The only income that must be reported in government budgets is that from taxes, fines and fees; but the *investments* of government entities can be found in official annual reports (CAFRs), which [since 1981] must be filed with the federal government by local, county, and state governments. These annual reports show that virtually every US city, county, and state has vast amounts of money stashed away in surplus funds.²⁷⁶ Burien...[documents] that these [normalized] *slush funds* have been kept concealed from taxpayers, even as taxes are being raised and citizens are being told to expect fewer government services” (Brown, 2010).

2) For example, California had a “budget deficit of \$26.3 billion...[in] April 2010. Yet the State Treasurer’s website says that he manages a *Pooled Money Investment Account* (PMIA) tallying in at nearly \$71 billion²⁷⁷ as of the same date, including a Local Agency Investment Fund (LAIF) of \$24 billion” (*Ibid*). None of these can be used to balance the state’s budget deficit or reduce its interest payments because doing so would be in violation of the state constitution and other public budgeting laws. As in other states, bond issues are only approved for specific purposes, and when excess funds are collected, they are not, by law, handed over to the general budget. Thus, in late 2009, California was paying its bondholders 7.26% interest (even though it has never defaulted on payments), while the “too big to fail banks, which would have defaulted on hundreds of billions of dollars of debt...had [they] not been bailed out... [were] able to borrow from each other at the extremely low federal funds rate...[of 0.12%. In other words], ...The banks...[were] paying...states quite minimal rates for the use of their public monies, and [then] turning around and relending this money, leveraged many times over, [back] to the states and their citizens at much higher rates. That is assuming they lend at all... since speculating with the money is more lucrative, and investing it in federal securities is more secure” (Brown, 2010).

²⁷⁵ The term was first coined, however, in 1751 by Physiocrat “Jean Claude Marie Vincent de Gournay... [after he] became France’s administrator of commerce [c.1751]. Gournay was outraged by what [de fact Prime Minister] Colbert had put in place [in the latter 17thc] and railed against the multitude of government regulations...[that] were suppressing business activity. To describe a government run by insensitive creators and enforcers of rules, who neither understood nor cared about the consequences of their actions, he coined the term *bureaucratic*...[or] ‘government by desks’.”- <https://hbr.org/2005/10/bureaucracy-becomes-a-four-letter-word>

²⁷⁶ “[M]aintaining [such] large ‘rainy day’ funds is simply how local governments must operate”, because public budgeting leaves little room for public error, and interest rates for public sector borrowers are often higher than one might think. Hence, in order to “avoid...unpredictable contingencies, municipal governments will keep a cushion of from 20% to 75% more than their budgets actually require. This money is invested...” (Brown, 2010).

²⁷⁷ And that \$71 bn. is “just the funds managed by the Treasurer... the California Public Employees’ Retirement Fund (CalPERS) has total investments...[more like] \$360 billion, including nearly \$144 billion in ‘equity securities’ and \$37 billion in ‘private equity’.... This money cannot be spent, but it can be invested” (Brown, 2010).

- 3) Most state & local government trusts “are invested on Wall Street.... Why should we have elected governments’ job be to be an investment vehicle... while [also] taxing everybody and feeing them to death?” (2011, mn.). The citizens, not just the elites, should know about it, but state & local government “investments are not included in the CAFR” budgets that have been mandated since c.1981²⁷⁸ (mn.11). 65% public; 35% private?
- 4) Circa 2010, “hidden state & local government investments” in the US amounted to \$146,000 per capita (mn.?). “Total investment wealth” holdings are still never revealed (mn.47). State party slush funds? “Every state judge in New Jersey (c.) was guaranteed \$5 million after serving a 1-year tenure” (mn.48).
- 5) Such observations are not unusual. That same year (2010), International Accounting Standards Board (est. 2001, London) “characterized [both] municipal and government accounting as being in “a stage of primitive anarchy” (Soll, 2014, 206).
- 6) Somewhere around \$4-6 billion “is typical for states [cash funds?] and many have far more than that amount sitting around in liquid cash, because truly [?] states and all of their hundreds of sub-agencies are cash cows sucking in unimaginable sums of funds from a plethora of taxes and fees, usually far in excess of the public services provided and promised.”- **RS**, Mar.17, #95
- 7) “Whoever owns their bonds²⁷⁹ owns the US government”- (Burien, 2011, mn.?). See also “Bonds, government”. See also “Owners, the”.
- 8) Is the “parasite” in dollar terms, now “bigger than the host”? (Burien, mn.50).
- 9) See also: <https://library.solari.com/book-review-follow-the-money-a-citizens-guide-to-local-government/>
See also “Big Government (growth of)”, “Institutional investors”, “Compound interest”.

Bush-Clinton Dynasty- Empires, financial or otherwise, prefer steepening hierarchies and unquestioned control over known entities. So-called “political risk” is anathema to them. They can’t stand it; like nails on a chalkboard. 1) It is widely acknowledged by insiders that Ronald Reagan’s 1980 conquest of the “Eastern Establishment’s” Republican Party was cut short by the March, 1981 assassination attempt that very nearly succeeded and left him somewhat diminished thereafter. Vice President George H.W. Bush’s (Eastern Establishment) “Bushmen” were maneuvered into positions of unprecedented (for a VP) power and influence within the Administration²⁸⁰, as Reagan’s uncompromising campaign rhetoric was transformed into something much more resembling “military Keynesianism” in practice... substantially escalating what would turn out to be, in effect, a hypertrophy-imperialist phase for the so-called “Anglo-American” debt-money Establishment. During Reagan’s 8 year term, V.P. Bush was cementing his own personal-political debt-obligations (control) over the apperati and levers of the Republican Party, to where, by 1987-88, a senile Reagan could not even hint at any displeasure with his self-anointed ‘Eastern Establishment’ successor from the CIA.²⁸¹ The G.O.P. since then has been mostly dominated by the Bushes, from the 1980’s until 2016.

2) As George Bush was to the “left wing” of the Republican Party, Bill Clinton was to the “right wing” of the Democratic Party, having actually resigned as Chairman of the Democratic Leadership Council (DLC)

²⁷⁸ The Borough of Manhattan was the first state or local government to issue a “combined financial statement”, in 1951 (mn.).

²⁷⁹ Banks having the predominant ownership of “municipals” is nothing new (see Capra, 1946). Bond obligations of state and local governments comprised “only 2.5% of bank assets in 1945. Not until 1952 was...[1939’s] 5.3% share...matched. Unlike [with US Treasuries], banks increased their state & local government bond holdings year after year until 1986... [with their] 1969 total [exceeding their] Treasury bond...[holdings] for the first time ever.” Between 1945 and 1971, banks doubled their share of US municipals (from one-quarter to one-half of the market), with the latter representing only “12.8% of total bank assets” (Klebaner, 1990, 211).

²⁸⁰ “In 1981, because of Bush’s CIA experience-- and...also because of... James A. Baker III, who had managed...[Bush’s] 1980 nomination campaign-- President Reagan issued National Security Directive 3, naming the vice president to head a special Situation Group to identify national security crises and plan for them. A new era of clandestine arms sales, massive armaments buildups, secret diplomacy, and covert actions, perhaps as much Bush’s doing as Reagan’s, was about to unfold in the Middle East generally and in Iran, Iraq, and Afghanistan specifically. With it, the seeds of two Persian Gulf wars and hundreds of terrorists strikes would be fertilized and watered” (Phillips, 2004, 207-08).

²⁸¹ Bush, unique among US presidents, was Director of the Central Intelligence Agency, from 1976-77, in addition to being an agent thereof in the early 1960’s (Phillips, 2004, p.205). America’s 41st president is also in a class of only 5 others [Adams, Adams, Van Buren, Taft, Hoover, Carter] to have been resoundingly rejected for a second term (Phillips, 75).

in 1992 in order to run for President. Clinton's transformation of the Democratic Party in the 1990's (into "Wall Street Democrats") is cliché material. The current Obama Administration has appeared subordinate to the Clintons on numerous occasions, including the independence of Hillary Clinton's state department, and being upstaged at the 2012 Democratic national convention²⁸², not to mention the refusal of anyone in the administration to indict Mrs. Clinton for numerous crimes relating to her privatization (and de-securitization) of US State Department communication lines.

3) For those of us who do not believe that the Dynasty ended with the election of neophyte Obama in 2008, but was merely adding a new wrinkle to its propaganda, the 1980's-2016 era is 35 years old now, or 9 consecutive presidential terms. That's approximately 1,600 *judicial* appointments, in addition to about 5,000 *executive* appointments. Also "about 75%" of the 535 members of the *legislature* are controlled (via loans, bribes, and technical protocols) on matters of importance, according to Joel Skousen, former Chairman of the Conservative National Committee in the 1980's (Skousen, 2016, mn.210). See also "State capture", "Duopoly", "Bonds, government".

[NowShowing: TheReds&theBlues, 1993-2022'. See also "Populism" (.RossPerot.)]

Business cycle- 1) largely a disinfo term for what is really a financial-debt (consolidation) cycle; see "*Debt cycle*". 2) Within a bankmoney system, any "tide of new wealth" (bank credit issuance) "conceals an undertow of debt. The tide turns: interest payments have been draining the general prosperity, and creditors begin to demand repayment. Borrowings (which once seemed like the dawning of a new age) have become unprofitable and unsustainable. As old loans are repaid faster than new loans are taken out, the money supply shrinks. Assets go to financial speculators and creators of debt; borrowers are ruined.[23] This ebb-and-flow is repeated over and over again" (Mosley, 2017b).

See also "Central Bank", "Minsky, Hyman (1919-1996)", "Debt cycles".

Cabal, 'Globalist', the- See "World Economic Forum (WEF)" [.YoungGlobal], "Canada" [.Justin].

Canada- (etym. " "; 1st to reject the Americans [twice])

1) "Canada's system is highly concentrated, with a handful of large depositories controlling the lion's share of financial assets and handling the vast majority of financial transactions" (Feinman, 1993).

2) The War of 1812 "is credited with forging a national identity...[when] Canadians united to repel a series of American invasions.²⁸³ While an ambivalent US Congress declined to even create a national bicentennial commission, the Canadian government committed nearly \$30 million to bicentennial events, including dedication of a new national war monument." - <https://www.history.com/news/10-things-you-may-not-know-about-the-war-of-1812>

²⁸² In the quarter-century from 1992-2016, arguably the only DNCs that weren't Clinton-centric were 2004 and 2008.

²⁸³ The British tricked the Americans into doing something stupid that backfired. (hence finally allowing [Anglophone] Ontario to displace [Francophone] Quebec in primacy)

3) Circa 1977-78 Michael Hudson “was the advisor to the Institute for Research on Public Policy (IRPP in Toronto), [when] Canada was urged by the banks– Scotiabank and a number of other big banks– to let them make commissions by helping the government save on its interest rates by borrowing in Swiss Francs and German Deutsche Marks. They said that provincial governments could save a few percentage points in interest charges by doing this.... I urged against this, and the banks brought in a lot of lobbyists against me.... Basically, they explained to me: ‘Look, Dr. Hudson: *Canada is run by the banks. If you don’t understand that, you don’t understand Canadian politics*’.... [More specifically] the counter argument put forth by the banks was: ‘We’re the honest brokers for what is sound finance. We don’t trust governments to create money, because that is inflationary and politically autocratic’. The banks brought in a Jesuit priest who said that government control was the first step toward the gas chambers. He actually said that. He argued that the government should not create its own money, but should [instead] let the banks decide. He said all governments are fascist, all governments lead to the gas chambers, so Canada should let its planning be done by the banks. The members of the government (the Privy Council) were silent and Pierre Trudeau’s government accepted the argument. What was the result? Two years later, the Canadian dollar had plunged, while the Swiss Franc and German Mark had appreciated by about 20%... The result was that instead of saving a few interest points, Canada’s dollar went down toward 80 cents, while the money it owed in German marks went up to about \$1.20. So Canada had to pay a 50% premium for letting foreigners decide whether its provinces were fit to do what voters had authorized– for domestic spending in money that the Bank of Canada had to create in either case. The banks said that the Canadian public was incompetent to decide what to spend money for– too incompetent to let its provinces decide what to spend money on, so the Liberal government should just turn monetary policy over to the banks. There was such a fuss that the people who supported my position (largely financial stockbrokers and others who thought that letting the banks run Canada was crazy), got me appointed cultural advisor to the Department of State, because they decided that Canada had a psychological problem.... [T]he Liberal government soon fell apart [in 1979] and the Conservatives took over with an even more pro-bank position” (Hudson, 2019c). See also App.C: “1-2-3”.

4) It actually wasn’t always like that. From the late-1930’s²⁸⁴ until 1974 (when Pierre Trudeau’s government privatized²⁸⁵ the monetary system), the initial Bank of Canada was run in the interests of the vast majority of the citizenry (Abram, 2007). See also “Debt cycles”, “Latin America” [also on debt cycles].

[Abram, 2007]

²⁸⁴ The Bank of Canada (in some contrast to the US) wasn’t founded until the *Bank of Canada Act* (1934) was implemented in 1935. Newly returned PM MacKenzie King (1922-26; 1926-30; 1935-48), delivering on some of his ’35 campaign rhetoric; King “amended the *Bank of Canada Act* in 1938 which led [directly] to...[its] nationalization.... [and] For many decades... the Bank of Canada provided near interest free loans to the Canadian government [without much national debt, enabling liberal funding of] ...public transportation systems, subway lines, airports, the St. Lawrence Seaway, funding the universal healthcare system, and the Canadian Pension Plan... right up until 1974, when the Trudeau government made the decision to...[stop] the borrowing of money from the Bank of Canada, and instead...borrow from the private banks at compounded interest...” (PrudentPress, 2014). See also “Bank of International Settlements (BIS)”, “National Bank”.

²⁸⁵ In 1974, Canada’s *national debt* was only \$20bn., compared to approx. \$400bn. by the mid-1990’s (and approx. \$800bn. by 2020). As of 2016, Canadian aggregate *private debt* (business/corporate & household/individual) was 210% of GDP, and aggregate *household debt* was <100% of GDP. See also “Debt saturation”, “Japan model (asphyxiation), the”.

5) Whether concentrated “private” or concentrated “public”, Canada has been, through its history, *suigeneris*, in that it has been “essentially free of widespread banking panics. During the 20th century, there were 3 failures of chartered banks in Canada-- a failure of a smaller bank in 1923, and [of] two small regional bank failures in 1985. There were *no* chartered bank failures in Canada during the Great Depression, or during the recent Great Recession. What may seem even more surprising is that Canada had no central bank before 1935, when there was a safe... system of private currency issue maintained by chartered banks. So, apparently central banking, with a central bank monopoly on currency issue, is by no means a necessary condition for financial stability” (Williamson, 2015, 3). See also “Suffolk system” [.19thc], “Parity pricing” [.21stc].

6) In 2011, the Committee on Monetary and Economic Reform filed suit against the Canadian government, claiming that the Bank of Canada is mandated²⁸⁶ to provide debt-free support for public projects undertaken by federal, provincial and city governments. The federal courts ruled, in a series of decisions and dismissals from 2013-17, that the case was groundless. See also “Internet of Things” [.HSBC], “Narrow Bank, The”.

6b) Since 1939 “there have been no serious inquiries into our banking system!” (Eder, 2018).

See also “Neoclassical Economics”, “Currency wars, the”.

6c) “The crazed government of Canada is in a panic because the people are waking up to the fact that freedom exists outside the government, and the truckers have suddenly become a potent force that performs instant surgery on mind control and lops it off” (Rappoport, 2022b). See also “Bankmoney regime”, “Mind control”.

7) Canada Updates: winter 2022: ‘Justin’ wants another round/verse? <https://www.youtube.com/watch?v=PXzauTuRG78> [Trilogy, mn.4, “So...”]. See also “World Economic Forum” [.YoungGlobalistLeaders], “COVID”.

22.2- <https://home.solari.com/canada-faces-permanent-martial-law> [mercenaries] ;

<https://banned.video/watch?id=62bcacabd6a5a751cb8bcc22> [martial law since 9/21, mn.17].

22.7- Will the tide soon be turning? “The Canadian Conservative Party...[is] quite important. The Bank of Canada and Canadian banks are not on board with [Baby Justin]. They are trying to oust...Trudeau in the same way that our banks are trying to get rid of Joe Biden and the [Deep State] junta. That’s why the Bank of Canada has been aggressively raising rates. That’s why they were able to get the Canadian Senate to tell Trudeau ‘*No, you’re not going to implement the Emergencies Act*’...The Canadian Senate is kind of like the [UK] House of Lords...usually just a rubber stamp too [but justifies its existence every 3-quarters-century or so, making]...a watershed moment in Canadian political history” (Luongo, 2022, mn.137-138).

22.11- It was, according to *The Toronto Globe & Mail*, two Big Bank “CEOs [that] floated the idea of the government designating the protests as a terrorist group so that the banks could [then] seize their assets, according to the minutes and [Deputy PM] Ms. Freeland’s notes [of the Feb. 13 teleconference with Canada’s big bank CEOs].... [However, another Big Bank] leader [at the meeting] expressed concern that if banks were directed to close [the Truckers’] accounts, it could be seen as the [banking] sector ‘being used as an arm of the government’, and [he] feared the sector being seen ‘as a political weapon of the government’, per the [meeting’s official] minutes.”- “Bank CEOs warned Deputy PM Chrystia Freeland about Threat to Canada’s Reputation during Convoy Protests” (Nov. 24, 2022).

[Federal subsidies by sector, circa 20.2-20.4]

²⁸⁶ See Abrams, 2007, mn.5.

Capital- (etym. 1] from the Latin *caput*, or 'head', a.k.a. 'the smart people'/'where the smart people are'; 2] (more 'modern' usage) 'investment money')

Smart? "[C]apital is not about 'stuff', but about a *legally* enforceable *claim* to expected returns. The underlying good is secondary; what matters [now, as ever] is the legal coding"; any listed "asset" is a product of the law (Pistor, 2020b). See also "Power", "Privilege", "Lobbyists".

1) Traditionally this has been in and around "...the political seat of government, society's guiding intelligence or brain. Economically, the term is [however] used ambiguously to represent two antithetical forms of capital. A] Physical capital in the form of tools, machinery, and buildings are means of production evaluated [listed] by the cost of producing or acquiring them. B] Finance capital represents the *rentier claims* on these [physical] means of production and their revenue. Its dynamics tend ultimately to strip the means of production" away from the former mode, "via the claims of compound interest in excess of the ability to pay..." (Hudson, 2013). See also "Industrial Capitalism", "Finance Capitalism", "Compound interest", "State capture", "Fin de Siecle".

2) The strategic ambiguity is only from the Fin de Siècle & 2nd Industrial Revolution era, when John Bates Clark and the 'neo-classical' Economists started altering/broadening the term in the 1880's-90's, in their need to vaporize (popular grass-roots political economist) Henry George and the oncoming social revolution (that was being brought about from urbanization, the demonetization of silver and greenbacks, and the nascent 2nd Industrial Revolution). Clark changed the accepted definition, from what had been 'things made by labor not yet at the end-user' into 'money for investment'. See also "Clark, John Bates", "Unearned income".

3) A century later (in accordance with the 3rd Industrial Revolution), "Ecological economists have broadened the definition of *capital* to include the means of production provided by nature. We define capital as a stock that yields a flow of goods and services into the future. Stocks of manmade capital include our bodies and minds, the artifacts we create, and our social structures" (Daly & Farley, 2004, 17). See also "Capital, Natural".

See also "Neoclassical Economics (NCE)", "ConfUSURY", "Capitalisms".

Capital Account- 1) basically a balance sheet for an entire nation

2) the international balance of a nation's "loans and investments" (Hudson, 2013).

3) in conjunction with (the more extensive) "Financial Account", is inverse to "Current Account". For example, "a strong dollar backed by high interest rates helps [draw in international "hot money", to] produce a US capital account surplus, to finance its trade deficit." (Liu, 2004b).

See also "Current Account", "Dutch Disease".

Capital Adequacy Requirements (CARs)- 1) "When a bank creates [ex nihilo] a deposit to fund a loan, its assets and liabilities increase equally, with no increase in equity. That causes its capital [owner's equity] ratio to drop. Thus the capital [so-called] requirement limits the total amount of credit that a bank may issue" (Liu, 2004b). And there is no other "exogenous constraint on the supply" of bankmoney credit (Disyatat, 2010, 2). See also "Reserve [so-called] 'Requirements'".

2) European banks have these Capital-to-Asset ratio requirements from the BIS, as opposed to 'Reserve Ratio' requirements (both are meant to restrict issuing loans/credit-- the former does this by measuring assets; the latter by tracking liabilities). ...vs...

3) US "capital requirements...[are traditionally] the strongest in the world, because we were the only ones that had a [real] Leverage Ratio. The reason the European banks are reeling right now [is that] they've never seen a [real] leverage ratio" (Sheppard, 2017, mn.28).

3b) The US has also led the financial world in the development of the shadow banking sector (SBS). There's a relationship: "as you increase the capital requirements on the banks, and...[thus] create an environment where there's a [incentivized] search for yield, assets move into the non-bank sector, and it's very hard then to aggregate the [risk] exposures, and it's very hard to look at all the inter-linkages.... very hard to track....

Risk is like water, it just flows around the system.”- Patricia Jackson, <https://www.youtube.com/watch?v=aANly4GuyIE> , mn.146-147. See also “Nonbank Financial Institutions (NBFIs)”, “Shadow Banking Sector (SBS)”.

4) It is true that commercial “banks in the United States have been required to satisfy a *leverage ratio* requirement since 1981...[and] until recently, banks in other jurisdictions have not. That changed when the international Basel III regulatory reforms included a leverage ratio requirement, the SLR”; but it “is calibrated roughly at the same level as the existing Tier 1 leverage requirement in the US, which includes *only on-balance-sheet* exposures..... [Thus the Tier 1] leverage ratio’s core intractable problem is that it treats all bank assets as having the same level of risk, from deposits at the central bank and Treasury securities to leveraged loans, loans to small businesses and credit card loans.... [which actually] encourages banks to shift toward riskier assets, reduces the liquidity of financial markets, makes it more costly for banks to comply with liquidity requirements, drives intermediation into the [deregulated] shadow banking system [which then drives up interest rates there], and [thus] interferes with monetary policy” (Nelson, 2017).

5) Historically, capital-to-loan (asset) ratios “make certain that banks hurt, before help from the central bank [RAB] is available to correct their lending misjudgments. Free banking without CB backing often operated historically on a much *higher* capital-to-loan ratio. State banks [today] have no capital ratio... since the full credit of the state is behind them” (Liu, 2002c).

6) In the 2010’s, increased CAR’s²⁸⁷ were a main point of the Democrats’ *Dodd-Frank* ‘reforms’. Republicans later countered, however, that the larger CARs have “create[d] compliance burdens that... [actually make] it harder for small-to-medium sized financial institutions to compete with larger firms, further entrenching ‘too big to fail’” (Hensarling, 2014). CARs are [part of the process of the monopolization of smaller banks by the bigger banks](#). See also “Basel Committee Accords (I,II, III)”.

7) Although “capital standards are an improvement... the capital standards [that] we have now still rely on the idea of *risk-weighting of assets*,²⁸⁸ which doesn’t work”²⁸⁹ (Wolf, 2017, mn.19). UK banks’ leverage ratios (in terms of CAR’s) are “remarkably less than they were at the peak” in the financial crisis, albeit still too high, at a level of “about 20 or 25 to 1...[which means that they] only need to lose 4 or 5% of their asset value, and they’re bust” (Ibid). It’s “much better than it was before, but they’re still incredibly highly-leveraged financial system... *vastly* [sic] more leveraged than any hedge fund you could imagine” (Wolf, mn.20). See also “Japan model, the”.

8) In the US, “banks are required to have a capital-to-assets ratio...[of no] lower than 5%. In Europe, even less is required: 3%.... [And] ratios... are below 5-10% in most [OECD nations’] private banks. This means that more than 90-95% of the money that banks **lend** is not from their shareholders” (Ordonez, 2018).

9) CAR-centric regulatory regimes are also likely to increase cyclical (groupthink) and instability in the system (Dyson, Hodgson, & van Lerven, 2016, 10). The principal tool for regulating banks this decade doesn’t seem to work very well (and particularly so in Europe for some reason). See also “Reserve Ratio”.

Capital controls- (limit or prevent forex derivative products; not to be confused with ‘exchange controls’ [see “Forex”]).

²⁸⁷ In 2009, the “capital requirement for bank loans... generally... [was] about 7%... but for some major US banks it was much lower: Citigroup’s was 2.1%; Bank of America’s was 5.8%. At 7%, \$7 of capital can back \$100 in loans” (Brown, 2010).

²⁸⁸ “Risk-weighting...basically...is [when] we decide how much equity we need in a bank, by deciding how risky its assets are.” Banks flagrantly abused this tool in the (2004-07) runup to the Financial Crisis (Wolf, 2017, mn.20-21). Maybe so in the UK, where it’s pretty much all “Big 5 (High St.) banks”. In the US, however, in “fact... the financial crisis was hardly about ‘money issuing’ [TAB-bankmoney] institutions in the ordinarily accepted sense of the term-- [i.e.] commercial rather than investment banks. Few such institutions [of the former] were actually directly involved in the mortgage meltdown” (Selgin, 2020). See also “Investment banks”, “Mortgage-Backed Securities (MBS)”.

²⁸⁹ According to Richard Werner “the whole Basel capital [adequacy] approach doesn’t work...because it’s premised on the idea that banks are just *financial intermediaries*. But they’re not. They’re money creators. We need bank regulation that recognizes [the] reality of how the banks actually operate” (Werner, 2017, mn.11).

- 1) Both a) *capital account* controls (on “foreign investment”) and b) *current account* controls (on merchandise imports) limit “the ability of firms or households to convert [the] domestic currency into foreign exchange”(Eichengreen, 2019, 253). See also “Current account”, “Capital account”.
- 2) were an essential part of the initial (1952-71) Bretton Woods 1. “Pegged but adjustable exchange rates were feasible only because [of] capital controls.... [which, particularly in the 1940’s-50’s] held back the flood because they were not just one rock in a swiftly flowing stream...[but] were part of a series of levees and locks” (Eichengreen, 2019, 87), that had mostly been set up during the interwar years. See also “Bretton Woods”.
- 2b) were mostly jettisoned as archaic during Bretton Woods 2 (1971-2020).era. “” (Eichengreen, 2019,).
- 2c) In a nutshell, “controls on international financial transactions were absent” in “the period before World War 1... The interwar years... saw the collapse of this [initial globalist] system, the widespread imposition of capital controls, and the decline of international capital movements...[But the] 3 decades following [the unconditional surrenders of] World War II then were marked by...[a] progressive relaxation of controls and [the] gradual recovery of international capital flows... The 4th quarter of the 20th century... [continued the trend, and] The period since the turn of the [21st] century... has been again one of very high capital mobility”; the 1900’s-to 2010’s trend line has basically been “a U-shaped pattern” (Eichengreen, 2019, 1). See also ‘*Currency Wars, the*’, “Globalization”.
- 3) Malaysia avoided the ‘Asia Crisis’ of 1997-98 simply “because of capital controls” (Hudson, 2020c, mn.116). See also “Asian Crisis”.

Capital flight- 1) “...stripping domestic capital, to move it safely offshore, to the United States, Britain or [to] intermediate tax havens. Russia lost an average \$25 billion annually during the 1990s, as its *kleptocrats* moved their money abroad, accompanied by an emigration of labor. Depopulation typically accompanies capital flight as the economy shrinks.... (See *Asset Stripping, Hyperinflation and Washington Consensus.*)” (Hudson, 2013). See also “Putinomics”, “Africa”, “Depopulation”.

- 2) “Worldwide, developing countries lose over a trillion dollars every year in capital flight and tax evasion. Most of this...flows into large Western nations, like the United States and Britain, and enables their currencies to stay strong, whilst developing country currencies remain weak” (Oswald, 2018, mn.36).
- 2b) “But illicit [currency] flows into Western nations...had...[an] unexpected side-effect. The economies of the United States and Britain began to financialize”, sometimes a.k.a. “de-industrialization” (Oswald, 2018, mn.36). See also “Financialization”, “Dutch Disease”, “Taxation”.

Capital gains- (synon. ‘asset-price gains’; not to be confused with actual capital *investment* for ‘profits’, which are substantially taxed)

- 1) are typically “financed by a debt-leveraged inflation of real estate, stock and bond prices” (Hudson, 2017p). See also “Asset inflation”.
- 2) are what drives Wall St., not profits, despite CG being “something that wasn’t even a *part* [sic] of Classical Economics” (Hudson, 2016d). “Rich people don’t make ‘profit’. Only the little people pay taxes. If you make a profit, you have to pay a tax on it. So the rich people make ‘capital gains’, or their ‘profits’ are all made by their affiliates offshore. Ostensibly...[corporations ideally] don’t have any tax-declarable profits at all” (Hudson, 2017q, mn.8). See also “Tax shift”, “Taxation of income”.
- 3) Capital gains-centric *Finance* capitalism is easier to grow than (profit-centric) *Industrial* capitalism, because “machinery and other physical capital tends to wear out or obsolesce, but prices for real estate, monopoly privileges and other rent-yielding assets, as well as financial securities (stocks, and bonds since 1980) tend to rise or be inflated over time” (Hudson, 2013). That doesn’t necessarily mean better. See also “Corrosion-Cancer-Debt”.
- 4) “Everybody...[in Congress] gets their campaign donations from capital gains” (Fitts, 2017, mn.25). “You have this negative loop [that exists] between the politicians, the law firms, the lobbyists, and the corporations, where they’re all working to generate [churn] capital gains [a.k.a. Wall St. quarterly earnings statements, while].... We’ve seen the regular [a.k.a. ‘real’] economy asset-stripped, basically to [further] pump up the stock market” (Fitts, 2019w, mn.33-34).

5) “Almost all of the gains of the rich people, since 1945, have been capital gains... the increased value of real estate, the stock market, [which] has gone up 10% just since Trump was elected... Nobody’s earned any more, but the stock market has gone up. Since 2008, you’ve have the largest bond market rally in history, because the Federal Reserve flooded the economy with... Quantitative Easing, to drive down...interest rates.... [And such resultant] capital gains... [are] not even treated as income” (Hudson, 2017d, mn.5). See also “Interest Rates”, “Usury”, “Rule of 72”.

6) “80% of the [listed] *capital gains* in the economy are [actually] not capital gains. They’re *land value* gains.... Today the capital gains [tax] rate is only 15%. That’s less than the 15.3% FICA withholding tax that workers have to pay on their Social Security and Medicare. So now you have all of a sudden the economy encouraging speculation in real estate²⁹⁰ and stocks & bonds instead of direct investment” (Hudson, 2011, mn.9-10). See also “Finance Capitalism”, “Real Estate”, “F.I.R.E. sector”.

Capital markets- (a.k.a. ‘stocks & bonds’, ‘securities trading’, in both the secondary and primary markets)

1) *primary* markets- where new stocks & bonds (equity & debt) are initially issued;

1b) *secondary* markets- where the stocks & bonds are traded/resold.

2) “From World War 2 through the 1960’s, the US capital markets dominated world markets. Today, however, the value of US securities represents less than one-fourth the value of all securities” (Ehrhardt & Brigham, 2016, 726). See also “Financial markets”.

3) Nonetheless, “capital markets in the eurozone are not as developed as those of the US...[and attempts] to deepen capital markets and introduce a common debt instrument have been dealt repeated blows by EU countries belligerently opposed to financial risk sharing. The recent scuttling of the ‘coronabond’ proposal provides ample testimony on this...As long as countries like Germany and the Netherlands remain firm in their opposition to...financial integration in the eurozone, the currency composition of international reserves [RAB] will remain heavily skewed towards the dollar” (Feygin & Leusder, 2020). See also “Stock markets”.

4) US Bond volume has traditionally been greater than that of stocks, but in the share buy-backs era, the latter has been gaining (see SIMFA, 2018, 29-30). See also “Stock buy-backs”.

5) Capital markets for debt securities are often simply called the ‘*securities markets*’, and are the main institution for *repo agreements* and other forms of ‘shadow banking’. See also “Shadow banking (SBS)”.

6) “FASAB-56 just took 70 or 80% of...[US] capital markets dark.... You **can’t** have a big liquid capital market that’s black...” (Fitts, 2019w, mn.40-41). See also “Investment banks”.

Capital, natural- (a.k.a. ‘caput vivum’) “a stock that yields a flow of natural services and tangible natural resources. This includes solar energy, land, minerals and fossil fuels²⁹¹ [biotic or abiotic], water, living organisms, and the services provided by the interaction of all of these elements in ecological systems” (Daly & Farley, 2004, 17). See also “Ecological economics”, “Great Extinction, 6th”.

Capital, owner’s- (synon. ‘net equity’) the “owner’s investment in...[a] bank....includes... shareholders’ equity, retained earnings, [and] bank reserves” (Gerber, 2014, 279). See also “Equity, net”.

Capital ratios- see “Capital Adequacy Requirements (CARs)”.

²⁹⁰ Today “absentee-owned real estate and natural resource extraction are practically free of income taxation” (Hudson, 2017p). See also “Provocation operation (Po)”.

²⁹¹ “Fossil energy accounted for 82% of global energy consumption...[in 2021], down from 85% in 2016, so fossil fuels are headed to zero, right? No, total energy consumption is growing-- last year it jumped a whopping 5.8%, the biggest increase *ever*, including a 2.6% increase in renewables and a 5.7% increase in coal. The demand for energy will keep growing as a billion-plus humans seek to rise from poverty. *Renewables will be lucky to hold even their current share* of the market.... Still, the biggest wonder is the sheer size of the taxpayer sum we are getting ready to spend on climate change when nobody can honestly pretend it will have an impact on climate change.”

= *Wall Street Journal* (8-29-2022)

Capitalisms- (“an economic system motivated by the pursuit of profits within a price system” [Quigley, 39]; but a.k.a. [the sharply contrasting terms] classic ‘*industrial capitalism*’, → ‘*financial capitalism*’²⁹²; not to be confused with subsequent developments [mid-20thc-to-millennial-era] ‘*state capitalism*’, → [21st century] ‘*surveillance capitalism*’²⁹³ [Gilder, 2018]... all of these, increasingly,²⁹⁴ morphing into state-centric ‘socialism’)

sometimes a.k.a. “the question of ‘who is Mr. Global’” (Fitts, 2022, mn.115).

1) “*Capitalism* originates from the Latin ‘*caput*’, cattle heads, and refers to possessions. *Capital* is used in the 12th century and designates the use of funds. The term ‘*capitalism*’ is only used for the first time in 1854 by an Englishman, the novelist William Thackeray-- and he simply meant private ownership of [investment-grade levels of] money”²⁹⁵ (LaGarde, 2014); which has since developed into the term’s most common usage today, simply: ‘a societal system distinguished by using money [either through industry/employment or investing/usury] to attain more money’...which has a very strong correlation with... Sell also “Industrial Revolution, 2nd”, “Reserve ‘Requirements’”.

2) a “...term popularized by Werner Sombart in *Das moderne Kapitalismus* (1909)²⁹⁶ to describe the social system based on promoting the accumulation of capital. (Marx did not use the term *capitalism*.) Long used mainly as an economic invective, the term...[more] recently has become...glorified by *neoliberals*, referring mainly to *finance capitalism*” (Hudson, 2013). See also “Leverage”.

3) In the 1920’s, Sombart, who had popularized the term, wrote that one “cannot imagine what capitalism would be without double-entry bookkeeping: the two phenomena are connected as intimately as...[are a label] and contents” (Soll, 2014, xv). Ironically, this observation was only a decade before the advent of federal deposit insurance would begin transforming Sombart’s “late capitalism” (i.e. ‘finance capitalism’) into “state capitalism”. See also “Accounting, double-entry”, “Federal Deposit Insurance Corp. (FDIC)”.

²⁹² synonyms: ‘late capitalism’ (Sombart), ‘*disaster capitalism*’ (Fitts, 2021e). See also “Big picture”, “Financialization”, “Great Extinction, 6th”.

²⁹³ Zuboff’s famous *Surveillance Capitalism* (2019) misses this point by describing surveillance capitalism as a lawless zone, when in fact it would have been entirely possible to grant data producers a property right in their own data...as it was eventually possible to protect the collective use rights of land of the Maya in Belize through property rights protection; not to monetize their data, but to *prevent* others from doing so. The fact that this was not done at the outset and has been only partly rectified after the fact **speaks volumes about the power of private agents**... [and] prospects...[for] a data commons, or public trust in data, have vanished. Legally protected private power is difficult to dislodge, because it is protected against state intervention, it can rove, and it can morph.... in all...[historical] cases, denying property rights to the obvious contenders, to the commoners...or the data producers, has been critical for granting secure legal title...[to] the landlords, the settlers, as well as for Big Tech. Data producers who sued tech companies in the US for violating their property rights or tort were denied protection, because they could not show that these data were of any *economic* value to them. Once they had grabbed and aggregated the data from... millions of producers, Big Tech companies [then] received legal protection against hackers and copycats with the help of specific legislation. The deeper point is that **there [simply] is no entity that designs a social order and freely chooses between public and private law**. Access to the centralized means of coercion is and has always been diffused [delegated], although today it is possibly more so than it has ever been. Not all power is centralized and vested with public agents” (Pistor, 2020b). See also “Sovereignty” [Administrative], “Design”, App.C: “1-2-3”, “Feudalism, neo”.

²⁹⁴ The phenomenon is nothing new and, over the long-term, somewhat like the law of gravity. Even c.1410, the richest man in Florence, Francesco Datini, was “warned” by his friends “that all he was doing was making the bishop of Pistoia rich” in his will and other actions (Soll, 2014, 27). In the history of England, moreover, (what would come to be known as) “capitalism” and “state” were pretty much the same thing. “Large companies [there], such as the Russian Co. (chartered in 1555), the East India Co. (...1600), and the Hudson’s Bay Co. (...1670), emerged through...forms of incorporation that conferred a privilege of exclusivity as a royal prerogative and thereby granted monopoly status.”- *The Oxford Encyclopedia of Economic History* (2003), p.3. See also “China”, “Mill, John Stuart”, “Privilege”.

²⁹⁵ ...which, for many, was “the natural product of unfettered [post-“feudal”] development... [i.e. simply] the removal of such obstacles as those imposed by [anarchic] feudalism” (Comninel, 2000, 2). More specifically, by the end of the 19thc, “a series of...[Parliamentary] acts codified the practices of the [2nd] Industrial Revolution, namely, the requirement for *financial statements*, and *audit* of those statements, and the *filing* of the statements with an independent agency or a branch of the government.”

- *The Oxford Encyclopedia of Economic History* (2003), p.4.

²⁹⁶ Perhaps Somabart was reacting to (what had been, by then) a century of Britishness. “Prior to 1800, English court decisions were often conflicting [i.e. back & forth on whether or not (or how much) to privilege ‘capital’]. However, early in the 19th century, the Court of Chancery and the House of Lords determined that stock dividends did not constitute income but, rather, were analogous to stock splits. Although the English courts finally agreed on this...the same could not be said for their American counterparts... [where securities] fraud is associated with the early American corporate experience... [and] many states [actually] outlawed the use of stock dividends in the late 1800s...[but] 3b)3b) the [US] courts eventually re-established their legality” (Tucker, 1996, 567). See also “Industrial Revolution, 2nd”, “Pilgrim Society”.

3b) A half-century later Georgetown historian Carroll Quigley took the classifications of 'capitalism' further, into **6 basic stages**²⁹⁷ (Quigley, 1966, 38).

- | | |
|---|---|
| a) <u>Municipal mercantilism</u> ('company'/guilds; '1050-1270')- | <u>analogous to:</u>
pre-paper |
| b) <u>State mercantilism</u> ('chartered co's'; '1440-1690')- | bullionism+paper |
| c) <u>Industrial</u> ('the Owners'; '1770-1870')- | 1 st Industrial Revolution |
| d) <u>Financial</u> ('the Bankers'/'holding co's'; '1850-1932')- | 2 nd Industrial Rev.- fossil fuelization |

"To protect the national honor, every dollar of Government indebtedness should be paid in gold, unless otherwise expressly stipulated in the contract. Let it be understood that no repudiator of one farthing of our public debt will be trusted in public place, and it will go far toward strengthening a credit which ought to be the best in the world, and will ultimately enable us to replace the debt with bonds bearing less interest than we now pay."- President Grant's inaugural address, 1869

- | | |
|---|---|
| e) <u>Monopoly [State]</u> ('the Managers'/'cartels'; '1890-1950')- | 2 nd Industrial Rev.- electrification ["Late"/"State"] |
| f) <u>Pluralist</u> ('the Technocrats' & 'lobbyists'; 'post-war'-??)- | 3 rd Industrial Rev. (trans. to Knowledge Age) [??] |

the "post-war" "new system of economic & social life is not yet clear,²⁹⁸ but we might call it the 'pluralist economy'" (Quigley, 1966, 38; 551). It has been, more often, called 'consumerism'. "Notice, on the front of stores now; We Accept: American [Express], Bank of America, AmeriCard, all of these. This is a new thing. In 1930...banks did not finance consumption... They only financed investments" (Quigley, 1976b).

3c) This nomenclature, though a serious-minded update of 19th & early-20th century classifications, should be re-labelled (with more meaning and consistency) into these 6:

- | | |
|--|--|
| a) <u>Local-medieval mercantilism</u> - (c.1050-1300's) | High medieval |
| b) <u>State ('early modern') mercantilism</u> - (1430's-1700's) | Early Modern-state building |
| c) <u>Industrial-'classic' capitalism</u> - (1770-1870) | 1 st Industrial Revolution-mills |
| d) <u>Financial-corporate capitalism</u> - (1850-1930's) | 2 nd Industrial Rev.-fossil fuelization |
| e) <u>Corporatized State (war cartel) capitalism</u> - (1900-1970's) | 2 nd Industrial Rev.-electrificat. ["Late/State"] |
| f) <u>Financial-State ('surveillance')²⁹⁹ capitalism</u> - (1980's-2020's) ³⁰⁰ | 3 rd Indust. Rev. (trans. to Knowledge Age) |

See also "Civilization, Western" [scientific method], "Adolescence of Mankind".

4) Further back, the 19th century runup to the great "2nd Industrial Revolution" [i.e. the internal combustion engine-led mega-growth that characterized the latter 19th century to latter 20th century], probably would not have occurred without the preceding push factor of the "enclosure movement"³⁰¹ in the Anglosphere-- and particularly in the UK. In Britain, enclosure "reaches back to the 12th century, but peaked from

²⁹⁷ Although Quigley also lists "Manorial" on his p.38 table of capitalisms, he actually never used the term "Manorial capitalism" as such.

²⁹⁸ A decade later, Quigley had found its clarity. The mid-20thc 'Rockefeller' style capitalism was "...an entirely different system [than JP Morgan's simple credit liens]. They own *equity* [more than just bond & debt claims].... I have a very extensive list of the holdings of the Rockefellers. The Rockefeller family today is much more dominant than J.P. Morgan was back" in the early decades of the century (Quigley, 1976b). See also "Owners, the", App.C: "1-2-3".

²⁹⁹ They say it with a straight face. "Data mining and monetising has long been the core business model for platform technology companies; it is the reason that, according to McKinsey Global Inst., roughly 80% of the world's corporate wealth now resides in just 10% of companies, many of them in Silicon Valley. But surveillance capitalism is increasingly the business model for *every* firm, in every industry" (Ferozhar, 2019). See also "Psychology" [SkinnerBox], "World Par Economy".

³⁰⁰ By their fruits ye shall know them. "The constant in the bailout years has been a battery of artificial stimulants sent through the financial sector, from the [2009] TARP, to years of zero-interest-rate policies (ZIRP), to... the multiple trillion-dollar rounds of Quantitative Easing. All that froth [in addition to keeping them afloat, also] allowed finance companies to suck out hundreds of billions in fees, encouraged lunatic risk-taking in every direction [that the financial-state didn't forbid], rampages of private equity takeovers, and kept a vast stable of functionally dead companies alive on cheap credit. Those so-called 'zombie companies' make up roughly 30% of all corporations in America now, and they racked up over a trillion dollars in new debt since the pandemic alone.... funhouse profits on a funhouse economy, but when amateurs decided to funnel just a bit of this clown show into their own pockets, finance pros wailed like the grave of Adam Smith had been danced upon" (Taibbi, 2021). See also "Lobbyists", "Legalism", "COVID" [vs. small biz], "Zombie".

³⁰¹ Carroll Quigley would seem to agree, noting that the "advance of the [earlier stages of] the enclosure movement in England made possible the [initial burst of] Agricultural Revolution [c.1725-50], greatly *depopulated* the *rural areas* of England... and provided a surplus population for the cities, the mercantile and naval marine, and for overseas colonization" (Quigley, 1966, 127-128). Further back, circa 1000, in most of Europe that was "west of the Rhine and south of the Alps, and still [even] more in England, woodland, however extensive, was for the most part divided up [communally]... Woods were often part of peasant holdings.... [When] population pressure built up [however], it would be these woods that would go first, cut down and replaced with grain-fields.... [The] move to clear woodland and...marshland on a large scale, does not begin anywhere [in Europe] before 950 or so, and it often happened later. Population pressure was only really building up at the very end of...[the 1st millennium], from slow Carolingian beginnings" (Wickham, 2009, 544-545).

approximately 1750 to 1860"; and, more specifically, between 1750 and 1820, when approx. 4,000 enclosure bills "dispossessed former occupiers from some 30% of the agricultural land of England" (McElroy, 2012). "When access [to what had formerly been the Commons] was systematically denied, ultimately the peasantry was left with 3 basic alternatives: to work in a serf-like manner as tenant farmers for large landowners; to emigrate to the New World [presumably to escape that]; or, ultimately, to pour into already-crowded cities, where they pushed down each others' wages by competing for a limited number of jobs" (McElroy, 2012); (a.k.a. [the most common conception of] 'capitalism'-- as being urbanization-driven). See also "Primogeniture", "Commons".

5) In terms of *capitalism* as "bankmoney" (or 'finance capitalism')-- "Anybody except somebody who's been infected with the Neoclassical economic virus accepts that Capitalism is a pretty unstable system... just another form of instability there" (Keen, 2016k, mn.23). "Its whole history has been a sequence of different financial crises" (Keen, 2016w, mn.23); and ensuing consolidations. "Capitalism is *demand*-constrained [by money]. It's not resource-constrained" as was theorized by Austrians in the 1930's (Keen, 2017k, mn.21). See also "Crises, Financial".

6) "The financial systems of today's capitalisms are [certainly] not the financial systems of 1907 or of 1936.... This means that a decline in [RAB] reserves and in the [resultant] supply of [TAB-bank] money need... [not follow] a decline in business activity... Furthermore, with government debt [now easily] available for bank portfolios, the reserve [RAB] base and [TAB] bank deposits will be sustained, even if bank lending to business and households decreases. An...equally important reason for the absence of a deep depression [in the government-Reserves age] is that, in a big-government capitalism, a fall in investment does not mean that capital incomes [will necessarily] collapse, which is what normally happened in a deep recession or depression. This is so because government deficits are the equivalent of investment in sustaining aggregate capital incomes"; in an economic phenomenon that Minsky called "a contained depression" (Minsky, 1994, 13-14; n13), as was demonstrated with the Financial Crisis of 2008. See also "Bank welfare" (a.k.a. 'state capitalism').

7) Carroll Quigley took this observation further, "" (Quigley, 1966, 66-67).

8) The ongoing "problem of capitalism[s]...[in 19th, 20th, and 21st centuries, however,] is [that banks both] create the money, and then they [also] determine the capital development of the economy.... And if we don't recognize that that's the super [concentrated] power of capitalism, [then] there's no way we'll be able to deal with the immorality³⁰² that comes out of it" (Bongiovanni, 2018'b', mn.10).

9) While we may still arguably have 'capitalism' today in terms of the economic dominance of financialism and bankmoney; we certainly do not have 'capitalism' in terms of doing what [bankmoney's] boom-bust cycles "normally" have done, "which is...wipe out debt...So [that] the [ensuing] recovery begins from an

³⁰² Is passive income Board Systems turning human beings into homogenized commodities to be skimmed or leeches somehow 'moral', or are such institutions, more simply, just an expedient carryover from the 2nd Industrial Revolution? (See also "Adolescence of Mankind"). "The true definition of 'capitalism' isn't *productive* capacity in private hands any more than the true definition of usury is '*excessive* interest'. The essence of capitalism, moneylending at interest [usury], inevitably results in the commodification of everyone and everything, since time-- not just theoretically and conceptually, but literally-- becomes money, i.e., [time] becomes empirically commodified... There is a widespread misconception regarding the true nature of capitalism, which has been largely brought about by... Marxist Socialist terminology, [which is] itself not only basically untrue, but [also] intended to be misleading. The essential characteristic of capitalism is not [as the Marxist-Socialists have been trained] that it permits the private ownership of the means of production, distribution and exchange, be they land, buildings, machinery or personal credit and ability. The personal ownership of all these factors had been since the beginning of mankind a part of the natural law [as usury was not]. Even the earliest barbarians who owned a stone axe and a bow and arrows, or the most primitive plough and other tools, or dugout canoes, horses and other domestic animals were not [usurious] capitalists. Neither were the men of feudal times capitalists, even if they were great lords. And not even the miser who had accumulated a hoard of gold was a capitalist. They were, and in similar circumstances still are, [just] owners of property. The distinguishing characteristic of capitalism is that it is concerned with [controlling] the means of exchange [a.k.a. money], that it is a system in which *usury*-- the lending [or creation] of money at interest-- plays a leading role; it is the essence of *capitalism* [which had its infancy and childhood in the latter centuries of the 1st Industrial Revolution, before going gang-busters in the 2nd Industrial Revolution (from the latter 19th century)]. Under that [new; money-creating] heading, capital is not [listed as] an asset, but a liability; it is not property, but a debt burdened by interest payments. The capital of a company is not what it owns, but what it owes. [Finance] *Capitalism* is the system which has been created by the moneylenders [financiers], by the parasites. It is not the system of the constructive [industrialist] owners, the true creators of wealth by work and invention. It is the system of those who 'use idle money and put it to work for them'..."- George Knupffer (Knupffer, 1963). See also "Homogenization", "Finance Capitalism", "Compound Interest".

economy with a much lower level of debt. But the Obama Administration.... left all the debts on the books” (Hudson, 2017k, mn.11-12). Indeed the increasing trend throughout “the post-WWII period, [with] the aftermath of mortgage booms gone bust, is... considerably slower growth rates, irrespective of whether a financial crisis occurred or not” (Jarda, Schularick, & Taylor, 2016, 40). See also “Bankmoney”, “Big Government”, “Debt saturation”.

10) In terms of *capitalism* as “free market”-- “People are always complaining about ‘capitalism’, and I’m always saying” “Well, you know I think it might work, but we ought to [figure out a way to actually] *try it*” (Fitts, 2014, mn.30). Trying the less nakedly extractive versions or aspects of what is called ‘capitalism’ necessitates differentiating (productive) ‘industrial capitalism’,³⁰³ which Carroll Quigley *said...*, from (parasitical) ‘finance/financial capitalism’ (Quigley, 1966, ch). Or, as Prof. Keen says more simply, allowing “the financial sector [to] rip...has...hampered the industrial & entrepreneurial sector[s] of capitalism, which is what we need to make capitalism function properly” (Keen, 2020, mn.43). See also “Federal Deposit Insurance Corp. (FDIC)” (regime), “Bankmoney regime”, “BlackRock”, “Monetary reform”, “World Par Economy (WPE)”.

See also “Primogeniture”, “Accounting, double-entry”, “Industrial Capitalism”, “Finance Capitalism”, “Neoliberalism”, “Big 4 Accounting firms-Management consultants”, “Monetary reform”.

Carey, Henry Charles (1793-1879)- See “American System, the”, “Parity pricing (for the primary sector)”.

Carry trade

Cartel- 1) “a syndicate seeking monopoly over its territory of operation.... Over time [however], they cooperate more and compete less. There are more than 7 major cartels. For example: military, intelligence, medical, money, religion, education, energy, media, mega-corporate, government, technological mind control... Their functions tend to overlap.... As time passes, each one integrates horizontally across nations [or They’re out].... The pure goal would be: each cartel swallows up all relevant activity in all countries; and then all cartels join at the hip.... The task of building out each major cartel and taking over the present governments of all nations is, obviously, far from easy. Two steps forward, one step back. Sometimes, two steps forward, four steps back.... Labels like Communism, socialism, totalitarianism, fascism, monarchy, democracy, the corporate state, dictatorship, technocracy, and so on, have become loose names for the advancing cartelization of the planet” (Rappoport, 2022c). See also “Corporate Media Cartel”, “Fascism, modern hand of”, “Mafia”, “Homogenization”, “COVID”.

2) (Graham, 1944,).

Cash- (‘that which we don’t argue with’ [100% liquidity]; a.k.a. ‘physical cash’; synon. ‘physical currency’, ‘solid cash’ [Huber], ‘liquidity at hand’; ‘coins and currency’ [U.S. Code])

\$1.7tn (2019)

1) physical (paper, plastic, and coin), mostly untrackable money that, under today’s system, bank customers purchase from banks, at a 1:1 ratio, with their TAB-bankmoney credits. “Cash is created by the central bank and supplied in response to demand by deposit holders to exchange their... [TAB-bankmoney] for cash” (Dyson, et al, 2016, 8). All government cash, unlike TAB-checks and RAB, is Legal tender. Cash and Central Bank/Reserve accounts [RAB] are both interbank, interchangeable monies (at 1:1), and are both liabilities of the Central Bank.

2) A member of the public can withdraw physical cash “only if they first have bank deposits [TAB] in their account. In other words, the creation of bank deposits [TAB] precedes the supply of physical cash [from [RAB] to the economy.... State-monetized credit institutions, such as commercial banks, “‘buy’ physical cash (interest & tax-free) from the central bank in exchange for a reduction in the balance of its [RAB] account at the central bank. From a commercial bank’s perspective, this is simply an asset swap– it loses

³⁰³ During the 1st and 2nd Industrial Revolutions, it’s no secret that “peasants were voting with their feet for the ‘dark, Satanic mills’” (Weber, 1989k, mn.16). Why? See also “Capitalisms” [EnclosureMovement], “Del Mar, Alexander” [the Mills].

an asset in the form of Reserves in its account at the central bank, but also gains an asset in the form of physical cash. Then, when a customer withdraws that physical cash via an ATM or bank branch,³⁰⁴ the bank reduces the customer's account balance and hands over the cash. In this case, the bank's balance sheet 'contracts', as it simultaneously loses both an [RAB] asset (the cash) and a [TAB] liability (the bank deposits)" (Dyson, Hodgson, & van Lerven, 2016b, 7, n5).

3) These days **no** other institutions or individuals (including the federal government **itself**) are allowed to attain this fresh (interest & tax-free) money [Reserves/RAB-cash] direct from the source, and then pass it on to the rest of society at interest. "There is neither interest nor tax on the Federal Reserve [b]ank notes issued...to the [R]eserve banks [which the Member banks then purchase, at 1:1, with their Reserves/RAB]. The government paid out the greenbacks, direct, without interest, and everybody, except the banker, received them gladly.... The great wrong and injustice in the system is that our money is issued direct, without interest, to *one* special class, to whom is given an uncontrolled [and **probably** also unconstitutional & unlawful] monopoly of a public utility, and as [henceforth de facto] public servants they are appropriating too much for their services, and are using their power to control all production, industry, and commerce" (Loucks, 1916, 49); and 'free' markets of any size. See also "Market fundamentalism", "Food", "Options and Futures", "Derivatives".

4) People who do not like confusion and deception³⁰⁵ use the term cash for physical money only. Hence the term '*physical cash*' is a redundancy. Nonetheless, some serious reformers like to define 'cash' more broadly, to include essentially all government and *government-backed* money, regardless of whether it merely exists in books or is actual physical cash; this is because 'cash has long been 'finance slang' for Account money... Hence **our** occasional (and reluctant) use of the redundant term 'physical cash'. See also "Deceptive Banking Terms (d.b.t.'s)".

5) US dollar cash circulation (*within* the USA) was **\$2.1 trillion in 2013**, at a cost to the Bureau of Engraving & Printing (BEP) of 4 cents per note³⁰⁶ (Federal Reserve Bank of New York, 2013b). At year-end 2017, there was approx. \$1.6 trillion of notes & coins in circulation in the US, or approx. 44.4% of the \$3.6 tn. M1 money supply (Federal Reserve Board, 2018). See also "Eurodollars".

6) Over "the course of the 20th century, cash became a means of payment that is exchanged...[back & forth] into precedingly-created bankmoney, [and] in this sense [became] a subset of bankmoney... [and hence] largely irrelevant (Huber, 2021); and in the 21stc, banks increasingly refuse to honor cash withdrawals larger than a few thousand dollars, no matter how large the depositor's account.

7) Probably about 2/3rds of US-issued cash is not in the US. See also "Eurodollars". See also "Vault Cash", "Legal tender", "Cashless Society (War on Cash)", and "FDIC".

'Cash equivalents'- 1) the primary d.b.t. for short-term IOUs issued by 'shadow banks'. See "Shadow banking (SBS)", "Deceptive Banking Terms (d.b.t.'s)".

2) It is also, however, used more broadly as a synonym for all forms of (see also) "Near monies".

3) Sometimes both usages even appear within the same phrase, f.e. (defining 'cash equivalents' as): "easily liquidable securities such as government bills [i.e. #1], short-time *bank deposits* [i.e. #2], **bankers' acceptances** [i.e. #1] and commercial paper [#1]" (Huber, 2021). See also "Debt securities".

Cashflow- see "Ebitda".

³⁰⁴ "[T]he government/state never distributes cash into the economy [directly] by paying suppliers or employees with newly minted cash. The only route for physical cash to get into the economy is through withdrawals from ATMs and bank branches" (Dyson, et al, 8, n6).

³⁰⁵ This author doubts if one could find a more straight-talking economist than Hyman Minsky (1994).

³⁰⁶ The BEP then supplies US-stamped notes, each with its own serial number, to the Federal Reserve district banks, based on their demand, which in turn comes from their member-constituent banks' (monetized credit institutions') demand for it from their customers. According to the US Treasury, BEP notes are not money until they are monetized and issued by a Reserve Bank and/or one of its constituent monetized credit institutions. To obtain notes from the BEP, a Reserve Bank must **place collateral** equal to the face value of the note. Collateral may consist of the following assets: 1) US government securities, 2) special drawing right certificates, 3) gold certificates, and/or 4) other "eligible paper," as described by statute (Dale, 2019). See also "State-monetized credit institutions (SMCI)".

Cashless Society (War on Cash)- 1) The big banks' objective these days is to get rid of cash and go to a cashless society. This "is happening for several reasons. One is... the political reason...[because] it is the ultimate power point.... [Several years ago, Fed branches] wouldn't say whether the member banks have access to the data or not-- because that's the power point. If you can see in real time all the data about how the money in the economy is flowing, [then] that intelligence is all you need to basically run and control the world... an unbelievable control mechanism. The other thing...is... transaction costs have to come way, way down... The cash system in place in most countries is relatively expensive... but [the cheaper] digital is not going to have any privacy to it" (Fitts, 2016c, mn.18-19). See also "Digital Cash/Currency".

2) "The push of the establishment is to get everything onto technological and digital systems, and that is so they have complete real-time disclosure of how your money works... I call it The Data Beast. When most Americans look at the federal government, they see 21 different agencies. I see 3 contractors who have access to to 100% of the data" (Fitts, 2018h, mn.29). "I was amazed... [at] how few people understand the tsunami that is coming towards them as Asia rises, and their incomes converge with ours.... We're [becoming, in 'globalist' eyes] 1/10th of the Asian middle class... a major, major shift... happening at the same time...[of] the biggest technological changes...[probably ever]. A.I. and robotics is gonna rock our world in many different ways. [There is no escaping the fact that] these 2 things are happening at once" (Fitts, mn.31-32). See also "Black Budget", "Federal Accounting Standards Advisory Board (FASAB)", "Industrial Revolution: 3rd", "Internet of Things (IoT)".

3) Circa 1900, the ratio of *bankmoney* (on account) to *cash* (notes & coins) was "about 30-40%... Today, the ratio stands at 80:20 in the eurozone" (Huber, 2018, 2)...

4) ...and probably already down to 90:10 in the larger OECD. According to Carlos Arenillas, former vice president of the Spanish Securities Market Commission: "banknotes and coins...only make up approximately 10% of the total amount of money that exists in developed countries. The remaining 90% is TAB-bankmoney credits in computer/on account (Arenillas, 2018). Huber puts the ratio more towards "5-10% solid cash to 90-95% bankmoney" (2018d). Once upon a time, cash was "the genuine 'first' base money, but now [it is just] a technical subset of [TAB-] bankmoney and bound... [for insignificance] sooner or later..." (Huber, 2019).

5) ...Would that be a problem? "Should existing trends persist-- the much reduced role of central bank money [of which physical cash is a subset] and loss of monetary control, the relatively decreasing importance of conventional banking due to the increasing importance of shadow banking and new money surrogates such as the Libra [Diem]-- it looks as if central banks are to become a sort of King Lackland. The sovereign currencies would still exist, but...[as] mere units of account with no real monetary clout behind them, like an empty shell" (Huber, 2019e), in a world of Facebook & Amazon-bucks. See also "Cryptocurrencies and Stablecoins"; *Bladerunner*, 1981.

6) The move to the cashless society objective is a continuation of the previous banking phase that eliminated gold in favor of paper money-- which used to be a promise to pay gold for withdrawal on demand. Without cash and without encryption there is zero transactional privacy³⁰⁷-- a form of totalitarianism unrealized in the past. Since bank equity is only a fraction of outstanding bank debt in the form of TAB ('deposits') and savings, if people wanted to withdraw cash for all their TAB, the banks would all become insolvent and go bankrupt. This threat will always hang over the banking industry until either there is Monetary Reform, or they can force a cashless society on us. See also "Negative Interest Rates Policy (NIRP)".

7) The bank-money regimes' only ultimate safety lies in the cashless society.³⁰⁸ Bankers have been doing everything they can to attract us into the cashless society through convenience. Positive Money's "Digital

³⁰⁷ "[A]ny digital or electronic data processing leaves a trace" (Huber, 2018).

³⁰⁸ "So they are even willing to adopt this nonsensical negative interest rate, just so that they can have a *reason* to argue [that] 'we need to abolish cash'" (Werner, 2016b, mn.117). Keen agrees, that "a large part of that ['cashless economy'] is conventional economists thinking they can stimulate demand by putting negative interest rates on bank accounts. And they can only do that if we can't take cash out.... I don't want to hand over the monetary system to a bunch of people who don't understand money in the first place" (Keen, 2017h, mn.27-28).

Cash³⁰⁹ scheme (2016) now seems to be helping them, and China (which sent the largest-ever delegation to London & The City in the winter of 2016) is seriously proposing it.³¹⁰ They want it so badly they can taste it. They float articles extolling its advantages. The cashless society is the ideal tool for an international police state, better than universal spying. They are plotting to take the plunge legally and eventually make cash virtually impossible to get, so they can cover up their insolvency from their asset bubble gambling addictions. Already banks refuse to obey their obligation to honor large cash withdrawals to the rightful owner on demand, because they are incapable of honoring them. See also “Industrial Revolution 3rd”, “Negative Interest Rates Policy (NIRP)”, “Breakaway Civ.”

8) Banks “have come to dominate the monetary system by digitising [facilitating TAB] book-entry money ...[and] cash did not adapt.... To restore the balance, cash will have to keep up with the digital age” (Wortmann, 2019, 1-2).

9) In Europe, many Monetary Reformers seem to take it for granted; “that cash is disappearing. But I think what we *should* [sic] propose is not that cash disappear, but [rather] that we should transition to a cash-*only* [sic] money system...a system only based on money objects... [both] physical and non-physical...digital things/objects which [lawfully] embody the [national] currency” (Wortmann, 2018b, mn.13-14). See also “Monetary reform”.

10) Bankmoney accounts are the legal property of the creditor [the state-monetized credit institution], and their holders have few if any rights beyond insurance schemes-- and the right to withdraw cash. According to *United States v. Miller* (1976), any “financial records given to a third-party financial institution [monetized credit institution] receive no 4th Amendment protection...[and] bank accounts can be³¹¹ garnished or levied by creditors, including federal government agencies acting in their creditor capacities” (Ricks, et al., 2018, n46). See also “Bankmoney”, “Federal Funds (Accounts) for All”, “Digital Cash/Currency”.

[See also “Great Extinction, 6th”]

Casino Capitalism- “the final stage of Finance Capitalism” (Hudson, 2016k, mn.11); is a product of deregulation, particularly the SEC’s rule 10-b-18 from 1982, and lower interest rate trends. In 2009, the IMF was prepared to write down Greece’s sovereign debt (as much of it was fraudulent in nature), but then US Treasury Sec. “Geithner was on the phone with Europe frequently, and then Obama went to the G-20 meetings and said: ‘*Look, you can’t write off the Greek debt, because the American banks have essentially turned into horse-race betters... casino capitalism’. They have bet and promised to...guarantee the Greek bonds, and if the Greeks are written down, [then] the American banks go under....* It’s not really about [governmental] imperialism draining foreign economies.... Essentially it’s Wall St. running...the European Central Bank, and... the [European] financial ministries have to do burden sharing...” (Hudson, 2016e, mn.15).

See also “Debt cycles”, “Wall Street”, “Finance Capitalism”, “Washington Consensus”.

³⁰⁹ “That would then lead to central banks completely in control. ‘Digital cash’ [oxymoron], centrally controlled by the central bank. We are talking about a totalitarian regime here... the culmination of the 20th century agenda to centralize power... ever-more power in the hands of fewer and fewer...” (Werner, 2016b, mn.117-118).

³¹⁰ China’s digital payments market (2016) is 50 times larger than America’s. “...in Shanghai, you’d be amazed...[If] you pull out cash, you’re a dinosaur. Nobody has change. Everybody uses digital payments. It’s all on your phone.... You hit one button you get a taxi. You hit another you got food delivery coming... You hit another one, you’re in wealth management. You hit another one, you get to send digital gold packets...” (Collins, 2017, mn.16).

³¹¹ While a few federal statutory laws, such as *Privacy Act of 1974*, do “provide some basic privacy coverage for financial records, Congress has chosen over time to strike a balance between privacy concerns and other priorities, especially crime prevention and national security” (Ricks, et al., 2018, 9). See also “National Security Agency (NSA)”.

Censorship- “We hear about the events [that] we’ve been organizing for months being cancelled-- we hear about it [not directly, but only] in the media! In Germany alone, for example, I’ve been in touch with over 70 venues, and we’ve still never managed to pull off a Germany show” (Icke, 2019, mn.15). See also “Transhumanism”, “Provocation operation (Po)”, “United States, the”.

Censorship, academic- 1) “There’s a kind of censorship that happens if you’re not a Chicago monetarist. When the University of Toronto accepted one my books for publication and the economics department there heard about it, there were threats that faculty members would resign if they published my book and that the editor of the University of Toronto press would be fired if he went ahead with it.... The Chicago School’s monetarists are intolerant and censorial.” (Hudson, 2003). “The Chicago School is essentially censorship. They managed to get their school in charge of most of the journals that professors have to publish in if they wish to get promoted.... The result is that Economics itself is turned into a kind of tunnel vision” (Hudson, 2011c); “and what they get is an expensive Andy Warhol instead of a Durer” (Hudson, 2016s). See also “Neoclassical Economics”, “Chicago School”.

2) Steve Keen concurs that: “Because Neoclassicals are the gate-keepers on the so-called leading journals [of Economics], we [post-Keynesians] don’t get published there.... They are still incredibly resistant to non-paradigm papers” (Keen, 2017, mn.26).

3) This is not hyperbole. Economics, over the past half-century or so, has been transformed into “a profession that is basically self-dealing, and runs the... hierarchy of professional merit through a structure of journals and...departments which are profoundly tribal, and profoundly restrictive in terms of what they will publish-- what they will admit as a body of ideas.... I consider [Economics] to be...unreformable.... [C]ompetition... is manifestly absent inside the [USSR-like] Economics profession these days” (Galbraith, 2018, mn.0; mn.13). See also “Economics”, “Neoclassical Economics”.

See also “Academia”, “Groupthink”; Still, 2013 [from mn.4].

Central America- See “Latin America”, “World Bank”.

Central Bank (CB)- (that which: a) transformed “cash” from coins into paper [17th-19thc], and was then a.k.a. b) ‘*the lender of last resort*’ [20thc], and then also c) ‘*the anytime refinancier*’ [21stc] of commercial banks; or, more simply, the ‘Wizard of Oz’)

“marketing government debt to private investors”. See also “Bernays, Edward (1891-1995)”.

1) “The central bank [be it nominally ‘private’ or ‘publicly owned’] is *the banker for the private banks*” (Keen, 2017I, mn.22), that now create **more than 95%** of what we use for money today. Nonetheless, “there is no clear definition of *money* in the discourse of central banks” (Bindewald, 2018, 196), any more than there was a century ago. What gives? It “should be no surprise that central bankers have a tendency to be secretive-- these people are bankers after all.”³¹²- St. Louis Fed VP Stephen Williamson (Williamson, 2015). See also “Wonderful Wizard of Oz, the”, “Money”, “Banking”.

2) “The ideological assumption asserts that a [*internationally*] ‘sound currency’ is the *sine qua non* of a sound economy... an assumption that is neither logically true nor empirically supported”³¹³ (Liu, 2004b); although it is helpful in preventing Washington from dropping bombs, false flags, or color revolutions on your country. The ‘*Independence of central banks*’ is a euphemism for a shift from [an] institutional loyalty to economic nationalism, toward [an] institutional loyalty to the smooth functioning of a globalized international financial architecture... at this moment... dominated by dollar hegemony... as...[the] global reserve currency” (Liu, 2004b). See also “Dollar Diplomacy”, “Globalism”.

3) In reality, CBs represent “a permanent institutionalization of that marriage between the interests of warriors and financiers that had already begun to emerge in Renaissance Italy, and that eventually

³¹² In defense of the (cult of) secrecy attitude, it could be said that “of course the things that went wrong became public, and all the things that they got right were always kept entirely private.”- Clive Horwood, <https://www.youtube.com/watch?v=aANly4Guy1E> , mn.135. See also “Secrecy, Cult of”.

³¹³ See “Greece”.

became the foundation of financial capitalism.... governments borrow money in order to finance wars. This is...as true today as it was in the age of King Philip II” of Spain (Graeber, 2012, 364). See also “Finance Capitalism”.

3b) In ‘modern’ terms, what “a central bank actually does [‘for society’] is enforce [1:1 exchange] parity between [its constituents’] debt instruments [i.e. bank credits/TAB]...and the [government’s base money/RAB] currency. And it means that there is no market process to value... [these] debt instruments... [which should, actually] never... be at [1:1] par with the currency, but would [instead, like all things private] have a free-floating [market] value... But what a central bank does is *block* [sic] those market mechanisms and do *anything* to uphold [the] parity of a [TAB] claim on...[one of their constituent] bank[s] and the [base money/RAB] currency”³¹⁴ (Wortmann, 2020, mn.19-20). Rather, “[i]t is normal to [simply] say: ‘well when they are bust they are bust’, and then something new can happen” (Wortmann, mn.21). See also “Parity”, “Bank welfare”, “Monetary reform”, “Lobbyists”.

4) For approx. “500 years we’ve had a... Central Banking-Warfare model...[where] the central banks print money³¹⁵ and then the military makes sure that everybody takes it, in exchange for natural resources [or labor]. And that model has...run the limit of where it can go, and one of the reasons... is global debt... [which] we have taken...up up up up up, and we’ve solved a lot of our problems by just paying everybody off with [ever] more currency debasement and debt. But we’re really hitting a limit” now (Fitts, 2017c, mn.9). See also “Debt, private”.

[Planet Debt (from liquidity, to rust)]

5) With the present “crisis of central bank legitimacy.... [t]he fuss...is about the [fairness & efficacy of the] alchemical quality [nature] of banking, ok?” (Mehrling, 2018, mn.20-21). “This is creation of *something from nothing* [sic]...[that’s supplying] the access to social resources without providing any social resources [in return]. That’s what it is [delegated political management]. There’s no previous saving [involved in bank loans].... [It] is alchemical. And that is contested [political] terrain³¹⁶-- everyone wants this [monetary magic wand]. In particular, the State wants it, and in times of war grabs it [policy control].... [For example] this...is how the Civil War was financed.... [Then at] the end of the war, the private sector takes [back] over.... Everyone wants access to this alchemical quality, so how does this all get resolved?” (Mehrling, 2018, mn.22-23). See also “Franklin, Benjamin (1706-1790)”; <https://www.youtube.com/watch?v=V4KTebUT6Mw> [‘year 2051’]

[Franklin was well-aware of the proto-nation’s weaknesses... The need for a CB, for national unity, is no longer one of them.]

³¹⁴ Why doesn’t everybody already get this? See also “Exogenous vs. Endogenous” (money creation)”, “Economics”.

³¹⁵ Although central banking and raising (ever-more) funds for warfare are intimately linked, Central Banks were not the accepted norm until the 18th century in Britain, the 19th century France, and the 20th century in America. Moreover, “*printing money*” is a misleading and somewhat *deceptive banking term* (d.b.t.), since CBs (for more than a century now) first borrow (with interest) any money into existence, prior to the CB’s constituent member banks demanding any physical cash, which [in the UK since the 1840’s, and in the US since the 1860’s] the government’s treasury actually does physically print, as a service for their constituent banks’ demand for cash.

³¹⁶ “When I say ‘contested terrain’... I mean” politics (Mehrling, 2018, mn.25). See also “Politics”.

6) CBs “are government banks...in war-time³¹⁷; and...bankers’ banks ...in peace time³¹⁸... [And in imperial times] they’re both!.... [and are, on paper] the ultimate arbiter of this key contested [political] terrain-- *who* gets access to this **alchemy of banking**? [In the 20thc, it was just] ordinary banks [who did]-- let’s be clear about this... [And then] the *central* banking alchemy... can legitimize...[or] bless all the alchemy that the banks [and now also the SBS] below them do. That’s what it means to be a bankers’ bank.... [which is, at the end of the day] an enormous political decision [that governments have delegated to CBs], which is why central banks [always] want to hide behind technical rules” and deny³¹⁹ that they do things (Mehrling, mn.28-29). “That’s the veil that allows this [essentially political] process to work, without shooting, ok? [But in] a crisis, this veil gets ripped apart...” (Mehrling, 2018, mn.30). See also “Technocrats”, “Politics”, “National Debt Economy (NDE)”, “Monetization”, [vs.] “Wealth”.

[Excessive debt-money liquidity corrodes

society. See also “Corrosion-Cancer-Debt”, “Baby-boom demographics”, “Reform, false”.]

7) So who are the owners? The constituent “Member Banks” of course. In France at least “only about a score were of significance, and... 2 (Rothschild and Mirabaud) were more powerful than all the others combined... the High Command of the...economic system. Their stock was closely held in the hands of about 40 families³²⁰, and they issued reports on their financial activities... the same private banks which had set up the Bank of France [in 1800]. They were divided into a group of 7 Jewish banks (Rothschild, Stern, Cahen...Propper, Lazard, Spitzer, and Worms), a group of 7 Protestant banks (Mallet, Mirabaud, Heine, Neuflyze, Hottinguer, Odier, and Vernes), and a group of 5 Catholic banks (Davillier, Lubersac, Lehideux, Goudchaux, and Demachy). By the [early] 2⁰th century the basic fissure... between the Jews and Protestants [appeared], and the Catholic group had to split to ally itself either with the [finance capital] Jews or with the forces of monopolistic heavy industry. None the less, the various groups continued to cooperate... The Bank of France was not the center of French financial capitalism except nominally, and possessed no autonomous power of its own. It was controlled until 1936, as it had been in 1813, by the handful of private banks which created it.... The Bank of France acted as a kind of general staff for the 40 families which controlled the 19 chief private banks” (Quigley, 1966, 520-521). See also “Owners, the”, “Estates, 3”, “Greenspan, Alan”, “Shell game”.

³¹⁷ via the appointed board.

³¹⁸ via the legal ownership.

³¹⁹ Desan (2014) “reveals monetary system design to be an essential aspect of statecraft- a project of constitutional dimensions... with profound distributional implications.... that... [is nonetheless] often obscured from [any public] view” (Ricks, 2017, 123).

³²⁰ The “Bank of France was controlled by the 40 families (not 200, as frequently stated), because of the provision in the [B]ank’s charter that only the 200 largest stockholders were entitled to vote for the members of the board of regents.... Three seats were held by the same families for well over a century” (Quigley, 520).

[CB ownership shares, c.2018]

7) "Putting the interest of commercial banks first is what central banks do ~~these days~~. That's why the Federal Reserve Bank was made independent from the US Treasury in 1913,³²¹ and why the ECB is ' [constitutionally] restricted to lending only to banks, not directly to governments, to monetize their budget deficits"³²² (Hudson, 2012g). "A "central bank's role should be to *regulate* commercial banks and their lending policies, not serve as their *lobbyist*, as presently is the case.... What has happened is that central banks are doing just the opposite of what they need to do" (Hudson, 2012g). See also "Minsky, Hyman".

8) Indeed, 'central banks have given up control³²³ over the stock of money, deliberately [automatically] accommodating the [member] banks' residual demand for solid cash and reserves... Rather than being in control of the money³²⁴, central banks have become *anytime refinancers* of the banks, no longer caring about the stock of money and restricting themselves to short-term base [interest] rate policy, which is supposed to influence consumer price inflation.... Monetary control of central banks over bankmoney creation has...much decreased [basically] because of a decline in the effectiveness of conventional monetary policy instruments. This has allowed for essentially unlimited and pro-cyclically overshooting bank credit and deposit creation (= *bankmoney* creation), resulting in inflation (of up to 2/3rds of nominal growth) and nowadays primarily *asset inflation* and financial-market bubbles, which in turn results in increased instability and crisis-proneness..." (Huber, 2018, 1-5). See also "Interest Rates".

9) Central banks "follow the banking system and not vice versa. The minimum reserve ratio and the myth of a money multiplier as a policy instrument is...effectively useless [and just part of the 'neoclassical economics' mythology]. 90% of all the money we citizens use is produced by private commercial banks. Only the residual 10% [cash, coins] are actually produced by central banks– in retrospect" (Stelter, 2018); i.e. on order from the commercial banks' demand. "Under *market conditions* confidence in the banks is constantly being questioned. That [however] is exactly what central banks try to *prevent*"³²⁵ (Wortmann, 2019d). See also "Negative Interest Rates Policy (NIRP)".

³²¹ Actually the US Secretary of Treasury (with assistance from the Comptroller) at least nominally presided over Washington Federal Reserve Board meetings (which were also housed in the Treasury building), prior to the *Banking Act of 1935* (Federal Reserve Bank of New York, 2008).

³²² Secretary Alexander Hamilton noted, almost 2 centuries earlier, that it was already "well-known", even then, "that in countries in which the national debt is properly funded, and...[of] established confidence, [that] it [then] answers most of the purposes of money. Transfers of stock or public debt, are there equivalent to payments in specie" (Hamilton, 1790, 4). See also "Base money", "Monetization".

³²³ According to Huber, it has been since "the *mid-1980s* [that] central banks could no longer pretend to control the quantity of money.... [after] the failure" of the so-called 'money multiplier' and minimum reserve requirements in the 1970's-80's (Huber, 2017, 72).

³²⁴ "A central bank has control just over its own [Reserve/RAB] money, not, however, over [TAB] bankmoney" (Huber, 2018d). See also "Bank welfare".

³²⁵ Is this not self-evident? "If the ECB wanted to stimulate market forces, it would raise its interest rates sharply, making banks more dependent on investors and depositors, thereby killing weak banks. It does not do that though. It follows the trend instead of reversing it. Putting banks at risk is not part of any central banks' DNA" (Wortmann, 2019d).

10) The “Central Bank only creates 3% of the money supply in most countries” (Werner, 2015b, mn.50). Nonetheless, Central Banks “have done well out of crises. After each crisis they [have been] given more power³²⁶... they have been astute political players.... Because CBs always get more power, we have regulatory moral hazard- they have an interest in having more crises...[until] CBs have become more powerful than ever in history”³²⁷ (2015b, mn.103). “The theory of bureaucracy says that bureaucracies want to increase their power, and [that] Central Banks can do this by enhancing the business cycle... a viable hypothesis for CBs... The job of CBs therefore might be to create for at least publicize, what they call business cycles” (Werner, mn.104). They’re just lobbyists for the big commercial banks. “[T]he ‘economic research’ produced by central banks is usually of a kind that at best looks like political PR to objective observers, if not outright propaganda” (Werner, 2016c); and setting the tone for the rest of corporate sector reporting? See also “Debt cycles”, “Accounting standards”, “Plausible deniability”.

11) “One of the most important...[functions] of a central bank is its ability to make liquidity, which is to ‘make markets’... whenever...needed” (Davidson, 2019, mn.18-19). Thus, CBs “have the power to decide *to whom* they give the money [that] they create-- to private banks, to holders of public or private debt...[or] they can even purchase shares in private companies” (Ordóñez, 2018); but they *cannot* give it directly to citizens (which requires the public sector). See also “Market maker”, “Bank welfare”.

12) “I think ultimately you have to look at the facts and not the words... not the fake central bank stuff, but the real central bank stuff” (Prins, 2018, mn.24). See also “Economics”, “Monetary Economics”.

13) “Actually, as the [2014] paper from the Bank of England explains... *commercial* banks are in complete control,³²⁸ not central banks” (Zarlenga, 2016); which is perhaps why, in recent decades, there has been something of an “emerging consensus in favor of transparent and predictable policy” at Central Banks (Fawley & Neely, 2013, 82).

14) Like commercial banks’/(state-monetized credit institutions’) credit extensions (a.k.a. **liabilities**) create the TAB-bankmoney that we use for money today, CB liabilities are creating RAB/base money. But the main point of CBs is still being missed by most, that **a liability of the Federal Reserve isn’t a (binding) debt. When the Fed issues a liability it doesn’t owe anybody anything. The Treasury does, and the bank does; but the Fed is different**, because Uncle Sam has delegated to it the (bottomless) ‘magic checkbook’. See also “Sovereignty”, “Liability, pseudo”.

15) “The Central Banks can keep printing [Reserve/RAB] money for the asset markets indefinitely.... There’s no physical barrier to the capacity of the CB to create money.... They can actually operate...with negative equity, because effectively *their equity is the entire country*” (Keen, 2016x, mn.31). Thus, over

³²⁶ According to Mohammed El-Erian, the political “power and influence of central banks have grown by leaps and bounds.... over time”; into a “much more complex management and regulation of the banking system” (2016, xviii). Werner agrees, adding that “What we’ve got is central banks getting ever-more powerful, but not using these powers to give us good results.... In the last 40 years, central banks have been made independent from governments, globally. The idea was... ‘*We give them more powers, we get better results*’. And that...has been absolutely not true. We’ve had more & more banking crises, booms & busts cycles, and [TAB] credit creation not being used for productive purposes” (Werner, 2018b, mn.40-41). “But we do have some very good central banks out there.... It is possible. There are some examples” (Werner, mn.42). It can, however, be easy to exaggerate the (supposed) power of CBs, and to overlook the day-to-day reality that they were designed to serve their constituents/contributors-- the commercial banks and other **state-monetized credit institutions** that have accounts there. Huber points out that “central banks stopped trying to control bankmoney creation, about 30-40-50 years ago [circa early 70’s].... They simply gave up” (Huber, 2016b, mn.29-30), and CBs have been increasingly subservient to these de jure constituents thus far in the computerized age (Huber, mn.17-18). See also “Bankmoney regime”.

³²⁷ Steve Keen agrees that, globally, central banks have been “...pushing private debt beyond anything it ever reached in the 19th century” (Keen, 2016f, mn.25).

³²⁸ Richard Werner takes a different position from Zarlenga (above), or from Keen (i.e. that they are all just insufficiently intelligent), favoring something of a (central banks-only) conspiracy theory of purposeful obfuscation (as opposed to everyday groupthink/ineptitude). “Obfuscation has served central banks particularly well since they have become...all-powerful: the danger for them in this era of unprecedented powers is that the general public may simply (and rightly) link bad economic outcomes to bad economic policies adopted by *central banks*, not to the-- now far less powerful-- governments.... A [conscious] desire by central banks to misinform would explain why they have spent vast resources on ‘economic research’- pseudo-scientific writings that are often far removed from reality, but are designed to place any blame for the terrible economic performance that they [CB’s] have been responsible for on other actors-- preferably the government, [government] fiscal policy, or ‘irrational’ and ‘uneducated’ ordinary people...looking for ‘easy answers’ or seeking ‘populist explanations’” (Werner, 2016c).

the past 20 or so years, at “the same time that...[global] debt was exploding, from \$40 trillion to \$250 trillion... the balance sheets [of] the central banks of the world went from \$2 trillion to \$25 trillion” (Stockman, 2019, mn.12). The CB’s “have no idea how they went from \$2 trillion to \$25 trillion. They just did it a day, a week, a meeting at a time-- making it up as they went along. There was no doctrine” (Stockman, 2019, mn.18).

[If it were only so simple. Here is what is really needed.]

16) In terms of CB’s ability to learn thus far this century, the Bank of England has consistently been at the top of Steve Keen’s list. More recently, “even the Bundesbank has come around... [And] to some extent the New York Fed has come around. But the Fed in general has not... [even realized (or consistently acknowledged)] that banks create money by lending, and...[hence also create] part of aggregate demand” in the economy (In, 2017I, mn.21). “The only person in [central bank] official capacity³²⁹ who knew that a [global financial] crisis was coming was Bill White...research director at the Bank of International Settlements” (Keen, mn.22-23). Since then “what you’re seeing is central banks fighting against a tide-- the credit [debt saturation] tide-- that they helped create by *ignoring* this rise is debt... [and] they think the crisis is over... [But] their models ignore the stock of debt... and the impact that that has” (Keen, 2018, mn.10).

17) CBs these days are “stuck in a straitjacket... As long as the money supply runs on bank balance sheets, it cannot leave those banks to their own devices (and [hence] subject them to [actual] market forces). That would, after all, jeopardize the [public] money supply. To overcome this [dilemma], society is in dire need of a convenient alternative” to TAB-bankmoney (Wortmann, 2019b, 4). See also “Debt saturation”, “Monetary reform”, “Federal Funds (Accounts) for All”.

18) There is still a “prevalent identification of most central bankers with the existing bankmoney regime, still believing [that] it is them, the central bankers, who lead the system rather than the banks who actually do. Therefrom, and contrary to [their] own rhetoric, most central bankers today are rating the ba’ks’ interest in conserving the bankmoney privilege³³⁰ higher than the public interest in safe money and more stable finances” (Huber, 2018d). Rather than “being [the] *bank of the state*, they are now exclusively [the] *bank of banks*, and instead of being cautious lenders of *last resort*, they now act as *anytime refinancers*³³¹ of the banks.... [The resultant bankmoney] “regime of state-backed private bankmoney is no more viable than [early 19thc] private banknotes were” (Huber, 2017, 4). See also “Bankmoney regime”, “Central Intelligence Agency (CIA)”.

³²⁹ Half a century earlier, historian Carroll Quigley also concluded that the “public” boards of mostly privately-owned & staffed central banks were mostly just the modern manifestation of age-old corporate shell games: “It must not be felt that the [public] heads of the world’s chief central banks were themselves substantive powers in world finance. They were not. Rather they were [just] the technicians and agents of the dominant [private] investment bankers of their own countries, who had raised them up, and who were perfectly capable of throwing them down. The substantive financial powers of the world were in the hands of these investment bankers who remained largely behind the scenes in their own private banks.... The result of this was that larger and larger aggregates of wealth fell into the control of smaller and smaller groups of men” (Quigley, 1966, Ch.20). Debt-money is and always has been a tool, or leverage, for extraction. And (supposedly) “public” central banks are just another layer of disguise or obfuscation: “In most countries the central bank was surrounded closely by the almost invisible private investment banking firms. These, like the planet Mercury, could hardly be seen in the dazzle emitted by the central bank which they, in fact, often dominated. Yet a close observer could hardly fail to notice...” (Quigley, 1966, Ch.5).

³³⁰ Is usurping the state’s monetary seal ‘risk-free’ over the long-term? “By using a central bank [as] custodian, the risk of loss stemming from insolvency, negligence, or unauthorized disclosure is either removed or significantly reduced...[because] Central banks do not pose counterparty risk [to each other], and reserve managers’ use of fellow central bank account services reduces the risk of disclosure of central banks’ trading strategies.”- New York Fed VP Simon Potter (Potter, 2017). See also “Minsky, Hyman”, “Bankmoney regime”.

³³¹ This is Huber’s preferred term for CBs having effectively lost (or relinquished) control over the money supply. “At present, central banks do not [even] intend to exert control over the quantity of money.... [They just] deliver as much reserves and cash as the banks [their shareholders] demand” (Huber, 2017, 91). See also “Investment banks”, “Lender of Last Resort (LOLR)/TBTF”.

18b) Indeed, they are probably less viable: 'It's the central bank policy to push down long rates by boosting bond prices artificially, thereby driving more and more small banks out of business' (Werner, 2020). See also "German (industrial) banking", "Capital Adequacy Requirements", "Capitalisms", "Nonbank Financial Institutions (NBFIs)".

19) In the future, CBs³³² have "to transform gradually from...credit institution[s] for banks, into...institution[s] that monitor and adjust liquidity buffers [a.k.a. the money supply] in [the interests of] society at large.... under the restriction of absolute price stability" (Wortmann, 2019b, 10); leaving inflation games in the 20th century. They need to go "from providing liquidity to commercial banks, to providing liquidity to society at large" and should probably no longer be referred to as banks (Wortmann, 2019b, 10-13). See also "Inflation/Deflation".

BOJ Is Biggest Fish in QE Pond

Total assets on central bank balance sheet as a percentage of GDP

[In America, the commercial banks' shell, with neoclassical economics coating. In 2010's Japan, however...]

1/23-

[Last one out's a rotten egg']

Central Bank Account (CBA)- (a.k.a. 'reserve account') an account of Central Bank/interbank money held by a bank or other state-monetized credit institution at the Central Bank; it is a *pseudo liability* of the CB. See also "Pseudo liability", "Reserve Account Balance (RAB)", "Federal Funds (Accounts) for All".

Central Bank Digital Currency (CBDC)- see "Digital Cash/Currency".

³³² The "reformed monetary authority...[should] no longer [be] referred to as a [national or central] bank" (Wortmann, 10). Why? Because "their job is to get as much money into the hands of the fewest bankers that they can muster.... [They are the primary] lobbying organization for the banks and the primary bond dealers-- to be sure they [all] continue to get their cuts. If 'democratic socialism' suits their purposes better, then they will support them with their money. If Republicans seem more likely not to rock the debt-money system boat, then they will lavishly fund them by granting lower interest loans..." (Still, 2019e, mn.11). See also "Inequality", "Debt money".

Central Bank money- (synon. 'reserves', 'interbank' money; a.k.a. 'federal funds') See "Reserve Account Balance (RAB) money".

Central Bank/Treasury money- (this broader usage of the 'interbank' or 'central bank' money term [for private-sector accounts at the CB-Treasury] also includes 'intergovernmental/federal funds' money [for federal government accounts at the CB-Treasury])

The money that sovereign governments and central banks create for themselves, and only for their own internal use comes in only 1 form, but goes by 2 distinct names [in addition to a few other synonyms], based on *where* this Inter-bank (RAB) or Inter-governmental (FF) money/account is located

1) Central bank/Treasury money that only circulates **on account** between banks is called Reserve (RAB)/Interbank money (or US-centric 'federal funds'). See also "Reserve Account Balance (RAB) money".

1b) The **overwhelming majority** of CB/Treasury money in the US is held by banks and other **state-monetized credit institutions** in the form of 'Reserves' (synon. 'interbank' or 'central bank' money), which they are allowed to loan unsecured and "overnight" (24 hours) to other banks and **monetary institutions** that would like to shore up their (RAB)/Reserves for their **TAB** lending, usually irrespective of de jure, 20th-type regulatory 'reserve requirements'.³³³ Apart from that, Reserve/Interbank money is **virtually unregulated, as they demand**. See also "Reserve Ratio".

1c) Physical cash and coin, which still account for >40% of the US M1 money supply, are a subcategory and interchangeable (1:1) form of Reserve/interbank money, depending upon demand from the public.

2) Central bank/Treasury money that only circulates **on account** between the different branches of the national-federal government (not state & local) is called Federal Funds/Intergovernmental money. See also "Federal Funds (FF)".

2b) The US government holds only about \$5 billion in federal funds at any one time.

3) Both federal funds and Reserves (RAB) are really the same thing, just with different owners³³⁴, and are distinct from the **TAB**-bankmoney that everyone else (at 'the little table') uses from their bank accounts or paychecks. This is because only **state-monetized credit institutions** and the federal government are allowed to have accounts that hold **Central Bank/Treasury money**. Ordinary businesses, corporations, or state governments-- no matter how large-- may not.³³⁵

See also "Money, 2 classes (layers) of", "Federal Funds (Accounts) for All".

Central Banking-Warfare model- (a.k.a. 'the fiscal-military nation-state' or later stages of a 'bankmoney regime') Catherine Austin Fitts' preferred term for when "the central banks [in conjunction with their member banks] create money, and then the military makes sure they [everyone] take[s] it"³³⁶.... And it's true [that] model no longer [really] works. We need to go to a new model" (Fitts, 2017n2, mn.39). It lingers:

"I early saw its effects in the jealousies and vexations of Britain; and that, retaining it; we [USA] must become, like her, an essentially warring nation, and meet, in the end, the [same type of] catastrophe impending over her" (Jefferson, 1816b). See also "Currency Wars, the", →"National Debt Economy", →"Ecological economics", "Great Extinction, 6th".

"The sinews of war are infinite money."³³⁷- Marcus Tullius Cicero, *Philippics*, ch.5

³³³ Since ""UK, etc.

³³⁴ Huber just uses the term "*central bank money*" (CB money) to encompass both interbank *reserves* (RAB) and intergovernmental *federal funds* (FF): "No matter in which function-- as a fractional [Reserve] base [RAB] for transferring bankmoney, or as [sovereign] digital currency [FF] in public circulation-- either way it [CB/Treasury money] is about the same kind of central bank money-on-account. The terms 'reserves' and 'digital currency'...[merely] express different functions and *owners*... [of] non-cash central bank money" (Huber, 2018d).

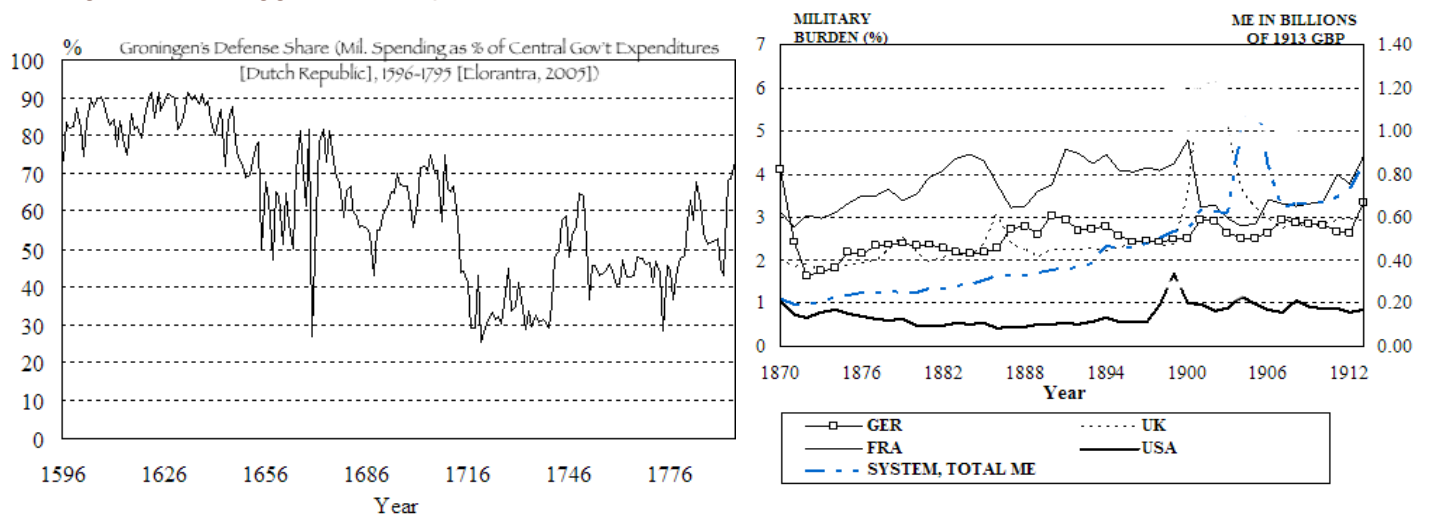

³³⁵ There may be some opacity on this in the US. Joseph Huber, as of winter 2019, is unsure if "perhaps other central banks, and *perhaps also other large [non-bank] corporations*" have accounts at the US Fed; although in Europe, he is sure that they do not (Huber, 2019b). See also "Federal Reserve Audit".

³³⁶ Prof. Ann Davis agrees that the model predates the Glorious Revolution (Davis, 2018, mn.28).

³³⁷ Chinese equivalent: "Wars are fought with silver bullets."-<https://www.wsj.com/articles/SB10001424052748703514904575602370668905224>

1) After the Glorious Revolution of 1688, King “William needed parliamentary taxes to fight the French, so there followed regular parliamentary sessions, scrutiny of spending, and approval of royal appointments. Parliament, and party politics, became permanent fixtures...[immediately after the] divine right of kings was gone” (Mullan, 2006). See also “Glorious Revolution, the”, “Parties, political”, App.C: “1-2-3”.

1b) However, one “can’t allow a few people to have a monopoly on credit” (Fitts, 2021, mn.19); without it turning into even bigger State Imperialism. See also “Mind control”, “Imperialism, American”.

[In the beginning...(See also “Big government”). [2nd Ind.Revol. increases-- France, Germany, UK, 16-nation aggreg., USA (Eloranta, 2005)]

2) Actually, the military ‘adventurism’ (warfare) predates the resultant “by-product” of an ‘imperial’ or ‘reserve’ currency (central banking), a task or burden that no society in history has found itself able to bear for much longer than one century; hence the ‘old’ (UK, early 20thc) makes way for the new (US, mid-20thc). See also “Reserve Currency”.

3) Does it matter now? The “story underlying the evolution of [Anglo-American] monetary thought from Keynes (1937), to Tobin (1963), to Wray (1998), is [most] fundamentally about absorbing the implications [i.e lessons] of *war finance*” (Mehrling, 2020). See also “Super Imperialism”, “COVID”.

4) “The governance structure of the Secret Team controls the central banks...”³³⁸ (Fitts, 2019e, mn.3).

4b) In 1976, “in the aftermath of the Church Committee’s inquiry into CIA abuses [Congress set up] standing intelligence committees... in both the Senate and the House, charged with holding the CIA and [ill-defined?] other intelligence agencies to account. But it was understood by all those involved in the vice president [Bush]’s secret team that these committees could be bypassed, even though the laws governing covert intelligence activities had been stiffened: there was now a legal requirement that all covert CIA *and military intelligence* operations had to be made known to the committees through a formal, written document known as a ‘finding’. But there was a big loophole in the legislation, *in the view* of the vice president’s men. ‘There was no requirement for a finding...[if the agency was] merely asking questions’ [conducting research], the officer said, ‘and so we’d make routine requests for intelligence assessments from the CIA, [from that time onward] through the Joint Chiefs and the National Security Council. Our basic philosophy was that we were running **military**-- **not intelligence**-- ‘operations, and therefore did not have to brief Congress. So we could [supposedly] legally operate without a finding.’

He was describing ...[the standard] procedure for getting around the law.... [Apparently, they really thought that: only] ‘if we used the CIA in an intelligence context, we had to get a finding. We decided to get around the law by using agency people in what we claimed was a “liaison capacity”.’ The next step was [simply] ‘to

³³⁸ Michael Hudson agrees (with Fitts, and Hersh [immed. below], and [prob. also] Quigley), tracing strong evidence back to (at least) Nov. 1979, when the US government froze all Iranian “assets in the United States and anywhere else they were able [to do so, thus revealing...] that international finance was an arm of the US State Department and Pentagon. But... only recently did foreign countries begin to feel queasy about leaving their gold holdings in the United States, where they might be grabbed at will to punish any country that might act in ways that US diplomacy [@ John Bolton] found offensive.” Venezuela’s gold at the Bank of England was frozen in January 2019, at the bequest of the US government. (Hudson, 2019). See also “Intelligence Community (IC)”.

attach the CIA operators to military units as liaison who were working for [the 'Secret Team's manager, Vice-Admiral Arthur] Moreau. [Reagan's CIA Director Bill] Casey knew [that] his CIA was being cut out... As a precaution, the team prepared written findings [only] when CIA men or information were being made use of-- but they were put 'in a safe', to be produced only if anyone in Congress [say Moynihan, not Ron Paul] found out what was going on. [Vice Adm.] Moreau was contemptuous of [Reagan's money-'campaign' manager] Casey and 'thought the CIA was a *crazy organization* that had no concern about the consequences of its covert actions', according to the officer. He remembered Moreau telling his subordinates on the secret staff: 'I'm accountable to the vice president and you motherfuckers are accountable to me. The [CIA] agency is not accountable to anybody-- not the president, not Congress, not the American people. They will do whatever they want to support their mission, which is defined [only] by them'. Cutting out the CIA leadership-- though using their resources where needed... was key to Moreau's operations. 'From the beginning, our philosophy was no publicity,' the officer said. Enlisting the agency formally would involve *findings*, and relying on 'the CIA's knuckle-draggers'-- [CIA] paramilitary units-- 'who were seen as too dumb and too incompetent. But by using only the military we inadvertently laid the groundwork for what we have now-- a Joint Special Operations Command essentially out of civilian control!' (Hersh, 2019). Central clearing counterparties (CCPs)- (synon. 'central counterparties' [in Europe]; 'clearance systems' [archaic], 'clearing houses' [19th-20th centuries])

1) "a financial market infrastructure that links the two parties to a transaction, becoming the buyer to every seller and the seller to every buyer...[in order] to manage the risk of one counterparty defaulting.... In the EU, there are currently 17 CCPs that clear a significant proportion of the EUR 500 trillion of derivatives outstanding.... [For example, in] 2015... more than 50% of the OTC derivatives market was centrally cleared by CCPs across all types of derivative contracts-- almost *double* the percentage from... 2009" (European Commission, 2016). See also "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)" [SIFI Cartel].

2) "In general, the lack of accurate time stamps is a common feature of many transactional datasets from over-the-counter (OTC) markets" (Benos & Zikes, 2016, 32). See also "Derivatives".

3) 'Counterparties' or derivatives risk first gained prominence in the 1990's, particularly with the Asian Crisis of 1997, and the ensuing year's Russian Crisis and collapse of Long-Term Capital Management (Gregory, 2015, 3).

4) CCPs "acted like firewalls during the global financial crisis in 2008. They successfully contained the consequences of the default of Lehman Brothers... [preventing the] contagion of losses...[from spreading]

³³⁹ "'The role that the [presumably US] military played in this highly classified operation is still unknown, though... military operators [a.k.a. soldiers were] seconded to the FBI....'"

to other financial institutions active in markets [that were] cleared by those CCPs. Historically, CCPs have been used in *exchange-traded* derivatives markets, but during the last decade CCPs have [also] been increasingly used in securities, repo, and [particularly] *over-the-counter* (OTC) derivatives markets... [because] In 2009...[this proven] firewall capacity of CCPs...[was] one of the drivers of the G20 decision to mandate central clearing for standardized OTC derivatives” (Wendt, 2015, 3).

5) Since then, CCPs have become so “highly interconnected with financial institutions and markets... [that they have become yet another] too important to fail³⁴⁰ [institution]... in particular... [due to their] increasing global scope... in the OTC derivatives market.... [N]etwork analysis...[should] be conducted by CCPs and authorities... to help reduce the dependency of CCPs on services [and data] provided by [the TBTF] commercial banks” (Wendt, 1). A CCP itself, “however, is not without risks and its firewall function will only hold as long as the CCP’s risk management is sufficiently sound. A CCP limits [micro] *credit risk*, but at the same time increases [macro] *concentration risk* by substituting for a whole network of financial institutions” (Wendt, 2015, 3). See also “Lender of Last Resort/Too Big to Fail”.

5b) Are CCP’s, hence; basically “collateral fraud” (Titus, 2022c, mn.17)?

Stability leads to instability. The more stable things become and the longer things are stable, the more unstable they will be when the crisis hits.
Hymen Minsky

[a “Minsky Moment”, decade, century?]

6) Only 3 CCPs have been closed “due to an (envisaged) insolvency of the CCP” over the past half-century... [They were] Caisse de liquidation Paris in 1974, the Kuala Lumpur Commodity Clearing House in 1983, and the Hong Kong Futures Guarantee Corporation... during the 1987 world stock market crash. In all cases the insolvency was caused by improper risk management practices of the CCP, combined with the default of one or more CCP participants. The Chicago Mercantile Exchange [also] experienced a near failure in the wake of the October 1987 crash” (Wendt, 2015, 11, n7). See also “Sovereignty” [.monetary], “Financial market infrastructures”.

[Dueling ‘CCP’s? A 2.5 hr.-hour “long Cantonese musical... *Hamilton Matteo Ricci the Musical*,³⁴¹ telling the story of Jesuit ‘Father’ Matteo Ricci’s mission in China in the late 16th & early 17thc’s...[was] performed in the Hong Kong Cultural Centre’s Grand Theatre... from April 20-28 (2019). The musical is the brainchild of Father...Giampietro, of the Pontifical Institute for Foreign Missions” [.HK]; and HK still doesn’t choose its own bishops. See also “Derivatives”.

Central Intelligence Agency (US)- (synon. ‘The Company/Agency’, the original 20th century [international] ‘Intelligence’, ‘civilian intelligence’; a.k.a. ‘catholics-in-action’ [Pieczenik], ‘the runt of the litter’ [Steele]; i.e. ‘the Fisher King’, ‘the *CMC*’s sorcerer³⁴² of a ‘controlled burn’, & general ‘lightning rod’ of/for the IC in general)

What the cloak of Economics is to the ‘Federal’ Reserve & bankmoney, the cloak of CIA is to Mockingbird Media storylines & ‘global governance (by the F.I.RE sector, a.k.a. ‘Kaos’).

³⁴⁰ TITF implies that such institutions’ “failure would have such a negative impact on the financial system and the economy as a whole that the government would do whatever it takes to prevent such a failure, including...transfers from taxpayers” (Wendt, 3).

³⁴¹ On “Hamilton: The Musical”: <https://www.bitchute.com/video/wB9Q88sgdx/> [Dykes, Rockefeller Found., mn.6-7; 26]

³⁴² How did the 1965-74 ‘hippy’ era get to this? <https://banned.video/watch?id=626e98e1bd0441466823e401&fbclid=IwAR002FjPDii7U-JGomzTgNkPMUh9zkAU9wvZkcKJ2HXIq3ruBXFvNjXH4Bc> [‘USofLM’]. See also (for a more serious take) “*Cultural Calendar*”.

Formed to consolidate the O.S.S. & other spy agencies of World War Two, **most of its movers and shakers (as with the P.R. industry) originally came from Wall Street, insurance, and advertising**, not the military, as was the case with NSA and most of the dozen or so other intell agencies. In the old days (prior to the current debt-cycle), there was just the Treasury-Wall St. nexus between New York and D.C. After the innumerable atrocities of what some have called ‘The 2nd 30 Years War’ (1914-45), President Truman entrusted an initial budget of \$100mn. or so (certainly surpassing that of the ONI/Naval Intelligence) under the ostensible care of military men from 1947-52, prior to Wall Street elite lawyer (confessor) and covert operations specialist Allen Dulles succeeding to its first civilian head³⁴³ in 1953. There are numerous reports that The Truman Show didn’t really know what it was creating at the time, thinking of the CIA as some sort of presidential news-analysis service, instead of as a blank check (and they already had very substantial slush funds³⁴⁴; see Seagrave, 2003) for Wall Street’s brain to engage in whatever it saw fit³⁴⁵-- like the ‘Federal’ Reserve-- sans oversight or meaningful audit. Such are the costs of empire, and at times the needs of empire were placed before those of nation. It is **this author’s** informed opinion that, since the coup of ‘63, CIA has been one of the primary institutions of state capture, and in the abject failure of any notions or culture of democratic accountability, both abroad and also at home. See also “American Insurance Group (AIG)”.

This has been increasingly obvious since the Obama Administration greenlighted their free-for-all usage of the “Total Information Awareness”³⁴⁶-NSA database to data mine or predictive algorithm on anything of interest. Since then the corporate media world-- increasingly shrill and irrelevant for decades-- appears to have gone crazy from the spying and propaganda run-amok (who knows how many of them were targeted), and jumped full-on into “fake news” hari-kari. All of them face the dilemma of either continuing to lose money & market share, or throwing what is left of their credibility out the window and going full-on celebrity-tabloiding (with all the thoughtless partisanship that that usually entails). See also “Russiagate”.

³⁴³ Dulles may have been the “first civilian” officially, but “private” (non-governmental status) in the Intelligence Community has always had a cardinal role. It’s been the primary means through which the I.C. has conducted Ops that would otherwise be illegal and/or an unforgivable taint on the Military. This means, among other things, the privatization or out-sourcing of (the mostly DARPA-type) technology that must disseminate in order for any global or “globalist” game to be engaged. The overall I.C. would not be capable of functioning in a global/international sense without such a strategy; and this has often meant “communists” and communist types in the tent. “They actually promoted communists in the O.S.S. They were promoting and using communists” from Day One; “[i]t’s totally run by the Army. The CIA is [mostly] a bogus thing [for bogus ops], you know” (Griggs, 1998). See also “Hegelian dialectic”, “Opposition, controlled”; ShadowGate, 2020.

³⁴⁴ Fitts cites Joseph Farrell (not Sterling Seagrave) for sketching out CIA being “in charge of... basically the biggest pot of secret money on the planet... [after World War 2... combined with a continuance of their their] ability to do covert operations [all over the world] and to kill with impunity. Now what do you [for President Eisenhower] think it going to happen?” (Fitts, 2020f, mn.33). See also “Nasserism”, “Military-Industrial-Intelligence Complex”.

³⁴⁵ President Eisenhower was not imagining things about CIA in the 1950’s and his farewell address (Rappoport, 2017g).

³⁴⁶ The T.I.A. term was coined at a 1999 DARPA conference, prior to the US Information Awareness Office opening in January 2002. Several months later, at the same time that *The Minority Report* was screening in theaters nationwide, the Office initiated its “*Total Information Awareness*” program, based on (“pre-crime”) predictive policing and algorithms. After Congress balked at its outrageousness (with the Senate actually voting **unanimously** for its **defunding**), the Pentagon successfully eluded their ire by simply renaming it “*Terrorism Information Awareness*”, or even “Basketball”, assuring Congress that (what would later simply be known as “the NSA database”) would only be used for military-intelligence purposes [i.e. non-commercial and non-personal] against “non-US citizens”. See also “National Security Agency (NSA)”.

In a society with any ambitions of democracy, some individuals and institutions have got to take the blame for the unaccountability and amoral madness of most American foreign policy this century. The CIA, its black budget, and its systemic disinfo needs to be shut down. There are 16 other spy nests to take up whatever non-criminal slack there may be in its crooked wake. The alternative-- keeping such financial 'intell' spooks in such a privileged position would be to wind up like Britain, where ___ families own ___% of the land³⁴⁷, and London now has a Muslim mayor. This is not some theory. This is what happens with parasites and unchecked parasitical institutions. One would have to be willfully deluded not to see it (see also "Corporate Media Cartel (CMC)"). Here are some select/learned quotes:

1) "When Harry Truman created the CIA [in 1947]³⁴⁸, he *thought* he was creating a central news agency, that would make sense out of information collected by others. But in fact CIA was created by Wall Street. Allen Dulles was a Wall St. lawyer who was sent down *specifically* to create a secret³⁴⁹ landing zone-- inside of the US government-- from within which Wall St. could control³⁵⁰ the US government.³⁵¹ And that's exactly what it has become... [T]here are 7 CIA's, not one³⁵²... so most of the CIA doesn't realize

³⁴⁷ According to Evelyn Cecil, the (famously uncodified) English constitution "...laid the foundation of a land system which has heaped up privileges upon the eldest sons.... [and] that hereditary principle in the Upper House [of Lords]...has...become the very kernel of *primogeniture*-- which is a stumbling-block of astonishing magnitude..." (Cecil, 1895, 1). See also "Primogeniture".

³⁴⁸ Congress punted on the specs in 1947. "[I]t waited 2 years to provide an administrative blueprint... [and] The 1949 bill provided for secret funding by transfer from other agencies. The Congress [then] was told that almost all of the provisions of the bill already existed [de facto] for other government agencies and were merely being extended, but no precedent for the funding or reporting provisions was set forth in the hearings, reports, or floor debates. The [1949] debates in the House made clear that the [novel] funding provisions had been in use since the CIA's creation without congressional authorization, [and] that the CIA Act would 'legalize' this method of funding, 1117 that such a method was the only way to operate the agency... and that it would not be 'wise' to disclose the CIA's budget... [T]he possibility of publishing parts of the CIA's budget was not raised. Discussion... was more extensive in the Senate, though the floor managers were very concerned that too much information was being made public in the debate" (Yale Law, 629-630). Nonetheless, "[i]t is nearly impossible to [even] conceive of any scenario in which open lump-sum appropriation to the CIA and an accounting for the gross sum expended by the agency would substantially enhance any danger to...[security or tactical] interests.... Even strong supporters of the CIA have maintained that neither the CIA nor national security would be harmed by disclosure of its aggregate budget.... As Allen Dulles noted, the withholding of too much information may hurt the CIA" (Yale Law, 1975, 632; n.133). See also "Secrecy, cult of", "Culture".

³⁴⁹ 50 U.S.C. 403f(a), or *The CIA Act of 1949*, expressly "authorizes the CIA to 'transfer to and receive from other Government Agencies such sums as may be approved by the Office of Management and Budget for the performance of any of the functions or activities authorized under Sections 403 and 405 of this title...' (Yale Law, 608, n.5). Catherine Austin Fitts agrees that the "Act... endowed it with the statutory authority that became one of the chief components of financing the '*black*' budget-- the power to claw monies from other agencies for the benefit of secretly funding the intelligence communities and their corporate contractors. This was to turn out to be a devastating development for the forces of [governmental] transparency, without which there can be no rule of law, free markets or 'democracy'" (Fitts, 2006). Robert David Steele also concurs that "CIA is basically leveraging the rest of the government [via the *CIA Act of 1949*] to do...evil everywhere" (Steele, 2017i, mn.56), as does early Reagan Admin. under-secretary of the Treasury Paul Craig Roberts. After WW2, "[t]hey began hyping the Military-Security-Complex.... President Truman said [that] he made the mistake of incorporating [Black Ops] inside the CIA-- which was supposed to just be intelligence analysts. He let them have this Black Ops and this covert operations section, that nobody...[had] any control over. And that is the part that has grown completely...[unaccountable]. No one knows what it is... [or] what is their budget.... It's off the books. It's hidden. They can block *any* [sic] kind of inquiry on the grounds of 'national security', and nobody in Congress would dare challenge this crap about 'national security'. What it means is...security for the security agency that's committing the crimes.... A President is a mere nothing compared to this kind of power, as Kennedy found out, [and] as Nixon found out" (Roberts, 2018b, mn.37-39). See also "English constitution, the", "Secrecy, cult of", "President of the US (PotUS)".

³⁵⁰ In addition to the '*de jure*' (though unconstitutional) financial privileges mentioned in the note above, there is also purportedly a *de facto* "CIA *get-out-of-jail-free card*", whereby if somebody working for or "helping the CIA and they get caught, the CIA can come in and say '*Don't prosecute this person. He's working with us.*' And that happened on a number of occasions in the S&L crisis, where you have a savings & loan looter... getting caught by the FBI & the Justice Department, and the CIA trying to get them off the hook" (Brewton, 1992, mn.19-20). In maintaining the CIA's unofficial motto of *plausible deniability*, "there can be 4 or 5 levels of cutouts and frontmen-- layers that the CIA money would flow through, so that it couldn't be tracked back to the CIA" (Brewton, mn.23). See also "'COVID'" (implausible).

³⁵¹ Or, in other words, "...a secret lily pad within the US government, from which to run the US government" (Steele, 2017d, mn.57). "[P]eople need to understand that the CIA was actually created by Wall Street to be its secret cabal inside of the US government to be the Wall Street mechanism by which it could leverage military aircraft and [permanent standing] military bases overseas to smuggle guns, gold, cash, drugs, and small children... from its inception.... [of, by, and for] The 5% at the top..." (Steele, 2017h, mn.20).

³⁵² Fitts concurs again, that there "is no such thing as '*the CIA*'. because you're talking about scores of thousands of people, as well as scores of thousands of contractors. The biggest problem in all this.... is that you have created a legal and financial infrastructure that allows private companies to receive government money on a non-accountable basis...literally trillions of dollars [for] doing [supposedly] highly classified functions.... The fox is in the henhouse" (Fitts, 2017, mn.18-20). "Jon Rappoport calls it [CIA] 'The Fractured Kingdom' [laughing]....

that it's part of the Deep State... But buried deeply within the ['old school'] CIA are people who have the capacity to, basically, conscript military aircraft and get free access to the thousand military bases that we have, and they smuggle...gold, guns, drugs, cash, and small children" (Steele, 2017d, mn.28-29). "We have 1,000 bases overseas not for military force projection, but because that's how CIA smuggles³⁵³ ... for the elite. Those are lily pads, okay? Closing those bases will knockout 50-60% of pedophilia³⁵⁴ that we're supporting.... I'm an old spy and I know stuff, and the dark side is dark" (Steele, 2017d, mn.53-54). In terms of everyday business, however, it is mostly CIA "*agents* [that] commit treason. *Case officers* recruit them, and handle them, and terminate them-- which means give them money to go away. It doesn't mean kill them" (Steele, 2012, mn.20). "I *did* [sic] a false flag operation for the CIA" (Steele, 2017c, mn.11).

1b) Perhaps it was that way at some particular point in the 20thc, but if so, it was fleeting. CIA has always been odd-man-out in the US intelligence Community. "In my experience...CIA is the basically operational arm for the [Yale-esque] secret societies... It's the central bankers and their related secret societies, and they basically do their bidding" (Fitts, 2020g, mn.14), and may also be tasked with other (more 'international'-type) Ops. by the larger United States I.C. Pretty much everyone admits (at least in the 21stc) that CIA "isn't very good at playing long-ball" (Ibid). See also "UKUSA Agreement".

2) Moreover, CIA predictions for public consumption had become a joke by (no later than) the last two decades of the/[Their'] 20th century. "You know in 1987 the CIA formally estimated [that] the per capita GDP in East Germany to be higher than [that in] West Germany.... [to which] John Deutsch [CIA Director from 1995-96, subsequently replied to Senator Moynihan's inquiry that:] 'Any taxi driver in Washington could have told you that's not so'. But...[they] have to get it into a box that...[they] can't get out of" (Moynihan, 2001, mn.52). See also "Group think", "Intelligence Community (IC)".

3) Nowadays, "[m]ost of the people...at CIA are...pasty-faced drone dwellers.... [a] tiny... fraction of CIA's people are actually out on the street, and most of them aren't actually risking their lives. They're under official cover, and if they're for any reason picked up, [then] they have diplomatic or... some kind of immunity, and...they get out" (Steele, 2017b, mn.23). In the Iranian hostage crisis of 1979-80, of the 50 hostages that were taken, 4 were "under official [CIA] cover.... [and] none of them spoke Farsi" (mn.24). The CIA "is primarily living off [of info] handouts from foreign liasons... and then CIA will pretend,³⁵⁵ when they put it in the President's daily brief, that they've gotten this from highly placed clandestine sources....

Imagine having 65,000+ people, plus contractors, and everything has to be secret. *Can you imagine what a mess you could [eventually] get yourself into?"* (Fitts, 2012, mn.31). See also "'COVID'".

³⁵³ According to the most famous CIA whistleblower of the 20th century, the CIA is characterized by "a kind of mafia attitude, and it has been that way since Eisenhower" (Agee, 1995, mn.17). CIA "sidekick" organizations include the National Endowment for Democracy, "which is nothing but a major conduit" for bribery (Agee, mn.31), and the Drug Enforcement Agency (Valentine, 2017, mn.). "An old[er] technique of the CIA is to establish a kind of 'Civic' organization which will be involved in monitoring elections and things like that" (Agee, mn.33).

³⁵⁴ Steele adds that Google CEO Eric Schmidt "is leading the campaign to bury [last year's] Pizzagate [controversy]. Pizzagate *scared the crap* out of the elite" (Steele, 2017d, mn.55-56)."Pedophilia has been for generations... the way you create control files on people... [which] is the way you maintain a political structure that operates outside the official law... So if you're a Shadow Government, if you're the intelligence agencies, if you're the secret societies, pedophilia is key to creating those control files.... It was always out of hand, but now it's been wildly out of hand" (Fitts, 2017, mn.10-11). "Clearly state and local [law] enforcement feel now free to do this.... And I think a lot of the very Orwellian behavior we're watching in Washington is [that] we have, on both sides of the aisle... a significant number of people in Congress who are compromised by these" operations (Fitts, mn.12). Politicians acting "beyond crazy... [is presumably] because they are terrified about something in their control file.... They're scared to death" (Fitts, mn.21). To "get all the government accountants and bureaucrats... in the government positions", however, is more often simply a matter of something like getting them "watching porn on a government computer... combining porn with entrainment technology...[to] get you addicted... and then I start bringing you into sites where I use under-age actresses.... And I've done it very, very low-cost and efficiently.... [There are] fantastic amounts of control files" (Fitts, 2019s, mn.19-20). "I've lived... in a very wealthy throw-- you know, everything works [even the weather forecasts]. Everybody's smart. Everybody's attractive. Everybody's fun. You know, it's *fun* [sic] to live in that world.... You don't have to wait in line for TSA. You just get in your private jet and go..." (Fitts, mn.21).

³⁵⁵ Living in lies? "Every person that's reporting to CIA is either a double agent, or under observation...I testified to Senator Patrick Moynihan on this... [that] basically secrets and sources and methods are [primarily] used by CIA to lie to Congress; not to actually 'protect operations'" (Steele, 2017, mn.10). See also "American Insurance Group (AIG)", "International Intelligence Community (I.I.C.)".

Put to the test, CIA generally fails,³⁵⁶ and part of the problem is that they rely extensively on official cover, and they do not do gutters... [or] low-rent... These are people that like to wear suits and go to cocktail parties.... The President's daily brief... is garbage.... It's 1/3rd lies, 1/3rd stuff you could read in the newspaper, and 1/3rd...[interrupted]" (mn.25-26). "I cannot overstate the banality of the secret intelligence world... just what crap it is" (Steele, mn.28). "We...have a very toxic bureaucracy. Most of the young people that come in the CIA leave in less than 5 years" (mn.33). Who is doing most of the blackmail? "CIA and NSA among others"; some are (or at least were, pre-2017) official; some are "rogue" (Steele, 2017b, mn.42-43). "...I was in the CIA. It's like being a Jesuit. You can't imagine that you are anything less than sacred and a hair away from being God... I mean c'mon: how righteous do you have to feel to be a clandestine case officer, spending a hundred thousand dollars a month at the age of 38?" (Steele, 2017l, mn.18-19). "It's a spending machine, and these people lie to the president with impunity.... It lies to the president. It lies to everybody. It is a massive sham" (Steele, 2018, mn.20-21). See also "National Security Agency".

3) The 1975-81 "peace window" more-or-less concluded with X.O. #12333 of Dec. 1981, which made **ChArille de jure** independent of PotUS (Conrad, 1985, 968). See also "**Peace Window, the**".

4) "Congress has proven...since the middle 1980's, to be little more than cheerleaders for the CIA.³⁵⁷ Dianne Feinstein, for example... Chairman of the Senate Select Committee on Intelligence [2009-14]³⁵⁸, did nothing to stop CIA malfeasance in all the years that she headed that committee. The same thing has happened under Republican leadership.... [Both the House and Senate] see their jobs as that of just supporting CIA operations" (Kiriakou, 2017, mn.10). "If you look back through history, it's only perjury charges and charges of contempt of Congress that have foiled CIA officers in the past" (mn.11). "My view is every time a CIA director opens his mouth he's lying" (Kiriakou, 2017, mn.13).

5) Director Bill Casey (1981-86), a old OSS exec, GOP-lawyer, and self-proclaimed Knight of Malta, exemplified (at least the first half-century of) CIA. He "spent half a century as a student, business information analyst, wartime intelligence operative, New York lawyer and [politicized] Government official, concerning himself with the flow, analysis, and presentation of information and arguments.... [always having] a marked talent for analyzing information [that was] useful to business executives"³⁵⁹ (Pace, 1987). also (Seagrave, 2003.), "Mockingbird".

6) "We've seen this kind of [anti-president or cabinet secretary] game many times before. The big difference...[today] is that the CIA Intelligence Community and the fake news media³⁶⁰ that they

³⁵⁶ According to Robert David Steele, "NSA does not provide signals intelligence support to the clandestine service... [nor to] the counter-intelligence people.... When I was overseas, a bottle of Scotch bought me NSA signals in my country, on my terrorism target, for one day" (2018, mn.19).

³⁵⁷ Hyperbole? In the first decade since Nixon-era heavy-oversight was scaled back (in 1976) to only 1 Committee, "the Senate and House oversight committees have pushed through Congress a *tripling* of the overall intelligence budget to... about \$25 billion.... Senator Daniel K. Inouye... who was the first chairman of the [new] Senate Select Committee.... [recalled:] 'I doubt if the majority of the committee knew the whereabouts of the C.I.A. in Virginia... I had never been there myself'... [And Inouye was not informed that, f.e.] 'a very, very high official of a certain government was on our payroll'" (Gelb, 1986). "The C.I.A. got what it wanted'," said Senator Daniel Patrick Moynihan... vice chairman of the Senate Intelligence Committee...[1977-84]..."Like other legislative committees, ours [simply] came to be an *advocate* for the agency it was overseeing', Mr. Moynihan added, reflecting the views of most of his colleagues.... 'Anyone who has followed American Government knows that an activity that wishes to prosper in the executive branch gets itself a pair of committees to look after it in the legislative branch', he [added]" (Ibid). Sen. "William S. Cohen, Republican of Maine, who is to be the next chairman... spoke for most of his colleagues when he said of Congressional-executive relations [since '76]: '....[W]e can say we've looked at this budget. As a result of that kind of approach, the intelligence agencies have done very well in their funding requests'" (Gelb, 1986). The ability to bamboozle Congress, however, is not the same thing as having a reputation for veracity. Several years later, in the mid-90's, Sen. Moynihan wrote to President Clinton: "'I beseech you not to ask the CIA [concerning what to do about the war in Yugoslavia]. It is brain dead and should be honorably interred'" (Moynihan & Weisman, 2010, 5). See also "Secrecy, Cult of", "European Parliament", "Intelligence Community (IC)", "Central Banking-Warfare model" [Secret Team].

³⁵⁸ Feinstein was preceded in that oversight post (a legacy of the 1970's Church Committee) by Sen. Rockefeller, 2007-09.

³⁵⁹ Casey initially "grew wealthy...by compiling legal and economic data of use in the business world, turning out works with such titles as 'Tax Sheltered Investments' in 1952" (Pace, 1987).

³⁶⁰ The same sponsors as their advertisers? "You know that.... there are only two countries in the world that [even] permit drugs to be advertised to the public [on television]" (Gerson, 2010, mn.26).

are...partnered with, are not in control [anymore]. There are too many independent media and independent researchers busting through and breaking up the fake news efforts. So this is the first time we've seen this game when fake news was *not* in control" (Fitts, 2017, mn.4). See also "Council on Foreign Relations (1921-)"

7) Nearly 2,000 private sub-contracting firms account for approx. half of the aggregate 'Intelligence Community' budget, which, for FY 2013 was under-listed (without FBI or military intelligence totals) approx. \$53 billion, or about twice what it was in 2001 (McGregor, 2013). The CIA has been "the largest beneficiary... [as it] has been transformed into a paramilitary organisation since 9/11 and oversees its own drone programme, [which] takes about 28% of the overall [IC] budget, or \$14.7bn" (McGregor, 2013).

8) Although not as self-deluded as Economists, CIA (and also its institutional little brother, the US Information Agency) will characteristically lie to advance their propaganda/storyline, or else their institution has no *raison d'etre*. "" (Rappoport, 2017).

9) Decades-long Intelligence Community insider Dr. Steve Pieczenik concurs: "The point of fact is [that] the CIA never admits to a failure unless there is another hidden agenda" (Pieczenik, 2017g, mn.5-6). Is CIA accountable? About "60-70% of the internal [CIA] staff has been outsourced³⁶¹.... The reason they do this in the CIA...[is that] The CIA is bloated [set up to fail], highly expensive, and not completely loyal to the US. It's very simple. They do not work directly for the CIA or for the US government. They usually work for an outsourcing contractor-- for the most part Booze-Allen, L3, or any other of the Blackwater associations" (Pieczenik, 2017, mn.14). The M.O. at least this century,³⁶² has been "come, define the narrative, and then finally they extract money from it" (Pieczenik, 2017j, mn.10). "Why do we have the same people at the 2nd and 3rd levels of the Central Intelligence Agency now that we had under the *two* previous presidents?" (Stone, 2018, mn.14-15). See also "Mafia (organized crime)".

10) Steele often calls CIA "the runt of the ['intel community'] litter", presumably because most of the others are overwhelmingly military, and CIA also seems to have been somewhat ghetto-ized in recent decades as the main place where civilians & 'liberals' go,³⁶³ as revealed by some of its factions' juvenile stunts in the latter stages and aftermath of campaign 2016. (At times it almost looked like the personal slush fund of George 'Color Revolutions' Soros and the D.N.C.,³⁶⁴ in addition to its much longer-established role in planting 'stories' within the Mockingbird-Corporate Media cartel). See also "Mockingbird", "Nasserism".

11) Many would agree with former Asst. Secretary of the Treasury Paul Craig Roberts that "the media is very much in the pockets of the CIA. It has been-- always. It's a product of the Cold War."³⁶⁵ I mean so is

³⁶¹ More generally, "the irony of the CIA is that 40-60% of people...[there] who are recruited are [in fact] outsourced... [T]he Agency itself is [now] a...outsourced mechanism" (Pieczenik, 2019n, mn.105). See also "Intelligence Community (IC)", "National Identity/Nationalism".

³⁶² It wasn't necessarily always like that. For example, in "the 1970s and '60's they created the McCone center [for International Relations] at MIT to study political psychology, propaganda, [and] national character... And when you learn those things, you never forget it. And in turn that was the essence of the CIA then. It eventually transmuted into other [contracting] organizations... They offered me endless kinds of jobs. And I said: 'Guys, I'm not interested. I don't want to be in the business of being controlled'" (Pieczenik, 2017j, mn.16). See also "National Identity/Nationalism", "Cultural Calendar".

³⁶³ According to Walter Laqueur, it was commonly argued, even back in the 1940's, "that the OSS men who were to constitute the core of [this new] central intelligence [proposal] were 'collectivists' and 'do-gooders'...[with] ideology 'far to the left of the views held by the President [Truman] and his Secretary of State' [then James Byrnes (1945-46)].... [President] Truman's conviction about the importance of intelligence [in the then-nascent 'computer age'] was not shared by everyone in the administration and Congress. Opposition came mainly from conservative elements in Congress and the [old] Department of State" (Laqueur, 1993, 72). To Carroll Quigley, however, this oft-held assertion didn't seem true to him in the 1960's-- when CIA tried "to infiltrate" or contribute funds "all across the political spectrum on American campuses" (Quigley, 1971). See also "Hegelian Dialectic", "Quigley, Carroll (1910-1977)".

³⁶⁴ 'Quantum Fund'ing or not, the relationship between (1 & only) 'City of London' and the (1 & only) D.N.C, goes back to the very founding of the latter (in the 1860's); it's no 'secret'. See also "Fascism, 'Modern'" [Belmont], "Soros, George" [Quantum], "Nasserism" [Color].

³⁶⁵ A quick gathering of notable/inside quotes on this subject, in chronological order: 1) "The conscious and intelligent manipulation of the organized habits and opinions of the masses is an important element in democratic society. Those who manipulate this unseen mechanism of society constitute an invisible government which is the true ruling power of our country. We are governed, our minds are molded, our tastes formed, our ideas suggested, largely by men we have never heard of. This is a logical result of the way in which our democratic society is organized.... Propaganda is the executive arm of the invisible government"- Edward "the father of propaganda" Bernays, 1928.

Germany.³⁶⁶ You don't think Britain has a media independent of the CIA do you?... Germany doesn't, or France, or Italy, or Belgium, or the Netherlands. None of them do!... Australia, Japan?... We even had a book written by one of the editors of the largest newspaper in Germany who says *every* significant journalist in Europe in on the CIA's payroll" (Roberts, 2017b, mn.12-13). See also "[Corporate Media Cartel](#)".

12) The 21st century has also been full of revelations on the American side of the Atlantic. According to seasoned observers, "[w]e do know [now] that the CIA has morphed into being a Deep State that uses disinformation-- propaganda-- to align decisions of Congress, the Executive branch, and foreign governments with their own secret behind-the-scenes agendas" (Roberts, 2016d, mn.2). The leading researcher of the agency, Douglas Valentine, concluded that CIA typically favors what will be beneficial to their "surveillance-control/information-control agenda" (Valentine, mn.).

13) Steve Pieczenik would "get rid of [Director] Gina Haspel and... a lot of the CIA operatives.... and bring in a very tough Attorney General.... [who] can fire 50% of the CIA without *any* [sic] ramifications!" (Pieczenik, 2019l, mn.29). Why? "One--it's [now just] a salary [for most of them]; and two--it's a pension" (Pieczenik, 2019n, mn.104-105). See also "[Military-Executive-Corporacy \(MEC\)](#)".

13b). A year later, Pieczenik added: "If I were [CIA director] Gina Haspel and I was part of the CIA... I would be very much concerned...Remember months ago, I told you [Steve] Bannon was going to be arrested...[interr.].... And Bannon was the key to a lot of the corruption [in the I.C.]" (Pieczenik, 2020e, mn.13-15). Trump "is doing it by attrition, which is the correct way to do it" (Pieczenik, mn.16); even though "we have not [yet] cleaned out any of the CIA...[interr.]... But...[Trump] is starting to clear it out, piece-by-piece, using the law.... I would not have used the law. I would've used executive power" (2020e, mn.23). "We have about 75,000 troops already deployed all over the United States to make certain that no military coup or civilian coup is attempted" (Pieczenik, 2020e, mn.27).

14) The "technological seed funding arm of the CIA" is In-Q-Tel, which is "seed funding companies to develop technologies (Icke, 2019, mn.7). "14 cutting edge firms...[have been] funded by the CIA. It's coming *through* [sic] Silicon Valley, not from it" (Icke, 2018c, mn.1). See also "[Industrial Revolution, 3rd](#)".

15) In summary, over the past 7 decades, "the intelligence agencies...have grown exponentially in power and influence, to the detriment of our freedoms... We have compromised our values... [killing] hundreds of thousands of innocent people... and [have] turned America, once the world's beacon of freedom, into a national security surveillance state and an international moral pariah.... [simply because] the Dulles

2) The popular internet fake quote that: "*The CIA owns everyone of any significance in the major media*", attributed to fm. CIA Director William Colby, is in fact based on similar (though less pithy) statements made during the mid-1970's and the 1976 Church Committee hearings. As related by Carl Bernstein in *Rolling Stone* at the time: "In all, about 25 news organizations... provided cover for the [Central Intelligence] Agency... [Former Director] Dulles initiated a 'debriefing' procedure under which American correspondents returning from abroad routinely emptied their notebooks and offered their impressions to Agency personnel. Such arrangements, continued by Dulles' successors, to the present day, were made with literally dozens of news organizations. In the 1950s, it was not uncommon for returning reporters to be met at the ship by CIA officers" (Bernstein, 1977). Moreover in 1973, CIA Director Colby "told reporters and editors from the New York Times and the Washington Star that the Agency had 'some three dozen' American newsmen 'on the CIA payroll'... [and] in 1976, according to high-level CIA sources, the CIA continued to maintain ties with 75 to 90 journalists of every description- executives, reporters, stringers, photographers, columnists, bureau clerks and members of broadcast technical crews. More than half of these had been moved off CIA contracts and payrolls but they were still bound by other secret agreements with the Agency. According to an unpublished report by the House Select Committee on Intelligence... at least 15 news organizations were still providing cover for CIA operatives as of 1976" (Bernstein, 1977).

3) "" 1981;

4) "There's been a coup, have you heard? It's the CIA coup. The CIA runs everything, they run the military. They're the ones who are over there lobbing missiles and bombs on countries.... And of course the CIA is every bit as secretive as the Federal Reserve.... think of the harm they have done since they were established [after] World War 2. They are a government unto themselves. They're in businesses, in drug businesses, they take out dictators... We need to take out the CIA"- Congressman Ron Paul, 2010. See also Titus, 2017; Paul's assertion is in contrast to what Seymour Hersh would say (see also "Central Banking-Warfare model" [Secret Team]), and also Sen. Moynihan (above footnote), and also Steele, Jones, & Pieczenik (immed. above).

³⁶⁶ "The equivalent to the CIA in Germany is the BND... which is... [in literal translation] '*The Federal News Service*'. Similarly, in the CIA under Obama, about 6 years ago, the CIA introduced a change into how it writes its internal reports-- to use the same style that journalists use in writing articles, called the *inverted pyramid style*, where...[inductively] you put the conclusion [first] up top, and then you justify how you got to the conclusion" (Assange, 2017, mn.5).

brothers, the Cheney gang, the neocons and their ilk have... deployed our military and intelligence apparatus to serve the mercantile interests of large corporations”³⁶⁷ (Kennedy, 2016). Some would say that such political shenanigans are encouraged-- if not necessitated-- by the exigencies of debt-money (a.k.a. “national debt”) monetary systems, which have always gone hand-in-hand with imperialism. See also “Nasserism”, “[Corporate Media Cartel](#)”, “[Fascism, Modern Hand of](#)”.

16) [CIA Updates: 11/21-](#) “CIA does not do public health. The CIA does coup d’états. Between 1947 and the year 2000, the CIA was engaged in 73 coup d’états-- most of them against [so-called] ‘democracies’; [that’s approx.] 1/3rd of the countries of the world” (Kennedy, 2021, mn.15). Why stop circa 2000? RFK, Jr. has “found 20 different ‘pandemic’ simulations... [from] 2000. And the 1 thing they had in common [was that in] most of them, Bill Gates was involved... Tony Fauci was involved. But [in] *every one* [of them] the CIA was involved... The CIA wrote the [master] scrip. High-level CIA... [public servants] participated in every one of those ‘pandemic’ simulations... [involving] hundreds of thousands of people... [using] frontline workers, and... trained police, and [for-profit] hospital systems & utilities in Europe, in Italy, in Germany, in Canada, Australia-- all at the same time-- [supposedly] to do a response to a ‘pandemic’. But it was not a public health response. It was a response to use the ‘pandemic’ for something else. So they practiced again and again and again [on] how to use the ‘pandemic’ as a pretext for imposing totalitarian controls... obliterating liberal democracy [?], across the planet” (Kennedy, mn.17-18). c.1967 “the CIA found” that most people, when ‘ordered’ by ‘an authority’ will “do something that violates their conscience, that violates their own basic values... 67% of people will obey authority over their values... hypnotized by fear into obeying... a ‘figure of authority’. But 33% of the people **will not obey**” wrong authority (Kennedy, 2021, mn.19). See also “‘COVID’”, “‘Conspiracy theorist’”, “‘Democracy’”.

[5/22-](#) “History shows that the CIA strategically blew it[s projections/predictions], all the way from Vietnam to Afghanistan and Iraq. Ukraine is no different” (Escobar, 2022).

See also “Deep State”, “National Security Agency (NSA)”, “UKUSA”, “Intelligence Community”.

[Centuries, recent-](#) See “Adolescence of Mankind” [.7 centuries], “Civilization, Western” [.centuries].

[Certificates of deposit, negotiable-](#) (fixed interest rate CDs that may be resold before maturity)

1) Large commercial banks will, as is usual with CDs, “pay the bearer a fixed interest rate and return the principal amount... Minimum denominations [however] are \$100,000... [and] \$1 million more typical. Maturities range from 1 week to 12 months.... As with other deposits [[savings investments](#)], the first \$250,000 of a CD is insured [regardless of negotiability. But].... since most are issued in much larger denominations, buyers are exposed to default risk if an issuer goes bankrupt.... Most negotiable CDs are sold directly by a bank to.... [typically] nonfinancial corporations and money market mutual funds” (Burton, et al, 2010, 253-254).

2) Banks “began issuing large negotiable CDs in 1961. National City Bank of New York (now Citibank) was the first issuer, and... a securities dealer agreed to make a secondary market in the instruments. The market grew rapidly until 1966, when open market interest rates rose above the Regulation Q ceilings.... Investors seeking higher returns turned elsewhere... [making] sharp decreases in the CD market... [and] banks turned to the commercial paper and [new] Eurodollar markets... and most importantly created *Euro CDs*. Again, National City Bank took the lead... [offering] dollar-denominated CDs in London in 1966 to get around the Regulation Q interest rate ceilings and to avoid the reserve requirements mandated on domestic deposits” (Burton, et al, 2010, 254). See also “Regulation Q”.

3) “*Euro CDs* refer to CDs [that are] denominated in ‘currency other than that of the country in which they are issued” (Burton, et al, 262). See also “Money markets & Money market funds (MMFs)”.

[Channel-Floor systems-](#) (a.k.a. ‘the ‘ed’s floor system’ [2013-17])

³⁶⁷ Julian Assange adds that the CIA “has a lot to be concerned about... [as] a very incompetent organization... that gave us Iraq, Al-Qaeda [a.k.a. “the database”], the destruction of ‘democracy’ in Iran [1953], [the General] Pinochet [dictatorship in Chile; 1974-90], the destruction of Libya [2011-present], the...rise of ISIS [https://img.huffingtonpost.com/asset/58c7eb00270000ee64749d45.jpeg?ops=scalefit_720_noupscale], and the Syrian civil war [2011-present]. So this is an organization that... [is] either deeply incompetent, or which-- even from the perspective of American power-- [operates] counter to its purposes” (Assange, 2017, mn.19-20).

1) Prior to 2008 at least, the Fed and other CB's targeted the interbank ('federal funds') rate of interest with: the (d.b.t.) "discount rate as the upper bound on the channel and the interest rate on reserves [a.k.a. zero at that time] as the lower bound on the channel" (Williamson, 2016).

2) According to St. Louis Fed VP Stephen Williamson, however, "" (Williamson, 2015).

3) And that was before the entire financial system was threatened with negative interest rates. What existed in the mid-2010's, Williamson adds, was best-termed simply a "floor system"-- i.e. "with plenty of Reserves in the system, the Fed can achieve its target for the fed funds rate by simply setting the IOER" rate, which Congress allowed them to do in 2008 (Williamson, 2016).

See also "Interest on Excess Reserves (IOER)", "Federal Funds rate (FFR)", "Repo Agreements".

Charismatic Authority (CHA) & Charismatic Dependency (CHD)- (1) "at the beginning, all that we had were lords and serfs, a kind of a two-class system"³⁶⁸ [Quigley, 1976c-pt.2, mn.135]; 2) a.k.a. the [long-term] process of ['honest broker'] state/public institutions, once established, being corroded into arbitrariness, and then broken down). See also "National Identity Cycle", "Estates, 3".

"A despotic government does all the mischief to itself that could be committed by a cruel enemy, whose arms it were unable to resist. It preserves itself likewise by... putting the most distant provinces into the hands of a great vassal" (Montesquieu, 1748, 129).

Why? "[I]n a government where there is no fixed property, people depend rather on the person³⁶⁹ than on his estate" or laws (Montesquieu, 1748, 62).

1) As socioeconomic stress within a nation or state increases, civil society breaks down into prevalent hero-worship (CHA) and (if uncorrected), eventually into relationships of primate-like personal dependency (CHD), as the state structures corrupt or dissolve away (from honest brokering) into openly oligarchical interests, and then irrelevancy (White & White, 2008d). See also OECD, 2019; Pieczenik, 2019c, "Montesquieu, Baron de" [Rule-by-Fear].

2) This is because "[w]ide differences in income, status, and opportunity prevent common attitudes and a sense of community... The ordinary Latin American [or any] barracks revolt does not produce changes in attitude or social structure" (Turner, 1968, 18). "[A]ncient states" as well, "seem[ed] to oscillate between periods of successful centralization [CHA] and [periods of] loss of control [CHD]"³⁷⁰ (Adams, 2000). The 3rd century historian Diogenes Laertius, cited Solon (c.638-558 BCE) describing it [the cyclical political-identity phenomenon] as like "...thunder follows upon brilliant lightning...[so] by mighty men [CHA] a city is destroyed, and a people Plunge unknowingly into enslavement [CHD]..." (Diogenes, 26). See also "Dynastic cycle, the".

3) The vicious circle set in motion by (sociologist Max Weber's term [from a century ago]) 'Charismatic Authority' has long been well-known: the "fact that the sultan was also [the] caliph... and the religious belief that the government was under divine guidance and should be obeyed, however unjust and

³⁶⁸ ...with "the king... [placed] outside [of] the [two] classes" (Quigley, mn.136).

³⁶⁹ Then "mischief arises from a notion which some people entertained of revenging the cause of the Deity. But we must honor the Deity and leave him to avenge his own cause.... [Otherwise] where would be the end of punishments?" (Montesquieu, 1748, 186).

³⁷⁰ CHA and CHD may also be characterized, respectively, as 'the political tradition of *inability to stand up for what is right*', followed by so much stress brought about from prolonged exposure to the above condition, that the subjects are '*no longer able or willing to distinguish between public right and wrong*'. See also 'National Identity Cycle', → "Ethnic (National) Identity (ENI)".

tyrannical, made all religious thinking on political or social questions take the form of justification of the *status quo*, and made any kind of reform almost impossible. Reform could come only from the Sultan, but his ignorance and isolation from society made reform unlikely. In consequence, the whole system became increasingly weak and corrupt. The administration was chaotic, inefficient, and arbitrary. Almost nothing could be done without gifts and bribes to officials, and it was not always possible to know what official or series of officials were the correct ones to reward. The chaos and weakness... grew worse during the next two hundred years” (Quigley, 1966, 112-113). See also “Civil National Identity (CNI)”.

3b) Weber, however, failed to note another (& what would soon be a much more prevalent) vicious circle. While Weber’s (1910’s-unpublished) “tripartite classification of authority” did seem to have, at that time, 3 mostly-distinctive categories: *charismatic* authority [CHA], *traditional* authority [ENI], and *legal-bureaucratic* authority [CNI]; over the longer-term, “charismatic authority”-- in governmental institutions-- always [and not just since the invention of paper or the microchip] winds up collapsing into “bureaucratic” (a.k.a. “legalist”) institutions³⁷¹ that may or may not be “rational” (that is, for anyone other than the ‘lobbyists & special interests’ that write most laws & codes today [one century of expanding-government after Weber]). It’s hardly novel to point out that, for about as long as “agricultural and other economic surpluses started to be accounted for numerically... [they were] typically controlled by priests and other temple bureaucrats”-- thus consistently blurring (in practice) Weber’s theoretical line between “charismatic authority” [priests] and “rational authority” [bureaucrats]³⁷² (White & White, 2008d). See also “Lobbyists”, “Big Government (growth of)”.

3c) In any event, as surely as adjectives serve merely to modify nouns, “authority”-- whether (fleeting) “charismatic” or (enduring) “rational-legal”-- tends to wind up as Authoritarianism in government, even if only because of self-serving “Groupthink”. Hence the “charismatic authority” typical of ancient “pastoralism” manifests today³⁷³ as the “bureaucratic authoritarianism” of (so-called) ‘modern’ *collectivistic socialism*-- in some contrast to the *Territorial-Civic* heritage of constitutionalism [and at least some meaningful limits on the authority of government] (White & White, 2008d). See also “Civil National Identity”.

3d) “The bureaucratic left is intimidated by the idea that... the privileged ‘free’ market can work” (Sullivan, 2017, mn.26).

4) Although “charismatic authority”’s archetype has long been (the ‘divinely’ weather-assisted)³⁷⁴ Genghis Khan (c.1162-1227), claims to ‘divine right’ have, obviously, not been at all limited, in Asia or Europe, to self-made superheroes or religious figures.³⁷⁵

5) Such phenomena (apparent to some extent after the British economic crackdown on the American colonies in the 1750’s-’60’s) are in fact quite contrary to what the founding fathers of the USA had in mind. A republican structure is designed to keep such ‘historical cycles’ at bay (or at least to slow them down considerably). See also “Separation of Powers” (keeping centralization and dependency at bay).

³⁷¹ Is ‘the’ solution to this something even worse? See also “Tickbox”, “Big 5 (on S&P 500)” (a.k.a. a ‘tech giants’).

³⁷² In fairness, Weber’s coinage (via Talcott Parson’s translation) of the term “iron cage” of the state (derived from Weber’s 1918 “Politics as a Vocation” lecture) does briefly allude to a future bureaucratization of social order as “the polar night of icy darkness” (or simply “dark winter”, as Joe Biden liked to say, a century later, in 2020). (Pistor, 2020b?). See also “Power”, “Politics” [‘most men’]; “Statism”.

³⁷³ Authoritarianism is authoritarianism, regardless of the modifier. “In providential monarchy... if there is a ruler on Earth, that ruler was picked by the Deity. This means you must accept whatever happens: it leads, of course... to fatalism, even though they don’t [necc.] accept that in their [own] actions, frequently... Now, this lead to a number of results. There is no rule of law; there is the rule of God’s will... There are no constitutional rules of succession in Islamic Civilization, in Byzantine Civilization, or in Russian Civilization-- *ever* [sic]; and to talk about constitutional law in Russia is to talk nonsense” (Quigley, 1976c-pt.1, mn.34-37), regardless of whether it was supposed to be the most religious (17thc) or most secular (20thc) place on Earth. See also “Russia”, “Dynastic cycle”.

³⁷⁴ In early 13th century Mongolia, the “transition from extreme drought to extreme moisture created the ideal conditions for a charismatic leader to emerge out of the chaos, develop...[a large] army and concentrate power.... Where it’s arid, unusual moisture creates unusual plant productivity, and that translates into horsepower. Genghis was...able to ride that wave” (Hessl, 2014).

³⁷⁵ This clip is a depiction of England’s king Charles II talking frankly with his nephew, (the out-of-office) William III of the Netherlands, ‘for’ whom Charles was, at that time (c.1670), arranging with his French 1st cousin, Louis XIV (“Sun King”) of France, to invade the Netherlands (and have William appointed *Statdholder*): <https://www.youtube.com/watch?v=YSrg9fp2fHs> . See also “Glorious Revolution”

6) Hence in the 1770's, a plurality of the 'Founding fathers' came to believe that it would be more effective to emphasize 'natural law' rights more than common law rights³⁷⁶ in the upgrading of their tussle with the British Parliament & Crown. For example, Thomas Jefferson's revision of the Declaration of Independence "appears to [deliberately] reject Divine Right (which has historically been used to justify monarchy) as the determinant of human rights and to use [instead] the laws of natural creation as the basis for equal rights" (Rosenfeld, 1998, 282). See also "Natural law", "National Identity/Nationalism", "Libertarianism(s)".

See also "Common law", "Military-Executive-Corpocracy (MEC)", "Legalism".³⁷⁷

8) Here is the simple (long-term) progression that basing social/public-political identity upon "Charismatic authority" puts into place: [see also "Aristocracy (& nobility)", "Oligarchy"]

Charismatic Authority-Dependency → Nobility → Aristocracy → Aristocrats → Oligarchs → Oligarchy → Revolution
 (the basic attitude-assumption) (closed caste system) ('open' class system) (from land-based to bankmoney-based) (aristocrats + public control [local-de facto]) (oligarchs + [nat'l/de jure] gov't control) (...or [some 'clever' form of] serfdom)

Effects of Increasing Stress on Group Cohesion

['not commodified yet' - freedom in '76... 2036?]

Chartalism- see "State Theory of Money".

Chicago Plan(s)- (a.k.a. '100% reserve banking'; the 1930's capstones for 'full reserve' or '100% reserve' plans; antecedent to 21st century 'public money'/'sovereign money' plans)

1) They simply "called for the [legal] abolition of [what was then (mostly) known as] fractional reserve banking...[and thus also for] the establishment of a federal [public] monetary authority to conduct monetary policy under definite rules established by Congress'... [per] Article...[1:8] of the US Constitution... What was envisaged by the...[ultimately hundreds of] Chicago School economists was that banks could not and should not perform both functions of payment and [of] lending... [because allowing] banks to perform the dual function risks a de facto nationalization of the banking system, which is to be avoided by [instead] clearly articulating the respective public and private roles in the payments and lending mechanisms, thus ensuring stability..." (Papadimitriou, 1998, 447). See also "Narrow banking", "Civilization, Western" [separation of powers], App.C: "1-2-3".

1b) ...but the most extensively reviewed and endorsed³⁷⁸ money reform proposals in the history of this planet (weren't enough to stop the greatest spasm of violence in the history of this planet). See also "Big picture".

³⁷⁶ This cleavage is sometimes a.k.a. Edward Coke (more NL-principles) vs. William Blackstone (more CL-arbitrary specs.). See also "Revolution, American, the".

³⁷⁷ *Legalism*, from Roman times, has been the primary institutional usher of successful 'civil' (CNI) societies to 'charismatic authoritarian (CHA) states. As comparatively-functional CNI societies tend to attract more & more incoming diversity, their civil-common law institutions are pressured to become more extensive & bureaucratic (a.k.a. legalistic or 'statist'), hence the long-term development from Common law (f.e. juries) into 'legalism' (tribunals & 'secret courts'), and the arbitrary-legalist 'decline' of 'civil' institutions that precede (if unchecked) their 'fall' into systemic corruption and (eventually) "Charismatic Authority (CHA)". See also 'National Identity Cycle'.

³⁷⁸ Although the original 1933-34 'Chicago Plans' were confidential, Irving Fisher actively promoted his 1939 revision (<https://www.scribd.com/document/53641496/A-Program-for-Monetary-Reform-1939>) in very broad sectors of the academic community, eventually writing to Roosevelt in late 1944 that "'[f]our hundred other economists have endorsed the idea'" (Phillips, 1995).

2) Like the late medieval reform-ation to separate church and state, the “purpose of the [original 1934] Chicago Plan for Banking Reform was to abolish fractional reserve banking and thereby clearly differentiate [a sovereign] government’s right to create *money* from its role in the [heavy] regulation of private *credit* markets” (Phillips, 1995, 5). See also “Monetary reform”, “Bank welfare”.

3) Hence, obviously, the “mistake... lies in fearing money and trusting debt.”– Henry Simons³⁷⁹ “Economic Policy for a Free Society”, 1948, p.199. Simons’ “Financial Good Society” core idea was that “all...[currency] would be fiat money, issued essentially by the Treasury.... [created] on the basis of 1) a rule... that they would [from this ruler] use the price level [of ???] to target how to adjust...[the] rule. That would take care of the money and payment system...[It] would then 2) abolish all short-term debt. All debt-- public, private, whatever-- would be essentially ‘*infinite maturity consoles*’³⁸⁰. That was his Financial Good Society. [Then, 3] Banks, with ‘100% Reserves’ [requirements]...would not be able to create any...[currency]”.- Ronnie Phillips (Kotlikoff, 2021, mn.139-40). See also “Monetary reform”, “Cryptocurrencies and Stablecoins”, App.C: “1-2-3”.

4) In March 1933, a memorandum from (lead signatory) Frank Knight,³⁸¹ Henry Simons, Aaron Director, (future senator) Paul Douglas, Garfield Cox, Lloyd Mints, Albert Hart, and Henry Schultz, was delivered to Henry Wallace, Roosevelt’s [de facto PM &] Secretary of Agriculture, approx. 40 other key individuals, arguing for ‘full reserve banking’ in all aspects of TAB-bankmoney, hence transforming it into a new type of banking institution with 100% Reserve requirements for all monetized credit institution activities, including not only cash notes [as the mid-19th century reforms had aimed at], but also for all TAB bank credit/current accounts, and for all of their Reserve (RAB) accounts at the 12 Federal Reserve Banks, which were to be nationalized (Laina, 2015).

5) The main point, as summarized in (Irving Fisher’s) subsequent ‘Chicago Plans’ [after Simons, et al’s original was shelved by the Roosevelt Admn. & Congress³⁸², in deference to the *Banking Act of 1935*’s federal insurance regime], was to “Nationalize *money* [creation] but do not nationalize banking [distribution]. In fact the present [mid-1930’s] demand to nationalize banking would fade away if only the control of *money* were recaptured by Government. Moreover... almost all of our complicated and vexatious banking laws could be repealed if once we made this separation between [new] money creation and [actual] money lending. The insurance of bank deposits would become unnecessary, because there would be no reasons for runs on banks. Furthermore, the 100% plan is the *only* way to make this separation complete. One of my half-converted correspondents proposes that we require an 80% but not a 100% reserve, ‘Surely 80% is enough’. No, [that is] not enough to disentangle *money* from banking, not enough to give Government undisputed sway over the former and bankers undisputed sway over the latter. Even 99% would not quite do that. Why not make the divorce complete?... Once anything less than 100% is used, the tendency is always to pare it down further; the same argument, ‘so large a reserve is not required’, will again be heard. Witness the progressive weakening of reserves under our Federal Reserve System which was established to strengthen reserves” (Fisher, 1936, 15-16). Why put banks in the governing business alongside (or in the same building as) governments in the banking business?³⁸³ See also “Separation of Powers”, “Estates, 3”.

³⁷⁹ Simons (1899-1946) was the primary initiator of the original “Chicago Plan” versions of 1933-34. He “was the original formulator of all these ideas”- Ronnie Phillips (Kotlikoff, 2021, mn.139).

³⁸⁰ Restricting debt to “consoles...may reduce the potential for [‘bank’] runs, but it’s still leverage I think” (Kotlikoff, 2021, mn.140).

³⁸¹ Knight “deserves much credit for having been the only reputable economist to have taken Soddy seriously [in the 1920’s], even though... he missed Soddy’s main contribution” (Daly, 1980). See also “Soddy, Frederick (1877-1956)”.

³⁸² Requiring “100% reserves” was not a startling idea by then. Frank Knight, “and probably [also Henry] Simons, conceived the idea of 100% reserves [even] prior to the publication of [Frederick] Soddy’s 1926 book. By 1934, however, Simons...[was raising] concerns that 100% reserves would not be sufficient in a world where financial markets could innovate around legal restrictions on banks” (Tavlas, 2020).

³⁸³ “The Government ought, as soon as possible, to retire from the banking and money-lending [i.e. allocating] business, into which the recent *emergency* has driven it. While depending on our banks to mint [i.e. create] our [new] money, we have come more and more to depend upon Uncle Sam to be our banker and source of [allocating] loanable funds. The appropriate functions of each have thus been perverted to the other.... take the banks out of the money-creating business and put them back squarely into the money-lending business where they belong,

6) “The banking business is obviously not a proper function of government; but providing, controlling and overseeing the monetary system is definitely a function of government. No private party can [even hope to] do that properly [without systemic corruption]. Especially not banks!.... Who would keep money in banks today, except for the FDIC guarantees? Banks should remain privately owned, because when reasonably structured, they perform very necessary functions, and can do it professionally and conveniently. Who within government would run the banking business? Bankers however, have nothing in their training, experience or their souls that qualifies them as masters of the universe– to control our society as the money power [both creating and allocating] confers upon them. Banks should act [simply] as intermediaries for their clients who want to get a return on a deposit or similar investment; and their clients who are willing to pay for the use of that money. But banks must not create the money. The money system belongs to the Nation and our Federal Government must be the only entity with the power to issue and regulate our money as the US Constitution already mandates. We nationalize the monetary system, but don’t nationalize the individual banks. That would be a dangerous step towards fascism. Private enterprise is a powerful mechanism that can produce excellent results when properly structured and regulated. That is an important American ‘theme!’” (Zarlenga, 2014d, 26). See also “United States, the”.

7) The Chicago Plan, however, has been characterized as simply “forcing banks to hold reserves [RAB] against their deposits [TAB-bankmoney]. As some people have pointed out, this doesn’t necessarily stop banks [from] creating [new] money– that is it is quite possible for there to [still] be money creation by the banking sector with 100% reserves³⁸⁴ ...for the same reasons [that] a 10% reserve ratio doesn’t constrain deposit [TAB] creation, although it does require the central bank[s] to play along³⁸⁵” (Jackson, 2012).

8) The July 1939 version at least, was basically to pay off (get rid of) the national debt by having the US Treasury purchase all of its outstanding government bonds with new US public (interest-free) money.

9) “We will get to the Chicago Plan, as part of the no-leverage financial system.... I think you [basically] want them to be...run as mutual funds.... just like Fidelity...[which] never failed. Look at 2008.... We want them all to operate like Fidelity”; “[w]e don’t even need the banks for this... [just]...allow everybody to have accounts directly with the Federal Reserve [or Treasury]” (Kotlikoff, 2021, mn.142-43; 149). See also “Monetary reform”, “Big 3-4 Asset managers”, “Federal Funds (Accounts) for All”. See also “Full Reserve banking”, [vis-a-vis] “Sovereign money”.

Chicago School- (the 1950’s-’80’s rehashing of 19th century ‘banking school’ antecedents in a non-’Austrian’ way; not to be confused with the 1930’s ‘Chicago Plan’ [which ‘Chicago School’ founder Milton Friedman supported from the mid-1930’s to the early 1960’s³⁸⁶])

1) “The essence of their ideology is that government has no positive role,³⁸⁷ being only a deadweight burden. Starting with John D. Rockefeller, substantial funding for these economists came from *rentiers* seeking to replace the tax burden on property, monopoly power, and finance with a tax shift onto the rest

and...put the Government in the money-creating business, where it belongs, and take it out of the lending [allocating] business, where it does not” (Fisher, et al., 1939, 31).

³⁸⁴ Adding to the past heritage of confusion over this matter is also the fact that Austrian founding father “Ludwig von Mises (1912) was [like Ricardo in the 1820’s] an advocate of 100% reserves in *gold*” (Phillips, 1995; passim Laina, 2015). Von Mises, unlike the Chicago Plan authors or Ricardo, also supported the patently false myth of ‘exogenous money creation’. See also “Exogenous vs. Endogenous”.

³⁸⁵ “Instead of [supposedly] ‘backing’ deposits with Reserves [which relies on heavy regulation], we [simply] give people access to the state created means of payment itself. Thus, unlike in the current system where 2 types of money circulate separately– central bank created Reserves [RAB]... and commercial bank created deposit [TAB] money... in the...[all public money] system there is no longer a split circulation of money, just 1 integrated quantity of money circulating among banks and non-banks alike” (Jackson, 2012). See also “Separation of Powers”. “Money, 3 (contemporary) Tiers of”.

³⁸⁶ Friedman’s apparent duplicitousness in supporting both (and thereby also conflating) his new Chicago *School* [which denied nearly any positive role for government in a peacetime economy] and the Chicago *Plan* [for government money] in the 1950’s and ‘60s is perhaps best explained by the CP’s original non-s... [?] See Laina, 2015, 3. See also “Minsky, Hyman (1919-1996)”, “Tobin, James (1918-2002)”.
[.Plan] [.School].

³⁸⁷ Such assertions are often predicated upon land-of-barter mythology [see Graeber, 2012]. For example, Chicago School monetarism “treats the whole economy as if it’s barter. If you look at any Economics textbook, all the way through the PhD, they treat the economy as being barter...” (Hudson, 2016p, mn.6). See also “Barter”.

of the economy and [thus] give free reign for the FIRE sector to charge rent and interest, free of regulation. Hence the euphemism “*free-market school*” (Hudson, 2013). See also “F.I.R.E. sector”.
 2) “...pretends that money and credit are lent to business for investment in capital goods and new hiring, not to buy real estate, stocks, and bonds. There is little account to take into account...the debt service that must be paid on [all this TAB] credit” (Hudson, 2015, 5)
 3) “Milton Friedman adopted the rentier motto as a cloak [for] invisibility: ‘There Is No Such Thing As A Free Lunch’... That means there are no parasites taking without giving an equivalent value in return-- at least no private sector parasites. Only government regulation is condemned, not rent-extraction” (2015, 17). “Chicago School monetarists...think that America’s financial free ride should be built into the world economy, as if it were perfectly natural for the rest of the world to adjust its economies to help the US economy” (Hudson, 2003). See also “Rentier”, “Chile”, “Thatcher, Margaret (1925-2013)”, “European Monetary Union (EMU)”, “Methodological Individualism”, “Super Imperialism”, “Homo Economicus”.

[‘Methodological individualism’- operation spaceman]

Chile- 1) “The easiest way to think about this”-- junk economics to coverup State Capture-- is that “the Chicago School of Economics were who General Pinochet called into Chile after the revolution... er... military takeover.... It essentially lets the criminals run society... a market free of regulation, free of government prosecution...free for the people in control... free of environmental regulations... free of taxation on wealth... The Chicago School’s basic principle is that of neoclassical Economics-- [that] *any way of making wealth is as productive as any other way*.... There’s no long-run. The short-run is the long-run to the Chicago School. That’s how financial markets operate” (2011b); smash & grab.
 2) “In order to make sure there is no alternative, you have to make sure that you have a totalitarian control of the media and of the political system. Without totalitarian control, you can’t have a free market, Chicago-style. That’s why when the Chicago boys went into Chile, they closed every university and took over the radio stations and imposed a dictatorship. That’s the free market, neoliberal-style” (Hudson, 2012e). “They killed 10,000’s of intellectuals. They closed every Economics department in the country-- except for the Catholic university where they taught” (Hudson, 2017g, mn.37-38). See also “Neo”.
 3) Half-a-century later, Chileans (*alone in the 1st or 2nd worlds*), “save for their own pensions...[with] many not...[having] a tolerable retirement.... Oligopolies have colluded to fix prices in industries ranging from drugs³⁸⁸ to poultry. Income inequality is... high by rich-country standards. More than a quarter of workers are in informal jobs. Even middle-class Chileans live in cramped housing. Behind the...rebellion lies a pervasive sense of unfairness...[University] students graduate with high debts, only to discover that the best jobs go to people with [the usual] family connections.... [And the] tax system relies on [consumption-

³⁸⁸ This took Whitney Webb by surprise. “[W]here I was living in Chile [was] very attractive, but I did not count on them going even further than places like New Zealand and Ontario with ‘COVID-19’ so quickly... Chile already has [both] U.B.I....[and] a domestic vaccine passport that you need to go to the bank, [or] to get gas...all of this stuff. And it got zero media coverage... [N]o one has really paid attention to Chile.... [And] Chile had no protests-- not a blip.... [due to] the Pinochet era.... And also... health institutions...are seen as [being] different from the government, [which was] hugely unpopular” until the ‘COVID’ propaganda kicked in; “most Chileans get their news from... state TV, or CNN.... It’s because of the TV” (Webb, 2021, mn.49-51). See also “Chicago School”, “Feudalism, neo”, “Basic income”, “‘COVID’”, “‘New World’ Order”, “Corporate Media Cartel”.

killing] VAT for nearly half of revenues... [T]he state should take less or redistribute more” (Economist, 2019d). See also “Tax shift”, “Fascism”.

4) Nonetheless, neighboring **Argentina** used to be “twice as rich” as Chile as recently as “the 1970’s...[but] is now poorer” (Economist, 2019d).

5) As of 2020, “if they declare quarantine, you’re only allowed out of your house for 4 hours a week, twice a week, 2 hours each; and you have to show police papers to prove that you are allowed to be out of your home. I mean... It’s beyond the Pinochet era. I don’t think...[he] could have imagined having that kind of power” (Webb, 2021, mn.52-53). See also “COVID”, “New World Order”.

See also “Corporate Media Cartel/6 Sisters”, “Control Systems”, “Chicago School”.

China- (etym.; wasn’t invented [as was Zionist-Israel] in 1949, and is more a ‘civilization’^{389, 390} than a ‘country’.

Is there any other way to govern something so big?→<https://www.youtube.com/watch?v=mOG0HnU4LDM> [20/20]³⁹¹;

i.e. ‘the land of long-term orientation is also [not by coincidence] the earth’s most-isolated large region’³⁹²“

“Everyone agreed China was cut off from the rest of the world” (Gonick, 1994, 53); the language is of no known relation to the Indo-European mega-family; “non-linear, and heavily inclined toward inference” (Secter, 2002, xxix). See also “Fundamental Attribution Error”.

“Be old while you are young and stay young when you are old.”- Chinese proverb. See also “Dynastic cycle” (...which is pre-‘Confucian’, but not pre-Yijing). See also “Confucian”.

“The character of the Chinese is formed of...[a] mixture, directly opposite to that of the Spaniards; the precariousness of their subsistence³⁹³ [often in large groups at high altitude] inspires them with a prodigious activity, and such an excessive desire of gain, that no trading nation can confide in them”³⁹⁴

(Montesquieu, 1748, 297) animism/nature worship→ Tao/Daoism

b) polytheism/ancestor worship³⁹⁵→ (1st intermediate) ‘Confucianism’

c) monotheism/‘foreign’ transcendence→ (2nd Intermediate) ‘Buddhism’...to-‘NeoConfucianism’

³⁸⁹ “China’s [primary] notion of itself is not as a nation. It’s as [literally] *The Middle Kingdom* [中国- “Zhōngguó”]. In other words, they belong to all of Asia, and all of [at least Far East] Asia belongs to China. That is a [cultural] complex that even Bush Sr. talked about... [in the early ‘90s] when I had to deal with the Chinese. Everything [at least in the region] really [so it goes] belongs to them” (Pieczenik, 2018c, mn.255). China *also* “sometimes sees itself as the natural leader of the 3rd World movement at places like the United Nations and such” (White, 2007; concerning [the ‘deep culture’ of] language families). See also “Civilization”, “Culture”, “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”.

³⁹⁰ Polymath analytical historian Carroll Quigley classified the Mao-era Chinese heritage as consisting of 2 civilizations: first the “*Sinic*” civ. (from 2000 BCE-400 AD), followed by “*Chinese*” civ. (from the 5th century); and that the later had been seriously “disrupted by European invaders...[from] 1790-1930”, and was indeed “dying” (Quigley, 1966, 6-7). Mao himself would seem to agree with the superior strength of the former, writing, c.1917, that “All the anthologies of prose and poetry published since the Tang and Song dynasties (should) be burned’.... The [older/Sinitic] foundations of Chinese culture were inviolate. Only the tangled superstructure needed to be cleared away, so that China’s originality and greatness could flourish anew” (Short, 1999, 62). Is this a problem? Chinese Marxists “have long wrangled over... whether the Western Zhou [dynasty] constituted a slave society++ or a feudal society”; but there is little doubt concerning the Warring States era & ensuing Qin Dynasty, when lack “of a stable occupation itself became a [state] crime: the *Book of Lord Shang* advocated that the idle should be enslaved by the state.” Nonetheless, with the “emergence of [coined] money & markets [& militarization] in China” (the first round, bronze coinage was introduced in the state of Qin, c.335 BCE), “a broader distribution of wealth among the lower orders of society [emerged], as the social boundaries between the lower elite and commoners blurred” (von Glahn, 2016, 34; 59-62). See also “Civilization”. ++ This is the conventional wisdom (He, et al, 3).

³⁹¹ Mn.0:35 there? See also “China- statistics”, “World Par Economy (WPE)”, “‘Hundred-Year’ plans”.

³⁹² ...a region which is, nonetheless, easily unifiable-- given a little long-term (reality-based economic) planning-- due to the proximity of two very large river valleys (a geographic anomaly which is also suigeneris on Earth). See also “Physiocrats, the” [China].

³⁹³ Mostly rice farming (with its ensuing dependence on both high yields and high labor), often at high altitudes and/or not particularly good soils-- combined with naturally high fertility rates-- have long formed a basic precariousness, in which “a bad administration is...immediately punished. The want of subsistence in so populous a country produces [chronic] sudden disorders... [I]n other countries... the prince is not informed in so sudden and sensible a manner as in China” (Montesquieu, 1748, 124). “It is”, nonetheless, “a constant remark of the Chinese authors that the more the penal laws were increased in their empire, the nearer they drew towards a revolution” (Montesquieu, 81). See also “Dynastic cycle”.

³⁹⁴ “It is necessity, and...the nature of the climate, that have given to the Chinese an inconceivable greediness for gain, and laws have never been made to restrain it.... At Sparta they were permitted to steal; in China they are suffered to deceive” (Montesquieu, 1748, 304).

³⁹⁵ “Ancestor worship combined with [even older] nature-worship (animism) formed the origin of religion in ancient China” (He, et al, 2008, 11).

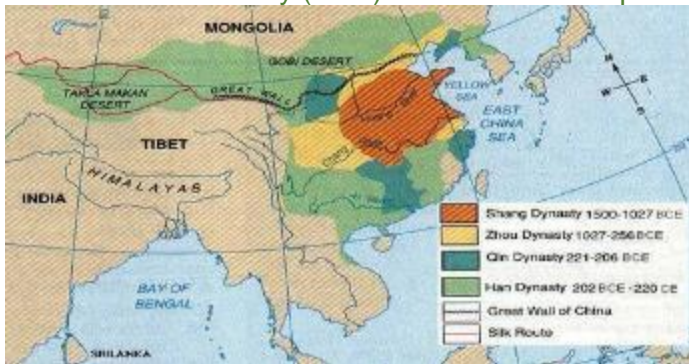

d) 1949-CCP atheism interlude (after 1000 yrs. of interplay betw. the 3)→ “Freedom Continuum”. “China’s uniquely historical experience-- the most crucial features of which were the predominance of small family farms and a distinct ‘peasant’ mentality... [has, nonetheless, been] governed by universal laws of economic behavior in which farming households [always] responded affirmatively to [often state-directed] market incentives”- Richard von Glahn (2016, 5). See also “Long-term orientation”.

The “Middle Kingdom” has thus long been, with a few notable exceptions, a land of (relatively scarce/powerful) *currency* [from the State/1st Estate], more than a land of plentiful *money* [more abundantly supplemented by *non-state*/2nd Estate elite]. Such relatively penurious currency-monetary control (at least when compared to Western Europe over the past half-millennium) results in more State-centric “*dynastic cycles*” of history, instead of the West’s (so-called) ‘modern’ experience with “*debt cycles*”. The 2000 year progression of Chinese Dynasties is well-known. Less remarked upon is a certain cultural tendency (commensurate with the West’s recent century-and-a-half of “*debt cycles*”) for alternating 3 decade periods of (often extreme) ‘liberal’ and ‘conservative’ oscillations. They predate the 1940’s-CCP era:

<u>Conservative crackdown:</u>	Xi faction	2010’s-2030’s
<u>Liberality ↑↓:</u>	Deng-Li Shanghai	1980’s-2000’s
<u>Conservative ‘iron rice bowl’:</u>	Maoist	1950’s-1970’s
<u>Liberal-anarchic:</u>	2 nd qtr. of 20 th c Warlords	1920’s-1940’s
<u>Conservative crackdown:</u>	Qing Restoration	1880’s-1910’s
<u>Liberal-rebellious:</u>	massive rebellions	1850’s-1870’s
	-- High Qing Era --	(c.1790’s-1840’s)

(For more on Chinese cycles, see also “Estates, 3” [China].)

1) Around 2000 BCE, the Asian winter monsoon “turned sharply colder, as China shifted toward the dynastic state”³⁹⁶ (Brooke, 2014, 295), and eventual unification (by 1027 BCE at least). See also “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”, “Dynastic Cycle”.

[Early Dynasties, BCE]

1b) With the 2nd (known) recurrence of the (further cooling) Bray Cycle (from c.1200-700 BCE), the famous *Book of Changes* (or *Yijing*, c.11thc BCE)³⁹⁷ wrote down what might be called a proto-science of

³⁹⁶ The sharp cooling also put the Neolithic Jomon culture of Japan “into a long decline that would end with the arrival of the rice-cultivating Yayoi [from Korea] around 300 BC” (Ibid).

³⁹⁷ Often purported to be the ‘oldest (continuous) book in the world’, the 1000’s BCE “*Book of Changes*” (*Yijing* or *I-Ching*) is traditionally attributed to King Wenwang and his then-jailed minister, the Duke of Zhou. Its original core seems to have been “a discussion of the divinatory system used by the Zhou dynasty wizards [before they were supplanted (nearly a millennium later) by Confucian mandarins (of the Han Dyn.)]. A supplementary section of ‘commentaries’ is believed to... [have been added during] the Warring States period (475–221) and, as a philosophical exposition, [the *Yijing*] represents an attempt to explain the world and its ethical principles, applying a largely dialectic method. For this work came to have great importance in the history of Chinese philosophy.... [Early] Han dynasty Confucianists ((in the) 2nd century BC), influenced by the Daoist quest for immortality, justified their use of the *Yijing* by attributing certain of its commentaries to Confucius.”

- <https://www.britannica.com/topic/Yijing>, and it has remained in (at least the Classical) Chinese cannon ever since. The *Book*’s uniqueness “consists in its presentation of 64 symbolic hexagrams that, if properly understood and interpreted, are said to contain profound meanings applicable to daily life” (Ibid). Chairman Mao, unimpressed (at least with its then-usage), had the *Yijing* suppressed and largely stamped out (from the 1960’s-70’s), as one of his “4 Olds”. The oldest extant composition on Earth may be *The Teachings of Ptahhotep*, from Middle Kingdom Egypt (from the upper 2300’s BCE, though it was subsequently lost until 1847 CE).

cosmology (or at least a start³⁹⁸ at such questions). “Many commentators have noted the analogy between [the structural] 64 [“gates”] in the...[*Yijing*] and the [basic building blocks of the] Genetic Code [(at least) as it was understood throughout the latter 20thc], the latter as obtained as 4 cubed = 64 triplets” (Carr, 2021). Don’t laugh; it’s the oldest (continuous existence) book in the world. See also “Design”, “Civil National Identity (CNI)”.

1c) Even before the Zhou dynasty, according to many sources, “the *I Ching* was handed down in some form as an oral tradition that credits its belongings to...the legendary father of Chinese culture” Fu Xi³⁹⁹. “From the time of its earliest recording, the *I Ching* seems to have been associated with both philosophy and divination. It owes its profundity to the former, its popularity to the latter, and its exceptional duration to both. For about 2500 years the *I Ching*...[was] included among the basic Confucian [Mandarin] texts that had to be mastered in the Chinese system... [of] formidable exams...like earning a Ph.D.⁴⁰⁰...[without which] one could not enter civil service...[or] public administration.... [I]t is a multifaceted mirror with an inherent potential of reflecting your mind back onto itself, thereby revealing consciousness to itself.... Beyond the level of the conscious mind, the objective self, logical thinking, deductive thinking, and an intellectual, analytical approach or response to life’s many facets lies another dimension” (Secter, 2002, xxiv-xxv). See also “Design”.

2) After the Han (Dynastic cycle) collapse, China’s ‘2nd Intermediate’-to-Sui-Tang centuries (i.e. the 200’s-800’s) was an era of innumerable precocious developments; not just the famous “gunpowder and printing”. In the 720’s, Yi Xing (683-727), a Buddhist monk, made “the earliest measurement of the meridian of the world... disproving the vaulted theory of heaven. Thenceforth the global theory of the Earth was...the guiding principle in the field of cosmogony... Yi... [also] found that the locations of fixed stars were not really fixed but in motion... about 1000 years earlier than Halley’s [discovery] in the West.... [T]he early Tang regime was [also] much concerned with the study of the past experiences of the preceding dynasties” (He, et al, 277-279); and even, as late as the 710’s, had something of a ‘conspiracy

³⁹⁸ Like the Shang Dynasty traditional tortoise shells divination, ancient Roman civ. had its Augury system (). But bird entrails (eventually) didn’t make the cut, and it was not to be until about centuries later, in 1930, that acclaimed Swiss Psychologist Carl Jung seems to have resurrected the entire concept or approach in Western civ. At a memorial address for () Richard Wilhelm in 1930 Jung started building the bridge, claiming that: “The science of the *I Ching* is based not on the causality principle, but on one which-- hitherto unnamed because [it is] not familiar to us-- I have tentatively called the *synchronistic principle*”; which Jung later simply called “synchronicity” (i.e. pretty much a scientific quest for [the confirmation of] hard-determinism in philosophy). See also “Philosophy”, “UKUSA Agreement”, “United States” [synchronicity], “G2”, “Design, Human”.

³⁹⁹ Indeed, the mythical father-teacher of “making nets for hunting and fishing” also seems to have been credited with inventing the 8 basic trigrams of the *Yijing*, “which were further multiplied into 64 by...King Wen of [the] Zhou... [whose divinations were] much easier to practice [than were to old Shang Dyn. tortoise shells] and hence was called ‘Yi’ (meaning ‘easy’ as well as ‘change’). ... [I]t was also called the Zhou Yi...[even though its known] commentaries... were written at a much later date... from the end of the Warring States to the...[Qin-Han] interval.... The commentaries...stated that all things in the world were engendered by the interaction of Yin (the negative) and Yang (the positive). The heaven [all-Yang] and the earth [all-Yin] were likened to the parents, and the thunder, wind, water, fire, mountains, river, were to the children of the parents, and the children in their turn helped the parents generate all things.... [But] the law of changes in the world was something beyond the capacity of human understanding. Therefore people were ultimately unable to master their own fate and had to resort to the deity for the prophecy of their own fortunes ” (He, et al, 2008, 3; 18-20).

⁴⁰⁰ The Chinese civil service system, from 1370 onward, “was adjusted to include 3 sets of examinations, one held in the local counties, another in the capitals of the provinces, and a third-- the highest examination of all-- in Peking, the national capital. Some were conducted annually, and others once every 3 years. The honors thus attained corresponded roughly to our B.A., M.A., and Ph.D. degrees. This system operated with great regularity until it was...abolished in 1905.... Each examination commonly lasted several days and was of unbelievable difficulty. In 1889...out of more than 14,000 candidates taking the examination in Peking, only slightly over 300 passed.... The chief defect[s] in this system...[were] its emphasis upon literary style and a detailed knowledge of the Chinese classics, at the expense of more practical matters... [and] the failure of... [dynastic China] to [ever] provide anything approaching a national system of free education. Hence, most candidates had to prepare... at their own expense, and the inevitable result was that the majority of those able to take...[the Exams] came from the well-to-do. Nevertheless, the system... was open, with trifling exceptions, to all members of society, thus making it the world’s most democratic means, before [so-called] modern times, for selecting [a large] government[‘s] officials.... Nothing like such a system seems to have been known among the other great civilizations of antiquity. In the universities of Europe, written examinations seem to have been unheard of before 1702”, and a professional, merit-based civil service system didn’t arise in France until the 1840’s, the UK until the 1850’s, and then in the USA in the 1880’s (where some considered planning to be “un-American”) (Bodde, 2005, 8-9). See also “‘Democracy’”, “Headless Horseman (essay)”, “Long-Term Orientation (LTO)”.

theorist' (Liu Zhiji) as official Court historian⁴⁰¹ (He, et al, 280-281). See also "Taxation of Income", "Aristocracy (& nobility)" [Han Yu].

3) In terms of (dynastic) Chaos vs. ([so-called] 'modern') Control, the year 1911 in China was like 1600 in Europe-- the point at which things started-- just started-- to get more normal & normative, less 'medieval' & chaotic. Chaotic? Even today, "[t]he Chinese courts do not [even] systematically report their judgments, and court decisions do not have [any] precedential effect, as [they do] in common law jurisdictions" (Zhang, 2014). See also "Common law", "Dynastic Cycle".

3b) Pictographs? "One Sunday afternoon I saw some hoodlums chasing and stoning a Chinaman who was heavily laden with the weekly wash of his Christian [solar calendar] customers, and I noticed that a policeman was observing this performance with an amused interest-- nothing more... I wrote up the incident with considerable warmth and holy indignation... and so I sought for it in the paper next morning with eagerness. It wasn't there... [nor] the next morning nor the next... The *Call* [newspaper] could not afford to publish articles criticizing the hoodlums for stoning Chinamen"- Mark Twain, looking back on his correspondent days in 1860's San Francisco (Twain, 1924a, 115). See also "Great Leap Forward, the", "Big 5 (High St.) Banks" [HSBC].

3c) Geographic isolation had its pros-- and cons. Halfway through the Middle Kingdom's long 'century of shame' (mid-19th to mid-20th century); the bourgeoisie of [so-called] modern China [1912-], as a class, was congenitally deficient and post-natally malnourished, so that they were deprived of the background to create their own ideology and [were] obliged to copy stiffly the various schools of the variegated thought of the Western bourgeoisie from different nations, under different historical conditions over a course of several centuries. From these various schools [the vast majority of] the Chinese⁴⁰² bourgeoisie picked over a heap of fragments and mixed them up to satisfy their urgent need" (He, et al, 2008, 481).

4) Material 'development' is not always at par with philosophical 'maturity'. It does not take a Chinese to observe that "[t]he quintessential function of European constitution'...[Sloterdijk] writes, 'depends on a mechanism to transfer the Empire'... it is such a transfer that has always created a highly conflicted relationship to the much narrower notion of *national state boundaries*."⁴⁰³ He argues that, from the Roman Empire to the 20th century, it is this conflict that has defined the centuries-long thrust forward of Europe, for better or worse" (Lamont, 2015, 306). See also "Adolescence of Mankind", "Big picture, the".

5) After the fall of the USSR; "China's economy had to accumulate a large amount of foreign reserves just to withstand the kind of American financial war that brought the Asia crisis of 1997. So China acted defensively. It exported a lot, developed huge international reserves to make itself independent of the West. And now it's in the middle of shifting away from an export economy, to begin to produce for its own people... and that means that China doesn't have to export more, and there's really nowhere to export to, if Europe isn't growing and the US consumers aren't spending" (Hudson, 2015c).

⁴⁰¹ The "official historian in the royal court under 5 succeeding emperors", Liu's "theory" of 'faithfulness in...truth'... succeeded the [more 'politically correct'] tradition of [the most famous Han Dyn. court historian] Sima Qian [(145-86 BCE). Liu held] a skeptical attitude towards the age-old [Northern-dominated] traditions and...[exposed] the internal contradictions within the [many centuries-old] ruling camp.... In particular, he singled out the faults and falsities in the *Book of History* and [the] *Spring and Autumn Annals*, both of which were generally held sacred since the Han.... He even found that the Confucian version of the 5 classics were [indeed] self-contradictory.... He did not admit the existence of any perfect sage and criticized severely the blind admiration of age-old traditions. The historiographic practice of concealing the facts for the ruler's sake, he pronounced, had become a prevailing mode in historical writings since old, so that 'the unfaithfulness to truth might be found in [the] historical writings of each generation'.... [Liu] even made severe critique of the *History of the Jin Dynasty* ...[which was] under the imperial editorship of [the great] Emperor Taizong of [his own] Tang Dynasty personally. His condemnation of...falsification... struck a formidable blow against the orthodox ideology and contributed much to the liberation of the people's ideas.... [harking back to] the influence of pre-Qin [Dynasty] thinkers, [apparently then still-extant in the South] who taught people... [that] one should never stick to 'the ways of the ancient kings'" (He, et al, 280-281). In "various places" in his *Shitong* (c.710), Liu also pioneered "the terms 'the ancient', 'the medieval', and 'the modern'... [a] schema of periodization ... was not [really matched in Europe] until the early 18th century...[& Giambattista] Vico (1688-1744)" (He, et al, 281). See also "Integrity", "History".

⁴⁰² This author can think of 4 exceptions: Sun Yat-Sen (in 1910's-20's), Zhou [more Mandarin class] Enlai (1950's, 70's), Deng Xiaoping (1970s-90's), and Wang Huning (c.2000-2020's). Sun's failures (civil war, totalitarianism) were dealt with by Zhou and Deng, then perhaps finally put to rest by Wang (a century later in the 2020's). See also "Chinese communism", "China, statistics".

⁴⁰³ The observation is nothing new. See also Jared Diamond (1998) [indented coastline], "Geography".

6) The c.2012 shift away from the “Thatcherite-Marxism” of Shanghai and towards “Beijing and towards the west... building up the western regions and the southern regions... [They] realize that they don’t want this to become just another real estate promotion [bubble] project” (Hudson, 2013b). See also “Great Leap Forward, the”, “Dynastic cycle”, “Market Bolshevism”.

6b) “The problem is the Communist Party leaders there seem to be trying to push it [borrowing] forward like it’s some planning objective back from the 1970’s.⁴⁰⁴ They’re trying to continue increasing the credit beyond the 200% of private debt-to-GDP ratio; “what they’re getting ultimately is a whole lot of companies that are simply losing money, going bankrupt”⁴⁰⁵ (Keen, 2016f, mn.22-23).

6c) China’s date with the “Global/Great Financial Crisis⁴⁰⁶” of 2008 was, hence, simply delayed, not avoided. Looming just as large, if not worse, is the upcoming **Water Crisis**: <https://www.youtube.com/watch?v=nRUc4gTO-PE> [PolyM-Reckoning3], mn.16-20.

7) “Chinese are [long-term] planners. They’ve got a vision for this, a vision for that, a vision for their military. It’s all written down. It goes through the process... and it’s remarkably public” (Fitts, 2017c, mn. 105); compared to the standards of a century or so ago. See also “Market Bolshevism”.

8) “People really under-estimate this” monetary boom on 21st century China; “I mean you can’t get a [99-year lease from Beijing on a] decent apartment in Shanghai now for less than \$3 million, US... Now when Chinese investors look...abroad, everywhere else pretty much looks cheap. There’s been so much...[public bankmoney] creation in China... We’ve seen wages go up... just for factory-level people you’ve seen wages go up 4-5 times... in less than 10 years... So 20% [of Chinese] are now considered ‘global middle class’.... (Collins, 2016, mn.9-10). China’s “tariff duty rate” on US imports is “13%”, vis-a-vis a “2%” corresponding US tariff (Collins, mn.12). See also “Middle class”.

9) Real estate bubble?- Areas of “Shanghai, Shenzhen, [and] Beijing [are now] more expensive than New York, [or] San Francisco... . [And the boom] is *not* completely credit-fueled... If you want to buy a 2nd apartment here and you do it with a loan, [then] you have to pay 70% down-payment”, because “the Chinese money has nowhere else to flow”, because traditionally they “[don’t] like stocks” and “the money is trapped in the mainland. It can’t get out, as fast as it wants to. So it goes in and buys property” (Collins, 2017, mn.21). Parents are also socially expected to buy (or, more precisely, lease⁴⁰⁷) an apartment for their adult children (mn.22). So approx. “70% of Millennials in China ‘own’ their own home. And only 35% of Millennials in the United States own their own home. They have no jobs. They’ve still got to go back to their parents” (Collins, 2017, mn.23). See also “Real estate”.

10) “In the last 10 years we’ve seen [an] incredible uptake of technology in China... I don’t think a lot of people are aware of it, but China is now challenging the United States technically in all areas, and actually surpassing the United States in many areas.... [Soviet-US] Cold War... roles have flipped.⁴⁰⁸

⁴⁰⁴ Speaking of what historian Niv Horesh has called China’s ‘monobank’ era (1950’s-’70’s), in reaction to Petrodollar developments, in August 1974 “the effective rate of the yuan was pegged to a trade-weighted basket of 15 currencies, the composition of which was undisclosed to the market” (Liu, 2004). The basket-peg didn’t give way to a *de facto* US dollar peg until the mid-1980’s, after the mono-bank system was broken up with Deng Xiaoping’s monetary reforms of the early 1980’s. A *de jure* peg was set at 8.28 per US dollar in 1995, and lasted until the 2005 limited de-peg and band-limited float. Completing the cycle, in Dec. 2015 the People’s Bank of China announced that it was shifting the yuan’s peg to a basket of 13 (undisclosed) currencies (Wei, 2015).

⁴⁰⁵ After two decades often bereft of leadership, China and its current premier “...will eventually face a choice between saving the Communist Party or saving China”, according to Long March scion-dissident Luo Yu. “China today is beset by “environmental crisis, a crisis of faith, a crisis of morality, financial crisis.... There are crises everywhere.... You can’t have both ... I’m telling him [Xi], there’s only one way-- it’s not like you can do it anyway you like-- and the only way is democracy” (Ong, 2016); or more democratic values. See also “Design”, “Parties, political”.

⁴⁰⁶ The Chinese characters for “*crisis*” are famously-- and incorrectly-- translated as ‘danger’ & ‘opportunity’. The more accurate translation, however, is ‘precarious’ plus ‘juncture’ or [simply] ‘change point.’”- Charles Hugh Smith, Dec. 9, 2021. See also “Design”.

⁴⁰⁷ In China the PRC government owns all land, commercial, agricultural, or residential. Home “owners” typically sign a 70-year lease with the government, which either party has the right not to renew.

⁴⁰⁸ “China was the largest economy in the world, and then they ran into the Opium Wars and the Brits [in the 1840’s], and basically the ‘West’ used violence [and other forms of dirty pool] to re-assert dominance and then use the Industrial Revolution to...become the lead economy. So China’s experience with the ‘western’ world is that we win by war, and that we win by violence, because that is in fact what has happened” (Fitts, 2018h, mn.36-37), actually through all the millennia of Chinese history (not just something that the ‘barbarian’ culture of the City of London & *Economist* started). See also “Central Banking-Warfare model”, “Intelligence Community (IC)”.

China[’s] E-commerce market is much larger now than in the United States. They have a ‘Made in China’ policy here... You saw a 20 billion dollar investment by the government into the Tsinghua Group to make [computer] chips... one of the last areas [of hi-tech] that we control.... The Chinese computer industry was completely non-existent 15 years ago, and they kept 100-200% tariffs on computers...[and] slowly built up their own industry. Then they got state-backed money to buy IBM[’s] Thinkpad [in 2005].... China announced this year [that] they have a new [super] computer, the Tiahu Light, 3 times as fast as the previous world’s fastest super-computer, which was also Chinese... [and] is now 5 times faster than anything the US has.... [Chinese firms are now leading the fields of] E-commerce, digital payments, [and] FinTech-- half of the world’s Fintech investment was done in China last year... unlike a place like Europe, which is kind of a farm team for US technology.... [They] have gone from adapting the technology to innovating the technology, and now that technology is going to go global” (Collins, 2017, mn.13-15). “There are 700 million internet users now; 90% of them are mobile [phones]. China’s really becoming the world’s 1st [and] largest digital economy... [T]hey seem to me to be 3-5 years ahead of...anything I see going on in the US” (Collins, mn.17). China is also now the world “leader in robotics.... spending...about \$25 billion [per year, which is]...expected to double in about the next 3-4 years... They’re putting in automation all over” (Collins, 2017, mn.18). See also “Social Credit System (SCS)”.

11) Whereas Americans “haven’t built a major airport for 20 years, China [has] built 75 in the past 10 years” (Dimon, 2017).

12) “When I was in high school [pre-1999], only a few people could use a PC. Even fewer could access the internet. But now...China it’s a cash-free society; you can use your cellphone to book any service, everything is going virtual. This [entire] process has happened within 20 years. Everyone can feel the anxiety, and the risk, behind that fast move.”- science fiction author Quifan “Stanley” Chen (Dunn, 2019). See also “Cashless Society (War on Cash)”.

12b) “WeChat, the app used for messaging and payment by almost everyone in China, *automatically blocks any message containing any banned word* of phrase expressing discontent with the regime, support for religious groups, or knowledge of the state’s human rights abuses. Google is reportedly helping [new bad cop] China to build a search engine that will report its users if they ask the wrong questions. Nobody... [online] is allowed to mention Winnie the Pooh– to avoid offence to Xi Jinping (who has been compared to the bear in an online meme).... In [the sci fi novel] ‘*Project Dove*’... drones that look and fly like birds are used for surveillance. But Project Dove is not fiction– it is an actual government project. The robots are so convincing that real pigeons flock with them. In another example, factory workers, train drivers and soldiers are made to wear devices on their heads that scan their brainwaves for signs of anger, depression or loss of concentration. The devices are monitored by artificial intelligence programmes... Such devices have been in widespread use in China for almost 5 years” (Dunn, 2019).

13) “China is our primary concern for the next 20 years... We’re getting out of the Middle East” (Pieczenik, 2017d, mn.19). While “we spent 7 trillion bogged down in the Middle East... they built a tech juggernaut. They’ve been able to come up to speed on AI and tech much faster than we thought they could” (Fitts, 2018s, mn.44). “The truth of the matter is the Chinese are ahead of us... [in] quantum⁴⁰⁹ encryption. We’re not anywhere near them... [W]e’re wasting money on F-35’s and fighter jets...” (Pieczenik, 2018e, mn.15).

14) “Literally within 12 years it’s expected that their middle class will be 10 times as big as ours... and they’re building a land empire” (Fitts, 2018p, mn.33)... See also “Land bridge”.

15) ...and with bureaucrats pretending to be banks (“East”), not banks acting like bureaucrats (“West”). “The reason for the Great Chinese Bank Bailout [of March, 2019] is clear. China’s economy is weakening [from debt-saturation], and its banks are in no shape to support [re-flate] it. As the PBC official says, recapitalizing banks should free them up to lend more to the real economy-- provided [that] the demand is there. China’s authorities have demonstrated repeatedly over the last few years that they have [learned many] ways of persuading people and businesses to borrow. Recapitalizing the banks could be [just] a

⁴⁰⁹ “We have no idea how they did this.”- Oct.2021 (<https://www.ft.com/content/ba0a3cde-719b-4040-93cb-a486e1f843fb>)

prelude to yet more government-initiated investment projects funded by debt” (Coppola, 2019). See also “Public banking”, “Zombie”.

16) China “is running out of useful places to build shiny new airports and high-speed railway lines at home, and wants its own global brands to vie with Boeing or Apple. That will require new markets overseas.... China has ambitions to become a standard-setting technology super-power... [but] it needs foreign know-how to get there” (Economist, 2019b).

17) According to CCP advisor Michael Hudson, “politically, US diplomacy would like China to divide itself into 3 or 4 countries, starting with Xinjiang as a separate country. This divide-and-conquer strategy aims at carving up China, and it uses financial policy to do this” (Hudson, 2020).

18) Feelings of Sinophilia⁴¹⁰ and/or Sinophobia (however ridiculous⁴¹¹) often run deep.

19) China Updates: 6/21- is conducting a “sweeping overhaul of its \$US100 billion (\$135 billion) *private education industry* will eliminate foreign investors from much of the sector and threatens to wipe out billions of dollars of investment from groups such as BlackRock, Baillie Gifford, Tencent, Sequoia and SoftBank’s Vision Fund. The regulations will ban companies that teach school curriculum subjects from making profits, raising capital or listing on stock exchanges worldwide, and will prevent them from accepting foreign investment⁴¹².... The changes are part of the Chinese Communist Party’s drive to make raising children and education more affordable and combat a...[long-threatened] population decline... [Part] of China’s increasing willingness to restrict foreign investment in its companies, Chinese regulators [have also] revised rules for groups seeking US initial public offerings, after ordering a security review of ride-hailing app Didi Chuxing...days after its \$4.4bn. listing in New York last month” (McMorrow, et al., 2021). See also “BlackRock”.

1/22- Geopolitics? “China’s decisive advantage, Prof. Wen Yang of Fudan Univ. wrote in a recent essay for The Observer (guancha.cn), is its *lack* of [over-reaching] ambition for global hegemony. The Observer website often acts as a sounding board for the [CCP’s] State Council. The Soviet Union fell, Wen argued, precisely because it attempted to become a hegemon, a concept that...Wen finds alien to Chinese civilization.... Americans [tend or like to] think [or, rather, project] that China aspires to world hegemony, while...Wen contends that the aspiration to hegemony as such is the *fatal flaw* of empires past and present. Americans will dismiss Wen’s analysis as Chinese dissembling, but they would be mistaken to do so.... Hegemons have an invariant characteristic... *deficits*. Imports made up half of the food supply in Pericles’ Athens, paid for by tribute exacted on threat of annihilation.... When the island of Melos resisted, Athens massacred its population in 416 BCE.... Historic China accumulated vast wealth through the exports of silk, tea, porcelain and other goods, but it never built an imperial economy like Athens, Rome or Britain. Agriculture was centered [from at least Han Dyn. days] on the extended family farm rather than slave-based

⁴¹⁰ It was “an enthusiasm that reached its peak in the early years of the 2nd half of the 18th century.... Particularly was China admired as a land where government did not rest in the hands of a feudal aristocracy, as in Europe. Instead, it was managed by the *mandarins*-- a group of highly educated scholars-- who gained their official positions only after proving their worth by passing a series of state-administered examinations...[T]his highly favorable picture of China was somewhat over-painted. Yet there is little doubt that the China of the 17th and 18th centuries was, both politically and economically, in many ways ahead of Europe” (Bodde, 2005). See also “Enlightenment, the”.

⁴¹¹ [https://en.wikipedia.org/wiki/Lifeforce_\(film\)](https://en.wikipedia.org/wiki/Lifeforce_(film)) [1985]; a.k.a. “qi” (or 气). See also “Design”, “Philosophy”.

⁴¹² “‘It is as bad as it can be’,” said the chief executive of a large private equity firm in Hong Kong that has exposure to Chinese education technology companies. ‘It will take 3 to 6 months for the sector to adjust, but then we will have to assess whether to write down investments or [just] totally write some off. Every private equity firm will have to take this necessary reassessment’. Foreign investors such as BlackRock, which as of November [2020] had a 5% stake in New Oriental’s Hong Kong listing, have found themselves blocked from investing in Chinese education companies that cover *subjects taught in schools*.... The rules target after-school tutoring, but do not cover adult education or professional and technical training” (McMorrow, et al., 2021). See also “Central clearing counterparties (CCPs)”.

latifundia. Unlike Rome, which constructed roads to speed its armies from Mesopotamia to Britain, China built walls to keep invaders out.... When I wrote of “China’s plan to Sino-form the world” in my 2020 book, I...[was referring] to the export of China’s digital infrastructure to the Global South, in the ultimate exercise of soft power.... China surely aspires to return to first position in world manufacturing technology, which it held from the beginning of...[its unification] until the 18th century, and it will try to extend its influence and power by dominating the new technologies enabled by fast broadband. In a sense, China’s strategic use of infrastructure-- physical as well as digital-- bespeaks a certain continuity from the Qin [Dynasty] era. Massive investment in flood control, river transport and irrigation created China [in the first place], and the export of Chinese infrastructure well may hard-wire a great deal of the world into China’s economy...China is indifferent to how we barbarians govern ourselves....China wants to dominate its coasts and has invested massively in surface-to-ship missiles, submarines, missile boats, aircraft, and other weapons to prevent the US from projecting power in the Western Pacific. [It has, however] only 1 overseas military base, on the Horn of Africa at Djibouti, built for anti-piracy operations. The US has 750 bases. There have been unconfirmed reports of Chinese attempts to build military facilities in the UAE and Equatorial Guinea, but they do not add up to a campaign for global military supremacy.” (Goldman, 2022). See also “Civilization”, “Currency Wars, the”.

What does it (pretty much all) add up to? The last straw or ultimate “thing [that] it cannot afford to do is be seen as weak or indecisive” (Edinger, 2021, mn.17; 7). See also “Charismatic Authority & Dependency”.

[Average wages in Cn. >doubled in the 2010’s.]

China bond markets- (a.k.a. 'Chinese treasuries market' (the most fundamental part of the whole financial system...[as] other fixed income and foreign exchange related markets are dependent on it" (Zhang, 2011, 234). The bonds are mostly owned by China's state banks, insurers, brokerages, and mutual funds 1) People's Bank of China (PBoC) bills were only introduced in the 2000's, and, alongside China's export-economy, rocketed during the decade-- from \$141 bn. in 2004 to \$681 bn. in 2010 (Zhang, 2011, 231).

[Selling something? Goldman-US Treas, Secretary Hank Paulson made >70 trips to China circa 1998-2005 (Evans-Pritchard, 2008)]

2) Government bonds (synon. 'treasuries') and foreign investment were re-introduced to China, after a 3-4 decade absence, in 1981; since then "government bonds" (from the Ministry of Finance [not 'treasury']) increased from \$2.79bn. (and only \$1.5 bn. in 1984) to \$287.9 bn. in 2007 (Zhang, 233). In September 2018, foreign holdings of government bonds reached the 1 tn. CNY mark (approx. \$150 bn.), or 8% of the total, and the "Bloomberg Barclays Global Aggregate [bond] Index... the first major global index to include Chinese bonds, will phase in inclusion of Chinese bonds... starting [in] April 2019" (Galbraith, A., 2018). See also "Financial Instruments & Interest (Summary table)".

3) Although China's (Ministry of Finance) "treasury debt outstanding is quite low: around \$2 trillion, or...17% of 2017...[GDP; provincial and local governments...have issued an additional \$2.5 trillion of municipal-bond debt- priced nearly the same as Chinese [MoF] treasuries-- and could soon carry a zero risk-weight for banks that hold it... This is, for all intents and purposes, sovereign debt" (Taplin, 2018).

4) "Financial bonds", bonds issued by state-sponsored bodies such as the big public banks, increased steadily from 1998 (510.7 bn. CNY) to 2010 (5.4 tn. CNY) (Zhang, 235).

5) "Corporate bonds", bonds issued by "enterprises" (usually state owned), have "been in existence for almost as long as" Ministry of Finance bonds, but they were subsequently overtaken by (the 1990's) "financial bonds". Bureaucratic paperwork was ornery prior to 2005 reforms, and from 1986-2009, "the total amount of capital raised from corporate bonds was less than 30% of the total amount...raised on the stock market... [and] corporate bonds still face problems that lie outside the scope of this book"⁴¹³ (Zhang, 2011, 235).

6) The China Development Bank "introduced *asset-backed* securities in...2005 and...2006" with a budget of approx. \$1.2 bn.; and also *mortgage-backed* securities, with \$0.4 bn. (Zhang, 235).

7) Bloomberg combines: a] provincial & local government debt securities, b] (the above) 'Financial and c] (the above) 'Corporate bonds' into what it calls China's post-2008 "Debt Mountain" [sans only MoF bonds] that it also terms, almost as imprecisely, "Chinese corporate debt" (Hunter & Kim, 2018).

⁴¹³ See White & White 2008.

[...conflates #3-5 above into 1 non-MoF category]

China International Payment System (CIPS) (a.k.a. ‘Cross Border International Payment System’-- established 2015; joined with the Russian Payment System in 2016)

- 1) “Why did Russia decide to have a payment system? Because the United States *threatened to... kick them out* of the SWIFT money transfer system” (Storey, 2017, mn.7). See also “Angry Birds”.
 - 2) As of May 2018, the Chinese Yuan accounts for only 1% of global central bank Reserves. This is, unsurprisingly, set to increase substantially. Why? Most “Western methods and organizations do not fit the non-Western context of the newly independent countries, and...these differ so greatly... that the *direct* application of Western methods to these...areas is inadvisable” (Quigley, 1966, 1186). See also “Culture”, “Industrial Revolution, 3rd”.
- See also “SWIFT codes”, “Angry Birds”.

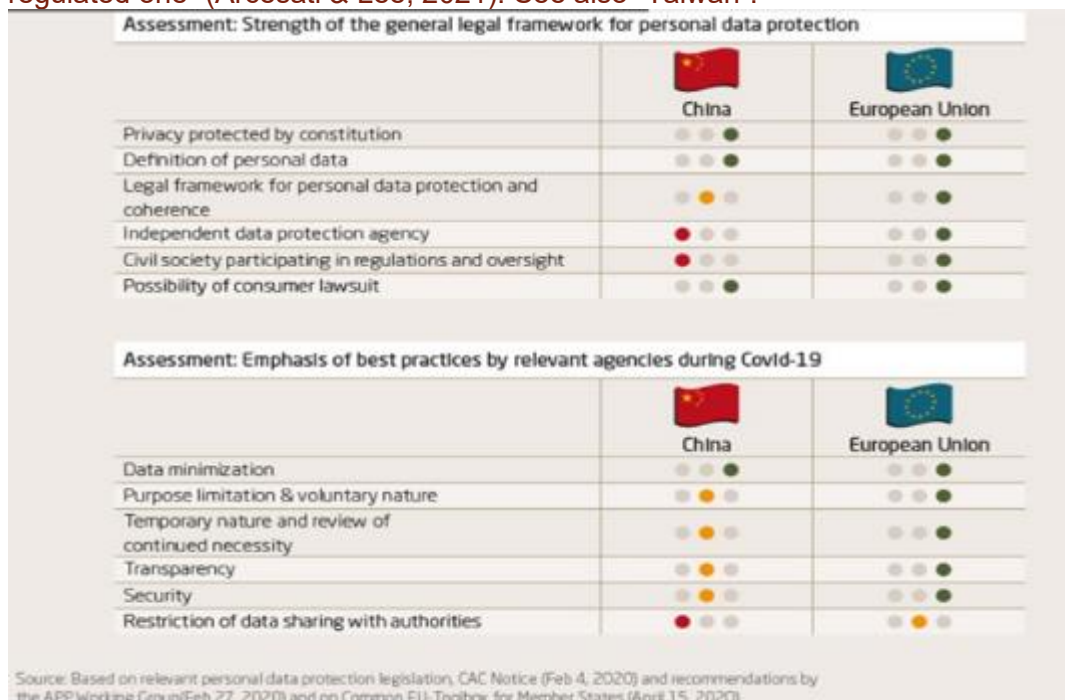

[‘Angry Birds’⁴¹⁴] See also “Dollar-diplomacy”, “Gold (bullion) stores”.

China- statistics- (digitalization to the rescue)

One of the first things to know about China is that it has been, for some time now, the world’s first & foremost culture of ‘no reporting’-- i.e. traditionally zero (at all ‘independent’) political, financial, or even public sector reporting (beyond *gaokao* [高考] exam results). See also “Estates, 3”, “Taiwan”, “Accounting” [.Endof].

⁴¹⁴ In the 21st century, it has become increasingly evident that “you’re having, really, the creditor cartel...running world politics...[under ‘economic’ guise. So]...what we’re talking about is not simply a monetary theory. It’s a political theory that’s... driving Russia, China, India...[and pretty much most] of Eurasia *out* of the globalization orbit [nest], because ‘globalization’ basically means permanent depression for labor, financialization, and if you don’t want to be part of this, you have to withdraw from the [bankmoney] globalized Order” (Hudson, 2018d,mn.103). The US “has overplayed its hand in destroying the foundation of the dollar-centered global financial order” (Hudson, 2019b). “The US dollar... was almost the only world currency. For some reason [however], the US began using it as a tool of [overt] political pressure, *imposing restrictions on its use*. So they started biting the hand that was feeding them [the US treasuries market]. It will collapse soon. More and more countries are gradually abandoning it as a reserve currency. They impose restrictions... This undermines confidence in the dollar. Not understandable enough? They are destroying the dollar with their own hands” (Putin, 2019). Michael Hudson adds that, like “the Vietnam War drove the United States off gold by 1971, its sponsorship and funding of violent regime change wars against Venezuela and Syria– and threatening other countries with sanctions if they do not join...[their] crusade– is now driving European and other nations to create their [own] alternative financial institutions” (Hudson, 2019); out of the (1940’s-2010’s) USD nest. See also “Eurodollars”, “Debt cycles”.

- 1) “The published Chinese stats are [traditionally] nonsense”; “4.09% unemployment... for the past seven years.... Even... some of the...party officials themselves use private stats on energy use and so on, to indicate what the real state of the Chinese economy is” (Keen, 2016d, mn.9-10).
- 2) The “official jobless rate is 4.3%... [and] does not reflect the real situation, since it does not include laid-off workers from state-owned industries, or migrant workers. Even though Chinese workers earn on average \$0.61 an hour, China is *losing* manufacturing jobs because of technological advances...” (Liu, 2004b).
- 3) In the United States (and OECD countries) “...each daily, weekly, and monthly [GDP] data is analyzed by different independent entities and each data point is impossible to...[be written over] by a government authority. That is why the GDP is constantly revised. China’s GDP is the **only one** that is not revised. It is [simply] published and consolidated” (Lacalle, 2020). See also “Taiwan” [.big idea].
- 3b) This is because “[h]ard-wired performance assessments give local cadres many incentives to distort data” (Brussee, 2021), and ‘the mountains are high & the emperor is far away’.
- 4) “Dollar hegemony [also] distorts GDP as a reliable index of growth for non-dollar economies, since GDP includes *foreign-reserves holdings*, when in effect such funds have left the local currency economy. Taking away annual rises in foreign-reserves holdings, real Chinese GDP is substantially lower” (Liu, 2004b). See also “Dollar-diplomacy (& hegemony)”.
- 5) Beijing “has pledged to bring...[China’s economic] data up to IMF standards, but lack of independent scrutiny and the [ongoing] competition between provinces when it comes to providing positive and spectacular figures continue to generate inconsistencies between sales, inventories, consumption, and profits” (Lacalle, 2020). See also “Dynastic cycle” [.princelings], “Social Credit System” [.myths].
- 5b) And indeed data in general has been getting better lately, and will continue to be one of Beijing’s top priorities-- if not the top priority. “China is moving from a largely unregulated data environment to a highly regulated one” (Arcesati & Lee, 2021). See also “Taiwan”.

China-US relations- See “G2”.

China's US Treasury Bonds (c.2004-15)- 1) We sell “Treasury Bonds, then we pay Chinese manufacturing companies to make stuff that Walmart then sells... it deflated the value of labor, and it deflated the cost of consumer products, and it basically kept the American consumer going for 10 to 15 years, [and] the American consumer was also financing it with the [2000's] housing bubble. So we kept it going by liquidating our manufacturing infrastructure-- [or at least] a lot of it... by dumbing-down America, if you will, and liquidating a lot of our family net worth...[liquidating much of] the middle class in a way that kept their false prosperity going” for some years (Fitts, 2018s, mn.40-41). “Now China is not interested in financing America. They are interested in financing their own growth and growth on the Silk Road.⁴¹⁵ And that's not deflationary. That's inflationary, because now they're competing with us for [raw material] resources... So they're re-balancing away from dependency upon the United States, and... Trump's trying, to a certain extent, to dig...the country out of the hole by moving manufacturing back” (Fitts, mn.41). See also “Great Repatriation”.

2) "The American government throws out the military spending dollars... [which] wind up...accumulating in China...[which then must decide] '*What do we do with these dollars? If we don't send them back to the US, then our currency is going to go way up*'... So in order to stabilize the currency, they have to recycle [dollars] to the US. [Then, however,] Americans [will not reciprocate. Apparently sometime c.2007, Beijing caught on.] '*Look, if we send the money back to America and invest in T-bills, then we're financing your military buildup, for you to surround us... just like you told the Near East! The end of this is going to be atomic war*'..'" So [Bush Treasury Secretary] Paulson went over there...[and said] '*We've got a deal for you. We'll give you more money than the T-bills. Buy Fannie Mae securities*'. And the Chinese did it... [This was] one of the main reasons the government bailed out Fannie Mae... [in 2008. So China] Finally [got together with the BRICs.... And there is] *not a word* of it in America... [But the Chinese know that] the [US] government debt... is mainly the embodied military⁴¹⁶ spending abroad... [Around 20'0-'07, China] had national security concerns...[and] needed to build up enough [US] money so [that] America could never destroy them like it had...Russia and Korea, and the other countries in the Asian Crisis [of 1997-98].... They [also] needed to obtain the Western productive technology, [and] the only way to do this was to make a deal...letting enough vested interests in America get rich off China that they were...permitting this technology to be transferred to China, rather than treating it like it did the Soviet Union" in the Cold War (Hudson, 2012f). See also “Cold War, the”.

3) “The Chinese and [US] are deeply, deeply dependent on each other.... It's not a secret if you look at the cashflows.... This is like Siamese twins that are having a fight and are frustrated that they're stuck together.... I thought everybody knew that it was [only] a short-term plan, and that if you basically transferred all your technology and invested all your wealth in Asia [that] this [tsunami] would happen. I was shocked, after I wrote *The Rise of the Asian Consumer* [all >2 billion of them]... how many people... really hadn't grasped how big the tsunami is” (Fitts, 2018t, mn.19-20).

⁴¹⁵ The (c.2015-originated) Chinese concept-principle of “*Stable investment*... [consists of issuing] special bonds... to be invested in infrastructure building... [particularly] in what they call ‘weak areas’” of China” (Escobar, 2020c, mn.15-16). See also “Infrastructure”, “Capitalisms”.

⁴¹⁶ Circa 2020, there's “one kind of overhead that China's really trying to avoid, and that's the military overhead.... They're very worried about the military.... They don't think of America as a group. They realize that there's a [series of] layer[s].... [And they think now that] Blackstone & Wall St. are going to represent their interests... [O]ne of the Chinese officials last week gave a big speech... saying: ‘*Look, our best hope in stopping America's military adventurism with China is to have Wall St. acting as our support*’” (Hudson, 2020c, mn.51-52). In Nov. 2020, the CCP even allowed “a wholly-owned US bank” to “make loans [extend credit] in domestic currency.... [perhaps just in order to] meet the World Trade Organization principles.... [and] counter the military hawks in Washington” (Hudson, 2020c, mn.53-54). Politically active Beijing professor Di Dongsheng was bragging in public, later that month, that CCP reliance upon Wall St. in its negotiations with America has been going on for “the past 30...[to] 40 years”, but was also, he says, temporarily set back with the Trump Admn.: “Since the 1970's, Wall Street has had a very strong influence on the domestic and foreign affairs of the United States.... But the problem is that after 2008, the status of Wall Street has declined, and more importantly, [even more so] after 2016” (Di, 2020, mn.5-6).

4) The party ended (perhaps a couple years later-than-expected) in 2022⁴¹⁷.

Dwindling Inflows

“But China is the place where the customs of the country can never be changed.”

- Montesquieu’s *The Spirit of Laws* (1748, 298).

https://www.youtube.com/watch?v=vre_yhZXPVU [‘HowtheCCPWorks’, 10/22, mn.11-14]

<https://www.youtube.com/watch?v=yh00z5CDJ-M> [Ch.Insights, 22-10-25]

⁴¹⁷ Foreign presence in modern China’s capital markets has [still] *increased* markedly since Xi became president in 2013. The government carved out channels to let capital flow in, including stock and bond trading links, via Hong Kong, and pushed for the inclusion of yuan-denominated assets in major global benchmarks. The goal was to encourage inflows, fund private enterprise and energize the economy-- all while retaining significant control over capital flowing out. But Xi’s government showed little regard for global investors last year [2021], when it unleashed a series of crackdowns on the country’s *most profitable* companies. The result was [inevitably] distrust and confusion over the Communist Party’s goals... Wariness toward Chinese assets born during the trade war with the US, [but] also increased this year after Russia attacked Ukraine, and as Xi insisted on pursuing a Covid-Zero strategy that’s been abandoned by virtually every other country” in the world (Horta e costa, 2022). It appears that things started caving in (on Xi’s CCP) in Oct. 2022; weakest Yuan since 2007, and on track for its worst year since 1994 (<https://www.youtube.com/watch?v=M7DRDIwHa0E> [Ch.Ins.; ForexPullout, mn.1-2]).

⁴¹⁸ It isn’t ‘World War 3’. The US has “a hundred-to-200 bases all around China.... The Indian army...[could come] in and... [with even a] low-intensity conflict with the Chinese, over the water...[sources of] the Ganges [make a shortage], because China is highly, highly dependent on water [from (the former sovereign nation of) Tibet]. If we close off the Himalayas, and we close off...[those] water supplies that come to China, [then] China will die very quickly. [CCP President] Xi [Jinping] knows this [and] we know this.... [And the economy’s] debt-to-asset ratio is [off-the-charts] negative... [T]hey don’t want to [publicly] admit that...trillions of dollars of mortgages are [pretty much] worthless. Yet they put it...[in] the book as...[real] assets” (Pieczenik, 2018c, mn.301-302). The “Chinese people understand that...[Xi] has a problem, [and] the P.L.A. is not happy with him.... The more he represses [ethnic minorities in China], the bigger the problem is going to be.... [And] they’ve made enemies of everybody around...[the] South China Sea” (Pieczenik, mn.303-304). See also “Zombie”, “Mortgage-backed securities (MBS)”, “Accounting standards”.

⁴¹⁹ ...And from the precision of Western grammars-calendars-time specs., (dynastic China also somewhat missed out on) the resultant developmental-leverage-usury train of “Separation of Powers”, & “Estates, 3”. <https://clip.cafe/the-cannonball-run-1981/we-want-give-our-blessing/> [mn.:25-29; there’s usually been *faster* development with (see also) “Leverage” schedules]..See also “Debt cycles”, “China” [% rural].

1) Soviets were essential in the quick rise of communism in China, c.192“: "In 1919, at the outset of the Ma' 4th Movement, *anarchism*⁴²⁰ was the predominant ideology among revolutionaries and intellectuals, and Marxism was virtually unknown. Three years later, however, the Communist Party of China had emerged as the unchallenged leader of the **Le"t.**"

- Arif Dirlik, Prof. of History, Duke Univ. (1989)

1b) (mid-20thc) At a time of unprecedented humiliation and stress, a foreign idea (invented by Banksters and their dupes) was adapted and imposed upon a halfway starving land, whose people were keen to end an unprecedented "century of shame"-- i.e. of foreign domination (from the 1840's-1940's). The OSS-CIA types, with their Jesuit outreaches, knew full well that, given the wretched state of the peasantry in 1949, China wouldn't be ready for the requisite transition to bankmoney addiction treadmill until at least several decades later. See also "Civilization" [Quigley], "China" [.century of shame].

2) After a "Maoist" era of neo-serfdom (see "**Freedom Continuum**"), bankmoney was trialed in the 1980's, introduced liberally in the 1990's, and increasingly hyper-ized in the decades since then, effectively burning up the uni-party's autarkic past with bankmoney.⁴²¹ By 2015-16, this had resulted in a private debt : GDP ratio of approx. 225%-- the highest indebtedness ratio in 'modern' Chinese (or arguably world) history,⁴²² and certainly the fastest accumulation ever (Vague, 2016, ch.3). So of course the Mao picture (unlike in the 1980's-90's) has been slapped on everything since c.2000, ad nauseum (in the 2010's).

3) Communism (dictatorship) is a political system that was originally supposed to implement socialism (the economic system), but the latter was **mostly** given up on⁴²³ (from the late 1970's). "Capitalism is an *economic* system-- any *political* system can use capitalism.... But...[any economic system] always serves the political agenda", as China has been demonstrating this century (Begich, 2019b, mn.23). See also "China- statistics", "Russia" [.alternation].

4) Most [%?] of this new ocean of bankmoney **has been lent** into existence by majority state-owned banks, thus enabling the uni-party (CCP) to: a) reduce or halt the bankmoney inflation at any time; and/or b) write off the sky-high levels of private debt with (what Prof. Hudson or Keen would call) a *debt-jubilee*, as the state owned banks wouldn't be complaining. Chinese think long-term. See also "Public Banking (idea)", "Long-term orientation (LTO)", "'New World Order' (NWO)" [Graham].

5) For [_%?] money that is *spent* into existence, they "first poll the existing Party elite, as to how they intend to spend the [new] money [injections]. They develop a bunch of proposals as to how the money is going to be spent... how they want the budget to be spent, and it's always different from what was originally set..." (Crock, 2018, mn.8). See also "Market Bolshevism" ['ghost cities'].

6) Hmmm. "The working language" of "the Central Committee of the Communist Party...[conclave] of 400 top officials...held every year or so at a...hotel run by the People's Liberation Army... is not Globalese. Communiques... are written in unlovely party jargon.... Even tighter controls are coming... [While Premier Xi Jin Ping says:] 'Whenever great powers have collapsed or decayed, a common cause has been the loss of central authority'... Xinhua...[the CCP establishment] state news agency [asserts] that the

⁴²⁰ This is not a new assertion: https://www.youtube.com/watch?v=Z0JXPVm_Ohg [Farewell1]. See also "Communism" [as defined], "**National Identity Cycle**".

⁴²¹ This Chinese bankmoney, however, has been mostly (and in the 20th century nearly completely) issued by the PBoC's '**Big 4**' state-owned banks-- Bank of China, China Construction Bank, Agricultural Bank of China, and the Industrial and Commercial Bank of China (ICBC).

⁴²² "China has a high debt to GDP ratio because most Chinese businesses are funded through [bank] loans rather than through the stock market [and near monies], as in the US; and China's banks are able to engage in massive lending because the Chinese chiefly save their money in banks" (Brown, 2018b) most of which are state-owned anyway.

⁴²³ The discarding of economic "socialism" in China may be thought of as a 30-year process (1978-2008), commencing with Deng Xiaoping's rise to power in 1978 (specifically, his initiation of a new "Open Door Policy" of 4 "Special Economic Zones" for foreign trade that December), and officially culminating with China joining the World Trade Organization (WTO) in 2001 and the CCP's ratification of fmr. Shanghai mayor Li Peng's "3 Represents" guiding Party theory in 2002. Two decades later, however, the opacity of Beijing's famous "State Owned Enterprises" (SOE's) is still alive and well. In 2021, UK ambassador to the WTO, Simon Manley, said that London was among those "concerned about the centrality of state-owned enterprises to China's industrial strategies, and the opacity of their operations" in general (Palmer, 2021). <https://www.politico.com/news/2021/10/21/wto-china-20th-anniversary-trade-policy-516647> . See also "Estates, 3" [represents], "Internet of Things" [Huawei].

world [has] never seen a governing system with such advantages, combining an ‘economic development miracle’ with ‘a miracle of political stability’.... For a long time [since the 1990’s], many foreign admirers of China treated party rule as a bit of a joke. This place has only one ideology, they chuckled, making money. Unfortunately for such people... the party not only refuses to fade away, but is [now] becoming ever-more visible and intrusive. Very possibly the guiding ideology is a desire for absolute power... In a secretive autocracy... outsiders can only guess.... [But it is undeniable that] Mr. Xi has asserted the party’s⁴²⁴ total authority over state capitalism⁴²⁵... one power-grab prompts another. [and] When modestly paid bureaucrats have sway over billion-dollar assets, at the same time that feistier newspapers are silenced and independent lawyers locked up, it is no surprise that the party has to launch anti-corruption campaigns so fierce [that] some officials fear taking decisions at all” (Economist, 2019b). See also “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”.

6b) “Factions [and their respective ebbs & flows] have always been rampant in Chinese Communist Party politics,⁴²⁶ but precisely because of the universally acknowledged propensity for factionalism, they are formally proscribed by the Leninist rules of innerparty life and hence exist...semi clandestinely... [as] a combination of one’s formal and informal ‘bases’ (*zhengzhi jichu*)....”⁴²⁷ (Dittmer, 2003, 97). Over the course of the Jiang Zemin decade (early-mid ‘90s to early-mid 00’s), factions and even para-military forces beyond Party control were generally on the rise; and Hu Jintao (r.2003-12) is said never to have really been in control of the military. Successor Xi Jinping’s resultant ‘anti-corruption’ campaign issued >100,000 indictments from c.2013-15, purportedly marginalizing both (Hu’s) “Youth League” Faction and (Jiang’s) “Shanghai Faction” by the time of the 19th Party Conference in Autumn 2017.

⁴²⁴ Basically in charge of The Party’s ideology, since at least c.2007, has been a (non-Princeling) acclaimed academic from Shanghai, whose (purportedly, at times, self-contradictory) publications also (mostly) seem to be in accordance with Youth League faction ‘ideology’ (especially since he crafted Youth League ideology himself [as, essentially Technocratic] in 2007). Wang Huning (b.1955) “devised Mr Jiang’s ‘3 Represents’ [codified by the Party in 2002], which acknowledged the need for the party to appeal to *more* Chinese, including private businesspeople... Mr Wang later provided a similar service for Mr Hu with his theory of ‘*Scientific Development*’ [codified 2007]. And his was [also] the brain behind ‘*Xi Jinping Thought*’, which was enshrined in the [P]arty constitution... [in 2017 (which was when Wang joined the Politburo Standing Committee, as its first non-governor & non-mayor)]. Central to Xi Thought is the notion of a ‘Chinese dream’ of the country’s ‘great revival’... [essentially adding Imperialism to] Deng’s pro-market rhetoric” (Economist, 2017b), that had been in place since 1991. What’s happened in the PRC in the 3-4 decades since then? First of all, the dominant, pro-2nd Estate, Shanghai Faction was perceived as scrambling (through the earlier years of the decade) for some more strategic legitimacy. Did they find the answer in the mid-90’s?

“[R]emarkably...[Wang] has been crafting the party’s [primary] message under 3 successive leaders [from 3 different ‘factions’]. China’s current...[Party boss] Xi Jinping, has [from the outset (2012)] again trusted him in this vital role, even though...[Wang] is not an old associate. [Even official] state-linked newspaper[s] have] called him the *party’s* ‘#1 adviser’ [transcending both individuals & factions]. ‘*Continue writing articles about political reform*’, Mr. Wang wrote in his diary in 1994 while still an academic. It was *published* the following year [i.e 1995, the year that Wang was summoned from academia to pretty much be the dominant Shanghai Faction’s strategy brain... It wasn’t something overnight. Earlier, Wang had been]...invited in 1987 to submit suggestions for the report [that was] delivered to that year’s [CCP] Congress, according to [Wang’s then-colleague] Ming Xia... [now at] the City Univ. of New York [after Wang helped Xia to escape to the USA] . That document, in 1987, was the most pro-reform of the Communist era-- calling for the *separation of Party and Government*. But Mr. Wang [subsequently] avoided entanglement with the Party’s reformist faction in Beijing and kept mum during the upheaval in 1989, says Mr. Xia, who is less guarded” (Economist, 2022). See also “Estates, 3” [China], “Chinese Communism” [anarchism].

⁴²⁵ *The Economist* here is failing to distinguish between Deng Xiaoping’s 1990’s-2000’s (transitional) ‘state capitalism’, and China’s subsequent ‘surveillance capitalism’ of the 2010’s. See also ‘Capitalisms’, “Economist, the”.

⁴²⁶ While factionalism “is hardly unique to China... We know from available survey data that Chinese political culture is relatively low in trust, and the faction provides a particularly useful refuge from the tiger world of [famously treacherous] politics [there], organized as it is around that culturally sanctioned dimension of trust known as *guanxi* (connections)... [A]lthough this has been changing more swiftly in society at large via marketization... any smaller and more personally useful organizations must [still] be formed sub rosa on a self-help basis... [in order to serve] several functions neglected by party-state corporatism... [including] even...[that of providing] a microcosmic unit beyond the family for social identity and solidarity” (Dittmer, 97).

⁴²⁷ Professor Hudson of the School of Marxist Studies at Peking Univ. notes that “the localities” in China “only cover about half of their working budget[s] from taxation.... [And] there’s no official revenue sharing between the...[imperial] government... state banks and the localities. So they can’t...[ask] for more money...[from Beijing, which] left the localities very [financially] independent.... They’ve let each locality go their own way...[which has resulted in] big deficits.... [So they] will *sell their tax rates for the next 75 years* for current money now...[to, for example] a real-estate developer”; this is “very much like” when Chicago (infamously) handed over tax revenues from (what used to be) its parking meters to “Wall Street investors, including the Abu Dhabi Investment” Authority [in 2008] (Hudson, 2020c, mn.16-18). See also “Feudalism, neo”. Peking Univ. changed its motto “from *freedom of thought*” to *loyalty to the Communist Party*” in 2019.” <https://www.youtube.com/watch?v=cQWlnTyOSig> .- PolyM, 3/22 (mn.8).

See also “Market Bolshevism”.

7) “The very complexity of modern Chinese society... seems to convince China’s leaders that they must tighten and retighten their grip. Increasingly that involves [dystopia 101] high-technology systems of [human] control, from algorithms that censor social media, to facial-recognition systems” (Economist, 2019b); while most of the urban areas of the west-- in Tibet and Xinjiang provinces-- already resemble something like a low-security prison. See also “Alibaba” [Ma]⁴²⁸.

8) According to Clive Hamilton of Charles Sturt Univ., CCP members (of which there were, c.2016, >79k in organizations abroad) “are obliged to purloin sensitive information if asked by China’s intelligence services”; and the Shanghai Academy of Social Sciences is very regularly used to recruit foreign academics.- <https://www.youtube.com/watch?v=OumhrE6JV3A> [2016 hack of CCP, mn.3].

9) CCP Updates: 10/22-

‘Circuits’, monetary- see “Money, 2 classes (layers) of”, “Money, 3 (contemporary) Tiers of”.

Circular flow- “The reciprocal flow of receipts and payments. The earliest model... was by the royal surgeon and founder of Physiocracy, Francois Quesnay, inspired by the circulation of blood in the human body. Most economic models since J.B. Say [d.1832] have focused on the reciprocal flow of income between producers and consumers, leaving out payments for debt service and property rent. But a rising proportion of income is diverted to pay interest charges, as the economy’s debt overhead grows over the course of each business cycle...” (Hudson, 2013). See also “Physiocrats, the”, Appendix B.

Circulation- See “Deceptive Banking Terms (d.b.t.’s)”.

Circus, the- “You know we’re producing a lot of lawyers...We need to be producing more engineers” (Fitts, 2018h, mn.36). See also “Duopoly”, “Corporate Media Cartel (CMC)”, “Attitude inoculation”.

Citigroup- See “Bair, Sheila (& Citibank)”.

Citizen’s/national dividend- (not to be confused with ‘basic income’)

1) In the post-2008 environment, not all welfare proposals have been about “Quantitative Easing” (Reserve money welfare) for the banks. In the UK, Positive Money has called for “*Quantitative Easing for the People*”⁴²⁹ (using TAB-deposit money); Kucinich’s *N.E.E.D. Act* has called for a *Citizen’s dividend* (using new sovereign money) in the USA; Finland’s parliament is planning to offer a national *Basic income* of 800 euros per month (in TAB-deposit money) to all citizens; and Swiss voters conducted a 2016 referendum on a more generous *Basic income* of 2,500 Swiss Francs per month (also in TAB-deposit money). Due to the confluence of many ‘21st century’ factors-- rising technological & industrial efficiency, low purchasing power, and increasing costs of living-- such “Basic credit” alternatives (also earlier known as “*Social credit*” or “Negative income tax” schemes) will continue to become more popular and relevant (at least until there’s meaningful reform). See also “Negative Interest Rates (NIRP)”.

2) “...the fair compensation of all taxpayers for having to pay for all the bailouts of the banking and financial system so far” (Stelter, 2018). See also “Bank welfare”, “Twenty-first century”.

3) This is an unavoidable fact of life in the transition to modernity. “Surveys in Britain and Holland reveal that 37 to 40 percent of all workers there are convinced that their jobs make no meaningful contribution to the world. And there seems every reason to believe that numbers in other wealthy countries are much the same.... If one includes the work of those who unwittingly perform real labor in support of all this-- for

⁴²⁸ According to Iain Davis, Ma, the richest man in China suddenly “just vanished” after having the temerity to “” (Wood, 2022, mn.28-29).

⁴²⁹ Keen calls it “People’s QE”, whereby “like a tax refund... electronically. The CB would credit your account... In Australia’s case, this was done, as part of the attempt to soften the blow of the financial crisis... in 2008”; roughly \$1000 per every person who “paid their taxes that year” (Keen, 2016o, mn.28).

instance, the cleaners, guards, and mechanics who maintain the office buildings where people perform [the] bullshit jobs-- [then] it's clear that 50% of all work could be eliminated with no downside. (I am assuming here that provision is made such that those whose jobs were eliminated continue to be supported)... Even this estimate probably understates... the problem, because it doesn't address the creeping bullshitization of real jobs. According to a 2016 survey, American office workers reported that they spent 4 out of 8 hours doing their actual jobs; the rest of the time was spent in email, useless meetings, and pointless administrative tasks" (Graeber, 2018b). See also "Bullshit jobs", ↔ "Tickbox".

4) With the "guaranteed minimum income ideas that are sprouting around... I think the ["basic"] idea is to pay people enough to keep them from raising the pitchforks and putting the bankers' heads on pikes" (Smith, 2016, mn.14). See also "Inequality", "Transhumanism".

5) One "likely result of universal guaranteed income would be the rapid defection of a large number of academics from their university positions to intellectual circles where they would once again be able to argue about ideas and research things [that] they actually find interesting. They might establish free schools where they could teach anyone who wished to learn. Universities would not become extinct. They would retain many strategic advantages. But they would be forced to de-bullshitize very rapidly" (Graeber, 2018b). See also "Bullshit jobs", "Academia".

6) "I would be in favor of [something like] that, if you included, for example, everybody...being given money by the government...then...[giving at least some of it to] crowd funding for innovators, because the most difficult thing in capitalism is getting money into the hands of people who innovate new ideas.... The current system doesn't do it [very well], and I don't think enough attention is being paid by the 100% Money groups about how to make up for that..." (Keen, 2018h, mn.16-17).

7) "Certainly in the US and UK, such a policy [of basic income, from the CB] would probably require new legislation, although [it would] not in the eurozone. So far, only the Czech central bank has been indicating it might adopt this policy if and when the next recession strikes. Innovation often comes from surprising sources" (Lonergan, 2019). See also "Helicopter money".

City (of London), the- (a.k.a. 'the Corporation of London', 'the square mile'; est. AD 40's; popul. 9000; i.e. the '3rd British Empire')

The '3rd' may seem watered-down, but in fact "the money flows...[were] *increasing* when we withdrew from the [former] colonies. We are still plundering developing countries as former colonial powers" (Oswald, 2018, mn.31). See also "British Empire(s)", "Colonialism".

1) Perhaps the world's oldest (continuous) quasi-sovereign municipality; 'The City's roots predate "that of Parliament...[T]he Magna Carta of 1215, which... [stipulated the] rights between King John and the barons, makes special reference to its 'ancient liberties', and how they extend to all freemen of the real...[This] status has afforded the...[Square Mile] a Lord Mayor since the days of William the Conqueror. The mayor's responsibility has always been to ensure the Crown maintains its side of the...[millennium-old] bargain. Is this why the Queen has to go through an elaborate ceremony before she is allowed in? According to the [City of London Corporation⁴³⁰, however]: 'The right of the City to run its own affairs was [only] gradually won as concessions were gained from the Crown'.... The City...Corporation prefers to view itself as an autonomous jurisdiction that defends the rights of freemen and occasionally extends that protectorship to 'freemen' beyond its borders with a ceremony known as the 'freedom of the city'"⁴³¹ (Kaminska, 2015). See also "Estates, 3" (England was 1st), "English constitution, the".

1b) became, in the 18th-- and particularly 19th-- centuries, "the center of the world's capital markets, just as Venice had been during the period of merchant venture kingdoms."- *Oxford Encyc. of Economic History* (2003, 4). See also "Venice, Republic of (697-1797)", "Oligarchy", "Parties, political- UK".

⁴³⁰ The municipal governing body of the City of London (est.) changed its name to the City of London Corporation in 2006.

⁴³¹ "Freemen are those considered not to be the property of a feudal lord, but who enjoy privileges such as the right to earn money and own land. This has meant that the freemen of the City have uniquely benefited from the right to trade as merchants or members of a guild or 'livery'.... Documents from the London Metropolitan Archives suggest the City of London has had the right to control its own police force since time immemorial" (Kaminska, 2015). See also "Liberal (classic usage)".

2) The (semi-sovereign⁴³²) City was supplanted, however-- for half a century-- as the western world's primary financial-economic leader, by the post-World War One Wall Street-Washington axis.⁴³³ After financial lobbyists were unable to convince Congress (during the early Reagan admin.) to deregulate Wall Street, however, the impetus moved back to London, where Torry financialists did not have much difficulty in persuading the Thatcher government to deregulate the City in the mid-1980's,⁴³⁴ knowing full well that once London made "the Big Bang", that they could scare Congress into following (about a decade later). See also "Thatcher, Margaret (1925-2013)", "Eurodollars".

3) "won the race-to-the-bottom and has ended up the financial cesspool of the world, with Wall Street only slightly behind... fraud and ripping off customers is literally the strategic plan" (Black, 2016c, mn.17-18). See also "Sabotage" [.RBS], "Big 5 (High St.) Banks", "Forex".

4) "" (Oswald, 2018, mn.).

5) Whereas American "financial sector debt began at 2% of GDP...in 1945, and hit 120% by the peak level... and is now rapidly falling.... But... I'm still shaking my head in disbelief...that the financial sector in England has accumulated something [approx. to] 450-600% of GDP. That's all speculative debt. It's all hot money... The [millennialist] UK has become the capital of fraud" (Keen, 2011e). See also "Three Romes", "Offshore".

5b) Tony Blair, prior to his landslide election in 1997, convinced the "new" Labour Party to abandon its traditional pledge to merge the City of London into London proper. Nonetheless in the 2010 election approx. half of all Conservative Party funding originated from the City (Shaxson, 2011b, mn.6). It was "only under New Labour that the historically acrimonious relationship between the City and the leftwing of British politics was smoothed over by granting the Bank of England...[sovereignty] over monetary policy" (Kaminska, 2015).

See also "Bank of England", "Governance", "Financialization", "Homogenization".

6) William Cobbett (1763-1835), the 19th century muckraking journalist, "would have found today's City much as he left it in 1835" (Roberts, 2017). See also "Financial Services Authority".

6b) What's going on? In 1907, Butterworths publishing (subsequently Reed Elsevier-RELX Group) recruited a former Lord Chancellor, the Earl of Halsbury, to codify British law in a public resource. The resultant *Halsbury's Laws of England*, more than a century later, is still the only complete compendium of law in England & Wales. Vol. 21 of the alphabetized archive addresses "money" and "Parliament", stating that: "There is no rule of law which compels a [Crown] Ministry which has lost the confidence of the House of Commons to resign office" (Halsbury, 1912, 618). Is this stipulation in the spirit of 'separation of powers', or in a spirit of perpetual blurriness and ambiguity in regards to British sovereignty? See also "English constitution, the", "Land bridge".

6c) The concept of "separation of powers" seems to have been not taken very seriously over the imperium and world wars of 18th and 19th centuries (neither Dicey in the late 19thc-- nor Halsbury in the early 20th--

⁴³² It is apparent in this official video from 1954: <http://www.britishpathe.com/video/londons-city-welcomes-queen> . The City of London, is also "an offshore center in its own right" (Shaxson, 2011b, mn.1).

⁴³³ Speaking of Axis, in WW2 most of the City was scorched by approx. 100k German bombs on the night of Dec. 29-30, 1940. In addition to most buildings, over 5 mn. books were destroyed in what was the biggest raid of the Battle of Britain, damaging a greater area than did the Great Fire of London (in 1666). - w Eichengreen,

⁴³⁴ The City's "present role and importance was already taking shape by the late 1950s, when it began to provide an *offshore* market for unregulated borrowing and lending....[and it has been globally] preeminent in 1] currencies, 2] interest rate derivatives and 3] global banking" (Tooze, 2018), not to mention 4] accounting & auditing, since the 1970's or 80's. See also "Three Romes", "Big 4 Accounting firms-Management consultants".

took it seriously); and, as Ian Ward has pointed out almost a century later, even “the supposed supremacy of the principle of parliamentary sovereignty⁴³⁵ is no longer so credible”, given the European Union, the devolution of powers to Scotland, etc, and the 1998 *Human Rights Act*... [UK] constitutionalism...is [now] ‘beyond’ [traditional] unitary conceptions of sovereignty... [A] modern...constitution could, and should, be better balanced.... For... if Parliament is indeed the only institution that can bind itself, then it is truly despotic. And if it pretends to be supreme as well, then it is tyrannical too, for the purpose of pretend legislative supremacy, [with the big government of] today at least, is to mask the uglier reality of an even greater tyranny, that of unconstrained executive power.⁴³⁶ Historical whimsy[ness] is no excuse for such a grotesque corruption of the liberal democratic principles of government and constitution. A modern constitution should be better constructed... to constrain the excesses of government. The separation and balance of powers is the pivotal component of such a constitution” (Ward, 2004, 81). “We [in fact] enter the 21st century with an emasculated legislature and an over-mighty executive” (Ward, 82). Conservative MP Christopher Hollis said the same thing half-a-century earlier (Hollis, 1949). See also “Separation of Powers”, “English constitution, the”.

9) Returning to *Halsbury’s*, “” Volume 6 states that: “” (Halsbury, ,).

10) According to Richard Werner and others, the City “is also not part of the EU... It couldn’t be part of the EU, because you have to have democratic elections and the City of London doesn’t. It’s the banks that have the votes.... It’s not part of the UK because the queen is not allowed to enter without permission... since [circa] 1688, since the foreign [Dutch] invasion” (Werner, 2017, mn.15) that preceded the UK’s Act of Union by two decades. See also “Glorious Revolution, the”, “Royalty, ‘modern’”.

11) The deregulated/lawless “situation [in The City, circa early 1990’s] only got worse under [PMs] Tony Blair and Gordon Brown...[I]n 2000, they passed... the *Financial Services and Markets Act* ...which ...included a clause which said that the competitiveness of The City was more important than the rule of law. It said that regulators must consider the international mobility of the financial businesses before taking enforcement action, and [that] they must avoid damaging the UK’s [eurodollars’] international competitiveness” (Fraser, 2012, mn.15-16). See also “Parties, political- UK”, “Eurodollars”.

12) “I dare say that I’m sure that the Brits have [T]heir offshore havens up in the sub-orbital platform [of the moon] already. Why would they miss that trick?... I’m serious. If you look at the tax benefits of creating a legal jurisdiction [for your corp.] in space [or the moon]...it’s the ultimate tax haven” (Fitts, 2020m, mn.5-6). See also “Offshore banking centers”, “Secret space program”.

13) City (of London) Updates: 10/22: a very concise history of the CoL’s concurrent rise with the (see also) “Eurodollars” (from the 1950’s-60’s, in stages): <https://www.youtube.com/watch?v=2FomACJ0YNo> [P.Boyle, ‘DirtyMoney’]. See also “Imperialism”, “British Bankers Association”, “White-collar crime”, “Tax shift”, “Police state”.

[smoldering 1940; c.2020]

⁴³⁵ Since

⁴³⁶ (Montesquieu, 1748, 162) couldn’t have said it better, a century-and-a-half earlier. See also “Timarchy” [Legislative power], “Circus, the”.

[obsolete?]

Civics- “We’re not teaching Civics anymore. One of the things that the universal draft did was inculcate a sense of Civics among all our citizens” (Steele, 2017d, mn.53). See also “Needs, desires (& law)”. See also “Separation of Powers”, “State capture”, “Political Economy”, “Civil National Identity”.

Civil-Military Operations - (synon. ‘4th generation warfare’, ‘unconventional warfare’, ‘gang stalking’)

1) euphemism for totalitarian mind control/mass control concurrent with the 4th debt money cycle (c.1940’s-c.2020). See also “Debt cycles”.

2) A Samuel Huntington “Council on Foreign Relations article back in 1975... said... ‘We need Civil-Military Operations’... This is...what the East Germans’ Stasi police was all about, when they had 1 in 6 East German civilians helping the security forces to go after ‘subversives’.... Whether [it is] communist or fascist doesn’t matter. It’s totalitarian.... This seems to be a bottomless pit. There’s money for this” (Karlstrom, 2017, mn.16-18). See also “Mind control”, “Neoconservatives”.

3) combining “the FBI’s COINTELPRO in and ‘60s and ‘70s [which] did pretty **much all** the CIA MK-ULTRA [mind control] experiments. A lot of that technology was developed back in the 50’s and 60’s and 70’s...” (Karlstrom, mn.19). See also “DARPA”.

4) “2 million are on the terrorist watch list in America.... This is treason against the US constitution and the American people.... Gang stalking [J’accuze’d! individuals on some list] is illegal... immoral... unconstitutional. It is a criminal felony in every state” (Karlstrom, 2018, mn.25-26).

See also “Black Budget (US)”, “Montesquieu” [timarchy].

[don’t read the fine print]

Civil National Identity (CNI)- (synon. ‘civic nationalism’, ‘civic identity’; i.e. ‘quit being irrational’) from Hans Kohn’s “territorial-civic nationalism” framing in the 1940’s⁴³⁷ (White & White, 2008).

“You shall no longer take things at second or third hand, nor look through the eyes of the dead, nor feed on the spectres in books, You shall not look through my eyes either, nor take things from me, You shall listen to all sides and filter them from your self.”- Walt Whitman, “Song of Myself”, 1891. So DIY, that which is right in the broader and longer-term-oriented contexts.

“I...recommended abolishing my office” (Peek, 1936, 31).

⁴³⁷ “Racism or the Principle of Racial Self determination, as it has been called in recent years is a materialistic illusion contrary to natural law and destructive of civilization” (Barnes, 1928).

1) The basics are not complicated.⁴³⁸ The “civic identity, evolving from the ancient territorial basis of identity, assumes that governments should endeavor to use their powers to *serve* equally the interests⁴³⁹ of all who happen to live within the nation’s territory” (White & White, 2008). See also “Ethnic (National Identity)”.

1b) For example, King Edgar’s code, issued in 962-63...specifically talks about: “...measures common to all the [singular] nation, whether [its inhabitants be] English, Danes, or Britons,⁴⁴⁰ in every province” (Wood, 2001). See also “English constitution, the”; “Common law”, (vs.) “Monetization”.

1c) A thousand years later, America’s most renown analytical historian distilled his 1,348-page magnum opus’ prescription down to 2 words: “*inclusive diversity*” (Quigley, 1966, 1222, 1311).

1d) In the 1700’s, this then-peculiar (in Europe) strand of nationalism; “waxed...[throughout] the British world. After the Act of Union of 1707 that brought England, Scotland, and Wales into a single kingdom, His Majesty’s subjects began to think of themselves as Britons... Britons drew strength from the idea that their nation had a role to play, in providence, for the liberation of the world from both political and ecclesiastical tyranny” (Samuelson, 1996). See also App.C: “1-2-3”, “Constitutions”.

2) In Europe, CNI (in terms of having meaningful, non-ethnic-based rights) pretty much died (from usury) in late antiquity, but re-rose in medieval Christendom; where it was “predominantly a political movement to limit governmental power and to secure [the traditional-medieval ‘free city’] civic rights” of Western civilization. (Gams’03). See also “Government, role of”, “Civilization, Western”, “Aquinas, Thomas”.

2b) In the 16th and 17th centuries in particular, the increasingly prosperous (and also frequently fighting) cities of (what came to be known as) the Dutch Republic was pretty much always out-front on these developments. “As early as 1509, Amsterdam saw the introduction of a ‘French school’ that taught double-entry [accounting]. The public demanded that city governments sponsor bookkeeping schools”, and eventually “merchant schools” were in nearly a dozen Dutch cities (Soll, 2014, 74). See also “Dutch Republic (1581-1795)”, → “Central Banking-Warfare model”, → “National Debt Economy”, → “Monetization”.

3) Of course, CNI also pertains to moving beyond kinship-based identity (White & White, 2008). In England, for example, by the 11th & 12th centuries, “family attachments were significantly less important to rural families...than they were in the lands of Celtic tradition... it could...[no longer] be assumed that neighbors and kinsmen were the same.... The migration of country people in search of land or employment [or other opportunity] contributed throughout this period to the occupation of new

⁴³⁸ Nonetheless, people have been arguing about it since the latter (i.e. ‘post-Montesquieu’) 18th century. CNI basically straddles in between the respective ‘3rd rails’ of ethnic in-group discrimination (which would be ENI) at one pole and reliance upon authoritarianism (particularly appeals to charismatic or irrational authority (CHA) on the other. The “Jefferson vs. Hume” issue, however, is (after 2 centuries now) more about whether it is good to mythologize about History-- for the purpose of building a ‘national [or social] identity’, of course. For more on (ethno-civic) Jefferson vs. (CNI-imperialist & accused ‘Tory’) Hume (who-- being a Scotsman-- may have been more interested in the new United Kingdom [of England & Scotland] than in traditional or ‘Whiggish’ English identity), see also “National Identity Cycle” [Jefferson vs. Hume], “History” [deceptions].

⁴³⁹ Those interests are usually in freedom or liberty. Rome’s leading philosopher Cicero (106-43 BCE) initially posited (the now pretty much universally-accepted attitudes in the 40’s BCE) “We are obliged to respect, defend, and maintain the common bonds of union and fellowship that exist among all members of the human race.”- *de Officiis*. “The welfare of the people is the ultimate law.”- *de Legibus*; which he distilled down to the virtue of ‘reconciling of Liberty with Equality’.

⁴⁴⁰ There were more tongues than 3. By “the 960’s, the Anglo-Saxon kings were taking into account several different linguistic groupings: the southern English, West Saxons, Mercians and East Angles, the Danes and the ‘Britons’-- speakers of Celtic languages (that is, Welsh speakers on the English side of Offa’s Dyke, the Cornish speakers in the south-west, and [also] the Cumbrians in north-west England). And it is obvious in their legislation that they allowed for regional difference in custom, too. At one point, Edgar [r.943-75]...says: ‘It is my will that secular rights be in force among the Danes according to as good laws as *they* can best decide on... Among the English, however, whatever I and my advisors have added to the customs of my ancestors for the benefit of *all the nation*’” (Wood, 2001). See also “Federalism”. Hence, although the “Danelaw” policy (from c.865-954) was perhaps not quite the same after Eric Bloodaxe was driven out of Northumbria in 954, there were still more law codes than one. The (separate books) policy seems not to have been fully left behind until one of the more powerful kings, Edward III (r.1327-77), who “totally abolished by statute 14 Edw.III. c.4... [to] define murder in quite another manner, without regarding whether the party slain was killed openly or secretly, or whether he was of English or foreign extraction” (Blackstone, 1780, ch.14).

farmland...the growth of towns, and...the colonization of territories...[adjacent to] England"- *The Oxford Encyclopedia of Economic History* (2003), p.202. See also "Imperialism", "National Identity Cycle".

4) From there; a "virtuous circle" formed, in which "the elevation of practical, business-minded mathematics into the spheres of high and humane thinking allowed these societies not only to maximize their use of accounting, but also to build complex cultures of accountability and awareness of the difficulties posed by such a culture. With this *culture of accountability* came capitalism and representative government" (Soll, 2014, xvi). See also "Capitalisms", "Accounting, double-entry".

5) 16th century "Humanists were obsessed with the Roman lawyer Cicero, who claimed that the *rhetoric* of making arguments and providing proof was a great civic virtue.⁴⁴¹ Good citizens expressed themselves publicly and proved their points. It was a civic duty to do so. [And an] *account book* was [now also] like an argument with a moral end. Its data were laid out and tallied, and its final sum was an argument for success or failure... the final tally... had authority in finance and law" (Soll, 2014, 54). See also "Accounting", "Dutch Republic (1581-1795)".

5b) Perhaps this was best expressed by the 'radical' (for that time) & banned Dutchman Baruch Spinoza: "The right of the sovereign, both in the religious and secular spheres, should be restricted to men's actions, with everyone being allowed to think what he wishes and say what he thinks"⁴⁴² (Spinoza, 1670). See also "Happiness", "Freedom continuum (maturation)".

5c) Montesquieu, writing between the heydays of the Dutch and American Republics, formally noted that virtue "in a [functional] republic is a most simple thing; it is a love of the republic; it is a sensation... felt by the meanest as well as by the highest person in the state. When the common people adopt good maxims, they adhere to them more steadily.... The love our [civil] country is conducive to a purity of morals, and the latter is again conducive to the former" (Montesquieu, 1748, 40). See also "Equality".

6) "The fundamental force that unites us is not kinship, or place of origin, or religious preference. The love of liberty is a common blood that flows in our American veins.... [And] the ideals which gave birth to our nation still inspire the hopes of oppressed people around the world.... Our common vision of a free and just society is our greatest source of cohesion...and strength...greater even than the bounty of our material blessings" (Carter, 1981, mn.12-14). See also "United States, the", "Leverage", "Usury".

7) British Establishment historian Arnold Toynbee picked up on the ethos in the late 19th century. "Among the ideas of Toynbee [Sr.] which influenced the [Rhodes-] Milner Group we should mention 3: (a) a conviction that the history of the British Empire represents⁴⁴³ the unfolding of a great moral idea-- the *idea of freedom*-- and that the unity of the Empire could best be preserved by the cement of [delivering on] this idea; (b) a conviction that the first call on the attention of any man should be a sense of duty and *obligation to serve the state* [that secures the 'freedom']; and (c) a feeling of the necessity to do *social service work* (especially educational work) among the working classes of English society. These [noblesse oblige] ideas were accepted... and became dominant principles of the Milner Group later [basically the 1st half of the 20thc]. Toynbee can [thus] also be regarded as the founder of the method used in the [British Establishment] Round Table Groups and in the Royal Institute of International Affairs" (Quigley, 1981, 10). Was this ethos up to the bar of its own rhetoric? See also "Separation of Powers", "City (of London), the", App.C: "1-2-3".

⁴⁴¹ Or rather, the alternative is a nightmare. See also "Scientific method", "Methodology" [.TheThing].

⁴⁴² "By insisting that '*the less freedom of judgement is granted to men, the further are they removed from the most natural state, and consequently the more repressive the regime*', Spinoza clears a much wider space for freedom of speech and the press than is allocated by [John] Locke's or [Jean] Rousseau's toleration, and simultaneously provides a method whereby the degree of freedom, or lack of freedom, in society can be measured.... Undoubtedly, no other Early Enlightenment theory of toleration does in fact embrace full freedom to publish" (Israel, 2001). See also "Freedom continuum (maturation)".

⁴⁴³ To others, of course, 19th and 20th century British Imperialism represented instead simply (in the words of one American author) "68,000,000 white people of the British Empire scattered all over the face of the globe, their strength dispersed in the task of keeping the 435,000,000 colored subject[s] of the Crown [i.e. the City] under control" (Knuth, 1944, 55). The inherent dynamics between these two views of British Imperialism would lead, inexorably, to the 20th century's fixation with "racism", and also (eventually) the 21st century's fixation with (what might be called) "monetarism". See also "Adolescence of Mankind".

8) More idealistically, that ethos which predominates in a “nation based upon a genuinely shared public culture in which no group is privileged... seeking to promote political plurality through the establishment of *accountable institutions*.... No government, whatever its composition, is likely to secure sufficient national support for its policies unless and until steps are taken to ensure that politicians and political institutions are publicly accountable and that political decision-making is based on the development of a civic [strong] public culture” (Campbell, 1999, 121-122). See also “Parties, political”, “Accounting standards”, “Serious”, “Taiwan”.

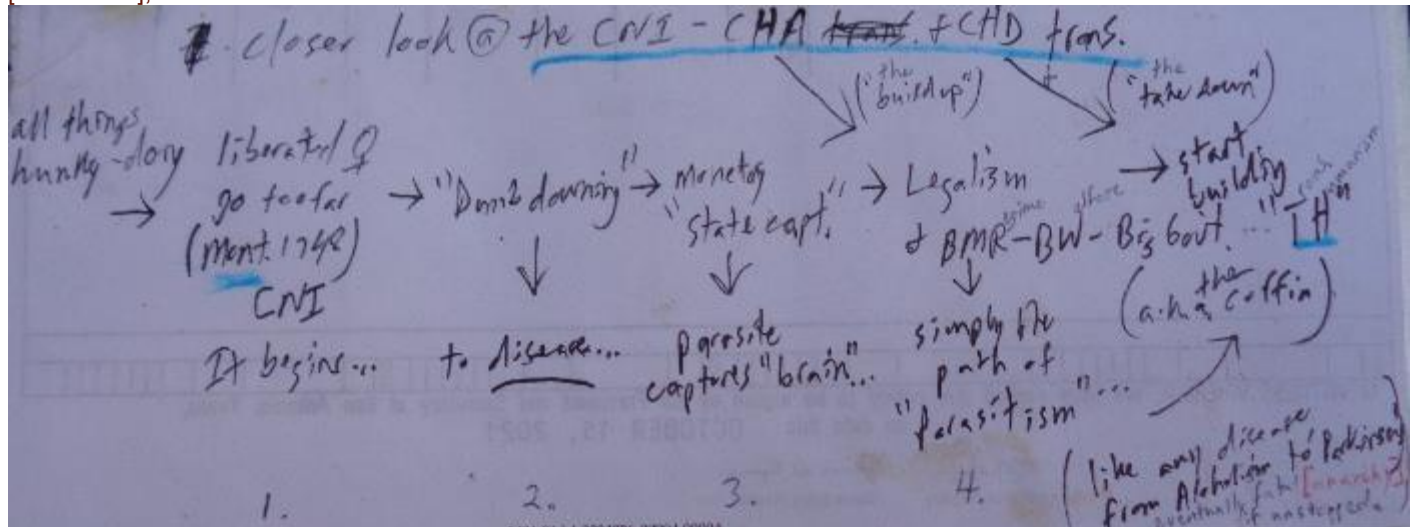

9) Simplified: “This is where I live. This is where I vote. And this is where I get to have a say” (Cook, 2019d, mn.41). What could (still) go wrong? The usual propaganda & fallacies. It’s long been observed that “in a country where the constitution gives every man a share in its government and political interests, conversation generally turns upon politics: and we see men spend their lives in the calculation of events which... can scarcely be thought subject to the rules of calculation. In a free nation, it is very often a matter of indifference whether individuals reason well or ill; it is [simply] sufficient that they do reason” (Montesquieu, 1748, 314-315). See also “Bernays, Edward” [propaganda], “Logical fallacies”, “Adolescence of Mankind”.

10) Nemesis? See also “Legalism”, → “Parties, political” [entrenched], → “Corporate ‘personhood’” [entrenched].

10b) But there exists also a more everyday ‘organic’ cycle, manifesting before the in-your-face political and institutional corruption. In countries where women often “have intercourse with men, their desire for pleasing, and the desire men also have of giving them pleasure, produce a continual change of customs. The two sexes spoil each other; they both lose their distinctive and essential quality; what was naturally fixed becomes quite unsettled, and their customs and behavior alter every day” (Montesquieu, 1748, 298). See also “National Identity Cycle”, “Cultural Calendar”.

10c) A Closer Look at the CNI-to-CHA (& CHD) ‘Flow’: [see also “National Identity Cycle”]

The basic dynamic: as authoritarianism & threats fade further & further into to (distant) past of (mostly forgotten) public history, womenfolk, of course, become increasingly ‘liberated’ too. If this location is also a large port city and/or particularly liberal ‘trading nation’, then another social dynamic is also occurring (in addition to Montesquieu’s ‘spoilage’ mentioned immed. above) at the same time. Just as surely as “Commerce brings into the same country different kinds of people, it introduces also a... [complexity] of wealth... Thus in a trading [CNI] city there are [without many exceptions] fewer judges and more laws” (Montesquieu, 1748, 326). As the resultant new, *newer*, & *newest* (‘trendy’) NI ethos-culture of the CNI rolls on, it becomes (increasingly) difficult for it to resist the pull of “legalism” & the bureaucratic state, if not (with a CNI that is even more successful) the siren song of outright Imperialism-Statism. At this (‘tractor beam’) point, pretty much the only way out (of the CNI’s destruction) is (see also) “Politics” [‘most men’], and “Reform”.

See also “National Identity/Nationalism”, “Libertarianism(s)”, “Civilization, Western”.

[classic David (1784)]

Civilization- (cultural governance larger than [political] nations) 1) a common system of rules and expectations to govern large abstracts-- such as written language, common religion[s] & currency[ies], and other aspects of culture-- that can be (or have often been) larger-*broader* than the (-more legalistic-) *national*-political level of social organization. See also "Culture".

2) "Societies and civilizations are organized around some concept of the common [socioeconomic] good. The concept always deteriorates, and this is because it is deployed to lower the ceiling on individual power rather than raise it. 'Be less than you are, then we can all come together in a common cause'. It's essentially a doctrine of sacrifice-- everyone sacrifices to everyone else, and the result is a coagulated mass of denial of Self" (Rappoport, 2021), until the sum (if unreformed) becomes less, not more, than its individual parts. See also "Statism", "Civilization, Western".'

['16 civilizations' (Quigley, 1966, 7)]

2b) The Slavic people's "destiny is to evolve a higher civilization of their own in the future. Now it is in a period of infancy."- C.G. Harrison, *The Transcendental Universe: Six Lectures on Occult Science, Theosophy, and the Catholic Faith* (1896)

Civilization, Chinese- See "Confucian".

Civilization, Orthodox- ('Platonists'/'neo-Platonism'⁴⁴⁴ meets 'the original'/unadulterated Christianity [per 4thc], made official [in Slavic-speaking lands, anyway] in the 9th-11th centuries [making 'Orthodoxy', along with 'Western civ.', the youngest of world civilizations])

1) ""- Prince Yaroslav, . "" (Hartley, 1992).

2) What was the great Eastern-Western rift about?

3) Nearly half-a-millennium later, by "the end of the 15th century, the rulers of Muscovy were developing an ideology which regarded their territories as the only free Orthodox realm, the successor of Byzantium, the '3rd Rome' and rival of the Holy Roman Empire...[I]nsofar as [groups of] people [often] define themselves by negatives by negatives, they knew that they were *not* [sic] part of Western Christendom... [T]he name for all Western foreigners indiscriminately was *nemtsy*, the dumb ones (the term still used in modern Russian to mean Germans). It is only at the end of the 17th century that the word for Europe is attested in Russian.... It was only in the 18th century that Russia aspired to become part of 'Europe', something which essentially meant being accepted... [but] Russia's position vis-a-vis Europe has remained ambiguous and her 'Europeaness' has never been fully accepted by either Russians or other Europeans" (Hartley, 1992).

See also "Patri", "Third Rome", "Russia (& Ukraine)", "Millennium".

Civilization, Russian- See "Civilization, Orthodox".

Civilization, Western- (synon. 'western'⁴⁴⁵ civ.', 'european civ.', 'the western tradition'; i.e. 'the un-unified'; not to be confused with 'Classical [or 'Iron Age Mediterranean'] Civ.'⁴⁴⁶) See also "Civil National Identity (CNI)", "Charismatic Authority (CHA) & Charismatic Dependency (CHD)".

1) Western "Political systems [at least per the United States] are not founded by [top-down] judicial decisions or executive actions [but by the 'grass-roots' and the legislative], so [US] colonial case law and executive directives were excluded [from *A Documentary History.... of the American Constitution*]. Too often constitutionalism is viewed merely legalistically, whereas legalism is the result of constitutionalism⁴⁴⁷ and not the other way around" (Lutz, 1998). See also "Legalism", "United States, the".

1b) As with any aggregate, its constituent institutions tend to come and go, ebb & flow, with the basic muscular dynamic (at least through the "Adolescence of Mankind") being that of extension-dispersion (of basic economic-'civil' rights), followed by some contraction-consolidation. Through the millennia and centuries, its 6 key (or 'leading'/u.s.p.) innovations have been:

- | <u>innovating institution</u> | <u>rise</u> | <u>fall-dispersal</u> | <u>current state</u> | <u>reason</u> |
|-----------------------------------|------------------------------------|---|-----------------------------|-------------------------------|
| 1. Money ([then] 'state coinage') | mid-1st millen.BCE | 6 th -8 th centuries A.D. | transformed into paper cash | See "Coined Money", CBDC |
| 2. Astrology & <u>solar cal.</u> | ⁴⁴⁸ 1st half millen.BCE | 3rd-9thc's; cal.never | underground; everywhere | See "Design", "Design, human" |

⁴⁴⁴ "Neoplatonism, the last school of Greek philosophy, [was] given its definitive shape in the 3rd century by the [Hellenic Egypt] philosopher *Plotinus* [c.204-270]. The ancient philosophers who are generally classified as 'Neoplatonists' called themselves simple 'Platonists.'" - <https://www.youtube.com/watch?v=QvWGXtk5UE> [Philos.Muse'14].

⁴⁴⁵ In general, this adjective is "talking about the culture that...[developed] in Europe and was a mixture of the classical contributions of [coinage revolution] Greece and [independent yeomanry] Rome, together with...Christianity [separation of powers], and we could basically define it as an *allegiance to* [or 'affinity for' the social values of] individual freedom, consensual [pluralist] government, civic audit of the military, secularism-- or at least the distinction between a church theocracy and state-- [and] capitalism, [in terms of some reasonably non-arbitrary, consistent definition of] free enterprise (Hanson, 2005); as reflected in (see also) the "Common law" and "Politics". "What's unique about the West...is that the idea of freedom [that] can be institutionalized and travels across time and space into a variety of environments... the idea that you would have constitutional government that would be written down and...provide a [public] blueprint" for facilitating such aspirations (Hanson, 2005). See also "English constitution", →"United States", → "Land Bridge"?"

⁴⁴⁶ Different people with different institutions and philosophies, talking about (very) different things. Tacitus (in *Agricola*, 98 AD): "More of Britain would be prosperous if Roman forces were everywhere and freedom was taken out of view." See also "Slavery", "Serfdom" (not the same thing), "Freedom continuum". Not even France (the most 'Roman' of the post-Roman Empire lot) is an exception.

⁴⁴⁷ "[P]olitical analysis should begin with a careful examination of a people's attempt at *self-interpretation*-- ...most likely to be found in their political documents and writing" (Lutz, 1998). See also "Constitutions", "Legalism".

⁴⁴⁸ The quest for keeping (perpetually) accurate *time* was, for the Ancients, what *alchemy* was for the Medievals, or *slavery* "1-2-3" is for us (US, etc.) Moderns-- the holy grail. The Sumerians (and subsequent Classical-Western Civ.--as distinct from **probably** both Sinic Civ. &

2) "began to expand in 976. By expand I mean they began to produce more goods per person, per day or per year... increased output per capita, increased knowledge, increased geographic area for the civilization itself, and increased population...[In the latter 10thc] that began. And we'll put an arrow here indicating that [beginning]⁴⁵⁰. The chief way in which that economic expansion was achieved was by specialization and [increased usage of money (either state currency/coins, or sticks) as mediums of] exchange: that instead of [per the 600's] each little group trying to produce everything which would satisfy *all* [sic] of these needs, little groups began to concentrate and say we will produce only wool, and exchange wool for other things. And so forth and so forth...[This has been] the basis of expansion in any civilization' I'll call it commercialization. And as long as the society is expanding, that process of commercialization will continue [hand-in-hand], as it has for a thousand years in our society, so that today, in our society, *everything* [sic] is commercialized: politics, religion, education, ideology, belief, everything, [even] the armed services. Everything, practically, is commercialized. Everything has its price" (Quigley, 1976c-pt.3, mn.304-06). See also "Industrial Revolution, 3rd", "Imperialism, American".

2b) And "when this [commercial] expansion reaches a crisis, you [then] get increasing *politicalization* [sic].... [when] the expansion is slowing up, and you are no longer attempting to achieve increased output per capita... or increased wealth... or whatever is motivating you, by expansion; but you are going to do it by mobilizing [political or state] power. We have seen this going on in our society now for almost a century. Increased politicalization of the society" (Quigley, 1976c-pt.3, mn.306-07); he also could have

Chinese Civ.) "had a [clear-grammatical] concept of the present versus the future...[D]uring the Sumerian period, the Mesopotamian [solar] calendar was developed...[which even] allowed [for] a mathematical link between lunar months and solar years" (Goetzmann, 1994). Pro's: w/o precision of (solar) time there's also little precision of soul. Con's: see also "Usury" (i.e. the West's long-term 'devil [Op.Mental] game'). <https://www.youtube.com/watch?v=NP9iOqdxS8c> [Question, mn.3].

⁴⁴⁹ Carroll Quigley's definition of 'western civ.' relegates the Greco-Roman to "*Classical Civilization*" (which is understandable, seeing as how the written language was [largely] lost with the fall of Rome), and hence takes up with the seedlings of (what was often called [by contemporaries]) "*Christendom*", which: "began... [as] a mixture, resulting from the barbarian invasions which destroyed Classical Civ... [from] 350-700... [then created] a new culture from the various elements offered from 1] the barbarian tribes, 2] the Roman ['classical'] world, 3] the Saracen world, and 4] above all the Jewish world (Christianity)... This society became a civilization when it became organized.... [which was primarily *away*] from the *centralized*, state-centered political orientation of the Roman [and Han Dyn.] world, to the decentralized, private-power feudal network[s] of the medieval world" (Quigley, 1966, 8). The "*Classical*" failure to distinguish between "state" (government) and "society" is/was, of course, deeper-rooted in the (purported) failure of the ancient *Mesopotamian* city-states to recognize the individual: "'An individual outside any of these [usually kinship-heritage] groups did not have a means to participate in the social and political life of the town' (Van de Mieroop, 1997, 257).... Surely it is important to remember... [that] the fundamental teaching of Sumerian theology [lunar or solar?] was that the gods created humans to be their servants" (White & White, 2008e). A couple thousand years later, there is "likewise in Aristotle's *Politics* a consciousness that the [collective] whole is prior to the [individual] parts, and that [one shouldn't deny that] the synthetical method must be combined with the analytical... [T]he perfect image of the state [per Plato] in which 'every means is an end, and the end [is] the sum of the means', is already present to his mind... [These] 2 aspects of the truth are placed side by side, but they are not yet harmonized or brought into relation with one another" (Jowett, 1885, xix). See also "Religion" [WestemIdea]→ "Separation of Powers"; "Denial", "Statism", "Fascism", "Dispensationalism" & "Zionism".

⁴⁵⁰ Most scholars of Western civ. place more emphasis upon its (more high-profile) *fruition* (in the 13thc), than on its 'beginning' (around the decades of c.1000). The well-known story (of independence & separation of powers) can be communicated in a number of ways. "The Basileus, the sacred [everything under-one-roof Temple] of the Byzantine/[Eastern] Roman Empire...[and] institutional successor to the [old Western Empire's] Pontifex Maximus. lost control of the money power [subsequently a.k.a.' currency'] with the fall of [its capital]Constantinople [via the duplicitous 4th Crusade] in 1204.... [The Empire's] successor in the West, the [Roman] Catholic Church [RCC] was unable to...[monopolize] the [money] power, as [Western] princes began minting [hitherto 'sacred'] gold coins", pretty much without regard to what (either) the Eastern 'Empire' or Western Church said about it (Zarlenga, 2002, 177). When, a century later (*in*), .

simply cited (the concurrent), 'long 20thc' rise of ever-increasing "Imperialism" in the US. See also "Industrial Revolution, 2nd", "Fin de Siecle".

2c) "And then, as the society continues and does not [meaningfully] reform, you [then] get increased militarization [sic] of the society. You can see that certainly in [Classical and] Western Civilization, and in the history of the United States. In the last 40 years, our society has been drastically militarized. It certainly isn't yet as militarized as other societies and other periods have been. We have a long way to go in this direction still" (Quigley, 1976c-pt.3, mn.307-08). See also "Timarchy", "France", "UKUSA Agreement", "Institutional approval (in USA)".

2d) "Now, as this [politicization-statization] process goes on, you get certain other things' I've hinted at a number of them. Misplacement of satisfactions. You find your satisfactions-- your emotional satisfaction, your social satisfaction-- not on...relationships with other people and with nature, but with power, or with wealth, or even with organized force-- sadism, in some cases. Go out and murder a lot of people, in a war-- a just war, naturally.... [hence, the] increasing remoteness of desires from needs.... Then the next thing is an increasing confusion between means and ends... [If I asked most people what are the needs of...[human beings], they could hardly tell me. Instead they would want the *means* [sic] that they have been brainwashed...[into accepting] will give them the satisfaction that they think of [as] a need. But... the methods we have been using [allegedly for 'happiness']⁴⁵¹ are not working. Never was any society in human history as rich and as powerful... as Western Civilization and the United States, and it is *not* [sic] a happy society. I just looked at a book this week called *The Joyless Economy*, by an economist, in which he diagrammed some of these things. All of that is [in service to the] establishment of new paradigms" (Quigley, 1976c-pt.3, mn.307-10). See also "Happiness"; "Great Extinction, 6th", "Industrial Revolution, 3rd".

3) (Quigley, 1976c-pt.3, mn.307-).

4) Western Europe has (for thousands of years anyway) been rather contested territory, and the resulting general synthesis; or (eventual) "Outlook of the West is that broad middle way... over the long succession of moments that form...[its] history. From that succession...it is clear [since the 1940's, anyway] that the West believes in diversity rather than uniformity, in pluralism rather than monism or dualism, in inclusion rather than exclusion, in liberty rather than authority, in truth rather than in power, in conversion rather than in annihilation, in the individual rather than in the organization, in reconciliation rather than in triumph, in heterogeneity rather than in homogeneity, in relativisms rather than in absolutes, and in approximations rather than in final answers... that man and the universe are both complex and that... each can be put into a reasonably workable arrangement with a little good will, patience, and experimentation...[T]he West sees the body, emotions, and reason as all equally real...and is prepared to entertain discussion... but is not prepared to listen for long to any intolerant insistence that any one of these has a final answer. The West has no faith in final answers... all answers are [like the scientific method] unfinal,⁴⁵² because everything is imperfect, although possibly getting better and thus advancing toward a perfection.... This [scientific] methodology of the West is basic to the success, power, and wealth of Western Civilization.... [W]e may reassure ourselves by recalling that our civilization has saved itself before by turning back to its tradition of *Inclusive Diversity*.... despite the many lapses of Western religion⁴⁵³ into authoritarian, absolute, rigid, and partial affirmations" (Quigley, 1966, 1127-1129). See also "Scientific method", "Civil National Identity", "Ethnic (National) Identity".

⁴⁵¹ Not to be confused, it would seem, with "the *pursuit* of happiness".

⁴⁵² "Non-Western peoples who do not find in their own system any acceptance of the rules of [rationalizing social] identity or of contradiction do not see reality in terms of 2-valued logic, and must make an impossible effort to adopt the West's natural tendency to rationalize problems [or anything]. On this basis, they [often] find it difficult either to rationalize their own emotional positions and thus to control or direct them, or to rationalize (which is to isolate and analyze) their problems and thus to seek solutions for them" (Quigley, 1966, 1186). See also "Globalism".

⁴⁵³ "In fact, a correct definition of the Christian tradition might well be expressed in...one word, 'Both'. Throughout its long history, controversy over religion in Western society has been based on a disturbance of the arrangement or balance with that 'Both'. From this religious basis [that was] established on 'Both' as early as the ['1st Ecumenical'] Council...of Nicaea (325) and [the '4th Ecumenical Council, held at] Chalcedon (451), the outlook of the West++ developed and spread... to replace the dying Classical Civilization" (Quigley, 1966, 1228).

4b) That's how it looked from the mid-20thc. That destination, of course, was enabled by Western civ's heritage of (-some substantial-) diversity in 'national' philosophies. To be brief, here are some of the (sub-'Western civ.')

England-UK- precocity; see also "English constitution, the".

America-USA- innovation;⁴⁵⁴ see also "App.C: 1-2-3", "Monty Python's".

H.R.E.-Germany- philosophical

Muscovy-Russia- emotional

"Adolescence of Mankind", "Freedom continuum (maturation)".

5) Interestingly; in "the course of its various expansions, Western Civilization has collided with *only one* civilization [at most] which was not already in the state of decay" (Quigley, 1966, 11).

5b) Pride-before-fall? It may be said that Western civ. was mortally wounded by the 3rd Currency War, which was made inevitable by the 2nd Currency War. See also "Intelligence Community (IC)", "Montesquieu" [Montesquieu's heroes].

5c) By the 2010's, it was obvious that "[t]he West is shrinking from the global centre of wealth creation into [something more like] a troubled regional phenomenon.... people elsewhere have...[begun to turn] away from the West, partly in embarrassment. They don't wish to be associated with our *naivety*" (Saul, 2013).

5d) "The West has essentially committed financial suicide, it's [in the process of] going down... [H]ow can the United States control other countries diplomatically without an industrial sector?; and with a government having a debt to foreign central banks and...[to] foreign government[s] far beyond its ability to pay?...[m]uch worse than any of the global south countries' foreign debt"⁴⁵⁵ (Hudson, 2022). See also "Constitutions", "National Debt Economy (NDE)", "Reform, 101".

See also "Philosophy", "Aquinas, Thomas (1225-1274)"; "Reserve currency", "Imperialism", "Dutch Disease".

[See also "Wonderful Wizard of Oz", "Monetization".]

Clark, John Bates (1847-1938)- 1) "By the 1870's and '80's, there was a lot of pressure in *all* countries-- but especially [in] the United States-- by Socialists on the one hand, and followers of the journalist Henry George on the other, wanting to tax away the economic rent and use that as the tax base, instead of taxing labor and industry. And so John Bates Clark...[from Columbia U.] said: '*There's no such thing as unearned income. Everything that the economists before me have written is wrong. Everybody earns exactly what they contribute to national product. And that means that whatever their earnings are will be added to the [new, sacred "gross"] nation product*'.... [Clark] got so well applauded by the bankers, and the landlords, and the F.I.R.E sector that the American Economics Association established the John Bates Clark award for economists under 40 years old who were writing in this anti-classical tradition that they

++- But both of these (and indeed all 4 Ecumenical Councils) were held more than a thousand miles to the *east* of Rome, in the Greek/Cyrillic language, in the vicinity of Byzantium (or Ionian Turkey). The first Pope of Rome, nonetheless, decided the 4th Ecumenical; educated people in Rome all spoke Greek anyway. See also "Russia", "Three Romes".

⁴⁵⁴ The basic assumptions "present in all" of the American colonies' founding documents, right up to c.1790, include (without exception): "a [written & concise] constitution as higher law, popular sovereignty, legislative supremacy, the deliberative process, and a virtuous people" (Lutz, 1998). This nomocratic stability engenders innovation (sometimes a.k.a. freedom or liberty).

⁴⁵⁵ "How on Earth can you hold on even beyond this September, when you're going to have countries that owe dollar debts on their bonds,[when] Latin America, Africa...cannot afford to pay the dollars to the dollar bond holders if they have to pay higher prices for oil and gas and food and raw materials that the United States banks' sanctions against Russia...[have] done? Are they going to really lie back and let America force them into economic suicide because their own pro-American elites, their own Boris Yeltsins in Latin America [and] other countries..." (Hudson, 2022). "Ponzi", "Reform", "World Par Economy (WPE)".

call *Neo-classical*, to erase [and obscure] the fact that they were the exact *opposites* of classical economists” (Hudson, 2016p, mn.11-13). See also “Industrial Revolution, 2nd”, “Imperialism”, “Death Culture”, “Monetization”.

2) More than anyone else, Clark was responsible for constructing **the idea that capital mutates from one form to another...** [which itself then mutated into **calling everything** [sacred cow] ‘capital’, including land. See also “Neoclassical revolution”, “Finance Capitalism”.

See also “Neo”, “Neoclassical Economics”, “Parasitism”, “Georgism (& Land Value Tax)”, “Academia”.

[See Pistor, 2019 & [undefined] “Money”, “Sovereignty”.]

Classes of Money- see “Money, 2 classes (layers) of”.

Classical Economics (hijacking thereof)- The “focus of classical economics was to try to cure Europe of the legacy of *feudalism*... a landlord class, the heirs of the armies that had conquered the land in the Norman Conquest of England and similar Viking conquests of Europe; and also [of the elitist legacy of] banking. The whole objective... was to try to prepare for the Industrial Revolution by freeing economies from this *overhead* of economic rent, land rent, monopoly rent, and interest that... [had carried over] because of the privileges inherited from feudalism... [Classical Economists wanted] a ‘free market’ that was free from rent and free from interest⁴⁵⁶... [T]oday’s economics *reverses* all It... And that’s why the ‘History of Economic Thought’ has been dropped from the curriculum⁴⁵⁷.... All this is dropped in order to teach mathematics... not talking about the real world” (Hudson, 2016c). See also “Clark, John Bates”.

Clean Slate- “The policy of annulling debts to save the economy and society from being torn apart financially and property being...[over-concentrated with] creditors, through debt foreclosure. Originally royal practice in Bronze Age Sumer and Babylonia, this policy became the core of Judaic Law in the form of the *Jubilee Year*. In modern times, a moratorium was declared on Inter-Ally World War 1 debts and German reparations in 1931, but debt cancellations now occur only through personal or corporate bankruptcy [law], not on an economy-wide basis” (Hudson, 2013); except for post-war Germany. “The Federal Republic of Germany’s creditors-- 20 countries including Greece-- indeed agreed at a London conference to write off 55% of the country’s 32.3 billion Deutsche marks of foreign debt” (Bershidsky, 2015). See also “Jubilee”.

Clearing Houses- (a.k.a. ‘central clearing counterparties’) clear all futures & options contracts payments between parties. “A big clearing house... is another under-capitalized, Too Big To Fail entity” (Sheppard, 2017, mn.29). See “Central clearing counterparties (CCPs)” for sufficient detail.

Clearance System- a centralized payment system. Non-physical money (‘digital’, ‘electronic’, ‘ledger’, ‘account’, or ‘fiat’) is only possible with a clearance system. The development of money was based on **centralized numeric/account clearance systems** over 5,000 years ago, long before physical coins were invented, as shown in many cuneiform transfer payment records.

⁴⁵⁶ “The common denominator among all the Classical Economists was the distinction between earned income and unearned income..... [until] John Bates Clark came along and said: ‘*There’s no such thing as unearned income. The landlord actually earns the money by taking all this effort to provide a house and land to renters. And the banks provide credit... Everybody earns their income. So anybody who accumulates wealth-- by definition, according to his formulas-- get[s] rich by adding to what is now called GROSS DOMESTIC PRODUCT*’ (Hudson, 2016d); as was necessitated by two world wars directed at German “socialists.” See “German (industrial) banking.”

⁴⁵⁷ “[I]f you had a History of Economic Thought, you’d know that Adam Smith and the adversaries of Ricardo and John Stuart Mill, [that] their idea of a free market was a market free *from* rent, free *from* the banks, free *from* monopoly. But now when you have the Austrian School and Hayek’s talk about the free market, they mean free *for* the parasite, free *for* the predatory” (Hudson, 2016s).

See also “Central clearing counterparties (CCPs)”, “Payment Systems”, “Credit money”.

Client oligarchy- “The ruling class of a ‘developing’ (that is, backward) country that has been co-opted into serving US and cosmopolitan finance capital in exchange for agreeing to IMF and World Bank ‘conditionalities’ and permit[ing] capital flight (‘free capital movement’) and un-taxing monopoly capital and other property, mainly for the benefit of foreign investors, including the client oligarchy, via its own offshore financial accounts” (Hudson, 2013). See also “Offshore banking centers”, “Oligarchy”.

Climate change, global- (has always been at least .95 cosmic-natural [f.e. 100k-year ‘Ice Age’ cycles], for every <.05 part ‘man-made’; not to be confused with ‘environmental change’ [which has often been from either the cosmic-climate or man-made developments, such as over-grazing]).

“The belief in progress has been replaced by the fear of social retrogression or even human annihilation” (Quigley, 1966, 28). It’s not necessarily all CMC hysteria. See also “Great Extinction, 6th”. In humanity’s fairly recent history, there have been 3 civilization-changing (or inducing) ‘natural events’⁴⁵⁸ of a global scale:

- 1) the “Mid-Holocene” Hallstatt/Bray solar minimum of c.4000-c.3000 BCE⁴⁵⁹
 - a] & China’s ‘Xia’-to-Shang Dynasty transition, 2200-1900 BCE (Brooke, 318).
- 2) the “Preclassical” Hallstatt/Bray solar minimum of 1200-700 BCE;
 - b] Its destabilizing “monsoon” apparently didn’t set off an existential crisis in the “decaying” Zhou Dynasty of China until c.500 BCE, clearing “the stage for the rapid development of iron technology” in the Orient more than a half-millennium later than it had been in (much of) the Mediterranean (Brooke, 319).
- 3) the “Little Ice Age”⁴⁶⁰ Hallstatt/Bray solar minimum of 1300-1700 AD (Brooke, 2014, 351).

These “Hallstatt cycles” approx. 2,350-year multi-century coolings are more often known as (and are a slight modification of) “*Bray Cycles*”, per 1968. Usokin, et al (2016) have “shown that *grand solar minima* tend to cluster in Bray cycle lows. The [recurrence of a] Bray cycle varies between 2200 and 2600 years from peak to peak, with a most common length of 2300 to 2400 years. The cycle may [in fact] be much more regular than that... [but] our ability to date events in the past is not very accurate, [and] errors of 100 years or more are very common.... Scafetta, et al. (2016) have suggested that the orbits of the larger planets have a repeating pattern of 2,318 years that might be the cause” of this now well-known phenomenon (May, 2016). See also “Geoengineering” [i.e. man-made], “Dynastic cycle” [i.e. natural].

4) So, up until the Enlightenment at least...

 CLIMATE change (cycles)

→→→  Geo. ENVIRONMENTal change

→→→  political & monetary HISTORICAL trends
(propag.) (real)

⁴⁵⁸ These 3 are in addition to the (pre-civilizational) “Late Neolithic Crisis” of the 6000’s BCE (Brooke, 301, 416); in addition to “the Hallstatt [solar minimum] at 5800-5000... [Main point:] from “the mid-Holocene, the Hallstatt...[solar minimum] and the millennial Siberian High have clearly work together to shape the essential pulse of global climate history” (Brooke, 177).

⁴⁵⁹ Like man’s “debt cycles”, the Sun’s “Bray Cycles”-- centered upon “Hallstatt solar minima”-- have become more tightly and sharply demarcated with each successive occurrence. The first adequately identified Hallstatt solar minima seem to have occurred, intermittently, throughout “the stormy 4th millennium” BCE. “A cluster of deep solar minima [occurred] in...[the] long 4th millennium, between...4300-2900 BC... [although in] the North Atlantic... [the] deep minimums...[and] the worst failure of the themohaline circulation system since the Younger Dryas [(9,700-8,800 BC) occurred] at 3500...and then again at 3000 BC (Brooke, 2014, 180). And the famous 1990’s “Iceman”-- a neolithic sheppard who died in the Tyrolean Alps c.3200 BC failed to escape a “rapidly” expanding glacial advance (Brooke, 180).

⁴⁶⁰ Hallstatt/Bray cycles (discovered c.1970) are not to be confused with the Earth’s larger cycle of (approx. 100k year) “Milankovitch cycles” of alternating glacial and “inter-glacial” periods, at an approx. 9:1 ratio (first published in the 1920’s, effectively ‘proving’ James Croll’s 1870’s thesis of orbit-caused glaciations, which in turn reached back to geologist Jens Esmark’s ideas from the 1820’s). According to the US National Oceanic & Atmospheric Administration, the cycles “consist of stepwise cooling events [to glacial], followed by rapid warmings [to inter-glacial]...”- <https://www.ncdc.noaa.gov/abrupt-climate-change/Glacial-Interglacial%20Cycles>

4b) Then (a few centuries after the advent of #'s & 2xAccounting in Western Civ.), there was the **National Debt Economy (NDE)**,⁴⁶¹ developed in the 18th-19th centuries, and its inevitable snowballing into the great **Currency Wars**, and then (by the 1930's) Gross Domestic Product (GDP), as the [increasingly dominant] measure of all things 'national', from the mid-20thc-to-today. This development (of the 'national' hamster wheel, if you will), combined with the cyclical absence of profound Bray cycles or El Ninos⁴⁶², has meant that (in a reversal of the above age-old norm) **POLITICS & MONEY was now the principal driver (→→) of ENVIRONMENTAL change**-- not the (cyclical) global climate change driver of centuries and millennia past. See also "Great Extinction, 6th" [profound man-made 'global warming' environmental change].

4c) In turn, the Politics & Money-caused 6th Great Extinction Event **will likely end in (2 parts)**:

1] c.2030- will be but a (political) reflection of (what is then forecast for) the **expected...**

2] c.2050- critical mass environmental tipping point (for the 6th GEE's climax effects). Humanity's 'global' stewardship of the planet (c.1950-2050) will, around this time, have its basic Pass or Fail grade.

5) Hence, deranged or not, "the climate change regulations [that] they have proposed in the past... are very effective at moving [non-corporate] people off the land and grabbing assets.... major access at low price to a lot of land and real estate" (Fitts, 2021e, mn.30). See also "Climate change, 'man-made'", "Green New Deal", "Politics", "Feudalism, neo".

See also "Enlightenment, the", "National Debt Economy (NDE)", "Great Extinction, 6th", "Secrecy, Cult of", "Intelligence Community" [I.I.C.], App.C: "1-2-3".

'Climate change', regional- Regional fluctuations in climate norms are both more prevalent, and less 'global' than the larger Bray-Hallstatt cycles (i.e. They are typically offset by contrasting 'climate change' in some other region of the globe).

- 1)
- 2)
- 3)

Climate change, 'man-made'- (see "Geoengineering", "Strawman", "Science")

1) Even Al Gore publicly admits that (his theorized talking point of) "global warming and climate change is... [merely] a [political] symptom of a deeper collision between our civilization, as we have currently designed it, and the ecological system of the Earth", per the usual ↑ "overfishing", habitat destruction (Gore, 2005), and polluting degradation. Why call a spade a rake? See also "Orwell, George".

2) The "UN experts will tell us the freeze is the result of global warming. They cover their bets every which way. If we get a heat wave, it's warming. If the temp drops 40 degrees, it's warming. That's their science. No science [i.e. scientific method] at all. Just a bunch of layered bullshit to handle all [political world] exigencies. Some of you will recall that in the 1970s, the big thing was global *cooling*. We were...[on the edge] to enter a new Ice Age. The press had all the stories [then, too]. They had the experts and the studies and the measurements. Their stories, in tone, and attitude & approach, mirrored current stories. Except then it was cooling and now it's heating."- Jon Rappoport (22-12-26); see also "Methodology (culture)", vs. "Statism".

See also ↓ , "Capital, natural" [.pretend].

Cognitive Dissonance- (it's torture for most people to admit that they've been fooled on something that [socially-emotionally] matters to them; nonetheless 'unlearning' is the primary key to the Knowledge Age)

⁴⁶¹ And most of the great-classic philosophers (of the Enlightenment) were against it (i.e. Montesquieu, Hume). **Kant?**

⁴⁶² For example, climate "scientists have suggested that the 2200 BC...[widespread drought] involved a massive El Nino event; evidence from the Andes and the ocean off Peru [also] points to a massive El Nino event around 2450 BC, which would have shocked the Asian monsoon systems, bringing drought to the western Pacific and southern Asia... [C]loser to 2200..there were clearly droughts from east Africa into Anatolia and climate impacts in North America and on the China coast" (Brooke, 2014, 294).

- 1) the (social-psychological) discomfort of *unlearning* what one had earlier found to be true.
- 2) “*Hang on; that means the theory’s wrong*’. Humans are funny things, and we learn to live with these contradictions” (Werner, 2015b, mn.41); just as surely as feelings & beliefs usually triumph over rationality.
- 2b) The phenomenon is **particularly dangerous** to humanity and nearly all of its institutions, because it:
- a) encompasses such sub-component mental foibles as ‘confirmation bias’ and ‘sunk cost bias’; and
- b) (like alcoholism or some other substance abuses) strikes independent of one’s “i.q.” or status: “People with high IQs are...just as susceptible to...*confirmation bias*– our tendency to only consider the information that supports our pre-existing opinions, while ignoring facts that might contradict our [habitual] views. That’s a serious issue when we start talking about things like politics. Nor can a high IQ protect you from the *sunk cost bias*– the tendency to throw more resources into a failing project, even if it would...[make more sense] to cut your losses”⁴⁶³ (Robson, 2019). See also “Great Extinction, 6th”.
- 3) “A long habit of thinking a thing wrong [in and of itself] gives it a superficial appearance of being right.” - Thomas Paine (Paine, 1776). See also “**Corporate Media Cartel/“6 Sisters”**”.
- 4) Mark Twain articulated the phenomenon half a century before the social psychologists: the (shared, emotional) “glory which is built upon a lie soon becomes a most unpleasant incumbrance.... How easy it is to make people believe a lie, and how hard it is to undo that work again!”- Mark Twain, 1906 (Twain, 1924a, 304)
- 4b) Make no mistake, power is power, and much of the 2nd half of the 20th century ‘agenda’ (sometimes a.k.a. ‘CIA’ and/or ‘IC’ ops) relied heavily upon the phenomenon. “You know the old expression, Seeing Is Believing? That’s a bunch of crap. *Paying Is Believing*. Remember that [kiddo].... They’re going to pay until it hurts.”- ‘Ellis Medavoy’ [pseudonym] (Rappoport, 2005). See also “Central Intelligence Agency (CIA)”, “**Cultural Calendar**”.
- See also “Control systems”, “Logical fallacies”, “Groupthink”, →“Economics”; “Imperialism, American”.

[not ‘the best of all possible worlds’]

Coinage- (Fr. *pièce*; Ge. *münze*) has always been publicly minted as a primary symbol of a sovereign-state, without debt and spent-- “not loaned”-- into circulation. **The seigniorage on such practices, however, is negative; banks don’t want it.** See also “Debt-free money”.→

Coined money- (sometimes a.k.a. [the original] “*coinage revolution*”⁴⁶⁴, not to be confused with the [more often-cited] *medieval* ‘coinage revolution’ from late 12th century Europe).

⁴⁶³ In addition to the basic lack of “capacity to challenge your assumptions”, other prevalent cognitive biases that do not substantially correlate with “i.q.” or educational attainment include: the inability to “identify *missing information*...[or even to] look for *alternative explanations* for events before drawing conclusions. These [self-questionings] are crucial to good thinking, but they do not correlate very strongly with [what we call] IQ, and do not necessarily come with higher education. One study in the USA found almost no improvement in critical thinking [a.k.a. ‘common sense’ questioning] throughout many people’s degrees” (Robson, 2019). See also “Logical fallacies”, “Academia”.

⁴⁶⁴ Ancient Greek scholar Apostolos Pierris uses the terms *coinage revolution* and *money revolution* interchangeably, to mean the “spread of coinage to all actively industrial and commercial states [which] would have been quick.... [T]he introduction of coinage was not a gradual, long-term process. Like the introduction of *the alphabet* and the consequent rise of literacy, it must have been a more or less [an] immediate, spectacular success. It was accomplished in [winning] theory instantly, and rapidly propagated... transforming the entire field of economic

1) (USA de jure usage) any state/stamped money, in any form, that is supposedly (de jure) assessed or weighed in terms of its *exchange value* for bullion or precious metal. See also *Julliard v. Greenman* (Gray, 1884); and/or “Legal tender”, “Lawful money”.

2) There’s (a lot) more to it. Official (stamped) state coinage was, arguably, what made the Axial Age, as the new invention was churned out in order to bring plentiful markets and happy camper soldiers, since the 600’s-500’s BCE, into Asia Minor, Greece, and its (rapidly expanding) colonies, in what was the first monetary Empire of colonies. It couldn’t have happened without the ‘happy campers’.⁴⁶⁵ Coinage “was not invented to facilitate trade (the Phoenicians, consummate traders of the ancient world, were among the last to adopt it)⁴⁶⁶. It appears to have been first invented *to pay soldiers*, probably first of all by rulers of Lydia in Asia Minor to pay their Greek mercenaries” (Graeber, 2009). A resultant “*military-coinage-slavery complex*’ [developed, particularly with the ensuing Roman civilization], since the diffusion of new military technologies (Greek hoplites, Roman legions) was always closely tied to the capture and marketing of slaves”⁴⁶⁷ (Graeber, 2009). See also “Slavery”, “Timarchy”.

2b) Was a resultant statism the original ‘Greek [& hence “classic”] tragedy’? “As [the great tragedian] Euripides says: ‘No subtle arts for me, but what the state requires.’”- Euripides (c.480-c.406 BCE), the most enduringly popular⁴⁶⁸ of the 3 ancient Greek tragedians. See also “Statism”, “Bankmoney regime”. See also App.C: “1-2-3”, “Civilization” [‘classical’ vs. ‘western’].

Cold War, new- see “Neo-Cold War”

Cold War, the- (1947-91;⁴⁶⁹ what better Hegelian dialectic for transitioning from the 2nd Industrial Revolution to the 3rd Industrial Revolution?)

1) The CIA “milieu, in which daring undertakings were planned and spacious ideas were discussed in mean little rooms by ardently ambitious men who were mostly very young, preserved a wartime atmosphere long after WWII was over. This was exactly what the O.G. [Old Gentlemen] wanted....

activity. This does not mean that coinage soon penetrated the remotest corners of the then-known *oikoumene* or that agrarian house-economic behaviours were immediately opened-up to individualistic capitalism in all places.... The *money revolution* (the introduction of coinage as concretization of abstract value) has to be correlated to other major corresponding [soon-to-be] phenomena such as: the introduction of the alphabet and the rise of high culture literacy and esp...lyric poetry... the development, after the Daedalic phase, of high archaic sculpture (with the ideal-real norm and its immediacy of transcendental formal beauty), the emergence of philosophic [abstract] discourse, the Ionian thought revolution (where cosmic principles are [both] divine and concrete realities simultaneously, as well as determinative factors in the organization of human systems), and, more directly, to the early spectacular [political] colonization, economic growth and accompanying intense commercial activity of Greek city-states” (Pierris, c.2005). It was a revolutionary development indeed, a civilizational equivalent of the invention of the wheel (2-3 millennia earlier). Why do we have to ‘re-invent’ it now? See also “Bank welfare” (immediate picture), App.C: “1-2-3” (big picture).

⁴⁶⁵ Coinage developed deeply “in Greece as part of the foundation of Athenian democracy. A requirement for building a representative government is establishing a sense of belonging among the citizens of the state. ‘One way of getting a lot of buy-in from the people that comprised the tribes of ancient Athens was [simply] to put them all on the public dole’, [William N.] Goetzmann explained. ‘There’s nothing that makes you buy into being part of an organization...like getting a salary’” (McCaffrey, 2017). See also “Democracy”.

⁴⁶⁶ “Carthage, another great trading nation, [also] only started minting coins very late, and then explicitly to pay its *foreign soldiers*” (Ibid).

⁴⁶⁷ Without all this (state-centric activity), the dissemination of coinage systems was a much slower and spotty phenomenon; as (mostly just) “real metal hooks, knives, and spits [that were traditionally] used as money became transformed into [merely] token representations of such objects”. (Zarlenga, 2002, 16). See also “Sovereign money”, “Fiat money”.

⁴⁶⁸ For example, the above quote was supplied by (see also) Aristotle (Book III, ch.iv). Euripides seems to have accomplished greater popularity in the Hellenistic era, despite having been forced into voluntary exile in his old age, in part of Athens’ reactionary crackdown (after losing the Peloponnesian War) that also seems, more famously, to have claimed Socrates (c.470-399 BCE). The ‘coinage revolution’ seems to have unleashed-- in addition to the meteoric rise of Greek colonialism-- several centuries of deep in-fighting (between 1st and 2nd Estates) about the nature of both state and (its?) money. Indo-European *drachma* (‘a handful of metal sticks’, or ὀβολοί) is rather close to a numerous ‘drac’ words with rather negative connotations, including *dracu* (‘plague, agony’), *dracht* ‘loathsome, dark’. and *dhreugh-dhuer*- (‘to bring to trap through deception’). (Zarlenga, 2002). Maybe it’s all not quite so ‘old as the pyramids’. See also “Monstr.” [Skeat], “Fascism” [‘a bundle of wooden rods’].

⁴⁶⁹ The “Cold War” period is most often considered to have run from the announcement of the Truman Doctrine (Mar. 12, 1947) to the dissolution of the USSR on Dec. 26, 1991.

Marxism-Leninism-Stalinism (always, as the O.G. liked to say, 'a lie wrapped in a sham surrounded by a delusion') had collapsed under the weight of its own pathology" (McCarry, 2007, 117; 342).

2) https://www.youtube.com/watch?v=wR3a_A1D8fl ; <https://www.youtube.com/watch?v=crQe3qlRWFg> [oflsaac'85].

3) "'Nobody on the Joint Chiefs of Staff ever believed we were going to build Star Wars'.... Moreau's team were amazed to find how easy it was to reverse Soviet influence-- often with little more than generous offers of American dollars and American arms. Across the 3rd World-- in countries such as Chad, Senegal and Côte d'Ivoire-- the offer of advanced American electronics and communications equipment was also invaluable. 'The Russians simply were not liked abroad,' the officer said. 'They were boors with shoddy clothing and shoes made out of paper. Their weapons were inoperative. It was a Potemkin village. But every time we found *total incompetence* on the part of a Soviet mission, the American intelligence community would assume that it was Soviet "deception". The only problem was that it was not deception. We came to realize that the American intelligence community needed the threat from Russia [simply] *to get their money*. Those of us who were running the operations were also amazed that the American press ['collateral damage'] was [also] so incompetent. You could do this kind of stuff all over the world and nobody would ask any questions'" (Hersh, 2019). See also "CIA", "NSA". See also "Neo-Cold War", "Super Imperialism", "Intelligence Community (I.C.)".

4) And then there was the (see also) "[International Intelligence Community \(I.I.C.\)](#)".

Collateralized debt obligations (CDOs)- (euph. for junk mortgage-backed securities)

1) "essentially just...pile[s] of triple-B rated mortgage bonds. Wall Street firms had conspired with the [credit] rating agencies to represent the pile as a diversified collection of assets. But anyone with eyes could see [that] if one triple-B subprime mortgage went bad, most would go bad... Subprime mortgage loans in Florida would default for the same reasons-- and at the same time-- as subprime mortgage loans in California", with only as little as a 7% loss in the underlying pool of home loans, "no matter what rating was assigned to it.... 'The more we looked at what a CDO really was, the more we were like... "That's just...crazy. *That's fraud!*"'" (Lewis, 2011, 129).

2) "Each CDO contained pieces of a hundred different mortgage bonds, which in turn held thousands of different [individual] loans.... 'I called S&P and asked if they could tell me what was in a CDO...and they said "*Oh yeah, we're working on that.*".... Moody's and S&P were piling up these triple-B bonds... without ever knowing what was behind the bonds!.... [N]one [of the triple-B CDOs], as far as they could tell, had been properly vetted" (Lewis, 130).

3) Why were these towers of junk bonds presented as "triple-B"? Because "the rating agencies, presented with piles of bonds backed by dubious loans, would pronounce 80% of the bonds in it triple-A. These bonds could then be sold to [institutional] investors-- pension funds, insurance companies-- which were allowed to invest only in highly rated securities" (Lewis, 2011, '140'). See also "Credit rating agencies", "Mortgage bonds (subprime)", "Bonds".

Colonialism- (imperialism + strategic immigration; less profitable than simply [see also] 'Imperialism')

1) "A policy whereby a mother country underdevelops its periphery by imposing a double standard favoring industry, food self-sufficiency and high technology at home, and raw-materials production and low-wage manual labor abroad.... Superseded by Dollar Hegemony" (Hudson, 2013).

2) "Something like this occurred in just about every part of the world conquered by European arms where markets were not already in place" (Graeber, 52). One of the first things that the French did after conquering Madagascar in 1901 was "to impose a head tax.... [General] Gallieni did indeed print money and then demand that everyone... give some of that money back to him.... It was referred to as the '*impot moralisateur*', the 'educational' or 'moralizing tax'. In other words, it was designed... [end p. 50] to teach the natives the value of work. Since the 'educational tax' came due shortly after harvest time, the easiest way for farmers to pay it was to sell a portion of their rice crop to the Chinese or Indian merchants who soon installed themselves in small towns across the country...harvest was when the market price for rice was...at its lowest: if one sold too much of one's crop, that meant one would... thus be forced to buy one's own rice back, on credit... later in the year when prices were much higher.... The

easiest ways to pay back the debt was either to find some kind of cash crop to sell-- to start growing coffee, or pineapples-- or else to send one's children off to work for wages in the city or on one of the plantations.... [a] scheme to squeeze cheap labor out of the peasantry... but it was also something more. The colonial government was also quite explicit (at least in its own internal documents) about the need to make sure that peasants had at least some money of their own left over, and to ensure that they became accustomed to minor luxuries-- parasols, lipsticks, cookies-- available at the Chinese shops. It was crucial that they develop new tastes, habits, and expectations; that they lay the foundations of a *consumer demand* that would endure long after the conquerors had left, and keep Madagascar forever tied to France. Most people are not stupid, and most Malagasy understood exactly what their conquerors were trying to do to them" (Graeber, 50-51).

3) Forever? "Countries that were colonized were worse off...[a century ago] and have fallen even further behind" since then (Weber, 2021).

[“the long-run detrimental effect of European overseas colonization” (Weber, 2021)]

See also “Imperialism”, “COVID”, “Race-to-the-bottom”, “Graham, Benjamin” (commodity reserves).

Command sector, the- see “Military-Executive-Corporocracy (MEC)”.

Commercial Bank Credits (CBCs)- (synon. “bankmoney,” “Transaction Account Balance [TAB] money”).

1) What the ‘modern’ ‘democratic’ world has been tricked into *using for money*.

2) “The numbers in your bank account aren’t really dollars of wealth [or even legally yours], but poker chips in the banking system. You can *cash* them in for stuff while the game continues, but, once the music stops, you’ll realize you don’t have an asset, but [rather] a conditional liability...of the bank...[i.e.] debt-based dollars” (Vrabel, 2011, mn.28). See also “Money”, “Bail-in”, “Wealth”.

Commercial Banks- (synon. Federal Reserve ‘member banks’, or simply ‘banks’)

1) The term ‘commercial bank’ was more meaningful prior to the 1999 repeal of *Glass Steagall*, when investment banks were given the power to create money, and (it is often overlooked) commercial banks were also given the power to speculate. Since then all types of *state-monetized credit institutions* (credit unions, S&L’s, and stock savings banks, in addition to investment banks & commercial banks) may legally create the currency by extending credit (via ‘loans’), See also “Bankmoney”, “Loan swaps”.

2) Through most of the 20th century, the total number of ‘commercial banks’ in the US (both nationally and state-chartered; not including thrifts or credit unions) declined from between 29,000 (c.1920) to less than 9,000 by 1998. As of 2018 there are less than 5,000.

See also “State-monetized credit institutions (SMCIs)”, “Fractional Reserve (monetary) institutions”, “Criminalization of Banking”, “Glass-Steagall”, “Money, 3 (contemporary) Tiers of”.

Commercial loans- *deceptive banking term*; see “Fractional Reserve Banking/Lending (FRB/FRL)”.

Commercial Paper- (short-term, unbacked, corporate promissory notes; a.k.a. 'paper')

1) usually refers to *unsecured*, short-term,⁴⁷⁰ negotiable, business (often NBFIs) promissory notes/IOU's [i.e. de facto "lines of credit"], **often** between business trading partners⁴⁷¹.

1b) In other words, "unsecured promissory notes issued by the most creditworthy corporations, as an alternative to bank borrowing... offered [either] through brokers or as direct placements... [I]ssuing commercial paper is cheaper [to the issuer] than borrowing [TAB] from a bank... [and may also be] issued by nonbank financial companies" (Burton, et al, 2010, 262). See also "Nonbank Financial Institutions (NBFIs)".

2) Large corporations are more likely to borrow from each other with (secured) '*asset-backed commercial paper*' (ABCP). As of March 2015, the volume of commercial paper outstanding (\$1.2 tn.) was comparable to that of aggregate commercial and bank loans (\$1.8 tn.) in the US (Ehrhardt & Brigham, 2016, 692). See also "Shadow banking (SBS)".

3) In "the 1980s, commercial paper...markets simply did not exist in most countries outside of North America'...[And in] the mid-1980's, the US commercial paper market accounted for 90%" of it globally (Schinasi & Smith, 1998).

4) "Dealers prefer to handle the paper of firms whose net worth is \$100 million or more.... [Although] banks are generally more able and willing to help a good customer weather a temporary storm... using commercial paper permits a [large] corporation to tap a wide range of credit sources, including financial sources outside its own area... [which] can reduce interest costs" (Schinasi & Smith, 1998).

5) "Direct and indirect investment in commercial paper constitutes an important link between the shadow banking system and the real economy. Demand for commercial paper strongly affects the ability of corporations to raise funds to meet *short-term* debt obligations such as payrolls" (Chabot, 2015, 4). See also "Securitization".

6) These instruments declined somewhat after the 1990's, with the rise of other forms of newly deregulated near-monies (and the end of double-digit interest rates), to the extent that "commercial paper [ABCP only?] is **not a significant** source of financing for corporate America today" (Ricks, 2016, 36).

7) However, BoE "liquidity provision operations" were ramped up in 2020, to include the "purchase of commercial paper in the new Covid Corporate Financing Facility" (Bailey, 2020). See also "Bank of England".

See also "Debt securities".

Commercial Paper Funding Facility- a GFC invention; see "Financial Crisis (of 2008-)".

Commodity money- (what traders typically resort to when there is **no** agreed-upon lawful money-- as originally **seems** to have been the case within Sumer [see also "Interest"], and actually was the case in **most** international trade, up until some time in the **19th** century; not to be confused with 'barter' which is even more [maximally] inefficient) See also "**Money, 3 types of**", "Eras of (Monetary) History".

1) "*He who has the gold makes the rules.*"- traditional proverb of monetary lawlessness; see also "Graham, Benjamin (1894-1976)", "Monetary Reform, international", "Gold standards".

1b) "The late 19th-century theorists who established the methodology of modern Economics held to one version or another of the *commodity theory* of money" (Ingham, 2004). Most famously articulated by John Locke in the 1690's; basically "gold and silver coins, possessing all...[of the then-supposed properties of money], became the dominant medium for money.... The centrality of the commodity itself in determining the nature of money lead to this theory being called the 'commodity theory of money' or the '*metallist* theory of money"⁴⁷² (Greenham, Ryan-Collins, Werner, & Jackson, 2012). The "commodity theory of

⁴⁷⁰ Commercial paper maturities can be as short as 1 day (the ave. is approx. 5 months), and usually mature within 270 days.

⁴⁷¹ Any business negotiates with its suppliers (often about delayed payment or float terms).

⁴⁷² Most theorists would agree with Geoffrey Ingham that "the commodity theory is sometimes [also] referred to as the 'metallist' theory of money (see Schumpeter...1954; Goodhart 1998).... [T]he fact that...[money] was seen as a commodity enabled the new [in the late 19th century] economic methodology to provide a theory of its origins as a medium of exchange. Menger's (1892) rational choice analysis of the

money in the 18th century, as a component of...[the] extraterritorial approach to economics, can be seen in the context of growing rebelliousness of the then middle classes against the repressive state of the ruling oligarchy” (Huber, 2017, 38). Hence Germans would (most famously) sometimes deride them as (less than up-to-speed) “Austrians”⁴⁷³, English as ‘continentals’, and Americans as ‘Europeans’. See also “Austrian school”, “Neoclassical Revolution”, “Industrial Revolution, 2nd”.

2) “Observe well these Rules, for they are the Principles of the whole Treatise. It is a very common mistake to say that money is a commodity.... money is valued by its Stamp, or any other Rule established by the Nation where it is Current.... [for] Money is not valuable in it self [sic], but, as of Use in Exchange”- “An Essay on Money and Bullion” (Jocelyn, 1718, 8). Philosopher David Hume’s views were in complete agreement: “Money is not, properly speaking, one of the subjects of trade, only the instrument which men have agreed upon to facilitate the exchange of one commodity for another. It is none of the wheels of trade: It is the [symbolic] oil which...[facilitates] the motion of the [real] wheels” (Hume, 1752), as were Montesquieu’s (1748). See also “Money”, “Smith, Adam (1723-1790)”.

2b) He also added that although “*Bullion* is the Measure of Commerce in the World. *Money* is the Measure of Commerce in the Nation where it is current.” J. Jocelyn, however, seems to have lost the argument to (his 1690’s contemporary [and City favorite]) John Locke, who was primarily concerned with the (literal) spoilage of grain-money, and thus also apparently concluded that bullion-money may be “hoarded up without injury to anyone” (Locke, 1690, ch.5, sect.48). Alexander Del Mar dates “the foundation of the Metallic [bullionist] theory of money” to a few decades earlier, specifically 1666, when the East India Co. merchants succeeded in attaining “that ‘free’ coinage law which practically altered the monetary systems of the world... [inaugurating] a future series of commercial panics and disasters which down to that time were totally unknown” (Del Mar, 1899b, ix); at least in England. See also “Adolescence of Mankind”.

3) Certainly not everyone felt like observing Jocelyn’s Rules of monetary common sense after the discovery of the internal combustion engine and ensuing “2nd Industrial Revolution” (a.k.a. arms race) in the second half of the 19th century, including most of the giant 2nd Estate (private sector) capitalists and their academics. Carl Menger’s 1871 “commodity theory of money... and the subsequent Austrian School [of Economics taught that a] commodity should be left ‘o’ the markets’ [personification fallacy]. With regard to [the theory’s commodification of] money, this is but another way of saying [that] it should be left to the big banks and financial actors of the time, while the government should limit itself to protecting property and enforcing [mostly creditors’] private contracts” (Huber, 2013, 5-6). See also “Market fundamentalism”.

4) “Money is a commodity.”- J.P. Morgan, testifying before the US House Banking & Currency Committee’s “Pujo Committee Hearings”, 1912 (Mullins, 1954, 25). See also “Banksters”.

5) “It’s ridiculous to...even talk about using a [single] commodity as the basis of money. It really has never been... [effectively anything other than]... a form of currency *between* countries-- way, way back.... If England wanted to pay for Chinese goods... in the 19th century.... they’d use gold.... and [since earth commodities are fixed in nature].... you start getting prices like the Spanish & Portuguese were destroyed by back when they had Empires” (Keen, 2016u, mn.21-22). See also “Graham, Benjamin”.

6) Hence it was observed, centuries ago, that “[f]lexibility of the money supply is important to support economic development and to maintain price stability.... [and any *pure* (as opposed to fraudulent)] metal standard has been abandoned” (Wortmann, 2019b, 3). See also “Gold Standards/bullionism”.

7) David Ricardo’s original plan for ‘full reserve banking’ (in the UK, 1824) was “a *pure commodity standard* proposal... [wherein] *all* money, including [TAB] bank deposits, is backed with *the* [select] commodity” (Laina, 2015). It wasn’t adopted. See also “Ricardo, David (1772-1823)”.

8) In a *regular* [actual] *commodity standard*-- such as the gold standard of the early 20th century-- “only *base money* (...cash and central bank Reserves [RAB]) is backed with *the* [select] commodity” (Laina, 2015). See also “Barter”, “Gresham’s law”, “Fiduciary money”, “Gold Standards/bullionism”.

evolution of money remains the basis for today’s neoclassical explanations” (Ingham, 2004, 19). See also “Gold Standards/bullionism”, “Neoclassical Economics”.

⁴⁷³ German inductive economist Gustav von Schmoller is credited with coining the term ‘Austrian School’ in 1883.

9) All of these (*single commodity*) monetary schemes may seem archaic and primitive, but (given today's mathematics & computers) issuing a nation's 'fiat' currency at 1:1 "parity" with a select **basket of agricultural & other basic commodities** need not be unfair and/or destructive of the environment and/or society; this same principle also applies to basing a world "Reserve currency" upon a *single* nation's fiat, as opposed to (see also) "Special Drawing Rights (SDR's)", "Fiat currency", "Parity", "Parity pricing". See also "Graham, Benjamin (1894-1976)", "Primary Sector Economics (PSE)".

Commodity trading- During (the 3) periods of USDA "parity pricing" for raw materials (i.e. 1910-14, 1922-29, 1942-52), "" (Asbridge, 2019b, mn.30). See also
See also "Options and Futures", "Parity pricing", "World Bank", "Food".

Common Agricultural Policy (C.A.P.)- (of the European Economic Community-EU, from 1962-)

1)

2) Declined (proportionally, as the EU bureaucracy grew) from 73% of the EEC budget in 1985, to 37% of the EU budget in 2017.

See also "World Par Economy (WPE)".

Common law- (Although usually made by judges these days [who may or may not be elected by the citizenry of a jurisdiction]⁴⁷⁴, the concept stems from the 'grass roots'-customary⁴⁷⁵-- not from the 'top-down' [executive/regulatory law], nor from 'special' lobbyists' influence [legislative 'statutory law']; a.k.a. 'case law')

1) In "a society largely dominated by a community in which personal behavior is largely controlled by *internalized controls*... the rules are not made by an outsider. You *discover* what the rules are by observing how [most] people act and, accordingly, the law was *found* and not made⁴⁷⁶... [I]t was a very drastic innovation when we shifted from finding the law to making the law. And we haven't really yet made that transition completely in the common law countries, where we still say that the judges are finding the law" (Quigley, 1976c-pt.2, mn.126). See also "Democracy", "Statism".

1b) In the 10th century (not just with the Normans), English kings chose to "placate regional sensibilities. In practice, this meant some coins did not bear [as was the norm] an image of the king, and most laws took local customs into account" (Wood, 2001). See also "Civil National Identity", "English constitution".

1c) In France also, at least through the half-millennium of the Old Regime; "the writing down of local customs... the[se] first examples of writing down, were not regarded as making new rules at all: they were simply promulgations of customs. And it was a long time before people realized that...[there was] in fact...a *legislative* process going... on, and...[the] making [of] new rules. It was centuries before people knew this" (Quigley, 1976c-pt.2, mn.128). And then Napoleon threw it all out the window with the Napoleonic Code's revival of the Byzantine Empire's *Corpus Juris Civilis* of late antiquity.

1d) Back in England, however, (as far back as the 14thc) professional "pride and respect...[expecting] a judge to be as exact and regular as possible...ultimately gave rise to the common law: that all verdicts be meticulously delivered and worked out in reference to an ever-growing body of [judicial] precedent.... [T]he common law's highest court of appeal was the *House of Lords*, where peers would rule according to statute and precedent, [and] the result was that government itself became subordinated to and

⁴⁷⁴ 'Common law' these days may have 2 somewhat contradictory meanings (though both share the basic attitude of 'finding' [not 'making'] the law). In the original sense, 'common law' referred to the "*previous actions* of people"; whereas in a more 'modern', legalistic state it usually refers to "*previous decisions*" or de facto 'case law' interpretations from the judiciary (Quigley, 1976c-pt.2, mn.126-27).

⁴⁷⁵ For example, "trial-by-jury", which was a Danish & Danelaw tradition, adopted by the English. See also "English constitution".

⁴⁷⁶ In England at least, "[w]hen originally the law was found, and when the royal judges first began to go around England trying cases, they never said 'This is the law'. They gathered together a group of men, sworn local people, and they said, 'What do you do in a case like this?'... Now in some cases they would look puzzled and say, 'In the memory of no one here has there been such a case'-- [if] they had arson or something of the kind. And then the judges would say, 'Well, in traveling around England trying cases, I have found that *the most common rule is*....' And thus...[was] established the [*statutory*] *common law*... the law that the royal judges discovered going around and finding out what the [local customary] law was, and [then] filling in gaps with what was common to England... [Hence] the common law in England was a **royal creation, from true local custom**" (Quigley, 1976c-pt.2, mn.127). See also "Legalism".

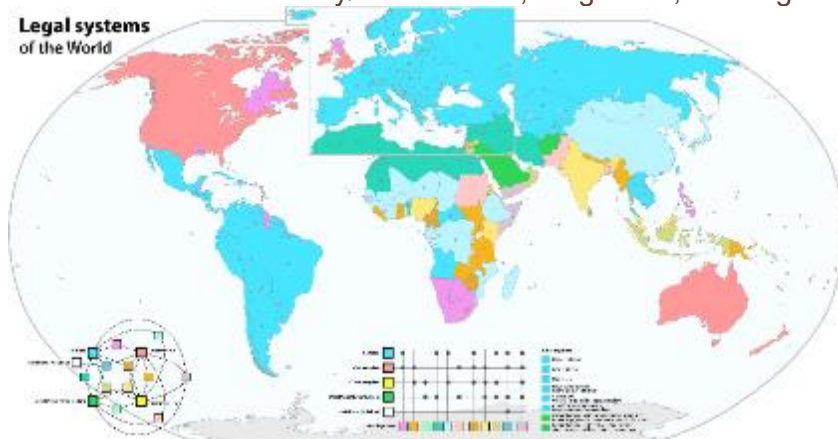

regulated by the wider legal system. In other words, the rule of law achieved its highest manifestation,⁴⁷⁷ constraining not just those who sat in judgment, but also those who authored the law in the first place” (Sagar, 2022). See also “Separation of Powers”, → “Religion” [Westernidea].

2) The American “colonies had *never* thought of themselves as subservient. Rather, they considered themselves chiefly as commonwealths or states, much like England itself [they thought (up until the 1760’s, anyway)], having only a loose association with the authorities in London.... [And, from around c.1620], it was generally accepted [in all the colonies] that the colonists had a right to participate in their own government. In most instances, the king... [formally] provided, in...[any subsequent] charter, that the free men of the colony should have a voice in legislation affecting them” (U.S. Dept. of the Army, 2021).

3) “A primary strand of...suffragists’ argumentation... [in 19th century England, was simply] the assertion of women’s right to vote on the grounds of [traditional common law] property ownership. Feminist Helen Taylor... supported women’s claim to parliamentary representation on grounds that ‘property is the true political unit among us’. Citizenship, she argued, rested on a legal right, not a natural one. In so doing, she adopted a strategy prevalent among British liberals since the French Revolution of eschewing the notion that [all] individuals [perhaps even children] held rights under natural law” (Mayhall, 2003, 15). See also “Freedom continuum (maturation)”.

4) Nonetheless, the primary institutional-philosophical victim of the 3 Currency Wars was none other than the primacy of traditional/local common law, which went from being nearly all there was for Englishmen (up to the early or mid-18th century), to being very seriously wounded in World War One and then a **veritable dead-man-walking** by the 1940’s (consistently trumped by both legislatures and executives/bureaucracies⁴⁷⁸). Nonetheless, the stream, although dwindling, carried on through the latter 20th century, and though pretty much without a pulse by c.2020-21, may be poised for a significant comeback. See also “Industrial Revolution, 3rd”, “Civil National Identity”, “Local scrip & Complementary currencies”.

See also “National identity/Nationalism”, “Legalism”, “Primogeniture”, “Debt cycles”.

[The key development of lasting Common Law traditions is from the 12th-13th centuries, because the (1st Estate) Normans then *couldn't* just do anything, given that: **a**] they were foreigners (and at least somewhat limited in numbers by the Channel); **b**] primogeniture gave many Englishmen a more (economically) independent attitude; and → **hence** also **c**] the (2nd Estate) [uni-]Church [at least vis-vis *semi-independent* monasteries] was *even weaker* there (due to less to 1stE-2ndE interlinkages-nepotism) than on the continent. See also “Commons”, (‘Hey, I know what! Let’s trade it in for...’) → “Democracy”; “Civilization, Western’ (.Quigley’s good/bad)].

Common sense- (polit. enabler: ‘common law’ traditions)

⁴⁷⁷ It was not without some public effort and investment. “Only in England, [Adam] Smith believed, was one tried by ‘a judge who holds his office for life and is therefore independent’.... [English] judges were financially very secure... [and a] system of **honor**, combined with favorable financial incentives, kept the legal system largely free from corruption” (Sagar, 2022), or at least outright bribery. See also “Montesquieu” [trichotomy], “Civil National Identity”.

⁴⁷⁸ “Our rule of law or common devotion to [community] precedent which introduced substantial stability into the structure of rights is being [increasingly] abandoned by the courts and overridden by legislative action in the passing of statutory law” (Walters, 1982, 12).

“Existing in doubt is a strength of people who live in extreme [or natural-cyclical] conditions” (Saul, 2013).

1) "The Lord by wisdom hath founded the earth; by understanding hath he established the heavens. By his knowledge the depths are broken up, and the clouds drop down the dew. My son, let not them depart from thine eyes: keep sound wisdom and discretion: So shall they be life unto thy soul, and grace to thy neck."- Proverbs, 3:19. See also “Economics, Parity”.

2) Everyday notions of life, death, growth, and cycles used to be more ‘common’ when people used to work with them, hands on, on a daily basis: “At the awful day of judgment, the discrimination of the good from the wicked, is not made by the criterion of sects or of dogmas, but by one which constitutes the daily employment and the great end of agriculture. The judge upon this occasion has by anticipation pronounced, that to feed the hungry, clothe the naked, and give drink to the thirsty are the passports to future happiness; and the divine intelligence which selected an agrarian sense as a paradise for its first favorites, has here again prescribed the agricultural virtues⁴⁷⁹ as the means for the admission of their posterity into heaven”- John Taylor of Caroline, 1813 (McConnell, 1951, 17). See also “Parity pricing”, “Monetary reform”.

See also “K.J.B. (King James’ Bible)/70 Year Plan”, “Conspiracy theorist”, “American System, the”, “Jones, Alex”, “Sovereignty” [Bjerg].

[Aesop’s... Εὐσθ... “Economic science”]

Commons- (synon. ‘the Commons’; unenclosed lands, subject to the [common law] rights of public/common use)

1) “Publicly held land and other economic infrastructure in the public domain, such as water, land, radio airwaves, forests and air, and natural monopolies such as transportation, power and telephone service, to be organized in society’s overall long-term self-interest rather than monopolized by private-sector rentiers...” (Hudson, 2013). See also “Oligarchy”, “Jones, Alex”, App.C: “1-2-3”.

common ground → common sense⁴⁸⁰ → common law → common good

2) (Rifkin, 2014).

3) “Recall the [contemporary] quest of the Maya in Belize to have their indigenous use rights recognized as property rights under their country’s constitution.... [because] property rights without state backing are not worth much” (Pistor, 2019, 230). See also “United States, the”, App.C: “1-2-3”.

Communism- (a.k.a. forced collectivism or ‘left’ totalitarianism; i.e. structural failure [if not inability] to distinguish between the interests of government [1stE] and the interests of ‘commoners’ [3rdE]; i.e., in a word, betrayal)

1) the banksters’/counterfeiters’ ideal end-point form of government-- totalitarian rule by criminals.⁴⁸¹

[upside-down cake (not healthy)]

⁴⁷⁹ <https://www.youtube.com/watch?v=5p7s2KQWjos> [blackland] ; <https://www.youtube.com/watch?v=feNsqcHGKnI&list=PLnK3mOq-aR15WiHTYYEj6jgp71CtI1cyf&index=1> [Hall]

⁴⁸⁰ <https://www.youtube.com/watch?v=7bOHC2m85ts> [dear diary].

⁴⁸¹ Redefining totalitarianism for the 21stc/3rd Industrial Revolution: https://www.youtube.com/watch?time_continue=430&v=IHcTKWiZ8sI ; <https://www.youtube.com/watch?v=woe1SoUvSG4> . “In communist theory, the state is a coercive apparatus that exercises the dictatorship of a single class” (Bedeski, 1977). It goes back to their “Conflict” theories of State and state formation. - <http://nationalityinworldhistory.net/ch4.html>

- 2) Was the rise of (political) forced collectivization alongside that of (political) Zionism just a coincidence? “Spinoza’s *atheistic Judaism* is the religion of Jewish Communists such as [initial Communism promoter] Moses Hess [1812-75] and [primary Zionist of the 20thc] David Ben-Gurion [1875-1973].... Hess... [who published towards the end of the 1st generation of Zionism promoters, also]... introduced both Marx & Engels to Communism [c.1840]⁴⁸², [actually] before coming out as a Zionist” (Myers, 2019), after the more profligate Marx & Engels had dismissed him (as too idealistic) later in the decade. See also “Zionism”.
- 3) In the USSR, “a 70-year experiment to test whether the ethos of the commune could be [forcibly] imposed on a transcontinental empire of hundreds of millions of people was over, long after the answer was in (it couldn’t)” (Meek, 2014). See also “USSR”.
- 4) Leon “Trotsky was MI6 British secret service.... Nobody seems to care” (Moon, 2019c). See also “Hegelian Dialectic”.
- 5) Was Marx and/or [financier] Engels? Karl Marx didn’t invent ‘communism’ any more than Col. Sanders invented fried chicken. *Communisme* was coined by the (deeply Christian) French utopianist and 1830 revolutionary Étienne Cabet (1788-1856), who was basically a democratic socialist and perhaps the most popular living philosopher in the country, before suddenly giving up on Europe in 1847-48, and relocating to the greener (‘democratic’) pastures of America and [what would turn out to be a failed colony, in] Texas. Enter, from stage North (London), Marx & Engels, who took 2 decades to fill the void, with a new (sort of perma-‘revolutionary’) focus upon ‘direct appropriation’ instead of anything particularly ‘democratic’. See also “Marx, Karl (1818-1883)”, “Hegelian Dialectic”.
- 5b) What the 20thc knew as “communism” (synon. Marxism-Leninism) was, however, pretty much invented by angerist V.I. Lenin (1873-1924). To British eyes, it was always at least half-madness, from before Day 1. “[B]ehind all technical questions there always stand the general metaphysical questions [about] what sort of society and what sort of life we wish to have.” To Lenin (as with Marx) “Conflict” was/is “inevitable. It would not matter a jot...if three-quarters of the human race perished; the important thing was that the remaining quarter should be Communists” (Hollis, 1949, 125; 142). See also “USSR”.
- 6) “Is it any wonder [that] our teachers are teaching kids to be communists and socialists? If you thought the company was pocketing 75 cents every time you got 25 cents, wouldn’t you think they could provide a 29 cent raise and a \$2.00 raise-- without forcing up costs and prices, without creating the wooden nickels of inflation?” (Walters, 1982, 11). See also “Democracy”, “Dumb-downing”.
- 7) Communism Updates: 11/22- Communism in the 2020’s? “In order to get this done, you have to wipe out the German middle class” (Luongo, 2022, mn.20); a.k.a. make “the fiscally conservative Germans and others so desperate that they’ll accept...whatever is in front of them” (Luongo, mn.26). See also “Middle class” See also “Dirigism”, “France (and the EU)”, “EUSSR”, “Parties, political”,

(White & White, 2008e).

⁴⁸² Engels was converted to communism, “which he had learned from... Hess [1812-75], with its prediction of social revolution”, in 1842; and even back then, before Marx’s particular brand of name-calling, “what set it apart from other... literature of the time was not its descriptive resonance, but its polemical power” (Hunt, 107). Moses Hess, like his generational juniors, Marx and Engels, “was a child of the Rhineland... when [in the infant Hess’ case] the city was under Napoleonic occupation and... ‘the gates of the Jewish ghetto were flung wide open, and its inmates, after centuries of being driven in upon themselves, were permitted to emerge in the light of day’.... [Like] many thousands after him, Hess filled the gap left by his abandoned religious heritage with the new socialist creed of humanity... recounted... in [Hess’] *The Sacred History of Mankind* (1837)... one of the earliest expressions of communist thought in Germany... Long before Marx and Engels had codified their views, Hess... [was] introducing German audiences to the idea of a... *communist* [“socialist”] future.... Hess, like Marx and Engels, used the [two] terms interchangeably” (Hunt, 2009, 70-72). Hess’ *History of Mankind*, however, was disregarded by contemporaries at the time, unlike Cabet’s *Voyage et aventures de lord William Carisdall en Icarie* (1840) and the *Populaire* (periodical, c.1841).

→ M.Hess →

[‘good cop’- (‘democratic’ totalitarianism)] ; [‘bad cop’- (‘dictatorship of the proletariat’⁴⁸³ totalitarianism)]⁴⁸⁴
See also “Hegelian dialectic”, “Georgism”, “Lender of Last Resort (LoLR)”, “Dystopia”, “Chinese Communism”, “Socialism, political”⁴⁸⁵.

Company- From *companion*, “literally those who break bread together; originally a ‘company of men’, in the form of marauding bands seizing lands and subduing their populations. The narrowing of this term to mercantile commerce retains the idea of a closed band, most notoriously in the form of the *limited-liability corporation* (LLC). The latter is a legal filter to protect businessmen from economic liability for their actions. As such, a limited liability company is the alternative to taking responsibility for the so-called ‘external’ environmental and social costs of doing business, shifting these onto society at large” (Hudson, 2013). See also “Corporations (and corporate ‘personhood’)”.

Comparative advantage- empirical research from the new field of “Economic Complexity... is very good research by *physicists*, rather than economists... [which] contradicts economic theory; because economic theory says: ‘*If you specialize, you’ll grow faster*’... [which is] the whole basis of... ‘globalization’. They find, on the contrary, that the countries that...[are] most successful have *diversified* industrial structures... everything from nails to nuclear reactors.... The whole theory we’ve had that emphasizes specialization... is false” (Keen, 2016r, mn.17-18). See also “Academia”, “Ricardo, David”.

Complementary currencies- See “Local scrip & Complementary currencies”.

Compound interest- (wherein the interest ‘is continuously added to the principal’ [Goetzmann, 1994])

⁴⁸³ According to the (often macabre) Marx, in summary, his “own contribution was 1) to show that the existence of classes is merely bound up with certain historical phases in the development of production; 2) that the class struggle necessarily leads to the *dictatorship of the proletariat*; [and] 3) that this dictatorship, itself, constitutes no more than a transition to the abolition of all classes and to a classless society”- letter to (fellow communist confidant) Joseph Weydemeyer, March 5, 1852. That’s about it, apart from inflammatory rhetoric. See also “Marx, Karl (1818-1883)”.

⁴⁸⁴ Despite some publishing of the *Manifesto* c.1848, Marx wasn’t as renowned as (the deceased) Cabet until the 1870’s or 1880’s. This cartoon from the *St. Louis Dispatch* in 1911 portrays Marx with a book entitled *Socialism* under his arm, standing amid a cheering crowd on Wall St. Greeting him with enthusiastic handshakes are characters in silk hats identified as John D. Rockefeller, J.P. Morgan, John D. Ryan of National City Bank, Morgan partner George W. Perkins and fmr. president Teddy Roosevelt. See also “Socialism, political”.

⁴⁸⁵ Marx and Engels themselves both used the terms ‘socialism’ and ‘communism’ interchangeably. See also “ConfUSURY”.

1) 'A lily pond, so the classic French riddle goes, contains a single leaf. Each day the number of leaves doubles-- 2 leaves the second day, 4 the third day, 8 the fourth, and so on. Question: if the pond is completely full on the ³⁰th day, when is it half full? Answer: on the ²⁹th day'; "boink, there ain't no water left... 'A stitch in time save nine'" (Cook, 2022b, mn.1241) Debts also "grow at 'geometric' rates, while the economy itself grows only 'arithmetically', in a slower and more linear way.... The 'magic of compound interest' refers to the tendency of savings to double and redouble exponentially, with a matching rise in what debtors owe on the other side of the balance sheet. These mathematics have been operated throughout history, ever since the charging of interest was invented in Sumer some time around 2750 BC. In every known society, the effect has been to concentrate wealth..." (Hudson, 2008b). See also "Leverage", "Liberty", "Usury".

1b) Hence; the average "rate of return on capital throughout history has always been [much] higher than the rate of economic growth."- Gabriel Zucman, *Capital in the 21st Century*, mn.129. See also "Dynastic cycle", "Debt cycles", "Numbers", "Usury".

2) "The exponential rate at which an interest-bearing loan or debt doubles under conditions where the interest is added onto the loan principal, earning interest itself. (The basic doubling curve is described mathematically as $y=x^2$. The phenomenon was known already in the Old Babylonian period c.2000 BC by the term 'interest on interest' (*mash-mash*). However, loan contracts were for a specified duration, and when they expired the creditor had to draw up a new contract to receive further interest... Prior to 1972, it was normal for Latin American countries simply to borrow the interest charges due on their foreign debt each year. This practice now (2005) characterizes over 20% of home mortgage loans" (Hudson, 2013). See also "National Debt Economy".

[prereq for a casino economy?]

3) "Nigerian President Obasanjo said at the G-8 summit 2008: 'We had borrowed around 5 billion dollars by 1985-6. To date, we have paid back 16 billion dollars. Now we are told we still have 28 billion dollars of debt.... If you would ask me what is the worst thing in the world, I would say compound interest'" (Mosley, 2017b). See also "Usury".

4) "A syndicate of less than 100 American capitalists, if allowed to collect interest on their capital at a low rate and re-invest for 150 years or less⁴⁸⁶, would at the end of that time own the earth and all real and personal property thereon. This is a simple mathematical proposition, capable of exact demonstration, and anyone who doubts the truth of this statement may set all doubts at rest by computing compound interest on one and one-half billions of dollars for 150 years, at 5% per annum" (Hudson, 2001). See also "S-curve", "Rule of 72", "Sinking fund", "Burien, Walter", "Foundations", "Common sense".

Comptroller of the Currency- See "Federal Reserve audit" (GAO).

Cooperative Commons- (Rifkin, 2014).

Conditionalities- "The requirement by the IMF and World Bank that indebted governments sell off their public domain [commons] and public enterprises, and also deregulate their monopolies and markets in exchange for creditor nations rolling over their foreign debts and refraining from overthrowing their governments, either by covert means or by force... with the support of local *client oligarchies*. (See *Washington Consensus*)" (Hudson, 2013). See also "World Bank".

Conditioning, classical- (mental ['sneaky mind control'] = conflating stimuli; i.e. carrier waves that are modulated); f.e. 1) "America's love affair with 'capitalism' is mostly because they [have been repeatedly conditioned to] associate the 19th century, and America's rise to prominence and prosperity, with [whatever

⁴⁸⁶ Say, for example, from c.1820 (Congress of Vienna), to c.1970 (Petrodollar & 'free-float').

the **corporate media cartel** signals a['] 'capitalism'...[instead of, rather, the larger underlying reality of] 10 million square kilometers of free land⁴⁸⁷ and...resources that brought prosperity to the masses" (Migchels, 2019g). See also "Economics, Parity".

1b) More recently, see also "Imperialism, American", (conflated with) "National Debt Economy (NDE)".

2) Sneaky? Recurrent themes & settings in 'the movies': "There's hundreds of these books, hundreds of these [*The Island*-type] movies, to pre-program you-- Predictive Programming is what it's called, because even though it's scary, when you sit there eating [carcinogenic] popcorn and...a hot dog and drinking a big old...delicious Coca-cola, and you're watching clones getting grabbed and harvested... and you're watching all this tyranny-- but you're sitting there eating a hotdog [at the same time, then] your brain at the cellular, synapse level, associates it as non-threatening"; or perhaps even pleasurable (unless one consciously blocks & overrides/overwrites it, willfully) (Jones, 2020, mn.27-28).

3) Repetition, of course, is key. The general rule of thumb is that: it takes '7 years to get (fully) in', and hence also '7 years' to de-program fully out. See also "Groupthink", "Design".

See also "**Corporate Media Cartel**", "United States, the", "National Identity", "Eye color", "Democracy".

[who crosseth to "modernity", must answer me these questions three']

Conditioning, operant- (physical ['old school' mind control] = +- carrots/sticks); see "Money", "Currency") "can...destroy free-will. We have had free-will, up until we got to the computer.... How dangerous is a method that can... destroy one's conscience?" (Isbyrt, 2018, mn.25-27).

See also "Psychology" [psychiatry]; "Design", → "Human beings".

Confirmation bias- See "Conspiracy theorist".

Confucian- (a.k.a. 'Mandarin'-- the inevitable compromise between [see also] "legalism" & spiritualism/Dao; but where is 'it' written?; sometimes a.k.a. Mencius [])

"If there were an honorable way to get rich, I'd do it, even if it meant being a stooge standing around with a whip. But there isn't an honorable way, so I just do what I like."- *Analects of Confucius* (Hinton, 2014).

See also "Happiness", "Japan" [official truth], "Plato vs. Aristotle".

"Let the superior man never fail reverentially to order his own conduct, and let him be respectful to others and observant of propriety: then all within the Four Seas will be his brothers..."

- 'Confucius', (Miyakawa, 1960, 25). See also "National Identity/Nationalism" [civic-collectivist].

1) "The principle object which the legislators of China had in mind was [how] to make their subjects live in peace and tranquility... filled with a veneration for one another, that each should be every moment sensible of his dependence on society, and of the obligation he owed to his fellow-citizens.... Thus the inhabitants of the villages of China practice amongst themselves **the same** ceremonies as those observed by persons of an exalted station; a very proper method of inspiring mild and gentle dispositions, of maintaining peace..." (Montesquieu, 1748, 300). See also "Hypocrisy".

⁴⁸⁷ "In 1776 the wealth of forest in North America was beyond belief. Within 200 years-- in fact 150 years-- it has been destroyed or more than 90% of it wasted. And it had in it 300 years of accumulated capital saving and investment of sunlight and the fertility of the soil. (And now that our bread is going to have five times as much fiber by making it out of sawdust)" (Quigley, 1976c-pt.3, mn.345). See also "Parity pricing (for the primary sector)", "Food (and food-like substances)".

1b) 'Confucius', Confucians, and subsequent Neo-Confucians all; "confounded...[China's] religion, laws, manners, and customs; all these were morality, all these were virtue. The precepts relating to these 4 points were called *rites*; and it was in exact observance⁴⁸⁸ of these that the [dynastic] Chinese Government triumphed. They spent their whole youth in learning⁴⁸⁹ them, their whole life in the practice... and as they included all the ordinary actions of life, when they...[could make] them strictly observed, China was well governed" (Montesquieu, 1748, 301). See also "Religion".

1c) This quality has often been attributed to the world's oldest (by far) civil service examination system, which has been a basic structural characteristic since the Sui Dynasty (581-618). The "chief defect in this system [however] was its emphasis upon literary style and a detailed knowledge of the Chinese [mostly literary] classics, at the expense of more practical matters...[Equally hamstringing has been the traditional] failure of the Chinese government to provide anything approaching a national system of free education. Hence, most candidates [have always] had to prepare themselves for the examinations at their own expense, and the inevitable result was that the majority of those able to [even] take...[the exams] came from the well-to-do. Nevertheless, the system... was open, with trifling exceptions, to all members of society, thus making it the wo'ld's most democratic means, before modern times, for selecting government officials. And it ensured the presence in...government of men of high education. Nothing like such a system seems to have been known among the other great civilizations of antiquity ...[and in] the universities of Europe, written examinations seem to have been unheard of before 1702" (Bodde, 2005), "Physiocrats, the" [.Mencuis].

2) Foreigners have often over-simplified 'Confucianism' as: 'Life is really simple, but we insist on making it complicated' (Rainey, 2010, 67). See also "Ontology & Epistemology", "Orwell, George".

2b) For example: "my opinion is that the key" to "unlock the universe" (of understanding) "will never be found but by one being who will ever keep it in his own custody. Human understanding will never dive in this state of existence to such depths, & it is a vain & impertinent curiosity to think of it. Our duties are the charities, of father, friend & brother..."- John Adams (Adams, 1819). See also "'Conspiracy theorist'" (which 'America's Puritan president' was also), "Design".

2c) Who is more simple-minded? The classic culture clash between the Germanic Occident and the Sino-Tibetan Orient was not so much the oft-mentioned [in the 20thc] "Power distance"⁴⁹⁰, but rather that of "High-context" or "Low-context"⁴⁹¹-- alphabetic 'to the letter' detail has been pretty much irrelevant in China; and their own little experiment (from 220-206 BCE) with [what was, a century later, termed] "Legalism" was rejected (as, essentially, insufficiently Confucian). Maybe that would have had a chance (of long-term viability) in an alphabetized, 'to-the-letter' (low-context) type culture. Both social contexts and the finer points of literal wordings (.Indo-European grammar tenses) can get rather 'complicated'. See also "Culture", "Legalism".

2d) Confucianist thinking, to its advantage [at least in survival], tends to work from the biggest and most main (perceived) point downward (in something of a contrast to alphabetics); and it hence usually pertains to the environment or context of a certain situation. See also "Fundamental Attribution Error", "Land", "Land bridge".

3) Prof. "Christian Wolff (1679-1754), suffered persecution... [after delivering a lecture] at the University of Halle in 1721, [in which] he praised the Chinese system for successfully harmonizing individual

⁴⁸⁸ An 'educational experiment in the 2000's found that reading Aesop's "The Boy Who Cried Wolf" increased children's likelihood of lying. But reading about George Washington & the cherry tree, however, decreased...[children's] likelihood dramatically' (Bronson & Merryman, 2009). See also "Philosophy" [.agency; **determinism**], "Fundamental Attribution Error" [.occident salt; orient fresh], "Adolescence of Mankind".

⁴⁸⁹ According to Montesquieu, it is the basic & unescapable "difficulty" of Chinese "writing, which, during the greatest part of their lives, wholly employs their attention... which has banished laziness, and cultivated a love of learning" in the mainstream culture (Montesquieu, 1748, 301).

⁴⁹⁰ 'Power Distance' is "'the extent to which the less powerful members of institutions and organizations within a country expect and accept that power is [to be] distributed unequally... [This approximates] the degree of human inequality that underlies the functioning of each particular society' (Hofstede 2000, p.81)... People in low-power distance cultures consider hierarchy as an inequality of roles which is established [simply] for convenience" (Balykina, 2013, 3).

⁴⁹¹ <https://www.youtube.com/watch?v=o-ZWNy6vyfw> [Thacker'19]; <https://www.socialmediatoday.com/content/geert-hofstede-dimensions-cultural-difference>

happiness with the welfare of the state. He [also] maintained that Confucianism was fully adequate as a way of life [and] that there was no real conflict between it and Christianity. For these bold words he was immediately accused of atheism, and, after a bitter attack, was forced” to resign (Bodde, 2005, 4).

3b) A century later, America’s then-greatest philosopher (Transcendentalist=individualism founder) Ralph Waldo Emerson (1803-82) was also an enthusiast; and “eagerly read many translations of the Confucian classics.... [F]rom China he accepted the Confucian concept of the true gentleman, the belief that good government must be based on a sound moral foundation, and the emphasis upon the responsibilities that each individual in society holds toward other individuals....We call them American ideas” (Bodde, 2005, 5).

4) China’s (original) “Confucian” century-- the 500’s BCE-- was not a very egalitarian time, and it is said that “Confucius, dismayed by the decay of the Zhou nobility, vehemently objected to giving *shuren* [a “new” institution of semi-“independent farming families”] any voice in affairs of state....[although] Mencius...in the mid-4th century BCE, readily acknowledged that *shuren* [3rd E] could and did serve in [1st E] government.⁴⁹² Nonetheless...[make no mistake] Mencius still insisted on maintaining the proper social and political hierarchy between the ruling elite and non-official commoners” (von Glahn, 2016, 59). See also “China” [Mengzi], “Estates, 3”, “Civilization”.

5) Montesq.
See also “National Identity/Nationalism”, “Civil National Identity” [Sun], “Long-term orientation (LTO)”, OverlySarcasticProductions (2020).

ConfUSURY- (Obfuscation is the traditional-primary strategy and tactic of usurers, in order to parry away inquiries & understanding of what they do). See also “Leverage”, “Neoclassical Economics”, “Economics”, “Usury”.

1) “Each institution of higher learning teaches its own form of confusion, not based upon science, not based upon physics, not [even] based upon math, but based upon the subjective thesis... that dissolves into bias when confronted by a... dime store pocket cowboy” (Lundgren, 1994b, mn.147).

2) Secretary Hamilton may be considered its all-time m.v.p. See also “Clark, John Bates (1847-1938)”, “Hamilton, Alexander” [Hamilton’sFootbinding], “Madison, James (1751-1836)” [invisible hand]. See also “Hegelian dialectic”, “Lender of Last Resort”, “Deceptive Banking Terms (d.b.t.’s)”, “Pyrite”; Still, 2013 [from mn.4].

Congress (US)- (antec. ‘The United States in Congress Assembled’ [3/1781-3/1789])

In “a country of liberty, every man who is supposed a free agent ought to be his own governor; the legislative power should reside in the whole body of the people” (Montesquieu, 1748, 154). See also “Libertarianism(s)”, “Estates, 3”.

House/Lower/Commons/3rdE-⁴⁹² (Montesquieu,). See also “Democracy”, “Constitution, US (of 1787-91)” (it isn’t).

Senate/Upper/Lords/2ndE- “An equal division of lands cannot be established in all democracies...[and could] even [be] subversive of the constitution.... If it appears that this division of lands, which was designed to preserve the people’s morals, does not suit the democracy, [then] recourse must be had to other methods. If a permanent body [is to] be established to serve as a rule and pattern of manners-- [say, f.e.] a senate, to which years, virtue, gravity, and eminent services procure admittance--[then] the senators, by being exposed to public view like the statues of the gods, must naturally inspire every family with sentiments of *virtue*.⁴⁹³ [But] [a]bove all, this senate must steadily adhere to the ancient institutions,

⁴⁹²“What appears to distinguish *shuren*... merchants and artisans from the servile classes was [of course] their independent means of livelihood.... Although *shuren* were no longer considered a servile class, forced labor... [was increasing radically in the Spring & Autumn period (771-481), and] by the Warring States period [481-221], the servile classes were largely wards of the state.... [and] penal servitude supplied most of the labor force in government workshops” (von Glahn, 59). See also “Legalism”.

⁴⁹³ The (original) Roman Senate (probably what Montesquieu is talking about here); “didn’t directly legislate anything, [but, instead] published opinions on policy that were very often very quickly put into place by the respective officers down the chain.”
- <https://www.youtube.com/watch?v=AsR-C9WtoKg> . The ‘pen is mightier than the sword’-type attitudes don’t just go back to English author-politician Edward Bulwer-Lytton in 1839.

and mind that the people [3E] and the magistrates [1E] never to swerve from them” (Montesquieu, 1748, 47). See also “Land”, “Montesquieu” [trichotomy], “Deep State” [Senate], “Civil National Identity” [ya blue].

1) The basic ratio of congressman-per-constituent has increased from 37,000 people per congressman in 1793, to 747,000 in 2018, and has been climbing at a 45 degree ratio since the 1930’s⁴⁹⁴. Is that still meaningful representation, or more like public relations (for Empire and its various sub-empire components)? See also “Bernays, Edward (1891-1995)” [PR], “Aristocracy”.

2) The United States “Congress must as a whole regain control over the appropriations power and must reassert its supervisory role over the CIA; the people must not be deprived of their right to know how the public money is being spent” (Yale Law, 1975, 636). It hasn’t happened in the half-century since then. See also “Great Extinction”th, “European Parliament”.

3) The United States Congress, as of 2019, “no longer controls: a] the approval of international treaties... b] whether or not we go to war... c] who and what is going to fight in our army. We now have an infinite amount of money-- as long as the dollar holds-- to finance secret armies, mercenary armies, corporate armies.... So what is it [in the 21st century] that Congress *does* [sic]?.... d] FASAB-56 is about who controls the [purse strings of the] US government” (Fitts, 2019v, mn.28-29). See also “Sovereignty”, “European Parliament”, “Federal Accounting Standards Advisory Board” [FASAB-56].

3b) “When you look at the life of a politician, it’s nothing but lunches, dinners, and talks of no value. And if you were to say to them, ‘What have you accomplished in 6 years?...’, they’ll say, ‘Well, I’ve been in a lot of meetings’” (Pieczenik, 2019n, mn.16). See also “Timarchy” [Montesquieu].

4) It’s worth saying twice. With FASAB-56, the “US congress has completely abrogated its responsibilities under the constitution for financial management. You’re not supposed to spend any money that Congress hasn’t approved.... What is it that Congress does other than entertainment, and distraction?... The Deep State & private guys are now asserting complete control-- behind secrecy-- of technology, [and of the] money. And in the meantime, they’re keeping everybody [98% anyway, via click-baiters] entertained” (Fitts, 2020, mn.13-14). See also “Deep State”, “Shadow Government”.

The number of people per representative has grown dramatically since nation’s founding

Number of people represented by one U.S. House member

[See also “Politics”, “Hypertrophy”.]

4b) “What I mean by ‘*the trend to end Congress*’ [is that] I literally mean the end of representation from our districts... [that] are supposed to serve the public.... Congress is beginning to realize that they’re dying.... We are literally talking about incompetency and irrelevancy...” (Pieczenik, 2019g, mn.0-1). “Congress is making it very clear [during the Trump Admn.] that they are not relevant” (Pieczenik, mn.4). With “congressmen and politicians, what you’re dealing with are people who deal in *process*... [not] product” (Pieczenik, 2019n, mn.16). See also “Lobbyists”, “Legalism”, “Left brain, Right brain”.

⁴⁹⁴ i.e. since after the *Permanent Apportionment Act of 1929* capped representation at (what used to be) America’s only nationwide democratic institution at 435, in order to make the public forum more “manageable” (like a lower Senate), with only committee chairs mattering. For a Crash Course on Congressional trends in the century since then: <https://www.youtube.com/watch?v=evLR90Dx79M> [Benzine-Crash]. See also “Democracy”, “Feudalism, neo”.

4c) The US Congress's last meaningful tussle with the Executive Branch was the 'Iran-Contra Affair' of 1986-92, which ended (silently, if not ominously) with the Executive (under Bush Sr.) essentially blowing the Legislature off, with the Christmas Eve '92 pardon of 6 Reagan Admn. public servants under investigation and/or indictment for perjury and lying to Congress (in order for the Executive to circumvent its laws). A couple years later the (so-called) 'Federal' Reserve (mostly not within *any* Branch of the federal government, and essentially self-regulating⁴⁹⁵) was outed for doing the same thing. "Some of the members of the [Fed's] Board of Governors called attention to FOMC votes that could 'be subject to being viewed as perhaps circumventing the Congress'....[bringing] their concerns directly to [Chairman] Greenspan in then-secret FOMC meetings" (Auerbach, 2009,). See also "National Security Agency (NSA)", "CIA", "Sovereignty", "Open Market Committee, Federal (FOMC)".

4d) It's a very long-term trend. Legislative subordination has been established over the past century-and-a-half. After a series of 'weak presidents' in the 1840's-50's, the US Congress 'temporarily' lost its sovereignty in 1860's (Civil War), and since then its dispensability in 'emergencies' hasn't been challenged. (Since then the Executive [branch] pretty much doesn't need to wait around for the Legislature).

1890's- (unreformed) 'first-past-the-post' voting systems insured that the oncoming 20thc would be one of political "Duopoly". See also "Democracy" [.median voter], "Parties, political".

c.1900- the Executive now de facto declares War, in addition to directing wars and foreign-imperial policy. See also "Imperialism, American".

1910's- World War One shuts down (euph. 'suspends') organized dissent, 'Initiative & Referendum' state & local movements, and pretty much anything multi-party (other than the Duopoly)-- hence realizing in formality what 1890's was aiming at. See also "Democracy" [I&R], "Imperialism".

1929- Congress officially caps the House of Representatives' capacity (for representation) at 435; i.e. no more 'growth', just more 'pressure'.

1930's-40's- the 'vote-for-money' & Democrats-as-Congress (like India) culture. See also "Madison, James (1751-1836)" [.invisible hand].

1950's-60's- definitely now overshadowed⁴⁹⁶ by the ever-expanding Executive-Imperial-DeepState. See also "Central Intelligence Agency (CIA)", "National Security Agency (NSA)".

1970's- a number of unfortunate 'accidents and incidents' involving key congressmen leads up to 2 (one might say) large bicentennial events; by...

1975-76- the Legislative branch's *Church Committee* hearings (from winter '75) raised public consciousness, but were strategically ignored by the Executive⁴⁹⁷; then the Judicial branch's *Buckley v. Valeo* decision (Jan. '76) eventually meant (in conjunction with a half-century now of supporting case law) that "every means of communicating ideas in today's mass society requires the expenditure of money"- <https://www.currentaffairs.org/2015/12/of-course-money-is-speech#> . Hence by '76 it was apparent that the half-century of 'vote-for-money' culture was in the process of being turned on its ear. Money now 'votes-for-you' ('human resources'). See also "Monetization", "Lobbyists", "Monetary reform".

1980's-90's- The 'Iran-Contra Affair' make official (de jure) what was in the 1950's-60's unofficial: congress doesn't decide or overrule anything regarding foreign policy or empire. See also "Imperialism, American".

2000's- mostly demonstrated the 'lapdogs of payola' status of any and all congresspeople (seniority-less Committee Chairs now included). They struggle with noise; the imperial-Executive struggles with governing. See also "Deep State", "Intelligence Community (IC)".

⁴⁹⁵ Congress's Financial Services (Banking) Committee is technically responsible for overseeing the Federal Reserve (Board). Committee Chair Wright Patman (r.1963-75) actually demanded "verbatim transcripts" of the FOMC's meetings "for 1960...[through] 1963... [So] the Fed... [then] began using paraphrased transcripts" again; it had first began "preparing paraphrased transcripts in 1936 for internal use", called 'Memorandums of Discussion' (Auerbach, 2009, 88). See also "Open Market Committee, Federal (FOMC)" [.edited], "Patman, Wright".

⁴⁹⁶ It is supposed to be the other way around. See also "Revolution, American", "Articles of Confederation".

⁴⁹⁷ See also "Mockingbird", "National Security Agency (NSA)".

2010's- the (above-mentioned) 'Trump Derangement Syndrome' (TDS)⁴⁹⁸ escapades. Noise? The typical congressperson now 'represents' (x more than in 1929); while constantly running the 'money votes primary', with an average war chest of (x more than in 1976). See also "European Parliament", "Parties, political"; Hollis, 1949.

4e) When will The Trend end? See also "Constitution, US", "Constitutions", "World Par Economy".

4d) It's not just in America. "Parliaments seem to have ceased operation, for all means and purposes. Some kind of takeover seems to have taken place. What we see [today] is actually only 207iberalized when we study much more totalitarian regimes"; irrelevant Parliaments represent "the Sovietization of our societies" (Werner, 2021b, mn.7-8). "Big government (growth of)", "European Parliament".

4f) Concurrent with The Trend (at least from the 1910's) seems to be an increasing institutional predilection for having (usually just) one (or 2) rather high-profile dissident in (what is supposed to be) the people's House.

1910's- Charles Lindbergh (R);

1910's-20's- Sen. Robert La Follette (R-Progressive)⁴⁹⁹;

1930's- Louis McFadden (R);

1930's-60's- see also "Patman, Wright" (D);

1980's-90's- Henry B. Gonzalez (D), James Traficant (D);

1990's- Ron Paul (R)

2000's-2010's- Ron Paul (R), Dennis Kucinich (D);

2010's- Tulsi Gabbard (D);

2010's-20's- Thomas Massie (R), ?.

5) Alexis de Tocqueville is often misquoted these days (despite the facility of fact-checking) as supposedly writing that: "If the American Congress uses American public money to bribe the American public, then it'll be the end of the American Congress" (Pieczenik, 2019n). What the first half of the 19th-century's most famous observer actually noted was that: "in *democracies*... it would be necessary to buy so many persons at once, that the attempt is rendered *nugatory*.... [In] France the practice of bribing electors is [now] almost unknown, whilst it is notoriously and publicly carried out in England. In the United States... I have often heard the probity of public officers questioned; [and] still more frequently have I heard their success attributed to low intrigues and immoral practices" (de Tocqueville, 1838, 206). See also "Corruption", "COVID".

6) It's not (of course) just in the US. "" (Hollis, 1949). See also "Parliament", "UKUSA Agreement".

7) Does Congress appear, in the 21st, to be perpetually weakening? Since "1998, we've watched the power of the electorate diminish steadily, and the power of the Congress diminish steadily. And a lot of that...[is from] the [new] ability to control the money centrally and control it secretly...[W]hat we see in the last two presidential cycles...[has been] a real de-linking of the fiscal policy from [pretty much] any influence by the electorate" (Fitts, 2022n, mn.30-31). See also "Black Budget (US)".

See also "Separation of Powers", "Monetary reform", "Parties, political".

Congress of Vienna- (a.k.a. 'The Empire Strikes Back').

"The original object of the Great Power Club was to prevent anything like the French Revolution from ever happening again. The French Revolution *haunted* [sic] the 19th century... [T]here is no understanding of international politics in this period if you don't bear that [bear] in mind" (Weber, 1989j, mn.14-15). See also "Currency Wars, the", "Conspiracy theorist", "Hegelian dialectic".

1) The 1814-15 wrap up of the Napoleonic Wars (i.e. 2nd Currency War) that had turned the continent upside down made the 'world' (i.e. imperialism) safe for [the euphemism of] 'constitutional monarchy' [a.k.a. 'bankmoney regime' and the City of London], which, few seemed to note at the time, was already a tax-heavy

⁴⁹⁸ F.e. <https://wallstreetonparade.com/2020/07/heres-what-everyone-including-mary-trump-gets-wrong-about-donald-trumps-failed-response-to-covid-19/>
See also ""Conspiracy Theorist"", "Intelligence Community (IC)", "COVID".

⁴⁹⁹ More than a 'back bench' voice of dissent, Sen. La Follette won nearly 17% of the (then more-accurate) popular vote for US President in 1924 (approx. to Independent Ross Perot in 1992, or perhaps genuine popular support for candidate Ron Paul in 2008 and 2012).

'national debt economy' [as pioneered from the 7 Years War], overseen (since c.17??) by a privately-owned central bank. The ('constitutional') British and the (outright monarchial) Russian Empires agreed to settle their differences later, while vanquished France and arguably most of the rest of the continent (that France had conquered) were, it seems, bribed, on very favorable peace terms, to more or less go along with the Bank of England's national debt economy system. See also "Currency Wars, the", "Bankmoney regime".

[Constitutional monarchy, via the (see also) "City (of London)"; "Neoclassical" (.peerage).]

1b) In simpler terms, "the stability of Europe from 1815 to about 1880, or '85, is now something we look back on with nostalgia. The reasons for this were... that the structure of the state had become sufficiently rationalized and sufficiently sovereign through the period of revolution, from 1776 to, let's say, 1820-- [in other words, it had become] sufficiently stable" from the discarding of medieval constitutions (Quigley, 1976c-pt.3, mn.319-20); and also of indefinite types of money from one locality to the next. See also "France".

2) "With the restoration of the French monarchy in 1814, counterrevolutionaries remained adamant that 'philosophy' [via mostly UK-derived masonic lodges?] ⁵⁰⁰ had been responsible [and hence, not 'money'] for all the troubles of the preceding quarter century... [T]hey called not just for banning books, but for burning them to prevent anyone from reading those fatal and impious words again. Throughout the 20th century ... [and] To this day, nearly every discussion of revolutionary historiography begins with a ritual invocation of the great, epoch-making clash between supposedly Marxist materialists ⁵⁰¹ and their ...Tocqueville-citing...[critics] of political ideas" (Spang, 2015, 271-72). Yes, the "Hegelian dialectic" dates from around that time, more than a half-century prior to the (more advanced) Fin de Siecle trickery. See also "Hegelian dialectic", "Marx, Karl (1818-1883)", "Smith, Adam (1723-1790)", "Duopoly", "Fin de Siecle".

3) Henry Kissinger's acclaimed book on the CoV makes no mention of money systems or strategy whatsoever. See also "Oligarchy, American", "Land bridge".

See also "Banking School" [UK], "Austrian School" [Europe], "Fin de Siecle" [UKUSA].

Consciousness- (the traditional litmus for what makes a 'human being')

1) The basic problem with human beings these days (in addition to literary credulity-immaturity & statism) [holographic mortality] is that man's conscious-reality bubble is only capable of entertaining a handful (say 7-9 or so, like a phone number) of mental items 'at one time', whereas his total subconscious awareness of facts, figures, names, faces, etc. is more like 7-9 million items...and increasing (or being expected to) year-by-year. A hundred years ago, something like 7:700 or 7000 would have been more typical; and in the 19th century even less (or at least more redundant and local in character). Being spread too thin (for his design) makes man appear foolish and less than competent (perhaps even less than morally competent or honest). See also "Integrity".

1b) For villains-- and their dupes, it is simply necessary to extrapolate the Information Overload trend to (see also) "'COVID'" and 'planet slavery'.

For heroes-- and the cognizant, it is not the early 21st-century autopilot, but rather the need to distill and/or re-invent most all societal institutions for the Knowledge/Digital Age. See also "Design". This need not be as difficult as it may seem at first glance-- given that one starts at the foundry or headwaters of (see also)

⁵⁰⁰ S

⁵⁰¹ Notice that the "materialists" had been around for half-a-century before the public debate was somehow corralled towards the polemicist labor organizer Marx and his financier Engels. See also "Marx, Karl (1818-1883)".

“Political economy” and how it was more-or-less destroyed by (the now-over) 2nd Industrial Revolution. See also “Politics”, ←“Economics”, ←“Ecological economics” (headwaters).

2) In more ‘scientific’ (or at least academic) terms, a debate of sorts commenced in 2020 between Giulio Tononi, of the Univ. of Wisconsin and Stanislas Dehaene at the Collège de France. Tononi “thinks consciousness is [simply] a direct consequence of the interconnectedness of neurons within brains. [His resultant] IIT [theory] argues that the more the neurons in a being’s brain interact with one another, and the more complex the resulting network is, [then] the more the...[animal]⁵⁰² in question feels itself to be conscious. Because the parts of a human brain where neuronal connectivity is most complex are the *sensory* processing areas (in particular, the *visual* cortex) at the back of the organ, these, IIT predicts, are where human consciousness will be seated...Dehaene... reckons...[however] that... consciousness, involves a [broader] network of brain areas-- particularly the *prefrontal* cortex. This part of the brain receives sensory information from elsewhere in the organ, evaluates and [then actually] edits it, and then sends the edited version out to other areas, to be acted on. It is the activity of evaluating, editing and [social] broadcasting which, according to [Dehaene’s] GWT [theory], generates feelings of consciousness.... One difference between IIT and GWT, accordingly, is that the former is a ‘bottom up’ [or Darwinist] explanation, whereas the latter is ‘top down’ [or actually involving a soul]. Supporters of IIT think consciousness is an emergent property of neural complexity that can exist to different degrees, and could, in principle, be measured as a number” (Carr, 2020). See also “Transhumanism”; “Philosophy”, “Design”. See also “Culture”, “Academia” [oligarchical].

Conservative- (going slow/incremental, instead of fast/big step)

1) *Conservatism* (1902), written by “a member of the chief family in the English Conservative Party...[for] the past century... defines conservatism... as tentative, flexible, undogmatic, communal, and moderate. Its fundamental assumption is that men are imperfect creatures, will probably get further by working together... and that, since undoubtedly each is wrong to some extent, any extreme or drastic action is inadvisable” (Quigley, 1966, 1232). See also “Liberal”.

1b) Hence, in other words, from Winston Churchill (Conservative Party head [1940-55]), one who supports “the settled and persistent will of the people”.- Speech before the House of Commons (Nov. 11, 1947)

2) But in politics, as in life, things are not always as they may first appear. See also “Parties, political-UK”.

2b) “Conservatism, though a necessary element in any stable society, is not a social program; in its paternalistic, nationalistic, and power-adoring tendencies it is often closer to socialism than true liberalism; and with its traditionalistic, anti-intellectual, and often mystical propensities it will never, except in short periods of disillusionment, appeal to the young and all those others who believe that some changes are desirable if this world is to become a better place. A conservative movement, by its very nature, is bound to be a defender of established privilege and to lean on the power of government for the protection of privilege” (Hayek, 1956). See also “Privilege”, “Liberal”.

3) “There the credit [i.e. money] of the individual has still all the weight of public credit [i.e. currency].... Admirable is that law of Geneva which excludes from the magistracy, and even from the admittance into the great council, the children of those who have lived or died insolvent...[unless] they have discharged their father’s debts [because]. It has this effect: it creates a confidence in the merchants, in the magistrates, and in the city [society] itself” (Montesquieu, 1748, 325). See also “Credit money”. See also “Currency”, “Estates, 3”, App.C: “1-2-3”.

Conservatorship- (a.k.a. legal guardianship, being a ward of the state; not to be confused with a ‘bailout’) Government control-- however temporary⁵⁰³-- of bankrupt private corporations. Management of such government-supported-enterprises (GSE’s) is typically with the Federal Housing Finance Agency (FHFA), which has overseen Fannie Mae and Freddie Mac’s securitization of residential mortgages since 2008,

⁵⁰² See also <https://www.economist.com/essay/2015/12/19/animals-think-therefore> ; “Homo Economicus”, “Human beings”, “Google” [Gilder], “Design”, “Provocation Op.”, App.C: “1-2-3”.

⁵⁰³ John Gregory calls conservatorship “a sort of *short-term nationalization*” (2015, 6).

though the Treasury also has a role in management. See also “Mortgage-backed securities”, “Fitts, Catherine Austin”.

See also “Solvency”, “China’s US Treasury Bonds”, “Liability, double”.

‘Conspiracy theorist’- (2nd half of 20thc CIA dumb-downing⁵⁰⁴ of [conflation with] ‘confirmation bias’⁵⁰⁵

"All the world’s a stage."- William Shakespeare’s *As You Like It*, 1623

"To have too much forethought, is the part of a wretch; to have too little, is the part of a fool."⁵⁰⁶

- Rev. Richard Cecil (Cecil & Pratt, 1824, 297).

"[M]oney and monetary policy is [in so-called ‘modern’ times] a game of swings and roundabouts heavily intertwined with the whims and ideals of a small group of people that makes decisions concerning one of the most important aspects of day-to-day life.... [A]s much as the fates of nations and their economies change, so do their currencies” (Connors, 2016, vi-vii). See also “Governance”, “Glorious Revolution”.

1) ‘We live life forward; but then we look at life backwards’ ([Is it all just] post-hoc justifications?).

2) a term first pioneered and rolled out [see “[Corporate Media Cartel](#)”] by the CIA in the mid-1960’s, in order to discredit and shut up⁵⁰⁷ the large percentage of questioning citizens who were publicly disavowing the “lone gunman” and “single bullet” teachings of the 888 page *Warren Commission* report of Sept. 1964 (Zerohedge, 2015). It still seems as popular today as ever: “What I find amusing about all the conspiracy theorists... that see this all being like a Rothschild plot and stuff like that. They think the banks are operating with you [Michael Hudson] in the back room, and [then] the public relations people in the front. But no, they’ve got the public relations people in the front and in the back” offices.- Steve Keen (Hudson, 2016s). See also “Attitude inoculation”, “Oligarchy”, “UKUSA Agreement”.

3) “[A]nyone contemplating the possibility that big banks and central banks might not always look after the public interest and instead might collude, in order to put their own objectives first is identified [in the corp. media at least] as a ‘conspiracy theorist’” (Werner, 2016c). See also “Cognitive dissonance”, “Eurodollars”; (Still, 2019).

4) Adam Smith “wrote about... businessmen rarely getting together without the topic turning to conspiracy against the public” (Keen, 2017i, mn.8). See also “Royal Institute for International Affairs (RIIA)”.

5) Conspiracies⁵⁰⁸ are “the fundamental organizing principle of how things get done in our world. It was not until I left the establishment that I learned that those not in the club had been trained to disparage and avoid conspiracies-- a clever trick that [always] sabotages their efforts to gather [or even understand] power” (Fitts, 2020d). There is nothing in politics without (some degree of ‘secret’ or) confidential planning. See also “Common sense”.

6) Friedrich Schiller (1759-1805) “in his remarkable work on universal history... looked to the actual processes & dynamics which *produce* [sic] events, rather than the events themselves. He looked to the fundamental axioms of the *actors* [sic] in the events, and [to] the nature of mankind and the *universe* [sic], to be able to forecast with some probability how future events would actually unfold. It’s a method that

⁵⁰⁴ Often the “forces... who conceive of and propagate such [more outlandish] theories... [as Sandy Hook, space alien invasions, and the Hitler Diaries++] are professional experts at disinformation operations, attempting to destroy... [the 3rd Estate-citizenry’s] cohesiveness” (Still, 2019, mn.9). See also “Attitude inoculation”, “Russiagate”. ++-BBC 29-7-02, 15:51 UK- “Hitler Diaries Agent Was ‘Communist Spy’”.

⁵⁰⁵ Confirmation bias (i.e. ‘lazy reasoning’ or [over-reliance upon] ‘intuition’) is “the tendency to seek out and interpret [i.e. distill] information that confirms what you already think. It is a feature of [the more complex process of] reasoning... [and the] most important consequence of the domination of intuition” in most thought (Economist, 2019f)...

⁵⁰⁶ ...especially when (primarily) The City of London has off-shored “50 trillion dollars” in “invisible” money in the fairly recent decades (Oswald, 2018, mn.18-19). See also “City (of London), the”, “Black budget (US)”, “Criminalization of Banking”.

⁵⁰⁷ “In order to think about himself or the universe with the...abstract and rational end of his being, man *has to* categorize and ...conceptualize both his own nature and the nature of reality... [a.k.a.] the buffer [or filter] of concepts” (Quigley, 1966, 1222). See also “[Corporate Media Cartel/6 Sisters](#)”, “Great Extinction, 6th”.

⁵⁰⁸ a.k.a. plans, plots, stratagems

was also used by Edgar Allen Poe, and the Cincinnatus Society⁵⁰⁹ (Boyd, 2020, mn.101). See also "Montesquieu, Baron de" [Timarchy], "Secrecy, Cult of".

7) Various misdirections and cognitive attitude inoculations allow "the people who [do] run the globe to stay behind that one-way mirror.... Some cycles happen naturally. Some are rigged [to mimic or seem natural].... The problem of when you're dealing with something where the reality is so far away from the official reality-- and the governance system is so invisible-- [combines to make] it very hard to get a healthy conversation going about...who's really running the global system[s] and where...the money [is] going" (Fitts, 2018i, mn.21-23); or where it is coming from. See also "Money creation", "Legalism".

8) "Look, the point of [oligarch clubs like] Davos [and] the ['careerist'] economic-managerial-scientific-engineering-cultural elite, the World Economic Forum [CFR-RIIA-Pilgrims] and its [later] spawns [Bilderberg, etc.]-- is a *mindset* [sic]... It's not [singling out some group, like] the Jesuits [restored in 1815]. It's not the [18thc] Freemasons. It's not the Illuminati [est. 1776]. It's not the Vatican [c.1000]. It's not the Protocols of the Elders of Zion [c.1900]. It's *in your face* [sic]! It's no [secret] conspiracy. It's the way the [central banking-warfare] system works!" (Bannon, 2018, mn.33). See also "Leviathan", "Technocrats", "Groupthink", "Big Government (growth of)", "COVID".

9) For those who imbibe of such whiskey (or have critical common sense), what might be called the 'green sunlight' of larger commercial interests' programming (see also "Boards/Board Systems") has, increasingly, conformed and contorted the 'upward' behaviors and subconscious mannerisms of 'downstream' (smaller) institutions & individuals, almost as if they were plants or domesticated animals, competing with each other for more direct access to the sunlight or grain hand. Nature (f.e. the agric. sector) is yellow sun and green plants. Washington (partied/partisanized sector) is all-too-often green sun [dollars] and various shades of red-- chains-of-fools (who will never, in this lifetime, even acknowledge, yet alone fully 'catch' or comprehend the edu-media feeding hand or the artificial [as in lying/fraudulent] liquidity source that contorts (or even motivates) their behaviors. The general 'daisy chain' (or sled dog team) of vested interests has-- for the past long-century (see also "Fin de Siecle")-- been most often understood⁵¹⁰ as progressing 'downward', from: banking & finance, to education & media ('Hollywood'), to morals, to individual family structure & demographics. See also "Creney".

9b) Although 'conspiracy theory' is very often poorly-sourced, the basic discrepancy-- that has, for more than half-a-century now, given 'conspiracy theorists' a somewhat-bad or 'half-baked' name-- is between whether the top of the 'conspiratorial' [or secret] 'pyramid', so to speak, is substantially political (a.k.a. strategically-planned) or (somehow) purely commercial in its origins & manifest motivations. The primary scholar on this topic often complained that poorly-sourced 'conspiracy theory', such as Gary Allen's *None Dare Call it Conspiracy* (1971), "insists that international bankers were a single bloc, were all powerful and remain so today. I, on the contrary, stated in my book that they were much divided, often fought among themselves, had great influence but not control of political life, and were sharply reduced in power [between] about 1931-1940, when...["Financial capitalism"] became less influential than monopolized industry... [S]uch bankers were subordinated to [nonbank] industrialists or to governments after 1931 (p. 61). I may be correct or I may be mistaken, but I certainly did not say what [Gary] Allen pretends that I said"⁵¹¹ (Quigley, 1972). See also "Attitude Inoculation", "Intelligence Community (IC)", "Capitalisms".

10) "There is [however] a kind of *communism* in the financing of banks, where costs and risks are borne [not so much by the banks themselves, but] by society at large. This financing is virtually unlimited" (Wortmann, 2019b, 2); especially in those countries with a large enough tax-revenue stream to keep it going. This is not hyperbole. "From their privileged [monetary creation] position, banks can finance

⁵⁰⁹ The Society of Cincinnati (est. 1783) is "the nation's oldest patriotic organization, founded in 1783 by officers of the Continental Army and their French counterparts who served...in the American Revolution. Its mission is to promote knowledge and appreciation of the achievement of American independence..."- <https://societyofthecincinnati.org>

⁵¹⁰ 'Understood' at least by those who don't bring 'the' CIA & Intelligence Community (IC) into it. See also "Intelligence Community".

⁵¹¹ In addressing W. Skousen's *The Naked Capitalist* (1970), Quigley had also reiterated: "I thought I had made it clear that the control of bankers was replaced by that of self-financing or government-financed corporations, many of them in the West and Southwest, in oil or in aerospace, and I saw a quite different alignment of American politics since 1950", that it had been around 1930 (Quigley, 1971). See also "Military-Industrial Complex".

themselves easier and cheaper than other market participants....[and] Credit decisions are taken centrally, at corporate level and from a banker's interest, at the expense of diversity. The real economy is impacted negatively, for instance because SMEs are not accommodated properly by the dominant banking sector, which tends to over-finance speculation [a.k.a. money begetting money]. The dominance of banks has a self-reinforcing effect and continues to lead to further concentration..." (Wortmann, 2019b, 2-3). See also "National debt economy (NDE)", "Monetary reform".

10b) Again, Carroll Quigley was not oblivious to the obvious trends (in transitioning from the 2nd to 3rd Industrial Revolution); they were obvious even in the 1960's-70's⁵¹². Quigley, in 1966, listed "as threats to democratic government (pages 865-869 or 205-209)...: professional armies of mercenary specialists, governmental secrecy, computerized decision-making, the growing role of over-specialized experts in government and economics, and the general narrowing of individual freedom by such things as the growing trend to give individuals a social security number and to use this to keep track of all their actions from the cradle-to-the-grave" (Quigley, 1972). All of these issues, despite public awareness, grew worse in the subsequent half-century, as has the environmental Crisis. See also "COVID", App.C: "1-2-3".

11) Some people are inherently more sensitive to such things that are others, but with each year of growth, given a few recessions and setbacks (see also "Peace Window, the"), it [i.e. the great 20thc UK-USA 'pump & dump'] becomes a bit more obvious or striking closer to home. See also "Debt cycles", "Fascism", App.C: "1-2-3".

12) It (unrealized institutional promises) is nothing new. It was in fact "the fear of a comprehensive *conspiracy against liberty* throughout the English-speaking world-- a conspiracy believed to have been nourished in corruption, and of which... oppression in America was only the most immediately visible part-- [that] lay at the heart of the [American] Revolutionary movement" (Bailyn, 1967, ix). "It was this-- the overwhelming evidence... that they were faced with conspirators against liberty determined at all costs to gain ends which their words dissembled-- that was signalled to the colonists after 1763, and it was this above all else that in the end propelled them into Revolution. Suspicion that the ever-present, latent danger of an active conspiracy of power against liberty was [now, in fact] becoming manifest..." (Bailyn, 95). See also "Corruption", "Revolution, American".

12b) How could any "revolution" be anything but conspiratorial? "What I'm saying is..."

- <https://www.youtube.com/watch?v=7dsbusKcJzk> [Tim&Moby-Texas, mn.7]. See also "National debt", "Revolution", "Market fundamentalism", "Myths", "Mediocrity". Any questions?

13) "Don't worry about whether there is a conspiracy [anymore]. If you're not in one, you need to start one" (Fitts, 2018m, mn.4). Hopefully it's not about centralization. "If I have the New York Fed flow of data, and I can create fiat [stamped] currency out of thin air, well [then] it's only a matter of time before I own everything. It's pretty simple" (Fitts, 2019o, mn.17). See also "Clark, John Bates (1847-1938)".

See also "Leverage", "State capture", "Owners, the", "Hegelian dialectic", "Fin de Siecle", "Pilgrim Society", "Central Bank", "Quigley, Carroll" [*la police*], "Veblen, Thorstein" [*sabotage*], "Debt cycles".⁵¹³

[See also CIA Act of 1949, "NSA", "Hegelian".]

[Venal offices were not suffered gladly in the 1760's-70's]

Conspiracy theory- (i.e. articulated [and possibly educated] conjecture, concerning 'oligarchy'; and/or a defective 'monarchy' or 'democracy'; and/or at least the need⁵¹⁴ for a [more or less] 'secret' 'master plan')

⁵¹² Readily apparent by c.1970 also was the oncoming environmental Crisis. See also "Great Extinction, 6th".

⁵¹³ ...And whatever you do, don't see Alan Greenspan, Ben Bernanke, or Janet Yellin (for they do not know).

⁵¹⁴ "Behind the trajectories that have suddenly launched us out of premodernity lies [in fact] a tangled paradox of human numbers, prosperity, and [last but not least] earth system stability" (Brooke, 2014, 559). See also "Economics" [*macro*], "Great Extinction", "Economics, 'Parity'".

See also “English constitution”, “K.J.B. (King James’ Bible)/70 Year Plan”, “London (City of), the”, → “Glorious Revolution, the”, → “Currency Wars, the”, → “Timarchy”, → “Rhodes-Milner (and Cecil) Group”, → “Pilgrim Society”, → “Royal Institute of International Affairs (RIIA; 1919-),” → “UKUSA Agreement”, → “Cultural Calendar”; (and, for *this* century) “Geoengineering”, “COVID”, → App.C: “1-2-3”.

1) ‘Conspiracy theories’-- like conspiracies & conspiring itself-- have always been a dime a dozen; and ‘most’ of them have been fatally flawed by blaming everything (imaginable) on pretty much one ethnic or religious group, as opposed to simply the Imperial beast & imperialism itself. See also “Dispensationalism” & “Zionism”; “Imperialism”.

1b) Here is a grand & classic ‘conspiracy theory’ that makes sense of both economic determinism and political development. One could call it: The ‘Templar Knights’-“East India Co.” & ‘The Brotherhood’/ (“Free’ masonry → Intelligence Community [IC] → International Intelligence Community [I.C.C.]).⁵¹⁵

1c) “This Song”-- “Rule-by-Virtue”-- was called in the mid-18th century. And no, we’re not ‘there’ yet-- though an important pre-requisite for ‘destination:maturity’ has more-or-less been realized:

Love-of-Honor.....

[outright] Despotism, ...meaning that Rule-by-Virtue is now a] *karmically-feasible*. Don’t laugh; the next step is b] *economically-feasible*, and the Americans had something like that going in the 1940’s. No kidding. Look it up, scratch it; see if you can tear it up. You can’t. Next is simply politics-- a.k.a. c] *political theory & economy*. Did America used to be a pioneer at that? The 1st half of America was always state of the art [out front] at that (from c.1620-to-c.1820)⁵¹⁶, until some guy called Montesquieu (i.e. the intellectual father of the US constitution) and his American translator Jefferson (i.e. the political revolution of 1800)⁵¹⁷ set the bar so high that the subsequent 200 years of political theory & economy (when unplugged from the Wizard of Oz) would seem little more than scaffolding (at realizing the old-classic objective).

The (international) Brotherhood and Montesquieu’s Spirit of Laws arose at the same time, in the same places, and for the same reasons. With the tenacity of Washington, the brilliance of Franklin, and pretty much anybody who was somebody in France, they defeated the British Empire and won a large playground or two for Montesquieu & Jefferson’s learned theories and ideas. The Empire of ‘Love-of-Honor’ wasted little time in striking back, however, as if to remind both dreamers, c.1814, that virtue (unlike Jefferson’s war-time currency schemes) cannot be constituted overnight. And over the next 2 centuries (c.1820-c.2020) it would be (Roman temple-esque) banks and ‘central banks’, later joined by national and international Intelligence Communities (the 20th & 21st century successors to the 18th & 19th century Brotherhood) that called the shots in the UK-USA Empires and Western Civ.-- underscoring perhaps both material and intellectual pre-requisites, for any triumph of ‘Rule-by-Virtue’ over (the same old/trite) ‘Rule-by-Love-of-Honor’-type stuff. See also “Teleology”, “Design”, “Adolescence of Mankind”, App.C: “1-2-3”.

2) “The deeper point [in, f.e., the contemporary USA] is that there *is no* [formal] entity that designs a social order and freely chooses [intermediates] between public and private law” (Pistor, 2020b).

See also “Secrecy, Cult of”, ← “Sovereignty”, ← “Constitution, US (of 1787-91)”; “Politics” [sneaky].

[‘Where’s my pension fund?’ See also “Pension funds”, “Military-Executive-Corprocracy (MEC)”.]

⁵¹⁵ Prereq.: basic familiarity with Montesquieu’s governing trichotomy of political regimes. See also “Montesquieu, Baron de”.

⁵¹⁶ Basically (a consistently pioneering) Mayflower Compact-to-Jeffersonian era.

⁵¹⁷ “At the core of Jefferson’s political thought was suspicion of political power; his belief in an eternal struggle between the power of government and the liberty of citizens-- an unequal struggle in which all the advantages lie on the side of power.”- James H. Read’s *Power versus Liberty: Madison, Hamilton, Wilson, and Jefferson* (2000, 120). See also “Jefferson, Thomas (1743-1826)”.

Constitution, US (of 1787-91)- (theory: Montesquieu; practice: Gouverneur Morris⁵¹⁸; secretary: Madison; i.e. 'Montesquieu's fruit')

Rule 1: Article I, Section 9, Clause 7 of the US Constitution:

No Money shall be drawn from the Treasury but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time. See also "Black Budget (US)" [FASAB-56].

I.e. "Guard with jealous attention the public liberty. Suspect every one who approaches that jewel."

- Patrick Henry, to the Virginia Ratifying Convention (June 5, 1788)

1) Even in 1779, "[m]any in Congress thought that the West was already filling up with adventurers, bandits, and fugitives from the law, and [that] the only way to discipline and civilize them was to first tie them up with industry and property, in order to make the 'virtuous', that all-purpose measure of a true republican society" (Adams, 2008, 119). See also "Montesquieu" [by virtue].

2) Specifically who exactly were the most-often cited 'European political writers' in America "between 1760 and 1805" (Lutz, 1984, 189)?

- a. St. Paul (Biblical) 9.00%
- b. Montesquieu⁵¹⁹ (Enlightenment) 8.30% ; see also "Montesquieu"
- c. William Blackstone⁵²⁰ (Common Law) 7.90% ; see also "Common law"
- d. John Locke (Whig Philosopher) 2.90% ; see also "Natural law"
- e. David Hume (Enlightenment) 2.70% (Ibid); see also "Hume, David".

These quantitative results are somewhat-to-substantially different from the (mid-20thc) "'orthodox' view...[which] held that John Locke's ideas dominated [18thc] American political thought, until Thomas Jefferson introduced the republican thought of the English Civil War authors [a.k.a. "the radical English Whigs"] during the post-[Articles of] Confederation period" (Lutz, 1984, 189). See also "United States, the".

3) One of-- if not the-- first to publicly call for "a supreme power" to "regulate and govern" was then-General George Washington, in his "Circular to the States" of June 1783. Gen. Washington's first known (fully operational...and lasting) *brain trust* (a.k.a. inner circle), from the war days (c.1777-), was a triumvirate of himself and the two 20-something wunderkinds, *Gouverneur Morris* and *Alexander Hamilton* (who were themselves subsequent lifer best friends, in addition to always being among those closest to Washington). They all understood that the key parts of bringing 'order' (to the worsening economic chaos that Robert & Gouverneur Morris⁵²¹ had been dealing with for years) was to ensure that **creditors got paid**. Perma-student

⁵¹⁸ Although all collaborators in (what might be called) the 'gang of 5' (Washington & his secretary Madison, Gouverneur, Hamilton, and Robert Morris [then very much with his Philadelphia neighbor Ben Franklin]) conspired closely at Philadelphia (and didn't disagree on much), GM stood out as being fully "ready to make the gamble that the people were, in the words of his Preamble, prepared 'to form a more perfect union'. It was a calculated risk that he was ready to take.... When [early on] a number of the exhausted delegates, including Hamilton, were prepared to give up and abandon the whole experiment of building a nation, Morris was ready.... [nor did he] hesitate to remind his colleagues that they were [also] representatives not just of America, but 'of the whole human race'" (Adams, 2008, xii). See also "Morris, Gouverneur (1752-1816)", "Founding fathers", "Civil (National) Identity".

⁵¹⁹ After the convention, the 1787-88 (so-called) Federal Papers publicly argued for state legislatures to ratify the Philadelphia plan; primarily "[d]rawing on Montesquieu's theories and John Adam's [more recent] *Thoughts on Government*" [1776] (Henretta, at al, 2018, 198).

⁵²⁰ Blackstone (1723-80), the Tory Jurist most renown for expressly codifying the English legal system in the latter 1760's (& for the first time since, arguably, the 1200's) did not have much if anything to say about the American *Revolution* of the 1770's. Perhaps it was out of fear. "After the 7 Years War, Blackstone's doctrines [which sold (at least) as well in America as they did in England] made it difficult to finesse the tension that had always existed between the liberties of the colonial periphery and governance from the imperial center...[Blackstone's work enabled] the American colonists...[to make] a strong constitutional case against the [unitarist] imperial reformers in London" (Samuelson, 1996). A century later, 4-time Liberal PM William Gladstone (1809-98) famously remarked that "the American *Constitution* is the most wonderful work ever struck off at a given time by the brain and purpose of man." See also "Revolution, American", "English constitution".

⁵²¹ This is how John Adams spoke of the Superintendents: simply "Mr. Robert Morris & Mr. Gouverneur [sic] Morris" (Adams, 1819). Others sometimes claimed that GM was the de facto "director" (Adams, 2008, 132). What the Morrisses [sic] were doing (and planning to do) was not always simple and direct. (We are, after all, talking about states & nationalism here.) For example, both Gouverneur "and Robert Morris advocated free trade, but argued that British attempts to thwart free trade with America would nevertheless provide a further incentive for American unity, since any such attempts by Britain at monopolizing American trade would drive the former colonies even closer together" (Kirschke, 2005, 330). See also "Civil National Identity".

Madison, who was often in the room with the Morris in Philadelphia for some reason,⁵²² also knew what needed to be done. After the Congress-chartered Bank of North America had come and gone (along with real expectations of repaying the debt to France?), the political solution became decisive: with a strong central government of elite referees/officials, “the competing interests in a large country would avert majority tyranny” (Safire, 2001). Hence the (Roman-like) sanctity of property, contracts, and debt (not to mention rather-indirect [if not to say “supranational”] representation, which was subsequently modified⁵²³)

3b) Madison himself admitted as much, in a speech to the US House of Representatives in 1794: “Out of this experience...grew the measures which terminated in the establishment of a government competent to the regulation of our commercial interests and the vindication of our commercial rights’. These [creditor] interests and [commercial] rights, he said, constituted ‘the first objects of the people in the steps taken for establishing the present government’”⁵²⁴ (Schwarz, 2017, 42).

3c) Incorporation details, however were originally left to the states. In Bill of Rights-inclusive constitution of the 1790’s, corporate entities “had none of the rights of the individual... They didn’t qualify for due process.... Corporations were [not automatically] chartered and [were only] allowed to operate by the states. If a corporation, in the eyes of a *state legislature*, violated a basic trust by harming the people, [or] committing offenses against the citizenry, the legislature could *summarily* cancel its charter and literally exile it from the state. The corporation had no day in court.... Corporations were...[in no way] granted the rights of citizens in the Constitution... [The constitution of 1787 thus placed, or maintained] double limitation on power...[The c]entral government...[& state governments,⁵²⁵ in addition to] corporations were...[all 3] strapped and shackled... [With the long century of Imperialism, however] just as the federal government has been allowed to expand like an unchecked fungus, so...[too have the banks, and then also] corporate power [in general]” (Rappoport, 2022g). See also “Sovereignty” [Incorporation], “Corporations”, “Imperialism”.

3d) “In most states a lot of the language from the early days, that reflected the subordinate nature of corporations is still on the books. Some of that language...[has been removed by lobbyists]. But we still have the authority, in California and other states, to define the corporations through their charters; we still have the authority to amend the charters; we still have the authority to revoke the charters-- the [basic] language is there. We still have the authority to rewrite the state corporation codes in order to order corporate executives to do what the sovereign people want to do” (Rappoport, 2022g), not just (see also) “Lobbyists”.

4) The Philadelphia convention really didn’t involve a complicated strategy. The Morris has already delivered the Pennsylvania delegation.⁵²⁶ New York was taken for granted, and the other large state, Virginia, would be brought along-- after much debate (minus Jefferson in France)-- with both the prestigious Washington-Madison network and a number of agents. Only the smaller states were likely to reject a competently-presented plan⁵²⁷, and they could be effectively bargained with, given the big negotiating card of the (Montesquieu’s Romanesque) “Senate” idea. See also “Separation of Powers”.

⁵²² Madison was a Virginia delegate to the (mostly Philadelphia-based) Congress of the Confederation from Mar. 1781 through Oct. 1783, and then also from Nov. 1786 to the end of Oct. 1787. See also “Articles of Confederation”, “Madison, James (1751-1836)”.

⁵²³ See also “‘Democracy’” [Dorr’s rebellion (c.1840)].

⁵²⁴ It’s no secret anymore, okay? Prof. Holton jumps the shark: <https://www.youtube.com/watch?v=1dFF5Qsg7mM> (Holton, 2013, mn.56). See also “Federal Reserve audit”, “Federal Accounting Standards” [FASAB-56].

⁵²⁵ “Most of all, they were obsessed with reining in the states.”- <https://www.mountvernon.org/george-washington/constitutional-convention/washingtons-constitution/>; i.e. from issuing their own money-currency, via *unicameral* (i.e. vox pop/farmer-controlled) legislatures (Holton, 2013). ...which were, by that time, starting to issue their own currencies. See also “Sovereignty” [monetary].

⁵²⁶ Robert Morris biographer Charles Rappleye list RM (and hence also GM) as “[t]he [mid-decade] leader[s] of a faction that included [RM’s neighbor] Benjamin Franklin, [GM’s best friend] Alexander Hamilton, James Madison, and Washington” (with whom both Morris’ had been on intimate terms, for a decade) (Rappleye, 2010).

⁵²⁷ The so-called Virginia Plan was actually an equal collaboration between (the Franklin & Morris-led) PA. delegation and the (Washington-Madison-led) VA. delegation. It “became known as the Virginia Plan [simply] because Virginia governor Edmund Randolph offered...[what Madison had actually drafted] at the Convention. Little is known about these [secret] meetings, but letters from those present suggest [that] Washington attended each one and supported the outcome...[To at least] one Virginian... [it looked like] nothing less than a revolution in government was brewing. ‘The most prevalent Idea’, he wrote, ‘seems to be a total Alteration [sic] of the present federal System and substituting a great National Council...’”- <https://www.mountvernon.org/george-washington/constitutional-convention/washingtons-constitution/>

4) Simple, however, does not necessarily mean easy. “Washington was one of the few delegates to arrive on time in Philadelphia. He went to the State House at the appointed hour on May 14 to find only [co-conspirators] Madison and the Pennsylvania representatives⁵²⁸ present.... it took 10 more days to obtain a quorum.... [And] After heatedly debating and narrowly defeating a motion [in the first days] to limit the proceedings to [only] amending the Articles of Confederation, the Convention accepted the Virginia Plan as the starting point” for large state--small state negotiations, that would then drag on for months-- and years.

- <https://www.mountvernon.org/george-washington/constitutional-convention/washingtons-constitution/>

5) So who actually spoke-- and also formally wrote⁵²⁹-- the most at the Philadelphia convention in the summer of 1787? Fmr. Dep. Superintendent of Finance of the US (and financier Robert Morris' principle lawyer) Gouverneur Morris (1752-1816) was much more than ‘the penman of the constitution’ and chairman of its “Committee of Style and Arrangement” (and also the sole revisor of its famous Preamble). Gouverneur, who rejected his manorial estate & inheritance in order to be a key financial analyst and spy for the Revolution, was a core member of Gen. Washington’s brain trust (along with Alexander Hamilton) by 1777-78, co-wrote the plan for America’s first (national/central) Bank-- the Bank of North America-- in 1780-81, and was then the young man (not Hamilton) who was mostly running (such as it could be run) America’s finance and monetary details, as Deputy Superintendent from 1781-84. By then Gouverneur was a permanent Pennsylvanian, and business (to include the business of politics) partner with (one of his closest friends) Robert Morris; the other two were (fellow ‘band of 5’ers) Alexander Hamilton & George Washington. See also “Founding fathers” (‘2nd tier’, those ones born in the 2nd half of the 18thc).

5b) James Madison (1751-1836), a greenhorn perma-student in the 1770’s-- and still dependent upon his parents, c.1780, (prior to his **teaming up with, yes, the Morris**es in Philadelphia)⁵³⁰-- was merely its Secretary⁵³¹ or midwife; not the plan’s progenitor. Madison’s convention notes on Morris: “He came here as a Representative of America; he flattered himself he came here in some degree as a Representative of the whole human race; for the whole human race will be affected by the proceedings of this Convention. He wished gentlemen to extend their views beyond the present moment of time; beyond the narrow limits of place from which they derive their political origin” (Madison, July 5, 1787).

[bold & clear. See also “Estates, 3”, → “Separation of Powers”, → App.C:”1-2-3”.]

[It is not impossible to remove the “state capture” of the const. of 1787 by “corporations”⁵³²]

6) Sovereignty & accountability: Why is (even) Article 1 no longer really holding up (in the 21stc)? Concern #1 for the Pennsylvania-Virginia gang that showed up on time and eventually got their way at Philadelphia was not accountable sovereignty. It was, simply the (then clear & present) danger of states issuing paper currency (which would have made the states effectively sovereign instead of the ‘federal’ government). The

⁵²⁸ When the convention finally did convene, Washington “supervised the deliberations and called on members when they spoke... One day after the Convention committed itself to secrecy, the Virginia delegation dropped its bombshell. Having participated in preparing it, Washington clearly **conspired** in the timing.... [and] sided with his delegation-- everyone there knew that. In doing so, he helped to hijack the Convention. Congress had endorsed this gathering as a meeting to draft amendments to the Articles... Washington’s [a.k.a. ‘Madison’s] Virginia [Plan] instead proposed using it to scrap the existing government.”- <https://www.mountvernon.org/george-washington/constitutional-convention/washingtons-constitution/>

⁵²⁹ James Madison’s detailed notes notwithstanding

⁵³⁰ Recent scholarship has confirmed that “” (Schwartz & Mikhail, 2020, 2033).

⁵³¹ The scholarly Madison-- unlike 35 of the 55 delegates (such as Morris & Hamilton)-- was also not a lawyer. See also “Founding fathers”.

⁵³² Revoking a corporation’s charter “is a powerful tool in the hands of state officials. Step 1 in many states will be disqualifying these corporations from receiving **depository** [i.e. the d.b.t. for ‘banking’] business or contracts from the state governments. States [today] have banks and...[NBFIs] providing bank services, as well as custodian and asset management functions. They also have [non-finance sector] corporations providing a wide variety of products and services. So before they pull [a corporate] license to operate in the state, they [should] have to [simply] remove [the corporation] from state operations & access to state data and employees.”- Catherine Austin Fitts (Rappoport, 2022g). See also “Fascism” [conflict of interest].

primary objective was how to corral the states' oncoming sovereignty-- in spite of the fact that the state constitutions were far more democratically accountable to the citizenry than what the constitutional convention was offering, via the Virginia Plan and other large states' designs. The British still posed a real external military threat, creditors had to have confidence that their contracts would be paid-in-full, taxes had to be taken seriously, and-- *if all went well*-- an "Empire" (as Washington was not shy about calling his intentions, even 4 years before the convention) would be established (informally of course, not de jure) upon crossing the Alleghenies and plowing up the Ohio Valley & Northwest territories, with simply more people (not going politically astray) than any other power could show up with.

6b) This left James Madison (after G. Morris declined the duty of being [ultra-centralist] Alexander Hamilton's debate partner), in 'Federalist' 10 and 46, to make a fool of himself a few times, arguing, that "" . "" (Madison,). See also "Monetization & entropization", "Sovereignty", "Parties, political".

6c) Monetary sovereignty was another black hole from the Philadelphia convention. [The Constitution is virtually silent on the 4th \('credit money'\) branch](#) of governance. [They just left it up to...](#) (the City of London) [and](#) (the Morrises, and) [Hamilton...and](#) (since the constitution is so hard to change) [his successors](#) (Frankfurt banking family migrants Jacob [Schiff and](#) ([his brother-in-law] Federal Reserve System mastermind Paul) [Warburg](#). See also "Sovereignty, monetary".

6d) Was Patrick Henry the Philadelphia convention's main expert on sovereignty (design)?

"Let Mr. Madison tell me when did liberty ever exist when the sword and the purse were given up from the people? Unless a miracle shall interpose, no nation ever did, nor ever can retain its liberty after the loss of the sword and the purse."- Patrick Henry, 1788 (Wirt, 1817, 285).

7) A clearly understood constitution is better than not having a clearly understood constitution. One should not, however, mythologize the US constitution of 1787 as eternally sacred. Its principle creator-forger, revolutionary-monetarist Gouverneur Morris, was surprised that it lasted much longer than a decade. See also "Morris, Gouverneur (1752-1816)".

7b) The political 'parties-that-be' could have tried to forge a new one after it had been suspended in the 1860's, but of course there was only 1 party then, and the mood was not exactly felicitous. So it was just to be a 'matter of time' (i.e. typically 1 or 2 [see also "debt cycles"]) until the constitution of 1787's patched-up sovereignty gaps manifested (again). See also "Sovereignty", "Corporations (and corporate 'personhood')", "Pilgrim Society", "Bankmoney regime", "UKUSA Agreement", "Imperialism, American", "Intelligence Community", "Provocation Op."

[TheSpiritof87]

Constitutions & Conventions- (formal: 'nomocracy'; i.e. balancing 'political liberty' [participating in governance] with 'civil liberty' [the right to be left alone], in the forging of foundational or 'basic law'; not to be confused with 'legalism' or 'teleocracy'; antith.: [the fleetingness of] 'politically correct')

"The idea-- and more important, the sentiment-- of the American people as a 'covenanting community' comes from Calvinism. The idea of this community being governed by elected representatives comes not from memories of a feudal parliament (as in Europe), but from [1600's] Puritanism and [1700's] Presbyterianism. The conviction that all men have equal access to God, that freedom of conscience has divine sanction, that a large measure of individual liberty is consonant with a moral life-- all are derived from the impulse toward spiritual individualism of [the] various dissenting and pietist sects..." (Kristol, 1987, 6). See also "Protestantism".

1) Constitutions (as nomocratic-meaningful⁵³⁴ common ground) "are supposed to aid the moving of conflict from the streets and battlefields to arenas of...(persuasion and) compromise, and not to produce peace per se" (Lutz, 2006, 12); they are "to marry [political] power with [procedural] justice" (Lutz, 17).

⁵³³ An old term for a new (or at least timeless) phenomenon? See also "[Peace Window \(& great compromise\), the](#)" [social security]. "Black budget (US)", "[Military-Executive-Corporacy \(MEC\)](#)".

⁵³⁴ "Nomocratic regimes are more modest. Rather than attempting to alter their societies, these regimes seek to [serve and] protect the traditional liberties and...norms of their citizens, their '*nomos*' [or common law]. Whereas the teleocratic [or overreaching 'legalist'] regime is universal and philosophic [sometimes a.k.a. 'liberal'-imperial], its nomocratic counterpart is local and historical [sometime a.k.a. 'conservative']-

2) In other words, constitutions “seek to constrain public power by elevating individual and collective aspirations to constitutional rights, or by dividing power amongst different branches of government, or between a federation’s center and its constituent parts” (Pistor, 2020b). See also “Federalism”.

2b) ...Perhaps in theory, but as ‘a general rule, in *constitutional* states liberty is a [social contract]⁵³⁵ compensation for the heaviness of taxation, and in *despotic* states the equivalent for [a republic’s/timarchy’s] liberty is the lightness of taxation’.- US constitution (of 1787) de facto founding father, Baron de Montesquieu, 1748. Rhetoric aside, “the reality of constitutionalism is [or at least has been] that political power trumps culture”⁵³⁶ (Lutz, 2006, 18). See also “Freedom continuum”, → “Legalism,” → App.C: “1-2-3”.

2c) Carroll Quigley recognized this. “I can’t get any [apparently vested] constitutional lawyer to agree with me. It’s perfectly obvious in the Constitution [however] that if the 3 branches of government couldn’t agree, [then] ‘don’t do it. That was [what] the theory was...[Now, however] we [have to] have somebody supreme: the court will make the ultimate decision, and so forth” (Quigley, 1976c-pt.3, mn.407); and all power plays wind up being won by (you guessed it) the [ever-expanding] Executive. See also “Veblen, Thorstein” [.vested], “Deep State”, → “Monetization”, → “COVID”.

3) Constitutions, however imperfect, matter and should be understood because; in the words of one contemporary expert it “is quite possible that once a country writes down a set of rules, even...[if] they are merely window dressing, these rules over time create among the people [who understand them]⁵³⁷ an expectation of reasonable [state] compliance that amounts to a self-fulfilling prophecy (Lutz, 2006, 5), with the development of democratic republics⁵³⁸ following “the curve for the number of countries with [simply] written constitutions... [approx.] a half-century lag” (Lutz, 9). See also “Lisbon Treaty (E.U. ‘Constitution’)”.

4) In addition to the slavery thing; the 1787 constitution “left out completely...[not just Monetary and Incorporation power specifics, but also] the Administrative power.⁵³⁹ The result is that ever since [then] the 3 branches of government have been struggling to decide which of them will control the administrative power...[Hence the] growth of political parties was necessary [just] to establish relationships between the 3 branches” (Quigley, 1976c-pt.3, mn.359). See also “Sovereignty” [8 aspects], “Parties, political”.

5) “One of the reasons you see a push for a constitutional convention is they want to tear up the [current] constitution before everybody gets smart enough to say ‘*Hey, wait a minute. We want to enforce the constitution...with respect to our financial management*” (Fitts, 2017g, mn.24). “They’re gonna try hard to shred the constitution” (Fitts, 2017n2, mn.21); because “that’s what they have to do to keep all of the

federal].- <http://dailyquiddity.blogspot.com/2015/05/nomocratic-versus-teleocratic.html> . See also “Lisbon Treaty (E.U. ‘Constitution’)” [400 pages vis-à-vis 26 pages], “Federalism” & “Unitarism”.

⁵³⁵ “There are a lot of things you can’t do in America.... It [US constitution] is a spiritual covenant, first and foremost, between all the people in America” (Fitts, 2020k, mn.26).

⁵³⁶ Judicial review, however, is an overrated construct in changing culture, and the “supreme court and constitutional courts have not really been the major source of political change” since the 1940’s; even though the common “use of dissenting opinions.... is a way of floating [political] trial balloons” (Lutz, 2006, 18). See also “Technocrats” [.overrated]. Quigley, in the mid-20thc, saw “judicial supremacy” as “simply...[taking] over the undemocratic feature of the English system, which requires the citizen to defend his rights in courts of law” (Quigley, 1972b); sometimes a.k.a. ‘the King’s Bench’. See also “Legalism”.

⁵³⁷ See also “Lisbon Treaty (E.U. ‘Constitution’)” (with its 400 pages), vis-à-vis the 26-page US constitution. Nonetheless, the German constitution (clocking in at [not totally unreasonable] 135 pages) “has been widely copied... [and] has served as a a major model” (Lutz, 2006, 9). Brevity matters because constitutions “need to be...[understood] as instruments for achieving general fairness and justice...[rather] than as instruments for...pursuing specific...policies” (Lutz, 11). See also “English constitution, the”.

⁵³⁸ Prof. Lutz’s highest unambiguous hurdle for attaining (what he calls) “constitutional democracy” [i.e. democratic republic] status is having “at least one peaceful transfer of power between competitive parties, or...significantly different...coalitions... [that is] peacefully accepted” (Lutz, 2006, 5). The achievement of such status over the 20th century has been much more likely with “presidential systems” than with “parliamentary systems”, because many “of the elected presidents have [relatively] minimal powers... [but they have nonetheless] reduced the ability of parliaments to [unilaterally] appoint officials or to revise the constitution without... some other body... [And an additional benefit of this] increase in the separation of powers has [also] been...[the] emergence of more independent supreme or constitutional courts” (Lutz, 2006, 11).

⁵³⁹ The “Administrative power and the Incorporating power...are vital in any government [that calls itself ‘sovereign’]. They are not allotted to anyone in the Constitution, certainly not to the Federal Government” (Quigley, 1972b). Also making PotUS both “the head of the state as well as head of the [ever-expanding] executive branch” (Quigley, mn.404); seems myopic and inexorably prone to (see also) “Propaganda”, & “Lying”, if not also (eventually) “Charismatic Authority (CHA) & Charismatic Dependency” from the Executive bloot.

money that they've stolen through the *financial coup d'etat*" (Fitts, 2017q, mn.28). See also "Federal Accounting Standards Advisory Board (FASAB)".

6) "If we can't enforce the constitution in the United States, it doesn't matter which asset you hold your holdings in; you can be stripped of all of them" (Fitts, 2017n2, mn.31); because...

7) "Right now the constitution represents a covenant that we all share and agree to. And the reality is [that] if you tear it down, there will be no new agreement.... What there will be is chaos; and... the ability of the people who stole all their money to buy everything for pennies on the dollar" (Fitts, 2017u, mn.122). See also "Parties, political"; "World Par Economy".

8) "Right now the public is not smart enough for that [convention]. We have dumbed them down and fattened them up for 25 years, 50 years actually" (Steele, 2018, mn.29). See also "Dumb-downing".

9) "This year we saw the destruction of the American constitution" (Kennedy, 2021, mn.21). See also "NSA" [Bill of Rights].

10) The monetary-circulatory system is obviously key to restoring/improving US constitutionality, and does not require a convention (as it did not go into much detail in the first place). See also "Revolving Door, the", "Governance".

10b) The "men who framed the [1787] Constitution... gave us a pattern of government under which we can attain permanent freedom and prosperity. Do we have the vision and unselfishness to perpetuate the United States?" (Wilken, 1947, xiv). See also "United States, the", "American System".

10c) Nonetheless, imperialism and constitutionality (Americans must know by now) should not coexist in the 21st century. See also "Dutch Disease".

11) Constitution Updates: Feb. 2022: "We live on a planet where the governance system is [mostly] secret... We know lots of power lines. I would suggest one of the most powerful lines on the planet is essentially in the financial system...the central bankers, the insurance industry, and the pools of equity.... That's what we're grappling with; the governance system is...broken.... I'm watching a control [foreclosure] grid snap into place.... [I]t works like a *covert social credit system*⁵⁴⁰...People...know [that (the matrix)] the financial line and the surveillance mind control line and the covert operations lines are integrated and connected, but it hasn't [yet] been made overt. And one of the reasons it hasn't been made overt is that they haven't been able to bring the constitutions down...; [the US constitution is still] very significant" (Fitts, 2022, mn.22; mn.100-102; mn.108). See also "United States, the", "Secrecy, Cult of".

See also "Montesquieu" [not Madison], "Franklin, Benjamin (1706-1790)" [not Hamilton].

Consumer credit (G.19)- (bank loans that aren't for real estate)

1) As of year-end 2018, the main subcategories are (Federal Reserve Board, 2019):

- a) "revolving credit"- \$1.1 trillion
- b) "personal loans" (2 yrs.)- \$10.3 billion
- c) "new car loans"- \$10.1 billion

See also "Credit cards".

Consumer economy- 1) Merchandise was traditionally exempt from Roman law, and "[g]enerally merchandise did not become a taxable asset until the 17th century" (Schneider, 1996, 576).

2) "As part of the *postindustrial* service economy, employees and workers are referred to as 'consumers' and proclaimed king, rather than the exploited factor⁵⁴¹ of production. But it is the advertisers and mass-market producers who occupy the commanding position in shaping consumer tastes. Television and radio as well as the printed media have been turned into advertising vehicles and only incidentally for the news or culture. Poll-takers have found that the most open to being influenced are youth, up to the age of 25; after that age, they tend to become cynical..." (Hudson, 2013). See also "Consumerism (philosophy)", "Cultural Calendar".

⁵⁴⁰ "80% of the Western social credit system is already in place and operating on an invisible or covert basis" (Fitts, 2022c, mn.9). See also "National Security Agency", "Social Credit System (SCS)".

⁵⁴¹ "'Consumer behavior is largely like water. We kind of take the path [that is placed] before us'," said Mariel Beasley, co-director of the Common Cents Lab at Duke University" (Wack, 2018). See also Jackson, 2010, mn.145.

3) However, with the 3rd Industrial Revolution driving down labor costs to near zero, “the emerging zero marginal cost economy is...[changing] our notion of the economic process. The old paradigm of owners & workers and of sellers & consumers is beginning to break down. Consumers are becoming their own producers... *Prosumers* will increasingly be able to produce, consume, and share their own goods & services... on the collaborative commons at diminishing marginal costs... [promising] more intense psychic rewards than traditional employment in the capitalist marketplace” (Rifkin, 2014). See also “Savings rate”, “Debt saturation”.

Consumer Price Index (CPI)- see “Inflation/Deflation”.

Contempt- see “Narcissism”, “Political Science”.

Continuity of Government (CoG)- see “Deep State”.

Continuums of Monetary Reform- (in addition to the most basic q. of ‘what is used for money?’) a simple 2x2 chart of two either-or continuums:

Private (control of quantity) vs. Public (control of quantity)
 [_____]

b) Mechanical (distribution of new money) vs. Discretionary (distribution of new money)
 [_____]

Contractors, government- See “**Military-Executive-Corpocracy (MEC)**”, “CIA”, “Secrecy, Cult of”.

Control fraud- See “Accounting Control Fraud”, “Duopoly (political management)”.

Controlled opposition- See “‘Opposition’, controlled”, “Hegelian”.

Control systems- “Many of the misunderstandings in the financial community...[are because] they don’t understand [the common sense of] how control works, and you have to understand control to understand how anything in the financial markets works” (Fitts, 2017r, mn.42). Controls in the 21st century are increasingly *cognitive* (the attitudinal shaping of constructs; often relying on repetition, via media control), as well as the more ‘old school’ herding tactics of *bribery* (carrots)⁵⁴² and *blackmail* (sticks), in addition to threatening occurrences-incidents and/or outright violence. A basic trichotomy:

UNITARY system- (synon. ‘dictatorship’, ‘authoritarian’) BINARY system- (synon. ‘free’, ‘democratic’) Finance, Politics & finance are one; no constitutional firewall. See also “China”. like ‘the’ Church before it, is made constitutionally separate from ‘those [party] politicians’⁵⁴³...

BINARY-A- the church & financial class (Catholics & Jews) formal dominance/control over southern & central Europe,⁵⁴⁴ and their former colonies in the W. hemisphere.

BINARY-B- church-cum-Intelligence Community & financial class (Protestants & Jews) informal (*de facto*) dominance/control of the political-‘chattering’ classes of the UK-USA-

⁵⁴² *Bribery* (direct or [increasingly] indirect) has obviously been a norm as old as money (and its scarcity) itself. <https://www.popmatters.com/scfv-season-3-dvd-2496225131.html> [“The Adventures of Shake & Bake” is n/a (2019)], and is not always distinct from ‘blackmail’. “When a political party, or a public official, accepts of their [large scale] financial assistance, [then] they are in their toils, and must obey, or be destroyed by [the] exposure” of the bribery (Loucks, 1916, 287). See also “Corruption”.

⁵⁴³ ...a.k.a. ‘We The People’. Most of the Unitary states are (de facto) run by the Binaries (via monetary-economic and other forms of indirect imperialism) these days [and particularly since World War Two], so the Binaries have been rather full of themselves of late, and hence within a crisis brought about by hubris. See also “Financial Crisis (of 2008-)”, “‘COVID’”.

⁵⁴⁴ The Holy Roman Empire-like status of the European Union this decade was exemplified, rather extremely, by the sudden replacement of elected prime ministers in both Greece and Italy with unelected bank bureaucrats in November, 2011 (Still, 2011, mn.10-15). See also “Lisbon Treaty (E.U. ‘Constitution’)”, “European Monetary Union (EMU)”.

Anglosphere, based primarily on cognitive ring-fencing of the public/dialog space with buzzwords.⁵⁴⁵

See also “Colonialism”, “Conspiracy theorist”, “Hegelian dialectic”, “Economics”, “Conditioning”, “Constitutions”.

[Ring-fencing... relies on the social psychology of cognitive dissonance.]

‘Corporate Governance’- (concerning the contractual governance of Boards & Board Systems, i.e. pushing towards ‘outside investors-over-management’; a term also prob. intended to be confused or conflated with [that subject which does not exist] societal management or ‘governance’-by-corporations in general [sometimes a.k.a. “State capture”]) See also “Owners, the”, “Boards/Board Systems”, App.C: “1-2-3”. The “time has come for a new model of shareholder engagement.... from one predominantly focused on proxy voting towards an approach based on engagement with companies. The growth of indexing demands that we now take this function to a new level. Reflecting the growing importance of investment stewardship”- BlackRock CEO Larry Fink, 2018. See also “Big 3 (Asset managers)”.

1) a movement by outside investors (a.k.a. ‘capitalists’ [however distant or anonymous]) to strengthen their position on corporate boards, vis-a-vis the (local-national) management (& regulation). “Bond markets would clearly benefit from reforms in corporate governance”, which forwards the interests “of the holders of corporate bonds” (United Nations, et al, 2002, 18). See also “Globalism”, “Bonds”, “Owners, the”.

See also “Financialization”, “Governance”, “Corporations (and corporate ‘personhood’)”, “Conspiracy theorist”.

Corporate Law- “the F.I.RE. sector: Finance, Insurance and Real Estate... also should include the legal sector, because most law these days is *corporate law* to defend, protect or even facilitate financial fraud and monopolies.... Interest, fees, commissions and penalties are the result of standardized legal privileges. Economists call these returns '*economic rents*' because unlike profits, they are independent of the cost of production. Their 'cost' consists of buying [political] privileges, not making tangible capital investment.... A privilege is literally a '*private law*' (from the Latin *legis*, law), a monopoly right to impose a tollbooth.... These financial returns have a different dynamic from commercial and industrial profits. They are made off the economy, not part of the economy’s physical and technological growth and capital formation” (Hudson, 2012g). See also “Corporations”, “Estates, 3”, “Privilege”, “F.I.RE. sector”.

Corporate Media Cartel/“6 Sisters”- (synon. ‘the media’, ‘mainstream [analog] media’, ‘MSM’; a.k.a. ‘legacy media’, ‘dinosaur media’, ‘Mockingbird media’, ‘Medusa’⁵⁴⁶ [mythology]; i.e. the ‘controlled media’, birdseed) **Globalists have invested a huge amount of labor to control the education and media system and keep people ignorant.** See also “Dumb-downing”.

“[W]ithout an informed and free press, there cannot be an enlightened people.”

- Justice Potter Stewart, (*New York Times Co. v. United States*, 1971).

1) “...major media are themselves a red flag.... It’s all about the invention or creation of reality. The news is a concocted reality, basically. That’s not to say that it’s all lies all the time, but the motivating force behind it is the invention of a *pretended* reality, which becomes a *real* reality if people buy in... and that is

⁵⁴⁵ ...as demonstrated during this BBC panel (Wolf, 2017, from mn.110), by The City’s cognitive-linguistic dominance of the Parliament, represented by Martin Wolf and Ed Balls, respectively.

⁵⁴⁶ “...even though it was dead, the head still had the potential to turn someone [who was overly ethnicist or otherwise weak-minded] into stone.” See also “National Identity/Nationalism”.

the major purpose of major media...to sell that reality. It's art. It's like a [major Hollywood production] movie. It's like a painting. It's like a stage play. You walk into a theater and you sit down. Every student who's ever studied drama is told, right at the beginning, that there is this phrase, called '*the suspension of disbelief*', this is what the audience [ideally⁵⁴⁷] experiences in the theater.... If the actors are good enough and the play is good enough, you believe in what you are seeing and hearing, otherwise you would get up and walk out.... How do they get you... to buy this reality? Well one of the ways is they introduce you to important people. '*Here is a general that we spoke with...*', '*the President said...*' '*Congressman so-and-so said...*' '*Professor of Neurology & Neuro-psychiatry at such-and-so hospital said...*'... So they parade out many, many people who are helping them to create this artform called media-reality. Now it isn't as if everybody's sitting around a table going '*What are we going to lie about today?....*' They aren't having discussions about that. They are *inside* it. They accept it. They-- to one degree or another-- *believe* it. They have been indoctrinated to such a degree, and their lives and careers depend on it to such a degree, that they become programmed and they don't even think about it. So, for example... a new epidemic is announced, that is threatening the entire planet, and I *know* that they're painting false reality, because I've been through this with every 'epidemic' since 1987. I know how they do it; how they put one brick on top of another.... the people who are doing it, you see-- and here's where some people find it hard to accept-- because *we're not like those people*. Those people can buy into a calculated reality, and then develop amnesia about the fact that they bought it, for their own motives-- career, prestige, money, fear... They become the foot soldiers, the pawns, the lieutenants selling this [scripted] reality.... Inside themselves, in their psyche, they are fractured. That's what you have to know. You are dealing with a person whose consciousness is fractured, and they are talking to you from one space inside that consciousness. And that's where they live [end mn.1:14].... [E]ssentially all these foot soldiers and lieutenants⁵⁴⁸ who are helping to build the media reality are that way. They have this role, you could say, in the stage play. They know what their role is. They've been cast in it. They've accepted it. It gives them benefits; and they block everything else out" (Rappoport, 2015, mn.109-117). "Part of seeing is perception. Perception is not entirely divorced from imagination.... If people have no connection to their imagination, then they're not going to be able to see behind these false works of art-- these false realities that have been created for them.... I'm not really seeing the painting unless I'm also involved in my imagination with it... [re] creating⁵⁴⁹ the painting that has already been created... If I'm not doing that, then...I'm going to have a very boring, unpleasant experience and I'm gonna walk out, and I'm gonna say '*that was nothing*'...same with food, same with life, same with everything" (Rappoport, mn.123-125). 1b) (shorter version of the above) <https://blog.nomorefakenews.com/2021/10/23/cia-news-and-the-matrix-revealed> . See also "Mockingbird".

2) The creation of the Reuters news wire media empire in the 1860's "marks the critical point in history when Jewish moguls begin to [first] dominate the press of Europe and the US" (King, 2015, 95). *The New York Times*⁵⁵⁰ joined the club in 1896. "For 117 years, America's most influential...[paper was] in the

⁵⁴⁷ Bad acting (or incredulous script), of course, awakens one from the trance.

⁵⁴⁸ Both Rappoport and Meadors are southern Californians. Outsiders sometimes have a less charitable, and more hierarchical, view of 21st century 'talent industry' management: https://www.youtube.com/watch?v=_574Rxxez2c (Moore, 2015). See also "Cultural Calendar".

⁵⁴⁹ "If you're not creating your own reality, then you then you are accepting the reality that's being invented for you... I mean, that's the way it is" (Rappoport, 2015, mn.129). See also "Boards/Board Systems", "Mockingbird".

⁵⁵⁰ It is common knowledge that even house intellectuals of the latter 20th century such as-- most famously-- Noam Chomsky were shadow-banned (semi-muzzled) by most of the 'blue-chips' of the CMC. For example, *New York Times* executive editor "Abe Rosenthal had...a sort of unwritten rule that...Chomsky-- certainly one of the most important intellectuals in the country-- his name was just not gonna appear in the *New York Times* at all" (Hedges, 2018, mn.16). America's most renown activist for the era adds that: "In my experience, A.M. Rosenthal[']s... Washington bureau reporters would tell me [that after] ...he took over the helm of the...[paper, in 1969] that they would send up stories about our exposes-- about our testimony...[and] litigation, and [that] he basically took them off the table... And then you know when the *Times* doesn't cover the consumer-environmental movement, with the advent of A.M. Rosenthal, then...the network televisions don't cover it, and the *Washington Post* doesn't cover it, because they all look at the *Times* for, you know, what's hot-- what's news..." (Nader, 2018, mn.16-17). See also "Debt cycles", "Mockingbird". According to Chris Hedges, who worked for the *The New York Times* for more than a decade, "the space for reporting on issues that corporate advertisers didn't want reported on" during the A.M. Rosenthal era "was shut down, and remains pretty much shut down" (Hedges, 2018, mn.17). It goes back further than that. See also "USSR" [Malone, mn.5].

hands of the same Zionist-Marxist family. Count on *The Times* to promote big government, Globalism, phony environmentalism, Israel, the Fed, and endless wars” (King, 124), if not unisex school bathrooms. “I had very *horrible* experiences in the Bush [Sr.] administration with the *New York Times*, and then at Hamilton Securities with *Washington Post*; and I just decided they were all completely just...bogus. They had no integrity... I couldn’t do anything with corporate [saluting] media” (Fitts, 2018, mn.36-37). See also “**Military-Executive-Corpocracy (MEC)**”.

3) “Basically...the mainstream media was set up, by the leadership, in coordination with the intelligence agencies, to create and manage an *official reality*” (Fitts, 2017, mn.4-5). Watch any 1940’s newsreel if you doubt this. It was more openly heavy-handed back in the formative era. “I mean [even today] we’ve literally seen commentators say: ‘*Wait a minute. We’re supposed to tell people what to think*’” (Fitts, 2017, mn.5).⁵⁵¹ Like a tapeworm, the corporate media “is injecting a chemical that makes people crave what’s good for the tapeworm and what’s bad for them” (Fitts, 2015b, mn.43). “I decided that I was never to speak to corporate media again...[and] only respond to questions from [real] people” (Fitts, 2017q, mn.16). See also “Russiagate”.

[“The Storyteller”, 1896]

4) The British Crown-Imperialist “Rhodes secret society” (a.k.a. “the Milner Group”) “has controlled *The [London] Times* for more than 50 years [from c.1949], with the exception of the three years 1919-1922” (Quigley, 1981, 5). See also “Fin de Siecle”, “Rhodes-Milner (and Cecil) Group”.

5) “Basically 80% of the French press is bought by bankers and weapon dealers.... [Popular YouTube channels are vanished, and] The bankers have bought all the radio, TV, and of course newspapers; and now they want to have the total control on the media and of course on people” (Jovanovic, 2018, mn.20-21). According to Carrol Quigley, that’s nothing new. See “France (& the EU)”.

5b) According to CIA whistleblower and/or limited hangout Kevin Shipp, what the “CIA does... [and] has been doing... is it will approach journalists, particularly foreign ones, and say ‘*Hey, you want to be a patriot; you want to serve your country?.... Why don’t you work for us and collect intelligence. You’ll be a great American. You’ll be a CIA spy*’”. And the person most of the time gets stars in their eyes, and they say: ‘*Yea, I’ll do it*’⁵⁵². So [then] the CIA makes them sign a secrecy oath, and now they are bound from ever [sic] talking about that again, without facing criminal penalties” (Shipp, 2018b, mn.13); apparently whether ‘the’ CIA in question is French, or American, or perhaps sporting some less revolutionary badge. See also “Currency Wars, the”, “Debt cycles”, “Patri”.

6) Certainly in the post-war (1960’s-’70’s) and larger millennialist era (1980’s-2010’s), the CMC has been about, at root “encouraging citizens to reduce population.... the media is just... ‘*neuro-linguistic programming*’”. It’s [as is so obvious today, simply] *coding your subconscious*” (Atwill, 2016, mn.30).

7) Some years after the Clinton⁵⁵³-Bush radical deregulations, 6 conglomerates-- Time-Warner, News Corp., Disney, Viacom, Comcast, and CBS-- now comprise about 90% of corporate media in the US, down from approx. 50 such companies in 1983. CIA whistleblower Kevin Shipp adds that the big 6 firms’ “boards of directors are tied at the throat financially” with “Shadow Government” military contractors like General Electric (2017, mn.48). “Unnamed sources” and particularly “unnamed intelligence sources--

⁵⁵¹ Independent journalist Greg Hunter, a fm. veteran CMC trooper, adds to this his own personal experience that “The inmates do not run the asylum. I did nothing on ABC and CNN without management [executive] approval” (Fitts, 2017, mn.5).

⁵⁵² <https://www.youtube.com/watch?v=4Hmeo6LAoV0> [‘Tinytown’ (1981)]

⁵⁵³ According to Paul Craig Roberts, it was initially during “the Clinton Administration that 6 firms were allowed to take over ownership of 90% of the... print & broadcast media... [Even though] the American tradition had always been a *diverse* and independent media, with *thousands* of media organizations.... This was not something the government decided it wanted to do. It’s something they did to serve the people who pull the [government’s] strings” (Roberts, 2017d, mn.104-105).

whenever they say that, that means the CIA.... This is kind of the worst kept secret in [company town] Washington. *The Washington Post*... they want to have their sources in the CIA. That's a big deal...[if] you've got a CIA source that's gonna tell you stuff. So they take whatever the CIA gives them. And the CIA makes it clear: 'You report what we're telling you, and if you don't [then] we're cutting you off.... You're not gonna be able to get big stories anymore. You're not gonna sell papers. So you play by our rules'.... which is another form of Operation Mockingbird"⁵⁵⁴ (Shipp, mn.109-110). This sequestering of the 'mainstream' corporate media "has been in place for a couple decades...[now, after being] supposedly terminated in 1976...[But it just] continued as a more voluntary *quid pro quo* [favors] operation, which is what we see today" (Shipp, 2018b, mn.11-12). See also "Jones, Alex".

8) "The American media has never been very good. But it used to have some [competition and] independence. That ended...[c.2000], when President Clinton allowed a few conglomerates to concentrate the media. And now it basically just serves the government's interest. It's a propaganda entity. You might as well call it the Ministry of Propaganda... [because] there are so many things that simply can't be mentioned or debated" (Roberts, 2010, mn.0). Offshoring, for example, "has essentially destroyed the middle class" (see OECD, 2019, 44); "and you can't get any recognition of that" on (supposedly public) air, yet alone "debate about it...[Also] everyone knows now that the invasion of Iraq [in 2003] was based on deception... [and] that there was no basis for that, at least not according to the account we were given by the government. And it's impossible to even *report* [sic] on what experts find out about 9/11" (Roberts, mn.1-2). See also "Middle class", "Dumb-downing".

9) "When you put a group of people who's basic history is to be sycophants. Remember, the basis of journalism is to pander [not ponder]. Once you have pandering within an individual or a group-- it doesn't matter whether you are the New York Times or the Washington Post-- they're compromised.... The press is just an entity [that is] very easily manipulated" (Pieczenik, 2017f, mn.6). See also "Journalism (standards)".

10) If we stop taking world leaders at their word [that they are all for economic betterment] and instead think of neoliberalism as a *political* project, it suddenly looks spectacularly effective. The politicians, CEOs, trade bureaucrats, and so forth who regularly meet at summits like Davos or the G20 may have done a miserable job in creating a world capitalist economy that meets the needs of a majority of the world's inhabitants (let alone produces hope, happiness, security, or meaning), but they have succeeded magnificently in *convincing* the world that capitalism... exactly the *financialized, semifeudal capitalism* we happen to have right now-- is the only viable economic system.... How did they pull it off? The preemptive attitude toward social movements is clearly a part of it; under no conditions can alternatives, or anyone proposing alternatives, be seen to experience success. This helps explain the almost unimaginable investment in 'security systems' of one sort or another: the fact that the United States, which lacks any major rival, spends more on its military and intelligence than it did during the Cold War, along with the almost dazzling accumulation of private security agencies, intelligence agencies, militarized police, guards, and mercenaries. Then there are the propaganda organs, including a massive media industry *that did not even exist before the sixties*" (Graeber, 2013b). See also "Cold War, the".

['Don't give them any ideas'⁵⁵⁵; see "Orwell, George"]

11) "How far can you reduce living standards before labor fights back politically.... This is a Class War... [progressing] from [merely] Economic parasitism to Biological parasitism.... [but] You have to do it in a way that numbs the host from seeing that there is a parasite on him. In nature, the parasites have a chemical... [and] an enzyme [to] take over the brain of the host. And this enzyme makes the host believe

⁵⁵⁴ "Say everything is a CIA plot: you're a 'dipshit crazy conspiracy theorist'. Say everything is a Kremlin plot: you'll get a newspaper column!"- Neil Clark, Twitter, Nov. 5, 2017

⁵⁵⁵ <https://www.bitchute.com/video/wB9Q88sgdxc/> [Dykes on NielsenTVratings, mn.27].

that the parasite is part of its own body... That's what a parasite does: '*I'm part of your body*' (Hudson, 2010b). "The enzymes that the [bankster] parasite has...inculcated, via control of the media, tell people that it's not Wall Street's fault, [that] it's not the parasite's fault" (Hudson, 2016e, mn.21). See also "Parasitism".

12) According to Paul Craig Roberts, "the American media has never been very good [at living up to journalism standards], but it used to have some independence [from CIA, banks, 'blue chip' advertisers]. That ended about a decade ago...[after] president Clinton allowed a few conglomerates to concentrate the media [into a half dozen holding co's (i.e. 2nd Estate)]. And now it basically just serves the government's [1st Estate's] interests. It's a propaganda entity. You might as well call it the Ministry of Propaganda...[T]here are just so many things that can't be mentioned or debated... For example... we've offshored so many middle class jobs... high-wage jobs, that we've essentially destroyed the middle class-- and you can't get any recognition...[or] debate about it...[But rather just] a path of war and police states" in the 2000's. "I think it's futile when you can't question the basis for being on a war footing and on a police state footing.... [and] you can't even report [serious scientific findings, and] the facts" (Roberts, 2010, mn.0-3). See also "Estates, 3", "Oligarchy, American".

13) Corrupt media is hardly of course just a 'big corporate' [2nd Estate] phenomenon. "It took me years to figure out that both RT and Press TV, the Iranian state [1st Estate] TV network, were totally uninterested in anything but an anti-American slant to every story. At that point I stopped doing interviews with both of these, around 2014" (Still, 2019d, mn.9-10). See also "Media, B".

14) "The reason I launched this entire...series in the first place... [is] because the media doesn't help.... We just get rapid-fire noise about markets, and they sort of chalk everything up to corruption and government incompetence. But the truth is much more sophisticated. We are undergoing a *massive, strategic global transition*. A few in the 'alternative media' describe it, using a bunch of emotion and hype..."⁵⁵⁶ (Vrabel, 2011, mn.55-56). See also "Boards/Board Systems", "Truth serum".

15) *In the media matrix-mediated society, it is axiomatic that there is no public opinion other than media made opinion.*⁵⁵⁷ *Truth does not automatically prevail over the (science of propaganda) media matrix*⁵⁵⁸ and its primary tactic of repetition. See also "Conditioning", "Cultural Calendar".

16) In terms of exposure-saturation, Yankelovich market research firm estimated, nearly a decade ago, "that a person living in a [US] city 30 years ago [c.1976] saw up to 2,000 ad messages a day, compared with up to 5,000 today"⁵⁵⁹. About half the 4,110 people surveyed... said they thought marketing and advertising today was out of control" (Story, 2007). See also "Diminishing rate of understanding."

17) "The ad agencies that control radio...5 of them control all the adds. They put me on a blacklist for twenty-two years.... I've talked to a big anti-trust lawyer about them" (Savage, 2017, mn.20).

18) 'The fish is the last to discover water'; "look at all the things that are happening in this country that are lawless; none of them could be happening if you had an honest media" (Fitts, 2016, mn.39). "...[T]he corporate media is arguably the most corrupt aspect of this society" (Fitts, 2016b, mn.3). There's "so much anger at the corruption in the media, because the media is running... a psy op.... they ought to be

⁵⁵⁶ "90% of...[alt. media (that you've heard of)] is...just trolling...and the CIA...plugging the scary stories.... professionally exploited by the wizards" (Migchels, 2020b). I.e. get "them ghetto-ized and cut-off...[to where] 'We've got that audience trapped. We've got them enthralled and you own them. Just keep doing that while we sit em all on their ass while we re-arrange the grand chess board geo-politically.' That's what's going on.... [Army Whistleblower] Patrick Bergy explained how the IIA operator works [in ShadowGate, 2020], ghetto-izing and locking up people into these little algorithm-ruled ghettos. That's why they don't have to kill you anymore. You can spin your wheels talking to yourself and your bot friends and your helpless friends, as they algorithm-send you to people who can't help you."- Australian dissident Brendon O'Connell, (O'Connell, 2021d) [<https://www.brighteon.com/802dad72-7f45-4ccd-be44-e4f1f0d76407>, mn.103-10]. See also "Social Media", "Google".

⁵⁵⁷ ...which typically "...writes as if production and business [industrial] conditions take the lead, not finance. It is as if stock & bond prices, and interest rates, reflect the economy rather than influencing it. There is no hint that financial interests may intrude into the 'real' [industrial] economy in ways that are systematically antithetical to nationwide prosperity" (Hudson, 2011d).

⁵⁵⁸ For an incisive summary on the ownership of the CMC in the US, UK, Australia, Germany, and France, see <http://msm.rt.com/>.

⁵⁵⁹ A 2014 study by Media Dynamics, Inc. also found that the "typical" American's "adult's *daily* media consumption has grown from 5.2 hours in 1945 to 9.8 hours" in 2014 (Papazian, 2014), which is significantly more than any other developed nation.

prosecuted.⁵⁶⁰ When you engage in that kind of material mission, and you lie... about what's happening in a way that gets them to waste their time and energy. I mean think of how many children are autistic because the major lied about the dangers of heavy schedules of vaccines. They should be prosecuted for that.... They made their money by tricking productive people into going along with a system that was harvesting them. And they did it on purpose, and they thought they were clever" (Fitts, 2016c, mn.24). Now we have the "central powers...losing control of the narrative, and they're turning up the *shriek-o-meter*. So they're doing more-and-more censoring. They're doing more and more suppression... and attacking. They're trying to appeal much more to emotion... trying as much as they can to turn people against each other... and the fear-porn is rolling out, and the hope-porn is rolling out... It's like Baskin-Robbins and there're 57 varieties of how to waste your time and eat up your emotion, while they control the official narrative... to maintain central control" (Fitts, 2018c, mn.23).

19) Orwell said that "material omission is the greatest lie" (Fitts, 2017e, mn.42). "This is an epic battle between good and evil, and if we can get everybody in America to turn off their TV, good wins" (Fitts, 2017l, mn.29). "The problem is why is anybody watching that fake news"⁵⁶¹ (Fitts, 2018s, mn.28). "We live in a world where [like East Asia] there's [now] an official reality versus reality. And the job of media has become to affirm that official reality, police that official reality, and destroy or trash any person or vision that starts to educate people about reality. And...that effort has gotten more and more aggressive and more and more shrieky, as we have gone through...the financial coup d'état, which has...exploded the distance between reality and the official reality" (Fitts, 2019t, mn.1-2). See also "New World Order", "Academia".

20) "A lot of people won't realize this, but they're replacing journalists, increasingly-- not least in America-- with algorithms...[that] are writing the news" (Icke, 2018d, mn.3); watch out for anything without a full named author.

21) With the arrest of publisher Julian Assange in April 2019, "journalism is [now] being criminalized, and the journalists are supporting the criminalization of their occupation. So... we can see the *beginnings* [sic] of it becoming a *crime* [sic] to criticize a [criminal] government-- to reveal any information unfavorable to a government" (Roberts, 2019, mn.5-6). "There is no independence whatsoever in the American print and TeeVee media. They are strictly propagandists.... [And] I doubt [that] there's any independence in the British print and TeeVee media...The BBC [at least] sounds like a trumpet for Washington's propaganda" (Roberts, mn.10-11). See also "Propaganda".

21b) "More stuff is fake and fabricated right now in the news than what's actually real."- Patrick Bergy, (ShadowGate, 2020, mn.112). See also "Social Media", "Central Intelligence Agency".

22) "Don't read mainstream media. There's no need to read it" anymore; don't "become enamored of your captors..." (Titus, 2020, mn.24); "CIA-MSM is like Sears. The end is near, but old people still swear by it" (Moon, 2017). See also "Boards/Board Systems", "Industrial Revolution, 3rd".

23) At the end of the day; "They're only seeing [clocking] if you believe them."

- <https://music.apple.com/us/album/elephant-rope-single/1550069653> [Rigsi]

23b) Hence, [t]he public is also learning now that the mainstream media is really the fake news media....What's happened is that this [old] house of cards-- in which the Deep State provided the narrative⁵⁶² to "the [pre-internet] media.... When it... hits the ground, the people who will be standing above the [former house of] cards are We The People" (Steele, 2017c, mn.43-44).

23c) Sure enough. "The media cartel's job is as easy as shooting fish in a barrel. It associates protests with former 'heinous events'. 'This is 9/11 all over again'. 'This is worse than the 1918 Spanish flu, and the protestors are endangering public health'. 'The break-in was the most evil act since Pearl Harbor'....

⁵⁶⁰ "My experience with the *Washington Post* is that the *Washington Post* is a criminal enterprise.... Reality is in the [FHA] budget, and this is just 'ya ya ya ya ya ya ya'.... a distraction...a movie" (Fitts, 2017e, mn.43-44).

⁵⁶¹ "It's an old, old technique...[to accuse] the ones you want to discredit of doing what you yourself are doing... [When the so-called mainstream of journalism doesn't question things, but just supports the official narrative- *that* [sic] is *fake news*" (Icke, 2018d, mn.12).

⁵⁶² "People need to understand that the Pulitzer Prize is named after the guy that invented Yellow Journalism... on a foundation of lies" (Steele, 2017l, mn.43), in order to start the Spanish-American War. See also "Fin de Siecle", "Pilgrim Society".

When you're the media and you shoot fish in a barrel for a hundred years, and it works like magic, you develop a smug complacency.... [Then 2020-21] was as if [Davos,] Switzerland suddenly decided to send planes over England and drop canisters of poison gas" (Rappoport, 2022c). See also "Provocation". 23d) Of course institutions-- not just individuals-- may sometimes go into a 'self-destructive' mode. America and Imperialism has always been a paradox or self-contradiction (though increasingly intolerable). https://www.youtube.com/watch?v=oi_7MdRCPA ['a tendency towards self-destruction']. See also App.C: "1-2-3".

24) CMC Updates:

10/21- "They're the Old ["Legacy"] Media. There's no point in struggling with them anymore.... There's [now] incredible talent shifting... There's [now] enormous amounts of [state] subsidies in the \$3.5 trillion [US federal] budget package *for media* [sic]; because... apparently [if] they have no audience, [then] they can't [really] charge for ads [yet alone subscriptions]. And now the government is apparently going to have to fund them" (Fitts, 2021g, mn.23-24). See also "Bank welfare", "COVID", "Bankmoney regime".

[old studios]

[millennial-era newsroom]

[new studios]

Corporation of London- See "City (of London), the".

Corporations (and corporate 'personhood')- (Latin: *persona dicta* or 'fictitious persons'; a.k.a. 'legal personality' [UK]; liberated corporate charters were a response to the 2nd Industrial Revolution)

1) The "thousands" of monasteries and convents in medieval Europe were corporations "and they did not have any charter of incorporation" (Quigley, 1976c-pt.2, mn.132). See also "Privilege".

1b) Johannes Andrea, "the fount and trumpet of canon law" (c.1270–1348), "argued: How can you trust a creature that cannot be shamed or punished?" (Mosley, 2017d). See also "Boards/Board Systems".

2) Nonetheless (trading) corporations were entitled to citizenship-voting (and domination of the money supply) in medieval Venice (from the 11th century), and then early modern England (from the 17th century), where the City of London established a tradition of 'non-residential'/business's voting that continues to this day.⁵⁶³ See also "Corporate governance", "Offshore".

2c) The "ancient corporation was, in Jefferson's view, a closed body of privileged, unenlightened businessmen who held their exclusive rights from the king, [thus] adding moral indignity to his personal economic injury as one of its victims" (Adams, 2008, 201).

3) The Corporate Model was from the [Dutch & English, 'Crown-chartered'] East India Co.'s in the 1600's. They've been thinking about corporations for a long, long time... a place for rich people to hide their assets.... It was more than 150 years before they got it the way they wanted it. See also "East India Co.", "Currency Wars, the", "State capture", "Design".

3b) The "use of the corporation form of business organization... was permitted by French law in 1807, earlier than elsewhere.... Strong family feeling hampered the growth of large units or publicly owned corporations... [and the] preference for fixed-interest obligations over equity securities as investments

⁵⁶³ Official 'business voting' in parliament was only abolished in 1948, and likewise for the rest of the UK (excepting *the City*) in 1969. See also "English constitution", "City (of London), the".

made it difficult for corporations to grow”; but things changed with the railroads and Napoleon III (r.1852-70) (Quigley, 1966, 518). See also “Physiocrats, the” [laissez-faire], “Finance capitalism”.

4) as ‘persons’, are legal and moral fictions (Myers, 2000), created in the US⁵⁶⁴ by courts⁵⁶⁵, for the purpose of financial extraction and consolidation, and controlled by the international kleptocrats. See also “Industrial Revolution, 2nd”, “BlackRock”, “Investment Banks”.

5) Originally, through the 17th, 18th, and vast majority of the 19th centuries; US corporations “had to have a [meaningful] charter⁵⁶⁶-- they had to a) have a limited term of life, and not be immortal.⁵⁶⁷

Corporations...[in the 20thc, however] are immortal: they get a [perpetual] charter; they can live forever and [along with their governmental co-conspirators] bury us all...[T]hey [also used to] have to have b) a limited purpose...⁵⁶⁸ Who is it giving us this bread that’s [now] made out of sawdust [and sugar-chemicals. Do they have a charter for that]?”; and “it was c) on the state level⁵⁶⁹... [States] restricted [their] purpose and activities, especially [of the] banks & insurance companies...[f.e., by prohibiting] one corporation...[from holding] the stock of another, without a specific statutory grant (we definitely should have that again)...[by limiting] the span of the life of the corporation itself, [by] requiring recurrent legislative scrutiny...[by limiting] total assets...[and] new issues of capital⁵⁷⁰... [and by limiting] the vote allowed to any stockholder, regardless of the size of his holding, and so forth” (Quigley, 1976c-pt.3, mn.409-11)

5b) It all changed from the mid-1870’s to mid-1870’s, however;⁵⁷¹ and “[b]y 1890 all of these had been destroyed by [corrupt] judicial [and state legislature] interpretation[s]...extended to corporations-- [which

⁵⁶⁴ British special corporate privileges, of course, go back a bit further. “In England, limited liability was not a consistent feature of corporate law until the late 18th century-- and wasn’t universally available until 1855...”; up until then “[c]enturies of English legal tradition had established firmly the principle that corporate charters were revocable...” (Nace, 2003, 53; 84). This officially changed with *The Joint Stock Companies Act 1844*, which allowed British corporations “to define their own purpose”, thus passing control of them from the government to the courts (Brazier, 2008, 215). And a decade later, “limited liability protection” had become the norm for British corporations by 1855 (Nace, 2003, 78). It wouldn’t be until the 1870’s-80’s, however, that the American corporate camels first got their nose under the franchise tent.

⁵⁶⁵ The old story of what is known today as *corporate personhood* is that it originated in the US as a supposed “mistake in the [clerk’s] recording... And then [from the 1970’s], Justice Powell spent 20 years building up toward [the] *Citizens United*” ruling [in 2010] (Steele, 2012, mn.44) that codified corporate political money as 1st Amendment-protected ‘free speech’. See also “Public relations (P.R.)”, “Boards/Board Systems”, “Imperialism, American”.

⁵⁶⁶ “After Independence, US corporations, like the British companies before them, were chartered [or incorporated] to perform specific public functions-- digging canals, building bridges...[with] charters [that] lasted between 10 and 40 years, often requiring the termination of the [entire] corporation on completion of a specific tasks... [effectively] prohibiting any corporate participation in the political process” (Brazier, 2008, 215). And there were a lot. John Adams inquired: “are there not more legal Corporations, literary, Scientifical, Sacerdotal, Medical, Accademical Scholastic Mercantile, Manufactural, Marine, Insurance, Fire, Bridge, Canal, Turnpike &c. &c. &c. than are to be found in any known Country of the whole World? To these might be added Biblical Societies, Missionary Societies, political Conventions Caucusses, and Washington Benevolent Societies... And are not all these, Nurseries of Aristocracy?” (Adams, 1815). See also “Del Mar, Alexander” (who traced it all back to 1666), “Sovereignty” [incorporating power].

⁵⁶⁷ Why does this matter? Irrevocable-non-expiring ‘charters’ are meaningless, except for deification. The “ancient Greeks [like China] defined...[divinity as simply immortality]. They called their gods the immortals, because the only quality they had that set them apart from men was that they never died” (Quigley, 1972b). [C]riminal law never had...teeth in the first place when it came to corporations, because of the obvious uselessness of the corporal disincentives that the law has traditionally relied on-- floggings, imprisonment, and so forth. Instead, the designers of the classic corporation relied on the [statutory] limitations...in corporate charters, and on the ultimate sanction of charter revocation. By around 1875 [however], general incorporation had largely replaced the system of individually issued charters, and...[hence] ceased to provide a means for controlling corporate behavior” (Nace, 2003, 78). See also ‘Amorality’ immed. below; “Lender of Last Resort” [Titus].

⁵⁶⁸ Corporations “were prohibited from engaging in any activities not specified in their charter. Under the legal principle...*ultra vires*, any contract that dealt with activities beyond a corporation’s charter would not be enforced by the courts”; “judges had mainly abandoned attempting to enforce it by 1900” (Nace, 2003, 53; 76).

⁵⁶⁹ Interstate Commerce Commission (ICC)

⁵⁷⁰ “Most state *constitutions* also featured limits on the amount of investment capital that a single corporation could control... [in addition to such] common charter provisions...[as] prohibitions against owning land not directly connected to a company’s activities... geographic restrictions... [as well as the traditional] doctrine of *unanimous* shareholder consent for major decisions such as acquisitions or asset sales... [A]ll...[of these] constraints were lifted... [as evidenced by] the wave of mergers around 1900” (Nace, 2003, 80-81). See also “Sovereignty”.

⁵⁷¹ Quigley earlier noted that such structural extraction & consolidation was more necessary for Industrial-Finance capitalism [of the 2nd Industrial Revolution] than for [today’s] Finance-State capitalism. “The efforts of financiers to separate ownership from control [during the 2nd Ind. Rev.] were...[motivated] by the great capital demands of modern industry. Such demands for capital made necessary the corporation form

were now to be] fictitious persons...[whose] constitutional rights [were to be] guaranteed, especially [by] the...[14th] Amendment...[which was of course originally intended for human beings]. Because [the fmr. senator from NY] Roscoe Conkling, known as ‘Turkey Strut Conkling’⁵⁷²...[argued before] the Supreme Court...[(in 1882) the spurious claim that] there were no records kept...[from] the committee of the Senate which drew up the...[14th] Amendment; but [that] he had [been present then, and had] kept private notes, which showed that they intended the word ‘person’ to include corporations.... The corporation which was hiring him to do this [Southern Pacific Railroad] suitably rewarded him” (Quigley, 1976c-pt.3, mn.411-12) for the [what is now openly called] political **access**. See also “Fin de Siecle”, “Capitalisms”.

[Conkling arranging a case of prospective PotUSs (1880); Washington’s I.C.C.⁵⁷³, not the states, is now to run the rodeo (1887).] 6) Making up for lost time it would seem (vis-a-vis the British Tory’s *Joint Stock Companies Act* [1844]), G.O.P. power broker Conkling’s bold fraud of 1882, though it didn’t carry the day, did pave the way for the Court to revisit “corporate personhood” several years later.⁵⁷⁴ In 1886, a court reporter (and former railroad official), J.C. Bancroft Davis, was allowed to write the *headnote summary* for the Supreme Court’s ruling on *Santa Clara County v. [the same] Southern Pacific Railroad*-- a privilege for which

of business organization. This...[simply] brings together the capital owned by a large number of persons to create an enterprise controlled by a small number of persons” (Quigley, 1966, Ch.20). See also “Industrial Revolution, 2nd” → “Financialization”.

⁵⁷² Sen. Conkling [1867-81], from a prominent Anglo-American political family, “was President Ulysses S. Grant’s right-hand man in the Senate and [also] the man behind the rise of future president Chester A. Arthur [r.1881-85]. But the real source of Conkling’s power was patronage and money. In the late 1800s, it was assumed that elected officials would pack the ranks of government with their cronies...[and it was] said [that] Conkling controlled hundreds of federal jobs. Conkling also placed his loyalists in charge of collecting customs for the Port of New York.... The man had such a sweet operation that when President Grant offered him the job of Chief Justice of the...Supreme Court [in 1873], Conkling turned him down” (O’Grady, 2015). See also “Deep State”.

⁵⁷³ The “Interstate Commerce Commission... has been absolutely paralyzed... [by] a number of things; one of them was insisting that they must use the procedures of the common law courts” (Quigley, 1976c-pt.2, mn.124). See also “Common law”.

⁵⁷⁴ Conkling-- who had recently declined a 2nd nomination to the Court, [even] after the Senate had already confirmed him--“was seen by the justices as a peer. It was a trust Conkling would betray.... Laws referring to ‘persons’, he said, have ‘by long and constant acceptance... been held to embrace artificial persons as well as natural persons’. Conkling buttressed his account with... a musty old journal.... [But it] It showed, in fact, that the language of the [14th Amendment’s] equal-protection clause was never changed from ‘citizen’ to ‘person’. So far as anyone can tell, the rights of corporations were not raised in the public debates over the ratification of the...Amendment or in any of the states’ ratifying conventions. And prior to Conkling’s appearance...[for] Southern Pacific, no member of the drafting committee had ever suggested that corporations were [somehow] covered.... The justices held onto the case for 3 years without ever issuing a decision, until Southern Pacific unexpectedly settled the case. Then, shortly after, another case from Southern Pacific reached the Supreme Court, raising the exact same legal question. The company had the same team of lawyers, with the exception of Conkling [and did not choose to mention his prior argument].... The rules of judicial ethics were not well developed in the Gilded Age.... By tradition, the reporter writes up a summary of the Court’s opinion and includes it at the beginning of the opinion. The reporter in the 1880’s was J.C. Bancroft Davis.... [a former] president of the Newburgh & New York Railway company [His] wildly inaccurate summary of the *Southern Pacific* case said that the Court had ruled that “corporations are persons within ... the 14th Amendment”, and Justice Stephen J. Field ran with it, writing just a few years later that “‘It was so held in *Santa Clara County v. Southern Pacific Railroad*’... [even though he] knew very well that the Court had done no such thing” (Winkler, 2018). And that was just the beginning.

“reporters like Davis received a commission from the publisher of [such] legal documents. Davis’s lead sentence declare’: ‘The defendant Corporations are persons within the intent of the clause in section 1 of the 14th Amendment to the Constitution of the United States, which forbids a state to deny any person within its jurisdiction the equal protection of the laws’. That’s it. A clerk’s personal opinion, carrying no weight of law and misinterpreting what the court said-- this is the pillar on which rests today’s practically limitless assertions of corporate ‘rights’” (Hightower, 2003). See also “Lobbyists”. “New World Order”.

7) Between “1868, when the [14th] amendment was ratified, and 1912, the Supreme Court would rule on 28 cases involving the rights of African Americans, and an astonishing 312 cases on the rights of corporations” (Winkler, 2018). “Hypocrisy”, “Transhumanism”, “Contempt”.

7b) So what? Within a century, “[m]ost of the income in the United States does not go to living people. It goes to corporations; and they then invest it, or do anything they want with it. You saw that a hundred million [dollars] a year was being spent illegally, by the Library of Congress study issued, two weeks ago, by 24 corporations...[T]hat is part of their savings. So bribes, expenditures of all kinds, [above-board] political contribution[s], [pretty much] everything”⁵⁷⁵ goes (Quigley, 1976b). See also “Liberalism”, “Public relations”/“Bernays, Edward (1891-1995)”.

7c) “[N]otice [however, that] taxes come almost entirely from natural persons.... If you look at the taxes paid by large corporations, they’re infinitesimal. I pay between a quarter and a third of my income in taxes. And if I include local taxes, then it’s a third of my income; so 33%. Very few corporations, and none of the big ones, pay more than 5%. And they do that... by very tricky bookkeeping. If it were a solid analysis of what they were paying, it would be less than 5%...[W]hat goes out in taxes...is largely from natural persons, not from corporations” (Quigley, 1976b). See also “Accounting” [The End of], “Taxation of income”, “Tax shift”.

7d) Such power obviously molds and shapes a culture. The “[m]ost crucial” shapers in Western civ., since (no later than) the mid-20th century “have been the demands of the modern industrial and business [a.k.a. corporate] system... for more highly trained manpower. Such training requires a degree of ambition, self-discipline, and future-preference that many persons lack or refuse to provide, with the result that a growing lowest social class of...social outcasts (the *Lumpenproletariat*) has reappeared. This group of rejects from our bourgeois [post-]industrial society provide one of our most intractable future [social] problems, because they are gathered in urban slums, have political influence, and are socially dangerous... [T]hey are really an educational and social problem for which economic or racial solutions would help little. This group is most numerous in the...advanced industrial areas and now forms more than 20% of the American population... [and] are increasing...faster than the rest of the population... based... chiefly on the fact that disorganized, undisciplined, present-preference parents living under chaotic economic and social conditions are most unlikely to train their children in the organized, disciplined, future-preference and orderly habits [that] the modern economic system requires in its workers, so that the children, like their parents, grow up as unemployables. This is not a condition that can be cured by providing more jobs, even if the jobs are in the proper areas, because the jobs require characteristics [that] these victims of *anomie*⁵⁷⁶ do not possess and are unlikely to acquire.... The intellectual and religious aspects of any society... change at least as rapidly as the more material aspects of the society...[but] are generally less noticed” (Quigley, 1966, 1221). See also “Globalization” [Brzezinski’70].

⁵⁷⁵ For political ‘contributions’/investments, see *Buckley v. Valeo*, 424 U.S. 1 (1976). See also “Lobbyists”, “Congress”.

⁵⁷⁶ What could anyone be confused or conflicted about? In a middle-class or “‘acquisitive society’...[the] facts of a man’s personal qualities-- such as kindness, affection, thoughtfulness, generosity, personal insight, and such, were increasingly irrelevant or even adverse to the middle-class evaluation of a man. Instead...[it] rested on non-personal attributes and external accessories. Where personal qualities were admired, they were [at least through most of the 20thc] those that contributed to acquisition (often qualities opposed to the established values of...Christian outlook, such as love, charity, generosity, gentleness, or unselfishness). These middle-class qualities included [instead] decisiveness, selfishness, impersonality, ruthless energy, and insatiable ambition. As the middle classes and their commercialization of all human relationships spread through Western society in the... 12th to 20th [centuries], they largely modified and, to some extent, reversed the values of Western society earlier” (Quigley, 1966, 1236). See also “Monetization”, “Adolescence of Mankind”. “Middle class”.

8) Another half-century later, and it is now obvious to many individuals that “corporations are amoral-- meaning that their only goal [at least as far as Wall St. is concerned] is to increase [the quarterly] profits [fix], and it [pretty much; and increasingly] doesn't matter what they do to get there” (Dore, 2019, mn.6). See also “Monetization”↑, → “COVID”↓.

8b) ...to include (increasingly) politics and ‘political speech’. In *First National Bank of Boston v. Bellotti* (1978) the Supreme Court ruled “that 1st Amendment protections extend to corporations...[thus striking] down a Massachusetts statute that prohibited corporate political expenditures on [state & local] referenda issues [that were] unrelated to a corporation's property.”- http://www.lawrecord.com/files/37_Rutgers_L_Rec_20.pdf

8c) ...Amorality is often mixed up with (self-serving) institutional groupthink. No kidding; here is the USG (Treasury's) current definition of a “person”-- and also, indirectly, of itself: “A ‘person’ is an individual, corporation, partnership, association, organization, state or local government, or any other type of entity-- other than a federal agency” itself (Treasury, 2021). See also “Statism”, “Devil”, “Homo Economicus”, “Transhumanism” [it].

9) Is this a problem? Even as far back as c.2002, “66 of the...[largest] 100 economic entities in the world [in terms of revenue]... are corporations” (Nace, 2003, 82). See also “New World Order”, “Free-Trade, practice”.

9b) Main point: unaccountability-- https://www.youtube.com/watch?v=D2t4u_tEefM [*Monopoly*, mn.12; 32]. See also “Big 3-4 (Asset managers)”, “Duopoly”, “Corporate Media Cartel/6 Sisters”, “Insider trading”.

9c) In addition to “setting limits to corporate immortality, we must put other restraints upon *all fictitious persons*, including foundations, universities, and all such entities.... [T]here are no restrictions, no restraints, no reporting. Even the Congress 'can't find out what are the actual costs, expenditures, and profits of the automobile manufacturers” (Quigley, 1972b). See also “Race-to-the-bottom”.

See also “Free market”, “Accounting standards”, “Common sense”, App.C: “1-2-3”.

10) “Fortune 500” revenues from “1955 to 1995... tracked with the general growth of the [US] GNP [GDP]. But then] in 1995, the Tech companies started to move into the Fortune 500...[the same year that] we created the WTO... Globalization took off; and what you're looking at is the giant sucking sound of the [US] economy [being sucked up] into centralized, publicly-traded corporations... [T]he #1 source of political contributions is [now] capital gains, from that rise... or the parallel rise of real estate...from capital gains. So... we've created a political dynamic-- whether it's the technology or the capital markets-- that is *powerfully centralizing*. And again and again and again... what you're watching is that combined political and corporate tornado hit a local economy and suck things up” (Fitts, 2017n2, mn.14-16). See also “Feudalism, neo”, “Private debt”, “Big 5 (on S&P 500)” [tech giants], “Monetization staircase”.

11) Corp. 'Personhood' Updates:

10/21- “We've given, basically, legal immunity to the big international banks, and [now] through them, to the big corporations.... What we're watching is the society being destroyed to keep...(the “corporate model”) going, and give them complete control to keep it going...[until it becomes clear that...] You cannot have a [strategically] healthy economy or society when the financial sector is dominant-- as opposed to subservient” to (the needs of) “society & civilization” (Fitts, 2021g, mn.53-54). See also “Lender of Last Resort (LoLR)/TBTF” [SIFI].

10/22- “Twenty years ago I discussed contracts with corporate lawyers. They...[tell] me that today a [commercial] contract is meaningless and unenforceable. They still draw up contracts to record what is expected by the parties to the contract, against the outside chance than the parties intend to honor the document that they signed.

Apparently, corporations suffer no damage from failure to honor contracts as profits are universally regarded as more important than one's word.”- Paul Craig Roberts, 10/22

See also “COVID” [Pfizer], “Parasite”, “Financialization”, “FASAB-56”.

[See also "Dumb-downing".]

Corporatism- ()

"It's not 'fascism'. Corporatism is the right word [in the 21stc]."

- <https://www.youtube.com/watch?v=a2mcW-YfA4Q> <https://www.youtube.com/watch?v=a2mcW-YfA4Q> [BoC, 22-11-30, mn.130]

1) "the World Economic Forum philosophy... is, a merger between state and large companies (also known as corporativism) with the aim of solving global problems in a more 'effective' way. The choice[s] of [the vast majority of WEF Young Global] leaders clearly reflects this aspiration" (Nordangard, 2022).

2) Distinguishing between 'Fascism', 'Corporatism', and (the newest of such terms) 'Corporatocracy' has always been tricky, or at least rather blurry, in the great American Imperialism & super power era of the 2nd half of the 20th century. The 1st two terms originated pretty much at the same time (1920's), with 'Fascism' denoting the more-political (or 1st Estate) side [of basically both the 1E & 2E 'teaming up' against the interests of the 3E], and 'Corporatism' denoting the more-economic/cultural (or 2nd Estate) side. 'Corporatocracy', in turn, arose in the , reflecting both of the older terms' inability to encompass a sufficiently broad picture of the spirit of what was (and is) going on. See also "Public-Private Partnership".

3) *Pluralism*-"*Corporatism*"-"*Corporate Governance*"-'Shareholder Capitalism'-*Corporatocracy*-"*Fascism*"
synon.: CNI-Int.Group Dem.-(by)TheOwners(not mgrs.)-a.k.a. 'Democracy' (via Parties)-Rule/dom.byCorps.+ism
a.k.a.: civics- -Owners-over-Mgrs.- 'MoneyVotes'-'NewWorldOrder'-belief

Correspondent bank- a foreign bank's representative within a jurisdiction where they have no branch

Corrosion-Cancer⁵⁷⁷-Debt- (the planet's 'big 3 inflammatory-stressors'⁵⁷⁸)

1) are *the* most prevalent forms of depletion or the breaking down (degeneration) of the:

- metals [that are non-precious (group 10-11) elemental metals (with *oxidation-corrosion*)⁵⁷⁹];
- higher animal forms [i.e. non-insects (with *cancer*)]; and also
- higher/written institutions of mankind [that are non-sovereign (with *debt*)].

2) In other words, all *metals* (the original 'hi tech')-- save the most precious⁵⁸⁰-- are susceptible to significant corrosion (in ferrous materials, rust). All *animal species*-- save insects-- are susceptible to cancer (a significant/leading cause of death). And all *civilizational institutions*-- excepting sovereign governments-- are at some risk of insolvency and/or bankruptcy (which generally furthers socio-economic and institutional consolidation). Thus, precious metals, insects, and sovereign governments have had,

⁵⁷⁷ This idea was arrived at independently (in summer of 2019), prior to the author's discovery of Prof. McMurtry's work (in the summer of 2020). McMurtry adds to this entry's analysis that: the cancer "pattern is first recognised in emergent global capital sequences which [first] proliferate, [and then] decouple from and attack the productive functions of life hosts.... [And it is driven by, of course, the] principal mechanism...[of] debt multiplication... managed by private banks' issuing longterm compounding debts without the money to back the loans" (McMurtry, 2013b).

⁵⁷⁸ As well as inflaming & stressing, each of these 'big 3' also does its work by upsetting the balance of oxygen/ H_2O /liquidity, respectively, wherein an initial abundance (of oxygen, water, or liquidity) transforms into **cellular** desiccation/illiquidity. [i.e. cellular degradation, metabolic dysfunctionalities, and somatic necrosis].

⁵⁷⁹ Oxidation occurs when air reacts with metals; whereas (metallic) corrosion, which is a form of oxidation, is brought about by wet conditions.

⁵⁸⁰ Platinum and (most famously/traditionally) gold; not so much silver, which is slightly susceptible. See also "Gold Standards/bullionism".

respectively, life's playing field ("market", if you will) significantly tilted their way. And, to this day, governments are still the biggest 'gold bugs' on the planet. The 1890's 'free silver' campaign was, accordingly, a regionalist false dichotomy/diversion from the 1870's-80's populist movement. See also "Hegelian dialectic", "Industrial Revolution: 2nd", "Wonderful Wizard of Oz, the".

3) Everybody knows⁵⁸¹ there's nothing you can do with rust (scientifically, 'corrosion'-- the downside of excessive or uncaredful liquidity); either strongly scrub it away and (only then) paint over it [for stage 1 or 2; see also "Jubilee"], or one must simply remove and replace the infected issue altogether [for stage 3 or 4; see also "Monetary Reform"]. See also "Federal Funds (Accounts) for All", "Economic, Parity", "Local and complementary currencies".

4) Carroll Quigley noted (half-a-century) earlier that "[a]lready [by the 1920's-30's] the American economy was a cancer economy...[A] cancer economy is a system which has intrinsic, built into it, unrestrained [monetary-GDP] growth, and you *cannot* stop it, even though it *kills* what it is in" (Quigley, 1976b). See also "Parasitism".

See also "Gold Standards/bullionism" (for corrosion), "Zombie" (for cancer), "Debt saturation" (for debt); "Usury", "Monetization & entropization", "Great Extinction, 6th", "Breakaway Civ".

["a dozen for two dollars"]

Corruption (political)- (abuse of a large institution, or systemic political favoritism, as opposed to how things are supposed to operate 'by the book'; sometimes a.k.a. 'bribery'⁵⁸², 'arbitrary income' practices, 'path-dependent lock-in', or simply 'baksheesh' kickbacks). See also "National Identity/Nationalism".

1) Institutional dishonesty (strategic dysfunction) is the usual consequence (or flashing 'idiot light') of too few people in charge of too many resources. See also "Design", "Communism".

2) "will be part of any hierarchical system. No matter where you go, a certain amount of corruption is inherent in a system where people [still] have to rule other people. What really begs the issue is the amount of corruption" (Pieczenik, 2016c) in a public system; because there is really no escaping public-sector favoritism, other than ramping up the cage of bureaucratization (or material progress to the point where such 'petty' things no longer matter). See also "Adolescence of Mankind", "Legalism", "COVID".

3) "[W]e have had [the] extension of governmental control over the private banking [particularly from the 1930's] system, largely because of the intimate relation of banks [since the 1820's] to the stock of money" in the US (Friedman, 1965, 10). See also "United States, the", "Corporations (and corporate 'personhood')", "Big Government (growth of)", "Minsky, Hyman (1919-1996)" [.moment].

4) Big bags of money are so 20th century & 2nd millennium. Corruption now is more often a matter of pushing a few buttons-- or even simply failing to object to systematic embezzlement-- than something that takes a lot of individual effort or initiative. Is it socially acceptable to "realize that you're bought" (Granogger, 2022, mn.42-43). For more concerning *institutional (systemic) corruption*, see "COVID".

4b) Of course the institutional-systemic often involves bigger potatoes. "Now, if you were a Wall St. bank that had systematically perpetrated criminal fraud, who would you want making decisions about prosecutions at the top of DoJ one the [2008-] collapse happens? How about [yes, you guessed it] two partners from our corporate criminal defense law firm?" (Titus, 2022c, mn.17). See also "White-collar crime".

⁵⁸¹ Only a devil would knowingly deny that which genuinely cures these 3 blights upon our planet. See also "Evil".

⁵⁸² The World Bank's "Corruption Perception Index (CPI)" is simply a meta-aggregate of numerous bribery surveys, measuring public servants' propensity to accept bribes in certain countries, and hence correlates as much with poverty and low salaries as it does with anything else. Are *human beings* social beings? With an *institutional* focus (as opposed to an individual focus); a "massive *culture of corruption*... [can be addressed]. 'If we can face it, God can fix it'" (Fitts, 2022, mn.116). "Tracking the *metastasizing* [institutional and indirect] corruption is [still (very much)] an art, not a science" (Fitts, 2020d). See also "Corrosion-Cancer-Debt", "COVID".

4c) “They [US bi-coast elite] became astonishingly corrupted by the power; by the knowledge that as the elite with the most power, they d’dn’t have to answer to anyone. It happened about as fast as it ever does, 2-3 generations...” (Moon, 2017d). See also “Dynastic Cycle”, “Oligarchy” (see also Weber, 1989a, mn.9-19)

4c) Transparency International’s ‘Internet Corruption Rankings’ are only meta-surveys of bribery reports. There is (obviously) a lot more to it. “Frank Vogl, co-founder of Transparency International, and William Rhodes, former senior vice chairman at Citigroup...write that ‘IMF officials privately concede that they need to do more by *explicitly* raising issues of illicit finance with the governments of major western developed economies, whose capital markets provide safe investment havens for so much of the [world’s] illicit cash’. Yes, that includes, above all, American and British capital markets” (Wolf, 2019).

5) The “corruption in the general population is as bad as it is in the elites. This is not a ‘We’re good. They’re bad’ thing. It doesn’t work that way” (Fitts, 2017t, mn.8). See also “Imperialism”, →“K.J.B. (King James’ Bible)/70 Year Plan” [minions], “Fitts, Catherine Austin”, “Control systems”, “COVID”. See also “Separation of Powers”, “Academia” [Bayh-Dole], “Parties, political”, “Integrity”.

Council of Europe-

Council on Foreign Relations (CFR; 1921-)- (in tandem with the UK’s *Royal Inst. of International Affairs* [RIIA, est. 1919], the primary think tank or flowering of the UK-USA [‘bankster’-to-I.C.] elite’s merger that characterized the 20th century, starting [in the US] with the Pilgrim Society, est. 1902).

1) ...even though the (rather more secretive) Pilgrim Society was founded 2 decades earlier for more-or-less the same purpose, the CFR, at least in the mid-20thc, was one of the key places for oligarchs to be. See also “Pilgrim Society”, “Royal Institute of International Affairs (RIIA)”.

2) The CFR-RIIA is traditionally the most prominent of the various “cusp organizations... [that forge and weave] the agenda[s]... into the seam... like... the [subsequent] Bilderberg group, created [half a century later] by the Rothschilds and the Rockefellers in... 1954, and the Trilateral Commission, created by the Rockefellers [in the 1970’s] and a guy called Zbigniew Brzezinski... a major [water carrier] for this force. They have...among their ‘members’, or people they invite to their meetings, people from journalism, politics, the corporate world, the banking world... and media, and [the] military [technology], and...[even the] intelligence agencies” (Icke, 2018b, mn.9-10); most of whom, as in any pyramid structure, “have no idea” that they are “daily contributing to advancing...[the] agenda of [a] human control” grid (Icke, mn.13). See also “Democracy”, “Intelligence Community (IC)”, ↔ “Monty Python’s”.

[“*mash-mash*”-, er, “*mush-mush*”, he said; see also “Compound interest”.]

3) “the corporate planning and governing body of the US. It operates...like a Board of Directors” (Vrabel, 2011, mn.23). “Most of the Council is just... the careerists, the uppity, those who are easily co-opted by the ruling class... (mn.112); “the group of system-management Ivy Leaguers and ruthless over-achievers, centered around the financiers at the top of the pyramid who [can] dominate all these professions”-- finance, law, media, corporations, government, military, academia; “they’re generally narcissists, so they are the last people we would want running our lives” (Vrabel, mn.144). See also “Statism”, “Narcissism”.

4) **They’re agents for the skimmers; parasites always need something more to skim.**

5) “...an organization with less than 5,000 members... [has] been able to dominate...key positions in our government-- regardless of whether the [US] president is Republican or Democrat-- is what tells you why we’ve had only cosmetic changes when we flip from Republicans to Democrats.... This is why we have

this shadow oligarchy that runs things from behind the scenes, and the Council is⁵⁸³ the [primary] mechanism... by which the rich to that” (Perloff, 2016, mn.8). See also “Parties, political”.

6) Here’s something that US presidents don’t do: “After the JFK MLK RFK assassinations, David Rockefeller took charge of [the] CFR [member since 1941; Chair 1970-85]. We opened the [TAB-bank] money supply, opened mental institutions, drafted men to Vietnam, and the Rand [Corp.] CIA flooded the market with experimental drugs. One great result ... some amazing innovations in popular music. Then...Bush...took...[over] with...[George] 'HW's CIA [c.1980], and [then] Giuliani Clinton Bloomberg [1990's] *locked the nation up* and made cops prosecutors sexy on TV. We got new '*stabilizing*' drugs [sometimes a.k.a. pharmaceuticals, going through the roof since then], and went back to gay kindergarten and watched fake news. One bad result [of this, in addition to (chronologically): corp. consolidation, artificial instruments, 'political correctness', and destroyed copyrights]... the music began sucking.”

(Moon, 2020d) [includes graph]. See also “Oligarchy”, “Mockingbird”, “Lockheed-Martin”.

7) also not quite what it used to be in the 20th century (in terms of leadership). See also “Pilgrim Society”, “UKUSA Agreement”, “Owners, the”, “Narcissism”.

Counterfeiting- (unauthorized or unethical/dishonest production of the state-stamped currency, either in coin, [most commonly] paper notes, or digital/account form [f.e. 'eurodollars']; euph. 'money augmentation') 1) became a standard tool of warfare (alongside the rise of paper currencies) in the 1700's; and the British were masters of it. Even several “months *before* the Colonies declared independence, the British started counterfeiting [the] Continental currency aboard the HMS Phoenix, a gunboat anchored in New York harbor” (Rhodes, 2012).

1b) Up until the mid-1800's, it was substantially more prevalent than today⁵⁸⁴ and often considered a form of treason, although in the USA there weren't enough state or federal agents to effectively police currency until the Civil War; and since then technology has generally made faking coins or paper notes more difficult (and detecting them more easy).

2) *de jure-tactical* counterfeiting (drawing of- or forging- the state stamp): At least in the age of paper notes, counterfeiting the enemy's currency was typically a primary task of special forces and/or battalions of intelligence units, from British, et al hypertrophing of American continentals and French assignats⁵⁸⁵ in the 18th century, to Japanese efforts to inflate away Chinese currencies in World War Two.

⁵⁸³ Think tanks and policy shops have their relative ups and downs in influence. According to former CFR member and sometimes Intelligence Community spokesman Steve Pieczenik, the CFR in recent decades has transformed “into a fossilized dyspeptic version of themselves. What was once a collective body of individuals with innovative ideas became, through time (inertia and just the normal process of aging), a gargoyle of physical and intellectual vulgarity that at one and the same time...[is now] both repulsive and fascinating.... The CFR is not a place for statesmanship and new ideas, but rather a laundry for scrubbing up bunglers who want to belong to something that used to be important” (Pieczenik, 2012). The Council, however, still has the longest members list of any of the public 'elite' talking shops (in addition to the globalists' flagship periodical: *Foreign Affairs* magazine).

⁵⁸⁴ "The difficulty of preventing counterfeiting... discouraged the use of tokens and...delayed the adoption of the [de jure] gold standard until the 2nd half of the 19th century, when steam-powered presses...[enabled] producing coins to high precision.... [although it was in] 1816 the British mint was [1st to be] fitted" with them (Eichengreen, 2019, 12). See also "Gold Standards".

⁵⁸⁵ Actually, animosity towards the assignats in France was much greater than was the hatred of continentals in America. Hence, according to recent professional scholarship on the subject (Spang, 2016), the rampant counterfeiting of the former did not (it may be inferred) necessarily require foreign/British leadership or organization. See also “Polemics”, “Strawman”.

Conflict	Currency	Sponsor	Episode of Hyperinflation
American Revolution	Colonial Dollar	Britain	1778 - 1780
Bolshevik Revolution	Russian Rubles	White Army	1922 - 1924
World War II	Chinese Yuan	Britain, Japan	1943 - 1945
World War II	Japanese War Notes	United States	1944 - 1944
World War II	Hungarian Pengo	Nazi Germany	1945 - 1946

Table 1. A summary of state-sponsored counterfeiting operations that overlapped or were closely followed by episodes of hyperinflation. Conflicts and counterfeit plots were taken from table 1 in Altig (2002 p.3) and data on hyperinflationary episodes from Hanke and Krus (2012 pp.12-14) or McIndoe-Calder, Bedi, and Mercado (2019 pp.27-41).

[Übleis, 2021, 3]

2b) Paper counterfeiting in the US seems to have been most rampant during the 1850's-60's, but by 1900 or 1910 it had been largely shut down by the Secret Service (est. 1865).

2c) A 2005 "joint study by the Federal Reserve, Secret Service, and Treasury...concluded that less than 0.01% of Federal Reserve Notes in circulation worldwide were counterfeit" (Rhodes, 2012).

2d) The "Federal Reserve, the IRS, the Civil Service, the Treasury Department, all of them said 'Well, we don't find a law specifically against printing [your] own money [in the US], as long as it doesn't *look like* dollars. There was no challenge to our [non-state actors'] right and our ability to create a community trading system.... [but] We [also] didn't *call it* 'dollars'" (Glover, 2019, mn.1-2).

3) With *de facto-strategic* counterfeiting (drawing-in the state to stamp your special interest's product [f.e. TAB bank credits] as official/public 'money'), strategic counterfeiters (often from the old, pre-national, Holy Roman Empire) may at times even deny the very concept of "currency". See also "Currency", "Creney", "State capture"; Titus (2020, mn.9).

4) The larger matter today is "the *hypothecation*, or [de facto] counterfeiting of money-- in all its different flavors-- that gets you" rampant economic inequality (Still, 2019f, mn.1). Public institutions should not be in the business of "the leveraging of money or [other forms of] counterfeit money creation" (Ibid). See also "Eurodollars", "Offshore banking centers", "Lunatics".

6) US federal counterfeiting laws currently stipulate a wide range of fines, but, **since the Geneva Convention of 1929**, imprisonment of no more than 10-20 years (U.S. Code, 18 U.S.C. §§ 470-513).

7) Overseas, convicted counterfeiters may be imprisoned for life in the larger countries of the Orient, whereas in the UK the maximum is only a 10-year sentence. "National Identity/Nationalism".

See also "Currency Wars, the", "State capture", "Treason".

'**COVID**'- (i.e. 'the shutdown'⁵⁸⁶; a.k.a. 'corona virus' [more-or-less common cold/flu], 'the plandemic').

"When the object is to raise the permanent condition of a people, small means do not merely produce small effects; they produce no effect at all."- John Stuart Mill (George, 1879, 298".

"I expect that the current 'pandemic' we are living through will be a profound turning point in the history of humanity. It is my hope that out of this event, a new way of life will emerge in a world free of poisoned food, poisoned water,⁵⁸⁷ and [even also] the poisonous and false germ theory.... Buckle up, folks, we are in for the ride of our liv"s."- Thomas S. Cowan, MD, *The Contagion Myth*, July 2020

"Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage."- Galatians, 5:1. See also "Statism", "Common sense".

1) Flus & **pneumonias** are nothing new and are constantly (like anything else, sans government assistance-subsidies) evolving [and that means gradually, unless there is some sudden/massive die-off]. What's

⁵⁸⁶ Why, on Earth, would anyone wish to shutdown or fundamentally restructure such a system? "Our economy is really more about waste and destruction than [anything but *gross* (mostly mindless) domestic product] growth. Scientists report [that] from 55 to 87% of energy in the US is wasted. Roughly 40% of food in the US is waste, and that's before counting the scary reality that 40% of what the US eats is *empty calories*" (Lappe, 2011). See also "Gross Domestic Product", "Food", "Debt cycles", "Industrial Revolution, 3rd" [a change-in-kind from the 2nd]. As of the mid-2010's, "the spirals down of productive output and social and ecological life support systems continue[d] world-wide.... This is the genetic code of the cancer system" (McMurtry, 2013b). See also "**Corrosion-Cancer-Debt**", "Great Extinction, 6th", "Monetary Reform".

⁵⁸⁷ In (at least most of) these hopes Dr. Cowan is not alone [or babbling in the 'wilderness']: "Our results reemphasize the extreme urgency of taking **massive global** actions to save humanity's *crucial life-support* systems" (Ceballos, et al, 2020). Neither is it 'just a handful of scientists' with 'insufficient' data for such conclusions: "the ineffectiveness of current and [even] planned actions... to address the ominous erosion of Earth's life-support system... [necessitates a] 'cold shower'...[alarm, concerning] the state of the planet... [in order] to avoid a ghastly future.... [The 15 international co-authors have] near certainty that these problems will worsen over the coming decades, with [irreversible] negative impacts for centuries to come" (Bradshaw, et al, 2021, 2). See also "Great Extinction, 6th", →"Intelligence Community" [I.I.C.].

new to the equation is how governments have been behaving thus far this century. “We’ve had a plandemic⁵⁸⁸ [almost] every [other] year [since 2002-03]. We had one in 2004...[and] one in 2008, during the [1st] Financial Crisis. And...every election year since.... 2008, 2010, 2012, 2014, 2016, 2018, and now 2020, and this one they’ve⁵⁸⁹ managed to really get global” (Fitts, 2020b, mn.2). Hyperbole? ‘COVID-19’ has never been isolated in a valid scientific test (i.e. there is no singular “it”, but rather, a host of (not very extraordinary) cold-flu ailments, combined with in-your-face fraudulent governmental statistics).⁵⁹⁰ See also “Statistics (warping of)”, “Geoengineering”.

2) At the ‘venal Deep State’ level, federal governments have been creating massive *subsidies* (f.e., for US *state governments*, often at least 100x the famous \$1200 per citizen, on average, per ‘case’)... a.k.a. behavioral *distortions*:⁵⁹¹ *Becker’s CFO Hospital Report*, on April 14, 2020, reported a “State-by-state breakdown of federal aid per COVID-19 case”.... [with a state-by-state] breakdown provided to the House Ways and Means Committee by [the US Dept. of] HHS, along with COVID-19...[‘case numbers’] tabulated by The New York Times”: [for example]

‘Alabama- \$158,000 per COVID-19 case
 Alaska- \$306,000
 Arizona- \$23,000
 Arkansas- \$285,000
 California- \$145,000
 Colorado- \$58,000
 Connecticut- \$38,000
 Delaware- \$127,000...’

The article... [lists every] state and the money it...[is to] receive for each diagnosed COVID case. If mask wearing increases the likelihood of a [‘positive’] COVID diagnosis, then...those states forcing new widespread mask dictates will be multiplying their federal \$\$\$ [& “c.y.a.” (i.e. their ‘institutional budgets culture’) at the same time... with what must sound like exceptionally ‘low-risk’, free money to most; in other words-- a trap.]

And... [of course] every method of...[bogus] case-counting will have the same ballooning \$\$\$ effect for the states” (Rappoport, 2020f). What would-be robot these days (public or private sector) turns down free money?... See also “Big government (growth of)”.

3) Since the 19th century, all depressions have “been power-grabs [consolidations] dressed up in dollars... The 1920 depression was about crushing farmers, the [1930’s] depression was... about crushing [farmers again, in addition to certain nations’] industrialists, and this one is about crushing small

⁵⁸⁸ Carroll Quigley was joking about it in the mid-70’s (Quigley, 1976c-pt.2, mn.122). See also “Industrial Revolution, 3rd”, “Estates, 3”.

⁵⁸⁹ See also “Intelligence Community (IC)”.

⁵⁹⁰ Shutting “down 85 countries in a few days? Natural viruses don’t work that way” (Fitts, 2020b, mn.3). Viral diseases are typically of the “pox” family. It’s been known for nearly a century that: bubonic plague, diphtheria, malaria, pneumonia, scarlet fever, typhoid, typhus, tuberculosis, and whooping cough are all caused by (living) *bacteria* or *parasites* [prevalent in conditions of filth]. Viruses, in contrast, are not living. See also “Intelligence Community (IC)”, “Zombie” (apocalypse).

⁵⁹¹ Approx. \$120,000 per ‘case’ x “4 mn.” gov’t-reported ‘cases’ = roughly somewhere in the neighborhood of \$480 billion in direct federal subsidies (as of summer 2020; sources: [https://www.cbpp.org/research/state-budget-and-tax/how-much-would-each-state-receive-through-the-coronavirus-state-fiscal-\['HeroesAct'\]](https://www.cbpp.org/research/state-budget-and-tax/how-much-would-each-state-receive-through-the-coronavirus-state-fiscal-['HeroesAct']), <https://www.thenewtribune.com/news/state/washington/article242733706.html> [Wa. state specs.]). \$400bn.-to-\$500bn. per year may sound like ‘unprecedented’ profligacy, but an ‘80-year debt crisis’ is an ‘80-year debt crisis’, and the last time around (during a certain “distortion” called [US direct action in] “World War Two”), the US government was spending more than a trillion dollars a year on the war (inflation-adjusted), or about 40% of GDP.

business, and [as usual] buying up businesses for pennies on the dollar. That's what's [still] going on", on planet TAB-bankmoney (Titus, 2020c, mn.2). See also "Bankmoney regime", "Zombie".

4) The 2019-20 "financial crisis on Wall Street began in earnest on Sept. 17, 2019,⁵⁹² almost 4 months before the first death from coronavirus anywhere in the world was reported in China on January 11, 2020 and 5 months before the first death in the US was reported on February 29... the structure of Wall Street, with trading casinos allowed to own our largest commercial banks [and hence also both the creation & and primary allocation of the US money supply], is far more deadly to the future of America than [any so-called] COVID-19" (Martens & Martens, 2020). The intervention occurred 4-5 months before any 'COVID' or 'coronavirus-19' [a.k.a. the ordinary yearly strain of flu] story, but 1 month after the private CB annual conference at Jackson Hole, Wyoming; and "the Fed had pumped... [an unprecedented] \$6.6 trillion [sic] in repo loans to the trading houses on Wall Street...[one] month prior to the first reported death from COVID-19" in the US (Ibid). Then 3 days later, the [boss bank] New York Fed announces... [that] it is also adding \$30 billion in 14-day terms loans that will be offered 3 times during the week of September 23. This is a clear indication that banks have backed away from lending to one another, just as occurred in the 2007 to 2010 financial crisis" (Martens & Martens, 2020). See also "BlackRock".

4b) Predictably, US treasury yields have sharply increased in th^e 1st quarter 2020. "Whoever heard of the long Treasury market making 23% in 3 months?" (Fitts, 2020b, mn.17). See also "Dollar hegemony", "Reserve currency", "G2".

5) As of May 2020, "2/3rds" of US "small businesses" report that they have been endangered⁵⁹³ by the shutdown's persistence. "Basically, the Department of Justice has become a monopoly creator" (that the PotUS does not control), not a monopoly buster; leaving us with an "economy that makes no sense... [but is rather, just] constantly on the lookout for more subsidy, to keep itself going" (Fitts, 2020c, mn.5-6). See also "Finance Capitalism", Titus, 2017; "Big 3 (Asset managers)", "Groupthink".

6) Why? First of all, the planet's monetary system has gotten to the point where "[s]hort of another massive financial crisis and its unpredictable aftermath, a fundamental restructuring of the legal systems that support capitalism may be impossible. Too much is [now] at stake, and the defense 'it is legal' is...powerful.... Given the amount of wealth that is [now (after a half-century of 'globalism')] tied up in property rights, collateral, trust, and corporate law, a peaceful or affordable reconfiguration of rights may well be beyond reach" (Pistor, 2019, 224). See also "Usury cycles", "Bank welfare", "Cycles".

6b) At an even more basic level; "The Deep State is secretly devoted to boundaries, beyond which the mind is not supposed to go. Because Beyond is where freedom and power live. They don't live like some sort of...[man-made] architecture. They live like great rivers, and you can travel on them forever. The System in which we live is a kind of [Jenga game of] mutual admiration society: each interconnected piece confirms all the other pieces. People take this as 'proof' that the System is correct. What a marvelous delusion! But remove one piece, look at it, examine it closely, turn it over in your hands, notice its flaws, and the whole System trembles⁵⁹⁴...[if] here is an element that doesn't fit. Suddenly, it triggers a circuit-breaker. The lights go out. In the darkness, you discover you have night vision. You are able to see things you've never seen before. For example, the System's skeleton..." (Rappoport, 2015b). See also "Deep State", "Government, Hidden", "Provocation operation (Po)", "Parity pricing".

⁵⁹² On "September 17, for the first time since the financial crash of 2007 to 2010.... the Fed intervened in the repo loan market [of the 'Shadow Banking Sector'].... [after] the yield on the 10-year [US Treasury]... Note collapsed from 3.22% to 1.47%.... The Fed ...[announced that it would] provide a maximum of \$75 billion per day to [the] 24 [foreign & domestic] Wall Street trading houses ([a.k.a. the] primary dealers), with a cap of \$40 billion going to any one firm" (Martens & Martens, 2020). See also "Repo (Repurchase) agreements".

⁵⁹³ More specifically, "49% of the small businesses in San Francisco are expected to be closed or shut down or bankrupted...[from] 2020" (Fitts, 2020j, mn.1). See also "Bankruptcy, state".

⁵⁹⁴ "[W]hat would happen if, in 2020, the New York Times suddenly decided to follow up, day after day, on its own story about 90% of PCR tests being false-positives? Suppose they traced out the implications. Suppose they interviewed many scientists and confirmed the fact that, even by conventional standards, only 10% of all COVID cases in America could be real.... The emerging scandal would shake and crack the pillars of the medical establishment...." (Rappoport, 2022). See also "Fascism, 'Modern' Hand of" [health care].

6c) ...Or that bad government (that which makes people dumber) is from bad ideas/theory, which is usually from (Epistemological) name-game\$. It's all "because they can call it 'COVID' if they want [to]. They can not call it [that] if they want [to]. It's like New Zealand saying 'We haven't had one case in 3 months.' [and then] 'Oh! We've [now] had 4 cases! We're suspending the election and locking everything down!'" (Jones, 2020, mn.26). See also "Ontology & Epistemology", "Orwell, George (1903-1950)", "Conditioning".

[See also "Revolution", "Montesquieu" (Age(s) of Revolution).]

7) According to (semi-insider provocateur) Alex Jones, there is no P.o. (light at the end of the tunnel): "the lockdown is permanent, it never ends, it's about martial law control...[followed by coerced] inoculations, ['cashless society'] digital currencies, everyone tattling and spying on you when you go around. It's the end of everything [constitutional & traditional], folks. It's an authoritarian orgy...[after] the mega-banks stole all the money, and are [now] delusional that they are going to merge with machines.... This is an over-wright of the entire biosphere and every species.... And everything has been psychological war-gamed,⁵⁹⁵ [to the point] where...[unless] the public completely wakes up and rejects it all, wholesale, it will succeed.... It's the [social] psychology of Stockholm Syndrome" (Jones, 2020, mn.1-3); "[M]ental illness and insanity is spreading like wildfire.... Fear not who can kill the body, but you can kill the soul" (Jones, mn.5-6). See also "King James' Bible/70 Year Plan", "Transhumanism" [or at least] "Technocracy"; "Homo Economicus".

8) The proposed 'COVID'19' "type of DNA-vaccine has never been used in humans before.... and... trials are being fast-tracked at a...rate that I have never seen in my life, nor did I ever expect to see... They are skipping over the animal trials, going directly to human[s]. They're not using good scientific methodology at all.... And they want to inject it into everybody.... The vaccine manufacturers in general are exempt from product liability... [and are now] also exempted from randomized control trials.... [The only standard they now] have to prove [is] that the vaccine is producing anti-bodies" (Madej, 2020, mn.6-8). See also "Transhumanism", "Civilization, Western", "Revolution".

8b) 'COVID' 'vaccine' frontrunner Moderna, Inc. was est. in 2010 by the Harvard researcher who reprogrammed a human being's "stem cell...[changing its] function... [Hence, proving] that you can genetically modify something by using modified RNA.... [Moderna] hasn't made any vaccine for a human before. It's [not even] made [any] medicine for a human before.... Usually it takes 5 or 6 years" to properly develop a vaccine (Madej, 2020b, mn.2-3). Inside the tiny fang-like spicules' hydrogel is a "Luciferase enzyme...[and] the vaccine itself" (mn.6). If we use *transfection* "to make a [less healthy] genetically-modified organism, why would it not do the same to to a human?" See also "Health care (US)" (vaccinations).

8c) "Uncalled for"? There "is no way-- ...(barring extreme and unprecedented increases in human mortality)-- to avoid rising human numbers and the accompanying overconsumption" and hence the ongoing 6th Great Extinction Event; because "[s]topping biodiversity loss is nowhere close to the top of any country's priorities... [N]one of the Aichi Biodiversity Targets for 2020 set at the Convention on Biological Diversity's 2010 conference was met.... [and] most of the nature-related U.N. Sustainable Development Goals (SDGs) are also on track for failure, largely because most SDGs have not adequately incorporated their interdependencies with other socio-economic factors... [So] the apparent paradox of high and rising average standard[s] of living despite a mounting environmental toll has

⁵⁹⁵ "They know how to get our *laziness* [sic]. They know [all about] how to manipulate that. They know how to-- incrementally-- get us to put the chains on ourselves" (Jones, 2020, mn.9; specifics in mn.15). See also "Provocation operation (Po)", "Devil", "National Identity/Nationalism".

come at a great cost to the stability of humanity's medium and long-term life-support system. In other words, humanity is running an ecological Ponzi scheme in which society robs nature and future generations to pay for boosting incomes in the short term" (Bradshaw, et al, 2021, 4). See also "Great Extinction, 6th", "Monetization".

9) Make no mistake, "it's not the state governors. If...[Pres. Trump] had told the truth about all this, it would have shut it [all] down right away-- #1...[And] #2...the CDC [also] has... the power to stop these shutdowns. There was no scientific basis for them. Trump has to take [some] responsibility for not stopping the riots... [and] for shutting down and destroying Main Street...[which] bankrupted millions of legitimate people who supported him" (Fitts, 2020f, mn.26-27); while "global billionaires...[increased] their net worth 27%" through the first three quarters of 2020; what "we're watching is the centralization of the economy" (Fitts, 2020i, mn.7-8). "You cannot have the US government or a state government [constitutionally-legally] shut-down [all] churches.... This is World War 3....⁵⁹⁶ Why is it that the average American has a cost of capital of 16%-to-17%, when interest rates are at 1%?" (Fitts, mn.15-16). See also "Design", App.C: "1-2-3"; "Big Lie, the", "Intelligence Community (IC)".

10) The rationalization? With the Internet of Things (IoT), infrastructure tracks need to be laid down for 5G,⁵⁹⁷ "into the last mile, which is every community-- the smart grid. But the other [half of it] is the last inch-- literally into our heads-- and that's where...[Fitts' 'company store'-type new] 'currency' system and the [so-called] 'vaccine' meet... Last January... Moderna... called their injection 'The Software of Life'. So, literally... what they are talking about doing is installing in us...the kind of operating system they've installed in our computers, and [then] using that to hook us up to the Cloud and to A.I. [Why? Ultimately, in order] to teach robots how to do all of our jobs. So literally, if we're connected to automation, we can, over time, teach all the automation how to, basically, do everything" (Fitts, 2020h, mn.8-10).

[see also "Legalism", "Transhumanism"]

[7 decades of the 3rd Industrial Revolution, 1970's-2030's]

11) "You can't go to church and you can't sing. But you can... go to Costco...[and] Walmart...If KKR, Carlyle [Group], Blackrock, JP Morgan-Chase, and Citibank and the [other] New York Fed member banks can make money from it, [then] it's [deemed] essential and you can do it. They can borrow from the Fed at zero percent. Our credit cards cost 16-17%. This is how this works... Inequality...[going on slavery] is rigged through the...central bank credit mechanism. That's how it works " (Fitts, 2020k, mn.8-9).

12) In terms of economic policy, president Trump's "\$10 trillion 'COVID' program gave 2 trillion to the population at large... and 8 trillion...[to pretty much] just to buy stocks & bonds. None of it was to build infrastructure... [or] to build a single factory.... It was all just to support the prices of stocks & bonds and keep the illusion that the [US] economy had not stopped growing.... [Today's] GDP... is fictitious" (Hudson, 2020c, mn.101-102). See also "Great Reset, the", "Financialization".

12b) In the new economic environment, sans reform; the "unpleasant choices...are...[simply] higher taxes or...higher rates of inflation" (James, 2020, mn.203). See also "Monetary reform".

⁵⁹⁶ "When you shut-off the income of half of a society, and then...[create] money...[that's] basically channeled to another group who's free to go in & take over their businesses and property and make them financially dependent...that's an *invasion*" (Fitts, 2020h, mn.2). "Most people [especially if so-trained] will not face the fact that they're up against this kind of technology" (Fitts, mn.20); that is sometimes, and increasingly, pointed at them. Ultimately, "what we're talking about here are ideas that'r so toxic that, if we allow them to stand, we are pulling the legs out from under the very basis of civilization...Now you're talking about entering a world where civilization doesn't exist."

= Catherine Austin Fitts, mn.18: <http://information-machine.blogspot.com/2020/10/jeff-reuse-catherine-austin-fitts-riots.html>
See also "Conditioning", "Cultural Calendar", "Technocracy", "Transhumanism", "Civilization".

⁵⁹⁷ <https://banned.video/watch?id=61b214d3859af811ce8f0b5a> [so-called '5G' & so-called 'COVID'; 12/21]. See also "Climate change, global".

See also “Industrial Revolution, 3rd”, “Black budget (US)”, “Financial Accounting Standards Advisory Board (FASAB)”.

13) Hippocratic Oath? Regarding the ‘COVID’ ~~vaccine~~ injections’ grounding in theory, in 2011-12, results from the (so-called) “SARS Coronavirus vaccines” trials in lab mice clearly resulted in: “mice given *any* of the vaccines led to occurrence of Th2-type immunopathology suggesting [that] hypersensitivity to SARS-CoV components was induced. ~~Recklessness~~ Caution in proceeding to application of a SARS-CoV vaccine in humans is indicated” (Tseng, Chien-Te, et al, 2012). Hence, in contrast to ~~all~~ previous “vaccines” in the US, the various ‘COVID’ ~~vaccine~~ injections have always been, ~~suigenerisly~~, immune from liability lawsuits. See also “Great Extinction- 6th”, “Malthus, Thomas Robert (1766-1834)”.⁵⁹⁸

13b) The Pfizer injection, according to internal documents, “may or may not” also be contagious to non-injectees: “An occupational exposure occurs when a person receives...direct contact with the study intervention [injectee], which may or may not lead to the occurrence of an AE [“adverse event”].... The investigator must report occupational exposure to Pfizer Safety within 24 hours of the investigator’s awareness, regardless of whether there is an associated SAE” (“*serious* adverse event”) in the non-injectee) (Pfizer, 2020, 69; 140).

14) In summary; the “bottom line: Follow the money for a fascinating story of hundreds of billions of dollars that went merrily by, while most of us were locked down and losing our jobs, businesses, and lives while fighting mandates. It is a reminder of the old adage that no matter how bad things look, ‘*there is a bull market somewhere*’” (Fitts, 2022i). See also “Corruption” [.institutional], “Bullshit jobs”, “Reform, 101”.

15) ‘COVID’ (& Vax) Updates:

2/21- Reuters reported that the gov’t of Indonesia was threatening residents with fines of up to 5mn. ~~rupi~~ approx. \$360), for anyone who ‘opts out’... [in addition to withholding gov’t] benefits.... [According to polls] only 37% of Indonesians were willing to get the jab.

3/21- Japanese Red Cross: “Those who have been vaccinated against new coronaviruses are not allowed to donate blood for the time being. - https://www.jrc.or.jp/donation/about/refrain/detail_08

4/21- “The leading Covid-19 injections currently in use in the US and other OECD countries are *experimental messenger RNA (mRNA) injections*, developed by 1] Pfizer (with German partner BioNTech) and by biotechnology company 2] Moderna (in partnership with the Nat’l Inst. of Allergy & Infectious Diseases)...[Both] are being distributed through emergency use authorizations (called ‘conditional marketing authorization’ in the EU and ‘provisional approval’ in Australia), granted following abbreviated clinical trials and without long-term safety testing. As yet, neither injection has received full approval or licensure from the FDA or any other national regulatory agency [or any “liability” provisions]. Though marketed as ‘vaccinations’, the Covid-19 mRNA injections are [different versions of] *experimental gene therapy*. Vaccine developers openly describe the never before-authorized mRNA approach as a means of ‘*programming a person’s cells*’¹ or, using Moderna’s terminology, deploying new ‘software’.² In prior research, mRNA injections have displayed an intrinsic inflammatory component that has made it difficult to establish an [any] ‘acceptable’ risk/benefit profile.³ The mRNA...[experiment] requires an in-built ‘gene delivery system’ (also called a ‘carrier system’) to deliver the *synthetic mRNA* into the cells’ cytoplasm before the mRNA breaks down. The Pfizer and Moderna Covid-19 injections use lipid nanoparticles (LNPs) for this purpose; the LNPs not only shield the mRNA and promote cellular uptake, but also function as adjuvants, ‘revving up’ the immune system. Pfizer’s and Moderna’s LNPs are coated with polyethylene glycol (PEG), a synthetic, *nondegradable*, and controversial polymer associated with adverse immune responses. Moderna acknowledges that its LNPs ‘could lead to significant adverse events’.⁴ The FDA has identified PEG as the possible culprit responsible for anaphylactic reactions to the Covid-19 injections.⁵ In late Feb., the FDA authorized ^a3rd Covid-19 injection for emergency use...manufactured by Johnson & Johnson’s Belgium-based pharma. subsidiary, Janssen. J&J’s injection is an ‘adenovirus vectored’ vaccine that, like the mRNA injections, is intended to ‘trick’ the cells into making coronavirus spike protein...[using] a genetically modified live common cold virus as a Trojan horse to ‘shuttle’ *spike protein DNA* (genetic instructions) into human cells. In late 2019, the FDA approved an adenovirus-vectored Ebola injection, and the technology has also been featured in experimental-- and problematic-- Zika and HIV injections.⁶ The J&J Covid-19 injection is the 1st adenovirus-vectored injection to be authorized (on an emergency basis) for general population use.⁷ In Europe, the EU has granted conditional marketing authorization to a different adenovirus-vectored Covid-19 injection-- using an adenovirus that usually infects chimpanzees--developed by

⁵⁹⁸ Malthusian? “Projections put global population in the year 2100 at 10 billion, *long since seen* as the outer carrying capacity of the earth. We now stand facing an uncertain future...” (Brooke, 2014, 559).

AstraZeneca & Oxford [?]. AstraZeneca called several time-outs during its Covid-19 vaccine clinical trials, because trial participants developed *transverse myelitis*, a condition that damages the insulating material around nerves,⁸ and is associated with pain, muscle weakness, paralysis, and bowel and bladder problems; 2/3rds of the individuals who experience it remain permanently disabled. Dozens of other Covid-19 injections are under development, including RNA-based, DNA-based, and viral vector injections, as well as injections using **other** technologies. The W.H.O. has granted emergency authorization to both the 1] Pfizer and 4] AstraZeneca Covid-19 injections, opening the door for the injections to begin rolling out in poorer countries.”- <https://pandemic.solari.com/wp-content/uploads/2021/03/FAMILY-FINANCIAL-DISCLOSURE-FORM-FOR-COVID-19-INJECTIONS-Fixed.pdf>

5/21- Tenpenny’s 2021 “book covers 20 mechanisms through which these injections may injure people. Months after the first [‘COVID’] injections have been administered, we still don’t know exactly what’s in them-- and it appears that the recipe may be changing.”- C.A. Fitts (25-5-21)

7/21- “the Director of Public Health Services in Israel told... the CBS program, Face the Nation, on...[Aug: 1st] that 50% of new infections in Israel are from fully vaccinated⁵⁹⁹ people.”- <https://wallstreetonparade.com/2021/08/israels-director-of-public-health-stuns-tv-viewers-with-statement-that-50-percent-of-new-covid-cases-are-among-fully-vaccinated-politically-incorrect/> <https://banned.video/watch?id=61e6cc55dda51e7ed123984c> [Haiti]

1/22- Wondering “why”? “America is one giant hospital” (Rappoport, 2022a)-

<https://blog.nomorefakenews.com/2022/01/17/america-is-a-hospital/>; the scams have simply been increasing in magnitude since the 70’s (“swine flu” hoax) and 80’s (AZT myth-- also led by a certain Dr. Fauci). See also “COVID Op.”, “Fascism, ‘Modern’ Hand of” [Fentanyl].

2/22- T’was all about the graphene (a.k.a. super-conductivity). <https://banned.video/watch?id=61f94e7d17bdc33301c16f51>
 Indian Lawsuit Alleges Vaccine Murder: “Hence, it is clear that the accused are habitual offenders of earning profits by selling vaccines with death causing side effects and therefore, they are in the category of ‘Mass Murderers.’ The...punishment for such offences [in India] is death penalty.”- *Smt. Kiran Yadav* [Petitioner] vs. *The State of Maharashtra & Ors.* [Respondents] (Fitts, 2022b). Prof. Mark Skidmore estimates “about 308,000 fatalities” (approx. 10% lethality rates) from the 3 or 4 various “COVID” shots administered in the US, as of Dec. 2021 (Skidmore, 2022).

4/22- <https://blog.nomorefakenews.com/2022/04/20/deadly-covid-vaccine-smoking-gun-astrazeneca-ceo-reveals-the-secret>

FDA advisors just voted 21-0 to authorize Moderna’s vaccine for children 6 months old to 5 years old. Germany, France, Denmark, Norway, Sweden, and Finland all suspended Moderna for people under 30 due to safety concerns. But in the US we’ll now be giving this product to infants.

12:24 PM - 6/15/22 - Twitter for iPhone

6/22-

8/22- Denmark Bans Covid “Vaccine” for Those Under 18; but in USA, “only 16” Congresspeople (out of 535) “had the courage to sign a [form] letter to the FDA [that was] just questioning the FDA’s judgement on safety for childhood vaccinations”- <https://www.bitchute.com/video/fdlo8tgnORRM/> [SR#3919; int.McCullough, mn.10]. See also “Congress”.

11/22- Dr. Malone’s 5 W’s & H: <https://www.bitchute.com/video/i32hbO9PS5Zy/> [w/Adams, mn.19-44]. See also “NSA”, “International Intelligence Community (I.I.C.)”.

12/22- “The GENETIC EXPERIMENT currently launched against the human population is not what we are being told it is. We’re GMO crops, GMO mosquitos; we’re the GMO cattle and rabbits; we’re the twin baby GMO girls in China. On September 12, 2022, a day that will live in [WW3] infamy, Biden issued his Advancing Biotechnology Executive Order. Here is one passage...:

‘We need to develop genetic engineering technologies and techniques to be able to WRITE CIRCUITRY FOR CELLS and predictably program biology *in the same way in which we write software and program computers...*’

⁵⁹⁹ “The Pfizer–BioNTech mRNA COVID-19 vaccine was the *exclusive* vaccine used to inoculate the broad population of Israel. It was also 1 of the 2 most highly-administered vaccines in the United States, with Moderna’s mRNA vaccine being the other. As of July 12... 146 million people in the US...were fully vaccinated with either the Pfizer-BioNTech or [the] Moderna vaccines, both of which require 2 doses.... [O]nly 12.8 mn. people in the US had been vaccinated with the Johnson & Johnson single-dose vaccine” (Ibid).

In case there is any confusion...[it] means cells of the body.... The executive order is a green light signaling the transfer of tons of military and academic genetic research into the...private sector....Technocracy isn't tomorrow. It's now. Societally speaking, the educated class are the rubes, yokels, dupes, and marks. They eat up this gene-speak like soy steak" (Rappoport, 2023). See also "Transhumanism".

COVID Op. (in practice/short-term)-

1) The financial breadth & scale is challenging to get anywhere near encompassing in one article, but Solari Report provided a glimpse at the proverbial elephant in the (dark) room in winter 2022. Hundreds of billions of dollars in "private sector funding...[of a] cradle to grave, PreK-Adult, lifelong obedience training that the globalists have cooked up for children, parents, communities, and businesses, to keep everyone in line with a one-mind premise for a blockchain workforce" (Lynn, 2022). See also "Mind Control".

2) It's "setting up a system to--...under the guise of medical tyranny-- to prevent the riots that are going to ensue once this [terminal financial crisis] thing all unwinds.... I watch what people do, not what they say.... [T]he social contract has been broken. People just don't know that yet. The pensions are broke. They're not going to be able to pay. So they need a ['new'] way to control the proletariat.... On Wall Street I learned to think like a criminal."- Fmr. BlackRock portfolio manager Edward Dowd (Feb. 2022, mn.2-3). What's the big deal? No longer sustainable (planet) Ponzi. See also "Pension funds (US)", "Black Budget (US)".

3) "No Money shall be drawn from the Treasury except in consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time."- Article 1, Section 9, United States constitution. See also "Federal Accounting Standards Advisory Board" [FASAB-56].

+ "Rebellion to tyrants is obedience to God." See also "United States, the".

4) COVID Op. Updates: 10/22- <https://home.solari.com/hero-of-the-week-october-31-2022-governor-bill-lee/>

See also "New World Order", "Socialism", "Technocracy", "Public-Private Partnership; "State's rights".

COVID Op. (in theory/long-term)- (when classic theory is at odds with [in addition to the biosphere] '2 centuries of honorific oligarchy'... eventually Montesquieu's *political* prophecy refuses to yield, because Franklin's *economic* aphorism has materialized, hence enabling the return of "political economy") See also "Physiocrats", "Equilibrium" [death]; App.C: "1-2-3".

As long as man is mortal, economic science (a.k.a. 'economics') is king of the social sciences⁶⁰⁰; and at the end of the day it all boils down to photosynthesis & phosphorus. See also "Wealth", "Primary Sector Economics (PSE)

1) Some fool named Ben Franklin-- in his economic "aphorisms" (1769)-- theorized simply & concisely that there were (as of the mid-18thc) "3 ways" for a country to become rich-- **by War** ("robbing"), **by Mercantilism** ("cheating"), and/or **by Agriculture** ("honesty" & virtue).⁶⁰¹ See also "Franklin, Benjamin", "Super Imperialism" [all 3 ways].

1b) Is becoming wealthy-by-War really still an option in a late-Holocene 21st century of click weapons, and "6th Great Extinction Event"? (+ a long half-century of 'free-trade'-globalism & economic interlinkages)

1c) Becoming wealthy-by-Mercantilist 'cheating' is also on the way out with the Information and Knowledge Age of open, transparent, and well-studied trade protocols. (What new tricks can now go

⁶⁰⁰ "Psychology" only temporarily usurps that role, as if in a cult sci fi movie or Rocky Horror Picture Show, due to the unprecedented blood bath and resultant climbing down from the 3rd Currency War (1914-45). Yes, it was traumatic. The Psychological regime that resulted from it, masquerading as "Neoclassical Economics" was only meant to be temporary or medium-term. The original Bankmoney Regime had existed on gold standards and laissez-faire freedom. With the subsequent Intelligence Community (IC) regime from the 1960's-c.2020, however, hitherto unheard of, over-the-top psychological manipulations took the "barbarous relic"'s place (i.e. how JM Keynes described the gold standard in 1924)-- like a substitute teacher (or scaffolding usher) for a **still-absent international** macroeconomic reality. See also "Ecological economics" was only written up c.1970, with its first textbook published about 3 decades later. See also "Primary Sector [i.e. reality-based] Economics", "Land", "NInnies".

⁶⁰¹ Franklin's economic trichotomy (robbing is worse than cheating, is worse the agriculture) seems-- directly or indirectly-- to have influenced Thomas Jefferson, who was 37 years his junior (see Jefferson, 1816). See also "United States" [rebellion], "Founding fathers".

unnoticed?...They're all old and/or freely explained online.⁶⁰² Raw material (or primary sector-based) economics is, however, newly re-discovered. See also "Primary Sector Economics", "Graham, Benjamin".
2) Thus: enter (center stage) the long taken-for-granted and abused Primary sector of the economy as the 'new' idea for our survivalist age-- even though raw material economics is, in fact, senior to Adam Smith, 'free-trade', or neo-mercantilism. See also "Physiocrats, the", "NInnies".

2b) The classic 3-pronged approach of the 18th-through-20th centuries (sometimes a.k.a. the 'central banking-warfare model' or 'national debt economy') becomes boiled down to 1 in the 21st century. Any non-oppressive government can attain most of the revenue, economic control, and stability it needs through tariff rates & regulations-- especially in the digital age (granted that the digits are more functional knowledge than dysfunctional information). Why not put the Earth, justice, honesty, clarity, and virtue first? Is it still not time yet? See also "National Debt Economy".

2c) Montesquieu, only a couple decades before Dr. Franklin's "aphorisms", famously expounded on the difference between "Rule-by-Love-of-Honor" and "Rule-by-Virtue"; but he was conducting a very long-term analysis, and did not expect (as far as this author has seen) a world, continent-- or even country-wide-- manifestation of Rule-by-Virtue. This annoyed Jefferson, who tried to prove Montesquieu wrong on that assumption⁶⁰³. But systemic slavery was to persist for another half-century, and large-scale organized warfare-robbery for at least another century and a half. Although the scale of armed robbery decreased considerably after the mid-20th century, it wouldn't be until the 1st quarter of the 21stc that national robberies were no longer tolerated. And a 2-legged stool no longer works, but is instead a (shorter, broader) bench.⁶⁰⁴ See also 1. "Aristotle" [middle class], → "Montesquieu" [by virtue ("what will be."); then 2. "Franklin, Benjamin" [by agriculture], "Graham, Benjamin" [specs⁶⁰⁵].

[archaic: see also "Adolescence of Mankind" → "Super Imperialism" (.all 3)]

2d) Speaking of 'national robberies', some of course are still going on internally (or *intra*-nationally), and on a rather large or even unprecedented scale. Much of the "paper in the [US] pension funds...[for] promised retirements and massive amounts of [possibly dubious] medical expenditures for an aging population. So the question is, now that the money's been moved out the backdoor, how do you let them down. You know that you're gonna abrogate your commitments on health care and retirement, and the question is-- as a political matter-- how do you engineer that.... Do you blame [the takedown & ensuing 'attitude adjustment' on] the magic virus? Do you [also] blame, I don't know, the Russians [as usual], whoever?.... [We have now] an entire generation... [or 2 or 3] who believe we're in [only] a financial collapse. They don't understand [that] there's a difference between a bankrupt government and a bank robbery.... [But] if you re-engineer the financial system so [that] you align living capital with financial capital, and...run the economy to build health [instead of oligarchy]...[and] the speed at which we could start to generate fantastic amounts of wealth that could begin to deal with some of our liabilities and...

[accounting dysfunctions]...is fantastic. They [.IC] see that opportunity, too" (Fitts, 2022, mn.113-114). See also "Baby-boom demographics", "Black budget (US)", "Accounting" [.end of], "G2"; [or simply 'the luxury of doing things wrong'] "Adolescence of Mankind", → App.C: "1-2-3".

3) An international monetary system (if it is to be understood by anyone beyond a privileged few) must be predicated on one or the other-- either an Agricultural or Mercantilist system of base money at its heart.⁶⁰⁶ See also "Ecological economics", "Agriculture" [Aristotle].

⁶⁰² ...for instance, at: <https://www.youtube.com/c/polymatter> .

⁶⁰³ See Montesquieu, 1748, 120-122.

⁶⁰⁴ from the Proto-Indo-European word **b^heg* [sic], from which the word "bank" also derives.

⁶⁰⁵ Yes, it's possible (& No-- 3/4r's of century later-- the alternative no longer is.). See also "National Debt Economy".

⁶⁰⁶ It was only 'too complicated' for this during the large war/national-robbing (or 3-legged) era.

4) Treating the Primary sector as primary is, of course, not a new idea (per Benjamin Graham, the American “Par economy” years, Ben Franklin, The Physiocrats, China, and Aristotle). What is new is the number of (so-called) ‘modern’ institutions in the way⁶⁰⁷ of monetary-economic common sense on the one hand, vis-à-vis the not very long amount of time until the planet’s biosphere is forecast to pass some proverbial point-of-no-return (on the other). See also “Imperialism”, “Great extinction”, “Transhumanism”.
classic theory past 2 centuries of practice

5) See also “Intelligence Community (IC)”, “Macroeconomics”, “International Intelligence Community (I.I.C.)”.

credit- ‘Credit is a weasel word too, with many meanings that bankers love’. See also “Credits & debits”.

Credit/Debt- the right to purchase (credit); economic obligations (debt).

- 1) “Credit is always allocated. There’s *always* a bureaucrat making an allocation decision. This is what the banks are doing” today (Werner, 2016b, mn.38). See also “Credit money”.
- 2) “Credit has always been the primary basis for exchange. We’ve allowed [over the past 2-3 centuries] the banks to capture our credit and lend it back to us at interest...[And now] it’s our collective [US gov’t-taxpayer] credit that supports every [other monetary] currency in the world” (Greco, 2019b). See also “National Debt Economy”, → “Reserve currency”, → “Dutch disease”.
- 3) Money, simplified, is just ‘credit from the government’-- and, hence, carries official state stamp or demarcation (as opposed to private bonds, ‘shadow banking’, ‘shadow money’, etc). See also “Money”. See also “Credit money”, “Credits & debits”, “Credit Theory of Money (Innes)”.

Credit cards- (a.k.a. ‘revolving consumer credit’ [Fed speak])

- 1) Credit cards are instruments to generate loan contracts and bank credit [TAB]. When one uses a credit card, the vendor’s bank [i.e. ‘monetized credit institution’] immediately creates bank credit (and transfers Reserves) equal to the amount of your purchase. (*liability for this newly created bankmoney is a separate matter.*)

The Fed admits that the “use of credit, such as a credit card, is *effectively the same* as taking out a loan” (Federal Reserve Bank of San Francisco, 2005). Although credit card debt is officially classified as “*consumer credit*” (G.19), the *use of a credit card nonetheless creates a new loan and a new demand (TAB) deposit*. Reserves (RAB) are transferred to the vendor’s bank *almost immediately*-- and hence state-backed “money” as we know it today (TAB credits + RAB backing) is being created whenever a credit card is used. See also “‘Exogenous vs. Endogenous’ (money creation)”.

- 2) But is it being officially *counted* as such? US credit card debt (“revolving credit”) is the largest category of the Fed’s G.19 (“consumer credit outstanding”⁶⁰⁸) measure, at approx. \$1.1 trillion outstanding for 2018 (Federal Reserve Board, 2019). But any G.19 forms of “consumer” or “revolving” credit are nowhere to be found in the Fed’s definition of the official “money supply” (M1, M2).

- 3) Nonetheless, the primary “way you give people money [these days] is through credit cards, [and] that’s

⁶⁰⁷ See also “Health care” [administrative undergrowth], “F.I.R.E. sector”.

⁶⁰⁸ The G.19 rubric also includes car loans, personal loans, and pretty much any loan (to an individual) that is not a mortgage (Federal Reserve Board, 2019).

all controlled by banks” (Dore, 2019, mn.0), and banks’ profitable⁶⁰⁹ industry continues to grow in the US. And even though (most people would acknowledge that) “banks are the moral superior to no one”, they can still decline to process any credit card transaction, with or without rationale (Ibid); as long as they don’t do so too often.

4) According to Huber, “credit card debt under Monetary Reform could instead be based upon a mutual fund for investors who want to invest in these short-term, unsecured loans” (Lebow, 3/19, 112). See also “Monetary Reform” [Kotlikoff].

See also “[Transaction Account Balance \(TAB\) credits](#)”, “Nonbank Intermediaries”, “Interest-free money”.

Credit default swaps (CDSs)- (bondholders hiring a 3rd party insurer to backup junk bonds or ‘subprime’ securities)

1) Introduced by JP Morgan in the mid-1990’s, CDS’s are now the most common type of credit derivative; and are also “the easiest to manipulate in ways that were deemed illegal in the past” (Hudson, 2012g). See also “Regulation”.

2) A CDS is not an exchange, but rather a hedge; “an insurance policy, typically on a corporate bond, with semiannual premium payments and a fixed term” (Lewis, 2011, 29). Quite the contrary to short-selling, with CDS’s the “...’downside was defined and certain...[whereas] the upside was many multiples of” what one had put down (Ibid). Hence, in 2005, fund manager Michael Burry pioneered their use for, in effect, *shorting subprime* mortgage bonds (Lewis, 29-30).

3) “Nobody who sells somebody else a credit default swap is hanging on to Reserves, in case they have to deliver. So it’s insurance *without backing*” (Keen, 2011b).

4) “The credit default swaps, filtered through the CDOs, were being used to replicate bonds [that were] backed by actual home loans. [The motive was that] There weren’t enough Americans with...[bad] credit taking out loans to satisfy investors...” (Lewis, 2011, 143).

5) “Credit Default Swaps are inherently unsafe, and we [Dodd-Frank] didn’t say ‘Don’t do them’. We said: ‘Oh well, try and get some margin for them’” (Sheppard, 2017, mn.28-29).

See also “Dodd-Frank Act of 2010”, “Short-selling”, “Mortgage bonds (subprime)”.

Credit guidance- see “Window guidance”.

Credit-issued money- See “Bankmoney”, “Debt money”.

Credit money- (synon. any abstract ‘claims money’ [i.e. claims that have been granted *de facto* state-backing, or the *de jure* state stamp, and that CIRCULATE between > 2 parties]); not to be confused with ‘credit-issued money’ [the more narrow subset of credit money], which is just a synonym for interest-bearing [and *de jure* state-supported] bankmoney⁶¹⁰).

1) Even though many scholars have noted that “the Neolithic and Bronze age economies operated mainly on credit” (Phillips, 2020), those were in the pre-coinage (i.e. ‘pre-monetized’) era. As with Michael Hudson’s denial of Iron Age ‘sovereign money’ (Hudson, 2019b), for some (like ‘MMT’ founder) Mitchell-

⁶⁰⁹ Credit card (administrative) “merchant fees” for 2020 are forecast at \$43 bn.; checking account fees, in contrast, are only about \$3bn. (Dore, 2019, mn.3).

⁶¹⁰ “Credit-issued money” (synon. “TAB-bankmoney”) is a more specific and more (directly) state-supported subset of “credit money” (i.e. what bank credits [TAB] used to be in the ‘free banking’ or wildcat [Huckleberry Finn] era, prior to their *de jure* state-backing in reserves [RAB] and insurance schemes [FDIC] in the (so-called) modern era. Just as “bank credits” [TAB] and “bankmoney” [TAB+RAB] are not the same thing, “credit money” and “credit-issued money” are not the same thing. As Huber further explains, “[p]laying with bankmoney is not the transfer of a credit-and-debt document, as is the case, for example, with a commercial bill of exchange.... Pragmatically, one may speak of ‘credit money’ when meaning [more specifically] ‘credit-issued money’...[just as one uses] ‘debt money’ as short for ‘debt-borne money’”. No problem exists as long as it is understood that money is but money, a tool for the settlement of transactions, different from the socioeconomic relationships of credit and debt, claims and liabilities, which are settled by paying money” (Huber, 2017, 96).

Innes, Bronze Age “credit’ became a revelation of the true nature of money from time immemorial onward to forever”⁶¹¹ (Huber, 2017, 93).

2) The term ‘credit money’ has been easily abused in the century since Mitchell-Innes’ ‘theory’, because (like “private” & “public”) the two components mean different things. “Credit” involves some risk⁶¹² and-- being private-- should be *interest-bearing* (according to salient time/risk). “Money” is simply the means of payment (like water) itself, and should not necessarily bear interest (that is, unless the ‘greedy state’ is, for some reason, addicted to gaming-monetary-revenue-streams; see also “State capture”, “Parasite”, “Big Government [growth of]”).

2b) Credit can be issued or marked by anyone (see “Shadow Banking Sector”). What makes credit into actual ‘money’ (a.k.a. “currency”) is the public sector or state stamp (the legal [de jure] mark or seal of *acceptance/backing*’ that is required for widespread circulation on either the [account money] Payment System, or for physical cash). “Money, forms of”.

3) Through the ancient, medieval, and early-modern eras, both public [1st Estate] and private [2nd Estate] institutions have had their institutional credits officially marked as ‘money’ (pre-1600’s) or as ‘currency’ (post-1600’s) within a politically sovereign jurisdiction (or, in the case of empires, jurisdictions). This observation is nothing new: Individual “Credit as a facilitator of exchange is older than [state-symbolled] money... But though it may [very often] be made *into* money, it is not itself [inherently state-stamped] money...”⁶¹³ (George, 1898, 493). The state is just taking an extra step (or, in more recent times, more like 4, 5, or 6 extra steps) to support it as such. See also “Bank welfare”.

4) Because *credit* is one of those rubber *deceptive banking terms (d.b.t.’s)*, however, its resultant oxymoron-- “credit money”-- has been used, mostly in the 20th century, to conceal or confuse the distinctions between *account/abstract money* (which is, from the first states of Sumer, the oldest and most prevalent *form* of money) and *debt-borne money/bankmoney* (merely the most common *class* by which such ‘account money’ is initially issued today. This is done with interest strings attached, (typically) by privately-owned institutions [acting (either de jure or de facto) in the name of a sovereign/monetary state]). See also “Credit Theory of Money (Innes)”, “Money, 2 classes (layers) of”.

4b) “Only credit bears interest, not the means of payment” (Huber, 2021); on which it travels. Messing with this fundamental truth is (state-sanctioned) “Usury” [i.e. abuse of the (public) scales].

5) It is a mistake to claim that ‘all money is (always) credit’ or (even worse) that ‘all credit is money’. Credit/Debt may involve interest without money. Historically, the farmer would borrow seed or land and pay back with crop yield. For example, Bronze Age Mesopotamian temples and palaces would lend seed to sharecroppers, or silver to merchants, with commodity interest. This kind of credit is not money (i.e. not on the payment system). It is just a claim to a commodity, like silver or barley at a warehouse. The Mesopotamians used this kind of credit claim extensively; and only in some cases did it function as ‘money’-- when the symbolic cuneiform clay claim⁶¹⁴ could be passed to a new creditor in payment for

⁶¹¹ The British diplomat one-hit wonder actually stated that: “Credit and credit alone is money.... [Credit] is simply the correlative of debt.... The words ‘credit’ and ‘debt’ express a legal relationship between two parties... seen from two opposite sides.... Money, then, is credit and nothing but credit.... This is the whole theory of money” (Mitchell-Innes, 1913), rivalling Adam Smith in (see also) “ConfUSURY”, “Smith, Adam (1723-1790)”, “Credit Theory of Money”.

⁶¹² “Credit markets”, as was demonstrated in the financial crisis of 2008, “cannot operate normally if an accurate price cannot be assigned to the assets [that] a would-be borrower includes in his portfolio” (Schwartz, 2009, 23). See also “Risk”, “Separation of Powers”.

⁶¹³ Money can exist without credit; but legal credit transactions today cannot exist without money. “Credit transactions are exchanges of value with a time lag [unlike cash]. Without a [generally accepted] way to quantify the value exchanged [a.k.a. “money”], they are nearly impossible to make” (ACH, 2018).

⁶¹⁴ Anything that is (or is being used as) money has to circulate. Although MMT advocates often teach that ‘credit money’ goes back to ancient Mesopotamia, actual cuneiform debt records were primarily for *commodity debts*, where commodities-- including *commodity money*-- had been sold or loaned out, and payment in commodities (or commodity money) was due in return. Alternately [?], the credit records recorded the fact that a warehouse depositor of goods had a claim on the commodity deposit, a claim which could be transferred (sold to 3rd parties) only under *very limited circumstances*. See also “Commodity money”, “Smith, Adam (1723-1790)” (who broke with Hume in trying to conflate *commodity* money with *credit* money).

goods or services within the community (that recognized such symbols). This kind of credit⁶¹⁵ simply does not originate from creating a loan, as does TAB-bankmoney, and is hence commodity money, not 'credit money'. See also "Graeber, David", "Commodity money".

6) If the account/abstract-money-issuing institution is *private* [2nd Estate], we typically call it (from medieval times) a 'bank', and its credits come with strings of interest (precise debt schedules) attached. Hence so-called 'modern' *debt-borne money* (a.k.a. 'credit-issued money') is a subset of *credit money*⁶¹⁶ (and 'credit-issued money' is hence also a subset of *account money*, which, in turn, is a subset [vis-a-vis physical coins] of *money* in general). People who confuse such distinctions, whether deliberately or not, are playing shell games, and the shell games originated⁶¹⁷ from a desire to conflate and confuse private-credit *financial* powers with public-measurement *monetary* powers. See also "Crenery", "State capture".

7) If the account/abstract money-issuing institution is *public* [1st Estate], then no interest need be attached to its credits (and new money can also be *spent* [interest-free] into existence, not just lent into existence). This form of public/government interest-free money has (more often) been called: 'coined money', 'sovereign money' (Huber), *Debt-Free National Money* (this book), 'equity-based' money (Kotlikoff, Phillips), and 'constitutional'/US money; as well as (not entirely accurately) '100% Reserve' (1930's) & 'full reserve banking' (UK). See also "Sovereign money".

8) In terms of deception and wordplay, for hundreds of years, bankers have maintained that they merely create 'credit', not money, with their loans. They deny the accusation that they create money. 'They just create credit' (TAB), which is a half-truth, because what is in the bank accounts-- bankmoney-- is a combination of bank credits (TAB) and Reserve (RAB)-backing. The reason for the bald denial of money creation by bankers is that most of us suspect that imbalanced money creation by bankers and their borrowers is the main cause of the inflation, recession, and monetary instability. This banker flimsy denial hides a fundamental contradiction. Their own lobby, the Federal Reserve, calls the money that banks create with loans *money*-- as in the official M1 money supply-- not merely (TAB) *credit*. In fact such bankmoney represents the bulk of all money in existence. Nonetheless, bankers want to have 'credit' (TAB) be both money and not money, depending on the context. The corporate media cartel has been very successful at giving a criminal money creation racket a positive face with the gullible public, and even pretending that bankers are victims of banker bashing.

9) Those individuals whose attention is caught, however fleetingly, by monetary reform have often fallen into 3 divergent camps with respect to the nature of credit and money. Traditionally most prevalent in the South and West have been the Libertarians, Austrians, gold bugs, and commodity money proponents. Their (common ground) position is that today's current *credit money* is incorrectly used as money, when it is actually nothing but worthless 'fiat money' without intrinsic value, not 'real money'. The second camp, the sovereign money promoters, also go back a ways (in Massachusetts at least, to the 17th century) and agree that the current *credit-issued money* (TAB-bankmoney) is merely used as money, and is not a valid definition or concept of 'real money'. The real nature of money for them is *legal* (public, deliberative), not material (yet alone material-derivative in nature). The third camp, MMT, agrees that money is legal & governmental, but asserts that we *already have* sovereign money⁶¹⁸ and that US Treasury debt is not real debt (with a real bite), but just a form of 'savings'. Their position, from British diplomat Mitchell-Innes, a century ago, is that credit/debt is inherent in the definition and nature of money and has been so ever since the invention of money in ancient Mesopotamia five or six thousand years ago. They have invented this history of money (as being invariably credit [and hence also invariably debt]) largely out of whole cloth, not unlike the libertarians invent the history of money as (the absurdity of) private barter. Both the first

⁶¹⁵ More modern variants of *moneyless* credit/debt involve collateral or retention of title, as in a pawn shop or a land contract mortgage. The pawn seller retains an option to repurchase the pawn with interest.

⁶¹⁶ ...as the United States is, geographically, a subset of North America.

⁶¹⁷ The earliest known formal articulation of (at least the superiority of) private (what would come to be known as) bankmoney was made by the [2nd Estate] Bishop of Lisieux, Nicole Oresme (c.1323-82). See also "Austrian School", "Barter", "Gold standards/bullionism", App.C: "1-2-3".

⁶¹⁸ MMT has simply failed (in supporting this assertion) to distinguish between "*sovereign money*" (as defined by Huber, below) and what Wray (2011) has defined as "*sovereign currency*".

and third camps are functionally (de facto) pro-banker and work for the interests of the banks, regardless of what they say or believe (see also “Fin de siecle”). The libertarians are anti-regulation, which is the main goal of bankers, toward the international ‘globalist’ banking syndicate. MMT wants to keep the Treasury bonds backing (a.k.a. the dual-circuit monetary system; see also “Quantitative Easing”, “Bank welfare”) and to conflate the private Federal Reserve with the public Treasury, which also coincides with banker goals. See also App.C: “1-2-3”.

See also “Creney”, “Cashless Society (War on Cash)”, “Barter”, “State Theory of Money”, “Sovereign money”, “Currency Wars, the”.

[*Fin de siecle*-era ideas were convenient for capitalizing railroad development (and also sometimes villains-provocateurs). See also Appendix C- “1-2-3”].

Credit rating agencies- (synon.: ‘nationally recognized statistical rating organizations’ [NRSRO’s]; regulator: the SEC)

1) the ultimate in top-down, consolidated power, the credit rating industry is dominated by a duopoly of Moody’s⁶¹⁹ and Standard & Poor’s (accounting for 80%), with a 3rd private firm, Fitch,⁶²⁰ comprising an additional 15% of the global market. All “Big 3” firms are (unlike the Big 4 auditors) US-based, and, despite a prior reputation for solidity (or perhaps just stodginess), have not been keeping up with the times this century. The Big 3 were officially blamed by the Financial Crisis Inquiry Commission⁶²¹ as “key enablers of the financial meltdown [of 2008]... This crisis could not have happened without the rating agencies” (Angelides, 2011).

1b) Given more than a decade’s hindsight, Laurence Kotlikoff (now) disagrees. Even most of the ‘subprime’ ‘loans’ in 2008 “were properly rated. The...[overall] problem in the [US] mortgage market was not in the subprimes, but in the regular mortgages that were not subprimes. They were the ones that lost the most value. The...31 billion [dollars] of crap Bear-Stearns mortgages that were called the ‘Maiden Lane fund’ that the [‘subprimes’ that the New York] Fed bought up to enable JP Morgan to scoop up Bear-Stearns. “These supposedly terrible securities...[actually] turned a profit, as Tim Geithner is proud of telling everybody.... We didn’t have mis-rating of securities on a systematic basis” (Kotlikoff, 2021, mn.52-54).

2) The SEC only permits money-market mutual funds (whose dollar volume surpassed that of bankmoney in the mid-1990’s) “to purchase...securities with high NRSRO ratings. NRSRO ratings also are used in satisfying net capital requirements by banks; [and] broker-dealers and insurance regulators [also] use credit ratings from NRSROs to ascertain the strength of the reserves held by insurance companies” (Fitts & Betts, 2019).

3) The industry’s origins go back to “the mid 1800s...[T]he... railroad business was incredibly capital intensive and, as a result, the railroad companies issued securities-- a wide variety of notes, bonds and hybrid debt-equity instruments-- to finance the construction and maintenance of their infrastructure. Information about the health of railroad companies, particularly their financial health, was fragmented,

⁶¹⁹ “...the aristocrats of the rating business, 20% owned by Warren Buffett” (Lewis, 2011, 172). See also “Aristocracy (& nobility)”.

⁶²⁰ Fitch “is controlled by Hearst” (Fitts & Betts, 2019).

⁶²¹ “Almost everything that the Financial Crisis Inquiry Commission wrote about the causes of the [so-called] Great Recession-- [f.e.] the idea that housing prices were out the wazhu-- [was] not true.... [For] decades...[t]he real prices of houses had been declining. Then they [simply] went up for a couple years.... Back in 2008 we didn’t know the facts; but we do now” (Kotlikoff, 2021, mn.55-56).

providing an opportunity for pioneers in the field of business information and analysis.... [All of the Big] 3 first began as publishers of business information in the early 20th century... [and then] branched out into securities rating, as the business information industry developed. Economic forecasting also boomed early in the 20th century” and the new “credit rating” industry wedded the two fields (Lesyk, 2015). How did it become such an absurdly narrow cartel?

4) For example, in 2005 “more than 40% of Moody's revenue came from rating securitised debt such as mortgage backed securities (MBSs) and collateralised debt obligations (CDOs). If one agency gave realistic assessments of the high risk associated with these securities while others did not, that firm would see its profit plummet” (Crotty, 2009). “It's almost as if the *higher* the rating of a financial institution, the more likely it was to contribute to financial catastrophe. In pursuit of their own short-term earnings, (ratings agencies) did exactly *the opposite* of what they were meant to do: rather than expose financial risk they systematically disguised it” (Lewis & Einhorn, 2009).

5) Also in that decade, bonds “backed by *floating rate* mortgages received higher ratings than bonds backed by fixed rate ones, which was why the percentage of subprime mortgages with floating rates had risen in the past 5 years, from 40 to 80”; and even though “a lot of these loans were going bad... Moody's and S&P...still...[didn't change] their opinions of them” (Lewis, 2011, '169').

6) Wall St. or Deutsche Bank insiders such as Greg Lippmann commonly remark upon what Michael Lewis calls “the idiocy and corruption of the ratings agencies, Moody's and S&P, who stuck a triple-B [“investment grade”]⁶²² rating on subprime bonds that went bad when losses in the underlying pools of home loans reached just 8%” (Lewis, 2011, 66-67).

7) “This will tell you everything you need to know about the [Big 3] credit rating agencies [cartel].... The financial version of ‘Don't Ask, Don't Tell’.... We know how many loan files were reviewed by the Big 3 in giving the ratings. And what do you think the typical sample size was?... it was zero... [So] then Fitch [came in and] did a study-- after the secondary market collapsed-- when there were no more fees to be jeopardized”, giving “Triple A rating” to “‘fraud or misrepresentation’ in almost every file” (Black, 2017, mn.40-43).

8) “Guys who ‘can't get a job on Wall Street get a job at Moody's,’ as one Goldman Sachs trader-turned-hedge fund manager put it⁶²³.... Wall Street bond trading desks.... Quickly figured out...that the people at Moody's and S&P didn't actually evaluate the individual home loans, or so much as look at them. All they and their models saw, and evaluated, were the general characteristics of loan pools” (Lewis, 2011, 98-99). “In Vegas, it became clear to me that this entire huge industry was just trusting in the ratings... so they didn't have to think about it’. Eisman had worked on Wall Street for nearly two decades, but, like most stock market people, he'd never before sat down with anyone from Moody's or Standard & Poor's.... ‘The smartest ones leave for Wall Street firms, where they can manipulate the companies they used to work for’.... The ratings agencies' guys... weren't players, and they didn't know the people who were, either.... They appeared to know enough to justify their jobs-- and nothing more. They seemed [it could not be hidden] timid, fearful, and risk-averse... It was in Vegas that Eisan realized that ‘*All the stuff I had cared about, the ratings agencies didn't care*’” about (Lewis, 155-156). “They all said 5%. It was a party, and there was a party line” (Lewis, 2011, 157). The ratings agencies “were morally bankrupt and living in fear of becoming actually bankrupt” (Lewis, 176).

9) “There was only one answer: the triple-A ratings gave everyone an excuse to ignore the risks [that] they were running” (Lewis, 2011, 144)... i.e “‘how the securities were [often] worthless. How they all knew it. He gave words to stuff we were just suspecting.... When he finished there was complete silence.... It was like everyone pretended [that] he hadn't said it’.... If the market became self-aware, its madness couldn't last long” (Lewis, 2011, 149).

⁶²² The ratings AAA, AA, A, and BBB are to be considered “investment grade” bonds; whereas BB, B, CCC, CC, C, WR (“withdrawn”) and NR (“not rated”) are “below investment grade” or “high yield”. A rating of D is for bonds that are already in default.

⁶²³ Jacob Soll agrees that “the accounting schools fret about their image... [which] has been tarnished.... an honest accountant is...not going to make as much as a banker. So...[they] struggle trying to get better students...” (Soll, 2014b, mn.49).

10) “There were more morons than crooks; but the crooks were higher up’. The ratings agencies were about as low as you could go and still be in the industry, and the people who worked for them really did not seem to know just how badly they had been gamed by big Wall Street firms” (Lewis, 2011, 158). “We of course thought that the ratings agencies had more data than we had... They didn’t” (Lewis, 170).

12) In August 2016, US securities regulators approved an application from Morningstar Credit Ratings-- a subsidiary of the leading mutual fund-rating agency-- “to offer credit rating opinions on companies and banks as a *nationally recognised statistical rating organisation*.... The group now expects to compete with the major rating agencies [at least] on offering opinions on new debt sales... now that it has SEC approval, and intends to hire a number of new credit analysts.... Morningstar, like rival agencies, has a credit rating committee debate rating actions proposed by its analysts... The credit rating division counts 130 employees, including [all of] 13 [actual] corporate credit analysts” (Platt, 2016). See also “Accounting, standards & reform”, “Big 4 Accounting firms”, “Globalism”.

Credit Theory of Money (Innes)- (‘from [Adam Smith’s] barter-myth to [Mitchell-Innes/Hudson’s] Bronze Age ‘palatial’ farm credits; antecedent: ‘banking school/bank teachings’; successor: ‘MMT’). See also “False dichotomy (fallacy)”.

1) In addition to serving as a simple refutation against bullionism & the gold standard (that was then already heading out of style), the ‘theory’ (1914) is a facile conflation that money-- since it is (in recent centuries, increasingly) abstract-- must also therefore ‘always’ be promises (& hence exemplified by a specific interest schedule); and that, ideally, any institutional promise is hence also ‘money’ (or at least some form of ‘near-money’).⁶²⁴ See also “Credit money”, “ConfUSURY”.

2) About a century ago, British diplomat Alfred Mitchell-Innes swayed from traditional Banking School teachings, pointing out that “money is not a commodity but an accounting tool. In other words, it is not a ‘thing’ at all. You can no more touch a dollar... than you can touch an hour or a cubic centimeter.... [But] such abstract systems of accounting emerged long before the use of any particular [recognized] token of exchange” (Graeber, 46). See also “Tally sticks”.

3) Mitchell-Innes, however, still “idealized” fractional “reserve banking as a, quote, ‘*wonderfully efficient machinery of the banks*’” (Huber, 2013b, mn.15); and “in an almost compulsory way... insisted on the nature of money... to be credit & debt”⁶²⁵ (Huber, mn.33-34). See also “Credit-ocracy”, “Bankmoney”.

4) Zarlenga and Henry George have also pointed out, as Hudson, Keen and Graeber have not, that (private) credit “can legally be improperly made [stamped] into money, but it’s not itself money. Money is on a higher order than Credit.... [For example] ‘Credit expands when there is a tendency to speculation, and [then, sans public intervention] sharply contracts just when most needed to assure confidence...’ wrote Henry George” (Zarlenga, 2004, 544).

5) Moreover, credit transactions involve a time lag and hence are dependent upon both parties using the medium of money; whereas money, at least in the form of cash, does not require credit and can be either spent or lent into existence. Innes’ theory was and is false (just less so than was Smith’s).

See also “Credit money”, “State Theory of Money”, “State capture”, “Leverage”, “Usury”, “Modern Monetary Theory’ (MMT)”, “Public Banking”, “Reform, false”, “‘Opposition’, controlled”.

Credit Unions- (now more like tax exempt banks [post-1980’s] than farmers’ coops [pre-1970’s])

⁶²⁴ The ‘theory’ basically fails (in all of its 15 or so pages) to differentiate between “money” and (what were called at the time) “near-monies”.

⁶²⁵ Mitchell-Innes-type comments that ‘[m]oney is credit’ or ‘money is debt’ [make] for a witty remark in an arm-chair conversation; if taken literally [however, it’s]... simply nonsense. Why should the fact that credit & debt historically existed long before money be ‘proof’ of [all] money actually being credit & debt? Rather, it may be seen as evidence that money (the means of payment) came as a social innovation that helps to deal with... transactions... in a much more efficient way than was previously possible. The separate existence of money and credit was obvious for 2500 years of coin currencies, when the money was not lent into circulation against interest, but spent into circulation...” (Huber, 2017, 94). See also “Reform, false”.

One of the classes of Fractional Reserve (monetary) institutions,⁶²⁶ credit unions primarily differ from commercial banks in that they are member-owned, non-profit, and (local) community-based; and also differ from thrift banks in that they have their own deposit insurance plan.

Some discordance over exactly how long they have been creating money with loans

1) 5,757 credit unions in the US had an aggregate \$1.3 tn. in assets in 2017, compared to approx. 4900 banks with \$15.63 tn. in assets (CUNA, 2018, 2).

2) have steadily liberalized since the 1970's, and now “count more than 110 million people as members and hold deposits totaling \$1.1 trillion. They...[have become] major players in auto and mortgage lending and are making deepening inroads into commercial and small-business lending.... [so much so that] bankers and their trade groups have questioned why...[credit unions] remain exempt from paying federal taxes. Credit unions have countered that they have stayed true to their mission by passing the savings on to their members in the form of higher rates on deposits and lower rates on loans” (Reosti, 2018).

[US credit unions & banks total assets, 1980-c.2011]

3) typically have less exposure to mortgages and MBS, and have hence gained some market share since the 2008 Financial Crisis; with asset growth surpassing that of banks since 2009 (Ibid). See also “Monetized credit institutions”.

⁶²⁶ Although officially regulated by the National Credit Union Association (NCUA), national credit unions in America operate with Reserves [RAB] and must have accounts with the Fed. This is not mutually exclusive to also having NCUA regulation.

Credit Unions vs. Banks	
Become a member when you join	Ran by investors.
Not-for-profit.	Profit-driven.
Insured by NCUA.	Federally insured by the FDIC.
Serves a particular group or neighborhood.	Anyone can open an account.
Expanding to a wider range of services.	Wider range of services.
No high fees & finance charges.	Monthly fees & finance charges.
Lower interest rates & low-cost services.	More accessible.

[also: Less exposure to bad loans ; More exposure to mortgage trends.]

Credit-ocracy- “We are seeing today the equivalent of Rome’s Social War, 133-29 BC. Creditors know that they are paper tigers in a fight with a government that uses its sovereign legal powers. So creditors try to weaken government, denouncing taxes, and [constantly] accusing it, rather than creditors [and debt saturation], of being a *deadweight* responsible for *austerity*.... The financial interests have gained control of the mass media and universities, the courts, and now the government itself, under the US ‘*Citizens United*’ [2010] ruling that relinquishes election campaign financing to whomever has the most [bank credit] money”⁶²⁷ (Hudson, 2012g). See also “Duopoly”, “Credit rating agencies”, “Soddy, Frederick”.

Credit (& Debts)- 1) is Latin in double entry accounting for “*he believes my promise to pay my debt*”. The debt is for goods or services purchased or borrowed, or for a monetary loan. The debt may thus be owed in goods, services, or money (or ‘near money’). In international accounting, since the late Middle Ages, all accounts & entries are either debit or credit accounts & entries (since all ownership transactions [if we want to be clear] have two parties). A debt (liability) by the company or bank is entered in its ledgers as “a credit” (a negative); and a debit (asset) to a company or bank is entered in its ledgers as “a debit” (a positive). “A credit” thus increases an institution’s debts (liabilities→to *accounts payable*) or decreases its assets (to *depreciation*); although, confusingly, the multi-faceted term credit (d.b.t.) may also be used to record incoming revenue (assets→ *accounts receivable*). See also “Deceptive banking terms (d.b.t.’s)”.

2) Since a credit balance at the bank is an asset for the account holder, non-accountants are shocked to learn that *credit* actually means *debt*. The explanation for this apparent contradiction is that every debt is someone else’s asset, and every debt is a credit on the debtor’s books and a debit on the creditor’s books. The bank credit (TAB) balance in a bank account represents the bank’s debt to the account holder.

3) Non-accountants are additionally confused by the fact that the word *debt* comes from the Latin *debit* (he owes me) and therefore think that debit should be the debt that they owe. However, debit represents what another owes me, not what I owe. The IOU (debt) from a debtor is an asset (a future income stream) in the creditor’s ledger. Therefore, since accounting is as much about future settlements as it is about cash transactions, it is natural for an accounts receivable asset to have a debit balance.

See also “Credit/Debt”.

‘Creney’ (essay)- (the strategic conflation of ‘money’ and ‘credit’; a.k.a. ‘confusury’, or ‘state-sanctioned counterfeiting’, via the ‘central banking-warfare model’)

1) The mother of all public lies & chicanery, so to speak, goes back to ‘creney’, the aftermath of the 1st Currency War (a.k.a. the American Revolution) in the 1780’s, and possibly a *quid pro quo* that Benjamin

⁶²⁷ “Money” being, of course, (approx. 96%) *commercial bank credits* (TAB) under the present system. See “Banksters”.

Franklin, et al may have negotiated (with the Creney Kingdom) during the '80s.⁶²⁸ How long will it take the sheeple⁶²⁹ to figure out what it is that ails them and their so-carefully-crafted constitutional republic? It is, in a word,⁶³⁰ 'creney'-- a.k.a. 'confusury'-- the mixing up, deliberate or otherwise, of 'money' and 'credit', i.e. that which is supposed to be public and above the fray, not the fray (of extracting liquidity⁶³¹) itself. See also "State capture".

2) Why did this discovery/realization take so long? The classical conditioning of concurrent stimuli. The development of 'creney'/confusury-- plotted in the 1780's, hatched (in the US) in the 1790's, house-trained in the 1810's (the 2nd Currency War), set back in the 1830's, and then back on course from the 1860's-- has very often, if not usually, been conflated (as indeed, is the institution's very nature) with all sorts of concurrent American developments since the 1790's: frontier development and Mark Twain-like common sense; then (after 'creney's state-zation in the 1860's), ending slavery, replacing it with 'capitalism' and its inventions galore, the war economy, 'father knows best', and civil rights-excellent music. Who could argue with all of that, eh?... pretty much gold medals all over the place. See also "Conditioning", "National money".

3) But then something in America changed. And in the 1980's-90's, perhaps as profoundly as the re-setting of the 1780's-90's, the gold medals started turning into bronze, tin, and sometimes even rust.⁶³² The music (at least on most public mediums) died, civil rights devolved into a 'politically correct', legalist quota regime, public dad guys (from c.2005, anyway) now knew least, the war-economy (obviously never a good thing) was now more or less openly run by private contractors, and even the never-ending stream of inventions, (by the 2010's) seemed, en masse, at least as likely to harm health and wisdom as to support them. See also "Central Banking-Warfare model" (sans large-scale warfare), "Dumb-downing", "Fascism, modern hand of", "Zombie".

4) Did Americans even-- after such a long string of disillusionment, vulgarities, and junk food-floridization-- still have common sense?⁶³³ Did the monetary [operating] system of Robert & Gouverneur Morris'

⁶²⁸ Did Alexander Hamilton spill the beans to the new New York legislature in 1800? One would think it sort of difficult to cover-up something like that (in the public record). But (Sumner, 1890, 147-148).

See also "Franklin, Benjamin (1706-1790)".

⁶²⁹ The term *sheeple* usually denotes those people-- particularly in the 21st (in-your-face) century-- who have failed to grasp that they are being used or 'sheared' by certain prevalent societal institutions (be they 'public' [1st Estate] or 'private' [2nd Estate]). The mother of them all, so to speak, is the financial-monetary usurpation (a.k.a. usury). "Account holders are *not supposed to* wonder what risk they take when putting money 'in the bank'. They are often *not even aware* that they are [in fact] funding a bank with their savings. Anyone who puts money in the bank believes that he [de jure] owns that money..."; when in fact they do not (Wortmann, 2019b, 2). Why does the state (government) make everybody do this? See also "Parties, political".

⁶³⁰ In the broader sense, the American republic, some 2.5 centuries after its founding, 1.5 centuries after its last revision, and more than 8 decades now since its last debt-cycle collapse and systemic reform, suffers from every one of biologist Aubrey de Grey's "7 Deadly Things" (for any organism [as adapted for large nations & constitutions]; see also de Grey, 2013, mn.9:58):

1. inactivity/atrophy- Given America's sugeneris TV & couch potato'ism (cocktailed in with GMO's and marketing), obesity rates are already the highest in the world, and (if the trend is uncorrected) could reach near the 50% mark by 2030;

2. socio-economic bifurcation- see "Debt saturation", which is the inexorable result of dependence upon "'Debt money'";

3. the undead- see "Zombie", "Big Government (growth of)", "Socialism".

4. political parties- see "Parties, political", "Duopoly".

5. junk food/GMO's- see "Food", "Dumb-downing".

6. junk media- see "Corporate Media Cartel" (& 'Hollywood' millen. era 'heroes', with weird accents, who do nothing new)

7. globalism-imperialism- see "Globalism", "Super Imperialism" (failure at home→ escapism abroad). And please note the fine print: that pretty much everybody (in the IC at least) knew about it, as far back as the 1980's. See also "Jones, Alex".

"Creney" is, so to speak, like the lynchpin, or devil's inhibitor, that holds inactivity on all of the 7 (well-known) nation-killers in place. It differs from "*debt-money*" (its Janus-face) in that the latter refers to a specific (money creation) process, whereas *creney* (a.k.a. 'credit money') is the more general/theoretical (and history [pseudo-history]-based *justifications for* contemporary 'debt-money' practices. See also "Credit theory of money", "History", "Economics".

⁶³¹ A.k.a. "the haggling of the marketplace" (Wood, 1993, 106).

⁶³² For example, the USA, traditionally the most "middle class" and socially mobile nation in the world, is now become so ossified that it doesn't even rank in the top 30, according to a detailed study by the OECD in 2019 (p.44). See also "Imperialism, 'modern'" [life expectancies], "Dutch disease".

⁶³³ ...as opposed to neurolinguistic programmed auto-deferral to the 20th century almighty super-power's endless lines of 'properly' licensed and degreed experts? This matters, because even though separation of powers (i.e. [1st Estate] money from [2nd Estate] credit) is just traditional

Pennsylvania delegation⁶³⁴ (with a tip to British & Dutch absentee owners) in the 1780's doom a nation-- of now 330 million, 2.5 centuries later-- to the fate of that of a mythological "Atlantis" (the ultra-high-tech political dystopia that winds up killing itself along with most everybody else)? If so, why? Is it insufficient fate that can be avoided; and if so, how? See also "Adolescence of Mankind", "Statism".

5) "I say, let the bankers have their [private] credit; we the people want the [public] money" (Switzer, 2020d). See also "Credit money", "Money", "Deceptive Banking Terms (d.b.t.'s)", "Conspiracy theorist", "Anthropology, of credit & money", "Monetary reform", "Local scrip & Complementary currencies"..

[State's ~~money~~ currency. See also "Pyrite", "Imperialism".]

Criminalization of Banking, the⁶³⁵ (full 'disintermediation'⁶³⁶, plus offshoring/deregulation)

1) It wasn't always like this.⁶³⁷ In "the 1980's, a decision was made to end financial intermediaries.⁶³⁸ The [full reserve] Savings banks were looted by insiders. The Boards of Directors simply took the Reserves of the Savings banks... gave 10% to themselves, [and] 90% to the Wall St. companies that turned them into commercial banks, and they were emptied out, [transformed] from basically depositor-owned institutions into Wall Street [fractional reserve] banks. The S&L's were similarly changed" (Hudson, 2010b, mn.1-2). "Once the government succeeded in abolishing [deregulating] the Savings banks, in abolishing the Savings & Loans associations, there was only one place that people could go to gain

American common sense, the parades of experts to the contrary can be long. To "Banking scholars... [and] to most neoclassical, Keynesian, and post-Keynesian economists today, the [classic] Currency School principle of keeping money and credit apart appears [to them] to be an impossibility, for they [have been taught to] firmly believe in money and credit...being one and the same" thing (Huber, 2017, 47). See also "Neoclassical Economics", "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)", "Commons".

⁶³⁴ The Pennsylvania delegation (led by [in equivalent to today's money] both America's 1st millionaire [Franklin] and also its 1st billionaire [R. Morris]) was both the largest and most prestigious at the 1787 convention; and in addition to Robert Morris's [monetarily-astute] lawyer Gouverneur (who spoke more than any delegate), all were selected from R. Morris's newly-dominant party faction in the legislature, with the exception of Franklin, who, as ceremonial 'President' of PA., tried to remain neutral. **Audacious frontman** for the team Alexander Hamilton (arguably G. Morris' best friend [like Adam Smith to David Hume]) only came to the fore after the Morrises had had decided to pull back a bit, and (unlike the Morrises) was summarily rejected at the Philadelphia convention. See also "Franklin, Benjamin (1706-1790)", "Constitution, US".

⁶³⁵ This term in particular is only intended for the United States, where (in contrast to the UK) there has been greater *pluralism* in banking (from, as FDR pointed out, "the days of Andrew Jackson"), as well as (since the 1930's) a much more extensive *regulatory rubrick*. The point of this entry is that the 'American exceptionalism', in the form of the latter, was systematically dismantled in the 1980's-'90s; followed, inexorably, by a very substantial decline in the former, in the 1990's-2000's. See also "Big 5 (High St.) Banks", "Provocation operation (Po)".

⁶³⁶ Although *disintermediation* is typically used as the **d.b.t.** for the process of moving funds from bankmoney (which is not intermediated) to 'near monies', in this usage it refers to formerly old-style ('full reserve') **financial institutions**, such as thrifts, being allowed to transform into 'fractional reserve' **state-monetized credit institutions** that no longer have to rely on their account holders' funds for the financing of new loans to borrowers (as per Kumhof's "Intermediation of Loanable Funds" theory).

⁶³⁷ In the 1870's, City of London doyen Walter Bagehot wrote that "'A banker, dealing with the money of others, and money payable on demand, must be always, as it were, looking behind him and seeing that he has reserve enough.... Adventure is the life of commerce, but caution... is the life of banking'" (Dunne, 1984, 18); that is, until debt-money's inherent predilection towards debt-saturation and warfare drove sufficient development of Big Government-- and big insurance (a.k.a. 'moral hazard')-- to, a century later, make this observation obsolete. OTC derivatives, for example (nearly all of them owned by TBTF banks), are **more** gambling than cautious. The moral stricture on risking 'other people's money', or generally doing things without their consent, ain't what it used to be. See also "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)", "Tolkien, J.R.R. (1892-1973)", "Separation of Powers".

⁶³⁸ For more on the demonstrably false, though still prevalent, 'financial intermediation'/'loanable funds' theory of banking, see "'Exogenous vs. Endogenous' (money creation)".

access to housing-- and that was the commercial banks... [which were] essentially criminalized"⁶³⁹ (2010b, mn.7). See also "Securitization", "Bank welfare", →"Monetary Reform".

[...2.0- the 1980's; See also "Currency Wars, the", "UKUSA Agreement", "Cultural Calendar".]

2) Why? According to America's straight-talking Economist, Hyman Minsky, if the declining trend "in the ratio of government debt to gross domestic product of 1946-1980 had continued [on] through 1993, [then] we would now be concerned about the *shortage* of government *debt* to satisfy the needs of the financial system" (Minsky, 1994, 26-n12), **which is, after all**, based on Treasury debt securities. See also "National Debt Economy (NDE)", → "Minsky, Hyman", →"Monetary reform".

3) In the deeper sense, it was actually from the City of London (in the 1960's) "that the offshore [and hence deregulatory] dollar banking industry was born, with profoundly destabilising long-term results.... By the 1980s, the push was on to achieve... the wholesale liberalization of capital movements. Regulators in London and New York, egged on by banking interests, were racing to the bottom. By the 1990s, the City of London had ceased to be in any sense a British banking centre... the small merchant banks of the City were swept up by Asian, American, and European competitors. The City became, as Mervyn King quipped in 2012, the Wimbledon of the world economy.... But that sporting analogy, with its suggestion of elegance and decorum, is flattering. The City of the boom years was... showered with staggering amounts of money from [all sorts of] questionable sources" (Tooze, 2018). See also "Counterfeiting", "Big 4 Accounting firms/Management consultancies" → ['mister dummy' & 'mister smarty'] → "Debt cycles".

4) "In fact we had a dry-run on the S&L scandal in the mid-'70s in Texas, with the so-called Texas '*rent-a-bank*' scandal. And we have the same people... [showing] up in the S&L crisis, ripping off small Texas banks, and doing the same thing-- trading bad loans between each other, trading capital stock loans between each other.... And the federal government knew about the rent-a-bank scandal. It came in and did an investigation.... [and] when these [same] people all got back in the S&L's, you know 5-10 years later" federal regulators "did nothing" (Brewton, 1992, mn.10-12). See also "Savings & Loan Crisis."

5) And then there was the (see also) "*Glass-Steagall Act*, 'repeal'" in 1999, after which "commercial banks... [were] allowed to merge with investment banks and insurance companies, creating financial megafirms potentially far more powerful than had ever existed in America" (Taibbi, 2014). See also "American Insurance Group (AIG)", "F.I.RE. sector".

5b) But it "would take half a generation... to understand the most explosive part of the... [repeal of *Glass-Steagall*], which... [was legalizing] new forms of monopoly, allowing banks to merge [f.e.] with heavy industry. A tiny provision in the [1999] bill also permitted commercial banks to delve into **any** activity that is '*complementary to a financial activity* and does not pose a substantial risk to the safety or soundness of [so-called] depository institutions or the financial system generally"⁶⁴⁰ (Taibbi, 2014). See also "Deceptive Banking Terms".

6) A "full-blown banking crisis must follow after a bank-credit driven asset bubble.... Why, then, did the ECB allow 20% or more bank credit growth in Ireland, Portugal, Spain and Greece, for several years? Such high credit growth is clearly in excess of nominal GDP growth" (Werner, 2016c). See also "European Central Bank (ECB)".

⁶³⁹ In "the 1980s, the financial sector as a whole had become basically a criminalized sector" (Hudson, 2017o), that somehow didn't implode until 2 decades later. But the Financial Crisis was only part one (of the 2-sided nature of 'money' & 'politics'). See also "Reform, 101".

⁶⁴⁰ 15 years later at least, it was evident that "Wall Street and its lawyers took... ['complementary to a financial activity'] to be a synonym for... campaigns of world domination. 'Nobody knew the reach it would have into the real economy', says Ohio Sen. Sherrod Brown. Now a leading voice on the Hill against the hidden provisions, Brown actually voted for *Gramm-Leach-Bliley* as a congressman, along with all but 72 other House members. 'I bet even some of the people who were the bill's advocates had no idea'. Today, banks like Morgan Stanley, JPMorgan Chase and Goldman Sachs own oil tankers, run airports and control huge quantities of coal, natural gas, heating oil, electric power and precious metals. They likewise can now be found exerting direct control over the supply of a whole galaxy of raw materials crucial to world industry and to society in general, including everything from food products to metals like zinc, copper, tin, nickel and... aluminum. And they're doing it... abroad" too (Taibbi, 2014). See also "Bank, universal". "Big 5 (High St.) Banks", "Congress", "NSA" [Senate].

6b) Meanwhile, in the US, the *Commodity Futures Modernization Act of 2000* was “a bi-partisan effort... to squash the only real regulator of this entire...20 years... [Commodities Futures Trading Commission chair] Brooksley Born.... [who] proposed to regulate these [expanding] financial derivatives.... [At their] first meeting.... [Fed Chairman] Greenspan says [to her]: ‘*You probably think stopping fraud is a reason for regulation. I don’t*’... If you put the leading foxes in the world-- the Economists who ideologically are opposed to any effective government regulation-- in charge of the regulators... bad things are gonna happen” (Black, 2016c, mn.112-113). See also “Regulation”.

7) “The banks... were fundamentally broken by the business models that they adopted and pursued in the runup to the Great Crisis [in 2008]. They moved from what they / been doing in the post-war period, which was substantially financing business investment, to financing consumer loans and mortgages, and to doing so on an increasingly decrepit, fraudulent business model... in the sense that they were ...[particularly] in the runup to the Crisis, making vast...volumes of loans that they *knew*-- or should have known-- would never be repaid...This was a model that was destined not only to collapse but also to deplete the equity which was the foundation for economic expansion up to that point... [T]he world going forward is not the same...” (Galbraith, 2018, mn.6-7).

See also Lewis, 2011; “Zombie”, “Industrial Revolution, 3rd”.

[Shiva destroyer; Brahma creator]

7) The 2008 “bailouts were really triggered by the fact that we issued trillions of dollars of fraudulent securities, to finance what I call the financial coup d’état”⁶⁴¹ [bankmoney blowout] (Fitts, 2017o, mn.7). See also “Savings & Loan Crisis”, “Reserve ‘Requirements’”, “Hegelian dialectic”, “Crenney”.

[No more (exogenous) hen houses ‘round here...Now what? Debt-saturation, SBS>TAB, the 3rd Industrial Revolution, and public Monetary Reform]

See also “Exogenous vs. Endogenous’ (money creation)”, “Monetary Reform”.

Crises, Financial- (synon. ‘domino effect’/contagions) 1) when (what we use for) money “disappears, because money [today] is the *liability* of financial institutions.... 95% of the money in our economy is...the liability of financial institutions” (Wolf, 2017, mn.9); according to the IMF there were “147 Financial Crises”, either national or international, between 1970 and 2012 (mn.7). And “the solution we’ve found to that [structural] problem is...” See “Big Government” (Wolf, mn.10).

2) Any ‘financial crisis’ “can be solved at zero cost to the taxpayer. All you need to do is for the Central Bank to purchase the non-performing assets of the banks. [See also “Quantitative Easing”.] Move those on the Central Bank balance sheet, then the problem is solved...What is a banking crisis? Well, there’s an accounting problem, with the rigged accounts of the banks. We know they’re rigged anyway... You can change the numbers and the problem is solved. Why should people be unemployed for this-- some bookkeeping problem?... I’m not advocating to fiddle the books. You can use current accounting rules to solve the problem at zero [short-term] cost to society” (Werner, 2016b, mn.59).

See also “Financial Crisis (of 2008-)”,→ “Quantitative Easing”,→ “Totalitarian/Nanny State”.

⁶⁴¹ Fitts’ definition: the *financial coup d’état* “...was very much part and parcel of engineering the global modelling.... We made a decision at the highest levels of G7 to shift assets out of government and into private corporations... a model where corporations could grow much faster than the GNP, and so many aspects of the general economy were going to get drained as we centralized this control into the corporate model. And...a lot of that was done illegally.... If you’re gonna make sure that private investors and people who own securities get... much more return than the general economy is producing, then somebody’s got to lose. So you’ve created an enormous Win-Lose relationship between many corporate industries and the general population... and that’s one of the reasons we see productivity slowing way down.... I think part of this is just...a real plan to downsize the population and lower life expectancies, and lower fertility rates” (Fitts, 2018, mn.19-21). See also “Provocation operation (Po)”.

Crisis, the (of 2020's)-

when/where representation & media-academia are (trending towards) nothing,
while entropization, statism, & redundancy are (trending towards) everything.

1) is basically a consequence of being governed by (what is, at core) a psychological system, instead of by a harder economic science system. Frederick Soddy called it out nearly a century ago. See also "NInnies", "Needs, desires (& law)", "Ecological economics".

See also "COVID Op.", "Transhumanism"; "Main point", "Reform, 101".

Critical thinking- See "Logical fallacies", "Dumb-downing", "Self destruction".

'Cryptos' (slang)- 1) to millions, 'crypto' slang usage means simply "a *decentralized* means of trading *digital assets*"; "people will indeed be paying each other in the metaverse using tokens exchanged using decentralized finance protocols, but those tokens won't be cryptocurrencies valued by supply-and-demand...[T]hey will be tokens linked to actual assets: dollars, gold, Walmart points or whatever...." (Birch, 2022).

2) Whether one is talking online tokes, Amazon bucks, or Walmart points; "the era of...Edward de Bono's 'IBM Dollar' is upon us. IBM, in de Bono's early 1990s thought experiment, might issue 'IBM Dollars' that would be redeemable for IBM products and services, but are also tradable for other companies' monies or [possibly] for other assets in a liquid market. In other words, they would be what we now label *digital objects*, implemented using *tokens*...De Bono came to the conclusion that if you could exchange these objects directly between counterparties, then you would not need to exchange them into...[currency] first. Metaverses full of digital objects continuously trading between digital identities may seem difficult to imagine, but remember that this is not about transactions between people but, as I wrote in my book *Before Babylon, Beyond Bitcoin*, transactions between... 'economic avatars'. This is a world of transactions *between bots* capable of negotiating between themselves to work out how to value and fund deals" (Birch, 2022).

2b) According to de Bono,,, "pre-agreed algorithms would determine which financial assets were sold by the purchaser of the good or service, depending on the value of the transaction... [T]he same system could match demands and supplies of financial assets, determine prices and make settlements'.... De Bono predicated that this kind of...system would depend on 'instantaneous verification of the creditworthiness of counterparties' or, as I would put it in shorthand, reputation. The metaverse economy is a reputation economy and it cannot exist without a digital identity infrastructure" (Birch, 2022).

See also "Design", "Fintech", "Accounting standards & reform".

[Is it not a 'social credit rating'?)

Cryptocurrencies and Stablecoins- (privately-based online 'currency' schemes⁶⁴², the winners of which are, increasingly, those [stablecoins] that are backed 1:1 with [or 'tethered to'] the USD or other national

⁶⁴² As of 2020, there were as many as "8000 private cryptocurrencies... despite their mostly low chances to succeed" (Huber, 2021).

currency; not to be confused with 'digital currencies' ['CBDCs'], which are more directly government-based) See also "[Money, 3 \(contemporary\) Tiers of](#)".

1) Mr. Global "wants a global digital currency. Is it gonna evolve out of the [US] dollar? Is it going to evolve out of the [IMF's] SDRs? Who knows? I don't think they know... they are trying lots of things" (Fitts, 2016, mn.35).

1b) Anyone can see that "It's [rather easy to use digital currencies and/or cryptos as] a control system... [or perhaps even trying to be (a totalitarian)] *end* [sic] of currencies.... [i.e. just] a credit at the [US Deep State, Amazon or MS, etc.] company store. [Cryptos are basically] not a [public, circulating] currency.... [In some places, such schemes may even be] tied into [the user's] spatial control. You're talking about serious slavery... a slavery system."⁶⁴³ Catherine Austin Fitts, mn.50: <http://information-machine.blogspot.com/2020/10/jeff-reuse-catherine-austin-fitts-riots.html> See also "Great Extinction, Event", "Robotization (and productivity)".

2) "I don't think Mr. Global ever does anything unless he's got a backdoor.... I've never met a digital system that wasn't compromised... that had integrity" (Fitts, 2017c, mn.134-135). See also "Integrity".

2b) "Until such time as I see a cryptocurrency that is designed to support [speed of] transactions first and foremost, and gives up on this 'store of value' stuff, I'm not gonna take it too seriously" (Keen, 2018d, mn.26). See also [much faster] "Credit cards".

3) As of 2020, there were approx. 8,000 commercial cryptocurrencies, up from "1,450" in 2017, "including Bitcoin, Ethereum⁶⁴⁴, Ripple,⁶⁴⁵ and Madcoin, at a total market...[cap. (2017)] of \$616 billions. Most crypto-'coins' are launched by fintech start-ups, but large technology companies are preparing to join the race" (Huber, 2018, 4).

4) ...One such large-scale, private 'crypto'-- the Facebook consortium's *Libra Diem* coin-- is to be strictly tethered to the USD, or potentially other prevalent national currencies. It is thus envisioned as a "*stablecoin*"-- tethered 1:1 to a national currency (in order to be more realistic about getting traction). "The best prospects among...[the thousands of cryptos] to find [any chance of] general use as money are asset-backed stablecoins, [usually] issued by corporate currency syndicates⁶⁴⁶, as opposed to cryptocurrencies such as Bitcoin that are neither backed by assets nor by the power of a national government or large technology and financial syndicates" (Huber, 2021). According to Joseph Huber, "the development of web-based business sectors so far has shown [that] they can...[grow] from inconspicuous beginnings to new large business sectors and market-dominating corporations within 5–10–20 years"; and the big 3 stablecoins are taking shape as Tether, Ethereum,⁶⁴⁷ and (the prospective) Diem (Huber, 2021). See also "Diem".

4b) Will large-scale **stablecoins** be creating (2nd-tier) "money" or merely (3rd-tier) "credits that circulate"? There "is potential for the development of [so-called] fractional reserve banking [2nd-tier money creation] in a new...[way. And the] issue has already become topical with Tether.... [It could be done via] an *active issuance* policy... for example by...[a Diem subsidiary] directly buying securities on the open market with new Diems.... [F]ractional reserve banking can arise with stablecoins as much as with bankmoney", and the more prevalent a large stablecoin becomes in an economy, the more governments and CBs will be pressured to support it (Huber, 2021); which is how **TAB-bankmoney** developed into the problem that is today. And if "new currency syndicates" actually do arise, then "the most important of...[the] stablecoins would soon be systemically [monetarily] relevant"; especially in international payments, which can still

⁶⁴³ Historian John Brooke would seem to agree on this (Brooke, 2019, mn.56). See also "Corporations (and 'corporate personhood')", "[K.J.B. \(King James' Bible\)/70 Year Plan](#)" [Aspen].

⁶⁴⁴ Ethereum, unlike Bitcoin, supports **genuinely anonymous** transfers without the need for a middleman or bank. Gilder, 2018

⁶⁴⁵ According to its CEO, "over 100 banks worldwide...already... use the technology of Ripple for international transactions" (Huber, 2018).

⁶⁴⁶ "[M]ost members of the Diem syndicate [for example] are companies with large international network potential. Facebook alone has 2.7 billion users. If only a few % of [FB users] them use a few hundred dollars or euros in Diems, this can already generate a payment volume in the double-digit billions" (Huber, 2021).

⁶⁴⁷ "Ethereum is dead. Maybe Bitcoin will be retained... just to make people feel better."- O'Connell, .mn.28, <https://www.youtube.com/watch?v=iXa0AyuNopw>

“take several days” with bankmoney⁶⁴⁸ (Huber, 2021). See also “Lender of Last Resort (LOLR)/Too Big to Fail (TBTF)”, “Money, 3 (contemporary) Tiers of”.

4c) And if “3rd-tier money surrogates are tolerated, or even promoted, in growing numbers and quantities, the complexity of the unfolding 3-tier money system will *definitely become unmanageable*⁶⁴⁹ [W]e are at a historical crossroads” (Huber, 2021). See also “Anarchy”, “Reform, 101”, “Great Extinction, 6th”, “Anthropology”.

4d) The ‘Amazon-of-China’ Alipay’s (coin-wallet) already offers the “typical banking services such as granting loans, financing companies, and making investments... on a large scale. Bill Gates summed up these perspectives in a bon mot: ‘Banking is necessary, [but] banks are not’” (Huber, 2021). For example, in a battle of 3rd-tier money surrogates-- as to “whether stablecoins will displace MMF shares in the payment function, or whether both will coexist... MMFs have the advantage that the shares earn interest, albeit only a small amount... However, they have the disadvantage, which bank deposit money also has, that they are not *programmable*. But why not [digital] tokenise MMF shares? MMFs would then be a variety of stablecoins” (Huber, 2021). See also “Diem”.

5) Does the ‘fintech start-up’ storyline obscure the fact that cryptos are tightly controlled? “The cryptocurrency market is tiny and ownership is very consolidated... If there’s any market in the world that’s easy to manipulate it’s cryptocurrencies, compared to what they’re manipulating...everyday in fixed income...this is nothing.... [In terms of logistics], it is much cheaper to run the price of cryptocurrencies...up, and [laughing] get every software developer in the world figuring out how to do that, as opposed to hiring them all and paying them to do it. You’re going to get there much faster” (Fitts, 2017r, mn.28-29). And “for the Central Banks [or the big banks that control them] this is fantastic, because it’s really helping them keep the price of gold down, while the Central Banks are buying” gold (Fitts, 2017r, mn.31).

6) “Regulatory controls are going to drive value. We saw what happened [to Bitcoin] with China.⁶⁵⁰ I assure you the regulators, globally, have the power to drive any cryptocurrency out of business whenever they want, and they can do it like that [snap]” (Fitts, 2017n2, mn.31).

7) Libertarians originally thought bitcoins were worthless fiat money (although private ‘fiat money’ is higher in their hierarchy than government-issued fiat currency); but now have switched and decided that cryptocurrencies are private digital gold, not fiat. They do not see that the blockchain was developed by the Intelligence Community long ago to help bankers advance towards a digital, cashless society. The globalists can pull the plug on any private cryptocurrency any time. Then they switch to the government ‘Fedcoin’ or other national digital currencies to replace cash. ~~Sweden~~ China is already coming out with the digital ~~e-krona~~ e-Yuan. See also “Cashless Society (War on Cash)”.

8) One already has to pay taxes on cryptos, and “you [also] have to file currency transaction reports... You’ve got a tremendous number of people who do not understand their compliance obligations, and when this is all said and done, the IRS is gonna have a file on every one of them” (Fitts, 2017r, mn.35).

9) Whether or not some crypto or digital currency eventually proves technically feasible (in real competition with credit/debit cards), “...applications of blockchain technology under the current [debt-money/dual-circuit] monetary system are nothing more than a patchwork and its main benefits are lost when its ground is permanently shaking.... What we need is a re-design of [a] failing system... and to redirect the blockchain revolution toward the public money system” (Yamaguchi & Yamaguchi, 2017, 4-5). Bitcoin and all other blockchain coins (tethered or not); “[a]s long as they are created on top of [the] debt money system...are nothing more than *blockchain patchworks*, and destined [only] to fluctuate along with

⁶⁴⁸ With digital money, however, “both domestic and cross-border payments are instant and cheap. *Even many banks* [already] use cryptocurrencies as a vehicle for international payments, for example... the cryptocoin Ripple” (Huber, 2021).

⁶⁴⁹ “Unlike MMFs and e-money, the new stablecoin sector is still largely unregulated” (Huber, 2021). See also “Money Service Businesses”, “Regulation”.

⁶⁵⁰ China effectively “banned cryptocurrency exchanges and so-called initial coin offerings in 2017 amid a broad effort to cleanse risk from its financial system and clamp down on so-called shadow banking” (Bloomberg, 10-11-19).

debt money... They cannot solve systemic problems..." (2017, 25), at least not without meaningful Monetary Reform (ending the superfluous TAB-bankmoney circuit).

10) 'Crypto' hype tends to be approximate to gold mythology...

10b) ...though probably even more controlled. "These are all prototypes for [massaging people into] CBDC" (Fitts, 2022, mn.218). See also "Digital Cash/Currency".

10c) Cryptocurrency (banning) Updates: Bangladesh (2014); most large 'middle-eastern' countries (2018-21); Nepal (2019); China (2021); Russia (2022);

See also "Dark Pool" [FTX ponzi].

11) Functional "stablecoins", however, are becoming approx. to (see also) "Money market instruments & Money market funds (MMFs)". "The stablecoins circle has the US Dollar Coin...[that] is essentially the 'Chicago Plan'-- it's backed 100% by safe assets."- Ronnie Phillips (Kotlikoff, 2021, mn.140). See also "Diem (stablecoin)", "Chicago Plan(s)".

11b) Stablecoin Updates: 7/22- "The top 3 stablecoins account for almost 90% of transactions, and the top 2...account for 80% of market capitalization."- <https://www.federalreserve.gov/newsevents/speech/brainard20220708a.htm>
See also "Bitcoin", "Blockchain", "Direct circulation", "Digital Cash/Currency".

Cult of Secrecy- See "Secrecy, Cult of", "UKUSA Agreement".

Culture- 1) "the collective programming of the mind which distinguishes the members of one category of people from another'. The [cultural] 'category of people' can be [first & foremost, a language]⁶⁵¹, a [sovereign] nation...[or religion], or ethnic group (national etc. [minority] culture), women versus men (gender culture), old versus young (age group and generation culture), a social class, a profession or occupation (occupational culture), a type of business, a work organization, or part of it (organizational culture), or even a family" (Hofstede⁶⁵², 1994, 1). Or more simply...

2) "...the subconscious matrix... that we base our daily lives on.... a presupposition that you can deal with trust with a stranger... So it's extremely important...the bedrock on which rule of law is based"⁶⁵³ (Farrell, 2017). Or more pleasantly...

3) "the arts, elevated to a set of beliefs"- Thomas Wolfe. See also "Cycles".

4) Why? "Without culture, and the relative freedom it implies, society, even when perfect, is but a jungle. This is why any authentic creation is a gift to the future"- Albert Camus; see also "Methodology (culture)". See also "Design" [culture], "Human beings".

5) Language is typically considered to be its kingpin (as the heart is to circulation and money/price is to economics). According to Aristotle, "[w]e should...say that through language man attains to the expression of general and universal conceptions not only in morals, but in all things" (Jowett, 1885, xviii). See also "Imperialism, English (language)", "Adolescence of Mankind" [7], "Lexicon Test".

5b) Globalization 'culture'?... a necessary training. Westerners see "the present only as a moving point of no dimension that [distinctly] separates the past from the future. The African [however] sees time as a wide gamut of the present with a moderately dimensioned past, and almost no future [yet alone a future tense]. This outlook is reflected in the structure of [Africa's predominant] Bantu languages, which do not

⁶⁵¹ "Languages differ essentially in what they *must* convey and not in what they may convey"- Roman Jakobson, 1959 (Vigliocco, et al., 2005, 501). "Some people argue that language just changes what you attend to... But what you attend to changes what you encode and remember" (Motluk, 2002, 35). See also "Imperialism, English (language)".

⁶⁵² From the 1980's, Geert Hofstede's (1928-2020) nations-based international *Cultural Dimensions* have been the most-applied sociological tool (at least in international business) https://en.wikipedia.org/wiki/Hofstede%27s_cultural_dimensions_theory#/media/File:Hofstede_4_countries_6_dimensions.png. At some point early on, the dimension of "High-context" and "Low-context" cultures was replaced by "Individualism vs. Collectivism". Inglehart's classic "*World Values Survey*" closely correlates with 4 of the 6 Hofstede Dimensions: 'Power Distance', 'Individualism vs. Collectivism', 'Long-Term Orientation' and 'Indulgence versus Restraint' (not so much with "Masculinity" and "Uncertainty Avoidance") - https://papers.ssrn.com/sol3/papers.cfm?abstract_id=2606243 (Inglehart, 2006 [Post-Materialist Values]). Gert Van Hofstede appears to have added the "Indulgence vs. Restraint" dimension to his father's work in the 2000's. See also "Long-term orientation (LTO)", "Civil National Identity".

⁶⁵³ Hence, an other-worldly or supernatural component is also often emphasized: "Culture is the integration of the divine in everyday life." - John Edward Hurley (Farrell, 2017, mn.4). 'Oh, the mysteries' (per 20th century): <https://www.youtube.com/watch?v=vbCg5ZFxdM> [f.e., Mancini 70's]. See also "Currency Wars, the", "Big picture"; "Philosophy", "Design".

emphasize the tense distinctions of past, present, and future, as...[pretty much only Indo-European tongues] do, but instead emphasize categories of *condition*, including a basic distinction in...[the verb classes] between completed and uncompleted actions that places the present & future (both concerned with unfinished actions) in the same category. We do this occasionally in English when we use the present tense in a future sense by saying, ‘He is coming tomorrow’ (Quigley, 1966, 1185). See also ‘Imperialism, English (language)’, ‘Debt cycles’, → ‘**Cultural Calendar**’, ‘Self destruction’.

Cultural Calendar- (a.k.a. the ‘Rock Around the Clock’ in ‘stylistic audacity’ [Yes’83], [in order to obscure] monetary ‘Pyramania’⁶⁵⁴, [and eventually reveal] celestial ‘Days are Numbers’⁶⁵⁵; i.e. ‘You’re soaking in it.’⁶⁵⁶) See also ‘Lunatics’, ‘Globalism’, ‘Debt cycles’ [Goetzmann].

When ‘manners and customs are to be changed, it ought not to be done by laws; this would have too much the air of tyranny... better to change them by introducing other manners and customs... [I]t is very bad policy to change by law what ought to be changed by custom.... engage the people to change them themselves’ (Montesquieu, 1748, 298-299).

‘The sequence of intellectual history is concerned with the sequence of styles or fads that have been prevalent, one after another, as to what emphasis or combinations of man’s three levels of operations would be used in his efforts to experience life and to cope with the [nation or] universe’ (Quigley, 1966, 1223).

‘Rock ‘n roll just used to be for kids, but nowadays it’s politics.’- Billy Joel, *The Bridge* (1986).

⁶⁵⁴ a monetary phenomenon also articulated, concisely, by Prof. Keen, 2020, around mn.33. See also ‘Pyrite’.

⁶⁵⁵ ‘Some day, you’ll know where you are’ (on the merry-go-round). That day wasn’t in 1982: <https://bit.ly/2WOFXWL> [Costello].

Two years later, however, a certain ‘Project’ (on EMI’s Abbey Rd.) had some ‘premonitions’ (some analysis of Mr. Parsons last 2 EMI hits): **Part 1 (past & present)**: <https://www.youtube.com/watch?v=P6NNJq0FZN4> [Prime]

Woodrow Wilson’s lasting ‘legacy’, from 0:01, then the post-WWI depression, (skipping the 20’s) followed by 1930’s Great Depression. 0:30-60- 1940’s ‘rollin’... on to ‘63 weirdos.

1:00-1:30- 1968-70’s ‘longest night’ (+ ‘still rollin’ nonetheless)

1:41- She wakes 1st (early 80’s; so & so didn’t)

from 2:09- ‘dark age’ latter 1980’s; early 90’s no head; mid-90’s so & so finally wakes (2:40).

from 2:49- early 2000’s ‘Ammonia Ave.’ horror (incl. word’s leading jailer)

from 3:20- latter 2000’s (Duopoly; ‘Obama’ now has you cornered.)

3:34- ‘outa here (again)’... Yes, it’s ([all about the] mind ctl.) relapse.

4:00-30- (Obama’s 2nd-term) Globalism is working; as is the [‘that crazy’] Campaign 2016. So ‘all is well’, right?

from 4:30- Wrong; from ‘17, relapse threatens again.

Part 2 (present & future): <https://www.dailymotion.com/video/x2sk1x> [Days#s]

0:01-30- just setting the theme (many decades, if not centuries, of US implicit conflict between ‘goody-two-shoe’/citizens types... & venal oligarchical institutions. It’s been going on for a long time.)

from 0:40- 2017-18- kicks in (yet again). Anything diff’rent this time around? → ‘Hey, what’s on TV?’ 0:51- ...Is it the A.P.Project? (a.k.a.

[London/EMI’s **Cultural Calendar** ‘programming’)? (i.e. ‘What’s that you’re really watching on that TeeVee there?’ ... 0:51-52 = **CC**, circa 1980; 3:48-49 = **CC**, circa 2020). See also ‘Debt cycles’.

from 1:00- Will anything awake the venal-**CC** trance? **a]** 2017-19 **CMC** ‘sexes it up’ (& football wins); even with impeachment drama.

b] from 1:26- next up is the winter 2019-20 ‘corona virus’ shutdown, complete with a ‘blame China/hackers’ narrative, from 1:36. (still not working); **c]** 3rd, from 2:00, is the ensuing economic bomb of currency inflation/deflation, which ‘the olig.’ easily-automatically directs back at ‘the people’; **d]** So, from 2:26, finally leaving the oligarchy, for greener pastures with the (**Int’l**) **I.C.** (football sports talk still ‘the’ focus). Pls. notice, from 2:55, encroaching ‘**STATE**’ (state capitalism). from 3:00- ‘‘‘Were we, once upon a time, supposed to be, like, a constitutional republic or something? That was out the window *decades* ago!’’’

3:06- ‘‘‘Bankmoney; **Corp.Media Cartel**; Parties, political.’’’

3:10- Yea, **I.I.C.** is so clever.

from 3:12- State capitalism’s (lingering) 20th century wreckage & waste

3:16- **I.I.C.** even has the new (21st) money.

3:39-43- ‘‘‘I (we) was (were) made in G*d’s image.’’’

3:48-49- What’s the last (cultural ARTifact) thing standing there? [https://en.wikipedia.org/wiki/The_Best_of_The_Alan_Parsons_Project_\(1983_album\)#/media/File:Thebestof_app.jpg](https://en.wikipedia.org/wiki/The_Best_of_The_Alan_Parsons_Project_(1983_album)#/media/File:Thebestof_app.jpg)

See also ‘Eurodollars’ (Rise of [completed by 1983]).

⁶⁵⁶ <https://clickamericana.com/topics/beauty-fashion/palmolive-ads-featuring-madge-the-manicurist> [hashtag#]. And uh, yea, not exactly everyone took it (**CC** ‘programming’) seriously at the time: <https://www.youtube.com/watch?v=V9AmIC5MyJY&t=18s> [1982].

1) From 15th century Florence, Plato's (re-discovered) "Allegory of the Cave...described a lower cave people being ruled by an intellectual elite who through the wisdom of their souls sought the good of the republic" (Soll, 2014, 38). See also "English constitution, the", "Statism", "Democracy".

2) "We [often] think of [supposedly public] Intelligence and [corporate] Media agencies as organizations that cooperate. In fact... we are looking at deep, long-standing and highly profitable partnerships that create a matrix reality that entrains" John & Jane Doe, increasingly⁶⁵⁷, for about a century now. By the second decade of the 21st century, "it [had] nothing...to do with bringing you the news. Intelligence agencies and the media are engaged daily in the creative, dynamic process of inventing our [mediated] world, defining...dreams...fears...hopes...directions. They create, and they create together. And what they create are ways of harvesting [a.k.a. 'developing'] you and me" (Fitts, 2019p, mn.0). See also "Conspiracy theorist", "Oligarchy, American", "Boards/Board Systems", "Groupthink".

3) This author sees, certainly, proverbial 'method in (what might otherwise appear to be) the madness'; approx.. 40-yr. Yang-side/rising egalit.-nationalist era ("Smokey Life"); transitioning to (followed by) approx. 40-yr. Yin-side/rising elitist-globalist era (lots of pvt. debt accum.; "Ballard of the Absent Mare"), plus a couple decades for transitioning, = approx. 100 years of the ('Federal Reserve century's) trends calendar [not to be confused with Strauss & Howe's 80-yr. "generations cycle"; though similar]. See also "Debt cycles", "Jacob's Ladder", "Pyrite".

Here's The Track: approx. 20-yr. trans. between 30-Yr.-YANG/'Liberal' & 30-Yr.-YIN/'Conservative'⁶⁵⁸

["School", they call it (1974-80)]

30 years 'Liberal'/progressive ('pro-3rdE' run)

	5. heart <i>Leo</i> (hubris/dom.)	4. breast <i>Cancer</i> ⁶⁵⁹ (reform 'break')	3. shoulders/arms <i>Gemini</i> (jovial/self-int)	"open renewal" [let's all be liberals] <i>Taurus</i> 2. cerebell./neck (strong/stub)
['Cadillac curve'] 6. belly <i>Virgo</i> (judgmental)	-1964.2	1955.7	1947.4	1930.7-
[6-8pm](pk. YANG) - 7. kidney <i>LIBRA</i> ⁶⁶⁰ balance -	-1972.4	20 yr. trans.	[8.33] ave.	20 yr. 1922.3 - <i>ARIES</i> ⁶⁶¹ trans. - (pk. YIN) [6-8am] - ebullience
	-1980.7	1989.2	1997.4	2014.2- <i>Pisces</i> 12. feet

⁶⁵⁷ F.e., c.1985, David (Jones) Bowie wasn't yet getting in Americans' face (about it): <https://www.youtube.com/watch?v=MJRF8xGzvJ4> [NotAmerica]. See also "Jones, Alex"; "'Creney'" (i.e. de Grey, 2013); "Secrecy, Cult of". Really just comprehending an intelligent numerology-astrology book, combined with something like 'the essential David Bowie collection' is probably sufficient to understand "the" (20thc-millennialist) Cultural Calendar [and throw in The Alan Parsons Project if you think it's evil; or Paul "Backwards Traveller" McCartney if you think it's funny: f.e. <https://www.youtube.com/watch?v=DRCgueckAXE>; e-chorus: "I care no more."]. Yes, the CC's denizens are (were) mostly British, and its dupes mostly American. This ('wise East' playing 'strong West') phenomenon is nothing new. For thousands of years the more eastern monetary-imperial power has schooled its more westerly monetary-imperial power successor. 'Brits' & 'Yanks' were just repeating Greeks & Romans, etc. See also "Pilgrim Society", (and, for more on Bowie-Jones relat.) "Primogeniture".

⁶⁵⁸ There is some (minor) discrepancy between the approx. "100-year cycles" (Yangy [electro-] Nationalism-vs.-Yinny [magnetic] Globalism; Cultural Calendar) and the approx. "80-year cycles" ([Strauss & Howe's] Generational; Interest Rates). The (80-yr.) US "Generational cycle" claims validity back to the early 17thc and earliest English-American colonists; the (100-yr.) "Nationalism-vs.-Globalism cycle" seems coherent back to the mid-18thc; the (80-yr.) "Interest Rates cycle" back to the mid-19thc [although the interest rate tool appears to have been reduced in recent (post-Crisis) years, by the increasing eclipse of bankmoney by the SBS in the US, from the mid-1990's onward]. Finally, the more comprehensive (100-yr.) "Cultural Calendar" seems to go back to the early 20thc. Use whichever one [or 2, 3, or 4] you like, but making sense of so-called modern history (a.k.a. the era of central banks, [con-scripted] world wars, and [corp.-mediated] pop music, etc.) is likely to require some rather large 'leaps of faith' without understanding any of these 4. See also "History", "Cycles".

4) Is circa 2018-20 a time of more profound transition than usual? "Utterly different from Google's rule of [yakety yak] communications first is the [1st] law of the cryptocosm... the barn-door law [a.k.a. territorial integrity]: 'Security first'... [It] is not a procedure or mechanism; it is an architecture.... Security [that lasts] cannot be retrofitted, patched, or improvised [in some reactionary police state]⁶⁶⁴ from above" (Gilder, 2018, 46).

4b) The CC has always, however, been applied more heavily in the UK⁶⁶⁵ than in the US; and there are doubts as to whether, c.2020, it still applies to the latter. Was it ever even designed to run to circa 20/20, or to have the capacity for 'extra innings' (if deemed necessary)? See also "Provocation Op.", "Adolescence of Mankind".

4c) "It's a whole new game plan now, ain't it?.... Like in all the movies, the super-villain. Why's the super-villain have a [suddenly open] big evil smile on their face, and cackle and laugh?" (Jones, 2020, mn.61). See also "Jones, Alex", "Super Imperialism", "Mind control".

[National/social Identity + Cultural calendar (often =s) 'My God, what have I done?' Ask EMI→Beatles-Queen-Bowie-KennyRogers-SnoopDoggy]

Currency- (*de facto*, overly-broad usage: simply a means of payment that circulates [whether public or private in origin]; in *formal* usage, however, it is the traditional/formal term for [only] coinage & other forms of state/public money⁶⁶⁷; a.k.a 'current money' or 'public credit' [Montesquieu, 375-376; 325]; archaic:

⁶⁶² loyal, sincere/sometimes obstinate

⁶⁶³ "The central conservative truth is that it is culture, not politics, that determines the success of a society. The central liberal truth is that politics can change a culture [be it quick-fix or not], and save it from itself."- Daniel P. Moynihan, 1985 (1987, 190).

⁶⁶⁴ Proactive security and (reactive) safety are not the same thing. "Requiring a system to be safe at every step of construction results in a kludge: a machine too complex to use" (Gilder, 2018, 47). And the 'afterthought' "concentration of data in walled gardens increases the cost of security. The industry [in the 2000's] sought safety in centralization. But centralization is not safe" (Gilder, 9). See also "Google".

⁶⁶⁵ <https://www.youtube.com/watch?v=yKP3sYEUAm0> [Moody, mn.156-158].

⁶⁶⁶ ...or most David Bowie songs [which are usually numerologically-astute]; especially any with 'America'/'Americans' in the title.

⁶⁶⁷ In other words, that which does not require "backing"; nor "endorsement" from anything else "in serving as a medium of exchange" - <https://www.britannica.com/topic/currency>, and means of payment. See also "Money, 3 (contemporary) Tiers of", "Base money".

'coined money'. Hence it is one of the more garbled monetary terms, with at least 3 different uses [in order of prevalence]

1) In common-everyday usage, an abstract system of payment (be it local, regional, or national-- f.e the Forex 'currencies' market).

2) Like 'money', however, 'currency' has also (for centuries) often meant simply *anything* (official or not) that serves as a circulating means of payment [i.e. 'money']-- a.k.a. whatever is accepted as a [not necessarily "the"] prevalent *medium of exchange* in a particular time & place. Bananas and cigarettes can be used as (informal) 'currency', for example, but they are not an official-legal 'unit of account'. See also "Money"-- a (i.e. a broader and less formal) 'medium of exchange' that is, very often [in practice] the same thing [measurement unit] as the state's/legal currency.

2b) Still confused? 'Money' is both the older and broader term, and hence also the catch-all-- i.e. fully inclusive of 'market-value'-based constructs-- because the younger and more legalist term, 'currency', is more often formally restricted to meaning only the *state's* money & unit of account (however precisely or imprecisely defined).

3) In financial sector slang, "currency" is often further reduced to (1 syllable) "*cash*" (i.e. immediate, ready-money that does not depend on **any** securitization). This usage is justified by the fact that, historically, the term *currency* (Fr. 'monnaie', Ge. 'Währung') has very often been defined as a polity's official "*measure of value*" or "*unit of account*" [which is traditionally coin, cash, and/or **base money**]. Some confusion, however, may arise from the fact that the 'modern' world's *abstract* (or digital) account (book) money *form* of a 'livre', 'franc', or 'dollar' unit is no longer a physically-formed "means of payment", as were bullion, shekels, and the first couple millennia of coins. See also "**Money, forms of**"; Sanahuja-Anguera, 2017.

3b) The (so-called) 'Federal' Reserve and the U.S. Code⁶⁶⁸ also mostly employ this formal/legal & more circumscribed usage. See also "Legal tender".

4) The "*currency of the realm*...[is simply a state's legal] monetary *unit of account*" (Huber, 2017, 39). See also "Units of Account", "**National Money**".

4b) This (more encompassing) usage makes sense in terms of etymologies:

<u>money</u>	<u>currency</u>
from: Fr. (mid-13 th c) ' <i>monie</i> ' ("funds, means, <i>anything convertible</i> into money");	Lt. (17 th c ⁶⁶⁹) ' <i>currentia</i> ' ("a flowing")
and back to Latin ' <i>moneta</i> ' (the same root word as 'mint')	and: Latin ' <i>curre</i> ' ("to run" sth.);
and (see also) ' <i>Moneo</i> '-- to warn, to advise, to remind.	and back to the Proto-I.E. root ' <i>kers</i> ' ("to run").

4c) I.e., from the 1600's, 'currency' has been the prevalent official/legal term (at least in Europe) for directly-State-issued 'money' (means of payment). _Sanahuja-Anguera,?

4d) Although there has generally been more conflation of the terms 'money' & 'currency' in the US (since at least c.1790), the USA's 1st public monetary regulator was the Office of the Comptroller of the *Currency* (OCC; est. 1863), and OCC has also traditionally been the primary US bank (i.e. bankmoney [not cash & coin]) regulator since the (so-called) 'Federal' Reserve took over the helm of America's currency-monetary system in 1914.

4e) According to **this** author, in the Iron Age of Greco-Roman times, one basic word (*νόμισμα*/'nomisma' & 'moneta'/'nummus', respectively) was sufficient to cover both money-currency (since basically all money [that was worth writing about] was state-coined currency during the Iron Age anyway). After decades of the New World monetary bonanza of the 1500's & 1600's, however, the volume of 'money' (and hence also its various forms) in the rich Kingdoms of Western Europe increased so much that some new words had to be invented (in order to avoid too much public confusion).

⁶⁶⁸ The U.S. Code of Federal Regulation leaves out (the term) 'base money', defining instead *currency* as: "coin and paper money... that is designated as *legal tender* and that circulates and is customarily used and accepted as a medium of exchange in the country of issuance. US Currency includes US silver certificates, US notes, and Federal Reserve notes. Currency also includes official foreign bank notes [i.e. eurocurrencies] that are customarily used and accepted as a medium of exchange in a foreign country". (C.F.R. § 1010.100 (m)... This definition of *currency* as [pretty much only] the tangible forms of money (i.e. notes & coins) aligns with the explicit definitions found in the UK" (Bindewald, 2018, 181-182); and also has no "discernible difference" from "current legislation" definitions of 'money' (Bindewald, 188). But base money is always government money, and hence the U.S. Code's synonym for it ("currency") is the logical choice for the (*single word* to denote the) formal, legal, de jure money that comprises the official "Unit of Account". See also "Eurodollars".

⁶⁶⁹ The first known usage of the full term *currency* was in 1624.- <https://www.merriam-webster.com/dictionary/currency#h1>

5) 'Complementary' and/or 'crypto currencies' are, as of c.2022, still deemed to be more or less irrelevant in the formal-legal sense of the term. See also "Cryptocurrencies and Stablecoins". See also "Sovereignty, currency", "Currency Wars, the", "Deceptive Banking Terms (d.b.t.'s)".

Currency devaluation- "When you devalue a [national] currency, what you're really devaluing is the price of labor" (Hudson, 2011b). See also "Race-to-the-bottom".

'Currency manipulation'- (sovereign nations have the right to set their own weights & measures, period)
1) political hypocrisy designed to divert attention from the fact that the US trade deficit with China is "due to US corporations offshoring their production for US markets to China. When US corporations bring goods and services produced offshore back to the US for sale, they enter as imports, thus swelling the trade deficit. The myth about currency manipulation shifts the blame from US corporations to China, while in fact it is the return of offshored production... that swells the US trade deficit" (Roberts, 2017).
2) Any sovereign nation can set its currency towards whatever foreign exchange rates that they deem suitable. For example, one nation (or CB) buys or even (given sufficient mass) drives up "another nation's currency to drive [their] exports to that nation" (Mosler, 2017d).
3) "That's why those [macro-economic policy] chains are constructed the way they are-- to take advantage of any little tweaking chance to get on top of somebody else's monetary or fiscal policy" (Cook, 2019d, mn.40). See also "China's US Treasury Bonds", "Forex", "Currency Wars, the", "Sovereignty".

Currency pegs- see "Bretton Woods", "Forex".

Currency reform- See "Graham, Benjamin (1894-1976)", "Monetary reform".

Currency School/Teachings⁶⁷⁰ (synon. *chartalism*) see "State Theory of Money".

Currency swaps- (CB management of the Forex 'markets')

1) Established "in the 1960's...[when] the [US] dollar was weakening [and eurodollars were picking up], as other countries hit [their] post...War...production strides" (Prins, 2018c, 8).
2) With an increasing number of "countries using each other's currency, they're not dependent on US banks. They're not dependent upon the dollar at all; and not using the [individual] US banks means [that] they're never going to be in the situation that Argentina found itself in [in 2000]-- when by using a US bank as a paying agent-- that [allowed] vulture funds...[to] buy debt at a great discount, and enabled the vulture funds to paralyze Argentina's financial relations with the rest of the world" (Hudson, 2016b).
3) From 2008, the Fed provided "US dollar liquidity" globally by more than doubling its forex swap lines with Canada, Japan, the UK, Australia, Denmark, the ECB, Norway, Sweden, and Switzerland, "from \$290 billion to \$620 billion...the central bank equivalent of 'the House' providing extra money to the gamblers at nearly no cost..." (Prins, 2018c, 8). This sparked the dollar's greatest appreciation since currencies were allowed to float in 1971... [simply] by... crafting just enough [international/euro] dollars to keep the [Eurodollars] system, but not enough to drive down demand... [i.e.] the perfect drug dealer, keeping its customers always wanting a little more" (Prins, 9). See also "Eurodollars".
4) "Shuffling currencies back & forth...is 73 times as big as all trade in goods and services. It's 25 times all global GDP. And it doesn't even accomplish stable or meaningful monetary values [apart from dollar hegemony] across the world economy...Its...function, really, is to endow central banks with the capability of generating [more] money and imposing... this kind of doomsday pot of \$250 trillion dollars of [global] debt on the world economy. This [globalist bankmoney] system is [obviously] not going to be viable over the future" (Gilder, 2018c, mn.21). See also "Forex", "Eurodollars".

⁶⁷⁰ "Little attention was paid to the Currency School position after its heyday in the 19th century... [and] its successor from around 1900, the *state theory of money*... [was in some ways] ambivalent in terms of Currency-vs-Banking teachings" (Huber, 2017, 2). See also "Modern Monetary Theory" (a product of that ambivalence).

Currency Wars, the⁶⁷¹ (global wars for international reserve currency status [or escaping from its yoke])
 1) In the broader sense, any war is a 'currency war'-- as that is the principal prize for victory in any violent contest between states-- to say what the currency [the hamster wheel of society] will be. This has been true since Sumerian days, if not the latter neolithic. What has changed over the millennia have been the notions of what that currency system should be-- what it should be based upon... from what kind of commodity interest would prevail (Bronze Age); to whether or not there was to be debt forgiveness & jubilees (early Iron Age); back again to whose commodity interest would prevail (Dark Ages); to how much usury was ethically permissible [and how distant and convoluted the lines of usury would be] (Medieval).
 2) After Europe's discovery of the New World, the Protestant Reformation, and the 30 Years War/Treaty of Westphalia, however, a new and more meaningful factor entered the 'currency wars' mix: whether to have public-institution-based paper money fiat or *not*⁶⁷² to have public-institution-based paper money fiat. In this sense there have been 3 'modern'⁶⁷³/major Currency Wars (roughly concurrent with 3 World Wars).⁶⁷⁴ The 1st damaged British (reserve currency) Imperium; the 2nd re-established it; and the 3rd effectively transferred reserve currency imperium (while broadening & deepening it) to the USA.

	<u>Pro public-inst.-based paper currency</u>	<u>Anti [or fake] public-inst-based paper</u>	<u>Results:</u>
<u>1st C.W.</u> (1775-1781) American colonies, Fr. (continentals)	British Imp'ism (Bank of England)	US-Fr. vic.on points ⁶⁷⁵	
<u>2nd C.W.</u> (1793-1815) France-Directorate-Napo.(assignats) & 'War of 1812'-Jefferson US Treasury (notes-bonds)	British Empire (Bank of England) & British Empire (Bank of England) &	UK's <u>condit.surr.</u> of Fr. ⁶⁷⁶ & UK split dec. on points ⁶⁷⁷	

⁶⁷¹ Jim Rickards' 2011 book was, characteristically for this age of dissolution, semi-correct sizzle for entirely incorrect stake. See also "Gold Standards/bullionism".

⁶⁷² The British Empire's suppression of the American colonies' paper money was, first and foremost, the cause of the uprising; and, according to a number of intrepid historians, paper currencies "were the Revolution itself" (Del Mar, 1895). Why is this conclusion not the 'mainstream' history already? See also "Constitution, US" [states].

⁶⁷³ The author[s] prefers to call the 18th-20th centuries, at least in terms of monetary history, the *early* modern era, as monetary matters are currently in a state of profound change. See also "Monetary reform".

⁶⁷⁴ The 1st thoroughly global World War between international powers was the British-French Seven Years War (1756-1763), which, although more about simply trade lines than the underlying monetary systems, did directly provoke and lead to the *1st Currency War* (between the American colonies, with [ironically] critical support from Old Regime France, and the British Empire) in the 1770's. Obviously aware of the Americans' success (with sovereign money) in the 1st C.W., the ink was hardly dry on the Treaty of Paris (1783) when the French Revolution kicked off the longer *2nd Currency War* in the 1790's. It's not called a world war, and is, rather, belittled with the label 'Napoleonic Wars', because the pro-British Federalists prevented America from openly siding with the French (*assignat*-toting) revolutionaries through the 1790's, and the conflict was thus limited to Europe, prior to the ascent of Napoleon's (reversion to hard money) dictatorship, which made the French cause even less popular in the USA, thus enabling the increased British impressment and harrying of American trade lines that would lead to (the British demonstrating some of the things that they could do, in) the War of 1812. The British system [private banks creating their own money via 'fractional reserve'] attained the upper hand in America then, although its political cementing of the 'fractional reserve' monetary system and economy would not be mopped up until the 1860's ("national banking" era) and, moreover, half a century later in the 1910's ("central banking" era), when-- one should be clear about this-- America's full support had to be attained in order to put down the monetary-economic uprising of Germany and its (state money-friendly) 'industrial' capitalism, by any and whatever means possible. That *3rd Currency War* (1914-45) is what most people call (with some incredulity) the First and Second World Wars, as if no one up until the 1910's had even thought of ever challenging or probing some of the weaker and less just aspects of the British Empire and its fractional-reserve-based monetary-imperial system.

<u>The 'World Wars'</u> (prior to the founding of the 'Intelligence Community' in 1947)	<u>The Currency Wars</u> (prior to the I.C.'s internet)
1. <i>Seven Years War</i> (1756-63) [French loss motivates heavy support for the]	...1. <i>American Revolution</i> (1775-81) [Am. victory inspires...]
2. <i>The Great War</i> (1914-19) [-the same-]	2. ... <i>French Revolution & Napoleonic Wars</i> (1793-1815)
3. <i>The 'Second World War'</i> (1937-45)	3. 'The Great War'/'2 nd 30 Years War' (1914-45)

⁶⁷⁵ French support enabled the colonies to break away from (mostly unpopular & useless/parasitic) British political control, but (it would turn out, only 5-6 years later) not entirely from British monetary-economic control. See also "Fiat currency"; Jefferson 1813b.

⁶⁷⁶ British/Monarchists' operations to counterfeit/inflate-away the French sovereign-fiat *Assignats* were successful by 1795-96 [unlike UK efforts, 15-20 years earlier, to sabotage the American sovereign-fiat *Continental*s, which were salvaged by the French and Robert Morris' personal wealth]. See also "Congress of Vienna", "Land Bridge".

⁶⁷⁷ Americans, like Pres. Madison, actually thought that they [apparently possessing the only national identity & nationalism in the new world] would easily take large portions of Canada in 1812. Instead, Americans usually found themselves on the defensive from latter 1812 through 1814 (when Madison had to surreptitiously flee the White House on horseback). Andrew Jackson's Battle of New Orleans in Jan. 1815 was after the commercial treaty had already been prepared in late December, and had no effect on the final terms that Pres. Madison and Congress

3rd C.W.⁶⁷⁸(1914-1945) Axis (not yet “of evil”) Powers

Allied Powers (UK-Fr. ‘private’ CBs... Allies diplom.-based strat. + Brit.EMP., US, and Ru. tag along) prevails...in Uncond.Surr.⁶⁷⁹

[3rd Currency War-- air superiority-bombers]

3) The 3rd and decisive C.W. (1914-45) was framed, via British Intelligence & diplomacy, of course, in very different terms. It was not to be perceived-- even though Hitler dismissed the global central bankers, such as Helmar Schacht, in Jan. 1939-- as a (long-anticipated) struggle between “*Industrial*” capitalism (with more public money & less debt-overhang) and “*Financial*” capitalism (with less public money & higher debt)... i.e. between **the old Smith-Bentham** monetary philosophy tree and that of (the century-more-recent) *Knapp-Feder* monetary philosophy.⁶⁸⁰ No, instead the Empire’s globalist proto-media machine was to view this 2nd 30 Years War as being initiated by somewhat-irrational Germany aggression, predicated upon their (presumably archaic & more ‘barbaric’) *Ethnic nationalism*. The future fin de siècle-era Prime Minister Robert Cecil spelled it out more than half-a-century earlier, in the 1850’s, a decade before the German state was even unified: “...the splitting up of mankind into a multitude of infinitesimal [linguo-ethnic] governments, in accordance with their actual differences of dialect or their presumed differences... would be to undo the work of [‘Western’/Roman] 268pprox.268tion [itself] and [to] renounce all the benefits which the slow and painful process of consolidation has procured for mankind... It is the agglomeration and not the comminution of states... by which the physical and moral excellence of the species is advanced... [I]t is [thus] England’s right to enforce the law of Europe...” (Gascoyne-Cecil, 1859, 22-23). See also “Royal Institute of International Affairs (RIIA; 1919-)”, “Hitler, Adolf (1889-1945)”, “National Identity/Nationalism”..

4) The UK-USA’s subsequent wars (Korea-to-Iraq/Afghanistan) have been increasingly asymmetric and imperialistic in nature (just maintenance of the expected trade lines and departments’ budgets), as

agreed to in February. Although the British military had usually proven stronger (including a successful blockade that was strangling the American economy), the nationalist Americans were not about to roll over, and there was, by autumn 1814 (six months after Napoleon’s abdication), not much of anything that either of the war-weary sides could realistically hope to attain, apart from restoring trade practices to what they had been like before the Napoleonic Wars had moved the British to seriously impress upon and harass Americans’ trade lines with Europe.

⁶⁷⁸ There was substantially more monetary systems divergence during the 1st C.W. than in the 3rd C.W., by which time ‘the international’ system was, it could be argued, just ironing out a relative wrinkle of (public-private) difference-- i.e. between [given that thesis] the ‘public-controlled’ (by only a slight majority) Reichsbank of the early 20th century (Zarlenga, 2002, 579), and the ‘privately-controlled’ (by only a slight majority) US Federal Reserve from 1914-35. In any case, the (mostly UK) “banking school” teachings & (mostly German) “currency school” teachings of the 1st half of the 19th century had substantially converged (given standard practices and exigencies of imperialism) by the early 20th century, although the ideological heritages were still salient. See also “Congress of Vienna” (which had probably already decided the (new ‘globalist’ order) issue in favor of 1. [TAB]/bankmoney over 2. sovereign/state [RAB] money. It is already conventional wisdom that the 1914-45 war “succeeded in reducing the number of Great Powers from 7 to 2” (Quigley, 1966, 315)..

⁶⁷⁹ Theories of Hitler’s madness [being useful for attaining a 100% ‘unconditional surrender’ of Germany-- then the primary nation standing in the way of Finance Capitalism’s ‘globalist’ agenda] aside, the modern re-introduction of ‘total war’ (targeting civilians & economic livelihood), which characterized the 19th and 20th centuries, was due more to the development of technology than to (imagined or thrown-down/after-the-fact) ideological differences. Freud’s (somewhat ethno-centric) “der Narzissmus der kleinen Differenzen” is perhaps also a useful explanation for the then-unsurpassed brutality of 1] the original 30 Years War (Europe’s first 2-sided civil war), 2] the (somewhat less horrific) US Civil War, and then 3] the senseless slaughter of tens of millions of innocent civilians in Europe’s 2nd 30 Years War (a.k.a. The First World War & Second World War). See also “Hitler, Adolf (1889-1945)”.

⁶⁸⁰ For a very short take on “monetary philosophy”, see “Two sides of the same coin”.

opposed to any meaningful contest of (substantially different) currency systems⁶⁸¹, which were all wrapped up by 1944-45, if not to say 1815.⁶⁸²

[German supply lines breakdown, Stalingrad, Jan. 1943]

See also “Reserve currency”, “Congress of Vienna”, “Chicago Plan[s]”, “Industrial Revolution, 3rd”.

Current Account- (a nation’s simple ‘*trade balance*’ [exported goods & services, minus imported goods & services], plus or minus its *net earnings* on cross-border investments, and *net transfer payments* [international aid]; not to be confused with ‘current accounts’ [the UK term for individual ‘checking accounts’], nor with the broader term ‘balance of payments’, which also includes all known financial transactions)

1) basically an *income statement* for an entire nation; just as a company’s income can include other things besides sales revenue and purchasing expenses, so does the nation’s current account. A current account *deficit* shows a net flow outward of the domestic currency (net trade + net income + net transfers), and that means a net flow inward of that currency as some sort of investment, even if just being held in a bank account. See also “National income”.

2) consists of the simple trade balance “plus the net amount received for domestically-owned factors of production used abroad. Hence, if an American owns an apartment building in London, the [financial] rent he receives is part of the *current account*, but not part of the *trade balance*... [Thus] the current account is a... [more inclusive] measure of the trade balance” (Mankiw, 2006); sort of like M2 is to M1. Its two components are: (its inverse) the “Financial Account”, and the (substantially smaller) “Capital Account” (Gerber, 2014, 183-85).

3) Michael Hudson characterizes this “sub-balance” of the Balance of Payments as: “trade, services, and transfer payments such as immigrants’ [financial] remittances”⁶⁸³ (2013).

3b) Such remittances to countries such as the Philippines have long been approx. 10% of their GDP (and/or nearly 1/3rd of export earnings). “Money from abroad is the only thing that keeps the economy in motion....If you don’t encourage the employees to go overseas, you will have revolution.”

- Alejandro Lichauco (c.1928-2015), fmr. head of policy research for the Philippines National Economic Council (in the *LA Times*, Apr. 20, 2006).

4) According to MMT, *trade & current account surpluses* enable a nation “to keep their private sector in surplus” without having a big government deficit (Kelton, 2012, mn.1:17), because the private sector is

⁶⁸¹ The 3rd *Currency War* (1914-45) is also occasionally referred to as ‘Europe’s Civil War’, even though it was the *original* 30 Years War (1618-48) that was much more about cultural differences than about dueling monetary systems. The latter conflict, which Eugen Weber insisted on calling the “Second 30 Years War”, was really much more like a “civil war” *within* “*capitalism*”-- i.e. Financial (imperialist) Capitalism vs. Industrial (nationalist) Capitalism. This should be evident to anyone who has analyzed ‘World War 1’, which took place prior to the mid-20th century UK-USA *propaganda-intelligence matrix* getting its act together (The propaganda used in WW1 was more cruder [and the Allies almost lost] compared to that of WW2). The mid-century UK-USA team effectively painted most of (old school, Industrial Capitalist) central Europe as the land of raging/howling racists (which was not really true, and, moreover, also something of an evil projection, unto the victim/losing side [and also, increasingly so, even after Germany’s unconditional surrender], like an after-the-fact “throw-down weapon”). See also “Zionism”.

⁶⁸² The 2nd *Currency War* featured differences *in-kind* over (what was to be) best monetary policy in the Western world. Bretton Woods (1944), in contrast, was in fact more about the politics of (bankmoney-assumed) monetary tinkering. See also “Bretton Woods”, → “Technocracy”.

⁶⁸³ Gross remittances (2020): <https://www.tbsnews.net/economy/bangladesh-among-few-whose-remittance-surges-2020-report-203455#lg=1&slide=0>

creating enough new money supply and thus does not require additional 'money supply' from government spending.

4b) Conversely, for a nation like the US, with "current account deficits, you have to have a government deficit that's [even] bigger than your current account deficit, to offset the outflow that's happening because of the trade deficit...[in order to] keep your private sector [money creation] in surplus" (Kelton, 2012, mn.1:01). There are, however, "consequences, in the railways" and other forms of infrastructure "being run down" by so much money leaving the economy (Keen, 2016g, mn.25) via trade deficits. See also "Eurodollars" (mother of offshoring), "Dutch Disease".

US sector savings/borrowing balances (as % of GDP)

Source: Datastream, 99 Cross Asset Research

[remove?]

5) And the US current account deficit has long been under-measured. A large "anomaly in the item 'reinvested earnings' on foreign direct investment [FDI] in the US balance of payments...improves the [US] current account by about \$100bn a year, because foreign companies systematically *report* abnormally low profits for their US operations to avoid US corporate income taxes.... Properly measured, the country's current account deficit would thus be about [+1%] of GDP larger than officially reported. The underreporting of the current account deficit...[also means] that US [federal] indebtedness is also underestimated. Over the past 2 decades, the cumulative correction for the anomaly in 'reinvested earnings' would lead to a higher US net debtor position of about \$1,000bn". And that's just half the story (of under-reported current account deficits and ultimately-unmeetable liabilities of the US federal government (Gros, 2006);-- a decade before the budgets started going black in 2015. See also "Taxation of income", "Federal Accounting Standards Advisory Board" [2015].

6) MMT's trade theory (see points 4 and 4b above) "suggests a certain re-interpretation of Public - Private sector balances... The emphasis [there] is on pointing out that for government debt-- *net* government debt in the public sector-- there are corresponding private fortunes in the private sector.... private financial fortunes seem to necessitate public debt. In any case, both sides netting out to zero [is] as if this were to say 'You see, things are netting out. No problem here'. But problems there are... in Europe the major part [of public debt] is held by banks, and other big slices by other financial institutions and insurance companies.... the holdings of bonds... is very, very unequally distributed... Furthermore, much of the debt is [as usual] held by foreigners... [which] can lead to... problems of dependency. MMT, however, tells us not to bother about the level of public debt...[and] public finances.... I can't understand this" (Huber, 2013b, mn.44-46). MMT theorist Randall Wray admits elsewhere, however, that "running a foreign account deficit is basically, as he says, a '*beggar thy neighbor* strategy'. Yes, that's what it is. But I am astonished how... he does not draw any conclusion from this, and...does not... explain what it means" (Huber, 2013b, mn.48). See also "Owners, the", "Economics", "Dutch Disease" [dependency]. See also "Modern Monetary Theory", "War", "World Bank", "Reserve currency"; "Reform, 101".

Current Account (UK usage only)- an individual's 'checking account'; see "Transaction Account Balance (TAB) credits".

Custodial accounts- (antec. 'stewardship') are, like fiduciary/trustee accounts, not reported on the balance sheet, and are not liabilities (subject to the claims of creditors), although a custodian's professional duties are *less extensive* than a fiduciary's. Custodians are legally responsible only for the safekeeping the account-- a service for which they may collect interest and/or dividends from an in-trust account. See also "Fiduciary accounts", "Off-balance-sheet".

Cycles- (how humanity hasn't been [already] removed from the planet a half-dozen times by now) "As an innovation spreads, a threshold is reached beyond which adoption provides [merely psycho-political] legitimacy, rather than [improving actual economic] performance"⁶⁸⁴ (DiMaggio & Powell, 1983). See also "National Identity Cycle", "Gross Domestic Product (GDP)".

1) It's not just China (per "Dynastic Cycle") that has noticed. "Liberty produces excessive taxes; the effect of excessive taxes is [serfdom &] slavery...[which then] produces a diminution of tribute" to the state (Montesquieu, 1748, 216). See also "Dynastic cycle", "Common sense".

1b) So-called 'modernity' (see "Freedom continuum (maturation)", "Adolescence of Mankind") has been governed not 'just by money' or 'war', but by a growing chorus of (increasingly technology-dependent, or *mediated*) cycles. In chronological order, the 4 primary 'modern' era ones have been:

<u>cycle name:</u>	<u>durations:</u>	<u>origins:</u>
1. Generational ⁶⁸⁵	80+ yrs. (20+x4)	early 17thc- Anglo-America (from free preaching; English Renn.)
2. Nationalism-Globalism ⁶⁸⁶	100 yrs. (50x2)	mid-18thc- Anglo-Francosphere (from New World racing; Freemasons)
3. Interest Rates (Debt-money)	80 (40x2) ⁶⁸⁷	mid-19thc- Ibid+ ⁶⁸⁸ (from national banking systems; 2 nd Indust. Revol.)
4. Cultural Calendar	100 yrs (30x2;+2 20-yr. trans.)	early20thc (from recorded-marketed music, etc.; UKUSA, I.I.C., etc.)

1b) Apart from the basic/foundational National Identity Cycle, all of these (increasingly downstream or derivative-mediated) cycles increase in definition and acuteness as they ripen (the oldest/Generational cycle may have ripened as far back as the mid-20thc, softening somewhat by half-a-century later). The latter 3, arguably, were still going strong into the 2010's. See also "Main point".

2) With a longer-term view however, pretty much all of these salient cyclical determinants may be collapsed into 4 basic categories,⁶⁸⁹ in concurrence with the 4 classic Elements of Creation:

<u>ELEMENT</u>	<u>Concerning</u>	<u>Family sub-cycles (& ave. years)</u>	<u>'super-70's' theme</u>	<u>see also</u>
1] FIRE	(man's power/leverage [econ.]) [i.e. 'instinctual leadership']	Business - Debt - Usury 7-8 - 70-80 - 600	Hawaii 5-0	"Debt cycles", "Usury cycles",
2] WATER	(great waves-tides [pol.sci.])	Nationality cycle - Montesquieu	Love Boat	"Montesquieu", App.C: "1-2-3"

⁶⁸⁴ In other words, on the (political-cultural) facsimile, rather than on (the ecologic-economic) reality. "Unchecked [social] insanity builds over time. It isn't a stagnant industry. Top-down control breeds insanity. Deranged leaders show up [at an increasing pace] like flies on fresh shit."- Jon Rappoport, Dec. 30, 2022. See also "Imperialism, American" [stages], "Debt cycles", "Dynastic cycle", "Reform, 101" (not easy).

⁶⁸⁵ from *Generations: The History of America's Future* (Strauss & Howe, 1991).

⁶⁸⁶ This "Nationalism-vs.-Globalism cycle" is .9 dependent upon "Reserve currency" status & (the perceived need for) ever-increasing international-global trade. See also "Freedom continuum (maturation)".

⁶⁸⁷ Although the most recent 40/40 Interest Rates cycle (from the early '40s-to-early '80s [rising-high rates]; then the early '80s-to-early 2020's [falling-low rates]) is crystal clear, the previous 80-year cycle's first half (mid-1860's to early 1900's) had drops of only about 4 points [not 14 points]; and its 2nd half (early 1900's-to-early 1940's) was uncharacteristically broken into 2-sub-halves (by the creation of the Federal Reserve for WW1, which then, amateuristically, over-hiked interest rates in 1920, in reaction to post-war price inflation). After this hasty doubling of rates after WW1, the next 2 decades, from the early '20s to the early '40s, saw rates fall by more than 50%. (Prior to the 2nd half of the 19thc, no 'sustainably distinct' trends are visible in US rates). See also "Debt cycles", "'State Banking' (era)", "UKUSA Agreement".

⁶⁸⁸ This is approx. to the spread of bankmoney-imperialism, primarily by (success in) warfare... 1st from the UK to the US & France (c.1815; see "Currency Wars, the"), but then also to the Hispanosphere (1st half of 19thc), the Commonwealth & British Empire (2nd half of 19thc), Japan-Germany-Italy (1870's), Eastern Europe (early 1990's), China (1990's), and the former USSR (c.2000). See also "Central Banking-Warfare model", "National Debt Economy", "Glorious Revolution, the" [full circle (33.3 decades later)? <https://vimeo.com/36974548> ('sir Albarn', '05); see also "Big Picture" (Hendrix)].

⁶⁸⁹ Although adding "Metal" as a 5th basic or 'cardinal' element would seem to dullen the model's clarity, it would also have the advantage of: 5] 'Metal' (the metallic determinants of older civs.); Quigley's "16 Civilizations [only 1 or 2 surviving to 1970's]"; LittleHouseonthePrairie; "Civilization".

[11th hour (of a full debt cycle)]

DARPA- (Defense Advanced Research Projects Agency, est. 1958; [now] 220 employees, \$3.5bn budget) "has sponsored everything from spacecraft, robotics, artificial intelligence, computer mice, wave division multiplexing, miniaturized GPS, speech recognition and machine translation, hypersonic planes, prosthetic limbs, rapid [?] vaccine production.... There is no other organization with remotely that span of [playing God] accomplishments.... DARPA works closely with Army, Navy, Air Force, and the Marines, as well as NSA, CIA, and the other I.C. Agencies to identify the most important unsolved problems and create new innovations. Those innovations are then transferred to an operational partner.... Success is having others adopt your work."- Fmr. DARPA Program Mgr. Randy Garrett, 2018, <https://www.quora.com/Which-government-agency-has-the-best-technology-NSA-or-Darpa-CIA>

2) In 2010, DARPA “started focusing on DNA and RNA vaccines... delivered...[via] microneedles... You can barely feel it. And in their words: ‘It is *to enhance and subvert*’ humans at a genetic level. This is around the same year [that] heavily started to fund the DNA, RNA vaccines with...[all sorts of] companies...” (Madej, 2020, mn.14-15). See also “COVID”, “Transhumanism”.

3) In 2012, DARPA “acknowledges a brain-machine interface, that...artificial intelligence and the human brain will form a neural network and therefore have the ability to communicate by thought alone or... controlled remotely.... [With] re-writing... artificial memories of things.... you become a computer program...a character in a computer program that you do not control. This is not sci-fi. This is today.... something they’re trying to do very fast” (mn.15-18). “I’ve been to scientific meetings where they’ve talked about this. I’ve been to business meetings where they talk about this. This is real” (Madej, 2020, mn.21). See also “Social Media”, “Mind control”. See also “Timarchy”, “National Security Agency (NSA)”.

‘Death Culture’- (a.k.a. ‘Evangelium Vitae’ [1990’s], ‘zombie apocalypse’⁶⁹⁰ [21stc]; not to be confused with [typically ‘leftist’] ‘lunatics’/‘statism’)

1) Pope John Paul II’s *Evangelium Vitae* (March 1995) famously described Western society as a “a veritable ‘culture of death’.... It is impossible to catalogue completely the vast array of threats to human life, so many are the forms, whether explicit or hidden, in which they appear today!.... This culture is actively fostered by powerful cultural, economic and political currents which encourage an idea of society excessively concerned with efficiency. Looking at the situation from this point of view, it is possible to speak in a certain sense of a war of the powerful against the weak...[that]” (John Paul II, 1995). See also “Dumb-downing”⁶⁹¹, “Lies”.

2) In terms of the economic sectors, the whip-sawing financial ‘reforms’ of c.1980 fueled the Primary Sector (Agricultural/“Farm”) crisis in the 1980’s-90’s. The “race-to-the-bottom” trade ‘reforms’ of the 1990’s extrapolated the 2ndary Sector (Manufacturing/“Rust Belt”) crisis in the US [and the drug cartel crisis in Mexico] in the 1990’s-2000’s. See also “Food”, “Parity pricing (for the primary sector)”.

2b) JP II wasn’t alone. “This economic plague has undercut the wage structure and the overall profitability of the American economy. It forces debt-driven consumer expenditures. Worst of all, too much debt inevitably stacks up inventories of surplus goods and surplus people” (Walters, 1994). See also “Malthus”, “Great Extinction”, “COVID”; “N.O.R.M.”.

2c) Why complain about the weather? Malthusianism is not necessary. “[T]he central equation of [valid path] macro-economics is [in fact] anchored by the central equation of *nature’s* scheme... [W]hen the total annual production of goods and services flow through the economy at their par value (their intrinsic value as energy, rather than their perceived value), then sufficient [“earned national”] income is created along the way to distribute and consume those same products and services every year, without...[needing to resort to] excessive debt” (Walters, 1994). See also “National Income” [Kuznets], “Physiocrats, the”.

3) Since then, however, further financial ‘reforms’ in the late ‘90s-early 2000’s set off the Great Financial Crisis in the Tertiary Sector (services & government services [such as money-currency]), and what might be called a subsequent “McJobs” & “Bank welfare” (big gov’t for banks) crisis in the 2010’s. Full circle? See also “COVID”, App.C: “1-2-3”.

4) A quarter-century after *Evangelium Vitae*, Archbishop Carlo Maria Viganò, the RCC’s former Apostolic Nuncio to the US, denounced Pope Francis’ Holy See as “deliberately...[renouncing] the supernatural mission of the Church, making itself the servant of the New World Order and Masonic globalism in an antichristic counter-magisterium.... The true Church is now eclipsed, denied and discredited by her very Pastors, betrayed even by the one who occupies the highest Throne” (Vigano, 2021). See also “New World Order”, “Self destruction”.

See also “Transhumanism”, “Civilization, Western” [decline], “Atlantis (essay)”, “Corrosion-Cancer-Debt”.

⁶⁹⁰ ...defined (in the non-fictional sense) simply as when most individuals, families, businesses, and nations have significantly more debt than they have income/revenue. See also “Debt saturation”, “Crenney”, “COVID”.

⁶⁹¹ specifically in reference to de Grey’s “7 Deadly Things”, 2013, mn.9:55.

Debit cards- (synon. 'cash cards') just like checks, but with real-time processing.
See also "Credit cards".

Debt- (a.k.a. 'capital asset', or the 'principal'; not to be confused with 'interest')⁶⁹²

1) the economic form of obligation, reflecting (automatic) time value in the cycle of obligations (debts) and rights (credits). All societies are fundamentally organized around rights and obligations, these are just habitual parts of every society. Every *debt contract* is between two parties, the *debtor* and the creditor. Every debt is credit for the creditor. When a *debt record* is exchanged in a payment transaction, title to the right is changed to a new creditor.

2) an "exchange that has not yet been brought to completion (Graeber, 2012, 121); i.e. an "agreement between equals to no longer be equal (at least for a time⁶⁹³)... is the very essence of what we call 'debt'.... With money loans, all that is required is that the two parties be of equal standing. (You can't lend money to a child, or to a lunatic. Well, you can, but the courts won't help you get it back" (120).
See also "Super Imperialism", "Accounting, 'Fair Value'".

3) "first came into being in the temples and palaces, not among individuals bartering⁶⁹⁴... which is why rulers were able to cancel debts so frequently" (Hudson, 2015, 7). "Two decades ago, economic historians and even many Biblical scholars thought that the Jubilee Year was merely a literary creation... [even though] Each region had its own word for such [Clean Slate] proclamations" (2015, 9). See also "Liberty Bell".

4) "Hudson has achieved near complete consensus with the Assyriologists and biblical scholars that the Bible is preoccupied with debt.... '[A]ctually, the word for sin and [the word for] debt is the same in almost every language...[For example] *Schuld*, in German, means *debt*, as well as *offense* or, *sin*. It's *devoir* in French. It had the same duality in meaning in the Babylonian language of Akkadian'.... The idea harks back to the concept of *wergeld*, which existed in parts of Europe and Babylonia, and set the [proto-monetary] value of a human life...[which was to be] paid as compensation to the family of someone who had been injured or killed. 'The payment- the *Schuld* or obligation- expiates you of the injury caused by the offense'" (Hudson, 2017s).

5) "...a means of building leverage, or of gaining control over an underlying asset... leverage always exists over all the assets in our system" (Vrabel, 2011, mn.12); and is thus "*the fatal disease of republics, the first thing and the mightiest to undermine governments and corrupt the people*"- Wendell Phillips" (Vrabel, mn.25). See also "Leverage", "Corrosion-Cancer-Debt".

6) Debt accumulation "is external to 'capitalism, [because] it grows by purely *mathematical* rules of compound interest... not economic balance rules'" (Hudson, 2017b, mn.53). When "debt is growing faster than the economy... on a net basis, is this really growth at all, or are you depleting the [actual] economy, just as you are depleting the iron mine?" (Hudson, 2017l, mn.9); or just as iron and other metals are depleted (corroded) by rust. See also "Gold Standards/bullionism".

7) Global debt reached approx. "\$250 trillion" in 2018, up from "\$40 trillion" in the mid-1990's (Stockman, 2019, mn.12). See also "Black Budget".

See also "Feudalism, neo", "Inequality", "Jubilee", "Monetary reform".

Debt crash- "the mathematics of compound interest leads economies invariably into a *debt crash*, because the financial system always expands faster than the underlying economy, overburdening [clogging] it with debt so that crises grow increasingly severe. Economies are torn apart [disabled] by breaks in the chain of payments" (Hudson, 2015, 1-2); as debt "expands like a chain letter" (2015, 3).

⁶⁹² Debt is to Interest, as the bill is to the tip.

⁶⁹³ "During the time that the debt remains unpaid, the logic of hierarchy [as opposed to equality] takes hold" (Graeber, 121). Hence the German word for it is *schuld* (literally 'guilt'), and the Russian *dotg* (literally 'duty'). See also "Inequality".

⁶⁹⁴ Debt is the only form of obligation that is precisely quantified. See also "Numbers".

Debt cycles- (also sometimes known as 'interest rate cycles', stemming from the past 3 centuries of "National Debt Economy" & "Central Banking-Warfare model")

"All I can tell you is that the American Establishment are planners, and they are good at it, and they plan way ahead"- Catherine Austin Fitts (2017i, mn.23-24). See also "Cycles", "UKUSA Agreement"; "Usury cycles".

"The process by which banks create money is so simple the mind is repelled. With something so important, a deeper mystery⁶⁹⁵ seems only decent."- J.K. Galbraith (1975, 22).

"The herd instincts among the forec\$ters makes sheep look like independent thinkers."

- Edgar R. Fiedler (*Across the Board*, 1977); <https://www.youtube.com/watch?v=WpmRnueVUEs> [Nero's]

[...'natural' since the invention of writing and money anyway]

[Pisces/Yin awareness, Virgo/Yang awareness; 2018, 1968, respectively.]

1) The accumulation of private-consumer debt, in a bankmoney (a.k.a. 'debt-money') system, can be slowed with *recessions* every 6 or so years, which represent a relatively short-term reduction in bank 'loans' (debt-money) issuance. However, when **all** money-currency is born as debt, with initial interest attached, there will **always** be more debt (principal + interest) than money (principal), and thus a perpetual debt buildup, at either a fast ("liberal") or slow ("conservative") pace. The fast or slow increments/adjustments (to this accumulation of debt) tend to balance out, to where, after **7-8 decades**⁶⁹⁶ of debt accumulation, most citizens or subjects (in addition to the governmental institutions themselves) find themselves with substantially more debt than income. Thus, they don't want to take on any more debt (lest they lose what freedom they have); they don't want more *debt drag*. Hence a systemic "Financial Crisis" (as opposed to a mere 'recession' [in the debt buildup]) ensues, because the primary means of introducing new currency & money into society is clogged (see also "Debt saturation"). Some past '80 Year' Debt-Crisis cycles (sometimes a.k.a. "revolutions", or "turnings") have culminated in:

<u>Crisis</u>	<u>Resolution</u>	<u>Next Revolution Begins with</u>
1. the c.1770- Brit.-imposed Colonial Depr.	American Revol.War; Fr.Rev.	Napoleonic-Warof1812; 2nd BotUS; Congr.of Vienna
2. the 1850's- (1st Global) Panic of '57	American Civil War	Nat'l Banking Charters; 14 th Amd.; 2nd Ind.Rev.
3. the 1930's- the Great Depression	World War Two "debt reset"	BrettonWoods...to FreeFloat...3rd Ind.Rev.

⁶⁹⁵ Deeper? Yes. Mystery? Not really. In 'the world's first city', Uruk, by (no later than) c.3000 BCE, "The [1stEstate] ruler was the [3rdEstate] people's representative to the goddess [2ndEstate], and he [1E] presented to her [2E] the fruits of Uruk's [3E] citizens' labor. Since most of these commodities were perishable, we must presume that the [2E] temple redistributed them **in some fashion** [which was deemed to be effective; see also 'Political economy']. The numbers from the Uruk tablets indicate that this was a big job-- taxing people and then [popularizing volitional compliance with] redistributing the income... [which] may explain the movement of people into the cities, closer to the temple" (Goetzmann, 1994), at least in those cities where the process was done intelligently. See also "Estates, 3", "City (of London), the", "Smith, Adam" [invisible], "Cultural Calendar".

⁶⁹⁶ Two decades after the widespread debt write-offs and re-settings of the 1940's, "in the 1960s there was barely a hint that these trends would become a great financial bubble. But the [early stage] dynamics were there.... [I.e.] The more banks lend, the higher prices rise for real estate... And the more prices rise, the more banks are willing to lend-- as long as more people keep joining what looks like a perpetual motion wealth-creating machine. The process works as long as incomes are rising. Few people notice that most of their rising income is being paid for housing.... At least that is what worked for 60 years after World War 2..." (Hudson, 2015, 2). See also "Ponzi".

4. the 2010's- the Great Financial Crisis⁶⁹⁷... ? [Hopefully there isn't one.]
 See also "Debt saturation", "Financial Crises", "Big 4 Accounting firms", "Cycles".

[See also "Super Imperialism", →"Dutch disease".]

2) "When not thinking of commercial banks as 'neutral intermediaries' between savers and investors, like many of the current economic textbooks and macroeconomic models still do, one notices that banks [and hence their monetary flows] have a substantial *procyclical* influence on the economy" (Stelter, 2018); i.e. exacerbating (those major) 20th century trends and 'trendiness'. Where does this procyclical influence stop; when does it end? When did it start?

3) Neither bankmoney nor military budgets were what they are now back in the early 1700's. There are, however-- particularly with the subsequent politicization & militarization-- some distinctively long-term (and alternating) trends in the most recent 3 or 4 centuries of 'Anglo-American-Western civ.' Carroll Quigley, Eugen Weber (and other non-monetarist historians) have often noted the approx. 7-decade retreat, after the Congress of Vienna, "from conflict and politicalization and militarization to the level of commercialization, and industrialization" (Quigley, 1976c-pt.3, mn.321). And indeed, there was an ensuing "politicization & militarization" trend, often noted by Quigley, from the 1890's-1960's. It seems reasonable to surmise that the 7-8 decade "Debt cycles" are in a symbiotic relationship with (the older, and more obvious) 7-8 decade "War & Peace [militarization] cycles", which eventually pounce upon the inevitable monetary (i.e. de facto governance) disturbance [easily quantified in debt levels], that then leads to salient political change. 'Chicken & egg' relationships aside, here's how the two cyclical patterns (of 1st Estate & 2nd Estate preponderance) line up. (Yes, there's some covariance):

<u>'War & Peace' (or 'militarization') Cycles/(1st Estate)</u>			<u>'Rising Debt' Cycles/(2nd Estate)</u>		
<u>name</u>	<u>7-8 decades</u>	<u>cosmology</u>	<u>name</u>	<u>7-8 decades</u>	<u>Crisis, terminal</u>
3 rd Industrial Revol.	1970's-c.2030	Yin/2 nd Estate	5. Bretton Woods Cycle ⁶⁹⁸	1940's-c.2020	40-yr.Yang→40-yr.Yin.
			(i.e. [from the 1950's] the ["debt money"] 'structural over-monetization era')		
World/Currency Wars	1890-1960's	Yang/1 st Estate	4. Gilded Age/Barrons' Cycle	c.1860-1930's	Great Depression→WW2.
			(i.e. the 'vote-for-money era')		
Global Indust.Revol.	c.1820-c.1890	Yin/2 nd Estate	3. 'Free Banking' Cycle	1790's-1850's	US Civil War; ↑Prussia.
Age of Revolution	1750's-1810's	Yang/1 st Estate	2. National Debt Cycle	1710's?-1780's	[start of] US,→ Fr. Revols.
2xAccounting&N.D.E.	1680's-1750's	Yin/2 nd Estate	1. (NL-UK only)	n/a (to c.1690)	Glorious Rev.→BankofEngland
Mercantilist Looting	c.1600-1670's	Yang/1 st Estate	-	n/a	n/a

See also "Cycles"; "Central Banking-Warfare model", ←"Civilization, Western"; "Statism" [1stEstate], "Privatization" [2ndEstate], "Estates, 3" [cycles].

4) In the 'more developed' societies, the approx. 80-year debt cycle (a.k.a. 'Interest Rate cycle') has been, through most of the 20th century, divided evenly into halves. They are: 1] a more 'nationalist' era⁶⁹⁹

⁶⁹⁷ "You can't keep it afloat forever.... You get to the end of the debt cycle [simply] when the interest payments become too much" (Dowd, 2022, mn.2), referring to the (see also) "COVID Op." of 2020-21. See also "Parasite" [host].

⁶⁹⁸ 'Bretton Woods' is not a singular concept. The (original) 'Bretton Woods I' era ([actually in place from] the latter 1950's-1971), and its successor *Bretton Woods II* era (a.k.a. "the Jamaica System", from 1972-c.2020) were both pretty much increasingly indifferent to the era's trademark structural over-monetization (as evidenced by both systemic currency inflation & [in BW II] ever-increasing "asset inflation"); hence setting the stage for (at least) the 2020's being an era of (somewhat draconian) "Ecological economics" vs. (the systemic world peace of a) "World Par Economy". See also "Internet of Things (IoT)", vs. App.C: "1-2-3".

⁶⁹⁹ See also "Cycles".

of higher interest rates, retained earnings, and protectionism (1940's-'70's)⁷⁰⁰; followed (terminally) by a more 'globalist era of lower interest rates and 'downsize-and-distribute' *casino capitalism*⁷⁰¹ (1980's-2010's). Is it now possible to quantify the monetary drivers of what amounts to a 40-year half-cycle⁷⁰² of the larger yang-yin 80-year (40/40) wheel in the sky by which (probably) the 20th-21st century Intelligence Community 'professionals', and (also possibly) 19th & early 20th century 'banksters', have rolled out their strategies for society. [also "that" (distinction) vs. "this" (singularity), in 'cultural demonstratives usage] See also "K.J.B. (King James' Bible)/70 Year Plan", "Lunatics".

5) This "old Hamilton vs. Jefferson issue" from the 1790's is also the (even older) "*natural law*" [often employed for elite/abstract concepts] vs. "*common law*" [originating from tribal-popular norms for the vox pop] issue. "Hamilton pushed for big empire systems⁷⁰³ [globalism, lower interest rates], while Jefferson warned against them" (Vrabel, 2011, mn.130), the latter representing nationalism and the Republic (and also, ironically, higher interest rates). See also "National Identity/Nationalism", "Civil National Identity" [Jefferson vs. Hume].

6) With the development of communications media and big government, the raw economic vicissitudes of debt cycles are now less in-your-face than they used to be (even though the length and definition of these trends is certainly more pronounced). A debt "crash used to occur every 11 years in the 19th century. But... from 1945 to 2008, the exponential upswing [in private debt] was kept artificially long, by creating more and more debt [re]financing.⁷⁰⁴ So the [big] crash was postponed until 2008. Most crashes since the 19th century [have] had a silver lining. They wiped out the bad debts [as the creditor banks went under]. But *this* time [due to insurance and bank welfare] the debts were left in place, leading to a massive wave of [debtor] foreclosures.... Instead of a recovery, there's just a flat line for...[90-sth percent] of the economy" (Hudson, 2017o), while those sectors in line for the bank welfare inflate. "The only layer of the economy that is growing is the wealthiest...layer-- mainly the Finance, Insurance and Real Estate (F.I.R.E.) sector. That is, creditors living off interest and economic rent: monopoly rent, land rent and financial interest" (Ibid). See also "Asset inflation", "Compound interest". ['Zion' (good) and 'Babylon' (bad) are the pretty much the same thing/same place, approx. 7-8 decades apart (before-after); <https://www.youtube.com/watch?v=2FgDles4xq8>]

7) Nonetheless, they are still as prevalent sociologically as ever, and more predictable, almost like clockwork in the (so heavily-mediated) 20th century-millennialist era. According to Hudson, the first

⁷⁰⁰ In the mid-20th century (yang/nationalist era), Carroll Quigley noted that governments' "control...over central banks varies greatly from one country to another, but on the whole [it] has been increasing" (1966, Ch.5), to where, in the 1980's-90's "central bank independence" was nearly religious mantra in all corners of the corporate media (cartel). See also "Timarchy", "Cartel".

⁷⁰¹ To some insiders, this might seem like a euphemism for *monopoly capitalism*: "This economy has been engineered over the last 40 or 30 years to basically rig things so that all... businesses flow into big corporations... we've been centralizing, and we've been using government to do it... Again and again and again you've been subsidizing corporate America, by basically stealing from Main Street" (Fitts, 2017g, mn.21-22).

⁷⁰² In so-called "...advanced economies, a century-long near-stable ratio of [TAB-bank] credit to GDP gave way to rapid financialization and surging leverage [indebtedness] in the last 40 years... [The resultant] widely-noted return of macroeconomic fragility and crisis risk... is correlated with [what the authors call] central business cycle moments, which we can document thanks to a decade-long international and historical data collection effort. More financialized [i.e. debt-extracted] economies exhibit somewhat less real volatility, but also lower growth, [and] more tail risk, as... International real [economy] and financial [debt] cycles...cohere more strongly" (Jordà, Schularick, & Taylor, 2016b); than would have been the case if 'they' had tried to somehow 'dictate' such developmental convergences instead. See also "Freedom continuum (maturation)".

⁷⁰³ ...that now "control everything from a center and treat us...as nothing more than digits in a spreadsheet... I got exposed to this mentality while I was at Harvard Business School. It's very real. The [3rd Estate] masses are nothing but spreadsheet digits [a.k.a. 'consumers'] to these people" (Vrabel, 2011, mn.133). See also Appendix C: "1-2-3".

⁷⁰⁴ In the 1960s, for example, "banks required a 25-30% down payment by the buyer, and limited the burden of mortgage debt service to only 25% of the borrower's income. But interest is now federally guaranteed up to 43% of the home buyer's income. And by 2008, banks were making loans [with] no down payment at all" (Hudson, 2017o).

(modern) “*Interest Rate cycle*”⁷⁰⁵ was “from 1945⁷⁰⁶ to 1980. During all those years, interest rates... rose, steadily, from about 2% in 1945, up to 20%... the highest since Mesopotamian times... rising interest rates...” in turn led to a “35 year decline in the Bond market. The bond market went down steadily... [accompanied by] high marginal income tax rates... high wages, and the highest period of growth in United States history”; the following “1980 to about 2008” era “was just the reverse... a steady decline in interest rates... a constant boom in the bond market... and...in the stock market. You also had [increasing] living standards come to an end... In every model you have, you’d think that when you lower interest rates... that all of this should have promoted a re-channeling of credit into productive industry. That didn’t happen.... You had the economy turned into a bubble [instead, with] asset price inflation.... [There] was a deliberate intention, all over the world, to stop governments from running deficits, so that [then] the economy could increase its purchasing power *only* by the commercial banks creating credit on their keyboards...and raking off the interest...” (Hudson, 2010b-#2, mn.3-5). See also “Criminalization of Banking, the”, “Homogenization”.

8) Every economic recovery since World War 2 has taken place with a higher level of debt-- higher and higher and higher...[until] Finally, by 2008, the volume of debt was so high that it was absorbing all of the economic growth, and... the stock markets plunged, especially when it became apparent that the business plan of the large banks was economic fraud...[and] junk mortgages” (Hudson, 2016p, mn.1). See also “Leverage”, “Eurodollars”, “Mortgage bonds (subprime)”.

9) Central bank technocrats, increasingly, “struggle to maintain governability in a world in which domestic monetary conditions have increasingly followed a *global financial cycle*” (Braun, Krampf, & Murau, 2020). See also “Eurodollars”, →“Bank for International Settlements (BIS)”.

10) For Prof. Keen’s take on the four seasons of cycle, see 2016e, mn. 28-29.

11) “What is this nonsense? Everything is based, in our modern society, on improving an economic index.... And the result is [that] we are destroying...the stability of our societies, because we are worshipping the wrong god-- economic index.... We’ve allowed the instruments that are supposed to serve us to become our masters” (Goldsmith, 1994, mn.39; 47). See also “Gross Domestic Product”. It’s easier to see that towards the end of a Yin/falling rates 40-year cycle (2017), than in the 2nd quarter of one (as was 1994). See also “Ninnies”, “Monetization”, “Great Extinction, 6th”.

12) Will the ‘Bretton Woods debt cycle’ be the last one (to [effectively] govern US macro economic policy)?

12b) The paradox is that the violation of debt contracts-- per traditional Roman and Lockean imperial law-- can only be forgiven by force majeure or other ‘war time’ (blood sacrifice) exigencies. But Digital Age warfare ain’t what it used to be in the 2nd millennium. Some other forms of crises will have to be engineered-- and/or currency & money restructured-- in order to enjoy anything like a 20th century-type recovery. See also “COVID”, “Graham, Benjamin” [.reform], “China” [.recent 60-yr.Cycles [not 80]]. See also “Usury”, “Economics”, “Debt saturation”, “Globalism”, “Groupthink”, “Corporate Media Cartel”, “Cultural Calendar”, “Estates, 3” [& cycles].

⁷⁰⁵ This is a bit crude. The *Nationalism-vs.-Globalism cycle* (which is more like 50 years, as opposed to contemporary interest rates’ 40-year cycles) predates “Interest rate cycles”, as indeed governments precede widespread (government) “money”. See also “National Identity/Nationalism”, “Cycles”.

⁷⁰⁶ When money and debt were scarce and low after WW2, “back in those days, banks were still scarred by having caused the Great Depression, which called the 2nd World War, and banks were incredibly conservative after that whole experience and very limited in what they’d lend out and [it] was very tough to get money from a banker. You had to go put your suit on to see the bank manager. Now [after 7 decades of debt-money accumulation], the bank manager comes around to you in a Lamborghini and offers you... [at least one] credit card at your door” (Keen, 2017h, mn.26). See also “Monetization staircase”.

[Yang → material (equality); or yin → spiritual (inequality)?]
 (macro/debt focus, ↑ rates; micro/sin focus, ↓ rates) [40-year 'half-cycle': Yang/materialist, c. 1940-80]

Debt-Deflation (saturation)- (a.k.a. 'balance-sheet deflation'; antecedent: 'debt saturation')

1) "...starts off with excessive debt, which leads to people... trying to pay their debts down. But as they pay their debts down, they are also eliminating money in the economy, and causing the economy to spiral down as a result.... And the whole thing cascades on top of itself, the only destination being zero, unless there's a countervailing force acting in the opposite direction, which is what the New Deal was... running deficits in the government sector... [Current US policy] is running deficits that are [at least] 2 and 3 times the size of the deficits being run in Europe [which has] enabled the [US] private sector to de-lever without having a spiral down in the amount of money in the economy (Keen⁷⁰⁷, 2015). I.e., within a bankmoney creation system, "you need that demand generated by a rising level of private debt... [However] once you've got to the [private debt] levels that we're at right now, they're so high that nobody wants to borrow [TAB-bank] money, and that particular force of creative vitality in capitalism disappears" (Keen, 2015); on the other side of a large debt-money bubble buildup. See also "Debt money".

2) If aggregate debt is equal to GDP, "and the interest rate on debt that people have to pay is 4%... [and] if economies only grow at 1 or 2% [as have been most G8 economies this decade]... then [eventually] all of the economic growth has to be...[paid] to the financial sector... This is the phenomenon of *debt-deflation* that was discussed...in the 1930's... it's inherent in the very mathematics of compound interest" (Hudson, 2016p, mn.4-5). See also "Debt saturation", "Japan model", "Compound interest", "Homogenization".

'the other side of the bubble']

Debt forgiveness/write-offs- see "Debt restructuring", "Jubilee".

Debt-free money- (synon. 'sovereign money', 'plain money' [Huber], 'positive money' [UK], 'asset money', 'noninterest bearing credits')

1) free of any interest schedules or redemption clauses (Huber, 2017, 94-96), hence the more precise term: 'plain sovereign money' or 'plain money' (Huber, 143, 183).

2) is so-called because it is only *initially* created debt-free (having no claims of interest or redemption), because a sovereign government with discretionary power over the seigniorage that is inherent in money-creation has no need for a pre-arranged interest/tip schedule from the recipients. Of course such money is subsequently lent on (to borrowers/debtors), and any lent money of some time value and risk has some kind of fee or interest schedule attached. To pretend that 'debt-free money' is somehow intended as a perpetual (as opposed to merely initial) issuance is strawmanning. See also "Strawman", "Attitude inoculation", "Interest-free money".

⁷⁰⁷ Keen adds that he would prefer to see the debts simply "written off", as opposed to being (perpetually) covered up with increased government spending [on who knows what]. Rather, a "Quantitative Easing for the People" would target new government money directly to individual accounts, for the express purpose of reducing private debts (Keen, 2015). See also "Federal Accounting", "COVID Op".

3) Bankmoney proponents often like to pretend that 'all money is debt'.⁷⁰⁸ That notion is patently false, governments/public sectors have been issuing *coinage*, debt-free to the initial recipient, since the 7th century BC, in addition to (less often) debt-free national *paper* monies, such as the continentals and greenback dollars, since the 18th century. And in the digital age (of future money), its usage will increase, not decrease.

See also "Digital Cash/Currency", "Industrial Revolution, 3rd", "Economics, 'Parity'".

[Debt-Free National Money \(DFNM\)](#)⁷⁰⁹- (synon. 'sovereign money', 'plain sovereign money' [Huber], 'positive money' [UK], 'real money' [AMI], 'US [Treasury] money', 'Greenbacks', a 'single-circuit system', a 'plain money system', 'asset money'; d.b.t.- 'fiat').

1) Between 400 BC and 1700 AD, most national money was *debt-free* (synon. 'sovereign') money-- money issued debt-free by national governments or empires. At that time it consisted largely of marked coins of base or precious metal, minted by the treasury (or whomever the state-treasury delegated that task to)⁷¹⁰ and spent or **sometimes lent** into circulation, although other forms of DFNM such as *tally sticks* or paper or were also used to varying degrees (the former more before c.1800 and the latter more after that). The issuance of debt-free money has always been the exclusive prerogative [and the primary indicator] of the *sovereign* national kingdom, state, or empire. The production of *private* coins as (public) money was generally illegal, and often a capital offense. Coins were not a private, commercial invention, as is often falsely claimed. The Lincoln *greenbacks* are examples of paper debt-free national money (DFNM) in more recent times. [Sovereign digital \(account\) money has never been widely issued yet](#). If DFNM was fully implemented, **TAB** (d.b.t.: "deposit") and **RAB** monies would be absorbed and disappear into only 1 circulatory system. See also "US (Treasury) Notes", "Money, 2 classes (layers) of".

2) All people, except the friends of the extraction⁷¹¹ class who want to deregulate banker crimes, should be for **debt-free national money**, not debt money. The difference between the international money creators and an *extortion racket* is that an extortion racket has not yet succeeded in legalizing their operations or in controlling the courts and enforcement agencies and IRS collection agencies.

3) **Debt-free national money** "might...be likened to *pure water*.... [and] should be accounted for in the same way as coin is currently accounted for.... It will never be a liability. It is an [equity](#). So when the money is created, it is immediately *capitalized*, speaking in accountancy terminology" (Huber, 2013b, mn.40-41).

4) Only national/sovereign governments have the ability to issue new money, debt-free, i.e. "without having to wait for someone to go into debt" (Dyson, 2014); hence the synonym 'sovereign money'.

⁷⁰⁸ This error is due to the close link, in recent centuries, "between credit (financial contracts) and money (the means of payment)... [an] over-generalization, which is... prevalent in neoclassical and post-Keynesian thinking alike, and very pronounced in MMT. In fact, most economists today falsely identify money with credit, and thus confuse these two very different things and functions. This... over-generalization blind[s] out 2,500 years of debt-free creation and issuance of money, when...metal coins were spent rather than loaned into circulation. (Even today, in most countries treasury coins are still sold, not loaned, to the central bank). As a result of...[this false conflation] of money and credit, many post-Keynesians and most MMTers deny [even] the possibility of debt-free issuance of sovereign money" (Huber, 2019c).

⁷⁰⁹ DFNM is so named because it is initially issued or injected without interest (not 'without debt', per se).

⁷¹⁰ It is sometimes a point of confusion that the public authority to mint and the actual minting labor itself were often conducted by different parties- well into the 19th century. For example, even after "the previous 600 years...[of the French] monarchy...slowly [establishing] a [state] monopoly...[and thus wresting formal] monetary control from ecclesiastical authorities and rival princes alike.... [This should, however] not be mistaken for centralized production or [de facto] state control of the money supply...[In] France- in 1789... there were still 17 [mints- each with] its own engraver, its own mint mark, and its own director", which was, in 18thc France, typically a 'venal office' [i.e. up for sale] (Spang, 2015, 100). Realizing actual sovereignty (beyond the delegating of mints to what might be called 'government entities') typically took states [except perhaps England] a long time.

⁷¹¹ "There is a lot of evidence that, as the financial sector has gotten bigger, its contributions to productivity growth [and] the allocation of resources across economies and across time has [deteriorated](#); and I think it has had very perverse effects-- in addition-- on the distribution of income. So it's not clear what we are buying for all this [financial] instability.... This system is *an unspeakable mess*" (Wolf, 2016, mn.1:09); because it is predicated upon the use of inherently extractive bank credits (TAB) as 'money', an exigency that developed over the centuries of endemic European warring and scrambling to attain (i.e. quickly develop) as much of the "New World" as possible. See also "King James' Bible (K.J.B.)/70 Year Plan", "'New World Order'".

See also “Sovereign money”, “Asset-money”, “National Debt Economy”, “Racket”.

Debt Jubilee- See “Jubilee”.

‘Debt money’- (official/stamped ‘2nd-tier’ money that is initially issued/created as bearing debt [and nearly always also with an interest schedule (typically to private/opaque inst.)]; a.k.a.: ‘debt-based money’, ‘bankmoney’, ‘bookmoney’, ‘checkbook money’, ‘borrowed money’, ‘credit money’, ‘credit-issued money’; facilitator: “Fractional Reserve Lending”, “Bank welfare”)

“When converted into debt, however, real wealth ‘discards its corruptible body to take on an incorruptible’ ([Frederick Soddy’s] *Money Versus Man*, page 28). In so doing, it appears ‘to afford a means of dodging Nature’ (page 24), of evading the 2nd law of thermodynamics, the law of random, ravage, rust, and rot.” - Herman Daly (Daly, 1980). See also “Usury”, “Rentier”, “Corrosion-Cancer-Debt”.

“We need to ask more fundamental questions about why [the] money [system] seems to have this built-in enslavement”⁷¹² (Boyle, 2002), and also entropy. See also “Ecological economics”.

1) simply/narrowly the creation of new (‘2nd-tier’/TAB) money from [private] bank lending; although 1b) more broadly (and particularly in the de-regulated 21st century), it is also bank “assets [2nd-tier money] packaged as collateral, [in order] to backup [3rd-tier] money market instruments” (Wortmann, 2018b, mn.14). See also “Parity”.

2) The view that ‘money is debt, and debt is money’ is basically the British perspective. “If you look at Article 1 of the constitution, it’s Congress and the Treasury that should be issuing...[currency], not private banks like the New York Fed...[or] JP Morgan Chase and Citigroup and the commercial banks. And that’s really where the fundamental problem is, because when they do it, they [by necessity] issue it as debt. Whereas a sovereign, a real sovereign-- We The People-- We...[issued] it with Continentals, and Greenbacks... real [direct] money issued with no debt attached to it” (Titus, 2020g, mn.12). See also “Currency”.

3) Economic obligations (debts) are money in the broadest sense, *if* they can be exchanged to pay other/third parties; but otherwise debts **are not money**. For the past two centuries, most national money (with the exception of coins and greenbacks) has been *debt money*⁷¹³, not **debt-free national money (DFNM)**. Such national money, in recent centuries, has been paper or **account money**, issued by private banks that are licensed by national (or state) legislation to issue (create) money, in exchange for government bonds. **People who say that such money is ‘backed by nothing’ (or ‘ex nihilo’) are wrong. It is backed by a tax stream. Tax revenue is more valuable and creditworthy than precious metal.**⁷¹⁴ National money issued by the banks is debt money, because the government first borrows it by issuing bonds; (see also *Bonds*). All national money is either **sovereign (debt-free national) money (an asset of the banks)**, or **debt money (a liability of the banks)**. There is no in-between, although bankers and their experts want people to think that there is. See also “Account money” (of which “Debt money” is just one form). There is also a brief introductory video on ‘debt-money’:

https://www.youtube.com/watch?time_continue=162&v=lrQX4CF6Bxs [PM, 2012]

4) “A privilege is literally a ‘private law’ (from the Latin *legis*, law), a monopoly right to impose a tollbooth.⁷¹⁵ The most lucrative privilege is being able to create bank credit and take deposits insured by

⁷¹² This is the big question “that simply won’t go away. How can we sustain the financial system when speculation is...more than 20 times as powerful as trade, and has more than 20 times as much financial clout-- and when the people who run the system in Tokyo, London, and New York have more to gain from instability than they do from stability? How can we possibly organize a reliable system of global investment when the financial underpinning-- the combined reserves of all the central banks in the world-- could now be overwhelmed in just a few hours of foreign exchange trading? How can we create a free society when there is now less...[currency] in the economy... than there is outstanding debt?” (Boyle, 2002). See also “Denial”, “Money, 3 (contemporary) tiers of”, “NSA”, “International Intelligence Community (I.I.C.)”.

⁷¹³ “The dollar is based on credit and every dollar in existence [except for coins] represents a dollar of debt owed by an individual, a business firm, or a government unit.”- “A Primer on Money”, 1964, US House Subcommittee on Domestic Finance, 88th United States Congress

⁷¹⁴ as the Dutch Revolt (80 Years War: 1566–1648) demonstrated as far back as the 16th and 17th centuries.

⁷¹⁵ The institution of Debt-Money provides the primary criminal opportunity for certain interest groups to siphon off citizens’ wealth, be it cautiously or aggressively. See also “State capture”.

governments, ultimately [backed by the] public right to tax” (Hudson, 2012g). See also “Bank welfare”, “Projection (defense mechanism)”.

5) “After all, when you’re busy lending money to the government, who exactly is going to punish you for bending [or even writing] the law?” (Extra Credits, 2015, mn.7). See also “State capture”.

6) Monetary reformers point out bank-created money (TAB) “as *debt-based money*, because an interest rate [schedule] has been attached to the creation of that money”;⁷¹⁶ as distinguished from government-created money being spent (or loaned interest-free) into existence, “which does not come with an interest rate attached to it” (Walsh, 2019).

7) A debt-money system is one “where new money is [both] created *and* distributed...only” by loans. “Private debt-money is only created by commercial bank loans [issuing TAB credits] under the regulation of the Federal Reserve [system]. Government debt-money [RAB] is only created directly by... Open Market Operations, at the Fed’s bank in New York” (Pash, 2017, 23-24).

8) “As we have seen, the banks have often expanded the volume of the means of payment [TAB] when it should have been contracted, and contracted it when it should have been expanded. For this, bankers are not to be blamed; the fault lies with the system, which ties the creation of our means of payment [TAB] to the creation of the debts to, and by, the banks” (Fisher, et al., 1939, 28). See also “Debt saturation”.

9) Does this sound inherently inflationary? It is: “If two parties instead of being a bank and an individual, were an individual and an individual, [then] they could not inflate the circulating medium by loan transaction[s]; for the simple reason that “he lender could not lend what he didn't have, as banks can... Only commercial banks and trust companies can lend money that they manufacture [i.e. TAB/bankmoney] by [so-called] lending it” (Fisher, 1935, ch.3); hence it is also a primary driver of (see also) “Big Government”, “Bank welfare”.

10) “Paper money was [if privately-issued] debt money, and debt money was war money, and this has always remained the case... The national debts of England, France, and others were based in money borrowed not to dig canals and erect bridges, but to acquire the gunpowder needed to bombard cities and to construct the camps required for the holding of prisoners⁷¹⁷ and the training of recruits” (Graeber, 2012).

11) "When our Federal Government, that has the exclusive power to create money, creates that money and then goes into the open market and borrows it and pays interest for the use of its own money, it occurs to me that that is going too far. I have never yet had anyone who could, through the use of logic and reason, justify the Federal Government borrowing the use of its own money... I am saying to you in all sincerity and with all the earnestness that I possess, it is absolutely wrong for the Government to issue interest-bearing obligations. It is not only wrong; it is extravagant. It is not only extravagant, it is wasteful. It is absolutely unnecessary..."- Congressman Wright Patman of Texas, *Congressional Record*:

⁷¹⁶ The term ‘*interest-based money*’ would perhaps be more accurate, but ‘*debt-money*’ is only 3 syllables, compared to ‘interest-based money’s 7 syllables.

⁷¹⁷ As of 2016, the US holds approx. 1/4th of all the prisoners on Earth, incarcerating “at 8 times the average rate of other first-world countries...” with 96% of inmates not receiving a trial; “[w]e are spending billions of dollars more than we need to... [looking] like a fool in the international space”- Carlson Business School lecturer Sarah Westall (McKinney, 2017, mn.38-39).

Proceedings and Debates of the 77th Congress, 1941, p. 7583. See also “Patman, Wright”, “Central Banking-Warfare model”.

12) The main structural flaws of “debt-money” systems are: “monetary instability, inflation (particularly asset inflation), distortion of...income distribution, boom & bust cycles...and last but not least banking crises” (Huber, 2013b, mn.14-15).

13) “...income re-distribution is forcefully done from non-financiers to financiers. This is the main cause of income inequality under the current debt money system”⁷¹⁸ (Yamaguchi & Yamaguchi, 2017, 14).

14) “It’s no accident that states are bankrupt... [and] that politicians... must do this [austerity]. Our [monetary] system is based on ever-increasing debt...” (Vrabel, 2011, mn.32). In other words, “[m]oney is available to the extent that society can bear and service debts” (Wortmann, 2019b, 3). See also “Debt saturation”, “National debt economy”.

15) “Without a global alternative to letting debt dynamics polarize societies... *monetary imperialism* by creditor nations is inevitable” (Hudson, 2017r). See also “Russiagate”.

16) “Numbers, paper and coins do not have to be created as debt. But because they cost almost nothing to make, they are an ideal vehicle for fraud: they can be created, destroyed, and created again at little expense. The fraudulent aspects of today’s money are add-ons to its basic quality as [stamped] money. 1st, [TAB] bank-money is rented out to us at interest; 2nd, it is created (and destroyed) for the profit and benefit of those in power; 3rd, it is created and destroyed without public scrutiny, oversight, or debate: in other words, without any [known] reference to the public interest” (Mosley, 2017c). See also “Fractional Reserve Lending (FRL)”.

[musical chairs/debt cycles]

17) This is something that has been known to the higher-ups for some time. “In the abstract, it is absurd and monstrous for society to pay the commercial banking system ‘interest’ for multiplying several fold the quantity of medium of exchange [currency] when (a) a public agency could do it at negligible cost, (b) there is no sense in having it done at all, since the effect is simply to raise the price level [inflation, and/or asset inflation], and (c) important evils result, notably the frightful instability of the whole economic system and its periodical collapse in crises, which are in large measure bound up with the variability and uncertainty of the credit structure if not directly the effect of it” (Knight, 1927, 732). Why has such ‘absurdity’ (and sometimes monstrous absurdity) been tolerated for more than 80 years now? See “Debt cycles”. See also “Bankmoney”, “Taxation of income”, “Debt-Free National Money (DFNM)”.

18) Debt-money does have an impressive track record for both the development and dissemination of technology & technological products-- and technology is an essential element in both successful warfare and in peacetime productivity. But there is always an irony. Debt-money’s driving of rapid technological development also drives its own demise, as jobs and labor costs are eventually hunted out of existence by a mad ‘race to the bottom’ in cutting costs (Smith, 2019c). See also “Adolescence of Mankind”,

⁷¹⁸ A *debt-money system* is one in which all or nearly all [national or state-stamped] money is born into existence as an interest-bearing debt. See also “Reform, false”.

“National Debt Economy”, “Race-to-the-bottom”, “Industrial Revolution, 3rd”.

[Debt pyramid: after 3 centuries of debt-money (bankmoney) systems (the 18th, 19th, and 20th), it is no longer difficult to see that ‘financial corporates’ run the ‘governments’, and that these Big Governments mostly look after the downstream ‘non-financial corporates’, for whom most of the consumer ‘households’ work.]
 How steep does the pyramid have to get?...

[...the crunch] See also “Usury”, “Reserve currency”, “Debt cycles”.

Debt peonage- what leads to Feudalism. “Instead of landlords, you have credit lords. Instead of

...being tied to the land... [you] have to take on a lifetime of debt” (Hudson, 2016k).

See also “Feudalism”, “Economics”, “Debt, private”, “Student loans”, “Boards/Board Systems”.

Debt, private- (sometimes a.k.a. ‘the business cycle’) 1) Typically the biggest problem in debt-money societies (nonetheless unaccounted for in today’s economic models, or statistics), private debt consists of: a) consumer [household/personal] debt; b) commercial [business/corporate] debt; and c) financial sector [financial] debt⁷¹⁹ (basically anything but government debt). See also “Road to Serfdom”.

2) Across 17 “advanced economies”, the “great leveraging of the second half of the 20th century took place primarily in the *household* and not the corporate sector” (Jordà, Schularick, & Taylor, 2016b, 48). US households, c.2018, have \$15.5 trillion in debt (Stockman, 2019, mn.30).

⁷¹⁹ Apparently Prof. Keen has given up on this 3rd category of private debt (as have researchers at the B.I.S.), “just because the data is really bad” (Keen, 2016y, mn.27).

3) *Corporate* debt levels began to catch up with consumer/household debt levels, however, as interest rates sunk below 6% in the first 1.5 decades of the 21st century. Basically Wall Street learned that they could always refinance at a lower rate. “Business in America has \$15 trillion in debt today...[both] corporations and unincorporated mom & pop businesses... but... in the year 2000 they only had \$6 trillion.... a \$9 trillion increase, just in this century to date... [and] the overwhelming share of it [was used] to buy-back stock, or to pay special dividends, or to do leveraged re-caps, or to engage in massive M & A deals that were funded with debt. And [all] that probably didn’t add to productivity or [even] efficiency... But since you could borrow the money so cheap.... the carrying costs... were extremely low... Now...all that is going to reverse” (Stockman, 2019, mn.28-29). See also “Debt cycles”.

3b) There’s “about \$58 trillion in debt in the US economy right now, and well over 30 trillion of that is private debt... [which is now] pretty evenly divided between *household* and *corporate* debt...(at approx. \$15tn. each)”, and \$10tn. of the household debt is simply “mortgage debt” (Vague, 2020d, mn.4).

4) The “average private debt level is now of the order of 150% of GDP⁷²⁰, whereas it was around 60% of GDP in the ‘*Golden Age of Capitalism*’ during the 1950s and 1960s....”⁷²¹ (Keen, 2016); and “we show absolutely no signs of doing anything about” private debt (Keen, 2015e)... Even though “If we don’t reduce the level of private debt, we won’t get out of the crisis” (Keen, 2016m, mn.35).

4b) “Even before ‘COVID-19’...[the US economy was] kind of towards the north end of what was a sustainable level of private debt.... In 2000...[it] was about 125% of GDP... [Two decades later], as of Dec. 31st...[it] was 150% of GDP...[But] in 1950...[it] was 50% of GDP” (Vague, 2020b, mn.51-52). See also “Compound interest”, “Usury”.

4c) Globally, private debt-to-GDP “has gone from 129% to 151% just since 2001” (Vague, 2020, mn.4).

5) The Bank of England admitted in June “...that the biggest risk of financial instability is high private debt” (Boait, 2017, mn.6). See also “Financial sector debt”, “Debt saturation”, “Zombie”.

[Keen, 2016; Japan leads the way]

Debt, public- (d.b.t.- “sovereign debt”- an oxymoron if the ‘national’ debt is in one’s own currency; [f.e. see “National debt (US)”]).

1) “The current component of the money supply...spent by government that’s held by somebody in the economy in...accounts at the Federal Reserve called securities accounts that any other bank would call

⁷²⁰ Circa 1945-2008, US private debt-to-GDP went from about 1/3rd, to 170%, with debt growth outstripping GDP “virtually every year.... Now of course you can’t keep on going to... 6000% of GDP. **The deadly line** is...something between 1.5 and 2 times GDP... When you get to that point, so many ventures fail to get the...revenue they need... So many people can’t carry their private debt and so on, that the economy falls over [debt saturation] and we start to have very small demands coming from credit... and that’s happened globally... Effectively we’ve become constipated on too much debt, and the only solution is to reduce the private debt level” (Keen, 2015e).

⁷²¹ Why was the 1950’s-60’s The Golden Age? Because once private debt levels “get past about 80% of GDP... then you start to get credit dynamics dominating the economy...[And if that, in turn] creates asset-price inflation...[then there will be] financial crises” (Keen, 2018h, mn.28).

'savings account'. Instead they call it 'government bonds'. So you have got this illusion that there's some kind of debt going on up there that's some kind of a problem. How are [these] Treasury securities paid off? They just shift the dollars from Securities [savings] accounts at the Fed to Reserve [checking] accounts.... There are no grandchildren or tax-payers in...[chains]. It has nothing to do with that.... If you have a *savings* [or CD] account that comes due at your bank, what do they do? They put it in your *checking* account. That's the same as the Federal Reserve does. It's a bank.... Don't you think if there was a problem, it would've happened before 20 trillion? [dollars, roughly approx. to 100% of US GDP].... They all know it's just a Reserve Trade operation. They know it's not a funding operation. It's called the 'Reserve Trade' inside the Fed" (Mosler, 2017, mn.-8-7). See also "Debt, private".

2) The "...idea that the government should not create money is [like saying that] 'governments shouldn't act as governments'...[that] the government should be Wall St." (Hudson, 2017e, mn.4). "The reason why all of these European countries, all of the United States and North American countries ran budget deficits for so many years was because they want to keep this infrastructure in the public domain. They don't want it to be privatized..." (2017d, mn.5), as happened in Russia in the 1990's, when vital statistics went into reverse. See also "Japan model (asphyxiation), the", "Reinhart-Rogoff thesis", "Big government".

Debt restructuring- (a.k.a. 'debt forgiveness') 1) "is a modification of the terms of a loan that deals realistically with a borrower's ability to pay in times of distress. Typically, the lender a) reduces the principal balance or b) the interest rate, or c) extends the term of the loan." (Vague, 2020c). See also "Jubilee", "Vague, Richard".

2) "The widespread existence of... debt forgiveness in antiquity profoundly attests to the **universality and persistence** of this debt accumulation issue. Whether called 'restructuring', 'forgiveness', or 'jubilee', it is the only feasible [non-violent] way to reduce private sector debt when it accumulates to crushing levels in societies, and the only way to do so without [significant warfare and/or other means of] severely damaging the economy" (Vague, 2020c); in order to re-boot it. See also "Violence", "Currency Wars, the".

[Government/public debt is not the albatross that Household/consumer & Business debt are (Vague, 2020c)]

3) "Debt forgiveness [a.k.a. write-offs or write-downs] translates directly into economic renewal and resurgence" (Vague, 2020c). Do 'we', as a society, really want that?

See also "Robotization (and productivity)", "Transhumanism".

Debt saturation- (synon. 'debt sclerosis', 'debt overload'; precedes 'debt-deflation' [Hudson], 'debt trap' [White]; d.b.t. 'liquidity trap')

"The US economy cannot recover its industrial power [w/o structural reform]. Its debt is too high, its cost of medical care, 18% of GDP is too high, it's the rent is so high, 48% of income.... Every business recovery since 1945 has started from a higher & higher & higher level of debt, and now it's reached the limit."

- Michael Hudson (Hudson, 2022). See also "F.I.R.E. Sector", "Rentier"; "Parity pricing (for the primary sector)".

1) "With private money creation, you have the growth of [private] debt, that means at some point people don't want to take on any more debt, and then it terminates, which is where we are now" (Keen, 2016d, mn.21). In other words, "[o]bviously the banks are private institutions that try to maximise their...profits. Their goal is to grant the largest amount of [TAB] credit possible, creating money and debt" (Arenillas, 2018), until such practices become like 'pushing a string'.

1b) As of 2020, aggregate "global debt... is \$277 trillion...[approx.] 365% of global GDP" (Escobar, 2020, mn.59).

Debt Obligations,

[Usury at the end of the day is ultimately about foreclosure... or (meaningful) Reform.]

2) Once "you've reached the [d.b.t.] liquidity trap [first theorized in the 1930's], the world changes" (McCulley, 2012). See also "Debt cycles", "World Par Economy".

2b) This is not some deductive 'theory' (financed by pre-computer age oligarchs). The "defining characteristic of financial crises is [simply] the creation of over-capacity in the economy. We looked at 43 different crises, over 200 years, in the 6 largest countries... where you had a consensus major [economic] catastrophe-- like the Great Depression, or Japan's 90's crisis, or Germany in 1873, or Britain in 1866... [And they all] came from [making] way too much of something...[be it] railroads... [or] housing...[or drilling rigs, etc.] And the only way to create this massive over-capacity is through debt. There's no other way to create [such] over-capacity.... And... a couple of things [then] have to happen... Economic activity has to shrink [from the over-built key resource], while the demand catches up to the over-supply. You have to lay-off...[some well-trained] workers.... [And] those institutions that...[extended credit] to that [over-extended] sector [also] have to fix their problem" (Vague, 2020d, mn.6-7). See also "Debt, private", "Bank welfare".

3) "They'll saturate one [geo or demographic] market and then saturate another. And we're now getting to the point where they've saturated the *final* market which they can hit, which is...university students.... I don't think you're going to get kids with diapers to start taking out credit cards"⁷²² (Keen, 2016j, mn.0).

Europe & America "hit the brick wall of credit in 2008. They [consumers] can't continue borrowing. They don't want to take on the debt" (Keen, 2016n, mn.19).

4) "The debt burden is so great that it stops people investing, it stops them [from] borrowing for consumption, you get very low-to-negative credit [i.e. new money] demand, and you remain in a long-term slump. And that's the situation Japan has been in now for 25 years" (Keen, 2016w, mn.7). The "Walking Dead of Debt" [nations] are carrying so much...private debt that they are not... growing" (Keen, 2017e, mn.37). See also "Zombie".

5) This is not some 'conspiracy theory'. Since nearly all money creation today is "based on the issuance of [TAB-bank] money by private banks, it is necessary to increase *debt* every time you want to increase the amount of money" in society.- former Gov. of the Spanish CB (Ordenez, 2018). See also "Bank welfare".

⁷²² "There isn't much left for the [debt-money] vortex to suck in, to keep fueling the storm's growth" (Vrabel, 2011, mn.123).

6) Debt “levels have been reached in developed countries, at which further [new] money creation based on [still more] debt does not support the development of prosperity, but actually hampers it.... Flexibility of the money supply is no longer a reason to favour [increasingly large state support for] banks. It is precisely a reason not to do that anymore” (Wortmann, 2019b, 3). See also “Bank welfare”.

7) Once “the economy is loaned up, prospects for further capital gains [in real estate] are gone. So the prices are not rising much anymore. There is no reason to be borrowing. So the [TAB-bankmoney] system...[will be] imploding” (Hudson, 2017o). When commercial banks are no longer capable of providing enough new debt-money credits [TAB] to expand GDP growth, typically the government has filled the void with increased fiscal (spending) activities **in the TAB circuit**.

7b) In other words, after debt-saturation, comes the shift to (see also) “Equity”, “Owners, the”, “BlackRock”; the process was already starting in the 1970’s (Quigley, 1976b, mn.28-30).

8) The **current crisis’** strategy of Quantitative Easing, however, consists of unprecedented bank welfare payments to the Reserve/**RAB** circuit. See also “Debt-Deflation”, “Japan model”, “Zombie”.

[one consequence of issuing most of a society’s new money as debt, especially as private debt]

9) Debt saturation Updates: 12/20- In 2019, the US had “the highest level of *corporate debt* in the history of American capitalism” (Keen, 2020d, mn.24).

Debt securities- (a.k.a. ‘fixed-income securities’; ‘tradable securities’, i.e. either government or corporate IOUs, which include not only the many types of bonds, but also *any market instrument that pays interest and can be resold*, such as Treasury bills, commercial paper, negotiable CDs, collateralized debt obligations [CDOs], collateralized mortgage obligations [CMOs], and mortgage-backed securities [MBSs] markets) [**consid. overlap with “SBS” (21stc term)**] See also “Investment banks”.

1) loans between investors who are acting as (non-bank) lenders, and corporations or institutions that are acting as borrowers. The investors *don’t have the power to create money*, and must use money that they already have. See also “Loanable funds model”, “Nonbank financial institutions (NBFIs)”.

2) Debt security markets are generally twice the size of equity security markets, globally; and the vast majority of 21st century ‘*money market instruments*’ were (what used to be more often) called ‘*debt securities*’ in the 20th century. ‘Debt securities’ still comprise most of the ‘*money market instruments*’ toolbox today. See also “Money market instruments & Money market funds”.

3) The US debt securities market **largely**⁷²³ grew up with the demise of the gold standard in the 1930’s and that of Bretton Woods in the 1970’s; and the rest of the world-- even the UK-- didn’t start joining the game until the 1990’s (see “Debt cycles”). “Among the G7 countries, France, the United Kingdom, and Germany have historically not issued large volumes of short-term debt securities for deficit financing, although short-term instruments have sometimes been used for monetary policy... The most extreme instance of...[the former practice] is Germany, where, until recently a policy of [simply] not issuing liquid short-term securities...has been the norm, in part reflecting the concern that a developed [near] money market would affect the [government’s] ability to implement [any autonomous] monetary policy...”

[Markets] for short-term private debt securities in most countries outside North America have also been small until recently” (Schinasi & Smith, 1998). See also “Shadow banking (SBS)”.

4) For example, before 1997 at least, “in many countries other than the United States, repo and securities lending markets were long inhibited by regulatory policy (e.g. reserve requirements in Germany), taxation (e.g. the transactions tax in Japan), or legal uncertainty (e.g. in France)... [In 1998] the US corporate

⁷²³ From Sumerian times, “major debts were recorded on cuneiform tablets kept as [debt] *sureties* by both parties to the transaction” (Graeber, 2009); but there is no evidence that there were established markets for actually trading (circulating) these sureties. See also “Credit money”.

debt securities market is on the order of 50% larger than the combined markets in Japan and the major European countries.... Although... Japan and Germany...[also have] substantial.... magnitudes of corporate debt securities outstanding.... [the] debt securities markets in most of the advanced economies other than the United States⁷²⁴ have not been a viable source of funds for the vast majority of (even the largest) firms” (Schinasi & Smith, 1998).

See also “Tally Sticks”, “Bond Markets”, “Bonds”, “China’s US Treasury Bonds (c.2004-15)”; Bank of International Settlements, 2018.

Debt, types of- 1. Government [*public*; \$22 tn.(2019)], 2. Personal [*consumer/household*; \$14 tn. (2019)], 3. Corporate [*business*], and 4. Financial Sector [*finance*] debts (Keen, 2011b). Business/corporate debt runups typically precede government (clean up) debt. Consumer debt is the main factor in GDP (“economic”) growth (Keen, 2013), and Financial sector debt the main factor in ‘white collar’ criminality and general chicanery in society. See also “Debt, private”, “White-collar crime”.

Decentralization- (a.k.a. ‘federalism’, ‘constitutionalism’) 1) Does America have a ‘decentralized’ monetary system [like it was still the 1850’s, or even 1950’s] in reality, or only in illusion? Five big banks today both create *and* allocate more than “40% of the [TAB] money. In doing so they control about 50% of the economy.⁷²⁵ Is that decentralized?” (Howell, 2019).

See also “Big 5 (High St.) Banks”, “Homogenization”.

2) “There cannot be any more decentralized way of distributing money that a *citizens’ dividend*... [and] sending it [new money creation] to states on a *per capita* basis... [And spending it] on the country’s physical and social *infrastructure*...[unless fraudulent] benefit[s] everyone” (Howell, 2019).

3) It “is monetary reformers who are promoting decentralization, by removing power from the global financial system and asking governments to take up their sovereign responsibility and governmental prerogative to issue the money, freeing them from being vassals to the capital holders... [k]ind of a first step in decentralizing the system. A public money system will have a *centrifugal* force, distributing wealth broadly, to reverse the damage done by the violent *centripetal* forces that currently dominate” (Switzer, 2019). See also “Currency Wars, the”.

4) We (The People/citizenry) cannot make J.P. Morgan or the FRBNY do anything (except think of ever-more intricate shell games in which to divert, discourage, and delude us from what is really going on). We can, however, influence-- and even control [at least in theory]-- our governments and public sector to do the right things. We can also, course, just do our own thing. Localization “is a key part of restoring dignity, creativity, and [perhaps even] democracy as fundamentals in or society” (Glover, 2019, mn.4).

See also “Separation of Powers”, “United States, the”, “Deceptive Banking Terms (d.b.t.’s)”.

Deceptive Banking Terms (d.b.t.’s)- (a.k.a. “the thorny problem” [Friedman, 1985]) Banking and money creation is the most deceptive study in the world⁷²⁶, as the motivating modus operundi is basically that of ‘state capture’. Pretty much **all banking terms**, with a few straight-forward exceptions, **are laced with**

⁷²⁴ From 1980-1994, pioneering debt securities accounted for 1/3rd of the “non-equity liabilities of US *non-financial* firms, whereas the corresponding number for Japanese non-financial[s]...averaged only 3%...and in Europe...[the] percentage ranges from 0.2% in Germany to about 10% in France.... Domestic debt securities issued by US non-financial enterprises have been of the same order of magnitude as financial firms” in the 1990’s (Schinasi & Smith, 1998). So the United States has gone from enabling private banks to issue money in the early 19th century, to enabling even non-financial corporations (if large enough to meet the million dollar minimums) to issue shadow banking/near monies in the late 20th century, which are now of substantially greater volume than the actual US [TAB-bankmoney] dollars. See also “Shadow banking”.

⁷²⁵ Virtually every *Fortune 500* corporation has a Big 5 bank among its top 10 shareholders/owners (Henderson, 2011).

⁷²⁶ “To conceal meaning in...arcane speech comprehensible only to the initiated is surely the very essence of ‘negotiating power relations’”- Roger Collins, “Making Sense of the Early Middle Ages” (Collins, 2009). ‘Babylonian’ today is a one-word synonym for such (politically rooted) arcane speech. “Fashionable expert opinions obliged to [19th century] Banking School teaching have [increasingly] created a Babylonian confusion of language regarding the notions of money, credit, bank and related further categories. *Allegedly* it cannot even be pinned down clearly what *money* is and what it is not-- which is astounding [and preposterous] in a science that claims to be bound to non-interpretive exactness” (Huber, 2017h). See also “ConfUSURY”, App.C: “1-2-3”.

some deception or misleading connotation. Why?⁷²⁷ This is just our attempt at explaining, with as little jargon as possible, the approx. top 20.⁷²⁸

1) The most deceptive banking term is 'deposit'.⁷²⁹ Banks are not 'deposit taking institutions' and do not lend money. I law is clear cut, there is no such thing as deposit. The money you 'deposited' is owned by the bank. You are a creditor. It is just a loan, from the customer to the bank... Or "just a record of the bank's debt to us" (Werner, 2018, mn.24). "It's not a bailment. It's not held in custody. In law, the word '*deposit*' is [thus] meaningless."⁷³⁰ The law courts and various judgements have made very clear-- if you give your money to a bank, even though it's called a 'deposit', this money is simply a *loan* to the bank.... If they say they'll 'transfer'...[this 'deposit'] to your account, that's wrong, because no money is transferred at all... What we call a 'deposit' is simply a bank's record of its debt [liability] to the public.... Its record of the money [that] it owes you is what you think you're getting as [bailment/secure] money. That's all it is. And that is how banks create the money supply" (Werner, 2017, mn.6-7), which they have gotten away with because they also do most of the accounting and run the payment systems. (Thus, hardly anyone has noticed the distinction; that is until the internet and this century.) See also "Big...", "Depository institutions".

1b) For example, *sight deposits* (bankmoney current/checking accounts) is a doubly d.b.t. in that nobody has ever seen (what are supposed to be) their dollars, physical or on account, in a (so-called) 'deposit' account at a *state-monetized credit institution*. What you are looking at on your statement from a bank or other *state-monetized credit institution* today is, legally, only a statement of what you have loaned to them⁷³¹. Still more deceptive is the synonymous term *overnight deposits*, that-- in addition to being neither overnight nor (legally) a deposit-- also conflates the 'overnight' term, which is used primarily for Reserve (RAB) money backing, with TAB-bankmoney. To anyone who has studied the matter, banks and their (academic pinhead) economists belaboring to obscure the cardinal distinction between these two distinct monetary classes is their #1 and primary trick. See also "*Money, 2 classes (layers) of*".

2) 'Loans'/'lending'- "Banks don't lend money...again in the law it's very clear. They are in the business of purchasing securities. That's it [except for the state monetary stamp]... [In any] 'loan' contract... in law, it's very clear, you have issued a security, namely a *promissory note*, and the bank is going to purchase that" promise from you (Werner, 2017, mn.6).⁷³²

2b) Another term that assumes the 'lending' (or 'intermediation') falsehood is 'disintermediation'-- the d.b.t. for the process of moving funds from bankmoney (which is created, not intermediated) to near monies. See also "Exogenous vs. Endogenous' (money creation)".

3) The next most deceptive term is 'savings'. Nothing is (legally) 'saved' in a bank savings account. Bankers often say "safe as money in the bank", but a savings account is not only empty, there is *less* than nothing in it, but just debt or a bank IOU. A 'savings' (*non-transaction*) account is a loan from the account holder to the bank. Furthermore, 'savings' are not even "money" by definition, because they are not accessible to make any payments with, until they are converted to bank debt-money (*transaction accounts*). And no interbank money is actually 'reserved' to back up withdrawals against savings in case of runs or bank failures. All the stories in text books and videos about 'checking' (*Transaction Account*

⁷²⁷ In order for "bankers to control the supply of money... it was necessary to conceal, or even to mislead, both [1st Estate] governments and [2nd Estate] people about [both] the nature of money and [also] its methods of operation" (Quigley, 1966, 53). See also "Economics" (divorce from 'Political Economy'); Still, 2013.

⁷²⁸ The goal is possible, even after 2-3 centuries of strategic (intentional or otherwise) misdirection. "I have long felt that there's no economic proposition that can't be stated in clear, accessible language."- John Kenneth Galbraith, interview on CSPAN, 1994.

⁷²⁹ Milton Friedman agreed (1965, 4) that there "are few words in the English language which are greater misnomers than the term 'deposits' for those liabilities that are on the bank's books." See also "Orwell, George (1903-1950)".

⁷³⁰ In "the law, and we have Supreme Court judgements on this, there is no such thing as a 'bank deposit'" (Werner, 2018b, mn.19).

⁷³¹ Statement balances "ought no longer to be called a 'deposit'. Actually... [they are] a loan to the bank" (Fisher, et al., 1939, 30).

⁷³² Even in early 14th century Florence, preachers "complained that money lending was concealed by words like *deposit*, *saving*, *purchase*, and *sale*" (Soll, 2014, 21).

Balance/TAB) accounts starting when someone deposits cash are culpably deceptive.⁷³³ Banking has to be deceptive, because if people understood how wicked it is, they would replace it with sovereign (public) money, and bankers would lose their monopoly. Just think-- money is a public utility and bankers want to charge for its use by the public. Hence the deception and twisted jargon. See also “Federal Deposit Insurance Corp. (FDIC)”.

4) With the multifaceted term credit, banks have managed to pull off a truly amazing word trick, associating the word favorably with both what the bank *owes the customer* (the customer’s asset statement from the bank), and with what the customer *owes the bank* (the customer’s liability/debt to the bank). This intentional confusion is essential to ‘fractional reserve’ banking. How do they do this? They show your checking account credit (their *accounts payable*) from their books, but they also show the credit card balance (their *accounts receivable*) from a pretend customer perspective. Both are good. The banks and economists, et al have taught people to think of ‘credit’ as somehow being *both* their asset (which is patently false to the rules of accounting) and also their liability (i.e. ‘on credit’-- the ability to purchase stuff now without money) with a warm glow of gratitude (for the mysteries of the temple). The fact that assets and liabilities are exact opposites, but are both called ‘credit’ helps keep people confused and (unquestioningly) hooked on the debt-money system that is designed to extract wealth from them for the (hidden) financial kleptocracy. Furthermore, in addition to convincing people that ‘credit’ means both: a) a money asset and b) a money debt, ‘credit’ also means c) the right to borrow money-- as in a *credit limit*, and even d) *all public account money* today (TAB and savings)-- i.e. all “money in the bank”-- even if that money has been earned, not borrowed (into existence), by the owner (thus also advancing the cardinal objective of erasing the difference between *earned* and *unearned* income; see also “Unearned income”). And if that wasn’t enough, ‘credit’ may also refer to e) central bank Reserves, since (RAB) also comes into existence through loans. Thus economists and would-be reformers frequently speak of ‘credit’, ‘credit money’ and ‘debt-money’, using all three with the same general meaning-- referring simply to all national account money (without even going near the salient issue of how such monies are created). Is it simple irony, or conspiratorial genius, that both bankers and bankers’ critics work together to promote such confusion-conflation between ‘credit’, ‘debt’, ‘money’, ‘credit money’, and ‘debt money’? See also “Credit money”, “Creney”.

5) Shadow banking (sector)- this gargantuan 21st century catch-all term includes both *non-banks* and *banks*. All sorts of financial “conduits, securitization vehicles, hedge funds, [and] private equity investors” are commonly referred to as “shadow banks.... Although these often belong to a banking corporation, they are...[confusingly, separate] operating nonbank entities. [Moreover, calling] non-monetary financial institutions shadow ‘banks’ is [further] misleading with regard to what a bank actually is: a monetary institution that creates & deletes bankmoney.... Shadow banks, contrary to what is often suggested, do not create bankmoney, but...[instead] *accelerate the circulation* of bankmoney and banks’ refinancing” (Huber, 2017, 58). See also “Shadow banking sector (SBS)”.

6) Cash- Bankers often say that *‘base money’* (interbank/RAB + physical cash) is *‘real money’*, and

(in their sloppy slang) often refer to both constructs as [what most people call physical] *‘cash’*,  which is actually in the process of being eliminated. See also “Cashless Society (War on Cash)”.

6b) Cash equivalents- a) is a fairly common d.b.t. for *‘near monies’* (‘equal’ isn’t ‘near’). Cash (phys. notes and coins) is, of course, legal tender, whereas ‘near monies’ are excluded from the Payment System; b) moreover, this d.b.t. means rather different things to different people. See also “Cash equivalents”.

7) Open Market Operations- is the d.b.t. for “purchases on the *private* [closed] bond market. [So-called ‘O.M.O.’s] are conducted by the [so-called] Federal Open Market Committee (FOMC), which meets

⁷³³ “The legal facts are very clear, but not very well known. Banks do not ‘take deposits’, and banks do not ‘lend money’.... How is that possible?...Legally... they *borrow* from the public, because your money at the bank is not on deposit. It’s not held in custody. It’s not a bailment. What is it legally? You have lent money to the bank. So the expressions in banking are designed to mislead what’s really happening.... You are just a general creditor.... [and] No bank has ever lent any money.... Banks purchase securities.... loan contracts [based on] your signature. That’s what creates the money supply.... promissory note[s]” (Werner, 2015b, mn.51-52). “A bank account.... is a record of a bank’s debt to the public” (Werner, mn.53). See also Bank of England, 2014.

behind closed doors and is dominated by private banker interests. The FOMC has no obligation to buy the government's debt and generally does so only when it serves the purposes of the Fed and...[its constituent] banks...Wright Patman, Chairman of the House Committee on Banking and Currency from 1963 to 1975, called the official sanctioning of the [so-called] Federal Open Market Committee in the banking laws of 1933 and 1935 [nothing less than] '*the power revolution*'-- the transfer of the 'money power' [from the US Treasury] to the banks [that henceforth ran the so-called 'Fed']. Patman said, 'The "open market" is in reality a tightly *closed* market'. Only a selected few bond dealers were entitled to bid on the bonds [that] the Treasury made available for auction" (Brown, 2019).

8) 'Printing money'- It's not the 19th century anymore. For over a century now; when "the federal government needs an extra billion dollars, they do not have the Secretary of the Treasury call up the Bureau of Printing & Engraving and say: 'Please print up another billion dollars cash'. There is an extra step or two in there that nobody wants to talk about. [In reality] First the Secretary of Treasury calls up one of the richest guys on Wall St.-- a bond broker, a primary dealer-- and says: 'I'm having another billion dollars in bonds printed up. Please sell them as soon as possible'. Then the bond broker auctions off a billion dollars worth of US bonds, bills, and short-term notes. He keeps a small percentage for himself-- which, since it's such a large amount of money in the first place-- is quite a sizable chunk of change, and then sells these Treasury securities into the market. Your grandmother buys some US 30-year bonds. Banks and [other] nations buy the rest. And that [public] indebtedness becomes what we call the national debt. It doesn't have to be this way" (Still, 2019e, mn.4-6). Are Economists (that want to be published) being intimidated by some rather narrow group-think? (Ibid, mn.8; Still, 2013 [from mn.4]). See also "Open Market Operations (OMO)", "Quantitative Easing", "National Debt Economy (NDE)".

9) 'Financial markets'- Some say that they are now only about *short-term* ('near money') 'money markets' and OTC derivatives. Some say that they include (the long-term) securities and equities markets (a.k.a. 'capital markets').

10) 'Fiat'- a still prevalent **d.b.t.** for private interests attempting to personify (and poison the well) of publicly accountable institutions, projecting onto the empty-- but open-- shells of the public sector their own monetary track record of 'arbitrariness', extreme volatility, and rather poor management of inflation.

See also "Fiduciary" (the 20thc has been a transition from 'fiduciary money' [19thc], to 'fiduciary accounts' [21stc]).

11) 'Monetary Financing'- This new kid (c.2020) on the block begs some (false/misleading) questions. The primary deception is its implicit assumption that "financing" **always** involves debt & interest schedules. It also (often) conflates 2 different practices. Whereas "*direct* monetary financing" is in fact a step *away* from the key 'bankmoney' institutions [see also "Primary dealers", "Open Market Operations"], "*indirect* monetary finance" means going through these middleman institutions (to give them their cut or clip), sometimes a.k.a. the "2ndary markets" (for money creation). . See also "Monetary financing", "Open Market Operations (OMO)".

12) 'Discount window' (US only)- is the **d.b.t.** for banks borrowing **RAB** from *the Fed*, which is actually not a discount, but more *expensive* than borrowing from fellow banks at the 'Federal funds rate'.

13) 'Federal Reserve'- is the **d.b.t.** for the United States' central bank. Although not fully realized until the mid-1930's, the 'Fed' was so-named as a deliberate smokescreen (towards the tail end of the long 'Fin de Siecle' era that 'capitalized' the 2nd Industrial Revolution) in order to fool president Wilson and a Democratic congress (via certain provisions for a superficial Washington 'Board of Governors') into supporting what was and is a *de jure* consortium of privately-owned banks, that was and is *de facto* managed by the largest of the New York Fed-member big banks. See also "Public-Private Partnership (PPP)".

[Shell games: ancient, medieval, and early modern (is the pea “public” or “private”?)]

- 14) **Federal funds rate** (US only)- is the **d.b.t.** for the interest rate at which banks borrow **RAB** from *each other*, not from the Federal Reserve or US Treasury.
- 15) **Book-entry money**- Particularly Mephistophelean, even serious and consistent researchers, like the Bundesbank or Ons Geld, still interchangeably conflate ‘book money’ & ‘book-entry money’ (and then also conflate each of these terms, in turn, with both *account money* and its narrower subset **TAB-bankmoney**), leaving a 2 x 2 factorial design funhouse for anyone trying to understand all four terms.
- 16) **Fractional Reserve Banking**- Technically, there is no such thing as ‘fractional reserve banking/lending’ (a traditionally more prevalent synonym for the terms ‘debt money’ or ‘bankmoney’). Banks do not lend (any fraction of) their depositors money. Banks create money when making loans.
- 17) **Secular stagnation**- bankster/economist gobbledegook for the more-or-less no-growth economies that societal dependence upon bankmoney (and hence ‘debt saturation’) causes. See also “Debt saturation”.
- 18) **Dual banking system**- is a somewhat deceptive US **d.b.t.** for national-chartered and state-chartered banks, not for the two-layered monetary/circulatory system of **TAB** and **RAB**, which is much more fundamental to understanding how the system runs.
- 19) **Base money**- (‘Monetary Base’/M0)- which is actually (de jure) *interbank Reserves [RAB] + physical cash*, is often misused (de facto) to mean *only* the former, which already has half a dozen less-misleading names (interbank money, reserves/**RAB**, federal funds/FF, central bank money, high-powered money, ‘currency on account’). **All** government-created money (since the 19thc has been) is the “base”/foundational money upon which other constructs of the term rely upon for their existence.
- 20) **Liquidity trap**- a slightly **d.b.t.**-- commonly misattributed to Keynes’ *General Theory* (1936), instead of to theorist John Hicks (1937)-- for when (given a low interest rate environment) “money and [near zero-interest] bonds become close substitutes, the public can simply choose to hold central bank injections of **[RAB]** money as currency ‘under the mattress’ [i.e. collecting no interest], which prevents the additional money [injections] from stimulating economic activity” (Fawley & Neely, 2013). See “Debt saturation”, “Normalization”.
- 21) **Currency**- The BIS, the (so-called) ‘Federal Reserve, and many economists routinely use this term to mean (what ordinary people call) physical “cash” (notes & coins), as opposed to its broader and more prevalent usage of referring to the overall *monetary system* of a dollar, pound, ‘bitcoin’, etc., and/or any national currency unit that is on the payment system. According to some, however, “[b]y contrasting [21stc digital] ‘virtual currency’ with the [traditional] term ‘real currency’ [i.e. physical notes & coins], the...term ‘currency’ by itself loses...definitory solidity⁷³⁴.... The Chicago FED [contributes to this ‘confusury’, and] could...be seen as a commentator from the economic disciplines, and not a purveyor of [actual] legal definitions” (Bindewald, 2018, 187). See also “Currency”, “Digital Cash/Currency”.
- 22). **Circulation**-
- 23) **Reserve** also has misleading connotations. **Nothing is reserved in a “reserve account”, certainly not a fractional part of the deposit as the *Fractional Reserve myth* purports.** “This comes from the old days when there was gold in the system, and the banks would deposit some gold at the central bank, and there’d be a

⁷³⁴ The use of the term ‘currency’ for physical ‘money’ is nothing new. From the the 17th and 18th century etymology, ‘currency’, derives from the Latin *currens*, or a ‘condition of flowing’ or being current. What may be confusing is that, in the 18th and 19th centuries, the term was **used for both** the issuance of [commercial bank] *notes* (which were, up until the mid-19thc, often independent of government), and *also* for *coins* (i.e. direct, government-minted ‘currency’) (Bindewald, 2018, 202). See also “‘State Banking’ (era)”, “Currency”.

'Reserve'. But nowadays... [Reserves] are when the central bank buys stuff from the banks, and then it owes the banks money, and because the banks' liability to somebody else is called a 'deposit', they [go through the motions of calling] it a 'deposit' by the banks. But actually it is created out of out of nothing by the central bank. It's just a credit that the central bank created" (Werner, 2018, mn.32-33). Although the term usually refers to a distinct circuit of money used by banks, central banks, and (national) governments (including what we use as paper "cash"); in less formal usage, 'Reserves' may also refer to bank customers' "deposits", which are accounted for in TAB bank credits (d.b.t. 'deposit' money), not RAB. See also "Orwell, George", "ConfUSURY", "Myths, Big 6", "Middle-man", "Monetary Reform".

[Long 20th century's disinfo juggernaut]

Deep State- (synon. 'secret government', 'the 7th floor group', 'dark state', 'deep swamp', 'double government', 'invisible government', the 'Military-Financial'⁷³⁵Complex', the 'venal deep state'⁷³⁶, 'la police' [Fr.]; not to be confused with the smaller, inter-governmental gear of 'shadow government'⁷³⁷, which includes much, if not most, of the military Intelligence Community & [see also] "Timarchy") "The king never dies."- Blackstone's *Commentaries on the Laws of England*, Book 1, ch.7 (Blackstone, 1765). See also "President of the United States (PotUS)", "Corporations (and corporate 'personhood')". "The Czar himself is powerless against the bureaucratic body; he can send any of them to Siberia, but he cannot govern without them, or against their will. On every decree of his they have a tacit veto, by merely refraining from carrying it into effect" (Mill, 1859, 66). See also "Statism".

1) Secret governance in the bureaucratic sense of the term is "a corporatized, militarized, entrenched bureaucracy that is fully operational", consisting of 2 forms, de jure and de facto:

a) **Continuity of Government** (COG) is a formal/legal institution, started in the 1950's, "made up of unelected individuals who have been appointed to run the government in the event of a catastrophe.... When or if the COG takes over, the [de facto] *police state*⁷³⁸ will transition to [de jure] *martial law*"

⁷³⁵ not the 'military-industrial-complex' ...as President Eisenhower originally termed it. Carroll Quigley noted in the 1960's that: ?. Titus (2016) knocks the ball back over to the "banks" (M.I.H.) side of the net. See also "Shadow Government".

⁷³⁶ Those with the football (i.e. the State-power apparati) have usually-- since at least as long as there has been (written) 'history'-- done pretty much "everything...[they] can to alter and shrink the dimensions of perception" (Rappoport, 2015b), in order to rule more effectively & efficiently. See also "Politics", "Political Pronology".

⁷³⁷ ...as Chinese court-embedded 'eunuchs' [宦官] are not to be confused with the [often military-timarchic] *shi* [士大夫; scholar-officials]. The "political intrigues...[that eunuchs] often stirred up resulted in...eunuchs becoming infamous, and they were especially unpopular with Confucianist scholars. Huang Zongxi, the Ming dynasty...thinker here sums up the general view of eunuchs in Chinese history: 'Everyone has known for thousands of years that eunuchs are like poison and wild beasts.'" - <https://www.worldhistory.org/article/1109/eunuchs-in-ancient-china/>

⁷³⁸ Catherine Austin Fitts points out that this is not exactly correct, because with "a *police state* you have 1 centralized party that is in control. This... [situation today, however,] is...completely out of control... The governmental structure has lost the monopoly on force. And now you have multiple...sovereign players from around the world [that are now] within any jurisdiction. So we have foreign intelligence agencies...private intelligence agencies-- a.k.a. mercenaries-- and...government agencies all behaving in...lawless ways... which all traces back...to the fact that the US government is managed on a financial basis, outside the constitution" (2017, mn.17-18). See also "Federal Reserve Bank of New York (FRBNY)", "Black Budget".

(Whitehead, 2017, mn.0-1). The 2nd, unofficial form has gone by numerous colloquialisms for more than a century.⁷³⁹ Recently, however, it has been most prominently known as:

b) The Deep State,⁷⁴⁰ which is “comprised of unelected government bureaucrats, spies, corporations, contractors,⁷⁴¹ [and] paper-pushers... who are actually calling the shots behind the scenes. This [everyday] *government within a government* is the real reason We The People have no real control over our so-called government” (mn.2), as was demonstrated by the various fiascos of President Trump’s transition and first 100 days in office.⁷⁴² The Deep State (the *de facto* executive branch of the US government) “operates according to its own secret agenda, regardless of who is formally in power, [and] makes a mockery of elections and the...concept of a representative government” (Whitehead, mn.2). They prefer to use private sub-contractors, hence the “854,000 *contract personnel* with top secret clearances” surpasses the number of US government civilians with top secret clearances (mn.3). Most of it is found in: “the Department of Defense, the State Department, [since 2002] Homeland Security, the CIA, the Justice Department, the Treasury, the Executive Office of the President by way of the National Security Council, the Foreign Intelligence Surveillance [FISA] Court⁷⁴³, a handful of vital federal trial courts, and [Congressional] members of the Intelligence and Defense Committees... and it’s working overtime to trample the constitution.... [by pulling] the strings to the puppet show we call the [federal-executive] government” (Whitehead, mn.3-4). Did someone say “Police State”? “The average American now unknowingly commits 3 felonies a day, thanks to...[an] overabundance of vague laws that render otherwise innocent activity illegal” (Whitehead, 2017, mn.11). See also “Legalism”.

2) Since (on or about) 1947⁷⁴⁴ there has been “part of the government that never changes... There are many, many aspects [or wheels/gears] of the Deep State... [including] the Intelligence Community [IC] Deep State...[a.k.a. the ‘Shadow Government’ wheel, that has] access to so much information about

⁷³⁹ For example, the 1912 platform for Theodore Roosevelt’s Progressive Party officially stated that: “Behind the ostensible government sits enthroned an *invisible government* owing no allegiance and acknowledging no responsibility to the people. To destroy this invisible Government, to dissolve the unholy alliance between corrupt business and corrupt politics, is the first task of the statesmanship of the day” (Roosevelt, 1913, 578). They won 88 electoral votes and more than 27% of the national vote. 1920’s New York City mayor John Hylan also preferred the term “invisible government”.

⁷⁴⁰ For example, 2-time presidential candidate and former Congressman Ron Paul’s comments on then president-elect Trump: “there is an outside source which we refer to as the ‘*deep state*’ [from 1860’s] or the ‘*shadow government*’ [from 1950’s]. There is a lot of influence by people...[who] are actually more powerful than our government itself, [than] our president” (Paul, 2016).

⁷⁴¹ According to ‘CIA whistleblower’ Kevin Shipp, the Deep State “secret government.... has 10,000 secret sites within the United States... 1,271 private corporations... that have private operational contracts... [and about as many] other federal agencies... [in addition to] all the military-industrial contractors, which is hundreds of thousands of people... [And all] CIA or NSA secrecy agreements [whether with contractors or with government employees are binding] for life... [meaning that] their entire retirement system, their family’s finances and everything else is dependent on that.... It has got 100,000’s of Americans tied-in financially with their retirements... many good Americans [are] in bondage like that” (Shipp, 2017, mn.30-31). The “apparatus” of penetrating US officials, “including judges” has been going on for about “30 years” (mn.33). The “encouraging thing about all this... especially for me as a former federal agent... is [that] Donald Trump is not a part of this apparatus” (Shipp, mn.33). In January 2018, Shipp clarified his terminology somewhat, establishing that the ongoing intra-governmental conflict that surfaced in 2016 was basically between older “Deep State” and newer “Shadow Government” gears. Fellow ex-CIA talker Robert David Steele has suggested the reform that government employees “should lose their retirement pay if they work for a contractor--period. It’s time we had a government of, by, and for the people” (Steele, 2012, mn.9); not the Wall Street-owned contractors. See also “Oligarchy, American”.

⁷⁴² According to the foremost researcher on the subject, “the Deep State is so heavily entrenched, so well protected by surveillance, firepower, money, and its ability to co-opt resistance, that it is almost impervious to change... [And] it is populated with leaders whose instinctive reaction to the failure of their policies is to double down on those same policies in the future” (Lofgren, 2015, 216-17).

⁷⁴³ According to William Binney, the “FISA court didn’t even know about...[the searchable NSA database] program until February of 2002...4 months after it had started” (Binney, 2018c, mn.16-17).

⁷⁴⁴ Rounding this off to c.”1950” yields the following observation. The D.S.→Shadow Government’s (obviously top secret) “70-Year Plan” would simply be along these lines (in accordance with contemporary “teams” theory): 1940’s- *sketching* it, and 1950’s *writing* it (=FORMING). See also “Secrecy, Cult of”; 1960’s-70’s- *removing opposition* (=STORMING). See also “Conspiracy theorist”; 1980’s-90’s- *globalizing* it (=NORMING). See also “Globalization”; 2000’s-10’s- *in-your-face*’ing it (=PERFORMING). See also “Dollar Hegemony”, “Neoconservatives”; c.2020’s- Where else is there to go? (=ADJOURNING). See also “Trump, Donald”, “COVID” (& perhaps also *Head Office* [1986]). See also “King James’ Bible/70 Year Plan”, “Shadow Government”.

everyone. They can manipulate the President of the United States, and if they don't like what he says, they can embarrass him. And if they want to control his thought patterns... keep information away from him. Donald Trump has fallen victim to that, and he knows it.... If the American public learns that they [IC-DS] have access to everything that we type and everything we say, they will be repulsed by the power that this Deep State has" (Napolitano, 2017, mn.0-1). "One of the F.I.S.A. [*Foreign Intelligence Surveillance Act of 1978*] warrants⁷⁴⁵ that I saw was, quote, 'for every customer of Verizon in the United States'. That's 113 million people, including most of the Federal government" (mn.3). The IC-Deep State has already been caught spying on the Senate⁷⁴⁶ Intelligence Committee, in addition to private citizen, candidate, and president Trump, and all his known contacts. "This is the first time in the modern era that the man in the Oval Office has been an *adversary* of the Deep State...rather than a tool of it" (Napolitano, mn.5). See also "Trump, Donald" [.OPFOR], "Russiagate".

3) "Legal bodies that could trump the Constitution, first conceptualized in the Wilson administration, were finally achieved during the Clinton administration" (Walters, 1971, 395).⁷⁴⁷

3b) "You know, I've communicated with one US president, and with the 2nd, and with the 3rd... presidents come and go but the politics remain the same. Do you know why that is? Because the bureaucracy has a lot of power. So a person is elected, he comes with his ideas. Then people with briefcases come to visit him-- well dressed, in dark suits, kind of like mine... And then they explain what to do-- and the whole rhetoric changes, you see? This happens from one administration to the next."
 - Russian President Vladimir Putin (Putin, 2017).

⁷⁴⁵ Catherine Austin Fitts adds that "There were many other conduits where public and private intelligence agencies were listening [in] without that F.I.S.A. warrant. The system is out of control" (2017, mn.17). See also "'COVID'" (Op. shutdown).

⁷⁴⁶ A.k.a. Montesquieu's last bulwark to "inspire every family with sentiments of virtue" (Montesquieu, 1748, 47). See also "Constitution, US (of 1787-91) [Montesquieu]", "Congress".

⁷⁴⁷ It wasn't just Democrats. From presidents Truman and Eisenhower, through 2002, "no less than 10 [i.e. all but one] administrations named, above cast, a proxy for the American people without once telling them where they were going, even though any historian...could have discovered the consequences of blunders piled upon [oligarchy-serving] blunders for half a century" (Walters, 1971, 2003, 396). See also "'Conspiracy theorist'".

[simpler version]

[The US Executive Branch in 6 Wheels (counterclockwise from top): Presidency; CIA & daily briefing; 'Shadow Gov't' and Pentagon I.C.; 'Federal' Reserve- big banks; 'Deep State'/permanent bureaucracy, & Everyday civ. bureaucracy & military]

4) Although “Deep State” is the catch-all term for unelected, non-democratic (and often unconstitutional) governance these days, the term should be bifurcated, for the sake of clarity, between the age-old, private finance-based ‘Illuminati’ governance, and that of America’s post-war, timarchic “National Security State”. They are not the same thing, and patriots⁷⁴⁸ (in addition to imperial ‘globalists’) do exist. Robert David Steele (ironic for a military man) sometimes describes a larger, more nebulous “Deep State” concept in terms of the former (as if it were still) pre-World War Two days: “The Deep State [coverup] begins with the Rothschilds family, which is [if conflated with the City of London] above the Queen of England, and [also] the Black Pope-- the Jesuit Black Pope, who is [since the Congress of Vienna] above the Pope... [via alleged] control over banks & banking...” (McKinney & Steele, 2017, mn.13), as if such concepts as “military intelligence” and “secret societies” did not exist in any capacity apart from ‘the Queen/Rothschilds’ and ‘the Pope/Jesuits’, respectively. Steele continues: “And these [supposedly ‘Rothschild/Jesuit’] banks, in turn, control the 2-party tyranny in every country... The politicians are... servants of the banks... and below them you have the traitors, which are salted across the entire government, generally ‘free’-masons... and Knights of Malta and Opus Dei, and others, and then of course you have the Mossad and dual citizens” (Ibid). See also “National Security Agency (NSA)”, “International Intelligence Community (I.I.C.)”.

5) Since the presidency of former CIA director Bush Sr. in the 1980’s; “...it’s all been as if it’s a single administration...basically... what is called the ‘Dark State’...the people who are forcing Trump to get rid of [General Michael] Flynn [as Trump’s initial National Security Advisor], just in case he was serious about making peace with Russia” (Hudson, 2017h, mn.10). See also “Russiagate”.

5b) “The [Washington] government planners know just what they are doing: they’re appointed with Wall Street approval, to promote its interests and its business plan, mainly to monopolize the economic surplus in the hands of a narrow oligarchy.”- Michael Hudson (Dodson, 2009). See also “ShadowGate, 2020”.

6) Bush Sr. admn. insider Catherine Austin Fitts can “explain how the Deep State works. There are the political appointees, whether it’s the president or... the [first line] people he chooses to appoint-- and supposedly they’re running the government. The reality [however] is you have a [pre-existing, permanent] Deep State that controls the [government’s] banking accounts, information systems, and the data.... [So]

⁷⁴⁸ See also “Patri”, “International Intelligence Community (I.I.C.)”.

There's a reality TV show that's one layer-- the political layer-- and then you have a deeper layer.... [where they all] need to keep the money flowing" (Fitts, 2017h, mn.5-7). Earlier in the 1980's, when Fitts "became a partner of a Wall Street firm, I attended the partners' annual strategic planning conference. The Chairman of our firm attended the [Bohemian] Grove faithfully every year. He started his remarks at our annual conference with the following: 'Let me tell you what is going to happen this year'" (Fitts, 2017m).

7) "Presidential power... does not match the power of the Deep State, because the Deep State's been there for [at least] 60-70 years, and it's unaccountable, and most people don't even know who or where it is-- *including* the president and the Congress, and the Office of Management & Budget,⁷⁴⁹ and everybody else. This is a parallel government, and it does what it wants. I think this was a shock to Trump. That a president can be so *mistreated* by his own CIA!⁷⁵⁰.... So I think he just realized: '*Hey, gosh, being president isn't what I thought*'... Everyday he's threatened with impeachment, with hearings, with investigations. It's constant" (Roberts, 2017b, mn.23-24). "The military-security-complex... intend[s] to have Russia as a *threat*.... What they want is a serious threat. They want the Cold War back..." (Roberts, mn.28-29). See also "Russiagate", "Cold War, neo", "President of the US".

8) "Anyone who denies the [bureaucratic] Deep State denies the existence of the US government... All these small things make a big thing.... There are people...all throughout the [nest-building] bureaucracies consisting of the Deep State" (Shaffer, 2017, mn.0-1). In regards to the I.C. Deep State [a.k.a. 'Shadow Government'], "anything that has a microchip on it... can be used for exploitation and intelligence collection. That's just the way it is" (Shaffer, mn.3). Former US attorney Joseph DiGenova adds that, Deep State "individuals, both in the civil service and in the senior political ranks who have left the government-- the Obama people, led by John Brennan-- the most political CIA director in history, who set the tone for this kind of partisan behavior in the intelligence COMSEC. They are encouraging these people to continue to leak, and basically to commit regicide... they want to kill the president politically, and they'll do it any way they can" (DiGenova, 2017, mn.7).

9) According to one of America's most respected Congressmen, much of the "Deep State" is officially private: "What we have developed here is sort of a fascist system. You know the government doesn't own Google and all the social media. But they...have control over it. And they [social media] have sold out to the government, because they're collecting all the information-- and '*the government doesn't collect all this. But if we need it, Google will give it to us* [no questions asked]'. And all these others like Facebook, they'll [also] give it to them, because... Congress gave them the exemption that... [if] somebody in social media has turned over your information, they're not liable.... So it's a mixture of big business and big government, and it's a terrible thing. There's big money involved. It has nothing to do with helping the poor people... It's power and it's control, and it's protection of the [deep] state. And that's why whistleblowers are the greatest enemy of this. You know truth becomes treason when you have an Empire" (Paul, 2017, mn.14-15). See also "Truth serum".

10) Fellow former Congressman and Presidential candidate Dennis Kucinich attributes the 2017 problems to "a *politicization* of the [I.C.] agencies that is resulting in leaks from anonymous, unknown people... [with] the intention to take down a president.... It is a threat to our republic, and constitutes a clear and present danger.... Why doesn't somebody come forward and make a charge and put their

⁷⁴⁹ According to a co-founder of US Marine Corps. Intelligence, the OMB "in the 1970's...made a very specific decision that they would just be the green eyeshade types that move the money. And there's absolutely no coherence and there's no evidence-based reasoning behind any policy that the US government pursues. It's all about ideology and paying off campaign contributors and basically the [President's] cabinet secretaries are [just] there to serve the people who get the taxpayer money, not the taxpayers..." (Steele, 2012, mn.50).

⁷⁵⁰ As of April 2017, no one seems to have a clear answer as to what has happened to Trump and his administration during the first 100 days. Ex-CIA activist Robert David Steele "whether he's been blackmailed, or he's under mind control-- which CIA has taken...to a whole new level. It's...out of the bag. It's not just CIA. Yale sells it to everybody. So [George] Soros and Blackwater and all these other bad people have [such technology]. There are many different ways in which Donald Trump may be flipped.... The last possibility is that he's being really clever and is going to have a Wednesday night [cabinet] massacre.... [vis-a-vis] Mike Pence, the Deep State vice president-in-waiting" (Steele, 2017d, mn.47-48). The "Deep State...is not the Shadow Government. It is [in some ways] **above** the Shadow Government, looting all of us" (Steele, 2018, mn.27). See also "Intelligence Community" ["L.I.H." & "M.I.H"]. In 2012, Rep. Pence introduced legislation to officially remove "full employment" from the 'Federal' Reserve's traditional (since the mid-70's) congressional "dual mandate" of "full employment" and "price stability" (Klein, 2012, 258). See also "Unemployment (statistics)", "Robotization (and productivity)".

name and reputation behind it?” (Kucinich, 2017b, mn.2-3). “This is about the political process of the United States of America being under attack by intelligence agencies.... There are certain individuals who are the lifers [there], who want to be able to direct the policy of the country. And if a president stands in their way-- whether a Democrat or a Republican-- they’ll just try to run that person out.... It [also] has to be pointed out [that] in October of 2016, that same Deep State overrode the decision of President Obama and Secretary [of State] Kerry to come to an agreement with Russia over...[a] ceasefire in Syria. They overrode it⁷⁵¹ and launched an attack on a Syrian military base...” (Kucinich, mn.4).

11) Six-term former Congresswoman Cynthia McKinney adds that new Congresspeople are generally viewed with skepticism, prior to being screened by inside/permanent Washington for candidacy within the smaller, hidden wheels that turn the larger, public wheels. Bribery, influence-peddling, and sexual favors are commonplace. “The strange [congress] people are the ones who fight it. And those are the ones who are denigrated in the press” (McKinney, 2017, mn.32). But McKinney “represented the most dangerous type” of Congressperson, because “I didn’t have any stuff in.... [t]he black-book dossier...” (mn.60-59) that is presumably kept on all D.C. legislators.⁷⁵² Interviewer Sarah Wesll adds that “75% of Congresspeople’s time is [spent] on raising money. In fact they are expected to go to the headquarters, sit in a little cubicle, and make phone calls like a sales rep... [for] 30 hours a week”⁷⁵³ (McKinney, mn.35-36).

12) “All of these Congressmen are millionaires by the end of their first term, and... planning for post-Congress, K-Street, lobbyist jobs... if I were God, Congress would be like jury-duty. We would randomly select from among the citizens” (Steele, 2012, mn.9-10), and for fixed term limits. See also “Democracy”.

13) According to some, the Deep State “also controls Silicon Valley⁷⁵⁴ and Wall St., which supplies the cash that keeps the political machine greased and operating as a diversionary marionette theater. This is fascism in its most covert⁷⁵⁵ form...” (Whitehead, 2017, mn.12).

⁷⁵¹ See Moon, 2018c.

⁷⁵² ...since at least as far back as the 1940’s, according to CIA-State Dept. psy-ops pioneer Steve Pieczenik (2017c, mn.1-2), although the surveilling and blackmailing has generally been getting (increasingly) worse this century. Pieczenik, a self-proclaimed leader or spokesman of the I.C./Shadow Government patriots/nationalists (as opposed to “globalists”/imperialists) also noted later that year, that “...we have to ask ourselves ‘Are they [20th century institutions] relevant?’ Do we really need a senator and congressman? The answer for me, is no-- not in the world of the Internet. They’re totally irrelevant. They take our money. They waste our time” (Pieczenik, 2017k, mn.5). See also “Parties, political”, “Sovereignty”.

⁷⁵³ Six-term Congressman Rick Nolan says things are very different in the 2010’s than they were when he first served, in the 1970’s. Since the 2010 *Citizens United v. FEC* ruling in particular, “both parties have told new members [that] they should spend 30 hours a week on calls-- and the prospect is keeping people from running for office. ‘I could give you names of people who’ve said, “You know, I’d like to go to Washington and help fix problems, but I don’t want to go to... become a midlevel telemarketer, dialing for dollars”’ (Master, 2016).

⁷⁵⁴ CIA ‘whistleblower’ Kevin Shipp asserts that once a company signs a contract with CIA, “they are bound by the CIA secrecy or non-disclosure agreement *for life*... [and] not just the CEOs, but [also] their employees... their secretaries- anybody that has access to that contract is now [supposedly] bound by the CIA... [There are] thousands and thousands and thousands of Americans that work for these companies that are bound by CIA secrecy agreements and [supposedly] can’t talk about what they see, even if it’s unconstitutional or illegal.... It is aside from the constitution. It does not follow the constitution. It’s [unconstitutional] charter does not really command it to follow the constitution... Then you’ve got the CIA’s *outer nodes*, which are these multi-billion dollar military-industrial contract companies that are locked into the CIA, locked into the NSA, with these massive contracts... [Shipp has] been there as a program manager. There is no question about it. They won’t even question what the CIA is doing.... So that’s another node of this matrix called the Shadow Government or the Deep State” (Shipp, 2017b, mn.5-6). Specifically in regards to Silicon Valley, CIA “as they did with the military contractors, they’ve gone out and they’ve recruited segments of...[the Valley] They helped found Google, with advisors, seed money... [and] Amazon has just entered into a \$600 million contract with the CIA, and purchased the *Washington Post*. We’ll talk about that node later... The internet technology segment of the US is now a part of the Deep State, because it is [supposedly] bound by CIA contracts.... I keep going back to that secrecy agreement because that is the glue that holds this whole thing together” (Shipp, mn.6-7). See also U.S. Code 50 U.S.C. 403A.

⁷⁵⁵ The “covert operations and surveillance designed to harm or destroy people who fight this is enormous... I’ve seen thousands and thousands and thousands of people be destroyed...or killed...or smeared... And the media control has been sufficient to get really smart people to think that the fight hasn’t been much greater than it has been.... I mean you...had [in June 2017] the Republican baseball team... You know, if the bodyguards hadn’t done a good job, you could’ve had 10 or 20 congressmen dead.... Look at what happened to Bill Richardson or Curt Weldon. There have been [an] enormous number of politicians who have been targeted and destroyed.... You get away with it until the body politic gets smart enough to not get away with it.... I don’t think you can run a planet with the level of evil and corruption that the western world is currently being run with” (Fitts, 2018q, mn.105-107).

14) Ex-CIA 'whistleblower' Kevin Shipp lists the 4 "nodes" of the Deep State, as far back as "about 1948", as simply: **a]** The CIA (apparently in conjunction with NSA [database]), **b]** the military contractors, **c]** the Information Technology sector (for the past "25 years"), and **d]** the "national [Mockingbird] news media" (Shipp, 2017b, mn.3-10).

15) "[T]aking down CIA is the first step in taking down the Deep State" (Steele, 2017, mn.27).

16) According to Bill Binney, perhaps America's highest ranking GS whistleblower (and Steele's close friend), the problem is of course inter-agency. "After you reach a certain level, I would say about G15 and above, at that point they figure [that] they're above the law, and they can do just about anything that they want. And, according to Russ Tice, one of the whistleblowers from NSA, he even said [that there's] documentation of them spying on all the people [that] have oversight of them-- like the members of Congress... [on] the intelligence committees, especially, [and] also the Joint Chiefs of Staff, and also the...Chief Justice and all the other justices of the Supreme Court, plus federal judges around the country, and the White House... [Tice] had read transcripts of [illegally recorded] phone conversations by the then senator Obama... they're spying on everybody that has any kind of influence or potential influence⁷⁵⁶ over them, so that they can be prepared to ...deal with it...[and] direct them down the path that they want them to go. And they also have the [old school] ability to feed them information that will... direct them down that way. You know...they're responsible for about 70% of the intelligence produced for the entire United States government...[including] all departments" (Binney, 2018c, mn.7-8). The NSA, in "collaboration... over the decades" with CIA and FBI, has a mind of its own. "This is what senator Schumer was talking about when he said that president Trump should not be attacking the Intelligence Community, because they've got six ways from Sunday to get to you.... These are the people who have all that information and targeted data that's been collected on ...state governments, too, and federal judges and everybody.... And they make up their own rules... [particularly] those 3 agencies" (Binney, mn.9-10). See also "Sovereignty" [administrative].

17) Is the Dept. of Justice (DoJ), with its 'political police' FBI, "their" designated villain? "You have to fire them all. I mean, look at now...After that trumped-up riot...on the 6th of January...in D.C...[the Deep State] now has surrounded themselves with barbed wire and fences.... It's a total pretext; you know" (Binney, 2021, mn.51-52).

See also “K.J.B.”, “National Debt Economy” [never], “Zionism” [cat’s paw], “Cultural Calendar”, “UKUSA Agreement” [rescind], “Eurodollars”, “Reality & Facsimile”, “International Intelligence Community (I.I.C.)”.

Default USA?- This is another myth. A sovereign nation that issues its own currency cannot (involuntarily) “default” in that very same currency. “You default if you can’t print your own dollars. But he [Trump] does print his own dollars...if he becomes president.... If he actually realizes: ‘*Hang on a second. I’m paying American debt in American dollars, and I’ve got the Federal Reserve. All it’s doing is a book entry transfer from one account to another, [then] I don’t have any problem repaying that. The problem is repaying the private debt.... Somebody as off-the-tree as Trump could be somebody who breaks that pattern and actually says let’s write off the private debt*’ (Keen, 2016g, mn.16-18). See also “Debt, private”. See also “National Debt Economy”.

Deficit Spending (budget)- (a significant, although not .9 correlation, with inflation)

1) The US budget deficit is approx. “4% of GDP, under Trump... and you haven’t got rampant inflation.... The basic story is that [running a] deficit of about 2-to-3% of GDP is a sensible, sustainable level. And that’s [already] been the level-- on average-- for the American economy, for the last 120 years” (Keen, 2020, mn.103).

2) “The only problem... [that] deficit spending can cause is inflation... So what you do is look to the long-term inflation forecast, and they’ll tell you if you have a deficit problem. Now the long-term inflation forecasts are the CBO⁷⁵⁷... the Fed, and the Treasury index bond sales.... If you think there’s a deficit problem, the burden of proof is on you to show me there is an inflation problem... [It] is on you to show me that the Fed, the CBO, and the free market is wrong with their inflation forecasting” (Mosler, 2017, mn.10-9). See also “Inflation/Deflation”, “Productivity”.

Deficits/surpluses (trade)-

1) Under the current system, both public and private sectors are capable of creating new money⁷⁵⁸; and are thus typically inverse to each other. For example, *Government deficits* (creating money with excess spending) enable the private sector to safely de-lever (pay off their debts) without contracting the overall money supply (Keen, 2015).

2) *Government surpluses*, in turn, vacuum up “revenue out of the economy. When governments don’t run deficits, [then] the economy has to rely on banks...” to create money, and vice versa (Hudson, 2016c). The former was exemplified by Obama administration deficits; the latter by the Clinton administration’s surpluses of the latter ‘90s.

⁷⁵⁷ Prior to the creation of the Congressional Budget Office (CBO) in 1974.... [t]he president’s budget was... literally the only source of budget data.... On the bulk of [budgetary] line items, the president’s proposals tended to be rubber-stamped by the appropriations committees” (Barnett, 2017). The CBO was regarded highly in the 1980’s. In this century, however, the reputation of the CBO for accuracy has substantially declined (Santopietro, 2017). See also “Timarchy”.

⁷⁵⁸ Although the EMU and Lisbon Treaty severely restrict public sector money creation in today’s EU.

3) Government deficits are typically rolled-over-- and that's not just for military superpowers: “[L]ots of countries that are not global superpowers...have sustained deficits for decades and decades, and nobody has lost faith in the government, or the currency, or any of that.... independent of a country's... status as reserve-currency issuers, or the fact that most of the debt is held domestically” (Kelton, 2012, mn.120). See “Modern Monetary Theory’ (MMT)”, “Current account”.

Deflation- typically the other side of a monetary bubble; see “Inflation/Deflation”, “Gold Standards”.

Del Mar, Alexander (1836-1926)- (America & the 19th-20th centuries’ greatest monetary historian; and fmr./1st Dir. of the Bureau of Statistics at the US Treasury [1866-69])
i.e. ‘It’s [the insanity, and lunacy, of] the Mines’, not ‘the Moors’; nor its resonating echo in the ‘dark, satanic Mills’.- *A History of the Precious Metals, from the Earliest Times to the Present*, 1880

See also “A.P. vs. A.T.” [AversionTherapy].

1) definition of *money*: “...as it now stands in law and fact; a theory which explains precisely what money does, and precisely how it does it...[This] explanation is [simply] that money measures value by expressing it in price, and that *price* is a numerical relation expressed in the symbols of money...”

Del Mar spends the next 5 long sentences (the rest of the page) describing how, since 1666, ‘private hands’ have “destroyed Money as a Public Measure”, through their price and velocity of money manipulations (making “merchants” keep up with such shenanigans on an almost daily basis, instead of just having the State run a monetary-currency system stably).- Del Mar’s *Science of Money* (Del Mar, 1896, xiv). See also “Currency”.

1b) He basically was all fine with the Kingdom (.En), prior to the Stuarts, the 1660’s & Charles II.

See also “History” [monetary], “East India Co.”, “Sovereign money”, “Lawful money”.

2) ‘Greatest monetary historian’ or not, Del Mar fell for ‘Hamilton’s trap’. See also “Hamilton, Alexander” [Hamilton’sFootbinding], → “ConfUSURY”, → “Statism”; “Monetary Reform”, “‘Currency’ or ‘money’ (essay)”.

Demand Account- (a.k.a. ‘deposit money’; d.b.t. ‘demand deposits’, ‘sight deposits’) either a Transaction Account (accessible to the payment system; M1) or a Savings Account (M2).

1) TAB- bankmoney is used by the Payment System as money, but *savings investments* are inaccessible to the Payment System. The 2 are both called demand accounts, however, because they can both buy/demand cash whenever the bank ATM is open.

Demand, aggregate- “is both the turnover of...money you’ve already got in your pocket [or account]... [a.k.a.] the velocity of [the circulation of] money...plus change in debt, which [in a debt-currency system] is equivalent to creation of new money” (Keen, 2018b, mn.110).

Demand Deposits- d.b.t. for ‘checking’ (UK: ‘current’) accounts; see “Demand Account”.

Democide- “the intentional killing of an unarmed or disarmed person by government agents, acting in their authoritative capacity and pursuant to government policy” (Reese, 2021). See also “Evil”.

1) <https://www.bitchute.com/video/K4rEHHSjm0I6/> (Corbett, 2021, mn.8-18). See also “Conspiracy theorist” “Polemics”.

See also “Management’ vs. ‘Leadership””.

‘Democracy’- (classically defined: a functioning democracy exists where ‘the people... elect and judge ...its [own] magistrates’ [Montesquieu, 1748, xvii]; broadly defined: ‘any organization characterized by formally institutionalized feedback’⁷⁵⁹ [f.e. the USA, c.1920’s]; narrowly defined: ‘an end-state or ideal of institutionalized feedback, open to inputs from any group member or citizen, without institutionalized social-economic discrimination’ [arguably contemporary Switzerland]; sometimes a.k.a. ‘majority rule and minority rights’ [Quigley, 1972b] or ‘a voluntaristic society’ [early 60’s]; sometimes a.k.a. ‘baksheesh’⁷⁶⁰; not to be confused with ‘commonwealth’⁷⁶¹)

[i.e. ‘development’→ or “Jacob’s Ladder”, → App.C: “1-2-3”]

“[S]uffrage by lot is natural to democracy; as that by choice is to aristocracy”; and “[t]he more an aristocracy borders on democracy, the nearer it approaches perfection; and in proportion as it draws on monarchy [timarchy], the more it is imperfect.”- Montesquieu (1748, 11; 15).

1) “We often make the mistake, I think, of thinking [that so-called] democracy started in 507/506 [BCE]. Technically it did in [the sense of] Athens, but it drew on a prior 200-year...tradition of consensual government in the 1500 city-states [of 7th-6th century BCE Greece]. Sometimes this is called timocracy⁷⁶², or the Greeks had a word for it called *politeia*, the idea that *landed* voting citizens would have their own responsibilities for government. And...[when] we get [back] to the 8th century... we can’t trace that [Greek] origin any further” (Hanson, 2005). See also “Coined money” (coinage revolution), “Timarchy”.

1b) In the Near East, however, at least Early Dynastic Sumer (circa the upper-to-mid 2000’s BCE) also had *democratic institutions* of government. For numerous centuries, the city-states had at least “assemblies” of unknown composition which “held considerable power. So too did a ‘Council of Elders’ of similarly uncertain composition. Thorkild Jacobsen speculated... that these were [in fact] 2 houses of a bicameral legislature, but no one has either proved or disproved his speculation (Jacobsen, 1943, 1976), as no [subsequent] ‘assembly houses’ have yet been unearthed. I.M. Diakonoff, however, agreed, and distinguished ‘a council of elders representing the estate-owning community’ from the gurus of the assembly, ‘representing the common members of the community, those who cultivated small family plots’ (Katz, 1993, 23). Some 5 millennia before Thomas Jefferson, both of these institutions [seem to have] ‘shared power with the ruler’, at least ‘in matters other than the affairs of the temple estates, irrigation and building programs’ (Ibid)” (White & White, 2008e). Numerous historians have concluded that these assemblies and councils of elders exercised “significant, although declining power in Sumerian cities (Yoffee, 1995a, 302; Jacobsen, 1976; Clark & Piggott, 1965, 216; Katz, 1993; 23)” (Ibid).

1c) One of the many legends of Gilgamesh, the 5th King of Uruk (at an unspecified time within the Early Dynastic era), was that he “tried to mobilize the citizens of Uruk” for warfare against the overlordship of the northern city-state of Kish. Refused by the Council of Elders, Gilgamesh “appealed to a ‘general assembly’ to overturn their decision. In this sense, city-state government was consensual”, although Gilgamesh’s actions were also viewed as “effectively conducting a coup d’état” (Maisels, 1999, 170); in the support of more inclusive local autonomy. Thorkild Jacobsen, among others, concluded that, from around the time

⁷⁵⁹ “Between stimulus and response, there is a space. In that space is our power to choose our response. In our response lies our growth and our freedom.”- Viktor Frankl

⁷⁶⁰ *Baksheesh*, per latter 20thc India (‘the world’s largest democracy’) may be simplified as (the expected/cultural) voting for money (often a.k.a. ‘political corruption’). It is difficult to avoid a graft culture in any developing ‘democracy’ or constitutional republic. See also “Corruption”.

⁷⁶¹ *Commonwealth*- “a government founded by the people’s wishes, in which the people rule for the good (‘wealth’) of all members.

⁷⁶² “In some ancient commonwealths [certainly not just in Ancient Greece or Athens], where public debates were carried on by the people in a body, it was natural for the executive power to propose and debate in conjunction with the people, otherwise their resolutions must have been attended with a strange confusion” (Montesquieu, 1748, 160). See also “Timarchy”, “COVID”.

of...[this] episode, political figures ‘instead of seeking legitimation’ from the assembly and council, ‘tended to claim election [instead] by the patron deity of the city’, and that the ensuing ‘belief in divine election greatly diminished the political power and influence of the assembly’⁷⁶³ (Katz, 23)” (White & White, 2008e). See also “Charismatic Authority (CHA) & Charismatic Dependency (CHD)”, “Civil National Identity”.

2) *Demos*, in Ancient Greek, meant literally ‘of the districts’⁷⁶⁴, not ‘of the people’-- (and the term hasn’t gotten much clearer since then⁷⁶⁵). See “Fin de Siecle”, “Bernays, Edward (1891-1995)”, “Parties, political”.

3) Modern English ‘*democracy*’ (noun) is, of course, an ongoing project of sorts in these/the United States; and is, thus, a rampantly (and increasingly) abused term.⁷⁶⁶

3b) Quigley (and others have) distilled *democracy* down to, basically, the institutionalization of meaningful “minority rights”, in addition to the “...other basic point....[that it] is not the highest political value. Speeches about democracy and the democratic tradition might lead you to think this is the most perfect political system ever devised. That just isn’t true. There are other political values which are more important and urgent-- *security*, for example. And I would suggest that political *stability* and political *responsibility*⁷⁶⁷ are also more important” (Quigley, 1972b), for the sustainability of the general welfare. See also “Constitutions & Conventions” [democratic republic].

4) Abuse? In a so-called ‘democracy’, “the inhabitants are divided into certain *classes*. It is in the manner of *making this division* that great legislators have signalized themselves; and it is on this [division that] the duration and prosperity of democracy have ever depended” (Montesquieu, 1748, 10). See also “European Parliament”, “Parties, political”, “Adolescence of Mankind” [.monetary allowance].

4b) According to Quigley’s 5 Stages of Democratic Nominations (in the USA)...

⁷⁶³ Sumerian Assemblies, as known principally from much later sources, “may have included all adult males, or at least those subject to military service (from which later concepts of citizenship would arise). Councils of Elders seem to have made recommendations to Assemblies, and may [also] have had a role in implementing their decisions [somewhat like today’s ‘E.U. constitution’]. There is [however] some suspicion that retrospective nostalgia may have influenced perception of the functions of both groups, although it seems clear that both existed and had important, but diminishing, roles (Jacobsen, 1976; Postgate, 1992, 80-81)” (White & White, 2008e).

⁷⁶⁴ The ancient Greeks, of course, “had other words...that either meant or related to the idea of ‘common people’” (Olin, 2018). Does this reflect a ‘ghetto’ or ‘proletarianization’? “For Aristotle, *democracies* (as he defined them) were very polarized societies, containing rich and poor and not much in between.”- <https://fs.blog/aristotles-politics> . See also “Middle class”.

⁷⁶⁵ The problem of “confirmation bias” (in history) tends to increase the further back one is searching for (scraps or scribbles of) primary sources. Alexis de Tocqueville had a good way of expressing this: “I myself will not search, as some of my colleagues have done, for the real etymology of this word, democracy. I will not, as was done yesterday, rummage around in the garden of Greek roots to find from whence comes this word” (Tocqueville, 1848). See also ‘History’.

⁷⁶⁶ Tocqueville, among the less rose-tinted observers of the classic 19th century American scene (1838, 1848), is perhaps most responsible [it certainly wasn’t any of the ‘founding fathers’**] for initiating that particular institution of failing to discriminate between the word’s adjective and noun forms (which would subsequently become rampant in the [begging-the-question] propaganda of the 20thc). Seven decades later, the (notoriously globalist) Wilson administration again picked up the term. “Nothing like official sanction was given to the idea that the United States is first and foremost a democracy until Woodrow Wilson, in making the war [propaganda] against the Central [European] Powers... gave the stamp of wide popularity to the idea that the United States is, first and foremost, a democracy” (Beard, 1943, 32). See also “Bernays, Edward (1891-1995)” [.propaganda], “Timarchy”.

** - Constitution of 1787 honcho Gouverneur Morris, later in life, called ‘democracy’ “the child of squinting envy and self-tormenting spleen!” (Adams, 2008, xvi).

Carroll Quigley put the transition a little earlier. “Why do we have democracy in this country?...[The] blunt and simple answer... [is] because, around 1880, the distribution of weapons in this society was such that no minority could make a majority obey. If you have a society in which weapons are cheap, so that almost anyone can obtain them, and are easy to use-- what I call amateur weapons-- then you have democracy. But if the opposite is true, [if] weapons [are] extremely expensive and very difficult to use-- the medieval knight, for example, with his castle-- the supreme weapons of the year 1100. In such a system, with expensive and difficult-to-use weapons, you could not possibly have majority rule. But in 1880 for \$100 you could get the 2 best weapons in the world, a Winchester rifle and a Colt revolver; so almost anyone could buy them. With weapons like these in the hands of ordinary people, no minority could make the majority obey a despotic government” (Quigley, 1972b). Hence, if ‘democracy’ actually arose circa 1880, it also died (at least in terms of the public having meaningful debate, choices, and input) no later than the 1980’s. See also “Fin de Siecle” [for which the Wilson Admn. was the coup de grace/climax], “Imperialism, American”, “Propaganda”, →”Mind Control” [technology].

⁷⁶⁷ “In fact, I would define a good government [first & foremost] as a *responsible* government. In every society there is a structure of power. A government is responsible when its political processes [actually] reflect that [genuine] power structure, thus ensuring that the power structure will never be able to overthrow the government” (Quigley, 1972b). See also “Power”, “Revolution”.

- name/era: (time frame): distinguished by: significance:
- 1st] Legislatures' Caucus (1789-1842)⁷⁶⁸ popular resentment (Dorr's) rebellion
- 2nd] Spoils System (c.1840-1880's) the rise of Parties⁷⁶⁹ 'vote for money' polit. culture vs. "revivalist religion"⁷⁷⁰
- 3rd] Big Business Domination (c.1885-1932) 1883 *Pendleton Act's*⁷⁷¹ Civil Service ; "drastically" lower turnout,⁷⁷² and, from "1896 on, as a result, the Republicans dominated the national scene through amateur control of politics, and increasingly restricted political activity".
- 4th] New Deal Coalition (1932-1950) countervailing blocs⁷⁷³; the "New Deal was a system of organized blocs. ... [which] set about organizing all the other interests", very often via the Democratic Party, to "restore" societal "balance
- 5th] Plutocratic Control (c.1951-77) "sky-high.... costs of elections...TV air time...", etc.; "simply...buying elections"⁷⁷⁴ (Quigley, 1972b). See also "Parties, political", "CIA", "Corporate Media Cartel",
- 6th] Plutocratic Globalism (1978--) ["late Holocene"] globalized monetary system ; "I.I.C", "Freedom continuum"
See also "Capitalisms" [6stages], "Cycles", "Historical illiteracy".
- 5) The term's adjective form ('*democratic*'), however, is simply one's basic attitude towards questions and questioning, regardless of the veracity or accuracy of content. *Democratic* values have increased, in most places most of the time, over the past century-- hence, we have a scaffolding project. We are not, however, "'there' yet" (in the noun form)-- unless the 'there' is some sort of Potemkin village (of creeping Orwellianism). See also "Hegelian dialectic", App.C: "1-2-3".
- 6) Is this an unduly harsh assessment? No. Electioneering & vote-counting procedures in the US, never particularly pristine, went off the deep end with the implementation of (nearly entirely privately-owned, proprietary, and easily-hackable) computer voting machines⁷⁷⁵ (after Congress mandated them,

⁷⁶⁸A "steady extension...[towards] democracy by changes in the State voting laws [characterized the entire era], culminating in the Rhode Island reforms of 1842. [R]esulting from Dorr's rebellion...[they extended] the suffrage to the ordinary man. By 1843...[liberal male suffrage] was established more or less in all [of] the [26] States" (Quigley, 1972b). And it wouldn't be long until Tocqueville's observation-- that "the main point and very soul of every faction in the United States.... [was simply] aristocratic or democratic passions...easily detected at the bottom of all parties...." (Tocqueville, 158)-- was to be proved fleeting or wrong. The Union's founding fathers had merely kept political parties ('factions') largely at bay up until the Jacksonian era (of which de Tocqueville wrote). See also "Parties, political".

⁷⁶⁹ In a land "where most men...have the right to vote, there must be some way of nominating candidates for office. The method chosen [c.1840] was the nominating convention...[which] raised the problem of how to finance sending the delegates to the convention. The solution developed around 1840 was for the party machine of the winning party in an election to reward the party faithful by appointing them to government office. To the [Party] victor belong the [public sector] spoils. These appointees then kick back money to the party kitty, say, a quarter or [at least] 10% of their salary every year; and these kickbacks provide the funds for the nomination convention and the process of political campaigning. In that new system, government officials themselves went as paid delegates to the nominating conventions, and the nominations and getting out the vote in elections were [both] controlled by the party machines. All of these were...in cities or on a State basis. It was [in both the rural South or urban North] a feudalistic power structure" (Quigley, 1972b). The Conkling machine (c.1870-80's) "also drafted government workers at campaign time and... [e]ach employee was...assessed between 2% and 6% of his salary to the party's coffers, no exceptions allowed" (Cost, 2016, 100-101). <https://www.youtube.com/watch?v=NzbhbetwYFU> [Blazing Le Pétomane].

⁷⁷⁰ "In this period... politics and religion, frequently revivalist [not yet 'fundamentalist'] religion, were the chief entertainment outlets... [T]he American people...[then] did not have organized sports or other kinds of entertainment-- except an occasional traveling company of actors, and, more often, revivalist preachers. So people identified [deeply] with a political party.... If their [political] team won they were ecstatic, if their team lost they were downcast. Well, that's what politics was like in the era of the spoils system, and it continued until about the mid-1890's.... Professionals, not amateurs, ran the elections.... The parties put up the most colorless dark horse they could find-- the less people knew about him the better-- and then counted on enthusiasm for the party to get out the votes" (Quigley, 1972b). See also "Dispensationalism" & "Zionism".

⁷⁷¹ *Pendleton* (1883) "had the effect of cutting off most of the funds on which the party machines depended. So the parties now had to look to big business to finance them" (Quigley, 1972b). See also "Corporations (and corporate 'personhood')".

⁷⁷² "It was radically different.... Politics...[from the mid-1860's to mid-80's, had been] everybody's game. But once big business got control, voting fell off and hovered around 52%, instead of the 78% it had been before. The professionals were pushed out and amateurs took over-- people who came in for 1 campaign or 2-- generally financed by business; men like [Gov. of Ohio & President] William McKinley..." (Quigley, 1972b). See also "President of the United States (PotUS)".

⁷⁷³ "Formerly, organized finance and...heavy industry had run everything else. Now the New Deal set about organizing all the other interests, especially mass labor... [and also] the farmers...[and] others: Most of their money came from merchants" (Quigley, 1972b).

⁷⁷⁴ "Here's why. As our economy is now structured, the big corporations-- aerospace, oil, and so on-- are able to pour out millions to support the candidates they favor. The restrictions on the books are easily evaded, and the politicians in power won't do much about it, because they want some, too. The second reason is that labor unions are now [also] a part of the system. They too want to get on the gravy train" (Quigley, 1972b). See also "Imperialism", "Monetization".

⁷⁷⁵ From two decades ago, the term "Black Box Voting" has been applied to "[a]ny voting system in which the mechanism for recording

supposedly as a charity measure, with the *Help America to Vote Act* of 1992). According to Bev Harris, America's premier vote count observer,⁷⁷⁶ all known voting machine brands are (increasingly) pre-programmable with what has been termed 'fractional vote counting' (Harris, 2016), whereby "the person controlling the voting machines...[can] determine who the winner is before the first vote is cast" (Steele, 2017n, mn.32).

7) "[S]ince [the numerous atrocities of] 2016, states have received hundreds of millions of dollars from Congress to...replace...vulnerable voting systems.... [but] 'We still don't have strong security standards for the election equipment that comes with that federal money" (Still, 2020, mn.3-4). "3 companies [still account] for 80% of the voting machines in use in the United States...[and] 10 states don't even have the minimum [standard-- the ability to produce] an *auditable paper trail* of votes" (Still, mn.1-2), and "even [among those] states that *are* deploying new equipment with a paper trail, many...don't have plans to rigorously look at that paper, to make sure that the computer results are right.... And in every single case [of security experts' reviews] where we've gotten machines into the laboratory... we've found ways that hackers could...get in and install malicious code" (Still, 2020, mn.4-5).

8) It doesn't have to be that way. With Instant Runoff Voting (IRV), "you actually choose your 1st, 2nd, and 3rd choice, and then those are weighted, and [in conjunction] with paper ballots counted publicly on-sight, there's no fraud. It is [then nearly] impossible to have [vote counting] fraud" (Steele, 2017m, mn.32-33). And with "*Approval Voting*", vote-counting is even more tamper-proof-- and simpler! See also "Political Science", "Methodology (culture)", "Denial".

[bad.21; good.21]

Approval ballot by selection

Instructions: Vote for as many candidates as you'd like.

No	Yes

<input type="radio"/>	<input checked="" type="radio"/>	Mary Hill

[See also "Technocracy", "Reform"]

9) Simpler still, public service "by lot [lottery] is a method of electing that offends no one, but animates each citizen with the pleasing hope of serving his country... [whereas voting] might occasion mortification to those who were excluded, and undue pride to the favored ones. It was in order to avoid this contingency that they [Ancient Greeks like Solon] had recourse to lot, and thus chance precluded this danger, for it does not deal in humiliation or inflation.... Solon [in the 590's BCE] made a law... that senators and judges should be elected by lot.... [qualifying it, that:] none but those who presented themselves should be elected; that the person elected should be examined by judges, and that every one should have a right to accuse him if he were unworthy of the office⁷⁷⁷.... [and all magistrates (either selected, or by lot), when their 1 or 2 year term expired] were obliged to submit to another judgment in regard to their conduct.... [once] the time of their magistracy had expired" (Montesquieu, 1748, 11-12). Why not? See also "Federal Reserve audit", "Design".

and/or tabulating the vote is hidden from the voter, and/or the mechanism lacks a tangible record of the vote cast" (Harris, 2004, 4).

⁷⁷⁶ Journalist and activist Harris, has published exposes of "electronic voting since 2002, and was the first to discover that...Sen. Chuck Hagel (R.) of Nebraska had ownership interests in and had [also] been CEO of the company that built the voting machines that counted his constituents' votes.... [In only a half-dozen years, Harris'] nonpartisan... watchdog group has filed the largest number of *Freedom of Information Act* requests in history to examine the internal audit logs of voting machines in 3,000 counties" (Utter & Strickland, 2008, 172).

⁷⁷⁷ They "even [used] to draw 2 tickets for each place...[The 2nd one] named the person who was to succeed, in case the first was rejected" (Montesquieu, 1748, 12).

10) The main trouble is that one believes a (noun form) '*democracy*' is one person, one vote; whereas (in the long 20thc) it has always been [unless we see & supervise the actual ballots being counted] one dollar, one vote... just a synonym for bribery. Democracy has long been like communism (forced collectivism, albeit under Boards/Board Systems instead of 'Soviets'), a fraud initially hatched by the [Fin de Siecle-era] rulers, in order to let the people *think they are in control* (of what was to be a rather rough & tumble ensuing half-century). See also "Fin de Siecle". Constitutional America did not become "a Democracy" (broadly defined) until Edward Bernays and World War 1 and the Fed and the direct election of the Senate and women's suffrage [all c.1915-20]; even though some of the preceding American colony-states of the 1770's-80's were getting pretty close to the stricter definition of 'democracy' (Holton, 2013).

11) Even moderately defined, however, America, according to many citizens, "hasn't been 'a [1920's-*esque* TAB-bankmoney run] democracy' for decades"⁷⁷⁸.... America has been a 'fascist' [laughs]⁷⁷⁹ country for as long as I've been alive" (Fitts, 2018f, mn.27). The joke is that it is not at all difficult to conflate these two (supposedly polar [but actually sibling]) terms, because *democracy* and *fascism* were both ballyhooed⁷⁸⁰ at around the same time (World War One and its aftermath, c.1917-22), and for the same purposes-- i.e. primarily unsuccessful attempts to generate sufficient voluntary enlistments for WW1 imperialism, in order to avoid [the nakedly 'fascist' state of] conscription, and to facilitate the extraction (and sometimes outright robbery), predicated on hypocrisy, that was inherent to the "2nd Industrial Revolution" and its 'central banking-warfare' model of development. See also "Central Banking-Warfare model".

12) Just because things are bad does not mean that some change (in the stage props) will improve much of anything other than the Potemkin village's short-term 'approval rating'. Nothing very significant will improve as long as the secret rulers are actually in contempt of the people, and the people are too gullible to revolt, and/or stand up for something better. See also "Secrecy, Cult of", App.C: "1-2-3".

13) Monetary systems (deeper economic truths) still lead politics (superficial lies). "In most every case [in the 1930's] where liberal government broke down, the money system... had broken down first" (Fisher, et al., 1939, 43). See also "Truth serum", "Monetization".

14) Is that a good thing or a bad thing? And why was (the United States of) America founded in the first place? It's not just several centuries of bankmoney (a.k.a. 'central banking-warfare model') dynamics that have made notions of 'democracy' such a double-edged sword. Political economists like Anthony Downs in the 1950's noted the social phenomenon of "*rational ignorance*", wherein the individual realizes that "as only one of [say] millions of voters, the chances that one's [lone] vote [whether or not it's even counted] can influence election outcomes [is]... small...[And since] the payoff is extremely low, why should one bother

⁷⁷⁸ "It is ironic, if not downright shocking, that amid the enormous amount of survey data about democratic institutions, political participation, attitudes, ideologies, beliefs, and what-not, [that] we [still] have astoundingly little evidence in answer to a seemingly simple question: When people say they support *democracy*, what is it that they [in fact] wish to support? So far as I am aware, the evidence is sparse on the ground"- Political Science "pluralist" Robert Dahl (2000, 35); ...for the term 'democracy' meaning anything besides some vague state of (supposedly) more openness and less ostensible hierarchy. See also "Boards/Board Systems", "Corporations (and corporate 'personhood')".
⁷⁷⁹ ...or, more accurately, a 'Military-Executive-Corpocracy' country. The US went into the 1940's as a good old, Edward Bernay's-like (somewhat nonsensical) "democracy"; but it emerged from the decade as something else significantly different: an I.C.-overseen *democratic scaffolding* project (of civil rights, feminism, globalism, digitalism... and the eventual bankmoney blowout of the millennial decade. See also "Jacob's Ladder", "Military-Executive-Corpocracy (M.E.C.)", "Intelligence Community (IC)".

⁷⁸⁰ Leaving the ancient Greeks out of it for the time being, popular usage of the term *democracy* reaches back at least a century prior to its perversion (*fascism*), back to the French noble-aristocrat Alexis de Tocqueville, who (actually) feared democracy, and others like him (and often others even less charitably inclined toward the 3rd Estate) who had assembled at the Congress of Vienna in 1815-16 in order to [post-'continentals' and post-'assignats'] basically make the world safe for bankmoney. See also "Currency Wars, the". This author agrees with Fitts that-- apart from 'voting rights'-- America in the 2010's is, in many ways, less 'democratic' than it was through most of the 20th century-- surely in terms of those 'voting rights' having any meaningful, impact beyond the local level-- or even being counted in a way that inspires any confidence. This is in addition to the American public's (or non-elite/3rd estate's) traditional zero-influence on either monetary or [with the exception of 1968-70] foreign policy. One should not conflate the presence of corporate media outlets with any reasonable (as opposed to Orwellian) idea of 'democracy'-- a word of dubious pedigree that has done perhaps more harm than good thus far this century. See also "Aristocracy (& nobility)", "Politics".

spending time to become informed... [on increasingly wide-ranging and] complex policy issues?⁷⁸¹ Therefore, it seems rational for individuals to remain ignorant about politics, since their votes probably don't matter" (Han, He, & Yang, 2015, 3). See also "Socialism".

15) Institutional economist Mancur Olson took up where Downs left off, observing in the 1960's that-- due to the "rational ignorance" or (as Olson called it) the "*free rider*" phenomenon-- those public policies most likely to pass [especially in larger polities] were those that benefitted highly motivated [or financed] & organized-disciplined "special interests"-- since: **a**) smaller groups of interests are easier to organize into an effective team than are larger groups, and also because **b**) larger groups have less pecuniary incentive to organize, due to less payout per group (or team) member, vis-à-vis the payout or benefit for smaller or 'single-issue' (lobbyist) groups. (Basically hunting even the largest of game, like woolly mammoths or whales, was always done in teams of less men than a modern-day football team; certainly not the incoherence of hundreds or thousands, yet alone tens of thousands). In securing the fat of the public sector, like that of mammoth whale blubber, larger groups (if they could even keep together) were not necessarily at any advantage over smaller, coherent groups with real/pecuniary interests. For anyone who doubts that today's Congressmen and other representatives serving hundreds of thousands of constituents have a mark on them, please see "Deep State", "Parties, political", "Lobbyists", "Congress".

16) In Olson's words: "consumers are at least as numerous as any group in...society, but they have no organization to countervail the power of organized monopolistic producers. There are multitudes with an interest in peace, but they have no lobby to match those of the '*special interests*' that may on occasion have an interest in war. There are vast numbers who have a common interest in preventing inflation and depression [i.e. reform for a stable currency], but they have no organization to express that interest.... Virtually no one would be so absurd as to expect that the individuals in an economic system would voluntarily curtail their spending to halt an inflation, however much they would, as a group, gain from doing this. Yet it is typically taken for granted that the same individuals in a political or social context will [somehow] organize and act to further their collective interests" (Olson, 1965, 166). In fact, however, "[u]nless the number of individuals in a group is quite small, or unless there is coercion or some other special device [**provocation**] to make individuals act in their common interest, rational, self-interested individuals will not [actually] act to achieve their common or group interests" (Olson, 2), when they can just 'vote for money' instead. The most recent half-century has, from the latter 1970's anyway, clearly demonstrated the phenomenon.⁷⁸² See also "State capture", "Intelligence Community (IC)", "Provocation".

⁷⁸¹ The seemingly inexorable growth of complexity has been driven, of course, both by population increase (f.e., US Congressional district representation went from 1 congressman per citizens in 1790, to : in 1890, to : today), and by even more radical increases in the scope of the governmental sector, particularly from the 16th Amendment income tax and Federal Reserve (war funding, imperialist) system.

⁷⁸² Quigley noted, in the early 1970's, that since "1945 or so, we have had pretty close elections, with not much more than half of the people voting" (Quigley, 1972b). This (managed [& perhaps over-managed]) political phenomenon has often been formalized (since 1948) in "**Median Voter Theorem**" (i.e. the 'conventional wisdom' that elections are [at least *said* to be] 'determined by' the most 'moderate', mild, conformist/groupthink, and [economically] 'rational' members of a polity-- that is at least until a majority of traditional 'non-voters' [abstaining from the meaningless banalities] gets so fed up with it all that they think about hanging the 'median voter' in effigy: <https://www.lowyinstitute.org/the-interpreter/death-median-voter>). MVT tends to just reduce elections to 'economic rationalism' (<https://www.youtube.com/watch?v=-LAmAaBzQsE&list=PLPMsT2gLJYUjb55Zr-9Dk3HTCs5bP3q2F&index=30> [Lull.]). What's the correlation between pretty much meaningless choices (within the 'first-past-the-post'/MVT-Duopoly) and that particular cancer on any political state (not just democratic Republics) called 'voting for money'? See also "Homo Economicus", "Dutch Disease", "Big government (growth of)", "Reform".

17) Speaking of citizens' actions, 10 or 11 decades ago they were much more common. Today it's not so much that the laws concerning "Initiative & Referendum" (I & R) have changed, as much as it is that I & R's have been hushed up by wars and/or buried in (liberalized) money (laws)⁷⁸³. "The right of redress and the right to representation are two entirely different aspects of self-rule. Each enjoys constitutional protection and neither can supplant the other, because each is designed to play a specific role in self-governance. Representation provides convenience (so the people need not be "continually convened for the purpose of governing themselves"), and redress provides protection from the misguided actions of those representatives)." (source) See also "Design", "Provocation".

"The citizens of each state are guaranteed a republican form of government by the US Constitution, Amendment IV § 4. 'In a republic, all power is inherent in the people, and all free governments are founded on that authority and instituted for their peace, safety and happiness. For these ends, they may alter or reform the government in such manner as they think proper. In this country, these are well-recognized political truths, independent of any written constitution or laws.'"

Smith v. Isenhour, 43 Tenn. (3 Cold.) 214 (1866)

Ridley v. Sherbrook, 43 Tenn. (3 Cold.) 569 (1869)

State v. Staten, 46 Tenn. (6 Cold.) 233 (1869)

Henley v. State, 98 Tenn. 665, 41 S.W. 352 (1897)

See also "Government, role of".

17b) See also "World Par Economy" & "Freedom continuum (maturation)", → (real 'democracy' [apart from the drawing of lots] is some degree of economic democracy [is voting for I & R, and tariffs]-- in addition to the basics of legal-administrative democracy [voting for judges, justices, and vote-counters]).

18) A meaningful, as opposed to befuddling, definition of the term in the 21st century could pertain to either: **a**) the removal of special privileges (discrimination) for professional/standing political intermediation (a.k.a. parties), and/or **b**) providing for Initiative & Referendum (I & R) regularities in each state's constitution (which would presumably be more effective and less corrupt after Monetary Reform).

19) One should bear in mind, however, that-- however it sounds in theory-- 'majority rule' in practice (whether honest or fraudulent) has, at least thus far, never held up for very long, because "it confers an aura of [irresistible] legitimacy, decency, and respectability on acts that would otherwise be deemed tyrannical. Liberty and democracy are not synonymous and could actually [be closer to] opposites. The [USA's] founders⁷⁸⁴ intended and laid out the ground rules for a limited republican form of government that [with the inclusion of the Bill of Rights] saw the protection of personal liberties as the primary function of government" (Still, 2019b, mn.6). See also "Libertarianism(s)", "Common law".

[Anti-'median voter's': Turnout spikes when elections are perceived as meaningful, instead of meaningless.]

⁷⁸³ California's ballot initiative(s) from

⁷⁸⁴ This author is not aware of any 'founding father' who went on record as objecting (in any significant way) to the following remark by Samuel Adams, made during the problems of the Articles of Confederation: "I firmly believe that the benevolent Creator designed the republican Form of Government for Man. Will you venture so far as to say that all other institutions that we know of are unnatural & tend more or less to distress human Societies? Will the Lion ever associate with the Lamb or the Leopard with the Kid will our favorite principles shall be universally established?"- Letter to Richard Henry Lee, April 14, 1785 (Adams, 1908, 314-315). See also "Constitution, US", "Imperialism, American". "World Par Economy".

20) Even constitutional republics, “because... [they require so much] civic virtue and disinterestedness [objectivity] among their citizens...[are] *fragile* polities, extremely liable to corruption. Republics [such as the US founding fathers established] demanded far more morality from their citizens than monarchies did of their subjects.... Monarchies [often the next tyrannical or dictatorial step after ‘democracy’] relied on blood, family, kinship, patronage, and ultimately fear.... to hold their societies together” (Wood, 1993, 105). See also “National Identity/Nationalism”.

21) In today’s multi-party Eastern Europe, after 3 “decades of democracy, cynicism about politicians is as widespread as in western Europe. In Slovakia, 63% of people think [that] most elected officials do not care what they think... in Hungary, [it’s] 71%, and in Bulgaria, 78%... [while, in the West,] France and England are [at] 76% and 70%, respectively” (Economist, 2019e). See also “Oligarchy”.

22) Even the classic Athenian “tyrant”⁷⁸⁵ Pisistratus turned against his own ‘democracy’ (after using it to put himself in place), writing (apparently without shame) to Solon, c.560 BCE, that “...the Athenians... fare better [now] than they would under a democracy, for I allow no one to run riot” (Diogenes Laertius, 2018, 27).

23) Soviet democracy; see “USSR” [Solzhenitsyn].

24) In a digital- or ‘post-material values’- age, however, the achievement of something resembling a non-fraudulent ‘democracy’ should not be so extremely difficult or unlikely, given, of course, that people are living longer, have access to unrestricted public information, and are under less pressure. See also “Dumb-downing”, “Bullshit jobs”.

24b) But it probably cannot be achieved without restructuring the basic circulatory system of currency & other monies. “Democracy implies the sovereignty of man; and, since man cannot be sovereign without the money [or currency] power, there cannot be democracy under the political money system” (Riegel, 1944). See also “Derivatives”.

24c) ...nor with such squarely “aristocratic” (as opposed to “democratic”) institutions as a Senate:

“In England, at this day, if elections were open to all classes of people, the property of *landed proprietors* would be insecure. An agrarian law would soon take place. If these observations remain just, our government ought to secure the permanent interests of the country against innovation. Landholders ought to have a [‘invaluable’] share in the government, to support these invaluable interests, and to balance and check the other [house]. They ought to be so constituted as to protect the minority of the opulent against the majority. The Senate, therefore, ought to be this body; and to answer these purposes, they ought to have permanency and stability.”

- James Madison, “Notes of the **Secret** Debates of the Federal Convention of 1787”. See also

“Madison, James (1751-1836)” [*invisible hand*], “Hamilton, Alexander (c.1756-1804)” [*footbinding*].

25) ‘Democracy’ Updates: 8/22- “Remember we are talking about the American definition of Democracy, which is an Oligarchy” (Hudson, 2022). See also “Oligarchy, American”.

9/22- Rigged polls, for rigged vote counting? An introduction: <https://www.bitchute.com/video/Uf0Y5Ax78Sws/> [SR#3920, mn.1]. See also “Methodology” [vs.TheThing], “Duopoly”.

See also “Bernays, Edward (1891-1995)”, “Fin de siècle (c.1880-1910)”, “Fascism”; Gilens & Page (2014); “Parties, political”; App.C: “1-2-3”, “Economic democracy”.

Democratic continuum-

Demographics- See “Baby-boom demographics”.

Demonization- <https://www.smithsonianmag.com/history/a-brief-history-of-the-salem-witch-trials-175162489/> . See also “Polemics”, “World War Two”, “Tolkien, J.R.R.”, “Contempt”/“Narcissism”.

⁷⁸⁵ In the classic/ancient sense, the term refers to a (state) leader who was initially elected or propelled to political power with widespread support from the non-elite public. Why has this ‘3rd Estate’ been so quickly stabbed in the back? In the contest for economic resources (sometimes a.k.a. politics), things with large supply [are typically taken for granted, and thus] have low demand/low prices. See also “Freedom continuum (maturation)”, “Adolescence of Mankind”.

Denial- of certain primary/hard-won lessons from (recent and fairly recent) history:

- a) denying, in the 2020's, that nothing less than the 2-century-old conveyor belt (System) is in the process of breaking down-- or up. See also "Reserve currency", "Dutch Disease", "Reform";
- b) denying the 2010's- that there wasn't/isn't a (ongoing) "*Financial Crisis*", being papered-over with "*Zombie economy*". See also "Debt saturation", "Race-to-the-bottom (of the barrel)", "Imperialism, 'modern'" [life expectancies], "Monetization", "Productivity", "Inequality";
- c) denying the 2000's "Super Imperialism"-meets-'super failure'⁷⁸⁶. See also "Central Banking-Warfare model", "White-collar crime", "Black budget (US)".
- d) denying the 1990's- that the bifurcating '*culture wars*' were a red-herring and diversion, from the looting⁷⁸⁷ of Washington budgets and the entrenchment of neoliberal & neoconservative 'bankmoney regimes' (a.k.a. [political] 'globalization') on all continents. See also "Neo", "*International Intelligence Community (I.I.C.)*";
- e) ' ' ' ' the 1980's- that the Reagan-Bush-CIA administration was (in terms of budgets-finance) just '*military Keynesianism*'. See also "Super Imperialism", "Eurodollars";
- f) ' ' ' ' the 1970's- that *women* do not have equal rights. See also "*Freedom continuum (maturation)*";
- g) the 1960's-70's- that *ethnic minorities* do not have equal rights. See also "Civil National Identity";
- h) the 1950's- the *Intelligence Community-ization* (IC'ization) of Washington and its inheritance of the UK-USA empire. See also (unrescinded) "UKUSA Agreement";
- i) the 1940's- that the world's worst crisis ever *elevated the 'I.C. (& cult of secrecy)*' over 'banks & Jews'⁷⁸⁸;
- j) the 1930's- *monetarism*-- that the money supply, after exploding in the '20's, was simply contracted by 1/3rd in the '30's, as *TAB-bankmoney* is inherently unstable. See also "*Currency Wars, the*", "Russiagate";
- k) the 1920's- that the *Corporate Media Cartel (CMC)* has, at least prior to Op. Mockingbird, been owned by oligarchs and their own CMC groupthink of ballyhoo. See also "Boards/Board Systems";
- l) the 1910's- that the great planning that culminated the larger '*Fin de Siecle*'-era puppet Wilson, the 16th Amendment, the (so-called) 'Federal' Reserve, and Great War (3rd *Currency War*), were due primarily to the needs of the 2nd *Industrial Revolution*. See also "Fin de Siecle", "State Capture", "Adolescence of Mankind".
- m) the 19th & 18th centuries-- that the USA was founded on "conspiracy theory", by conspiracy theorists. See also App.C: "1-2-3";
- n) For perhaps the deepest denial-- of mortality (on Earth)-- see "NeoClassical Economics", → "Ecological economics". See also "Conspiracy theorist", "United States, the", "Civil National Identity", "Franklin, Benjamin" [Bacon].

Depopulation- 1) The (late stage) debt-money demographic straightjacket (characterized around the debt-money world by 'skyrocketing housing prices'⁷⁸⁹) is best exemplified by millennial era Europe, and the neoliberal pilot case of Latvia in particular⁷⁹⁰, which has "lost 20% of its population... since the late 1990's", with similarly "huge immigration from Iceland and Greece" (Hudson, 2016e, mn.21).

⁷⁸⁶ Certainly more than any decade since at least the 1930's, the 2000's were pretty much just one (revelatory) 'massive fail' after another-- arguably > half of the world's 'billion-dollar' institutions made a mockery of their most basic objectives from 2001-10. Most observant citizens would find it easier to list the one's that didn't massive fail than to list the ones that did.

⁷⁸⁷ "If you look at the refusal of the federal government to comply with the federal financial statement laws, since they were promulgated in the mid-90's...[then one doesn't] know... [whether or] not it's [been] disappearing out the back door. We [now] have no reliable financial statements. And when... Dr. [Mark] Skidmore and myself pressured for reliable financial statements, what we got was F.A.S.A.B.-56, and a government promulgation of an administrative policy that [has] said '*We can keep all of our books secret*'" (Fitts, 2019u, mn.7-8). See also "Black Budget", "Federal Accounting Standards Advisory Board (FASAB)".

⁷⁸⁸ See also Quigley [1931].

⁷⁸⁹ "The basis of what drives housing prices is...accelerating mortgage debt.... Your flow of demand is really driven by mortgage debts... If that flow of demand is greater than the flow of supply you're going to have rising prices" (Keen, 2016w, mn.18-19).

⁷⁹⁰ For more detail on Latvia's pilot study (for P.I.G.S.) of debt peonage, extended family co-signings, "50% flat tax", and "highest tax on employment in the world" combined with the "lowest tax on property", see: <https://www.youtube.com/watch?v=h7Bf4d1oIqk>

2) After the fall of the USSR, the former republics did not hand over the state-owned land to the people and then tax it (to support whatever level of gov't was needed).⁷⁹¹ Instead Latvia, for example, "borrowed, primarily from Swedish banks. So in order to buy a house, you had to borrow from the Swedish banks... [that wouldn't] lend in the Latvian currency", but only in Swiss francs, German marks, or US dollars; "so all of this rent... became an outflow that essentially drained all the Baltic economies.... Estonia and Lithuania followed suit. And of course the worst hit was Russia.... You don't need an army to destroy a country anymore. All you have to do is teach it American Economics" (Hudson, 2020c, mn.111-112). See also "Parasitism", "Financialization", "Capital flight", "Russia".

3) In 2010, currency "devaluation reduced [Latvia's] public sector wages by 30%. This helped drag down private-sector wages. Cutbacks in public spending shrank the domestic market and hence employment—and spurred [the unprecedented] emigration of young labor. Workplace rights are being rolled back in a way 19th century industrialists never dreamed they could achieve under democratic governments" (Hudson, 2012g). See also "Neoliberalism", "Usury", "COVID", "Malthus, Thomas (1766-1834)".

Deposit- d.b.t. (legally, just a claim⁷⁹² on a [so-called] 'depository' [i.e. 'state-monetized credit'] institution')
See "Deceptive Banking Terms (d.b.t.'s)", "Depository institutions".

Deposit Insurance- "the opium of the current monetary system" (Ordonez, 2019, mn.17).
See "Federal Deposit Insurance Corporation (FDIC)", "Bank welfare".

Deposit money- d.b.t.; see "Transaction Account Balance (TAB) credits", "Demand Account".

Depository institutions'- (a.k.a. 'depositories', i.e. the m.v.p. of Central Bank double-speak)

1) A more *de jure* (although less common) definition is simply any type of financial institution that *pays* a fixed rate or variable rate of *interest* on the general public's *savings* (d.b.t. 'time deposits') accounts or on the general public's *checking/current* (d.b.t. 'demand deposits') accounts.

2) According to prevalent Fed-speak, however, "depository institutions.... such as commercial banks, savings and loan associations, savings banks, and credit unions.... are financial institutions that obtain their funds mainly through deposits from the public" (Federal Reserve Board, 2015). This is a demonstrably false position. See also "Exogenous vs. Endogenous' (money creation)", "Keen, Steve".

3) 'Depository institution' is still a common d.b.t. [even after the 1980s-'90s deregulations] for what are actually '*monetized credit institutions*'. See also "State-monetized credit institutions (SMCIs)".
See also "Big Lie, the", "Tobin, James (1919-2002)".

Depression- GDP shrinkage for > 2 consecutive quarters is no longer a matter of commodity money "panics" (as in the 19thc) or central banks overdoing "credit crunches" (as in the 20thc).

1) Depressions "are no longer caused by a lack of annual production, or the lack of desire to produce and consume, but by a nation's inability to manage its internal pricing system.... improperly pricing the annual bounty of nature always causes turmoil in commerce and industry, and [results in] a constant demand for excessive debt expansion" (Walters, 1994). See also "Debt saturation", "Zombie".
See also "Debt-Deflation", "Parity".

⁷⁹¹ According to Michael Hudson, the post-Soviet states "could've financed all of...[their] capital investment for the government by...collecting the rising rental value" with simply a land value tax (Hudson, 2020c, mn.111). See also "Georgism (& Land Value Tax)".

⁷⁹² This has always been the underlying reality of banking law in the West: "The holder of a [so-called] deposit considers it his money. However, if a bank goes bankrupt, it can take years for a holder to get his...[account balance] back, if he ever gets it back. First, the liquidator will have to sell the bank's assets and distribute the proceeds among the bank's [higher ranking] creditors. All this time, account holders have no access" to their TAB-bankmoney, apart from 'deposit' insurance... For large-scale "cash managers this gives too much uncertainty. Consequently, they don't just put their money in a bank. If they park their money somewhere, they ask for extra security. *Money market instruments* are used...[for] that" (Wortmann, 2019c).

Deregulation, financial- blurring the distinctions between financial institutions, and eventually between different shades of money. 1) "" (Herod, 2009, 193).

See also "Big Bang", "Hypertrophy", "Industrial Revolution, 2nd" → "Industrial Revolution, 3rd".

Derivatives- (a.k.a. 'counterparty risk'⁷⁹³ hedges) contracts to buy *futures-options* contracts⁷⁹⁴ at a specific price in the future. They can be 'exchange-traded' or (more often) 'over-the-counter', long-term or (more often) short-term; global derivatives are now in the "quadrillions"⁷⁹⁵ not trillions.

1) "Derivatives are bets on the price of assets, and on which way interest rates⁷⁹⁶– and hence, bond prices– will go. Banks place arbitrage bets on stocks, currencies, or anything they want to. The result is a *casino economy*, betting on which way prices will go, rather than actually producing goods and services. But the banks don't use money for this, so the bet is [actually] a '*contingent liability*'.... [Derivatives] are the increasingly dominant speculative part of the F.I.R.E. sector's takeover of the production & consumption economy. It has turned Industrial Capitalism inside out and made computerized [mythomatics-based] gambling, debt extraction,⁷⁹⁷ and raiding the most important part of stock and bond markets.... On balance it's a *zero-sum* game. In fact, large losers who can't afford to pay the winners receive public bailouts. The winners insisted in 2008 that the government keep the game solvent... [with] the Troubled Asset Relief Program [overwhelmingly unpopular with the public], which should have referred to troubled *gambles*– the 'assets' of the winners. The 'crisis' only would have closed down the casino, not the 'real' economy. But the government capitulated and agreed to keep the financial casino's big players solvent, so that winners could collect on their bets. So the central bank and Treasury print enough...public debt to make bad debts good.... incurring \$13 trillion of added federal debt" (Hudson, 2012g). See also "National Debt Economy (NDE)", "Deutsche Bank".

[...while the real economy is on hold]

2) Over the past 3 decades, "...crazy new forms of leverage [became popular]... the real purpose [of which was]... a new, higher form of sucking [vortex] power [which] the financial system used, to push us from the Cat.4 [monetary] hurricane [that] we were in... 10-12 years ago, to a full-blown Cat.5" monetary hurricane⁷⁹⁸ (Vrabel, 2011, mn.122), from c.2002-2007. See also "Monetization".

3) "It's not like all derivatives are evil [fundamentally dishonest & zero-sum]. Derivatives in agriculture have existed in some places... for hundreds of years... and these can be perfectly prudent" (Black, 2016c, mn.134). "*Exchange traded*" derivatives "have a very small markup" in contrast to "*Over-the-Counter*" derivatives (Black, mn.135). See also "Options and Futures".

4) Why did derivatives go overboard? The "earliest derivatives attempted to mitigate interest rate risk and currency risk. In the volatile economic environment of the 1980s, when interest rates and currency values could swing suddenly and unpredictably, big companies were desperate to protect themselves; derivatives became the way. An interest rate swap allowed a company to lock in an interest rate and pay a fee to another entity-- a counterparty, as they were called on Wall Street-- [that was] willing to take the risk that rates would suddenly jump.... The counterparty, in turn, would often want to hedge, or reduce, its

⁷⁹³ "The credit risk of derivatives contracts is usually called *counterparty risk*" (Gregory, 2015, 12).

⁷⁹⁴ The most common underlying assets for derivatives contracts are: stocks, bonds, commodities, currencies, interest rates, and market indexes.

⁷⁹⁵ Hence, according to prof. Skidmore, "you could funnel and hide tens of trillions of dollars easily" (Skidmore, 2021, mn.26).

⁷⁹⁶ The "interest rate derivative market is something like 80% of the total [in] derivatives" contracts, "which, before they changed the counting procedure... was \$1.48 quadrillion" (Zang, 2017, mn.8).

⁷⁹⁷ *Financial Times* commentator Martin Wolf would seem to agree with Hudson here, editorializing a few years ago that the "giant hole at the heart of our market economies [debt-money extraction & debt-saturation] needs to be plugged" (Wolf, 2014).

⁷⁹⁸ The "derivatives industry, made mortgage lending problems worse, shifting [the] risk that is the basic property of derivatives in directions that became so complex that *neither the designer nor the buyer* of these instruments apparently understood the risks they imposed, and implicated derivative owners in risky contingencies [that] they did not realize they were assuming" (Schwartz, 2009, 21).

own risks by entering into an offsetting trade with another entity. Which would then want to hedge *its* [sic] risks. And so on. [By the 1990's]⁷⁹⁹ Trading derivatives could often seem like standing between two mirrors and seeing the reflection of your reflection, *ad infinitum*" (McLean & Nocera, 2011). See "Insider trading".

5) Compared to *exchange-traded-derivatives* (ETDs), *OTC derivatives* (a.k.a. 'swaps') are less standard...and are traded bilaterally...between 2 parties. They are private contracts, traditionally not reported... Hence, each party takes counterparty risk with respect to the other party... [which is] an unavoidable consequence of the OTC derivatives market. A relatively small number of... 'too big to fail'... banks are...dominant in OTC derivatives.... Since the mid-1980's, all exchanges have had... a *central counterparty clearing* function to guarantee performance and...reduce counterparty risk" than that of exchange traded derivatives at \$50 billion... even at this point OTC markets were more significant due to the fact that they are longer-dated (...a 10-year OTC interest rate swap is many times more risky than a 3-month interest futures contract)" (Gregory, 12). Within a few years of the deregulation of OTC derivatives with the *The Commodity Futures Modernization Act of 2000*, their outstanding aggregate notional volumes climbed into the hundreds of trillions, due to the popularity of credit default swaps and other custom-tailored contracts with flexible maturity dates. As of 2014 there were approx. **\$700 trillion**⁸⁰⁰ in outstanding notional OTC derivatives, vs. only about \$60 trillion in exchange-traded derivatives (ETD) transactions (Gregory, 13).

6) Like the LIBOR interest rate that underpins approx. half of OTC derivatives swaps, the derivatives markets "influence interest rates, currency values, credit costs, share values, and commodities, including food, fuel and precious and base metals... [This swaps] market was oligopolistic⁸⁰¹ and became a goldmine for the big banks. Almost all swaps [had] a bank on one side..." and >90% of the derivatives swaps were held by just 4 big banks (Tuberville, 2013). See also "Central clearing counterparties (CCPs)".

7) More recently, over 90% of (self-reported) OTC "derivatives market assets have fallen into the hands of...a half dozen banking behemoths"⁸⁰² (Lew, 2017). See also "Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)" (SIFI Cartel).

8) The *Dodd-Frank Act of 2010* "forced the Commodity Futures Trading Commission to implement rules moving a large swath of the [swaps] market onto 'Swap Execution Facilities' or 'SEFs'.... If the banks can rig LIBOR, [then] rigging SEF transactions is child's play" (Tuberville, 2013).

9) The largest component of derivatives "is interest rate swaps, and so we've seen...for the past 30 plus years... a...bull market for bonds, because interest rates on bonds have been doing down, down, down down down.... And as that has happened, we've turned into what I call *Planet Debt*...[just] issuing more paper and more paper and more paper..." (Fitts, 2017b, mn.38), until the concurrence of debt-saturation and zero interest rates, whereupon the tide inexorably turns, everything gets more expensive, and the people revolt/reform (be it foolishly or wisely). See also "Deficits/Surpluses", "Criminalization of Banking", "Vortex, monetary", "LIBOR", "Debt cycles".

Design (Knowledge Age)- (assigning value weights; a.k.a. 'quantum age')

"When even the brightest mind in our world has been trained up from childhood in a superstition of any kind, it will never be possible for that mind, in its maturity, to examine sincerely, dispassionately, and conscientiously any evidence or any circumstance which shall seem to cast a doubt upon the validity of that superstition. I doubt if I could do it myself."- Mark Twain, *Is Shakespeare Dead?* (1909)

⁷⁹⁹ In 1994 *Fortune* magazine quoted a bank executive calling derivatives "'the basic business of banking'" (McLean & Nocera, 2011).

⁸⁰⁰ Fmr. Goldman Sachs VP Wallace Tuberville also lists "\$700 trillion" for 2012. According to the BIS, 2014 was near the peak, and the 'global derivatives market' has since declined to \$613 tn. (SIFMA, 2018, 57).

⁸⁰¹ Derivatives "swaps markets are highly balkanized and many are dominated by [just] 1 or 2 banks" (Tuberville, 2013).

⁸⁰² All of them are from the US, in a not-unusual order: 1. Citigroup (at \$54 tn. in self-reported OTC derivatives), 2. JP Morgan Chase, 3. Goldman Sachs, 4. Bank of America, 5. Morgan Stanley, and 6. Wells Fargo (Office of the Comptroller, 2017, table 2).

1) The expediency of judgement “is designed to deal with the world as it is.... Animals do not redesign themselves or their lifestyles. They survive. They adapt (de Bono, 184; 187). In our 20th century world, “[a]lthough design does happen we have **never seriously developed a design culture**. We know that progress depends on discovery, inventions, creation and design, but we have simply supposed that it happens anyway. It is supposed to happen by chance or through those few individuals who are motivated to move forward instead of simply adjusting to what is” (de Bono, 184). “Creativity can be taught and so can design. But first we have to realize that these things are just as important as judgement” (de Bono, 1999, 187). See also “Industrial Revolution, 3rd”, “History” (distilling social data to social knowledge).

2) “History says that we are not proactive [design], rather we are reactive [judgmental]; but in the end we [have still] tend[ed] to advance over time.”- Nathan Martin. See also “Great Extinction”.

3) the "Information Age is over. We can now get [ad nauseum] all the information we want. Information is no longer the bottleneck. *Thinking* is the new bottleneck.... Billions are [still] spent on information technology. How much is spent on better thinking? Virtually nothing" (de Bono, 1999, 205).

4) “At least one third of every university course should be devoted to design” (1999, 60). See also “Academia”.

5) In the 21st century, “now that... you have robots do the work and you’re mechanizing production, people should be able to have a role in production where they actually use their brain, use their creativity. They can design. We’re supposed to be living in a leisure society, so they’re supposed to have enough free time to be imaginative and...creative and to be more productive and self-fulfilling” (Hudson, 2017i, mn.31). See also Inglehart, 2006 (post-materialist values).

5b) Hasn’t happened yet? Big data #-crunching and “Markov is...[just a] tool...it should not be elevated to a system of the world” (Gilder , 2018, 89). See also “Google”, “Provocation operation”.

6) “If you blow that brand, you’re sunk”; “I have always found that the Win-Win [of designing value] is always there. But you will see culture” that are very stuck on Win-Lose energetics, and they’re addicted to it... Part of it has grown up around the fact that the industrial economics really are Win-Lose; whereas the I.T. economics are Win-Win. So part of this is the economy changing (Fitts, 2017k, mn.14; 20-21). See also “Industrial Revolution, 2nd”, “Industrial Revolution, 3rd”.

7) “Imagination, of course, is the money of childhood.”- Kinky Friedman⁸⁰³

8) “You may discover the truth but you need to design value” (de Bono, 92). “The purpose of any design is to deliver value. If there are no values, then there is no design” (de Bono, 232). See also “Truth serum”.

9) Design Updates: 7/22- According to many psychologists like Mattias Desmet, Social Psychologist Solomon Asch’s “conformity experiments” from the 1950’s ‘prove’ “the effect of [late 2nd millennium-type] *mass formation*⁸⁰⁴. In my opinion, all that Asch’s [classic] experiment proves is that it takes 7 lying participants to convince 1 [emotionally bought-in] person of an obvious falsehood. That’s how costly [and doomed] the control grid is.”- <https://home.solari.com/book-review-the-psychology-of-totalitarianism-by-mattias-desmet/> , regardless of what it gets away with or gets-over in the near term. See also “Human beings”, “Integrity”, App.C: “1-2-3”. See also “Humor”, “Provocation operation (Po)”, “Totalitarian/Nanny State”, “Democracy”, “Industrial Revolution, 3rd”, “Methodology (culture)”.

⁸⁰³ The Texas Hill Country-based humorist/musician has sometimes described himself as “the oldest Jew in Texas not to own real estate”. In 2006, Friedman won 13% of the vote for governor of the state.

⁸⁰⁴ So-called “mass formation” (for human beings as opposed to, say, primordial minerals) is one of those 20th-century/late-2nd-millennium type concepts; i.e. not much more than something to be dispelled in the first half of the 21st century. “”- .

Design, human- (neo-international astrology; i.e. 'simple human being decency') 1) "Let the mind be enlarged... to the grandeur of the mysteries, and not the mysteries contracted to the narrowness of mind."⁸⁰⁵- Francis Bacon (1561-1626) https://www.youtube.com/watch?v=Gwtju3J_VDg [WhoBy]

1b) First were the artists: <https://www.youtube.com/watch?v=CPXSAEHvqw> [SignIn?]

2) Nonetheless, "[t]he ego⁸⁰⁶ in and of itself is a highly destructive⁸⁰⁷ dynamic which will destroy any relationship, company, and any country" (Pieczenik, 2019c, mn.4). See also "Big government (growth of)", and/or (its euphemism) "Public-Private Partnership (PPP)".

2b) Is, or can, the effective globalization of 'soul charts' (per Chaldean, Vedic, Pythagorean, and [now also] Chinese cosmological observations) be of practical use in this (rapidly digitizing) 21st century? Why is "our time put into defending and protecting ourselves [reconciling soul & ego, instead of]...figuring out productive ways of life [that do not] put such a limit on our freedom. We...[should] really slow down and figure out...where is the control, and then how do I put my time-- my life, my DNA, literally-- into [something that is] being productive..." (Granogger, 2022, mn.56-57). See also "Productivity", "Service sector", "Humor", "Soddy, Frederick".

3) Science? "[S]ubatomic particles that are nearby each other influence each other in some way, such as the direction they spin in. However, the [hitherto considered] strange effects of entanglement mean that when these 2 particles are separated, no matter at how vast a distance, if one is changed, [then] the other goes through the same [some would say 'karmic'] changes at exactly the same time, meaning these two particles are intimately and forever connected. [This] principle of *entanglement*... [will soon] be used by *quantum* devices for...exponentially faster communication of information."- <https://www.rt.com/op-ed/512443-quantum-leap-china-internet-network>

3b) "Biochemistry neurology is like light, electricity.... It's not difficult... [See the] gene expressions, through the deregulated, closed up proteins of those genes.... You've got that responsibility; that's the soul. You are the one who brings the freedom.... That's who we are."- Wim Hof, <https://home.solari.com/special-solari-report-cold-therapy-and-breath-the-wim-hof-interview2>, mn.39-41; 48. See also "Health".

4) & 'Social science'? See also "Psychology", [a mediocre cure for] "Learned Ignorance" ['social sciences']. See also "Freedom continuum (maturation)", "Integrity".

[corp. boardroom, circa late '70s-early '80s; see also "Industrial Revolution, 3rd", "Revolution"]

'Desk, the'- The Open Market Trading Desk at the New York Fed is responsible for "creat[ing] conditions in Reserve [interbank/RAB] markets" (Federal Reserve Bank of New York, 2013), in conjunction with the technical expertise of the primary dealers.

1)

See also "Primary dealers (23)", "Open Market Operations (OMOs)", "System Open Market Account (SOMA)", "Federal Reserve Board (in Washington)", "Interest rates".

Deutsche Bank- (est. 1870; famously corrupt for the past century; i.e. 'the Bundesbank's Doppelgänger')

1) "the leading bank in Germany... keeps failing [Capital Adequacy] stress tests. It just doesn't have enough capital...because it's had one series of scandal after another-- frauds, predation... funding terrorists. And it just continues, year after year... LIBOR [eurodollar rigging].... Deutsche Bank's problems with capital are so deep and so perennial that they have driven Germany...[and] the EU's response

⁸⁰⁵ "'Dirt is only misplaced matter'-- a typically Western [i.e. dualist vocabulary] attitude" (Quigley, 1966, 1233).

⁸⁰⁶ "I surrender human reason as a vain and useless faculty, given to bewilder, and not to guide us" (Jefferson, 1823).

⁸⁰⁷ <http://www.emophilips.com/video/video/176?fbclid=IwAR16TEHgeW7F7PdCwtQdWaKLVzc7QtLAScc-teJBFifLqQXIQaapmYHwoGM> ['UnitedNationsSquareDance']. See also "National Identity/Nationalism", "Globalism".

to...Basel III, which is the latest effort...[by the BIS talking shop] to raise capital requirements. Germany has been stalling and slow-walking this increase in capital requirements, for a...decade now, out of concern that Deutsche Bank couldn't meet the standards" (Black, 2018, mn.9-10).

1b) This isn't hyperbole. According to the New York Fed's regulatory arm: "The size and breadth of errors [in DB's US financial reports] strongly suggest that the firm's entire US regulatory reporting structure requires wide-ranging remedial action."- FRBNY report, Dec. 11, 2013,⁸⁰⁸ leaked to the Wall Street Journal. See also "Central Bank (CB)", "Monetary Reform".

2) moved its eurodollar/eurobond operations to London in 1985. See also "Eurodollars".

3) Is its (infamous) US branch mostly a Potemkin Village? Not just the FRBNY, but also DB's "external auditor, KPMG...[have] identified 'deficiencies' in the way the bank's US entities were reporting financial data in 2013.... [Nonetheless,] Deutsche Bank's annual report and other filings have included a [full] letter from KPMG signing off on the bank's financial statements.... [At a Sept. 2013 meeting,] Fed officials described the bank's reporting as *the worst* among its peers, according to the Deutsche Bank email.... [and] Despite finding dozens of problems, the Fed team was 'just scratching the surface',⁸⁰⁹ according to the email."- <https://www.dowjones.com/scoops/letter-new-york-fed-2013-said-deutsche-bank-suffers-litany-reporting-problems/>

3b) The "only major bank in the world that would lend to Donald Trump has been Deutsche Bank... If Deutsche Bank were ever actually cracked down upon... for violating essentially every law related to banking, then... if...[Trump's] debts were ever called [in] by Deutsche Bank, he would be in an immediate liquidity crisis and his empire would crumble" (Black, 2018, mn.11-12).

DB Updates: 4/22- <https://wallstreetonparade.com/2022/04/another-raid-of-deutsche-bank-another-dead-whistleblower/?fbclid=IwAR3bsfVDSXhSGh4MQPDSmaQrkDI30sIWLhNSHewdp8Vb0QxMviG2-gnKiDM>

See also "Big 5 (High St.) Banks", "Systematically Important Financial Institutions (SIFIs)", "Reform".

Developing country- 1) "A patronizing term for former European colonies hitherto called backward... implying a teleological tendency toward *food dependency* and *financial dependency* as a byproduct of the gains from trade, resulting from the international division of labor. A less euphemistic synonym is 'third-world countries'" (Hudson, 2013). See also "Washington Consensus".

2) In terms of monetary-financial dependency, developing countries in 2008 "were paying back \$13 for every \$1 they were receiving in development aid" (Kennedy, 2008, 18). See also "National Identity". Hence, since 2014...

⁸⁰⁸ Source: <https://www.dowjones.com/scoops/letter-new-york-fed-2013-said-deutsche-bank-suffers-litany-reporting-problems/> . Among the "laundry list of issues, the New York Fed found issues with the firm's financial reporting, inadequate auditing and oversight and weak technology systems, according to documents reviewed by The Wall Street Journal" several months later. The Dec. 2013 memo also "said [that] Deutsche Bank had made 'no progress' at fixing previously identified problems... [i.e.] 'material errors and poor data integrity' in its US entities' public filings... shortcomings [that] amount to a 'systemic breakdown'" (Ibid). DB's US branch "businesses, including investment banking, asset management and transaction processing, collectively account for as much as \$600 billion of assets, or more than one-quarter of Deutsche Bank's...total... Large portions of the US operations were previously the responsibility of Anshu Jain, who today is Deutsche Bank's co-chief executive" (Ibid).

⁸⁰⁹ "Deutsche Bank officials were making manual changes to more than 800 pieces of data, the...[2013 memo] said. That data was tied to a variety of balance-sheet items... whose values totaled about \$337 billion" (Ibid).

Development, national- (1) traditionally, the rise of 'national identity' and/or also the 'secularization-sportization' of a [sovereign] political jurisdiction; 2) sometimes a.k.a. a synonym for 'foreign aid' ['developmental economics']

1) From the 1870's, "the old religious holidays...[were re-cast as] secular days of re-creation sanctioned by the State. So the Holy Day became the holiday" (Weber, 1989I, mn.2; also mn.4-13 for a tour of the 'national'-'secular'-'sports' culture). See also "Monetization".

2) "As applied by economists to 3rd-world countries, a process of specialization, leading to food and credit dependency, usually the result of [military] colonialism in the past, and most recently of predatory global financial behavior under Dollar Hegemony" (Hudson, 2013). See also "Imperialism, American", "Dollar Hegemony".

2b) The USAID "was created so that somebody could make money off of international relief shipments from the United States as exports, so that private interests could make money off of our gifts..... It's financing arm, to finance foreign purchases of our excess production.... the shippers have to get paid, and the insurers... and the ship-owners.... [almost all] international private companies" (Cook; 22-6-12, mn.55-56).

2c) It's estimated that "the international aid which comes from so-called rich countries is...nothing compared to the kind of money which is flowing out of Africa and Latin America, among others, via tax havens. Tax havens allow the whole trail to be... kept secret... [and] is at a scale which is actually inhibiting the development of countries" (Evans & Tyler, 2017, mn.21). See also "World Bank". See also "Sovereignty".

Development, economic- (prerequisite for 'national development')

1) Basically, with the formalization of "Separation of Powers" in the "Enlightenment" era, things got rolling.

1b) Simon "Kuznets [quantitatively] identified a new economic era-- which he called 'modern economic growth'-- that began in northwestern Europe in the last half of the 18th century. The growth spread south and east, and by the end of the 19th century had reached [the soon-to-be warring] Russia and Japan. In this era, per capita income rose by about 15% or more each decade, something that had not happened in earlier centuries."- <https://www.econlib.org/library/Enc/bios/Kuznets.html>

2) But a funny thing happened on the way to the forum. Later, Kuznets' quantitative analysis also found that in "poor countries...economic growth increased the income disparity between rich and poor people; [but in] wealthier countries, economic growth narrowed the difference."- <https://www.econlib.org/library/Enc/bios/Kuznets.html> Hence "development" is both economic and political. See also "Estates, 3".

3) With a 3rd millennium-type global "commodity reserve" system, things will be different. "Instead of entering competitive channels of trade in the creditor countries-- for which their markets are not at once prepared-- the [reserve commodities index]

See also “Development, national”, “Modernity”.

Devil- (etym.: New Testament ‘the evil’, Teutonic ‘de evil’; broad use: the most prevalent ‘perversion-demonization’⁸¹⁰ of Shiva or entropy’; its antecedent:⁸¹¹ Shiva-like program of all death/removal; narrow use: fulfilling inappropriate & harmful desires...for a cut; a.k.a. ‘the father of lies’ [John 8:44]); not to be confused with simply ‘dysfunctional institutional incentives’ & wasteful epistemology.) See also “Power”, “Evil”.

1) “...a devil theory⁸¹² of the kind which is always congenial to the unsophisticated” (Unger, 1964, 339). See also “Evil twins?”.

1b) a/the personification... of the willful catalyst of accelerating entropy. See also “Ecological Economics”, “Hell”.

2) Of course in the larger picture, God is The Great Conspirator and Satan⁸¹³ is His devil. “The [old] devil doesn’t just want the planet. It hates us! We’re a more advanced life-form...[but] just at an embryonic level....[So devil thinks:] ‘*God look how powerful they are! If I can just get control of them, they’ll build whatever I want. [And then] I’m gonna tear them inside out before I flush them down the toilet*’ So God says [as usual]: ‘*Alright, have your way with my larva. It just makes them tougher*’” (Jones, 2020, mn.30-31). “Provocation Operation (Po)”, “Design”.

3) In other words: a) an extra-dimensional (‘magic’), b) stalking-horse (‘provocateur’) whom is c) mentally ill.⁸¹⁴ See also “Corporations (and corporate ‘personhood’)”, → “Statism”.

4) (in the early modern sense) a “special interest that usually works best unseen. As the poet Baudelaire noted, “*The devil wins at the point he convinces people that he doesn’t exist.*” Financial wealth [was long]

⁸¹⁰ personalized/emotionalized... ‘in your face or business’ (not just some abstract), for the purpose of captivity/enservment and/or destruction, almost always by way of dishonesty. “Evil it will not see, for evil lies/not in God’s picture, but in crooked eyes/not in the [determinist/long-term-orientation/understanding] source, but in malicious choice/and not in sound but in the tuneless voice.”- J.R.R. Tolkien’s poem to celebrate the conversion of his friend C.S. Lewis to Christianity, 1931. “Tuneless”, of course, is a form of dumb-downing, and ‘a devil’ is often characterized (as if anyone could keep up that act forever) as an over-simplified/over-centralized version or manifestation of evil. See also “Evil”, “Dumb-downing”.

⁸¹¹ Westerners, since the naming of ‘Europe’ in ancient Greek times anyway, have not necessarily taken *state capture* (a.k.a. grand theft state) as some inevitable force of nature, but as something rather more like a crime (and something stupid) that should be corrected. Hence, the ‘natural force’ of Shiva, or (to oversimplify) yin side, was not just written off as half of an inexorable cosmology (program); it was, rather, intentionally demonized as a willful/scheming ‘bad actor’ provocateur, standing in the way of all things good & proper-- a.k.a. whatever was ‘politically correct’ or most popular at that time.

⁸¹² Some Russians have a ‘devil theory’, pertaining to the civilization that is directly precedes them in Carroll Quigley’s line of 16 civs. <https://www.geopolitika.ru/en/directives/curse-william-okham-his-razor-damned> (Dugin, 2021); see also “Civilization” [Western, Orthodox]. “Nominalism”. For a simpler ‘devil theory’, see simply “Methodology”, “Lying”.

⁸¹³ “Let me tell you something. When you’re a kid... and you’re in a basement [prison (or Plato’s Cave)] and... when the door opens up, buddy-boy, that’s what you’re gonna see. You see that look right there, and it’s bad. In fact, most Satanists don’t even like to get possessed, and they don’t even make that face. That face is called ‘The Joker’, ladies & gentlemen, cause when people start making those faces in Satanic rituals-- that’s why they wear masks-- they start stabbing each other and things, because that demon wants one thing.... It’s sick. It’s evil. It’s empty; and it’s a [not-so-great] joke” (Jones, 2020, 57-58). See also “Usury”, “Compound interest”, “Zombie”.

⁸¹⁴ For millennia, ‘devil’ was basically a 2-syllable way of saying “mental illness” (and probably a .8-to-.9 correlation)...from primordial times right up to the Fin de Siecle era of the late 19th century & c.1900, wherein mass “media” programming & saturation-repetition/subliminal advertising (particularly of cheap-product, mass-market ‘consumables’) started filling-up the [in terms of Design] “not-self” social minds & worry-prone imaginations of “the masses” [many of them, indeed, right “off the turnip truck” (of rural life)] with innumerable ‘gotta have it’-in-order-to-‘avoid it’ social neuroses & phobias [concerning what ‘everybody else’ might be secretly ‘thinking about’ them]. These millions of “passing [superficial] fads” agglomerated into long-term, strategic social trends, and such matters have been left to “the market” cum “Intelligence Community” ever since... And yes, ‘someone’ had to tame that fire (https://www.youtube.com/watch?v=E9e9tp3_PE8 [Luci]). See also “Market fundamentalism”, “Cultural Calendar”. At the beginning of that (still institutionally-‘formative’) era, about 80% of the population were still farmers (with 1 or 2 newspapers to choose from). By c.2000, it was more like 80% living in cities with 800 multi-media channels. The main point of the entire 20thc was this “midwife to the Modern” role-- an entire ‘self-medication’ & ‘use-your-illusion’ century of (increasingly) being able to self-actualize with one’s own market choices... to the point where “the Devil” (arguably anyway) was on the endangered species list in year 2000... But not-so-fast there-- the big institutions were (and still are) foundationally structured 100% as they were in that FDS era. Is this a problem? See also “Fin de Siecle (c.1880-1910)”, → “Intelligence Community (IC)”, “Cult of Secrecy, the”, “Freedom continuum”.

called '*invisible wealth*', in contrast to [old school] 'visible' wealth in the form of landed property..." (Hudson, 2013).⁸¹⁵

4b) (in earlier stages of transitioning from early modern to maturation) See "Fin de Siecle".

4c) (in latter stages of transitioning from early modern to maturation) 'really stupid'⁸¹⁶ stuff from on-high, in order to provoke 'the westerners'/citizenry into taking 'back' their state' (in this day & age 'back from' what George Gilder has characterized as "hierarchical hidden Markov models"⁸¹⁷). See also "COVID", App.C: "1-2-3".

Dialectic- (epistemological 'herd management' ↑). See "Epistemological undergrowth (& the F.I.RE sector)", "Hell".

Dictatorship- a state/norm of one-way communication, without (meaningful) feedback or accountability.

1) [can be military and/or *financial* (usurious) in character] "We cannot mortgage the material assets of our grandchildren, without risking the loss also of their political and spiritual heritage...[with so-called] democracy... [becoming an] insolvent phantom...tomorrow" (Eisenhower, 1961b, mn.11). See also "National Debt Economy", → "National Security Agency (NSA)"; "Academia", → "Orwell, George".

⁸¹⁵ For more on the triumph of the new, 'invisible wealth' aristocrats-oligarchs (i.e. 'adolescence') over the old, 'landed wealth' of the nobility-aristocracy (i.e. 'mankind's little dude days'), see also "Aristocracy (& nobility)", "Glorious Revolution, the".

⁸¹⁶ "The most mentally deranged people are certainly those who see in others indications of insanity [that] they do not notice in themselves." (a.k.a. projection)- "The Devil", by Leo Tolstoy, 1911. See also "COVID", "Intelligence Community (IC)".

⁸¹⁷ a.k.a. bad philosophical assumptions. See also "Google".

⁸¹⁸ But what ([eco-]strategic) "boo-boo" did 1916 & 1968 have in common? See also "**National Debt Economy**" [.devil game], "Productivity" [.service sector]; "Provocation", "**Primary Sector Economics**".

1b) [can also be incipient] It was only after the ‘reforms’ of the 1930’s that the Federal Reserve Board became fully autonomous. The “Board is now free to reserve to itself the widest possible discretion in the use of its powers under any circumstances that may arise. What certainty is there that it has not already changed its mind...? ...What does the public know of the real aims of the Board?” (Fisher, et. al, 1939). See also “Globalization”, “China”, “Empire (in the so-called ‘modern’ age)”, “COVID”.

2) [solution] “The criteria for monetary management adopted should be so clearly defined and safeguarded by law as to eliminate the need...[for] permitting any wide discretion to our Monetary Authority” (Fisher, et. al, 1939). See also “Monetary Authority”, “Federal Funds (Accounts) for All”.

Diem (stable ‘coins’)- (combining national currency-backed ‘stablecoins’ with the world’s most popular web portal; for “the ‘social inclusion’ of the unbanked” [Huber, 2021])

“Spoiler alert: it’s a glorified exchange traded fund [ETF] which uses [trendy] blockchain buzzwords to neutralise the [mostly US] regulatory impact of coming to market without a [banking] license⁸¹⁹, as well as to veil the disproportionate influence of [tech platforming giant] Facebook in what it hopes will eventually become [nothing less than] a *global digital reserve system*. (Boldness⁸²⁰ in business award incoming.)”- *Financial Times*-Alphaville’s assessment of the “Libra” coin plan, 2019 (Kaminska, 2019).

See also “BlackRock” [.ETF], “Special Drawing Rights” [as ‘the new’ global *bankmoney* reserve system].

1) “Due to its backing with liquid reserves,⁸²¹ the libra [like Alipay’s Yu’e Bao] bears **the characteristics of a money market instrument**, which it combines with the functionality of electronic money. That makes the libra not only relatively safe but also very convenient, especially if the libra is widely used by market participants... Shame to the government that disregarded our money system to the point where one billionaire...[consortium may potentially] degrade the euro” with such payment competition (Wortmann, 2019c, 2). See also “Money market instruments & Money market funds (MMFs)”, “Special Drawing Rights (SDRs)”.

2) “Even if Facebook gave us promises, which it’s done in the past and lied about, and somehow we believed...[that] Facebook had turned over a new leaf-- Facebook doesn’t [even] control it! A bunch of other...nasty heads of these [inaud.] control it... Whoever finds that it would be sensible to take over this organization can take it over, get a 2/3rds vote, and then [the] Libra, they can make into almost anything” (Black, 2019). See also “Local scrip & Complementary currencies”.

3) Unlike cryptos such as bitcoin, Diem is not ‘decentralized’ (i.e. with permissionless blockchains), and instead relies more on the ‘central bank’ (trust) model. See also “Cryptocurrencies and Stablecoins”.

4) Q: **How does it go from being ‘internal’ (tokens) to ‘external’ (or nations’ payment systems)?...**

4b) A1: In April 2020, the Libra Assoc. restructured in response “to financial regulators⁸²² concerned [that] the effort could undermine the power and control of central banks. The group [thus] ... plans to support *multiple* Libra [Diem] stablecoins [presumably 1:1], with each [different ‘Libra’] working like [*simply*] a *digital version of a country’s existing currency*. The organization has also begun talks with Swiss regulators for a [single] *payments license*, and hopes to register with FinCEN, the US Financial Crimes Enforcement Network, as a ‘*money services business*” (Wagner & Kharif, 2020).

4c) A2: In December, all things ‘Libra’ were re-named (the somewhat less-audacious) Diem; and is to be “no longer a supranational basket currency, but a stablecoin based on...[only 1] single national currency at a

⁸¹⁹ The “license...[Libra was] going for...[was] only a money transmission license. This is odd given the system’s ETF-like structure and grander deposit-taking [& making?] aspirations” (Kaminska, 2019). See also “BlackRock” [.ETF], “Money Service Businesses (MSBs)”.

⁸²⁰ Libra “[o]penly stating [that] the intent is ‘to shape a regulatory environment’ rather than comply with the existing regulatory environment is a veiled assertion that Facebook is more powerful than the state... [And for FB] to assume [that] it can also sway international regulatory bodies like the BIS... iis truly ambitious.” (Kaminski, 2019). See also “Local scrip & complementary currencies”, “Anthropology”.

⁸²¹ Each Libra-Diem “issued will be fully backed by liquid reserves held by the libra-organization, in the form of government debt and deposits” (Wortmann, 2019c).

⁸²² Libra’s “original plan led some to characterize Libra as a *security*.. [which] brings much greater regulatory oversight. Some central banks also worried that a popular coin backed by a basket of currencies would undermine their ability to manage fluctuations of their home currency, a concern [that] the Libra Association acknowledged in its white paper” (Wagner & Kharif, 2020).

time... initially...a dollar Diem⁸²³... managed as a blockchain, by means of distributed ledgers. These form a kind of continuous journal.... The nodes are servers operated by member companies of the Diem [prospective currency] syndicate...[confirming] the execution of payments and...[adding] them to the blockchain. Unlike 'open' or 'decentralised' blockchains, the nodes in the Diem network and the Diem users **must be authorised (permissioned)**" (Huber, 2021).

5) Furthermore, "Diem is a programmable means of payment, i.e. payments can be triggered automatically & executed without delay according to the terms of a respective liability or contract... including transactions in the so-called *internet of things* directly... Conventional transfers of account balances-- whether at banks or the central bank-- **cannot** do this"; but Diem's "testnet" (for trans.-per-second) is still far, far slower than the the credit cards (Huber, 2021). See also "Internet of Things", "Industrial Revolution, 3rd".

5b) Privacy? Facebook "(through its...[Novi] entity and the wallet they provide) will have a reasonable (but not definitive) idea of who the users they are transacting with are, because they will almost all be Facebook or WhatsApp users. This is very valuable information. Facebook promises that...[Novi] data will not be given to the core Facebook entity for advertising purposes. They do not say that Facebook data will not be given to...[Novi] (which possibly means it could?). A minor change of details of service could...create a scenario where a user inadvertently allows Facebook to receive...[Novi] data.... [And] there are a helluva lot...[more] loose ends to tie up, including whether or not data will eventually be removed from the public ledger and archived (possibly for a fee). What's more, the Move language that aims to power the smart contract systems that ride atop of Libra is still in the process of being designed" (Kaminska, 2019).

6) Basically "Diem would work like an MMF...." (Huber, 2021). See also "Money market instruments & Money market funds (MMFs)".

6b) However, with "an **active issuance policy**... for example by Novi **directly buying securities on the open market with new Diems**... [then] there...[would be] potential for the development of" money creation [similar to **monetized credit institutions** today]; "fractional reserve banking can [possibly] arise with stablecoins as much as with bankmoney.... And the more Diem or any other such stablecoin ...becomes systemically relevant, the more the problem of 'too big to fail' is reproduced.... [i.e.] to support and stand bail for them in order to prevent worse. Today's monetary system has already changed from a 2-tier system to a 3-tier system" (Huber, 2021). See also "**Money, 3 (contemporary) Tiers of**".

6c) Who is to control the quantity of Diems? "The [nonbank] **authorised resellers**⁸²⁴ will in effect be provided with privileged status, entitling them to potentially very lucrative arbitrage windfalls. But it is unclear if the special arrangements will commit them to making markets even when liquidity conditions are poor" (Kaminski, 2019). See also "Market maker".

7) Hence, with the apparently inevitability of "new private currencies and related new financial institutions... growing into banks in all but name.... [the] large credit card companies that are banks themselves and [have always] cooperate[d] closely with banks...[at] a certain point... realised that Libra...[or] Diem would...[wind up competing] with [them in] the conventional banking sector. They would literally have nourished a viper at their bosom that...[would] bite them" (Huber, 2021). So they all dropped out of the Libra Association in October, 2019⁸²⁵. See also "Cryptocurrencies and Stablecoins".

⁸²³ "A stablecoin denominated in US dollars and in widespread use is suitable to strengthen the global dollar hegemony, [particularly] in developing countries and emerging economies. Whether dollar-denominated means of payment[s] have the form of dollar notes, or bankmoney, or MMFs, or stablecoins is not unimportant for the US Treasury and the Federal Reserve" (Huber, 2021). See also "Dollar hegemony".

⁸²⁴ This is Libra-Diem's "version of the authorised participant/primary dealer" (Kaminska, 2019).

⁸²⁵ The initial 6/2019 Association members that resigned 4 months later included: Visa, Mastercard, Booking Holdings, eBay, Mercado Pago, Stripe and even (the #1 Money Service Business) PayPal. Google Pay, Apple Pay, Amazon, and large banks were never there. The subsequent Diem Association, however, includes the Singapore state investor **Temasek Holdings**, in addition to venture capital firms Andreessen Horowitz, Breakthrough Initiatives, Ribbit Capital, Thrive Capital, Union Square Ventures, and Slow Ventures. Also on-team are Coinbase & prominent blockchain developers, Dutch MSB PayU, and an assortment of technology-dependent co's including: Uber, Lyft, Shopify, Farfetch, and Spotify.

7b) d

See also “Money Services Businesses (MSBs)”, “[Money, 3 \(contemporary\) Tiers of](#)”.

‘Digital Cash/Currency’- (a.k.a. ‘central/national bank-issued digital currency’ [CBDC]⁸²⁶, ‘sovereign digital currency’ [Huber]⁸²⁷; or ‘secure money’ [Ordonez], because it will be a “direct transfer from payer to payee...[with] no bank balance sheet[s] involved” [Wortmann, 2017])

-- will reduce [the 3 tiers of money into 2](#) --

1) ‘Digital currency’ is the term for either ‘grownup’/harvested cryptocurrencies, and/or directly CB-issued digital sovereign money (a.k.a. ‘Central Bank Digital Cash’/CBDC). Some schemes for ‘Digital cash’ are more protective of physical (real) cash than others. The main point? “If you’re going to a world where 7 billion people have smart phones, then you want digital currencies. The leadership has wanted digital currency for [a] decade...[and] you’ve got to build the train track” with crypto experiments, until governments are ready to scoop up the winners, “which the central banks ultimately will do” (Fitts, 2017s, mn.10). See also “Industrial Revolution, 3rd”.

2) broadening “the use of electronic or digital central bank [US ‘federal funds’] money in *public* circulation, [from] not solely...*interbank* [RAB] circulation as is the case today” (Huber, 2018). See also “[Federal Funds \(Accounts\) for All](#)”, Ch.5.

3) “In 2017 alone, about two dozen central banks announced their interest in CBDC” (Huber, 2018).

4) [Proposed national digital currencies like the Swedish e-krona are already structured on base \[RAB\] money, not on bank credit \[TAB\], and thus satisfy the major demand of many sovereign money proponents \(ending ‘fractional reserve’ money creation\)](#). But to the big banks perhaps it is still more about erasing cash from the picture than it is about eliminating TAB-bankmoney.

5) ‘Digital Cash’ is also a 2016 proposal from Positive Money (with support from the *Financial Times*⁸²⁸) to allow everyone– not just banks– to hold electronic money in accounts at the Bank of England (central bank), via the Bank of England’s introduction of (so-called) ‘*Digital Cash Accounts*’. In addition to the oxymoronic (doublethink) character of the name, we think that the Positive Money proposal effectively expands the power of banks-- from creating only Transaction (UK: ‘current account’) (TAB) credits, to **also creating** Reserve money [RAB] (a hitherto unheard of privilege for commercial-investment banks). Positive Money seems really to be referring to an alleged distributed ledger (blockchain)-- a new prospective payment settlement & clearing system. Supposedly it is *peer-to-peer*, like bitcoin, but without the same **blockchain**. Moreover, since the proposed ‘digital cash’ is to be issued as a liability of the central bank, they will control and have an interest in tracking it, not unlike an international police state would plan for a ‘cashless society’...this conversion power **appears** to extend the (money-creating) power of commercial banks to Reserve money. However the tendency of this proposal to move toward the cashless society⁸²⁹ is even more disturbing. The proposal also makes no mention of any (publicly accountable) Monetary Authority or Commission to control the quantity of money in circulation. See also “[Cashless Society \(War on Cash\)](#)”.

6) The conversion from TAB-bankmoney to RAB/CB money **should be kept impossible**, until the introduction of [Debt-free national money](#). See also “[Federal Funds \(accounts\) for All](#)”.

7) Ons Geld’s 2017 CB digital currency proposal, however, clearly stipulates that (their version of) *digital cash* “is a substitute for bank money. It can work at least as conveniently as bank money [TAB], and transition to a digital cash system could be implemented seamlessly, by mandatory conversion of all euro denominated *demand* [TAB] deposits into [so-called] *digital cash* (deposits). Accountholders would not

⁸²⁶ “Digital cash” is a better term than “CBDC” [which is often mixed up with “Federal Funds (Accounts) for All”]; because “when you have created a safe place for money, outside of the banking system, you can [then] close down the central bank” (Wortmann, 2020, mn.22). See also “Cashless Society (War on Cash)”.

⁸²⁷ Are CBDCs public/sovereign” (per Huber) or “private”/unaccountable (per Fitts)? De jure/de facto? See also “Central Banks”.

⁸²⁸ <http://positivemoney.org/2016/02/time-for-a-digital-government-mint-financial-time>

⁸²⁹ Positive Money, in 2016, seemed comfortable with the gradual abolishing of physical cash (as does Prof. Huber, 2017-19), although there is nothing like that in their (2012) book, and since 2018 they have been unambiguous about protecting (physical) cash.

experience any difference in the use of those converted deposits. The change is in the back-end; payment accounts no longer give access to the bank's balance sheet, but to the personal digital wallet of the account holder, containing virtual euro[s]. Digital cash does not need to replace physical cash.

Physical and digital cash can coexist without negative impact on the monetary system. Coexistence of digital cash and [TAB] bank money however... might contribute to financial instability" (Wortmann, 2017b), during the transition from the latter to the former. See also "Payment Systems".

8) Basically, a CBDC "the way that it is in the working papers now... is still a claim on the Central Bank. There's always talk about '*giving people* [and non-banks] *access to the central bank balance sheet*', which means that they [would] have a claim in the assets of the central bank... [Thus] as it is now in the papers, you will get a *giant* [sic] central bank.... [and] The commercial banks [would] have to, one way or the other...[borrow] from the Central Bank, with collateral at the Central Bank. So the Central Bank will grow and grow and grow. And...[if] it is top-down, forced [on] the banks, [then] you have a good chance that the Central Bank will *not* get the *best* assets out of the existing banking system. So CBDC might end up as [just] creating a giant, bad central bank, which is not very good to back up your currency" with (Wortmann, 2018b, mn.16-17). So CBDC should not just be the only reform, for that would be "concentrating risk in one [mono?] bank. But if you do it with the view to decouple the currency from underlying [financial] assets, so to go to a system where we have *intangible liquid assets*, [or] money objects, which have nothing to do anymore with assets [inaudible] on *any* [sic] bank balance sheet, then you make your own currency safer", by "deleveraging" the currency with a "citizens' dividend" (Wortmann, 2018b, mn.18-19).

9) China's PBoC, not the Swedish Riksbank, is (as of **summer, 2019**) "poised to become the first major central bank to issue a digital version of its currency", tethered to the yuan, and without anonymity or conversion to physical cash stipulations. "Consumers and businesses...[simply] download a digital wallet on their mobile phone, and load the digital cash [purchased at parity] from their account at a...bank... [not very different from] going to an ATM.... [except that the state then has] the ability to track money electronically as it changes hands... [supposedly just for] combating money laundering and other illegal activities... [F]ormer PBoC Governor Zhou Xiaochuan... wanted to protect China from having to some day adopt a [digital] standard...designed and controlled by" foreigners. "As the PBoC's digital money is [simply] designed to replace cash... its affect on [overall] monetary policy will likely be neutral.... [Moreover] Da Hongfei, the...founder of open-sourced blockchain platform Neo, said he can't see why the general public would choose the PBoC's digital currency over something [that's already established and] as handy as Alipay" (Bloomberg, 10-11-19). See also "Money Service Businesses".

10) "The killer app [for the 2020's at least] is digital currency" (Fitts, 2019w, mn.28); apparently whether it is done rightly or wrongly. See also "Digital Euro".

11) The "association of private commercial banks in Germany has [also now] called for the creation of a digital *euro*...[in order] to avoid relying on China or US-based services" (Sandbu, 2019). See also "Digital Euro".

12) Will come "to implementation, I guess within the next 1-to-4 years. China is already in a pre-introductory stage, and other leading central banks will not want to be among the laggards.... It will be put into practice...[as] legal tender.... used among banks and nonbanks alike" (Huber, 2020c, mn.10-11).

12b) According to Huber, "introducing CBDC in the US will not be different than using it in China or in Japan" (Huber, 2020c, mn.24). See also "Cashless Society (War on Cash)" [.'Fedcoin']⁸³⁰.

12c) If a run or stampede away from bankmoney occurs⁸³¹, "there is a simple solution... a conversion guarantee... to provide any quantity of [the 'digital cash' or] CBDC if need be...the CB can do that.... Just look at those enormous volumes of QE... that until recently seemed completely...unimaginable" (Huber,

⁸³⁰ "If we use CBCDs, then the Central Bank can simply take taxes [directly] from our accounts. We know that the World Economic Forum has said: '*It's 2030. You'll have no assets and you'll be happy...* With a digital control system, we can in fact take away your assets'" (Fitts, 2021f, mn.6). See also "Internet of Things (IoT)", "Slavery" [collateral].

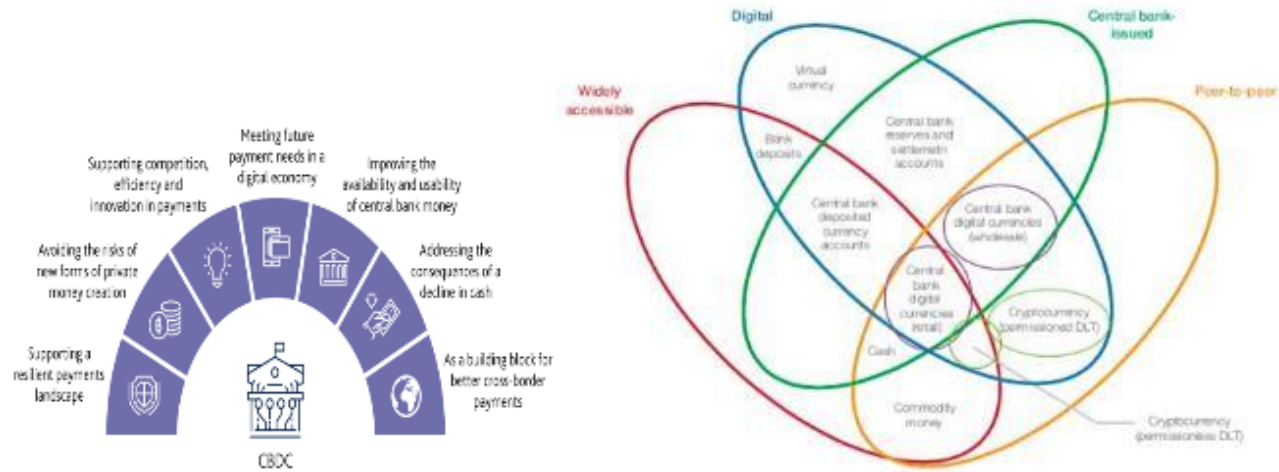

⁸³¹ The Philadelphia Fed, c.2020, "said...[that CBDCs are] likely to drive banks out of business... in...a Crisis or shock" (Werner, 2021, mn.53).

2020c, mn.14-15). And now “there is so much CB money existing-- digital currency...[by another name] that it’s really no problem to convert existing [TAB] deposits, according to customer demand” anyway⁸³². And CBs buying “government bonds on the Open Market and...[paying] for them with CBDC is an appropriate and effective way of bringing CBDC into circulation” (Huber, mn.17-18). See also “Parity”.

13) Digital Cash/Currency (CBDC) Updates- Summer’22-

https://en.as.com/meristation_en/2022/08/02/news/1659395606_575815.html [‘WhatHappenedtotheNazgul’]

See also “Cryptocurrencies and Stablecoins”, “Cashless society (War on Cash)”, “Monetary reform”.

[Treasury-CBDCs & types of ‘currency’]

Digital Euro- The European Central Bank’s primary scheme to steal ‘monetary reform’s thunder, by issuing supposedly “safe”/digital versions of the current Euro (as run by the ECB [without reform, just technocracy]) (Wortmann, 2020, mn.9-15⁸³³; mn.24-25). See also “Orwell, George”.

1) “I believe that a digital euro offers 4 important advantages: (1) a safe European common currency without the need to create political union; (2) a monetary order less prone to investment boom-bust cycles; (3) an end to the sovereign-bank doom loop; and (4) the establishment of the euro as a key international [reserve] currency” (Mayer, 2019). See also ‘Reserve currency’.

2) “At this point... the [Dutch] initiative...[has been hijacked by] Frankfurt, and that we will have a hard time to take back initiative in the Netherlands and...[elsewhere] in Europe” (Wortmann, 2020, mn.27).

2b) From the ECB’s initial “Report on a Digital Euro” (2020), the (proposed) “digital euro...[has been a Central Bank] liability”; and with the EC’s official endorsement of that concept earlier in the year, the main point (of reform proposals such as Ons Geld’s) is “beyond...debate.... They don’t want to talk about that” (Wortmann, 2022, mn.12-13). See also “European Commission (EC)”.

2c) The EC also dismissed Ons Geld’s other main point. A digital euro “we made clear, should not be an alternative to cash... Physical cash should always be there...it is the most secure way...[and] is protection against cyber-warfare...[etc.]... One of the pillars of the whole monetary system...[must] be that physical cash...[must] remain [significant].... There...[is] unanimity in Dutch politics that” cash should not be abolished, but the Central Banks persist, because doing so “takes away an alternative that we have to bankmoney. Our idea is to have a digital euro to replace bankmoney. Their idea is to have a digital euro to replace *cash*”⁸³⁴ (Wortmann, 2022, mn.13-15). See also “Cashless Society (War on Cash)”.

3) Other reformist plans sound similar. “The first step towards the euro as digital *central bank money* would be to create a euro bank deposit which is fully backed with central bank money. The ECB could

⁸³² “Most of the unfounded worries about bank financing would be rendered irrelevant if the trillions that flow to the banks in the form of *excess reserves*, as a result of Quantitative Easing were made usable for the banks as CBDC and thus also accessible to the public” (Huber, 2021). See also “Interest on ‘Excess’ Reserves (IOER)”..

⁸³³ What seems to have subsequently blossomed into the ECB’s “digital Euro” scheme was (perhaps initially) championed by the Dutch central bank (a constituent of the ECB), as a way to head off Dutch parliamentary moves toward substantial Monetary Reform.

⁸³⁴ ...basically in return for “debt forgiveness”, in the Eurobond-insolvent EMU.

create the central bank money necessary for covering the deposit by purchasing government bonds (as proposed in the Chicago Plan). The ECB has [already] done this since 2015 to increase the money supply.” (Mayer, 2019)⁸³⁵.

See also “Technocrats”, “European Central Bank (ECB)”.

Digital Greenbacks- See “US (Treasury) notes”.

Digital Money- (synon. ‘book-entry money’ [in Europe]; also [in more recent usage] ‘electronic money’, or more simply, just money that is ‘on account’ [non-physical])

1) Although ‘digital money’ and ‘account money’ have the same denotation-- essentially meaning non-physical/non-cash, “payment systems” money (either in the past or present), the connotations are different: *digital money* is obviously more compatible with modern usage, as ‘digital’ is a leading synonym for the computer age. See also “Account money”, “Digital Cash/Currency”.

2) From the 3rd millennium BCE, accounting entries have been keeping track of assets and liabilities. There never would be any account/digital money without a Payment System. See also “Payment Systems”.

Digital Yuan- (formal: DCEP-- Digital Currency Electronic Payment [of the PBoC]).

1) According to the People’s Bank of China, “Alipay and WeChat soon ought to use digital yuans... Alternatively, they might issue stablecoins backed 1:1 by central bank reserves [and/]or digital yuans... [I]ntroduction of DCEP is targeted for the 2022 Beijing Winter Olympics” (Huber, 2021).

See also “Cashless Society (War on Cash)”, https://www.youtube.com/watch?v=Fdqv_4IWzBo [PolyM’21]; “Digital Cash/Currency”.

Diminishing rate of understanding- “As society grows so much more complex as to be ‘thing-oriented’, ‘people tend to lose the ability to integrate the overall system [information overload]. Perception is broken down into a series of sensations. Culture turns into a way of ‘amusing ourselves to death’, as Postman [1985] put it, rather than as a key to understanding the world’s structure and how individuals and society interact. But the main cause of a diminishing rate of understanding the economy results from analysis becoming a public-relations exercise, based on *euphemisms* promoted by the vested interests to represent their behavior in a positive light, and under no circumstances to be a zero-sum activity or otherwise exploitative and rent-seeking” (Hudson, 2015b). See also “Death culture”, “Orwell”.

1) See also “Corporate Media Cartel”, “Academia”, “Dumb-downing”, “Deceptive Banking Terms”.

Direct banking- (synon. ‘online banking’; a ‘direct bank’ is an online and/or mobile-only bank)

Direct circulation- (a.k.a. ‘peer-to-peer’) Cryptocurrencies are working on how to circulate “directly ‘from wallet to wallet’, without intermediate bank transfer of reserves [RAB], as...[has to be] the case with indirect bankmoney transfer” (Huber, 2018, 7). Whether or not such endeavors eventually prove feasible;

⁸³⁵ More specifically, the banks “could obtain the Reserves needed to back secure deposits by selling government bonds they already hold to the ECB. Or they could buy government bonds in the markets against other assets they hold. Where needed, the ECB could accept other bank credit than government bonds from banks in exchange for Reserve [a.k.a. ‘Central Bank’] money and replace these claims with government bonds when they are redeemed. Thus, a secure deposit and asset as safe as banknotes would be created without any form of state backing needed. In a 2nd step, the secure euro deposit could be consolidated on the ECB’s *balance sheet* and set up as digital central bank money that can be transferred peer-to-peer using distributed ledger (i.e. blockchain) technology. Thus, the euro would become an ‘*asset token*’, backed *solely* by government bonds. Embedded in the token could be a ‘smart contract’ stipulating the nature of its backing and rules for the creation of new tokens (see below). The smart contract would be tantamount to a digital watermark identifying the token as a valid euro. Entities tasked with proofing transfers of tokens in the blockchain (i.e. ‘nodes’) would only validate a transfer if the token under review were created according to the rules laid down in the smart contract. A token found in a proof of a transaction not to have been created according to the rules embedded in the smart contract would be treated as counterfeit money. Only the ECB-- not the commercial banks as in the credit money system-- would be responsible for issuing digital euro tokens. For users accustomed to paper money, the ECB could of course exchange digital euros at parity into bank notes. See also “Cashless Society (War on Cash)”.

“...it has been established that...[cryptos & digital currencies] are an asset to the holder and a liability to nobody-- not to the issuer anyway” (Walton, 2018, mn.1).
See also “Accounting for public/’sovereign’ money”, “Equity”.

Direct financing- (a.k.a. ‘fixed income investing’) institutions issuing bonds (Werner, 2015b, mn.50). There is also “*Equity* financing” (selling shares), “*Indirect* financing” (taking out loans).

1) Global “fixed income markets are now...about 120 trillion...[not including] derivatives” (Fitts, 2019f, mn.13). See also “Bonds”.

Dirigism- (the political philosophy and assumption of state-interventionism, from the French *dirigisme*-- ‘interventionism’ and *diriger*-- ‘to direct’, as opposed to outright state ownership [‘socialism’]). See also “Public-private partnership (PPP)”, “Socialism”.

1) In narrow usage (mostly positive), the term was coined for the substantially state-directed strategic investment that characterized France’s post-war ‘Trente Glorieuses’, from 1945-75, when real salaries and consumption per capita increased nearly 4-fold or 200%; and also, to some extent, the rise of the East Asian ‘tiger economies’ in the last quarter of the century, and the subsequent Chinese economic ‘miracle’. See also “Window Guidance”.

2) Up until the early 1980’s, “the French financial system was...closed, highly regulated and compartmentalized. The State played a significant role in the organization and functioning of the system”; f.e. “In 1945, the banks were separated into 3 categories (...deposit banks, investment banks and medium & long-term lending banks) with each category being specialized into specific activities.... Alongside [this]... the French authorities multiplied the incentives for non-financial agents (households in particular) to increase their savings and tried to steer these, through the specialization and supervision of financial intermediaries, towards certain areas... In addition, from the 1970s, [the state (up until 1989 anyway)] regulated interest rates, and monetary controls were overseen by government supervisors” (Blot, et al, 2014, 5).

3) The system began breaking down in the latter 1970s, as “global interest rates rose more than the French rates, meaning that [foreign] exchange controls became increasingly necessary to maintain low interest rates in France... [which then] intensified the contradiction between the tighter controls needed to maintain the [dirigiste] financial system and the openness required by European and global economic integration... [Furthermore,] the French banking system was facing a serious crisis [then] ...due [not only] to... the US disinflation policy...[and] higher real interest rates...[but also to] the international debt crisis of the developing countries... and [the] poor profitability of the [French] banking system. The model of *universal banking* (recommended by the Mayoux report⁸³⁶ in 1979) had not yet been...incorporated into the French banking practice, and it was not [to be] until the *Banking Act of 1984*” (Blot, et al., 5-6); which was, ironically, passed and implemented by a Socialist government. See also “Bank, universal”.

4) In broader usage (mostly negative), *dirigism* is often conflated with socialist-type *baksheesh* and kickbacks. See also “Corruption”, “Keynsianism (Abba-ism)”, “Socialism”.

Discount rate- (the Fed’s so-called ‘discount window’ [see below] has 3 rates: synon. ‘re-discount rate’, the ‘interest rate on primary credit’, the ‘federal discount rate’, the ‘bank rate’ [UK], ‘standing facilities’ [in Europe]; not to be confused with ‘the overnight’/fed funds/interbank loans rate)

1) the interest rate at which the Federal Reserve lends interbank money (RAB), collateralized, to **state-monetized credit institutions**, in its CB role as a ‘lender of last⁸³⁷ resort’. See also “Lender of Last Resort”.

⁸³⁶ The “team of financial elites who authored the *Mayoux Report* echoed a widely held perception...associating perverse incentives that undermined the smaller-company sector...[with] the [traditional] underdevelopment of provincial financial centers, the concentration of finance in Paris, and the [ongoing] neglect of [Small & Medium Enterprises] under dirigisme” (Posner, 2009, 77).

⁸³⁷ “Only if a bank is not trusted by other banks will it find that it has to go to the Federal Reserve window to get the [RAB/base] money. And the last thing the Federal Reserve is gonna say is no in that situation. Because if they say no... [then] they cause a bank run” (Keen, 2020, mn.14).

2) More of a 20th century than a 21stc term. “Throughout much of the 1920s, discount window borrowings were more than half of total Federal Reserve assets” (Feinman, 1993, 574).

3) Effectively, the so-called (d.b.t.) ‘discount rate’ has been, since c.2002 the de facto *ceiling* on interbank/RAB interest rates, the (somewhat d.b.t.) ‘FFR’ is its *average/actual* rate⁸³⁸, and the Fed’s ‘overnight reverse repurchase agreement’ (ON RRP) facility has constituted a *floor*-- that is now no longer needed-- since the IOER (bank welfare) policy has been gradually pulling rates upwards since 2015. See also “Channel-Floor systems”.

4) The discount rate was falling into disuse (with only \$250 mn. in loans to **state-monetized credit institutions** in August 2007), prior to the Financial Crisis, wherein loans “peaked at over \$735 billion in November 2008... lending volumes that no one at the Federal Reserve had ever [even] contemplated” (Baumol & Blinder, 2012, 270).

5) Also the interest rate at which member banks may purchase **cash** from the Central Bank with **RAB** (Reserves).

See also “Federal Funds rate (FFR)”, “Interest on Excess Reserves (IOER)”, “Reverse Repo agreements (ON RRP)”.

Discount window- (purchasing interbank money/[RAB] from the central bank) There are 3 primary types of borrowing from the CB/lender of last resort⁸³⁹, all of which are collateralized/secured:

1) *primary credit*- loans to **state-monetized credit institutions** that are deemed to be in good financial condition comprise most of what is meant by the term ‘discount rate’; which is not to be confused with the substantially higher ‘Prime rate’ of interest. See also “Prime rate”.

2) *secondary credit*- this highest rate, for less stable **state-monetized credit institutions**, is set 50 basis points higher than primary credit;

3) *seasonal credit*- this often-lowest rate, typically for smaller institutions with widely varying agricultural or tourism demand, is reset every two weeks.

4) has been “stigmatized”, at least among the so-called “SIFI” banks, as only being for “‘bad’ type” banks (Williamson, 2015, 4); since at least the Great Financial Crisis.

See also “Federal Funds rate (FFR)”, “Channel-Floor systems”.

Discretionary (US budget)- subject to debate and possible change.

1) “In government budgets, interest payments are classified as *non-discretionary*, while social welfare and other long-term programs are categorized as *discretionary*, meaning that they can be cut back as being of secondary priority to financial claims...” (Hudson, 2013). See also “Bail-in”.

2) Congresses ‘discretionary’ budget for FY 2020 (\$1.43 tn.) is now down to approx. 30% of the total **\$4.75 tn.** budget, with the Dept. of Defense now being allotted the majority of the ‘discretionary’ sum.

US budget non-discretionary

- a) \$1.1 tn.- Social Security (transfer payments)
- b) \$0.72 tn.- Medicare
- c) \$0.61 tn.- all other mandatory programs (welfare)⁸⁴¹
- d) \$0.48tn.- ↑*interest payments* (bank welfare)
- e) \$0.43 tn.- Medicaid

US budget-discretionary

- \$0.74 tn.- *Department of Defense*⁸⁴⁰
- \$0.25 tn.- all smaller (non-top 9) departments
- \$0.093 tn. (\$93 bn.)- Dept. of Veterans Affairs
- \$90 bn.- Dept. of Health & Human Services
- \$62 bn.- Dept. of Education

⁸³⁸ The FFR is the New York Fed’s daily calculation of the average rate of interest on interbank [RAB] loans between US **state-monetized credit institutions**.

⁸³⁹ “[A]s a last resort, the Central Bank may lend the extra Reserves [that] a bank needs...” (O’Flynn, 2018, 5)

⁸⁴⁰ The House & Senate defense subcommittees (of the appropriations committees) have most of the control over the discretionary intelligence (IC) budget. See also “National Security Agency (NSA)”, “Federal Accounting Standards Advisory Board” (FASAB-56).

⁸⁴¹ Not including mandatory outlays for Medicaid [\$447bn. for 2021 budget], the “Big 5” large, non-discretionary “welfare” programs (included herein) were (in 2019): **a**) *E.I.T.* Credits (approx. \$70-87bn.), **b**) *S.N.A.P./Food Stamps* (\$65bn.), **c**) *S.S.Income* (\$56bn.), **d**) “*Family Support & Foster Care*” programs (@\$32bn. [more specifically: Head Start (10bn.), Child Care (9.5bn.), Foster Care (8.6bn.), Child Support (4.3bn), Unaccompanied Alien Children (1.3bn), & “Promoting Safe & Stable Families” (half bn.)], and **e**) “*Child Nutrition*” programs (@\$24bn.). This category also includes **aggregate** USG veterans pensions (\$5bn.) (Congressional Budget Office, 2019); and T.A.N.F./welfare (\$15bn.).

= \$3.32 tn.- TOTAL

\$52 bn.- Homeland Security (secret police)
\$43 bn.- Department of State
\$38 bn.- Dept. of Housing & Urban Devpt.
\$32 bn.- Department of Energy
\$21 bn.- N.A.S.A.
= \$1.43 tn.- TOTAL

PETER G. PETERSON FOUNDATION Mandatory programs and interest costs will take over more of the federal budget, squeezing discretionary programs

2019 Discretionary Outlays: \$1,338 Billion

SOURCES: Office of Management and Budget, Historical Tables, Budget of the United States Government: Fiscal Year 2021, February 2020; and Congressional Budget Office, The 2019 Long-Term Budget Outlook, June 2019.
NOTE: Mandatory programs include Social Security, the major federal health programs, other entitlement programs, and offsetting receipts.

SOURCE: Office of Management and Budget, Historical Tables, Budget of the United States Government: Fiscal Year 2021, February 2020.

[The real Crisis is of Governance (on interest-group autopilot)...extrapolated; & DoD outlays are not really discretionary, either. See also "Social Security", "Baby-boom demographics".]

3) It is just simple arithmetic to note that interest on the national debt is "approaching 500 billion dollars⁸⁴² per year...[which is] almost what we spend on the Defense Department...[and it] will some day inevitably exceed Defense spending" (Still, 2019h, mn.12); and all other "discretionary" US budget items. See also "Tax revenue", "Seigniorage".

See also "National debt economy", "Bank welfare", "Black Budget", "Deep State", "Monetary reform".

Disintermediation- d.b.t. for moving funds from bankmoney (mostly M1) to near monies (mostly M2); bankmoney is not 'intermediated'; it is created.

1) In France and much of today's Eurozone, banking "disintermediation took place in the 1980s... Companies were financing themselves increasingly through [short-term] financial instruments and less and less through intermediated bank loans" (Blot, et al., 2014, 11).

1b) It is of course a "purely fictitious" term, "because banks are not financial intermediaries of deposits. They are the creator of the deposits...not intermediaries" (Huber, 2020c, mn.13).

See also "Deceptive Banking Terms (d.b.t.'s)", "Exogenous vs. Endogenous' (money creation)".

Dispensationalism- (a.k.a. 'pretribulationism' ['rapture'], 'premillennialism', 'interpretive'/eschatological biblical studies, 'Christian Zionism'; i.e. [all adds up to] sensationalism)

Welcome to the real (political-imperial) world. "Like the Roman Empire's pantheon of religions...[which set] forth a table of controlled choices, for those participating, that you're allowed to choose.... set pieces of [acceptable] ideologies that you can [then] adopt..." (Boyd, 2020, mn.103).

1) Empires have always had to have fodder for their sacrifices, and the UK-USA Empires of the 19th-20th centuries were no exception. Like (the subsequent) *Zionism* (first propagated in the 1840's), *Dispensationalism*, formally articulated from the 1830's, started out as a cosmology of ethnic favoritism. "Prior to dispensationalism, the understanding was that there is one people of God. We could call it

⁸⁴² For comparison, aggregate *Lend-Lease* shipments from World War Two totaled \$565 billion in 2018 dollars (or \$50.1 bn. at the time). See also "Bank welfare".

covenant theology⁸⁴³.... But [J.N.] Darby [1800-82] made a distinction between those two, teaching [that] there are 2 peoples of God, as it were. He taught that God had a distinct and unique plan for Israel, and a distinct and unique plan for the church” (Nichols, 2020); hence conflating (as they have ever since) the (often venal) designs of men with the designs of providence. See also “Ethnic (National) Identity (ENI)”, “Imperialism”, “Conspiracy Theorist”.

2) “In addition to Russophobia, what the [British] East India Company needed most [to protect its new South Asia-based Empire] was a bastion to protect the Western approaches to the India trade routes--smack in the middle of someplace like, say, Palestine. Direct colonization was diplomatically impossible, but an indirect takeover was thought feasible.⁸⁴⁴ Thus, the English hit upon the idea of having...Jews, led by English Jews, return to their Palestinian homeland. It should be noted that, up until that point, there had been several projects for the creation of a Jewish homeland, most of which did not envision Jews returning to an undeveloped area like Palestine. M.M. Noah, the most famous Jew in the early United States, bought vast tracts of land in upstate New York as part of a plan for new Zion. However, the big campaign to relocate Zion in “the lands of the Bible” [first] came from Gentiles in England in the 1840s” (Minnicino, 2002, 65). See also “Zionism”.

3) The 1st wave was formally developed-articulated by J.N. Darby (Nichols, 2020); although it wasn’t really his. The “critical idea” was first actually published by “a Roman Catholic Jesuit Spanish writer...Manuel Lacunza. His book, *The Coming of the Messiah in Glory and Majesty*, was translated by [none other than Edward] Irving [the “very famous”, yet subsequently discredited (in the early 1830’s) “charismatic” preacher] in 1827, and studied at the [the latter prophetic/charismatic] Albury conference[s; c. 1829-30], and [then] especially at the...[subsequent] Powerscourt meetings [1831-33]. This...[was] one of the key spurs to the foundations of Dispensationalism...[B]y about 1830, we have a high degree of eschatological speculation in conferences, books and journals; [the introduction of] a futurist view of Revelation; a growing acceptance of extreme ideas, including charismania [and tongues]; a Jesuit view of 2 second comings of Christ; ideas about the separation of the church and Israel... and the expected rise of [the] antichrist and the Great tribulation. It is also interesting to note that Joseph Smith published the *Book of Mormon*, teaching a regathering of Israel, in 1830. In 1831, William Miller (the founder of Adventism) [also] began teaching his ‘findings...[and] Jehovah’s Witnesses also started soon afterwards. Chiliasm (millennialism) was in the air in the [early] mid-19th century. The missing ingredient [from today’s “premillennialism”], however, is a secret rapture” (Fahy, 1997).

3b) The “first person to speak about a pretribulation [a.k.a. secret] rapture was a young girl named Margaret Macdonald from Port Glasgow... who was familiar with [Edward Irving’s] *The Morning Watch* [then-like a 19thc “Coast-to-Coast AM”] and...Irving. The vehicle of this [girl’s] idea⁸⁴⁵ was a vision which was written down and [also] read by Irving. In the early 1800’s, some people were beginning to think of a future tribulation and Antichrist. Earlier, most had been historicists who saw the 1260 days of Revelation as years, viewing tribulation as [either] present or past, and seeing the Antichrist in the pope, or Napoleon...” (Ibid). When Irving soon became too controversial, J.N. Darby took it from there (Fahy, 1997).

4) 2nd wave “bridging” to America was provided by Presbyterian pastor James Brookes (1830-97); espec. from 1875 and his “Niagra Bible Conference”s, which taught “the end times” as being axiomatic...

⁸⁴³ This is also sometimes known as “faith-based” (as opposed to derivative/hermeneutic “belief-based”) theology. See also “Civic National Identity”.

⁸⁴⁴ This strategy would hinge upon, of course, the British being perceived as less-foreign & less-racist than other (principally German) imperial-development competitors. The British (vis-à-vis the Germans) were known, by century’s end, for their “Indirect Imperialism” system. Part of this strategy increasingly involved (in the mass-mediated 20thc) simply projecting what was *their* (UK & US) racism onto Germany and the Germans’ more-ethnic-based national identity (like, as if the Germans were slavers; see also “Slavery”). Regarding (what might be called the ‘imperial suitability’ of) the English language (vis-à-vis other grammars), see also “Imperialism, English (language)”.

⁸⁴⁵ McDonald “had also only been a Christian for a year and was uneducated. It was probably these facts which led to the origin being obscured and publicized by more educated men [such as Darby. And]... Margaret herself began to speak in tongues about 4 months after her vision in...1830” (Fahy, 1997).

and also Brookes' recruitment of Dwight Moody (1837-1899), "the Billy Graham of his day", to dispensationalism in 1880 (Gore, 2015).

5) 3rd wave "globalization", via C.I. (1843-1921) Scofield's "Reference Bible" from 1909 (increasing through the 1920's/40's), with large (Oxford Univ. Press) budget for being placed (pretty much for free) in every little church in America; then 'realized' (compounded) by the Balfour Declaration's (assumed) 'confirmation' of 'prophecy'. With "the spread of Scofield's reference Bible, the [dispensationalist] teaching went world wide" (Fahy, 1997).

6) What might be called the 4th (and seemingly final) wave; "really did reach... the peak of its influence... in...[American] culture" in the 1970's, with Hal Lindsey's 15-million (crossover appeal) best-seller, *The Late Great Planet Earth* (Gore, 2015, mn.40). See also "Industrial Revolution, 2nd" ('explodapedia').

7) Dispensationalism (Corporate Media Cartel notwithstanding) has been relatively moderating⁸⁴⁶ [i.e. not as extreme] over the past approx. 3-4 decades, in part because (in addition to no new World Wars or Israels since then), the old "hypothesis was that if the state [of Israel] was created in 1948, [then] Christ would have to return by 1988 [sic]⁸⁴⁷... [i.e.] within that [same] generation" (Gore, 2015, mn.36).

See also "Industrial Revolution, 2nd", →"Fin de Siecle", →"Corporate Media Cartel/6 Sisters", "Imperialism".

Distraction, the (great latter 20th c)- (from "Georgism" [big Idealism] & "Quigley, Carroll" [big Realism])

See also "Cultural Calendar", "Debt cycles", "Corporate Media Cartel/6 Sisters".

Distributed ledger- (a.k.a. 'distributed ledger technology', of which 'blockchains' are one form; i.e. "fully digitizing the process" [Stöcker, 2020, mn.12]; in order to enable [at least in theory] the Information Age 'caterpillar' of Big Data to morph into the Knowledge Age 'butterfly' of 'peer-to-peer' independence from middlemen)

1) A DL is not merely a decentralized accountancy ledger, but rather more like 1) "a continuously synchronised collective journal, of which every participant in the system has an identical copy, and where a number of confirmed entries are unalterably stored in a 'block', with successive blocks resulting in a chain of blocks" (Huber, 2018).

2) Does this make for faster-- or slower-- transaction times? "[P]art of the problem is the whole Distributed Ledger concept.... I know [of] some cryptos that are being designed on...[a single node] basis... without the huge number of distributed ledgers. They are inherently faster" (Keen, 2018c, mn.12). See also "Blockchains".

3) Can they determine false from true? Apparently the hope there is in "identity, signed data,⁸⁴⁸ and provenance, that's [being worked on] within the industry right now-- evolving" (Stöcker, 2020, mn.5).

3b) For example, the US Dept. of Homeland Security is 'thinking large-scale.... bringing digital identity to shipments and custom[s]...protections.... for an entire customs ecosystem" (Stöcker, mn.9-10).

Distributed Payment Systems- see "Blockchains".

'Divide & Conquer'- See "Political Economy", "Hegelian dialectic", "Lies".

⁸⁴⁶ "The fundamentalist position on biblical interpretation, with its emphasis on the explicit, complete, final, and authoritarian nature of Scripture, is a very late, minority view quite out of step with the Western tradition" (Quigley, 1961, 342). See also "Civilization, Western", "Aquinas, Thomas".

⁸⁴⁷ Author Lindsey, for his part, in his "last" (in-person) sermon to a large group, insisted that "the return of Christ was imminent...I remember him saying that.... to him it was unimaginable that 'the rapture' would happen anytime later than 1975.... [And no] publication has shaped American evangelical Christianity as much as" Lindsey's 1970 book (Gore, 2015, mn.38; 40).

⁸⁴⁸ Part of this is also now "to do what the banks are doing!" in order to avoid multi-month micro management "compliance" hurdles. This means that once "I've got a digital credential...[established once] I [can now] go from [a] Sparkassen [bank] to Commerzbank...[re-using] the...credentials of the human" (Stöcker, 2020, mn.10-11); sort of like an intra-guild boarding pass. See also "Local scrip & Complementary currencies" [also 'doing what the banks do'].

Dodd-Frank Act of 2010- (“we rebuilt the system...pretty much the way it was. We looked at all of these buildings that were made out of straw [leverage]; they’d all collapsed. The ones that were made out of brick hadn’t collapsed... And what we decided to do was rebuild everything out of straw..... bailing out leveraged institutions, so that they could live another day.” [Kotlikoff, 2021, mn.50])

1) at its simplest, a +2300-page feeding frenzy of Big Banks⁸⁴⁹, codifying what the BIS had decided (to include bail-ins)... a puppet for the BIS in Switzerland,⁸⁵⁰ that also instilled a lasting climate of partisanship into financial services legislation. See also “Basel Committee Accords”.

2) “the most far-reaching financial reform bill since the Great Depression.... left the short-term funding [‘near money’] markets practically untouched” (Ricks, 2016, x); although it did “create the interagency *Financial Stability Oversight Council* (FSOC)... [which] consolidated bank regulation from 5 agencies to 4.... [in addition to] consumer protection rulemaking, which had been dispersed among several federal agencies...[into] the new *Consumer Financial Protection Bureau* [(CFPB); housed at the] ...Federal Reserve... [which was granted more] oversight authority”⁸⁵¹ in conjunction with the FDIC insurance scheme (Murphy, 2015). See also “Capital Adequacy Requirements”.

3) “a very complicated thing that just nibbles at the margins of everything-- except the Capital Requirements” (Sheppard, 2017, mn.29). See also “Capital Adequacy Requirements (CARs)”.

3b) The law also reeled in (at least the quantity of) OTC derivatives somewhat; by forcing “the predominantly ‘over-the-counter’ market in credit derivatives onto exchanges with regulated clearing houses...[in order to make] these markets less prone to sudden collapse” (Pistor, 2020b). See also “Derivatives”.

3c) At a rumored “8,000+ pages” by late 2016, the legislation “is certain to be full of loopholes and therefore largely ineffective” (Dyson, Hodgson & van Lerven, 2016, 12).

4) Nearly half of the senior congressional staff (and one-third of the congressmen) who wrote the *Dodd-Frank Act* “now work for the financial firms [that are] succeeding at chipping away at it” (Dayen, 2018).

5) “The current [‘reformed’] system is killing the small banks. Since *Dodd-Frank*... about 2000 community banks have gone bust or have been forced to merge, because the regulatory expenses are so burdensome...” that that’s what smaller banks’ monthly board meetings [still] have to spend most of their time dealing with (Kortsch, 2017b, mn.30-31). The “CEO of JP Morgan-Chase loves *Dodd-Frank*, for the simple reason that it gives him a huge competitive advantage to all the other banks.... He came out publicly and said ‘I’m all in favor... *This is wonderful legislation*” (Kortsch, mn.32).

6) Politically, it “garnered only a handful of Republican votes when it passed... souring relations across the aisle” (Finkel, 2018); in an enduring way that few bills have done. The Crisis “just set up a very partisan divide, and we’re still living with it” (Ibid). See also “Regulation”, “Shadow banking (SBS)”.

Dollar (name)- 1) derives from the 16th century Bohemian silver mines of the Count of Schlick (1569-1621), “referred to... as Schlicken thalers”, subsequently shortened to German ‘thalers’, “which later became daler. By the middle of the century the term *daler* became a generic name for a variety of coins originating from Europe, and...in the early 1780’s the founders of the...[US] republic” chose it (Luft & Korie, 2019, xix); instead of ‘pounds’ or ‘pesos’, ‘piasters’.

⁸⁴⁹ *American Banker* (est. 1836) admits that “*Dodd-Frank* has been cited by large banks today as protecting them from competition by smaller banks” (Verret, 2018). Senator Dodd confessed in June 2008 that he had received special treatment, perks, and campaign donations from mortgage re-selling giant Countrywide Financial (which had financed 20% of all mortgages in the US in 2006). As a “friend of Angelo” (Countrywide CEO Angelo Mozilo), Dodd received a \$75,000 reduction in mortgage payments from Countrywide. The Chairman of the Senate Finance Committee Kent Conrad and the head of Fannie Mae Jim Johnson also received mortgages on “V.I.P.” terms as “friends of Angelo”.

⁸⁵⁰ a.k.a. ‘more-of-the-same, too-big-to-fail’. The rap on *Dodd-Frank* has always been, basically, that at least “some well established banks consider themselves better able to handle the costs than smaller or newer ones, particularly those that don’t have cushy relationships with regulators.”- *The Economist*, Feb. 18, 2012. See also “Lender of Last Resort/Too Big to Fail”.

⁸⁵¹ The Federal Reserve overseeing its own member-owner banks is essentially self-regulation, as national central banks have long been ‘self-regulated’ by the BIS club in Switzerland. See also “Glass-Steagall Act, ‘repeal’ (1999)”.

2) 24 decades later, approx. \$“1.5 trillion...[in] green... pieces of papers titled ‘Federal Reserve Notes’ change hands every year...[and most of this takes place] outside of the United States” (Ibid). See also “Eurodollars”, “Reserve Currency”.

Dollar- devaluation- See “Dollar standard”, “Dutch disease”.

Dollar-diplomacy (& hegemony)- 1) After the Indian Wars the US Census declared the American frontier officially closed in 1890. The term “*dollar diplomacy*” was coined, later lthe next decade, by the US press to denote a distinction between the physical intimidation strategies of late 19th century “gunboat diplomacy” & Teddy Roosevelt’s “big stick”; and the ensuing Taft administration’s preference for greasing the wheels of trade with a more systematic form of corporate money-politics (while still sending in the Marines every other year, mind you) in obtaining US commercial dominance over key assets in Central America and the Far East. Of course, with World War One and particularly World War Two (1918-45), the spheres for such US commercial-corporate dominance expanded radically, to the point where, by the 1930’s, Washington was actually able to put ‘pretty much the entire world economy on a *de facto* ‘dollar standard’, which solidified, over the mid-century, into a *de jure* dollar standard (see “Bretton Woods”, “Petrodollar”)-- for all weights & measures having to do with commerce.⁸⁵² See also “Super Imperialism”.

2) By the turn of the millennium, world trade had thus become “...a game in which the US produces dollars [and ‘food’, armaments and media], and the rest of the world produces things that dollars can buy. The world’s interlinked economies no longer trade to capture a *comparative advantage*; they compete in exports to capture needed *dollars* to service dollar-denominated foreign debts and to accumulate dollar reserves to sustain the exchange value of their domestic currencies. To prevent speculative and manipulative attacks on their currencies, the world’s central banks must acquire and hold dollar reserves in corresponding amounts to their currencies in circulation.... This creates a built-in support for a strong dollar that in turn forces the world’s central banks to acquire and hold more dollar reserves, making it [still] stronger. This phenomenon is known as *dollar hegemony* (Liu, 2002⁸⁵³).

3) Promoting “America’s ability to export dollars in exchange for foreign goods, services and asset ownership, as if these US Treasury IOUs had an intrinsic value... e.g. as [would] gold or other hard assets. (See *Balance of Payments* and *Chartalism*.) The basic principle is that US consumer demand and military spending should be the ‘engine’ that drives foreign production, rather than production abroad driving domestic consumption (as in *Say’s Law*). (See *Parasitism*.)” (Hudson, 2013).

4) “The essence of dollar hegemony is to maximize US choice by minimizing the choice of foreign economies to pursue policies not deemed in the interest of the United States [cum US financial sector], obliging them to depend on the United States for new dollar credit, food and technology” (Hudson, 2013). See also “Reserve Currency”.

4b) This is because “80% of trade in emerging market economies is denominated in [US] dollars... For this reason, central banks [always] attempt to stockpile dollar assets, most commonly US debt. To acquire them, they usually [have to] run a persistent trade surplus [a.k.a. ‘cash crops’/neo-imperialism] by repressing the real wages of their workers” (Feygin & Leusder, 2020), lest their economy be exposed to currency collapse risk, after the usual IMF & World Bank type sanctions. See also “Washington Consensus”.

5) *Dollar diplomacy* characterized the 1st half of the 20thc, and *dollar hegemony* characterized the 2nd half. The 3 cardinal elements in moving from *de facto* dollar hegemony (c.1970) to *de jure* (1993) were: a] the free-floating of currencies from 1971, which substantially increased cross-border capital flows; b] the pricing of all OPEC oil in US dollars after the 1973 oil crisis; and c] “the global deregulation of financial markets after the Cold War”, concurrent with the regularization of “computerized speculative attacks on weak currencies” (Liu, 2007). See also “Globalization”.

⁸⁵² Beyond the wildest dreams of even the *greediest* Persian, Roman, or British imperialist.

⁸⁵³ As of 2001, “68% of global currency reserves” were in US dollars, up from “51% a decade ago” (Liu, 2002); this (unprecedented) global hegemony mark being passed in the wake of the Persian Gulf War (i.e. the 1st Petrodollar War).

6) What, if anything, could upset the applecart? Internal weakness notwithstanding, not much “...as long as the Fed can secure the cooperation of the Bank of Japan, the Bank of England, and the European Central Bank” (Roberts, 2018c, mn.40). Excessive US browbeating of its allies over such matters as Russia and Iran sanctions, however, have been *raising resentment* in some quarters of the Empire.

Within the EU, some nations “are passing...’Blockage Laws’, to block the ability of the United States to enforce the sanctions against the European companies.... It’s a reckless situation...[for] one country... to go around telling every other country... and every business in every other country *who they can do business with!*” (Roberts, mn.40-42). See also “SWIFT codes”, “Angry Birds”, “Dutch disease”.

7) Moreover, today’s digital age technology [like the spread of iron technology some 3000 years ago] would seem to enable, at least in theory, the circumvention of dollar hegemony. Hence, “the US dollar hegemony is probably not gonna last forever unless we have some sort of miracle in terms of black budget invisible and space weaponry, and...who knows what the truth is there?... [Over the shorter] term, it doesn’t look like it’s coming apart anytime soon” (Fitts, 2018h, mn.9).

7b) But it likely will in the 2020’s. What will take its place? The “only remaining global currency candidate– the yuan– won’t be taking...[the dollar’s] place due to its inconvertibility and the restricted external access to the Chinese capital markets. The use of gold as the price reference is constrained by the inconvenience of its use for payments” (Glazyev, 2022). See also “Special Drawing Rights (SDRs)” (old plan), “Graham, Benjamin” (new plan).

See also “Super Imperialism”, “Reserve Currency”, “Eurodollars”.

USD Share of Allocated Global Official Reserves

**Dollar Hegemony
Composition of Official Foreign Exchange Reserves**

[Reports of the US dollar’s fall (from global ‘reserve currency’), c.2019, have been wildly exaggerated; see also “Eurodollars”.] Dollar Hegemony Updates: 3rd quarter 2021 World Reserves: 59% USD, 20% euro, 6% yen, 5% pound sterling, & <3% renminbi.

Dollar standard- 1) “An international arrangement in which central banks agree to hold their international savings in the form of loans to the US Treasury, rather than in gold or other assets” (Hudson, 2013).

2) What could go wrong? “Reducing the [Federal Reserve’s] balance sheet reverses the [regressive] redistributive effects of this [QE] program, and could [also] limit the continual ballooning of [increasingly regressive] federal expenditures. The greater the unwinding of the balance sheet, the greater will be the difficulty of [generously] servicing federal debt.... [which could eventually result in]... a dollar devaluation” (Caton, 2019). See also “Reserve Currency”, “Dollar Diplomacy (& hegemony)”, “Monetary reform”.

Double-entry bookkeeping- See “Accounting, double-entry”.

Double liability (for bank shareholders)- See “Liability, double”.

Droughts (updates)-

1) 2022 USA (worst since 1988 [when Miss. River was closed]): <https://www.youtube.com/watch?v=MM-menv6EJA> [WSJ10/22]

2) 2022 China (worst since 1950’s [when record keeping started]): <https://www.youtube.com/watch?v=vaW2shZKKS0> [Chinalnsights10/22]

See also “Dynastic cycle”, “Great Extinction”, “Reform, 101”.

Drugs- See “Fascism, ‘Modern’ Hand of” [Fentanyl].

DSGE modelling- (Dynamic Stochastic General Equilibrium)

1) “It takes a huge amount of intellectual labor... And it’s so demanding now that you don’t have a chance to think of *any* form of criticism. If you know how to do it, that’s all you know about Economics” (Keen, 2016m, mn.8); which is a problem because...

2) “Banks were and still are regularly...[modelled by DSGE, etc.] as if they were *nonbank* financial intermediaries” (Macro & Siebenbrunner, 2019, 4). See also “Creney”, “Exogenous vs. Endogenous” (money creation)”. See also “Economics”, “Equilibrium”.

Dual-circuit monetary systems- See “Money, 2 classes (layers) of”.

Dumb-downing- (synon. ‘menticide’; sometimes a.k.a. ‘domestication’)

“We’re developing people that are totally dependent upon rewards for doing what the government wants.”- Charlotte Iserbyt⁸⁵⁴ See also “Historical illiteracy”.

“[W]e no longer⁸⁵⁵ have intellectually satisfying arrangements in our educational system, in our arts, humanities, or anything else; instead we have slogans, ideologies. An ideology is a religious or [simply] emotional expression. So when a society is reaching its end, in the last couple of centuries, you have what I call misplacement of satisfactions.”- Carroll Quigley (1976c-pt.3, mn.257).

“There has been a recent resurgence of interest in the hypothesis that anatomically modern humans and domesticated species have followed convergent [dumb-downing] evolutionary paths” (O’Rourke & Boeckx, 2020, 341). See also “Social media”, “Schools & Schooling”.

“[T]hink about it. What are the 3 things that we pay the least for: food, teaching, and child care.... Why do we do that?” (Cook, 2021, mn.119). See also “Cycles”.

1) narrowly defined as lowering the level of difficulty and/or intellectual content of certain media, i.e. television standards, newspaper standards, journalism and talk show standards in general. “Most of it ...is just intellectual laziness. If...[I] don’t know, then you can’t ask a question [that] I can’t answer.”

- Randy Cook, Parity Group, 15-8-21, mn.44. See also “Imperialism, American”, “Foundations”.

⁸⁵⁴ “After only a few years of OBE [Outcome-Based Education], whole school systems are beginning to wither and die. Much worse, the children, their minds once fertile fields of intellectual soil, are...being infected by the worm of ignorance. True learning is starved to death, as all of the nutrients of [several centuries of] sound academic practice are being replaced with a dust-bowl curriculum that is structured to secure proper attitudes for the ‘Brave New World’. Sadly, the only ‘outcome’ of OBE will be a baser society, a society in which the nobility of the mind is lost to the savagery of enslavement. But wait! Parents have been told that Outcome-Based Education has nothing to do with changing the attitudes and values of their children; that OBE will improve learning for all children through ‘best-practices’ research. What parents are not being told is that the research base for OBE is from... [P]sychology, not [E]ducation; [and] that in psychology the term ‘learning’ is synonymous with the term ‘conditioning’. What parents are not being told is that Outcome-Based Education is not education at all; it is but the hollow substitute of psychological conditioning” junk food (Iserbyt, 1999, App.-122). See also “Reverse psychology”, “Conditioning”.

⁸⁵⁵ The “United States had the finest education system in the world until probably 1960; much of it was funded under Lyndon Johnson’s *Elementary and Secondary Education Act*...[of] 1965++, where they...[started to change public] education from academics to...behavior modification, which is necessary for the [federally] planned economy...to work... They know that the community is not ready for that. So we were taught [in training, c.1970] how to identify the resisters...[and] potential resisters.... My scalp tingled. I thought: ‘*What is going on!?*’ This is what they do... in communist countries, or fascist countries.... sex ed, drug ed, suicide ed, critical thinking ed, values clarification-- all these things.... these programs that have nothing to do with education” (Iserbyt, 2000-01, mn.3; 9-11). “You have to remember that the US Department of Ed.[ucation, est. 1979] funds the... National Education Association [est. 1857], for various purposes” (Iserbyt, mn.15). In order to move “to a planned economy, you have to do it through the schools. You have to dumb down, and brainwash-- change the attitudes and values, completely. Social engineering has to go on constantly” (Iserbyt, mn.16). See also “Fascism, Modern Hand of”, “Foundations”, “Statism”, “Mind control”.

++- <https://home.solari.com/lets-go-to-the-movies-week-of-august-29-2022-psychiatry-an-industry-of-death/> -[Education Act of 1965, mn.124-27].

2) in the broader sense, any institution that tends to decrease and/or devalue the intelligence of a society, from “No Child Left Behind”⁸⁵⁶ (social promotion policies in the worldly public schools), to GMO foods (outlawed in most other countries of the world before the USA),⁸⁵⁷ scorched-Earth pesticides, ‘baby formulas’, fluoridation⁸⁵⁸ of public water supplies (another US oligarchy-centric idea), rampant brain-altering pharmaceutical drugs,⁸⁵⁹ AFDC anti-family subsidies (over the last quarter of the 20thc)⁸⁶⁰, regressively repetitive⁸⁶¹ mind-numbing music, pornography, scanty dress codes,⁸⁶² and, indeed the very idea of a ‘Hollywood’ or celebrity-expert culture in and of itself (thinking that someone knows better for you than do you yourself)⁸⁶³: “In the *technotronic* society the trend would seem to be towards the aggregation of the individual support of millions of uncoordinated citizens, easily within the reach of magnetic and attractive personalities effectively exploiting the latest communications techniques to manipulate emotions and control reason” (Brzezinski, 1970)⁸⁶⁴. Although technological progress need not be inverse to the intelligence of human beings, the large scale of some societies present a most formidable obstacle to new ideas and creativity being taken seriously-- as do large scales of debt-- particularly student and college debt. There are not even any more “ivory tower” refuges of separateness from the ‘mainstream’ professional/conventional world, as Steve Keen has often pointed out. Educational decline “is the whole mentality of privatizing on the one side, [and then] regulating to control the privatizing on the other; and out of it all we get [is a] poorer education system, and poorer health, and poorer housing” (Keen, 2016j, mn.13). See also “Academia”, “Transhumanism”.

3) First amongst the ‘dumb-downing’ factors, however, must be poorer health (from poorer food & water, less exercise, & less oxygen/sunlight). “‘Food safety’ was basically designed to centralize to agricultural industry in this country, and it’s a conspiracy.... the results of destroying the local farm and the local food

⁸⁵⁶ “Outcome-Based-Education” (OBE), such as the *NCLB Act of 2001*, “is an international plan” for bureaucratization and “teach-to-the-test, which no good teacher wants... They’re gonna fire the teachers who won’t teach to the test... [L]ate 1800’s...England... had a form of Outcome-Based-Education... teaching to the narrow curriculum, just really workforce training skills [for the ‘working class’], where certain attitudes” get reenforced. (Iserbyt, 2000-01, mn.28-29). According to most US Education Secretaries during the 1980’s-90’s, “your child is nothing but a human resource, to be used for the good of the State” (mn.42-43). The “minute you move your local funding [of schools] to the state level...[one should] know the state level takes its orders from the federal level. State departments of Education get up to 80% of their operating budget from... [Washington’s] Department of Education” (Iserbyt, 2000-01, mn.56). And “charter schools are the [primary] vehicle to implement the planned economy.... They’re un-elected school boards, anyway.... They get federal money...[and all] have to give the federal test[s]” (Iserbyt, 2017, mn.56).

⁸⁵⁷ Russia, for example, in 2015-16 banned GMO production and imports. There they can only be used for scientific experiments. See also Weber, 1989a, mn.11-12. This video on Glyphosate-GMOs vs. regenerative farming is evocative, but has some errors: <https://vimeo.com/311972894?fbclid=IwAR1sNP7gdzDwkXGUD8H9OzKe2tsmdcQOTUJMAUS5xwe4uwYiX1eDT44jjA>

⁸⁵⁸ “2/3rds of Americans’ tap water contains fluoride, [a yellowing neurotoxin] which... [has been] added [mostly from the 1970’s]... under the guise of preventing cavities... even as research stacks up that fluoride is a neurotoxin that can harm brain function. Fluoride also leaches lead [another neurotoxin] out of old pipes, which further magnifies its neurological risks. A [2017] study of Mexican women and children... found that higher exposure to fluoride while in utero is associated with lower scores on tests of cognitive function in childhood... Harvard researchers [in 2012] ...revealed that children living in high-fluoride areas had significantly lower IQ scores than those who lived in low-fluoride areas, and suggested high fluoride exposure may have an adverse effect on children’s neurodevelopment... [and] in 2014, a review in *Lancet Neurology* classified fluoride as 1 of only 11 chemicals ‘known to cause developmental neurotoxicity in human beings’, alongside other known neurotoxins such as lead, methylmercury, arsenic and toluene” (Mercola, 2018).

⁸⁵⁹ “One Million Kids Under Age 6 on Psychiatric Drugs”- apparently children, even under the age of 6, are no longer spared from the new century’s rule-of-thumb that approx. 1-in-6 Americans are on some type of (chemically-rebalancing) psychiatric medication (Zero Hedge, 2018). See also “Fascism ‘Modern’ Hand of”.

⁸⁶⁰ “The richest inheritance any child can have is a stable, loving, disciplined family life.”- Daniel Moynihan, writing to President Johnson in the mid-1960’s (Moynihan & Weisman, 2010, 4).

⁸⁶¹ The corporate-consolidated (so-called) pop music industry’s reliance upon [presumably cost-cutting or risk-reducing] algorithms, spur songwriters to get to the chorus in the first 15 seconds, a science fiction-like level of decline from the several minutes typical of songs from a half-century earlier. More prominent, however, in the what might be called the ‘jumping to the hook’ phenomenon, or “attention-grabbing behavior... [has been] the near elimination of instrumental introductions [in pop music] between 1986 and 2015... [which was] the strongest change observed” over that period (Gauvin, 2018, ii). See also “Transhumanism”.

⁸⁶² A.k.a. ‘men thinking [‘mechanics’] like women [‘heuristics’], and women thinking like children [emotional manipulation-exploration]’.

⁸⁶³ Yes that (implicit or explicit) authoritarianism [a.k.a. external authority/locus of control] is the horse they all rode in on.

⁸⁶⁴ 1970-- and that was before the technological prospects for algorithm-based, individuated computer-tracked programming.

markets is doing more to contribute to high healthcare costs than anything else-- even the pharmaceutical companies" (Fitts, 2017i, mn.47-48). See also "Food".

4) There is some doubt as to whether the 'Millennial' generation [which is already less 'educated' than its two predecessors] will match the life-span expectancies of their ('Baby-boomer') parents. "We are all being poisoned. Food has been weaponized. Vaccines are primarily to sterilize and dumb people down. The degree to which the US government has become...a fascist tool for the Deep State is quite frightening" (Steele, 2017l, mn.28). See also "Fascism, 'Modern' Hand of", "Baby-boom demographics", "Sovereignty".

5) In terms of *money, credit*, the conflation of the two, and (good old) information overload, simply "the enhanced complexity of the [money augmenting] financial system and [the] significant rise in the number of banking [monetized credit] institutions and ['near money'] financial systems [a.k.a. 'shadow banking']... throughout the 20th century [(leading up to the millennialist blowout), seems to have] led to a [overall] *loss of system perspective*" (Macro & Siebenbrunner, 2019, 4); and thus also for criticism or (perhaps even) critical thought... as "only deep recessions [depressions] imply drastic needs for rethinking [monetary-economic theory] and...significant policy" change (Macro & Siebenbrunner, 8). See also "Creney".

6) The problem is also one of cognitive-didactic attitudes. **Americans**, for a number of decades now, **have been trained with the false idea that everything can be made simple, and that if not then the explainer is defective. In that way, after a few minutes people can fool themselves, with simple but defective summaries, into believing that they understand when they actually do not and are thus vulnerable to cognitive manipulation.** See also "Scientific Management/'Hawthorne Effect'".

7) The attitudinal issue may be a subset of the long-term technological trend. From the early 19th century through the early 20th century, technology (i.e. jobs/job design) was basically becoming more demanding to use, "but now... it's like the Navy-- designed by geniuses to be run by idiots. And you're gonna treat labor [like]... Essentially you're turning labor into low-quality, repetitive, servile mechanism type labor, rather than the highly-skilled labor that people thought was going to lead from Industrial Capitalism into socialism, and better living standards" (Hudson, 2018c, mn.24); as it did, actually, from the mid-1940's to mid-1970's. See also "Bullshit jobs", "Robotization", "Transhumanism".

8) "I have a foreboding of an America in my children's or grandchildren's time-- when the United States is a service and information economy; when nearly all the key manufacturing industries have slipped away to other countries; when awesome technological powers are in the hands of a very few, and no one representing the public interest can even grasp the issues; when the people have lost the ability to set their own agendas or knowledgeable question those in authority; when, clutching our crystals and nervously consulting our horoscopes, our critical faculties in decline, unable to distinguish between what feels good and what's true, we slide, almost without noticing, back into superstition and darkness" (Sagan, 1995, 25). In other words, just an extrapolation of the c.1980-c.2020 debt cycle, sans remedy. "The dumbing down of America is most evident in the slow decay of substantive content in the...[far too] influential media, the 30-second sound bites (now down to 10 seconds or less), lowest common denominator programming, credulous presentations on pseudo-science and superstition, but especially a kind of celebration of ignorance" (Sagan, 25-26); and particularly ignorance of the extractive ('money-for-nothing') modus operandi of usury, and other forms of [see also] 'white-collar' crime. See also "Secrecy, Cult of".

9) According to recent studies, Sagan and other hand-wringers have been proven right. The so-called "*Flynn Effect*" of rising I.Q. scores each generation (at an average of 3 points per decade), which had held from the 1900's through at least the mid-20th century, is now no more. A Norwegian longitudinal study of 730,000 men concluded last year that IQ scores have dropped several points per generation, beginning in the 1990s, and with those born after 1975. Co-author Ole Rogeberg says that similar, smaller studies done in Britain, France, the Netherlands, Denmark, Finland, and Estonia have produced very similar results, which he attributed to environmental factors, not hereditary (Lardieri, 2018). See also "Death Culture", "Food".

10) Then more recently, there has also been what might be called the '*Google effect*' (i.e. of 'everything free' if you just 'watch the ads'): "For glimpses of a short video that you may or may not want to see to the

end, you agree to watch an ad long enough to click it closed. [Thus instead] of paying-- and signaling-- with the fungible precision of money, you pay in the slippery coin of information and distraction" (Gilder, 2018, 23). Concentration (it used to be **axiomatic**)-- not 'multi-tasking' or achieving 'a higher frequency' of vibration-- is a positive good for intelligence and veracity (and hence the health of our species, and its increasing stewardship of life in general this planet). See also "Big data", "Google".

11) In terms of losing critical thought abilities, a large society, such as the US, which suffers one generation of this will experience substantial social turbulence, but not a regime change (1970's); a society with 2 *generations* of declining critical thought will eventually experience a political regime change (2016-19); a society with 3 *generations* of lower critical thought standards will also experience underlying socioeconomic-institutional change (2020's); and a society with 4 or more is pretty much dead-- just somebody else's colony or idea. See also "Schools & Schooling".

12) Of course it is not all bad news. Computers are not capable of creativity and are, **basically, only** recognizing pre-existing patterns. "[T]o truly write, you must first have something to say. Computers do not.... [Hence, apart] from making scribblers [and perhaps even academic scribblers] redundant,... [p]erhaps a flood of furious [and meaningless] auto-babble will force future readers to distinguish between the illusion of coherence and the genuine article" (Economist, 2019); hence the difference between an Information age and a Knowledge age. Distillation can take time. See also "Adolescence of Mankind", "**Freedom continuum (maturation)**", "Industrial Revolution, 3rd".

12b) But this does not happen (at least at any noticeable rate) without free speech. "Any form of suppression... of [decent (or even halfway decent) communication] is making people uneducated and uninformed.... It's the same thing as governments trying to suppress literacy in the last century" (Barnes, 2020, mn.41). See also "Social media".

13) That's a lot of onions. Can there be a 'main point' or everyday variable habit that one can control? In the media & hyper-mediated age, basically everywhere, we have been trained to "generally...[jump] over what we [actually] see, [and too hastily] going to concepts [instead of waiting for some replicability].... The whole Age is permeated with a rush into concepts after [only] superficial observation. Now this is the **basic [attitudinal] thing**.... Do you understand?" (Meyer, 2021b, mn.13-14). See also "Logical fallacies" ['hasty generalization', 'appeal to authority'], "Television", "Fundamental Attribution Error", "Science".

13b) The cushy life of high Imperialism⁸⁶⁵ has always tended to get pernicious after some time. When a "technocratic [culture of]... mediocre utilitarianism confuses itself with professionalism.... [eventually] one of the characteristics of [such] a civilization which [structurally] promotes *form* over *content* is that memory evaporates" (Saul, 2013). See also "Imperialism, American", "Dutch Disease", "Statism".

13c) Orwell's goldfish? Does the (totally unaccountable budget since 2018) DoD (Defense Dept.) consider such objectives to be a priority? ...And if so, where (and why?).

- <https://www.youtube.com/watch?v=RZEH0yk49wU> [BoC, 22-11-14, mn.15-16]. See also "Media, B" [.EIC], "FASAB-56", "Death Culture", "Nominalism", "Aristotle vs. Plato".

See also "**Corporate Media Cartel (CMC)**", "Academia", "Food", "Student debt", "Philosophy", "Main point", "Methodology (culture)".

⁸⁶⁵ "We, flowers of the temperate zones, can [and often do] float half awake through a padded world" (Saul, 2013, ix), via (see also) "Imperialism"; [vs.] "Common sense".

[Iserbyt,⁸⁶⁶ 1983].

[See also "United States", "Foundations", "Jefferson"]

Duopoly (political management)- Banks are always on both sides of a river. And the name of that river is... both reducing "the public sector to almost nothing...that is what the conservatives are doing; [and] the liberals want to destroy communities. If you destroy both government and communities, what you really get is [rule by] corporations and atomized individuals.... It won't work. For this reason: you cannot retain law and order with atomized individuals.... [Even though] the conservatives and the liberals are both working for the same goals: to reduce our society to atomized individuals... [and] then subject to corporations at a subsistence level. But they'll never get that far. Because you can always opt out" (Quigley, 1976b).

- 1) "Both political party establishments are more interested in controlling the party than in doing well for the country" (Roberts, 2017). See also "Parties, political".
- 2) This reality-- if not always steadily constant-- has been the norm since (no later than) the first decade of the 20th century⁸⁶⁷. "If a man deceives you once it is his fault; if he deceives you a second time, it is your fault. The same should be true of political parties.... Why not? The Democratic and Republican parties are financed, owned and controlled by private monopoly.... They pay no money until assured of service" (Loucks, 1916, 288). See also "Industrial Revolution, 2nd".
- 3) Today, both "parties are basically run by Wall Street. The Democratic Party, ever since Bill Clinton, was run by [Treasury Secretary] Robert Rubin. And all of the secretaries of the treasury, the officials, have basically [since then] come from Goldman Sachs.... you have Wall Street people basically running politics, whether they're the actual politicians-- Obama didn't work on Wall Street, but he worked with the real estate families. No matter who the president is, [since Bush-Clinton] they're going to appoint Treasury heads and...Federal Reserve heads from Wall Street. Wall Street [now] has a veto power on all the major Cabinet positions, and so, essentially, the economy is being run by the financial sector for the financial sector" (Hudson, 2015c). See also "F.I.R.E. sector"; Oswald, 2018.
- 4) Robert David Steele adds that "Cheating is an ingrained part of the 2-party tyranny.... Right now the governments... are nothing more than slutty servants for the bankers, and I'm ashamed of them all.... [In 2016] It's documented by Stanford Univ. that Hillary Clinton stole 13 primary elections⁸⁶⁸ from Bernie Sanders, by doing electronic vote manipulation...[on] machines... which were *designed* to rig elections" (Steele, 2017f, mn.3-6). In 2016 "47% of...[registered] voters chose not to vote... The Democrats control

⁸⁶⁶ Carol Quigley and Anthony Sutton revealed the basics half-a-century ago now. What Iserbyt added to that was "how we were [also] purposefully dumbed-down, to not *realize* [sic] that companies can have that much power and participate in grandiose narco-terrorism [and other 'private intelligence'] acts like 9/11.... the critical thinking and creative problem solving skills need to be back in education.... [U]ninstall all the learned helplessness and...[other] un-useful things that we have in our brains from [many years of] schooling" (Grove, 2022, mn.44-45). See also "Foundations".

⁸⁶⁷ ...and the basic-governing construct of the idea, of course, goes much further back: <https://www.youtube.com/watch?v=QuHoRgs9UkQ> [WT, pr.23, mn.20]. See also "Vatican Bank", "Estates, 3" (the English, and then anglophile Montesquieu's theory, simply took it further).

⁸⁶⁸ In the November general election, Clinton also benefited from "about 3 million illegal voters... [which has] been documented..." in California (Steele, 2017l, mn.42).

17%, the Republicans 13%-- and it's this base that is used to carry out the theater of a fraudulent [or proto-] democracy" (Steele, 2017, mn.17). "We have a two-party tyranny that disenfranchises 70% of the...public" (Steele, 2018, mn.26-27). See also "Democracy".

5) "The big bank cartel profits massively off of both [parties].... They may appear to be different choices, but they both fuel the same power structure... [which] to maintain power... [gives] people a choice, while hiding the real structure. We are trained to be devoted to our 'left' or 'right' political leader, and this [has] brilliantly fueled the system, while also keeping us in the dark..." (Vrabel, 2011, mn.128). "This is dialectical conflict-- the method used by the people in power throughout history to control the masses... to keep you from seeing the real issue, which [today] is... big versus small. The real choice should be between the [monetary] vortex-driven Empire system... and the Republic..." (mn.130). "The pendulum has swung so far to the Big side that it needs to be allowed to swing back" (mn.132). See also "Hegelian Dialectic".

6) "It is hardly surprising that the powers of politics and money are attracted to each other. As powers they are complementary, and if they cooperate their powers increase in tandem. The days of pure competition for power between 'left' and 'right' are over" (Mosley, 2017d). See also "Separation of Powers".

7) "Our traditional system of thinking is very good at defending itself because it picks the rules of the game, the concepts and the values" (de Bono, 1999, 62). Nonetheless, the "*cohesion* of a logical [lawyerly] argument says nothing about the *validity* of the starting perceptions. Because of our traditional emphasis on [lawyerly] logic and our dismissal of perception we often overlook this dangerous cause of arrogance" (de Bono, 1999, 67). See also "Legalism", "Sovereignty, currency" [that which 'right' has denied the 'left'], & "Sovereignty, monetary" [that which 'left' tries to deny the 'right'].

8) It should be axiomatic, in any 2-party system, that about half of what any 'national' politician says is going to be lying. During the 1960's-70's there was (excepting Lyndon Johnson) a period of relative truthiness (i.e. politicians actually trying to lie substantially less). But that ethos was gone in the 80's, long-gone by the 21st century, and gone-out-the-window (full cartoonification) in the 2010's. See also "Parties, political", App.C: "1-2-3".

9) A 2018 Pew poll found that "82% of Democrats thought [that] the media perform a useful 'watchdog' role of keeping politicians from things they shouldn't. Only 18% of Republicans agreed", in contrast to just 5 years earlier, when "the figures were 67% and 69% respectively" (Economist, 2019f). See also "Russiagate".

10) Party duopolies, like oligarchy, are hardly some 'new' or 'modern' phenomenon. 2500 years ago, according to Herodotus, Pisistratus organised (the majority) hill dwellers of the Athenian city-state, into a new party, **larger** than Athens' traditional 2 parties-- the *Pediéis* (men of the plain) and the *Paraloi* (men of the coast). Politics is usually grade-school simple in its strategies, in addition to mind-numbingly complex in its red-herrings and other tactics or stratagems of diversion. See also "Patri", "Politics", "Imperialism, American".

11) And yes, in times of systemic Crisis, the 2-parties, in such a system, can even migrate (via the pressures of competitive Public Relations) into each others' long-held roles: "...Historic Shift: Democrats Now the Party of the Rich Elite, Republicans Now the Party of the Working Class" (Roberts, 2020b). See also "Politics, identity", "Parties, political".

[tired of it yet?]

12) "It's like...McDonalds and Burger King are putting [up] different signs...[and] look like they're competing" (Fitts, 2020f, mn.27). "False dichotomy (fallacy)", "Logical fallacies".

13) And it's not 'just in America'; see "Revolution" [German Finance Minister], "Bankmoney regime".

14) Duopoly Updates: 11/22-

<https://twitter.com/jonrappoport/status/1590484909432328193?cxt=HHwWgsCq9aXmxJIsAAAA> ["D's...persuasion"]

1/23- "Floating ballots ar the lifeblood Democrats need to win; and win they do" (Still, 2023, mn.7-8).

See also "Credit-ocracy", "Rentier", "Bush-Clinton Dynasty", "K.J.B. (King James' Bible)/70 Year Plan", "Debt cycles", "Parties, political", "Deep State", "Montesquieu, Baron de" [strategic theory], "Humor".

[political management-- then and now]

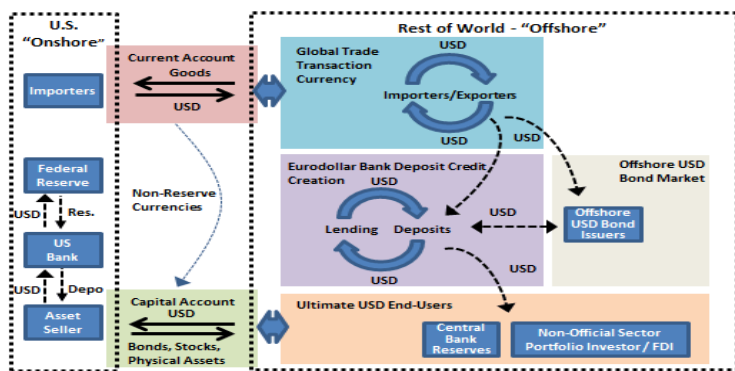

Dutch Disease- (broad usage: 'single-export-dependency' always has blowback; a.k.a. the 'Triffin Dilemma' [1960's]; not to be confused with 17th-18th century 'Dutch finance', although both lead to kleptocratic corruption and [see also] 'State capture')

1) (narrow usage: 'reserve currency dependency') Because of the US dollar's global "reserve currency [status]... we now sacrifice...domestic economic health in favor of [deference to] the world's payment system."- Randy Cook (22-2-6, mn.38) See also "Wealth".

1b) Yes, it matters. "Very few countries, still have...[any] kind of idea about becoming an Empire, mostly because a lot of them tried it and paid dearly. Imperialism is horrible for the country; at first it's initially beneficial, but then it turns against you and the blowback is terrible."- 'The Saker' (Hudson, 2022).

Any known system-- to include "Super Imperialism"-- is eventually figured out and "gamed". See also "Observer Effect/Goodhart's Law".

Source: Author & JPMAM as of 5/16/2018. For Illustrative Purposes Only

[“illustrates a hypothetical path of a dollar as it leaves the United States (via the *current* account deficit) and eventually re-enters (through the *capital* account surplus)”- JPMC’18; i.e. from ‘Super Imperialism’, 1970’s (i.e. ‘physical assets’), to “Dutch Disease”, 2010’s (i.e. ‘bonds, stocks’)]

See also “Graham, Benjamin (1894-1976)” [‘game’-proof?]; ←“Financialization” [always.].

2) “a situation in which the reliance on exporting a single commodity *raises the exchange rate* and thus squeezes out the [domestic] production of tradeable, value-added goods, in favor of services and [ever-accumulating] financial rents. Classic examples of... ‘Dutch disease’ ... have usually been commodity exporters such as Holland in the 1970s (after the discovery of North Sea Oil), as well as Nigeria and Russia [& OPEC]. Dutch diseased economies often result in a shrinking, narrow elite whose power rests on income from sales of the single commodity, [and/] or the services and management that bloom around the cash flows [that have been] generated by this commodity” (Feygin & Leusder, 2020).

3) “For the United States, this single commodity just happens to be the dollar.... The most visible cost of the [obese dollar] disease is the steady appreciation of the dollar since the 1980s, despite a falling US share of global gross domestic product. The main domestic symptom has been the *rising costs* of *non-tradable* goods-- such as medicine, real estate rents, and education-- over tradable goods” (Feygin & Leusder, 2020), that are more internationally-balanced. See also “Asset inflation”.

4) Are there domestic consequences from having a currency that has to backstop everybody else’s currency? “The share of American adults who live in middle-income households has decreased from 61% in 1971 to 51% in 2019. This *downsizing* has proceeded slowly but surely [a.k.a. predictably] since 1971” (Horowitz, Igielnik, & Kochhar, 2020). See also “Imperialism, American”.

Median family wealth, in 2018 dollars, and share of U.S. aggregate family wealth, by income tier

[trading places (Pew, 2020)]

4b) This is simply because the past half-century has been “painting ourselves into such a debt corner that... we’re in the same position that the Eurozone is in. There’s so much money that... [is extracted] to the creditors-- the top...5% -- that there’s no money for capital [infrastructure] investment. There’s no money for [economic] growth... [beyond the] property owners and creditors and the F.I.R.E. sector” (Hudson, 2020c, mn.58). See also “Currency Wars, the”, “Debt saturation”, “F.I.R.E. sector”.

5) Governance may be in fact mostly money, but America was not [in contrast to the UK] designed to govern the world through (the flim-flams of) finance. “We’re better off with... [a] dollar collapse than with

what they're trying to do (in 2020)."- Catherine Austin Fitts, mn.51: <http://information-machine.blogspot.com/2020/10/jeff-reuse-catherine-austin-fitts-riots.html>
See also "Super Imperialism", "Reserve Currency", "UKUSA Agreement" [1980].

Dutch finance- Financing warfare "by borrowing via bonds...[so] called... because the Dutch investors were the main bond buyers" (Hudson, 2016s) in the 17th-18th centuries.
See also "Glorious Revolution, the", "National Debt Economy", "Dutch disease".

Dutch Republic (1581-1795)- (in between the late medieval Italian city-states & the [so-called] 'modern' UK) "a golden age of cultural achievement, distinguished by the philosopher Spinoza" (Graebner, Fite, & White, 1975, 29). See also "Civil National Identity" [Spinoza].

1) "What the Dutch had that no one else then possessed to a comparable degree was a highly urbanized society based on a social system in which *neither nobility nor servile dependence* any longer played a significant part; and individual liberty, religious toleration, and a freedom of expression, including freedom of the press, prevailed to an extent unmatched even by England until after the 'Glorious Revolution' of 1688-- which was itself [mostly] initiated" by Dutch.... Even the most casual visitors, whether they were British, French, German, or Italian, were struck by the unfamiliarity, originality, and *effectiveness* of nearly everything⁸⁶⁹ they saw" (Israel, 2010).

2) "From street vendors and even prostitutes, to merchants and nobles, the Dutch needed to know double-entry accounting to navigate their little oasis of commerce and tolerance. With the complexity [after 1600] of the stock exchange, Dutch merchants' knowledge of finance became more sophisticated than that of their Italian predecessors or German neighbors.... Dutch trading posts could be found anywhere in the streets of the world... in cities even of their hated neighbors the French, such as Nantes and La Rochelle.... [Although] Dutch elites [had always] formed a small, tight-knit group.... Accounting became a central element of Dutch education.... both...[literal] and financial...[l]iteracy [were] at the center of both [the] Dutch Calvinist and Catholic religions [there]-- reading and understanding the Bible oneself was part of the individual's relationship with God and salvation [pre-determined (as taught by the Calvinist majority) or not].... Dutch accounting schools proliferated in the 1500s,⁸⁷⁰ alongside the Latin schools.... [and by] the 17th century, Holland was the most literate place in Europe, and the most literate in accounting" (Soll, 2014, 73-74). See also ""Civil National Identity".

2b) In some contrast, the 'double-entry accounting culture' 200 miles to the southwest in England, even a century or so later, was not for everyone. Proper bookkeeping there "had a special place in the lives of...Anglican, Cambridge-educated and the scientifically minded noble second sons, to high merchants and landowners, city businessmen and financiers, as well as...middling people-- the very literate and often business-minded Dissenters...[but] was [only] a binding thread [or two] in the complex tapestry of British Protestantism" (Soll, 2014, 121). And, as late as 1760, the tonnage of Dutch shipping around the cape of Africa "was still roughly 3 times the amount of British shipping⁸⁷¹.... [Most] striking...however...[was] that there was never such a thing as a Dutch East India Co. bubble.... [Its] rise and fall...[simply] tracked the rise and fall of the Dutch Empire" (Ferguson, 2008, 136). See also "German (industrial) banking", "Protestantism".

See also "Venetian Republic", →"Accounting, double-entry", →"Glorious Revolution, the", →"Revolution".

⁸⁶⁹ "Individual freedom and careful regulation of banking, insurance, and commercial practice ensured that free-market forces were cultivated in an orderly manner. Financial markets strictly supervised by the *city* governments.... [created] a dynamism and global reach that the world had never seen before.... [E]veryone was curious about and often envious of the country's manifest successes" (Israel, 2010). See also "Protestantism", "Civil National Identity", "Design".

⁸⁷⁰ On April 26, 1503, "Jacob van Schoonhoven from Bruges received a license from the burgomasters of Amsterdam to teach reading, writing, arithmetic, and French to 'anyone who might be interested'...[in addition to] the legal right to 'teach all that was useful for merchants'" (Soll, 2014, 74). See also "Civil National Identity".

⁸⁷¹ And "English people". in the 3rd quarter of the 17th century. "wore woolen cloth manufactured in the Netherlands from English wool" (Graebner, Fitts, & White, 1975, 29).

Dynastic Cycle, the (exemptions accumulate, until the government can no longer effectively respond) “The maxim of the great eastern empires... [from Asia to Europe, has traditionally been, simply] exempting such provinces as have much suffered from taxes”; but such short-term expediciencies have long-term consequences⁸⁷²; “to ease a village that pays badly, they load another [down] that pays better; the former [problem] is not relieved, and the latter [asset] is ruined. The people grow desperate between the necessity of paying for fear of [vengeful] exactions, and the danger of paying for fear of new [imposed] burdens” (Montesquieu, 1748, 218). See also “[Charismatic Authority & Charismatic Dependency](#)”.

1) “one of the most persistent patterns of Chinese historical writing: the rule of a new house set up by a man of extraordinary virtue and wisdom, and the gradual decline of the dynasty until its termination under a monarch completely incapable or evil” (Fairbank, 1987, p. 11). More specifically, from “Chinese official historiography,” a substantial change “preceded by *prolonged disorder* produced by a combination of factors: *unvirtuous conduct of the ruler* that would cost him the Mandate of Heaven; *fiscal bankruptcy of his regime* due partly to [personal] extravagance and partly to corrupt [favoritist] withdrawal of upper-class land from taxation, [thus resulting in a vicious circle of] increasing the tax burden on the peasantry, whose [ensuing] defaults [then] impoverished the government; *declining popular welfare* due inter alia to population pressure... and [the increasing] failure of the regime to maintain public works...; *low public morale* due to an increase in corruption... expressing the alienation of both officials and populace from the rulers; *military weakness*...” and eventual overthrow of the dynasty (Fairbank, 11). See also “Confucian”.

2) This might also be called the “*Monsoon Cycle*”. The Shang dynasty (c.1600-c.1046) “enjoyed 500 years of success until the onset of the [Bray cycle/solar minimum] Preclassical Crisis, when an epoch of strong winter monsoons, starting around 1150 BC...contributed to its gradual weakening before its final conquest by the Western Zhou in [or around] 1050... [T]he Zhou was [c.1050-400’s BCE] the preeminent power in central China for nearly 600 years of reasonably good monsoon conditions, until 475...when the beginning of 2 centuries of intense winter monsoons launched the period of the Warring States [475-221 BCE]. With the improvement of the monsoon conditions...[2.5] centuries later, first the short but pivotal Qin dynasty (221-207 BC) and then the long-enduring Han [202 BCE-220 AD; unified] China. The Han dynasty [then] lasted until the next major failure of the monsoons, around AD 220, with a brief interval of crisis (the Wang Mang interregnum) at AD 9-24, exactly at a brief burst of cold winter monsoons. The pattern would recur throughout Chinese history⁸⁷³ until the fall of the Ming dynasty in 1644” (Brooke, 2014, 309). See also “Climate change”, “Civilization”, “China”, “Malthus, Thomas Robert (1766-1834)”.

3) Islam has a shorter-term articulation of the socio-political (version of this) phenomenon. The 14th century “philosopher of history, Ibn Khaldun, estimated that every dynasty runs its course in about 120 years (4 generations). The tendency is to start out with a progressive⁸⁷⁴ ‘group feeling’ of mutual aid. But in time, dynasties succumb to luxury and greed⁸⁷⁵, and become corrupt and easily manageable by special interests” (Hudson, 2016j); henceforth creeping hypocrisy & authoritarianism (and not internet free space). See also “Internet of Things” (not of ideas).

4) Closer to home might be George Stigler’s classic Economic Theory of Regulation/*Regulatory Capture* from the early 1970’s, which predicts, again, that “longer regulatory tenures facilitate greater ‘coziness’ between regulators and the regulated... the relationships between regulators and special-interest groups

⁸⁷² In dynastic China at least they (the mandarins) publicly recognized this and tried to keep the cyclical phenomenon at bay, or at least slowed down.

⁸⁷³ For example, the Ming dynasty “replaced the Mongol Yuan in 1368, after 3 decades of epidemic and summer monsoon failure” (Brooke, 318). “3000 years of [of] dynastic changes.... not unlike the way periods of low Nile... undermined the Egyptian polity.... [But cold] climate would... [in addition to the usual woes, also] bring incursions of northern nomads into the Chinese heartland.... The pattern would occur throughout Chinese history until the fall of the Ming dynasty in 1644” (Brooke, 308-309). See also “[Charismatic Authority \(CHA\) & Charismatic Dependency \(CHD\)](#)”, “[National Identity cycle](#)”.

⁸⁷⁴ In the ‘progressive’ sense (increasingly inclusive), this is essentially a civic-minded (inclusive) patriotism, or “Civil National Identity”-- an ethos characteristic of relative prosperity in times of honesty and freshness/creativity. This same cyclical pattern of social (i.e. “national”) identity has occurred (at varying speeds) in all civilizations on this planet (White & White, 2008d). See also “National Identity/Nationalism”.

⁸⁷⁵ exemptions & favoritism

are expected to deepen and the regulators' empathy for the general interest in regulation is [also] expected to deteriorate... eventually... [resulting in] regulatory 'capture' by special interest groups" (Ramanna, 2015, 91). See also "State capture".
 See also "United States, the", "Accounting, 'Fair Value'", "Regulation", "Debt cycles", "Violence".

Dynastic Cycle, France- 1) The "public, accustomed to expect everything to be done for them by the State, or at least to do nothing for themselves without asking from the State not only...[permission] to do it, but even how it is to be done, naturally hold the State responsible for all evil which befalls them, and when the evil exceeds their amount of patience, they rise against the government, and make what is called a revolution; whereupon somebody else, with or without legitimate authority from the nation, vaults into the seat, issues his orders to the bureaucracy, and [then] everything goes on much as it did before; the bureaucracy being unchanged, and nobody else being capable of taking their place" (Mill, 1859, 66).
 See also "Bureaucracy".
 See also "Scientific Management" [.checkbox].

Dynastic Cycle, UK-USA(?)- (essentially [see also] 'legalism'; not to be confused with 'debt cycles' [which are about the economic culture])

1) As [western] 'hurricane' is to [eastern] 'typhoon', the same political phenomenon of "state capture"- via-oligarchical-theft has typically taken more than a century to materialize (as 'crazy' in-your-face gov't), if not 2 or 3 centuries (with the more successful regimes), when the subject of what is sometimes called "hypertrophy" [self-destructive overreach]⁸⁷⁶ can no longer be completely avoided in public. See also "Imperialism", [masked with] "Bankmoney regime"; [nonetheless] "Corrosion-Cancer-Debt", & "Dutch disease" follow. See also "Debt cycles".

2) In simpler terms, a 'western' version of the classic "vicious circle" goes like this. Private bank credit monetary systems "like the Bank of England's [have inexorably] concentrated society's resources into a few [seemingly ever-fewer] hands, crippling the possibility for government to function properly, leading to a growing contempt" for the public sector in general (Zarlenga, 2004, 544), and a gradual hollowing out of the taxpayers and public structures (in the absence of public sector protection). See also "Tax shift", "Big government (growth of)", "Economics, Parity".

3) For example, the "oil industry, like most rent-extracting industries, merged with Wall Street banks and investment banks. The banks went to bat... for the oil industry [expanding/sharing the exemptions] just like go[ing] to bat for the real estate industry and mak[ing] their customers tax-exempt.... You can [now] look at the oil and real estate industry as [also being] part of the [privileged] Finance, Insurance, and Real Estate F.I.R.E. sector" (Hudson, 2016c). See also "Duopoly (political management)", "Taxation".

Dystopia- 1) "A social system that leads to economic polarization and shrinkage, held together by repressive authoritarian... policies" (Hudson, 2013); and/or totalitarian manipulations.

See "Finance Capitalism" → "Scientific Management", "Corporate Media Cartel/6 Sisters".

[3 centuries of the 'Adolescence of Mankind' Operating System for 'Western'/global civ.]

⁸⁷⁶ "All attempts, admonishes Spinoza [1670], to curb expression of views, and censure books, not only curtails legitimate freedom, but [also ultimately] endangers the state" (Israel, 2001). See also "Civic National Identity".

2) “The people on top actually [at least while they’re young (mostly)] despise the [debt-money pyramid] system they built. But [like a bully], they end up [projecting their despisement unto] the little people who are hostage to it” (Vrabel, 2011, mn.47) and have been dumbed-down into failing to recognize it. See also “Dumb-downing”.

3) Yesterday’s brew? The 20th century’s leading dystopianists (Huxley, Tolkien, Orwell) all formed their ideas and visions in the ‘interwar’ era [after WW1, before WW2], after the Fin de Siecle institutions had already taken over and made a bloody horror show of things. At risk of over-simplifying, these Big 3 may be characterized as: *where* ‘they’ are going [Huxley (weird science)], *how* ‘they’ intend to get there [Orwell (language policing)], and *why* [Tolkien (mythology)]. See also “Industrial Revolution, 2nd”, “[Deceptive Banking Terms \(d.b.t.’s\)](#)”, “Evil”, “Empire”, “Transhumanism”.

4) Money & monetary theory is, as usual, the enabler. “Against the background of [the 19thc] Currency versus Banking [school] teaching[s], the [20thc] marriage [of the Knapp’s State Theory of Money to Mitchell-Innes’ bank credit theory of money] was a serious historical mesalliance” (Huber, 2017, 93). See also “Banking School/Bank Teachings”, “Industrial Revolution, 2nd”, “Parallel universe”, “Industrial Revolution, 3rd”.

4b) Serious? Most dystopias may be characterized as ‘where civilization has fallen, but money has not’. See also [that other famous ‘undead’ horror genre] “Zombie”; “Great Extinction, 6th”, → App.C: “1-2-3”.

5) Inequality’s “traditional violent levelers [sometimes a.k.a. ‘external military threat’s] currently lie dormant and are unlikely to return in the foreseeable future. No similarly potent alternative mechanisms of equalization have [yet] emerged” (Scheidel, 2017, 9). See also “Inequality”, “Monetary reform”.

6) A simple continuum of potential 21st century dystopias might run something like this (from most population to least population): “Communism”, “New World Order”, “Breakaway Civ.”

7) [Dystopia Updates: 5/22](#)- “If this [all, by now] sounds like some kind of dystopian novel, welcome to... circa 2022. Even the comedians at Saturday Night Live get it...Weekend Update[s]...Colin Jost...in May: “Is it me or does every story sound like the opening voiceover in a *Mad Max* movie? The year is 2022. A virus rages across the planet. Digital money has collapsed. Infants have nothing to eat. Women are forced to breed. Men are ready to die for gasoline...” (Martens & Martens, 2022). See also ‘Humor’, “Design”.

See also “Crisis, the”, “[K.J.B. \(King James’ Bible\)/70 Year Plan](#)” [old], “[Freedom continuum \(maturation\)](#)”.

Earth- (a) beautiful, mortal playpen of different (increasingly numerous) puzzle pieces. See also “Money” (photo), “Philosophy”, “Big picture, ‘the’”, App.C: “1-2-3”.

E-bank (virtual banking)- See “Direct banking”.

E-cash- simply bankmoney that is “accessed via cards and apps.... [after it] is deposited by the bank in a special omnibus account for customer ‘e-cash’ transactions” (Huber, 2018).

E-commerce- simply purchasing goods online; not to be confused with (see also) “Fintech” [sector].

Easiest thing (in the world), the (besides breathing)- is to forget your dreams. See also (submission to the group-collective) “National Identity/Nationalism” [social identity], “Groupthink”.

East Asian Economic Miracle- Keeping productivity ahead of inflation “is how the East Asian ‘miracle economies’ of Japan, Taiwan, Korea and China, developed so quickly. By using regulation to ensure that bank credit [bankmoney] is only created for *productive* purposes, high growth can be achieved, even when the economy is already at an apparent ‘full employment’ level” (Werner, 2016c), without stoking inflation. See also “Window Guidance”.

East India Co. (British/Dutch)- (c.1601-c.1873; antec., heart, & center of the ‘City of London [offshore] era’) ‘Is the shingle of global governance and long-term planning-- a century-and-a-half later now-- mostly “public” (the I.I.C.) or “private” (the E.I.C.)?’ See also “Secrecy, cult of”, “World Economic Forum (WEF)”.

"It accomplished a work such as in the whole history of the human race no other trading Company ever attempted, and such as none, surely, is likely to attempt in the years to come."

- London *Times* obituary, April 8, 1873; see also "British Empire(s)", "Eurodollars".

"Originally, the [English side] financiers consisted of 215 monopolists, under the title of the East India Company. They now comprise [pretty much] the entire world of money-changers and bankers. This cosmopolitan band threatens the peace of mankind" (Del Mar, 1899). See also "Public-Private Partnership", "Central Banking-Warfare model", "Central Bank", "Russiagate".

1) According to Del Mar, in 1666 "the English Parliament was so stupid [and] or criminal as to pass the East India Company's *mint bill*...and thus permit the country to be drained of its Measure of Value by a band of [2nd Estate] adventurers. Some of the disastrous consequences that ensued... [include] the...drainage of silver to the Orient, when the [traditionally durable] coins of England were clipped and sweated to 2/3rds of 1/2th of their original weight... It need hardly be said that this was a subject concerning which they ["the American colonies"] were [then] profoundly ignorant" (1899b, 75; & Titus, 2019b, mn.10). See also "Del Mar, Alexander (1836-1926)".

2) The E.I.C. officially disbanded (and/or metastasized) in 1874, after being mostly nationalized by the *Government of India Act* (1858), and divested from India in the mid-1830's. See also "Mockingbird" [.1970's], "International Intelligence Community (I.I.C.)".

3) "They all work for the [offshore] City of London [empire]... It's not about London and the UK. This is...[the dominant] international planetary trading guild that just...[started out & still has some] offices in London, [and] in Frankfurt...in Moscow, in the Bank of International Settlements in Bern, in New York on Wall St., in Sydney, Australia. They [pretty much] own the...planet. And they...[have] actors, and they want to [get around to] lock[ing] us up in a UN Smart City" where there is to be no checking out.

- <https://www.youtube.com/watch?v=a2mcW-YfA4Q> [BoC, 22-11-30, mn.133]. Motive? See also "Great Extinction Event", ←"Monetization"; "Ecological economics".

3b) "Smart cities.... We know the plan.... to remove 'humans' from the decision making process... and their gonna [try to] make us hate the military, hate the intelligence community, hate politicians, hate the courts, hate the police [and most any other public representation]. And you understand what's coming [then]. They will [simply] replace them with automated machines.... The EU international banking cartels, Roundtable groups, the Council on Foreign Relations, Trilateral Commission, the Royal Inst. for International Affairs... Davos, Bilderberger, Club of Rome...The foundations system that funds them. They put up the front people, whether it's Soros, or Kissinger, or... Bill Clinton-- they're just fronts for these Foundations... to [further] fund the private intelligence networks, to fund... the script writers to create all of these artificial [mostly bad] joke entities that go on to [see how much they can] distract us.... Carnegie, the Atlantic Council, the think tanks that write the policy and then put their puppet-idiots in place, who [then] integrate that policy into legislation" (and X.O. fiats).

- <https://www.youtube.com/watch?v=a2mcW-YfA4Q> [BoC, 22-11-30, mn.130-132] . See also "Tickbox", "Industrial Revolution, 3rd", "Corporatism", "Foundations (of totalitarianism)".

3c) Possibly simplified as: 'Bretton Woods I, II, & III' (i.e. the [unreformed] monetary system)... vs ...'Charles I, II, & III' (i.e. now fronts for The City & its [millennial-era] Offshore empire). See also "Bretton Woods", App.C: "1-2-3".

See also "Conspiracy Theory", "Methodology" [.TheThing].

[Dee's alchemical glyph, c.1600] [EIC flag, 1700's]

Ebitda: (replacing traditional 'net earnings' with simply 'cash earnings')

1) "an acronym for *Earnings Before Interest, Taxes, Depreciation and Amortization*. A more colloquial term is *cash flow*" (Hudson, 2013). See also "Kuznets, Simon" [.net, gross].

- 2) What does it mean? Many readers will recall that during “the Internet bubble of the late 1990s, ‘page views’ or ‘eyeballs’ did service [could then substitute] for revenue. Now ‘cash earnings’ are fobbed off as the functional equivalent of *net earnings*. (Suffice it to say that the former, which eliminate, for instance, acquisition costs, are usually substantially higher than the latter.) Years ago, orthodox analysts chafed over the neologism ‘EBITDA’, which means ‘earnings before interest, taxes, depreciation and amortization’. Now EBITDA seems conservative in comparison with such [newer] concepts as ‘EBITDAR’ (which [also] excludes *rent* costs, *restructuring* costs, or both), and [even] ‘adjusted’ EBITDA (which omits a host of [still] other expenses). [Main point?] Modern corporate finance is increasingly faith-based” (Grant, 2014). See also “Accounting, ‘Fair Value’”.
- 3) Are EBITDA, EBITDAR, and ‘adjusted EBITDAR’ simply (lenient scale) weigh stations on the way to (and end goal of) ‘fair-value’ accounting? See also “Accounting”.

Ecological economics- (There is no ‘humanity’s household’ without ‘nature’s household’⁸⁷⁷; not to be confused with ‘environmental economics’ [which is predominantly ‘micro’ perspective]; antec. ‘natural resource economics’)

When the sinks are full; growth can “be uneconomic as well as economic” (Daly & Farley, 2004, 121; 16). See also “Sink”, “Gross Domestic Product (GDP)”, “Industrial Revolution, 3rd”.

1) When it’s messed up, everything matters; and when/if it’s not, hardly anything matters.

See also “Soddy, Frederick (1877-1956)”, “Wilken, Carl (1895-1968)”, “Design”.

2) The primary conflict through eternity has been “man vs. nature”; (and) we’re not done with that yet. In other words: “The history of man is dominated by, and reflects, the amount of available **energy**” (no matter what .gov says or may say).- Frederick Soddy, “Science and Life”, 1920, p.6. See also “Common sense”.

2b) Man’s “economy...[is] a subsystem of...[nature’s] Ecosystem.... [C]ontinued growth of the physical economy...[onto] a finite and non-growing ecosystem will eventually lead to a ‘full-world economy’.... According to ecological economists.... [w]e already are in such a full-world economy”; hence “Ecological economics insists that the logic of optimal scale is relevant to the entire macroeconomy”, not just to its constituent parts (Daly & Farley, 2004, 17-18). See also “Great Extinction, 6th”, “GDP” [optimal scale].

2c) “Soddy’s insistence that the 1st and 2nd laws of thermodynamics must be the starting point of economics (*Role of Money*, pages 4, 5) is a fundamental insight the relevance of which has grown as we have come to discover that neither the sources of low entropy inputs nor the sinks for high entropy waste outputs” are holding up well (Daly, 1980). And, make no mistake, entropy is forever. “[E]ntropic phenomena are characterized by irreversibility, a fatal weakness of the mechanistic epistemology of standard economics” (Daly, 1980). See also “Ontology & Epistemology”, “Academia”.

3) Myopic Econospeak aside, humanity often reaches plateaus in its “thermodynamic⁸⁷⁸ efficiency”. According to Jeremy Rifkin and John Laitner, the “level of energy efficiency” in the US “steadily increased between 1900 and 1980, from 2.5% to 12.3%...[but] from that time on has hovered [at] around [only] 14%, reflecting the maturation of the 2nd Industrial Revolution energies and infrastructure...[Thus] for the past 30 years, we have been wasting [approx.] 86% of the energy we use in the production of goods and services. [And while] the thermodynamic efficiency has flattened, the entropy bill from... [the] estimated cost of air [pollution]...water pollution, and the depletion of nonrenewable resources was \$4.5 trillion in 2010, or 34% of the nation’s GDP-- double the percentage from...1950” (Rifkin, 2011, 210-211). See also “Monetization & entropization”.

⁸⁷⁷ Another way of introducing E.E. is that the civilizations of the first ‘200 years’ of the 3rd Millennium are going to be subjected to more environmental stress than were (even) the classic Bronze Age civilizations of the last 200 years of the 2nd Millennium BCE (all of which collapsed). See also “Eras of (Monetary) History”.

⁸⁷⁸ ...concerning how energy within a system changes, and how a system can perform work that is deemed useful; or, more simply, “the science of usefulness”- Herman Daly (Daly, 1980). How much of the ‘new’ “4th Law of Thermodynamics” has to do with “certain ratios between flows & forces in thermodynamic systems [that are] out of equilibrium, but where a notion of local equilibrium exists”? See also “Economics, Parity” [a.k.a. ratios].

3b) Laitner's model as well as "others suggest [that] it's possible to triple the current [US] level of efficiency to nearly 40%...[by c.2050]. The US...National Renewable Energy Laboratory calculates that if all commercial buildings were retrofitted and rebuilt using state-of-the-art, energy-efficient technologies and practices, it would reduce [their] energy use by 60%. If the installation of rooftop *photovoltaic* power systems were added to the mix, it would be possible to achieve an 88% reduction in the [their] use of conventional energy" (Rifkin, 2011, 211). See also "Industrial Revolution, 3rd".

4) Furthermore, the US "electricity generation & transmission system only operates at... 32% [efficiency]. This level...has remained unchanged since 1960, when the current 2nd Industrial Revolution infrastructure matured. Amazingly, what the...[US] wastes in energy in the production of electricity is more than Japan uses to power its entire economy.... [Reconfiguring] the *nation's power grid*, from servo-mechanical to digital, and from centralized to distributed, would also significantly increase thermodynamic efficiencies" (Ibid). See also "Internet of Things (IoT)".

5) Hence, accurately estimating "the value of natural resource stocks is...[perhaps the main] task of ecological economics" (Field, 2015, 12).

6) ECOLOGY

→ ECONOMy & its measurement

→ POLITics & the political sphere.

→ Corporate Media Cartel 'talking points'.

See also "Big picture, the", "Primary Sector Economics".

[See also "Parity pricing (for raw materials)" [good]; "Technocracy" [bad]]

Economic democracy- (i.e. the 'non-draconian' alt. to 'Ecological Economics'; arguably 'on the wall' since 1944)

1) How does a place (once it's past 'Rule-by-fear') get from 'Rule-by-Love-of-Honor' to 'Rule-by-Virtue'?

2) Its substitutes are pretty much 'The Road to Hell' (a.k.a "pluralist" intent to "fascist" result): ('pluralism'-'corporatism'-'corporate governance'-'shareholder capitalism'-'corporatocracy'-"Fascism")

See also "World Par Economy", "Reform, 101".

Economic factors- 1) pretty much the only thing that changes human (as opposed to human beings) behavior. See also "Human beings".

1b) Hence, (at least the Western) world's predominant 'political economists'-- from the Scholastics, John Locke, David Hume & Adam Smith, to Malthus, J.S. Mill, Henry George, and J.M. Keynes-- have all been 'worldly philosophers', not number crunchers. See also "Political economy", "Monetization & entropization".

Economic science (blanket term)- (reality-based antec. for [what was to become] 'modern' 'Economics')

See also "Political economy" (the breaking up of which, c.1900, led to university schools of 'Economics').

1) Portions of what might be called economic (as opposed to 'monetary') truth may be found in numerous Lexicon entries, including:

"Primary Sector Economics (PSE)" [i.e. 'new maero'], & "Microeconomics";

"Economics, 'Parity'", "Reality economics", "Physiocrats, the", "Franklin, Benjamin" [.aphorisms], "American System", "Soddy, Frederick", "Parity pricing", "Graham, Benjamin", "Minsky, Hyman", "World Par Economy (WPE)"; "Ecological economics"; "NInnies" ;

“Mercantilism”, “Smith, Adam”, “Economics”, “National Debt Economy”, “Neoclassical Economics”, “Gold Standards”, “Bretton Woods”/“Pyrite”, “Keynesianism”, “Parallel universe”, “Race-to-the-bottom”, “Crisis, the”, “COVID Op.”

2) The main distinction/dichotomy, between the 2 most basic “trees”, or approaches to the subject has always been between (what has often been called) ‘real wealth’ and abstract/symbolic monetary gain. In the 18th century this was basically ‘the Physiocrats vis-à-vis Adam Smith’. See also “Wealth”, “NInnies”.

Economic science (essay)-

Economics- (etym.: ‘law of the household’ [macro, and micro]⁸⁷⁹; antec.: ‘political economy’; a.k.a. ‘the dismal science’ & ‘miserable science’ [prior to Keynesian ‘money-]) Is the founding stone of the so-called ‘modern’ world even defined?⁸⁸⁰ Are we bound to a ‘law’ that is not defined? See also “Money”, “Common law”.

“If a man is not rising upwards to be an angel, depend upon it, he is sinking downwards to be a devil.⁸⁸¹ He cannot stop at the beast. The most savage of men are not beasts; they are worse, a great deal worse.”- Samuel Taylor Coleridge (Coleridge, 1835).

“He only is happy as well as great who needs neither to obey nor command in order to be something.”
- Johann Wolfgang von Goethe (Edwards, 1908, 217).

“Economists, when they seek to be profound, often succeed only in being wrong”⁸⁸² (Galbraith, 1955).
“It’s a failure of the [entire] Economics profession.... It’s the ideas that are wrong. I don’t criticize individuals in it.... What we *need* [sic] is a debate about the ideas behind all this.”

- Mervyn King, fmr. Gov. of the Bank of England (King, 2022, mn.22; mn.26). What we’ve gotten instead is (see also) “Euphemism”, “Public relations”.

1) The “...chief failure of economics is its inability, from Adam Smith to the present, to define or discover a concept of *money* [& currency] consistent with [either] logic or history. Economists rarely [even attempt to] define money, assuming an understanding of it.... An accurate concept of money will light the way to solve the...fiscal crisis” (Zarlenga, 2004, 540). See also “Money”, “Currency”, “[Money, 3 \(contemporary Tiers of\)](#)”.

1b) So-called ‘modern’ Economics also “assumes that economics in general and markets in particular are primarily about the allocation of *tangible* goods, or ‘stuff’ that exists only in *limited* amounts. Yet, the key resources that fuel economies are money and capital, neither of which is scarce” (Pistor, 2020b). See also “Accounting” [end of], “Industrial Revolution, 3rd”, “Capital”.

2) J.M. “Keynes may have been right when he said that ‘the ideas of economists and political philosophers... are the chief rulers of the world... it is ideas, not vested interests, which are powerful for good or evil’.... I am also impressed by the extent to which vested interests and going institutions seem

⁸⁷⁹ Don’t conflate the good of *microeconomic* practice with the bad of *macroeconomic* theory.

⁸⁸⁰ “It is almost as difficult to define the boundaries of welfare economics as it is to define economics itself.”- Keneth E. Boulding, (Kurzner, 1960, 20). See also “Bank welfare”, “Adolescence of Mankind”, “Ecological economics”, “Economics, Parity”.

⁸⁸¹ From whence does macro-“evil” originate (in the so-called ‘modern’ age)? “There never was a profession so terrified of unorthodoxy as [E]conomics. Even in the summer of 2001, Cambridge...graduate students who signed...[a] mild protest emerging from the Sorbonne against too much economic abstraction were so afraid for their future careers that they did so anonymously.... [M]ainstream economics lives constantly in fear of [its own] insanity, of heresy, of a sudden strange untrained messiah arising to challenge the way the [S]ystem works. It is a potent fear, especially, for some reason, among [the progenitors of (most of) the System] the British.... [It] is...a fear that stifles debate about fundamentals. It undermines imagination and reform and throttles big ideas at birth” (Boyle, 2002). See also “City (of London), the”, “Bank of England”, “Neoclassical Economics”, “Pilgrim Society”,

⁸⁸² This is a serious problem (for everyone & the entire planet), but it is not about “all” “Economics”. One must understand, at least superficially, the difference between *Macro*- and *Micro*-economics. The former is mostly deductive theory-based assumptions concerning (what they traditionally don’t talk about-- and often don’t even bother to define) ‘money’, ‘debt’, and the (see also) [national debt economy](#). On the other hand, the (increasingly distinct) field of Microeconomics is mostly about the (actual) placement of products-services, consumer behavior, and marketing-logistics. The two siblings are completely different. ‘Macro’ is basically killing the planet (with an un-scientific ideology), whereas Micro essentially brings us the (promised) perfection of supply & demand. [Macro & Micro have to undergo a thorough divorce](#) (with the former forgotten about as pre-modern anti-science), in order to avoid (the primary gravitational pull of) a totalitarian/dystopian future. See also “‘COVID’”.

to have the power to *generate ideas congruent with* [increasingly only] *themselves*... [but] Even... the realm of business...seems... little disposed to listen... even to those whom it [has] hired or subsidized. If it...[absorbs] ideas from the economists, it must...[do] so mainly by some process of osmosis not involving deliberate reading or listening” (Viner, 1963, 22).

2b) This is because people are smart, not because they are dumb. F.e., in 1930 the great historian Carroll Quigley “was studying... Economics. And...found... before the final exam in the first semester of my economics course, that economics was a enormous accumulation of myths that had very little relationship with reality” (Quigley, 1976b). See also “Banking School/Bank Teachings”, “Leverage”.

3) Farmer-economists in the mid-20th century noted, more incisively, that Economists failed to grasp the necessity for equitable primary sector prices-- sometimes a.k.a. the basic underpinnings of the economy. Economics’ influence has grown worse since then⁸⁸³, degenerating, by the late 20th century, into simply a vocabulary that masks the shortcomings of the monetary system. See also “Mythomatics”, “Equilibrium”, “Neoclassical”, “Dumb-downing”. It’s a sad scene. See also “Political economy”.

[what to do]

4) “The role of modern economic theory... [some would] call it *post-modern*⁸⁸⁴ economic theory and statistics is to pretend that the banks, the landlords and the monopolies actually earn⁸⁸⁵ their income, instead of extracting it from the (productive) economy”⁸⁸⁶ (Hudson, 2008). “Once you take an [macro] economics course, you step into the brainwashing... an Orwellian world”⁸⁸⁷ (Hudson, 2016g, mn.10). “Mainstream [macro] Economics is really how to sacrifice the economy to pay the bondholders” (Hudson, 2016n, mn.14). Their “textbooks teach that the economy is in equilibrium and is balanced. But every economy... is polarizing between creditors and debtors. Wealth is being sucked up to the top of the economic pyramid mainly by bondholders and bankers” (Hudson, 2017o). See also “Extraction instruments”, “Bonds”.

⁸⁸³ Widespread public criticism of Economics as unrealistic predates, of course, the 1960’s. “Practically all of the trouble now plaguing this distraught world stems from the practice of orthodox principles of economy which are-- and always were-- false” (Wilken, 1941). See also “Georgism (& Land Value Tax)”, “Parity pricing (for the primary sector)”.

⁸⁸⁴ Also known as ‘post-war’. Peter Drucker suggested that the transformation to a *post-modern* [self-aware] world transpired between 1937-57-- essentially the era of World War Two and its diplomatic aftermath. The concept of ‘modernity’ developed hand-in-hand with the normalization of (sovereign nation-based) standing armies in the West; the concept of *post-modernity* with that of war’s madness. Let’s not be fooled into throwing out the baby (national sovereignty) with the bathwater (our current ‘modern’ system’s slope towards excessive debt and militarization-warfare). National sovereignty and public accountability for policy matter now as much as they ever did.

⁸⁸⁵ “Modern Economics treats all of the theft-- the capital transfer, the transfer payments... as if it were all productive-- as if all income is earned” (Hudson, 2012b).

⁸⁸⁶ Hence, “the vast majority of economists...delusionally model the macroeconomy as if *banks*, *debt* and *money* don’t exist” (Keen, 2015b). “...mainstream Economics [ignores] the possibility that private debt has *any* role to play in the crisis we’re in” (Keen, 2015e). And “in fact the hostility to non-orthodox views inside the [Economics] profession is *worse* now than it was before the financial crisis” (Keen, 2016j, mn.8). See also “Capitalisms”, “Usury cycles”.

⁸⁸⁷ In something of a limited defense of the field, Yale’s Yair Listokin takes the “central lessons” of macroeconomics “to be the importance of aggregate demand for driving aggregate employment, and the crucial role of macroeconomic [i.e. government] policy in stabilizing aggregate demand” (Mehrling, 2019), and hence also employment. More incisively, UK veteran financial journalist Bill Keegan recently joked: “I’ve always *believed in technology* as an Economist, but I struggle with it” (Keegan, 2020, mn.218). See also “Productivity”, “Technocracy”.

- 5) “Mainstream economics has become censorially⁸⁸⁸ pro-creditor, pro-austerity (that is, anti-labor) and anti-government (except for insisting on the need for taxpayer bailouts...). Yet it has captured Congressional policy, universities, and the mass media [see “Corporate Media Cartel”] to broadcast a false map of how economies work... the pro-creditor mainstream rejects what the classical economic reformers actually wrote... [T]he Enlightenment and original free market economists spent two centuries trying to prevent precisely the kind of *rentier* dominance that is stifling today’s economies and rolling back democracies to create financial oligarchies” (Hudson, 2015, 12). See also “Classical Economics”, “Censorship, academic”.
- 6) “[O]ne finds much greater monetary abuse by privately controlled monetary systems, than by public, governmentally controlled ones. And that is why the study of economics is steered away from the study of history” (Zarlenga, 2001).
- 7) may best be thought of as a *criminal counterfeit* group (or thieves’ temple)...so powerful that they control everything that their counterfeit can buy. How can this be? There are only “about 1000-1500 *monetary economists* working in the US... a very significant majority” of which are working, have worked, or want to work at the Fed, which invested \$433 million “on experts researching monetary & economic policy” in 2009; Fed-affiliated individuals also control of the majority of editorial boards at “the 7 top journals” for Economics (Still, 2013, mn.5-6).⁸⁸⁹ [Economics and the courts use concepts](#) (see “Exogenous money”) [to hide or explain away the counterfeiting...so the counterfeiting is largely ignored. Society hobbles with the malignant debt tumor, unable to remove it from its back. Why? Because these arcane banker stories are nonsense to deceive and divert people.](#)⁸⁹⁰ [Banking does not work like they say. Economics students are getting their heads filled with sawdust,](#)⁸⁹¹ [so they will not catch onto the real solution, *sovereign money* that cuts the bankers out of the national money creation loop.](#) See also “Assumptions”, “Neoclassical”, “Neoliberalism”, “Monetary Economics”.
- 8) Is Economics the world’s most ethics-free profession? Economics, in contrast to the field of ‘political economy’ that it supplanted, has shown “no interest... at all in questions of ethics. There are no courses in ethics. There are no journals about ethics. There are no seminars about ethics for Economists.... It is very striking that this 2 centuries old profession has never had any serious engagement with questions of ethics”- Political Economist Robert Wade (Keen, 2018, mn.12-13). See also “Bullshit Jobs”.
- 9) Hence, the utter “illiteracy of modern Americans when it comes to money” is one of the wonders of this world; the “average redneck farmer in South Carolina in 1787 understood monetary policy better than your average Ivy League law student today” (Holton, 2013, mn.51). See also “Historical illiteracy”.
- 10) Economists are “used to mainly dealing with theoretical dream worlds⁸⁹² of their own making” (Werner, 2016c). This is because “...conventional Economics teaches you about a perfect world... in

⁸⁸⁸ Over the 2nd half of the 20th century, Economics and business schools came to constitute an “...academic system that doesn’t teach the history of economic thought anymore... so the very concept of economic *rent* is wiped out. The theory is [that]... ‘*everything is productive as long as you can pay the banker*’. This is what you have to raise the level of abstraction and discussion to, if you want to get widespread support...” (Hudson, 2010b). “[P]eople are not aware either of how destructive financialized management and planning has been... or of the alternative developed by the Enlightenment, classical political economics, and [the] Progressive Era reforms” (Hudson, 2012g). See also “‘Evil’ twins”.

⁸⁸⁹ What has changed since Samuel Butler’s *Hudibras*, c.1680, said it all: “What makes all doctrines plain and clear? About two hundred pounds a year. And that which was proved true before, proved false again? Two hundred more” (Spurgeon, 1870, 483). See also “Censorship, academic”.

⁸⁹⁰ The Neoclassicists’ beliefs on natural ‘*equilibrium*’ necessitate that they “argue...that you can ignore [the role of] banks... debt, and...money when analyzing the macro-economy-- except for...the role of increasing government money supply on causing inflation... It is totally and absolutely at odds with the real world, and it frustrates the hell out of me that I’ve got to waste my time even discussing it. But that’s the mainstream view” (Keen, 2016e, mn.23-24). “I once gave a talk to a group of international philosophers from peace organisations and described some of the methodology that economists use. I had them laughing in the aisles” (Zarlenga, 2007).

⁸⁹¹ Economics may be the most flagrant, but it is certainly not the only department of dubious utility. For although “the current generation [across the OECD] is one of the most educated... [they nonetheless have] lower chances of achieving the same standard of living as its parents” (OECD, 2019, 4). See also “Usury”, “[Usury cycles](#)”.

⁸⁹² In other words, the vast majority of Economists “have been more-or-less brainwashed, during their training, in using the wrong methodology-- the [classically medieval] deductive method, and they should instead look at [inductive] reality.... The natural sciences all use the inductive methodology. And that’s what we need...” (Werner, 2018, mn.6-7; 11). See also “Scientific method”, “Methodology”.

which there is no power-- no accumulation of power, no capacity for anyone to exploit anybody' else, and no need for government.⁸⁹³ It's basically an anarchist's ideal world-- anarchy which is managed through a marketplace, which doesn't need any exterior guidance. And that is so appealing to young people-- particularly young, slightly nerdy men.... I began with a very firm belief in all this stuff.... when I was at high school" (Keen, 2017d, mn.4). "The criterion for excellence in Economics is internal consistency of the assumptions. It's not reality" (Hudson, 2017b, mn.42); it is immature solipsism (at best). See also "Observer Effect/Goodhart's Law".

[See also "Pentagon Capitalism", "Environmental economics".]

11) At its monopoly-pushing and debt-saturated worst, neoclassical Economics today is "worthless.... it's resulting in the...destruction of the American economy. While we sit here the economy is dying and there's no corrective action that can be taken because ['mainstream'] Economists cannot think about it in a way that would allow a correction" (Roberts, 2017d, mn.22). See also "Financialization", "Dutch Disease".

12) "I have found out what Economics is; it is the science of confusing stocks [of money] with flows [of money]"⁸⁹⁴- Michael Kalecki (Robinson, 1982, 295-96)...so that both concepts, in the confusion, may be combined,⁸⁹⁵ consolidated, and (eventually) monopolized. See also "Big 5 Banks", "ConfUSURY".

13) Actually, however "...probably about 10% of academic economists would fall into the 'non-Neoclassical' camp... calling themselves either 'Post-Keynesians', or 'Austrians'...[plus] some Marxists, 'evolutionary economists', and so on.... We've been there...(“in the woodwork”) for 40 or 50 years" (Keen, 2011d, mn.22-23).

14) "Because we treat Economists as experts-- when fundamentally they're not, they're ideologues who don't know [that] they're ideologues... [who] get the right to re-design a system-- including the Central Banking systems... in the belief that their 'textbook' description of capitalism was accurate. Now it's off with the fairies, and we are starting to realize that the hard way...10 years after a financial crisis. But they set it up in such a way that you're actually *reducing* the money supply and saying '*Please grow while we reduce the money supply*'... Because the people who...ran the central banks, and the Treasuries, and all the bureaucracies, and so on were so committed to this ['Neoclassical'] belief system" (Keen, 2016q, mn.8-9). "It's about time Economists learn from empirical research, rather than just pumping out their [non-empirical] theories which... have been disproven by the last 40 years of experience" (Keen, 2016r, mn.18). The Bank of England's Michael Kumhof is "about the only Neoclassical Economist who understands aggregate demand properly, because he includes [TAB-bankmoney] credit in aggregate demand" (Keen, 2019, mn.5).

14b) Is this a problem? "I came to believe that the only way I could produce was to have [bank] credit, and lots of it. And of course.... that ideology was taught by the land-grant...[universities], certainly from the 50's on...and still is" (Asbridge, 2021, mn.16). See also "Imperialism", "Academia", "Parity pricing".

⁸⁹³ And also-- perhaps most incredulously for the 20th century-- no large institutions. Economics undergraduates "still... imagine that if they stick with the subject, then sometime in graduate school they will at last get to study the [real] world of big firms and complex organizations. The few who make it that far are eventually disillusioned" (Galbraith, 2007, xxiv).

⁸⁹⁴ I.e. "It isn't a money warehouse. It's a money factory."- Steve Keen (Hudson, 2016s).

⁸⁹⁵ When banks are the primary "creators of the money supply... [they are also] deciding about the amount and allocation of new money creation" (Werner, 2016c). See also "Monetary reform".

15) Existing (macro) “economic paradigms... are no longer relevant⁸⁹⁶ to the problems humanity is actually facing, in Britain or anywhere else” (Graeber, 2015).⁸⁹⁷ See also “Minsky, Hyman (1919-1996)”. See also “Neoclassical Economics”, “Monetary Economics”, “Censorship, academic”, “Homo Economicus”, “Lunatics”, “Industrial Revolution, 2nd”.

16) For chemistry nobel laureate Frederick Soddy and ‘the new Physiocrats’, however, (real) economics should not be about obfuscatory propaganda resting on absurd assumptions, but rather simply “the middle ground between matter and spirit, or as he put it, ‘between the electron and the soul’” (Daly, 2013b). See also “Soddy, Frederick”, “Ecological economics”, “Nobel Economics Prize”, “M.I.T.”.

⁸⁹⁶ For instance, “*Goodhart’s law*”, that “[w]hen a measure [also] becomes a target, it [then] ceases to be a good measure” (Davies, 2016, xix), has no role in Monetary Economics; see also “*Gross Domestic Product (GDP)*”, “*Ninnies*”. Instead, both Neoclassical Economists and (their primary opposition) Austrian Economists still subscribe to explaining & modelling with “Fractional Reserve Banking... a childish textbook model” from the 1930’s or earlier; so that “you have... one bunch using it to manage the economy, and on another side, a bunch of [neo-] Austrians who think that they’re going to abolish this form of fraud... One side’s trying to implement-- and the other side’s trying to abolish-- something that *doesn’t exist*” outside of textbooks, the primary effect of which has been simply “driving up asset prices dramatically” (Keen, 2017l, mn.20). See also “False dichotomy”, “Asset inflation”. “Individuals, the very focal point of traditional economics, no longer matter very much” (Galbraith, 2017). What is to be done from this dead-end? “You can’t change the thoughts of somebody whose mind is trained into a tunnel vision. You have to do what was done a century ago and create a new discipline. Unfortunately, *Sociology* has met the same fate as *Economics*, [both] largely at the hands of the University of Chicago. So you have to have something... a different discipline”, with a different name (Hudson, 2016p, mn.17-18). See also “Censorship, academic”, “Neoclassical Revolution”.

⁸⁹⁷ Straight-talking Economics insiders agree that the field “is stuck... [and] cannot really bring itself to adjust to the fact that...[its] thought is not particularly pertinent to the major problems that we face.... Compared to what Economics was 60, 70, 80 years ago-- a very diverse group of people-- what you have now is a machine that produces a substantial uniformity [as opposed to university] of thought” (Galbraith, 2018, mn.1), that was really only relevant to the 2nd Industrial Revolution era (‘the long 20th century’) and that time’s primacy on marshalling everything into ‘market’ economies of scale (a.k.a. ‘big box stores’). Huber would also seem to agree with the assessment: “Most economists stick to the status quo, no matter how flawed and failing it proves to be” (Huber, 2013, 11). For example, in the half-decade prior to the Financial Crisis of 2007-08, “mortgage loans doubled from \$5 tn. to \$10 tn... and the Economics profession barely noticed, much less warned us [in any way] of the [private debt] tsunami to come” (Vague, 2020, mn.8); even though similar conditions had, famously, levelled the Japanese economy in 1990. See also “Groupthink”, “Academia”, “Japan model”, “Greenspan, Alan”.

⁸⁹⁸ “The *classical economists*... were trying to shift all taxation to economic *rent*...[which] is a term that means a profit above a normal profit” (Roberts, 2017d, mn.18). They tried to do this because, “what the [fractional reserve] banking system does...[is] it takes those rents and capitalizes them into debt instruments which result in [more] interest payments to the banks” (Roberts, mn.21). But with “*Neoclassical economics*”, however, “the banks [simply] bought off economists. And the classical economists lost the argument that said ‘*We mustn’t be taxing things like labor, [and] production*’. No. *We want to tax these economic rents that have no justification [and] no cost of production. That’s what you tax*” (Roberts, 2017d, mn.21). Jeremy Rifkin was “amazed at how few economists, even at this [post-2008] stage, are willing to... finally acknowledge that the underlying assumption of [even] classical Economic theory-- that productivity produces more jobs than it replaces-- is no longer credible” (Rifkin, 2014). See also “Robotization (and productivity)”.

[and 'the electron' is certainly more about production than consumption]

Economics, "Parity"- (a.k.a. 'raw materials economics'-- sustainable pricing ratios for [not plunder of] the primary sector/raw materials; i.e. 'production-side economics', not 'consumption-side economics'⁸⁹⁹; a.k.a. the 1940's US strategic policy of "organized, sustained, realistic abundance" [-H.S.Truman, 1948]) "Justice is a relation of congruity which really subsists between two things.

This relation is always the same, whatever being considers it, whether it be God, or an angel, or lastly a man."- Montesquieu (George, 1879, 332). See also "Agriculture", "Primary sector".

"Is the metric system discredited because it goes back to the French Revolution?" (Walters, 1982, 8).

1) What's the problem? In "Adam Smith's day... [i]t took 2 weeks of labor in a factory to earn the equivalent of a bushel of wheat...[because the] nobles owned [all] the land and they regulated [via government] farm prices above [the] par of exchange.... Since labor couldn't even eat properly... industry [be it guided by 'government' or not, embarked] on a [strategic] policy that has [since then] ever been the curse of mankind-- [Imperialism]-- finding [& making damn sure you control] cheap raw materials for production efficiency... and [then] selling [its transformations] to the high market of the world, wherever it was" (Walters, 1982, 4). See also "Market fundamentalism", "Race-to-the-bottom".

1b) In the depths of the global Great Depression and general crisis of Western civ. that hung over the 1930's like Marley's Ghost, the old Physiocrats' primary sector-based approach to political economy was revisited by (1921 Nobel laureate) Frederick Soddy, which then caught on with a troika of intrepid American reformers-- Sears-Roebuck⁹⁰⁰. See also "Debt cycles", "Physiocrats, the" [.AdamSmith].

1c) Nonetheless, after securing the mighty machine that conquered most of Europe, it was then back to business as usual, per UK-USA type imperialism (slowly at first, up to the early 1950's, and then rapidly, from the 60's). See also "Bretton Woods", "Pyrite" [.Marley'sGhost].

2) Concerned about the (global) environment and degradation of the Earth's biosphere? "Only one concept [directly] answers this short circuit [in the real economy]. That concept is the idea of a par economy, or partity" for raw materials [instead of for bank credit] (Walters, 1982, 5). See also "Bank welfare", "Political Science"; "Ecological economics".

2b) 'Supply & demand' is not so simple for raw-natural resources. "There is only an interrelatedness between purchases and sales on a short term. The demand is, in fact created by supply, if the supply is priced on par in the first place... [O]f the 26 grain crops produced between 1909 and 1934, the 13 largest [harvests] sold for more per bushel than the 13 smallest" (Walters, 1982, 8). See also "Parity pricing (for the primary sector)".

3) Instead, today we have "increasing and widespread disparity...again quietly [w/o media coverage] destroying the nation's income-base, and [hence] any chance for a long-term general [as opposed to fleeting, monetary-imperialism-based] prosperity. We need to, and can...remake America's historic Prosperity Revolution. Already on the books, the law is simply being ignored. More accurately, the Secretary of Agriculture, who [supposedly] has the authority to act, is failing to enforce the laws on Parity

⁸⁹⁹ When will man's "overturning of...[his] ecological pyramid" (Gaede, 2008, mn.6), be corrected and reversed? See also "Great Extinction, 6th", "Primary Sector Economics", "COVID Op."

⁹⁰⁰ Actually

[for primary sector raw materials].... Without Parity [for something other than bank credit], the real life, high stakes game of scarcity-driven Musical Chairs, a.k.a. finance capitalism, plays out” (Bongiovanni, 2021). See also “Capitalisms”.

3b) The long-term extrapolation is clear. “What will you exchange for food when food is the only thing that has any value?” (Gaede, 2008, mn.7).

4) As with “a just and representative money creation system, Parity Economics has been hidden from view now for many decades and many generations” (Bongiovanni, 2021). See also “Debt cycles”, “Malthus”, “Transhumanism”.

4b) But does it matter less-- or more-- in the 21st century and 3rd millennium? In most countries counties today, “we have a global economy that [is using the wrong thing for money] where capital is using force to extract...[things] that doesn’t deserve,⁹⁰¹ at the expense of laborers...[and] commodity producers.... This is a revolution of the productive versus the unproductive” (Fitts, 2022h, mn.15; 17). See also “Graham, Benjamin”, “Productivity”, “Privilege” (private law vs. public law).

[Life [not death] on Earth; see also Gaede,

2008,⁹⁰² mn.6-9; “Communism”, “F.I.RE sector”]

See also “Ecological economics”, “Parity pricing (for the primary sector)”, “National Income”.

Economist, The (i.e. the Hegelian ~~ee~~communist) 1) “Once [like in the 20thc] lauded as a bible for the global elite, *The Economist* gave up all pretence of political balance magazine” by no later than 2022, and is owned by the Italian Agnelli [Fiat] family, one of Europe’s richest dynasties and so influential in its homeland that it has been called Italy’s royal family.⁹⁰³ The Agnellis became the largest shareholder in *The Economist* in 2015, the year before the Brexit referendum, via Exor, the family’s £6billion investment company” (Pierce, 2022). See also “Lender of Last Resort/Too Big to Fail” [.communism], “Myths, Big 6”, “Hegelian dialectic”, “Forex”,

1b) It then “paid £287million to become the publication’s largest shareholder, a sum that was described as ‘eye popping’ in some quarters. It was clear to many that the Agnellis were determined to buy influence. One of the [primary] directors of *The Economist* is the managing director of Exor, Suzanne Heywood, widow of the late Cabinet Secretary Sir Jeremy Heywood, who served 4 prime ministers... Arch Remainer Heywood was widely criticized by Leave campaigners, who argued that the civil service machine– which has a duty to support the government of the day– was being used to promote the Remain message” (Pierce, 2022), well after the referendum had passed.

See also “Brexit”, “Oligarchy”.

“Bretton Woods”, “Eurodollars”; “Estates, 3”, “Glorious Revolution”.

⁹⁰¹ ...In other words, “the extraction of [real] wealth through financial speculation and financial currency debasement” (Fitts, 2022h, mn.16). See also “Capitalisms”, “Finance capitalism”, “FASAB-56”.

⁹⁰² “I will merely argue that mankind is terminally ill.... If not, [then] when will...[such a long-term trend] stop?” (Gaede, mn.2-4). See also “Death culture”, “Great Extinction”; “Sectors of the economy”.

⁹⁰³ “The Fiat empire [no pun intended], formed at the turn of the 20th century, was turned into an international powerhouse by the late Gianni Agnelli [1921-2003]” (Ibid).

Education- (not to be confused with 'academia', which is all-too-often controlled by publishing desks, government grants, and chair endowments; all of which are subject to 'groupthink')

1) "If you plan for a year, plant a seed. If you plan for ten years, plant a tree. If for a hundred years, teach the people. When you sow a seed once, you will reap a single harvest. When you teach the people, you will reap a hundred harvests"- Kuan Chung, c.650 BCE (Chang, 2006, 698). See also "Schools & Schooling".

2) "I cannot teach anybody anything. I can only [help] make them think."- Socrates, c.400 BCE (Ibid).

2b) "To the West, in spite of all its aberrations, the greatest sin, from Lucifer to Hitler, has been pride, especially in the form of intellectual arrogance; and the greatest virtue has been humility, especially in the intellectual form which concedes that opinions are always subject to modification..." (Quigley, 1966, 1231). See also "Evil", "Methodology".

3) "Just as eating contrary to the inclination [of actual hunger] is injurious to health, so study without desire spoils the memory, and it retains nothing that it takes in."- (the self-taught) Leonardo Da Vinci (1452-1519), (Raja-Yoga, 1918, 110). See also "Dumb-downing".

4) "Education, then, beyond all other devices of human origin, is [be it good or bad] the greatest equalizer of the conditions of men-- the balance-wheel of the social machinery."- Horace Mann, 1848 (Mann, 1868, 669). See also "Schools & Schooling", "Academia", "Corporate Media Cartel (CMC)".

Education, higher- see "Academia".

Education, public- see "Schools & Schooling", "Dumb downing".

Eighteenth century ('usury's infancy'⁹⁰⁴)- See "Enlightenment, the", "Founding fathers (of USA)".

1) The "settlement imposed by the Glorious Revolution...evolving into the still-existing, and extraordinarily historically influential, British state as it is [still] found today" (Sagar, 2022). See also "Glorious Revolution, the", → "World Wars", "Imperialism".

2) The "fundamental...question of what, if anything, can be made to guarantee rights beyond [the 18thc's proverbial] convention and indignation-- or what Hume and Smith called the 'opinion' of mankind-- was *by no means* settled in the 18th century. Indeed, it remains very much an open question today" (Sagar, 2022). See also "Deep State, UK", "Constitutions", "Jones, Alex".

Eisenstein, Charles- "de-growth" activist and author of *Sacred Economics* (2011): "I'm very happy with any experimental idea.... stuff isn't going to work. We're going to learn from that.... I'd like to see a much more playful and gentle spirit" (Eisenstein, 2016. mn.33-34). Regarding "100% Reserve" plans, in his view, the resultant bank "fees, to hold your savings, is kind of a backdoor route to negative interest [rates]" (mn.37). "There's pretty much a movement around the world toward, uh, abandoning cash, which has totalitarian implications, because then every transaction is recorded. But it *also* brings us back to an earlier-- and think healthier-- conception of wealth. In early times, wealth was pretty much transparent.... [and] There was a certain social *role* that the wealthy person had to play. And so I think that ultimately we are moving into an age of transparency, where you can't hide; and we're already seeing that with the proliferation of video cameras" (Eisenstein, mn. 38-39).

See also "Parity pricing (for the primary sector)", "Ecological economics", "Georgism (& land value tax)".

Elections- See "'Democracy'".

Electronic payments- surpassed payments by check in the US in 2003 (Ricks, et al., 2018, n5).

⁹⁰⁴ ...in the sense of usury being legalized/normed; see also "Industrial Revolution". The imperial norming of *usury* was accompanied by the (pretty much concurrent) entrenchment of (those other 2 sides of the **imperialism triangle**) structural *racism* and the "*Central Banking-Warfare model*". Any long-term warfare has to have slaves & interest, if not to say an outright interest in slaves. See also "Usury", "Racism", "United States, the" [sins], "Reserve currency", "**Usury cycles**".

Electronic Reserve- see “Central Bank Account”, and “[Central Bank Account money](#)”.

Elite- is French-Latin for ‘the elect’ or chosen, those (presumed very few) who have seen or are presumed capable of seeing the big picture. Esoterics and obfuscation narrow it. This book is intended to broaden it. See also “Main point”, App.C: “1-2-3”.

Emotions- How else do we have ‘congruence’, yet alone consistency, in our actions? (see “Philosophy” [emotional]). 1) Some people are, inherently, more emotional (need for congruence) than others. 1b) Hence, pretty much ‘the meaning of life’ for most; but also life’s primary cause of redundancies (and thus ‘less-than-optimal usage of time’ for others). See also “Design”, “Numbers”.

Empire (in the so-called ‘modern’ age)- Question: How do the movements & modus operandi of the biggest thing in the world-- an Empire-- become unrecognizable to 98% of “its” population? Answer: Disinfo & appeal-to-authority chains of ~~slaves~~, er, stooges. More specifically, an Empire, in so-called ‘modern’ times, must have a:
a) CIRCULATORY-DIGESTIVE System of monetary-motivational nutrients that ‘the people’ do not understand (see “Federal Reserve System” & “Federal Reserve Bank of New York (FRBNY)”);
b) MUSCOSKELETAL System of public accounting and case law precedence that the public also (and increasingly) does not understand (see “Black Budget”, “Lockheed-Martin”);
c) 5 SENSES System of mostly top-down ‘mediated’ feedback loops of ‘acceptable’ social-psychology⁹⁰⁵ (see “National Identity/Nationalism”, “Central Intelligence Agency (CIA)”, “[Corporate Media Cartel](#)”). See also “Imperialism, ‘modern’”, “[Corrosion-Cancer-Debt](#)”, “Parity pricing”.

Empires- (pretty much all traditionally abuse the primary sector & farmer, until they keel over from abusing the primary sector & farmer) See also “Economist, The”; “Economics, Parity”, “Great Extinction”. “are to justify the financial system” (Hudson, 2016c). “Finance has always supported the military, as a collection agent” (Ibid). See also “International Monetary Fund (IMF)”, “World Bank”.

1) per Montesquieu: a) the “empire of *climate* is the 1st, the most powerful, of all empires” (1748, 299);
b) “the most durable empire... [however] is that of *virtue*” (1748, 306). See also “Montesquieu”.

2) Every Empire has had its (official or unofficial) ‘jewel in the crown’:

Athenian- c.500-405 BCE... Asia Minor & Dardanelles (...to 405 BCE);

Roman- 1stc BCE-600’s CE... Egyptian cheap ‘bread basket’ (...to 640’s);

Umayyad-Abbasid-Almohad- 660’s-1260’s... ??

Ottoman- c.1450’s-1910’s... Egypt (1517-1882)

British- c.1700-c.1960’s... India & Indian Ocean (1810’s-1940’s);

2nd French- 1830’s-early1960’s... Algeria (1852-1962);

American- c.1920’s-2020’s... [see also] “Washington Consensus”, “Reserve currency”;

Chinese- recurrent; c.1950’s- ??... Tibet (from 1950’s)

Russian- recurrent; c.2020’s- ??... E.Ukraine (from ??)

3) In terms of globalism, in the...

1500’s- Spanish brought *bullion* (‘money’) to Europe; death to the Western Hemisphere;

1600’s- Dutch brought *double-entry accounting*, and *joint stock* corporations;

1700’s- English brought the ‘*Age of Revolution*’ [En] and [Currency Wars](#) [UK]... continuing into the

⁹⁰⁵ Ideally, since it is at ‘the ground level’, the imperial-sensory apparatus should not merely prevent ‘the people’ from understanding, but should also keep them imbalanced and on one foot, so to speak, preferably in a self-policing mechanism so that the sheople may never unify, and thus may perpetually be kept at bay-- basically ignorant and at each other’s throats (see also “Dystopia”). Obviously, this involves, at least in the initial stages, some coordination between institutions like RAND, CIA, and the Corporate Media Cartel (CMC), in order to mimic or artifice a naturally-occurring phenomenon (a.k.a. “astroturf”). See also “Secrecy, Cult of”, “Debt cycles”, “Freedom continuum (maturation)”.

1800's- British Navy brings *financialization*⁹⁰⁶ to the world (via more imperial-currency wars), then
1900's- American aircraft carriers (bombs) bring *corporatization*-Intelligence Community-I.I.C. everywhere.
See also "Glorious Revolution, the", "Conspiracy theorist", "City (of London), the", "Imperialism, classic".

Enclosure movement, the- See "Capitalisms".

Endogenous money (creation)- see "'Exogenous vs. Endogenous' (money creation)".

Energy- (how anything moves)

1) "What energy is used for and how is as political [of] a decision as is made on the planet. There is no 'energy market'. There is just energy politics" (Fitts, 2023, mn.3).

2) "" (Krainer, 2022, mn.29-30)

3) "" (Luongo, 2022, mn.30-31). See also "Wealth", "Geoengineering", "Petrodollar", "Ecological economics", "Industrial Revolution, 3rd".

Enlightenment, the- (latter-1600's to early 1800's; a.k.a. [from 4th qtr. of the 17thc] the "Age of Reason"⁹⁰⁷)
"At this auspicious period, the United States came into existence as a Nation, and if their Citizens should not be completely free and happy, the fault will be entirely their own."

- George Washington, "Farewell Letter to the States", June 8, 1783. See also "Happiness".

1) After the purging of religious madness in the 30 Years War, the resultant Treaty of Westphalia's (1648) enshrinement of sovereign nations set the stage for a "long 18th century" (1680's-1815) of relatively civil developments in warfare⁹⁰⁸, public administration, bureaucratization, and "middle class" literary and material progress; i.e. this "freedom to critique all of the presuppositions of society" (Farrell, 2017, mn.3), as long as the proposal can be rationalized as utilitarian (for the majority and the nation). See also "Communism", "Montesquieu, Baron de (1689-1755)", "Middle class".

1b) In other words, that "...the universe operated according to observable laws; religion must [therefore] be compatible with [inductive] reason; the spiritual beliefs of another must always be tolerated; and humanity possessed natural rights and an innate moral sense."- *The Early Republic and Antebellum America*, 2015, p.519. See also "Natural law".

1c) It was indeed more of a 'globalist' than 'nationalist' era. The word *patriot* "became an ironic term of ridicule or abuse from [the] mid...[18thc] in England".- <https://www.etymonline.com/word/patriot>
See also "Cycles"; but that didn't stop the American 'patriots'⁹⁰⁹ from defeating the (hitherto almighty) British Empire in the 1st (of the great [see also]) "Currency Wars", "Revolution, American".

2) The close (or at least *exhaustion*) of Europe's great religious wars of the 17thc was one large factor; but there was another one. German philosopher, G.W. Leibniz (1646-1716), of "Panglossian" fame, was "one of the most internationally minded men who ever lived. He read extensively on China, corresponded with Jesuits who had lived there, and wrote on Confucian philosophy. In a letter written in 1697, he

⁹⁰⁶ British 'financialisation' was basically 'Big Government & Big Banks' collaborating closely (per the 18thc 'Whig Oligarchy' tradition). By the early 20th century, the American half of the UK-USA imperial tag team was expanding the elite [1st Estate-2nd Estate] financialism to include (equal access for) not-necessarily-'financial' *corporatization*. I.e., now, in the 20thc, 'you can start your own!' incorporation, as a 'human right'. See also "UKUSA Agreement".

⁹⁰⁷ Basically (see also "Montesquieu") it was about the public discovery & exploration of (not just Aristotle & the 'Scientific Revolution' of the 1600's, but, moreover,) how social laws [not just the 'hard sciences'] could be rationally studied and then adjusted to increase liberty for all. (not to be confused with Bentham-type 'utilitarianism'). Those "who [still] assert [per Hobbes' 17thc], that a blind fatality produced the various effects we behold in this world, talk very absurdly; for can any thing be more unreasonable than to pretend that a blind fatality could be productive of intelligent beings?" (Montesquieu, 1748, 1).

⁹⁰⁸ "Armies of the 18th century, before the days of [revolution and] national conscription, were too difficult to replace for generals to be eager to risk heavy casualties, if these could be avoided."- <https://www.britannica.com/event/War-of-the-Spanish-Succession> ("Cannon fodder" was a 19thc term.)

⁹⁰⁹ According to Macaulay's *Horace Walpole* (1833), the "name of patriot had become [c.1744] a by-word of derision. Horace Walpole scarcely exaggerated when he said that ... the most popular declaration which a candidate could make on the hustings was that he had never been and never would be a patriot."- <https://www.etymonline.com/word/patriot>

announced: 'I shall have to post a notice on my door: *Bureau of Information for Chinese Knowledge*'. Leibniz found in the mystic symbols contained in an ancient Chinese classic [?] support for his own...theories. There are striking parallels, too, between his philosophy and certain Confucian ideas. Above all, however, he had the dream of creating a new civilization that would be truly universal. This could be done, he believed, by consciously selecting and bringing together the [worst] best elements in Chinese and Western culture. This dream he expressed in a little book of 1697, *Novissima Sinica*" (Bodde, 2005). See also "Physiocrats, the" [Voltaire].

3) "Most 18th-century Enlightenment thinkers had nothing but contempt for universities, which they saw as corrupt, pedantic, moribund, and *medieval*; they preferred to write for the general public. The [so-called] modern [latter 19thc] university was a bid for renewed relevance" (Graeber, 2018b). See also "Academia", "Franklin, Benjamin (1706-1790)". See also "Renaissance, the", "Groupthink", "Censorship, academic", "Bullshit jobs".

English constitution, the- (the planet's oldest [uninterrupted] country is renown for its archaic peculiarities [inconsistencies], the primary seed of which has sometimes been identified as...See "Primogeniture" + Norman Conquest + Great Plagues → "Capitalism" [vis-a-vis 'Partible' inheritance → 'Socialism']) "Carolingian political parameters easily survived past 1000 (in England, indeed, they *never* went away)"⁹¹⁰ (Wickham, 2009, 563); because, unlike Francia & Germania, etc, Britain never dissolved⁹¹¹ in a succession crisis, but was, in fact, maintaining "balance of power" politics on the European continent-- via others' political-succession crises-- by the 1st half of the 18th century. "New courts and new laws are... great evils."- Adam Smith (Smith, 1762-63). See also "Common law".

Overview:

- "That the king [sometimes a.k.a. the City (of London)] can do no wrong, is a necessary and fundamental principle of the English constitution."- Blackstone's *Commentaries*⁹¹² *on the Laws of England*, Book 3, ch. 17 (Blackstone, 1768). See also "City (of London), the", "Blackstone", "White-collar crime".
- "The 'humour of our constitution'⁹¹³, like that of most others, has assuredly much to answer for. For good or for evil, it has here laid the foundation of a land system which had heaped up privileges upon eldest sons..."- Evelyn Cecil, secretary to (his uncle⁹¹⁴) PM Robert Gascoyne-Cecil⁹¹⁵, from 1891-92,

⁹¹⁰ "Carolingian institutions, rituals, values came to England... [primarily] through books.... Alcuin was certainly well known, Theodulf and Amalarius were available, and Hincmar may have been as well... But it is still striking that the English [all 10 or 15 of them, purportedly] took this literature so seriously" (Wickham, 458). "A feature of the Carolingian & post-Carolingian period [in general] is that more land came to be under [1st & 2nd Estate] aristocratic control than before, and was *less* under the control of [3rd Estate] non-aristocrats. This change was particularly important in England... [but] was even more acute in Saxony" (Wickham, 2009, 515).

⁹¹¹ The Norman Conquest and (so-called) Glorious Revolution were more like "new sheriffs in town" than fundamental restructurings. This is because they had to be (somewhat limited or restricted in that way). See also "Common law".

⁹¹² MP and professor William Blackstone (who would soon to be a Justice on the King's Bench) wrote within the "context of rising nationalism on both sides of the Atlantic. A votary of the British Constitution, his *Commentaries* were a summa to help lawyers more easily digest and, therefore, protect it. In his eyes, he merely described the constitutional system that grew out of the revolutionary settlement of 1688 in which the King *in Parliament* [now] held the sovereign power" (Samuelson, 1996). Like Alexander Hamilton and other hard core Anglophile 'Federalists' of the century, he was more for dividing power *within* the Executive than *between* 2 or 3 formally distinct branches of government. See also "Glorious Revolution, the", "City (of London), the", "Separation of Powers".

⁹¹³ The 'English constitution' is often characterized as "unwritten"-- i.e. 'being encompassed in no single, written document': https://constituteproject.org/constitution/United_Kingdom_2013?lang=en . As of c.2020, it seems that this ('unwritten constitution') condition consists only of the UK, New Zealand, and (see also) "Israel".

⁹¹⁴ Robert Gascoyne-Cecil had lots of nephews. "Most commentators offer the relationship between Prime Minister...Cecil... and his nephew Arthur Balfour [of the "Balfour Declaration" 3 decades later] as the source of the [popular UK & Commonwealth] phrase ["Bob's your uncle"; after Cecil.] in 1887, controversially appointed (allegedly nepotistically) the latter as secretary for Ireland. This idiom, very familiar in the UK, is all but unknown in the US..." (Victor & Dalzell, 2007, 74). <https://www.youtube.com/watch?v=GILE5X0IBAA> ["Rockerchild"] See also "Pilgrim Society", "Zionism" (regarding Balfour Declaration).

⁹¹⁵ Arch-Conservative Robert Gascoyne-Cecil, a.k.a. the 3rd Marquess of Salisbury, was Prime Minister 3 times during the Fin De Siecle era, usually sandwiched between (Liberal) William Gladstone administrations: 1) 1885-86; 2) 1886-92; and 3) 1895-1902, for a aggregate of 14 years (That's more than either of the [more famous] Disraeli and Gladstone adms.- and more than any PM of the UK since Robert Jenkinson in the 1820's) in the pivotal run-up to the Great War (3rd Currency War). He was a veritable Benjamin Netanyahu of his day (albeit not a thuggish puppet). The Cecil family has, purportedly, been the most powerful (baronage) in England since William Cecil William Cecil was

- and 1895-1902 (1895, 1). See also “Primogeniture”.
- (In the 1740’s) “Montesquieu described the English state as being basically a [Whig] republic hidden under the guise of a [puppet] monarchy.... [noting that they] ‘are quite right to preserve that [15th-17thc tradition of] liberty; [for] if they were to lose it, they would be one of the most enslaved peoples on earth (Montesquieu...II, 4)” (Sagar, 2022). See also “Eighteenth century”, “Deep State, UK”.
 - Quigley’s summary judgment: In the 18th century, the “landed oligarchy controlled the Parliament. It had taken it away from the king, so you now had sovereignty in Parliament. It...[was] taken it away in the civil wars of the 17th century. And that same land oligarchy had control of the court system and the interpretation of the law; and...when any occasion arose when there was a dispute, [per] ‘What rights does someone have in this piece of land?’, they invariably decided in favor of the landlord group and against any other group-- above all, any peasants. And the result was [simply that] England’s rural areas became depopulated. And that’s why, in... [1770, Oliver] Goldsmith wrote *The Deserted Village*... there’s no one there. Or if you read [Thomas Grey’s] *Elegy in a Country Churchyard* [1751], once again, there’s no one around. The whole countryside is deserted by the 18th century. And they ...[fled] to America...or... other [such] places, and this gave us, eventually, the British [i.e. bankmoney (or 2nd Estate)] Empire” (Quigley, 1976c-pt.2, mn.209-11).
- 1) Alfred the Great (r.886-899) made his “principle parallel with the Biblical law of Moses. As he saw it, the English could-- and should-- be a chosen people, answerable to God. In the 10th century, when the English state was created, that perception became the underpinning of the king’s law.... The new conception of royal justice was aggressive. The Anglo-Saxons had brutal corporal and capital punishments at their disposal.... Like many traditional societies, the Anglo-Saxons placed a high value on a person’s word... [and] at the heart of the 10th century state was the oath, taken by all freemen from the age of 12, to abstain from and denounce any major crime.... [For] serious crime[s] your entire kin could be punished” (Wood, 2001).
- 1b) “It was above all in England that earlier traditions of public *assemblies* with [real] judicial powers, extending to all free men, continued without a break. This was a major reason why the *free-unfree divide* remained strong in England...indeed, a rather larger proportion of the population was legally unfree there by 1200 or so than in any of the post-Carolingian lands” (Wickham, 2009, 539). See also “Capitalisms” [EnclosureMovement].
- 2) For nearly a millennium (11th-19th centuries), England was synonymous with political-economic precocity [being out front] in Europe. Only China, at the other end of *Eurasia’s bookends* of state money, can lay claim to a similar string of widely copied accomplishments, for such a long time (also for about a millennium, starting from the 7th century). Basic geography aside for the moment,⁹¹⁶ what key institutions made this precocity of English development in Europe? For 1,000 years (after being the 1st region of Europe [in the 400s] to become genuinely post-Roman/post-Imperial), England was usually first:
- 1st to make a permanent base (in the 8thc) for [what would eventually (11thc) be known as] *Chrisendom*;
 - 1st to be *politically unified* [in Eu., for > a century] (in the 10th-11thc’s [mostly due to geography & Vikings]);
 - 1st to *overcome warlord-centric feudalism*⁹¹⁷ (in the 12thc; [mostly from state-centralized/primogeniture]);

chief advisor to Queen Elizabeth I from the 1550’s and Lord High Treasurer from 1572 until his death in 1598: “From 1558 for forty years, the biography of Cecil is almost *indistinguishable from that of Elizabeth and from the history of England*” (Pollard, 1911). See also “Royal Institute of International Affairs (RIIA)”, “Deep State”.

⁹¹⁶ Both jurisdictions are eminently unifiable: Britain by virtue of being a somewhat large (but not too large) island only a child’s play distance from the continent (like a perpetual northwestern suburb of Europe); and China by virtue of the Himalayan rivers forming there not one, but 2, very large (and not too far apart) natural drainage basins (the Yellow & Yangtze rivers), which in turn were eminently unifiable themselves (in a geography fortuitous to [great-river-basin] size that is unequaled anywhere else on the planet).

⁹¹⁷ The usual academic term for this is *seigneurie banale* (derived from the Latin word *bannum*-- the right of command), which is used to designate the particular post-Carolingian reversion to local warlords (typically laws-onto-themselves) that occurred, primarily in France, from the later 10th and 11th centuries-- at precisely the same time that England, in contrast, was unifying. According to George Comminel, it “is the absence from English lordship of [the anarchic] *seigneurie banale*... that figured centrally in the development of Continental feudalism-- that accounts for the peculiarly ‘economic’ [rational] turn taken in the development of English class relations... In France, by contrast... [the proto-nation’s] social development can equally... be traced [to this time frame, but also] to the central role of *seigneurie banale* in the fundamental class relations of [French] feudalism” (Comminel, 2000, 1). See also “Feudalism”.

- 1st to develop a *nationwide*, post-serfdom *wage-economy* (in the 15thc: [1 defin. of ‘capitalism’ is working for bread]);
- 1st to confiscate Roman Catholic Church holdings in the 16thc, and thus subsequently achieving *cultural & literary* [publishing & national identity] *independence*;
- 1st to achieve, in the 17thc, ‘*constitutional monarchy*’; see also “Revolution”.
- 1st to achieve, in the 18thc, an economics-based ‘*2-party parliamentary system*’; and then [with the resultant political stability] a *global* maritime empire of relatively *indirect rule* (becoming the premier imperial/oligarchal power from that time). See also “Montesquieu, Baron de”, “Bankmoney regime”.

3) By the 19th century, however, (with the possible exception of the end of the slave trade, the de facto conquering of China, and the advent of womens’ suffrage) most new societal innovations by that time were coming from either the US or from Germany. After the UK’s Pyrrhic victory over the latter (and de facto monetary-imperial supplantation by the former) in the 3rd Currency War, the British lion was not what it used to be. Now, in the 21stc, the UK is really only ‘out-front’ in terms of offshoring and bankmoney laundering (mostly offshore US dollars). Lex. “City (of London), the”, “Imperialism”.

How was Europe’s big island to the north and west so different?

4) Roman inheritance was partible, which carried over into 1st millennium France (where the Roman exodus was nowhere near as sudden, nor as complete, as it was in England). Although the Germanic Anglo-Saxons were also of partible inheritance, the Viking northmen (who invaded and occupied large [and sometimes very large] swaths of England from the 700’s) were not. They practiced primogeniture. Some say that this rubbed off on Anglo-Saxon England to such an extent that the entire unified kingdom had become mostly “primogeniture” by the first half of the 11th century. Other sources [including Cecil, and Comninel], say that it was only with the Norman Conquest (1060’s) that the institution became the new norm. The Normans of course were themselves former Vikings, and being imperialist conquerors, their inheritance was definitely in the “royal” style-- strictly primogeniture, and although they never came anywhere near conquering all of France, they did [with the trick of a feigned retreat at Hastings] conquer all of England in 1066-67. See also “Primogeniture”.

[Bayeux Tapestry (c.1070)... of the Battle of Hastings (1066); post-Hastings “Conquest”.]

5) After Alfred the Great (r.848-899), in the 10th century, the Wessex “kings ended up with a high proportion of the land⁹¹⁸ under their direct control... overall, a far higher percentage of the land-area of their kingdom than did Charlemagne... [who] was certainly much richer than they [overall], but only as a result of... [having] over 10 times the land-area of the realm of Aethelstan [r.924-39]. English kings...had a *uniquely favorable position* in Europe; [hence] they could be enormously generous, creating a new aristocracy, or giving it hitherto unknown wealth.... They thus kept the strategic upper hand... [because systemic] taxation came in [via] Royal courts & royal power” (Wickham, 2009, 470).⁹¹⁹ See also “Coined money” [‘coinage revolution’].

⁹¹⁸ Even in the (formerly Viking) Danelaw regions, “from Yorkshire to East Anglia...[which always] had more fragmented estates...[and] more space for peasant landowning... even there... the percentage of landowning peasants was lower than on most of the Continent. England...moved from being the post-Roman province with least peasant subjection, in 700, to the land where peasant subjection was the completest and [the] most totalizing in...[all] of Europe, by as early as 900 in much of the country” (Wickham, 2009, 469); and everywhere by Norman Conquest times.

⁹¹⁹ It seems an odd (or at least rare) paradox that “the peasantry” (i.e. 3rd Estate) in Anglo-Saxon England was both more *excluded from landowning* and more *included in judicial* assemblies than were there counterparts in Francia and on the Continent in general. Are we to believe that such a combination of political manipulation (i.e. ‘voting but landless’ peasants) goes back to Wessex and Alfred times? In England, even in later medieval centuries, “royal dependents seem to have had more rights than other tenants... and they were at least not subjected to [2nd Estate] private lords... [T]he traditional public obligations of all free men persisted...[as the Viking-induced] national emergency... required wider military participation than was by now necessary on the Continent, and [additional] burgh defence was [also]

6) Given this relatively strong [honest] condition of the pre-existing English state, the Normans were, with a strong yet not unsteady hand, able to establish-- or rather quickly *re-establish*-- the strongest state (in terms of taxes & monetary *coherence*) among the kingdoms of Europe, and for the next 600 years would be attackers-- not attackees-- of the European continent. It wasn't just "bright eyes & bushy tails". The Normans' initial land grab and primogeniture provided England with more political (and hence also monetary) stability (less secession struggles) than Europe; and the Normans-- being French-speaking foreigners-- also had to rely more on developing (or at least *consolidating*) grass-roots "*common law*" (arguably a sort of proto-democracy, at least in regards to juries) rules in order to achieve their aims.

7) Basically, the "...oligarchy which arose in England differed [substantially] from the...aristocracy of continental Europe in...3 [main] points...: 1) it got control of *the* government; 2) it was *not opposed* by a professional army, a bureaucracy, or [by] a professional judicial system... [but instead took] control of these adjuncts of government itself, generally serving *without pay*, and [thus] making access to these positions difficult for outsiders...[i.e.] expensive; and 3) it obtained [as had the Normans] **complete control of the land**, as well as political, religious, and social control of the villages. In addition... it was *not a* [caste] nobility⁹²⁰.... In England, the landed oligarchy could engage in any kind of commerce...and could marry anyone without question (provided she was rich); moreover... *access to the peerage* by act of the government took only a moment, and could be achieved on the basis of either wealth or service... [T]he landed upper class in England was [thus (at least somewhat more)] open to the influx of new talent, new money, and new blood" (Quigley, 1966, 128). See also "Aristocracy (& nobility)", "Primogeniture".

7b) Thus, both due to the Norman Conquest and to the severity of the latter 14thc bubonic plague; "England did have what you certainly would call...a sovereign state very early-- certainly by 1400" (Quigley, 1976c-pt.2, mn.141). But there was also an equally-prominent 3rd factor. This "sovereign state, however, [was] not in the hands of the king, but instead in the hands of a *joint corporation*, known technically as *Rex in Parlamento*, [or] the king-in-parliament. And this... *Rex in Parlamento*... is not just English. It's Northern Monarchy...[Y]ou will find [that] the oldest parliament in the world today-- it's more than a thousand years old-- is in Iceland, and other old ones are in Norway & Denmark... And this idea of a ruler having the power to do almost anything, if the parliament agrees, is the real, basic background of a tremendous political power like [Swedish King] Gustavus Adolphus in 1630, in the 30 Years War" (Quigley, 1976c-pt.2, mn.141-42); basically 'Parliamentary dictatorship'. See also "Sovereignty".

7c) This precocious sovereignty was substantially assisted by, of course, the development of the bar. From the 14thc, the *English bar* was organized, 2/3rds of the (5 mile) distance between Westminster Abbey and the City of London, around the Inns of Court. Like other guilds, it gradually took on more functions and by the 1400s was assuming responsibility for educating (what might then be called) law students. "You see...[the various Inns] were the places where the judges & lawyers who were trying cases in Westminster spent the evening[s] during the judicial sessions...[T]hey not only discussed the cases that were going on each day, but men who were regarded as authorities [also] gave discussions afterwards in the lounge...[about] contracts, or whatever it would be. And in this way you would pick up the necessary knowledge of the law. But this was expensive. To join the Inns of Court, it required, oh, hundreds & hundreds of guineas...[and] Only the landed oligarchy could afford it; and...only people who

added to it; these public commitments continued without a break... whenever national defence required... [S]hire judicial assemblies had space for the free peasantry, and the basic law for the hundred assembly...presumed that their [3rd Estate] attendance was normal; this public role for the free continued without a break thereafter, as it did not in most regions of... [the] Carolingian [Empire]... England's development thus remains paradoxical... [It is both] the European country where aristocratic dominance, based on property rights, was most complete...[But it is] also... where [1st Estate] kings maintained most fully their control over political structures, both traditional (assemblies, armies) and new (oaths, taxation)... [I]t is the consequence of both the.... crystallization of property rights [& legal culture, vis-à-vis the Viking 'other'] that took place in the 9th century & into the 10th.... [and also the 1st-2nd Estate] oligarchical compact that allowed the West Saxon conquest of southern England in the 910s.... that the longest-lasting state of medieval Europe began" its basic frame & structures (Wickham, 2009, 471). that we still know today. See also "Primogeniture" [prop. rights], "Statism".

⁹²⁰ Half-a-century later, Oxford's Chris Wickham found that-- in high medieval Francia too-- there "was not a noble 'caste', marked out by unbreakable rules of blood-line, as emerged in some parts of latter medieval Europe; there was [instead] a ['class'] grey area of negotiation [not pedigree], marked out by the snobbery of social superiors at every level. It was inside this grey area that milites in some parts of Europe began to take on aristocratic trappings, and... claims to status hitherto unavailable" (Wickham, 524).

were lawyers, and had passed the bar through this process, could become judges. So what you had was - which is true of much of English history-- a very small hole through which circulation was allowed for people to work their way up. But [at least] it was an *educational* [sic] loophole that they had to squeeze their way through...[I]t was *expensive* [sic]... And the result was that only those people who had affluent parents [could become lawyers and judges], and for much of English history, at least up until... [circa] 1776, the only affluent parents...[were from] the gentry [and] landlord class.

So your *eldest* son would take over the [landed] estate; your *2nd* son would, perhaps, go into the navy or the army, or you would find him a place in the Church, a living, as they called it; and then the *3rd* son would, perhaps, go to the Inns of Court and try to become a lawyer.... [For] if he was to learn the law, he did not go to a law school, really, and certainly not to a university, because the common [precedent] law was not taught in universities. Instead it was taught in 4 very expensive eating clubs in Westminster-- the *Inns of Court*: [the Inner Temple,] the Middle Temple, Lincoln's Inn, and [Grey's Inn]... the 4 Inns of Court; and these were expensive. You had to eat meals there; you had to listen to the lawyers talking about" their business (Quigley, 1976c-pt.2, mn.207-209; 207). See also "Primogeniture".

8) Although the "Glorious Revolution" (1688-94) established the principle of Parliament's sovereignty over the purse strings and money (see also "City [of London], the"), the House of Commons [3rd Estate] didn't really get the House of Lords [2nd Estate] (mostly landed nobility-- i.e. related/peers to either the monarchy-bishops and/or the City) to butt out completely until a Lords uprising (against the government budget in 1909) was put down by the *Parliament Act of 1911*.⁹²¹ But even this ostensible victory for the 3rd Estate was **far from** complete.⁹²² See also "Oligarchy", "City (of London), the", "Parties, political- UK".

8b) Carroll Quigley noted that the (governance) "system in England is even worse [than in the US]. The Parliament in England now no longer has **any** control⁹²³ at all over expenditures, and yet they are still teaching in the schools that that is how they got the English Constitution-- by [parliamentary] control of grants to the Monarchy. Do you know who is making the decisions in the [US] Bureau of the Budget and Management, as to who will get how much?" (Quigley, 1976c-pt.3, mn.404). See also "Deep State", "Trump, Donald" [JEDI].

⁹²¹ From c.1832 to 1911 there had been only an *informal* convention that the (2nd Estate) Lords would give way when the public was behind the (3rd Estate) House of Commons. In 1949, the Act was followed up and amended by the *Parliament Act 1949*, which limited the amount of time that Lords could delay Parliamentary bills, from 2 years to 1. The constitutionality of the amended Act was, a half-century later, upheld in 2005 by the Appellate Committee of the House of Lords itself [which sometimes served as the UK's version of a 'supreme court'], in rejecting an appeal that was brought against the *Hunting Act 2004*.

⁹²² A century after the *Parliament Act*, the Blair government's *Constitutional Reform Act 2005*, Part 3, Section 23(1), mandated the creation of a *Supreme Court of the United Kingdom* (effective Oct. 2009), which officially took the place of the former "Lords of Appeal in Ordinary" (a.k.a. *the Law Lords*), which had been serving as the highest/final appellate court for UK domestic matters, as per the *Appellate Jurisdiction Act 1876*. Blair had, a decade earlier, promised to abolish the House of Lords [symbolic of 2nd Estate supervision of the (3rd Estate) House of Commons] altogether. The Judicial Committee of the Privy Council (est. 1833) continues to serve as the highest court of appeal for certain British territories, Crown Dependencies & [remnant] Commonwealth countries. Independence from the JCPC may be thought of as a measure of *de jure* sovereignty from the UK [which is not to be confused with independence from the British monetary system] (f.e. Canada in 1949, India & Pakistan in 1950, South Africa in 1950, Australia in 1968, Malaysia in 1985, Singapore in 1994, The Gambia in 1998, New Zealand in 2004, and Barbados in 2005). Under the doctrine of parliamentary sovereignty, the UK-style Supreme Court is much more limited in its powers of 'judicial review' than, f.e. the US. It cannot challenge any primary legislation that is made by Parliament.

⁹²³ "England [pretty much always] had an oligarchic political structure. It did [however] reform itself radically in the 1820's and became one of the best governments in the world by shifting to what I would call an aristocratic [in the Aristotelian (not rural) sense of the word] structure, that is, one with a sense of responsibility to the public welfare. But they didn't have a democratic system.... England was in no sense a democratic country in 1775, when we declared our independence. It remained an undemocratic country until well into the 20th century. Candidates were not nominated by the people, and members of parliament were not even paid until 1911.... An ordinary person couldn't get a secondary education *at all* until after 1902, and higher education didn't become widely available until after 1945 and the reforms of the last quarter of a century. Furthermore, both in England and in our country... [as] part of our undemocratic heritage from England-- access to justice is strictly limited. Until 30 years ago England had a rigidly stratified society-- the only one in Europe where you could tell a person's social class the minute he opened his mouth; the upper classes had a different accent. Today, with the BBC and more popular education, speaking accents are blending, as opportunities for changing status are opening upward. But access to law, to the courts, to justice, as well as to education, were strictly limited, and for the most part still are in the English-speaking world. When somebody infringes your rights, it's usually too expensive for you to defend them.... I don't have the \$150,000 it takes to flight a case to the Supreme Court" (Quigley, 1972b). See also "Monty Python's", "Legalism", App.C: "1-2-3".

8c) Hence, in so-called 'modern' times, "the Punch & Judy Show of British [duopoly] politics...[now features] a little bit of gang warfare between the Bank of England and the Treasury" (Marsh, 2020, mn.217). See also "Financial Services Authority", "Parliament", "Intelligence Community (IC)".

9) Such traditional imperialistic-monetary "blur" (opacity and [sometimes deliberate] obfuscation) is the primary lingering legacy of the 'English Constitution's' medieval precocity. Keeping things nice & clear (per the USA's abstract constitutionalism & "Separation of Powers") has not ever necessarily applied to the elite of a monarchy (even a 'constitutional monarchy'). Sir Peter Middleton, a former President of the British Bankers' Association & Chancellor of Univ. of Sheffield, recently confided (at a panel of English CB managers & technocrats) that: "If things are going well...[then] it's fine to have all the instruments in one place. If they're not doing well, then you need checks & balances" (Middleton, 2020, mn.118).

10) Some of England's pioneering cultural inventions-institutions include:

"Primogeniture", → the "National Debt Economy", → "Debt cycles", → "Cultural Calendar".

11) Since the United Kingdom & the early 18th century, British "rule of law has been sustained primarily through a political culture that prevented the...abuses of power inherent in the [otherwise] highly centralized and essentially unlimited power structure of the parliamentary form [a.k.a. 'elected dictatorship']".⁹²⁴ The high failure rate of parliamentary government, especially in Africa [with its great linguo-ethnic diversity & particularly ill-designed national borders (to suit the needs of mostly British & French raw materials exploitation)⁹²⁵], results from the absence of the unique and particularistic [i.e. 'imperial' or 'fat city'⁹²⁶] British political culture" (Lutz, 2006, 10). See also "Parliament".

11b) In William Blackstone's eyes, however, the "greatness⁹²⁷ of the British Constitution...was the [informal] balance it achieved among monarchy, aristocracy, and democracy in law making, by locating sovereignty in the [1st Estate] King, [2nd Estate] Lords, and [supposedly 3rd Estate] Commons of the realm. That [traditional] balance [supposedly] guaranteed liberty under law, and made Great Britain the freest and strongest nation of its age- as the 7 Years War [(defeating Old Regime France) had just] proved. According to Blackstone's line of thought, Parliamentary sovereignty, and its consequent right to promulgate the 1688 *Declaration of Rights*, was the heart of England's revolutionary heritage, and [also] of her role in providence" (Samuelson, 1996). See also "Separation of Powers", "Estates, 3", "Zionism", "Revolution, American", "Parliament" (which hasn't been sovereign for perhaps a century now)⁹²⁸.

11c) It's often overlooked that the Whiggish, anti-Scott & anti-Monarchy "Wilkes & Liberty" movement of the mid-1760's to mid-70's "nearly caused a Revolution...[in England, and] the war that was [eventually] fought in America was [mostly] just an extension of the civil conflict that was...[already] going on in England. It was [very much] a [trans-Atlantic] English affair and the Americans were English"⁹²⁹ (Livingston, 2006, mn.1-2). See also "Revolution, American", "Monty Python's".

11d) Scotts, however, "were identified with the authoritarian French, with whom they had had century-long connections, and with the authoritarian Scottish kings.... [resulting in] a deeply established

⁹²⁴ The Glorious Revolution was of the 2nd Estate, not (yet) the 3rd. Its "'Bill of Rights enshrined [only] the rights and privileges of Parliament, but left the people as subjects with no basic rights as such'" (Szromba, 2001). Per the 17thc civil wars, ('Glorious') Revolution, and John Locke, it was quite clear that both the executive (prime minister's office) and courts were to be creations of a sovereign Legislature and under its authority; sometimes a.k.a. the 'Whig oligarchy'. See also "Locke, John (1632-1704)".

⁹²⁵ ...With a substantial amount of "divide & conquer" linguo-ethnic insidiousness thrown in (to the boundaries-drawing process), to boot. One didn't want massive "uprisings" until the 3rd Currency War (and global dominance) was settled (in the mid-20thc). See also "Fin de Siecle" era (when most of the boundaries were drawn).

⁹²⁶ Everybody knows that in order to share, one must first have something (or better-yet, something surplus) to share. Then it is natural behavior. See also "Political Economy".

⁹²⁷ So what is 'greatness'-- in the English or American constitution-- or any constitution (in all senses of the word) in general? "[W]hose 'greatness' derives from their generality, as masterfully explained by [celebrity Physicist Richard] Feynman in one of his legendary lectures"? - <https://royalsocietypublishing.org/doi/10.1098/rsta.2019.0168> [Royal'20] . See also "Soddy, Frederick", "Ecological economics", "Physics, new".

⁹²⁸ Consequences? "Where are we at as a nation? We don't have one."- Ray Davies (Simpson, 2015). So you're going to charge (what's left of) the Commons, are you? <https://www.youtube.com/watch?v=cklpO4kYZKs> [c.1970, mn.2]. See also "Capitalisms" [Enclosure], "Music", "Appendix C: 1-2-3" [dismal].

⁹²⁹ "'It was a common prejudice that liberty was a peculiarly English practice. This was a deeply-held view, that only the English in all of Europe, understood liberty. And there was something to that" (Livingston, mn.16). See also "Common law".

prejudice that the Scotts did not understand English liberty... and to shout '*Wilkes & Liberty!*' was to affirm this prejudice" (Livingston, 2006, mn.17-18).

12) When alternative (and semi-alt.) media fellows like David Icke and George Noory start talking about "Majestic 12", one should know that it is not necessarily much of anything new. Operational "control of the Royal Navy remained the responsibility of the Lord High Admiral, who was one of the 9 Great Officers of State (est. by)... This management approach would continue in force in the Royal Navy until 1832" (wiki-Admiralty). See also "Timarchy", "Intelligence Community" ([International Intelligence Community \[I.I.C.\]](#)), "Imperialism, English (language)", "Accounting".

[Dickens, c.1867; see also Jacob Soll's version of "ideal utopia" (Soll, 2014b, 109).] [Mr.Powers, Sr., c.1997, gets it.]

13) Over the past half-century or so, Britain, since the mid-1960's, has been "[s]uffice it to say... content with her 'bridging' role between Europe and America...under the US monetary umbrella" (Wilkie, 2012, 28). See also "City (of London), the", "Eurodollars".

13b) ...Or has it? [English constitution 'updates'](#): see also "Parliament" [.1940's], "[Cultural Calendar](#)" [.1960's], "Thatcher" [.1980's], "[Tickbox](#)" [.2010's].

Entertainment- "The only things that are increasing in cost while everything else heads to zero are human experiences" (Gilder, 2018, 184). See also "Industrial Revolution, 3rd", "Statism", "Design".

Entitlements- "Pension funding, Social Security and other basic social spending should be organized on a *pay-as-you-go* basis rather than entailing 'forced saving' in the form of *paycheck withholding* to be lent to governments to enable them to cut taxes on the rich and on rentiers" (Hudson, 2012g).

See also "Discretionary (US budget)", "Baby-boom demographics", "[Citizen's/national Dividend](#)".

Entropy- See "Monetization & entropization".

Environmental determinism- (Does not all wealth ultimately derive from the Earth and sun?)

See "Economics, Parity", "Great Extinction, 6th", "Graham, Benjamin (1894-1976)".

Environmental-Social-Governance (ESG) investing- See "Green neocons".

Epistemological undergrowth (& the F.I.RE sector)- See "Ontology & Epistemology", "Orwell, George".

Equality- 1) "The good sense and happiness of individuals depend greatly on the mediocrity of their abilities and fortunes" (Montesquieu, 1748, 41). See also "Happiness", "Civil National Identity".

2) "In monarchies and despotic governments, nobody aims at equality; this does not so much as enter their thoughts; they all aspire to superiority" (Montesquieu, 1748, 42).

See also "Inequality".

Equilibrium- (sometimes a.k.a. death) 1) "All genuine sciences don't think you live in equilibrium. They say y' live in a dynamic system. Equilibrium might be a property of some particular part of the system, but you're going to be floating around, fluctuating...You're not going to be in equilibrium. And the dynamics don't move from one equilibrium point to another.... But [neoclassical] Economists... [say that] the market

just gets moved from one equilibrium to another, by exogenous shocks, etcetera, etcetera. And they build mathematical models of this, and people use those...to price things like options on shares and so on... [which is] one of the things that's lead to this huge rise in debt, which they don't think matters either" (Keen, 2012c). See also "Market fundamentalism", "Science of assumptions", "Death Culture".

2) "Virtually all economics since Ricardo has been based on equilibrium paradigm."- Richard Werner @scientificecon, 15-11-2017. See also "Economics", "Eurodollars", "Parallel universe".

3) "How much of [neoclassical] Economics is equilibrium Economics? I think it's something like 98%. There is no equilibrium.... It is only in this theoretical dreamworld-- a different planet-- that markets are in equilibrium.... The conditions for equilibrium are so stringent that they don't apply to the planet we live on.... That is what it's demonstrated.... There is no equilibrium" (Werner, 2015b, mn.45). See also "Forex (FX)", "Parallel universe"; "Economics, 'Parity'".

3b) Nonetheless, this Moby-Dick of the Neoclassical Economists dominated economic thought from the last quarter of the 19thc to the last quarter of the 20thc. 'Bullshit', you call out? Is such a concept just too weird? London fogs can be thick⁹³⁰. Take it from the madmatician⁹³¹ father of the mid-20thc "Neoclassical-Keynesian Synthesis" himself: The (so-called) "'Keynesian revolution' went off at half-cock... The *equilibrists*, therefore, did not know they were beaten; or rather...they did not [even] know that they had been challenged. They thought that what Keynes had said [in the 1930's] could be absorbed into their equilibrium systems [instead of the other way around]; all that was needed was that the scope of their equilibrium systems should be extended. As we know, there has been a lot of extension, a vast amount of extension; what I am saying is that it has *never* quite got to the point....I must say that that diagram [Hicks' own "IS-LM"⁹³²] is now much less popular with me than I think it still is with many other people. It reduces...[Keynes' 1936] *General Theory* to equilibrium economics; it is not really *in* time. That, of course, is why it has done so well."- John Hicks, "Time in Economics" (1976, pp. 289-90). See also "Macroeconomics" [tragic].

4) So why did 'they' do it? While it may be foolhardy to speculate on others' long-term objectives, according to a former editorial director at the Harvard Business Review "[w]hen pro-free-market theorist Léon Walras built the general equilibrium model in the 1870's that was a precursor to much of modern [a.k.a. "neoclassical"] economics, he assumed that in an optimally functioning economy, *land would be nationalized*⁹³³-- with the rent it from it replacing taxes as the means of funding government" (Fox, 2017). Why those in (financial) power passed the hat for such silly notions is another question, for which Fox hints that it may have originated in academia: "as wealthy businesspeople supplanted clergymen on the boards of trustees of...[particularly Ivy League] colleges and universities, they put pressure on faculty

⁹³⁰ See also "Eurodollars", "Derivatives".

⁹³¹ "Imagination does not breed insanity. Exactly what does breed insanity is reason. Poets do not go mad; but chess-players do. Mathematicians go mad, and cashiers; but creative artists very seldom. I am not, as will be seen, in any sense attacking logic: I only say that this danger does lie in logic, not in imagination."- G.K. Chesterton, *Orthodoxy* (1908). See also "Imperialism", "Quigley, Carroll" [tragic].

⁹³² Sir Hicks (1904-1989) invented "the IS-LM model"⁺⁺⁺ in 1937 as a mathematical representation of Keynes' (1936) macroeconomic theory. Between the 40's and mid-70's, it was actually *the* premier framework for macroeconomic analysis. See also "Macroeconomics" [tragic].

⁺⁺⁺ Both Keynes' 1933-35 "IS-LM"s and Hicks' superseding 1937 version had the point where the IS and LM schedules intersect as representing a short-run equilibrium in both the 'real' and monetary sectors.

⁹³³ ...as would later happen [irony intended or not] in communist societies such as the USSR (1920's), P.R. of China (1950's), and Mozambique (1970's); or under other forms of dictatorship such as Libya (1980's). Walras "in particular advocated the *nationalization of land* [sic] as the solution to the social problem. This would generate sufficient revenue to government to enable it to do away with *taxing income* [sic] derived from wages and salaries. As a result, workers would be in a position to invest their untaxed income and thus acquire their rightful share in the national wealth. Contrary to what many have argued, such [macro-economic] 'socialistic' policy was not incompatible with Walras' theoretical [micro-economic] model of perfect competition. In the absence of private ownership of land and natural resources, there would be no place for big enterprises and monopolies.... Walras was convinced that *if*, on top of a radical land reform, the State sought to secure the working of a free competitive system, then the economic system could function very closely to the theoretical model" (Cirillo, 1980). See also "Georgism (& Land Value Tax)", "Industrial Revolution, 2nd" [a.k.a. 'let's just blow everything up' instead];

<https://www.youtube.com/watch?v=dPdGlXKrME4> ['Ten Little'...UK-USA 'Neoclassical's are #1, #2 China, #3 France, #4 Nazis, #5 British Emp., #6 Japan, #7 Italian Peninsula, #8 Ottoman Emp., #9 Spanish Emp., #10 Russia.]. See also "Civilization" [16 candles], "Quigley, Carroll (1910-1977)", "Neoclassical Revolution".

members to shut up about things like aggressive land taxation and collective ownership of resources” (Ibid). See also “Georgism (& Land Value Tax)”.

4b) It’s not just “neoclassicists”. As the Earth itself is a ‘closed system’, with a stable standard of approx. 1.4 bn cubic kilometers of water in various forms, “Economics” in general should seek to attain some sort of balance with the finite aggregates of the closed system. Henry George forecast that, with the removal of (the myriad) tax distortions, and thus “capital and [land] improvements [to be] exempt...and exchange released from restrictions, the spectacle of...[involuntary unemployment] would become impossible; the recurring paroxysms which paralyze industry would cease; every wheel would be set in motion; demand would keep pace with supply, and supply with demand; trade would increase in every direction, and wealth augmented on every hand” (George, 1879, 439). See also “Taxation”.

4b) The concept can also be used for studying economic interactions between various sectors. For serious equilibrium (fixed ratio) economic studies, see also “Economics, Parity”.

See also “Mythomatics”, “Assumptions”, “Neoclassical Economics”, “Primary Sector Economics”.

Equity- 1) There are 3 basic types:

a) temporary equity accounts- like revenue, expense and dividends accounts. These are zeroed out (balanced) with closing entries at the end of each accounting period, when they are then netted to retained earnings [on income statements]/owner’s equity [on balance sheets].

b) stocks (ownership shares)- “In 1990, the global equity markets were about 11 trillion dollars.... Today the global equity markets are approximately 70-to-80 trillion” (Fitts, 2017u, mn.125).

c) owner’s equity- simply total assets minus total liabilities. It is this “equity that enables the [bank] lending” that RAB/Reserves then follow. “Banks have to have positive [owner’s] equity” (Keen, 2020, mn.23). But “[i]f you’re going to have banks having positive equity, [then] the rest of society must have negative equity.... the non-banking sector must have negative equity”⁹³⁴, i.e. ‘always in debt’ to the banks (Keen, mn.24); and “the only institution that can handle being in negative equity [all the time] is the government... because it owns its own bank” (2020, mn.27). See also “Big government (growth of)”.

2) US government accounting does not list “equity” (i.e. ‘temporary equity accounts’) on its balance sheets, but uses the term net position instead, which “is government accounting-speak for equity on the balance sheet, i.e., the increase in monetary assets can be balanced by an increase in equity, instead of [an increase in] debt liabilities. This [protocol] is mandated in the FASAB Handbook, on page 39 of SFFAC 2” (Kortsch & Walton, 2016, 4).

See also “Federal Accounting Standards Advisory Board (FASAB)”.

Equity financing- (attaining capital by selling [ownership] shares).

There is also “Direct financing” (selling bonds), “Indirect financing” (taking out loans).

1) One “aim is to prevent a large debt superstructure from being created... [which] goes back over a thousand years. Islam, for instance, says that the only kind of debt should take the form of equity [not bureaucratic usury], so that if the debtor is unable to pay, the creditor has to share⁹³⁵ in the client’s misfortune and write down his claim proportionally-- not as a debt that still has to be paid in full. If it’s an equity obligation, then if the ability to pay goes down, the debt service will also” (Hudson, 2019c).

2) “The reason why most early financial contracts with traders and other entrepreneurs took the form of debt rather than equity was *asymmetric information*: The creditor could not easily discover exactly how profitable the debtor’s business was” (Hudson & Goodhart, 2018), so one had to develop systems for bureaucratic approximations instead. “Nowadays, however... the problem of information asymmetry is much less of a concern. The continuing preference of many classes of borrowers for debt rather than

⁹³⁴ “Nobody likes being in negative equity.... [but if you] turn the money over [quickly and/or consistently enough, you] can do it” (Keen, 2020, mn.25). And “the government, by being able to take that negative equity, lets the rest of us be less...” bothered by always being in debt (Keen, mn.27); and the ever-faster hamster wheel. See also “National Debt Economy”.

⁹³⁵ In cosmopolitan medieval Venice (for many centuries Europe’s central trade hub), “merchants developed... [or adapted from Islamic practices] the partnership venture... A partnership was used to form and manage each voyage and was dissolved when the venture/voyage was completed”- *The Oxford Encyclopedia of Economic History* (2003), p.2.

equity finance is based largely on debt's *tax favoritism*" (Hudson & Goodhart, 2018). See also "Usury". 3) "According to a 2005 report from the Center for European Policy Studies...equity financing is more than twice as important in the US as in Europe, accounting for 116% of GDP compared with 62% in Japan and [only] 54% in the eurozone...In both Europe and Japan, the majority of corporate funding comes not from investors but from borrowing, either from banks or from the bond market." (Brown, 2012). See also "Equity, net".

4) "Global Equity markets, depending where the pricing is, are approx. 60-70 trillion" (Fitts, 2019f, mn.13). "Fitts, Catherine Austin".

See also "Venice, Republic of (697-1797)", "Usury", "Great Reset, the".

Equity markets- See "Stock markets".

Equity, net- a bank's 'net equity' (synon. 'owners/shareholders equity', 'net position/worth', or 'total capital') is its Assets minus Liabilities on a balance sheet [the result of a simple arithmetic calculation].

1) "...is that part of the balance sheet which has to be used to make up for losses, for non-performing assets, and it's [usually] far less than 10%" (Werner, 2016b, mn.32).

2) Converting "to an Equity economy..."⁹³⁶ builds a much more aligned model [f.e. "win-win"] between the parties...I think we are coming into...a debt-for-equity swap planetary wide" (Fitts, 2016b, mn.7-8). "[T]here are 2 ways to do it. One is on a *managed* process, where you re-align...bottom-up, step-by-step. The other is where you just write everything down in a process that... can be very, very ugly. So, are we going to crash up the Equity markets, or are we gonna... foreclose and bankrupt everybody.... That's what I mean by 'nice or rough'.... Do we change to leaders who are competent to run...a market economic process, or do we stay with basically you know the Soviet-style⁹³⁷..." of management by bureaucracy (Fitts, mn.11-12). See also "Methodology (culture)".

See also "Accounting for public/'sovereign' money", "Monetary reform".

Eras of (monetary) History- (though the long-term trend is towards increasingly abstract & state-backed monies; it must be turned around at some point)

most simply: pre-Sumer- 'mostly just *sticks*';
 2nd-3rd millennium BCE- 'all about the *Jubilee*,'
 1st millennium CE- 'all about *the ratio* (of [Western] Ag : [Eastern] Au);
 2nd millennium- 'all about the *reserve currency*;
 3rd millennium- 'all about *primary sector* (or *par economy*)'

1. Pre-human- *commodity* money ('He who has the bananas makes the rules'); See also "Barter".

2. Pre-historic- I.O.U. *mnemonics* (notched sticks, shells, other uniquely marked [or at least relatively lightweight, portable] natural symbols); See also "Tally sticks", "Anthropology, of credit & money".

⁹³⁶ "I would love to see something where you make it easier for a farmer's community or customers to crowd fund or do equity deals that invest. Maybe the state funds it, but it brings a private market integrity to...[the process]... It wasn't until 'COVID' that I saw a significant number of financially secure people realizing that 'Oh, if I keep financing the companies that are destroying my world...[instead] of the companies I need to have a decent life, [then] I'm gonna be in trouble... You know, that's a *huge change*, and that's just happened" (Fitts, 2022j, mn.113). See also "States rights", "'COVID' Op", "Imperialism, American",

⁹³⁷ A "government contractor loan allows the government-- in terms of audit and enforcement and regulation-- to really get deeply in your business, okay? It's like doing a deal with the Sheriff of Nottingham" (Fitts, 2020b, mn.27-28).

3. 'Riverine-Sumer' (from c.4000⁹³⁸-2300⁹³⁹ BCE)- origin of '2-classed systems' (barley or other seed grains were loaned to the illiterate masses; and silver to the 1st Estate-2nd Estate collaborators in the [mish-mash] temple-state [Sumer] or state-temple [Egypt]⁹⁴⁰). See also "Commodity money", "Money, 2 classes (layers) of", "Estates, 3".

4. 'Bronze'⁹⁴¹ Age (c.3300's-1000⁹⁴² BCE)- (analogous to Quigley's "Archaic man", from the 4000's to 500's BCE in Eurasia) who "emphasized man's emotional and intuitive equipment, with emphasis [particularly] on symbols, ritual, myth, and magical actions" (Quigley, 1966, 1223).

4b) the addition of cuneiform accounting and proto-writing (from c.3300's Sumer [& soon thereafter in Egypt]) made **no** known difference in kind from the above, although the addition of bronze (i.e. harder weapons, from mid-millennium Sumer) led to *more warfare* and raiding, particularly in the salt-water surrounded Occident [with its 'Sea Peoples'], as opposed to the increasingly rice-culture Orient (where taxes were **as** likely to be paid in ["social"] corvee labor as in ["monetary"] grain money). Throughout the Near East, "*debt jubilees*" were then the normal way of rebooting an economy from the bifurcating extractions of "usury".⁹⁴³ See also "Jubilee", "Liberty Bell"; "World Par Economy" [21].

[Bronze-bearing proto-Indo-European language groups were then conquering the salty/marine European peninsulae; while

⁹³⁸ In the second half of the 5th millennium, the Urukian cultural expansion spread across the Fertile Crescent, linking the Persian Gulf to the Mediterranean. With Egypt, the case for a de facto/cultural unification having occurred by this time frame **is** somewhat less established, and the 5th millennium in the Nile Valley is **generally** regarded as being a time of pre-Bronze, un-unified small villages, not only because the monsoonal depletion there was less extreme (and the risk of floods was far more predictable) than it was in Mesopotamia. Another factor was that Nile River volumes, it seems, were at first less effected-- even briefly recovering, in the 3900's-- to what they had been a thousand years earlier (Weldeab, Menke, & Schmiedl, 2014, Fig.2); but soon thereafter plummeted (Ibid)-- which may have actually been somewhat *beneficial* for farming, because "the reduction of Nile flow after...[3900 BC] reduced marshy conditions along the river, [thus] encouraging an expansion of agriculture" (Brooke, 2014, 185), for approx. half a millennium, until, by the 3300's, the drying trend was (only then) doing more harm [to agriculture] than good.

⁹³⁹ With the (now accelerating) desertification trend throughout southwest Asia [i.e. in Mesopotamia, but not so much Egypt] from c.2300 BCE-- farmers there turned from wheat to (more salt-tolerant) barley, and then barley also failed, and populations declined, encouraging the transformation of bronze ploughshares into swords (furthering a gradually increasing trend [pursuant to an earlier *monsoon* shift & aridification], from the latter 3000's) (White & White, 2008e). Hence, pre-mid-2000's is the (more peaceful) "old Sumer", before they were forced (per Carneiro's "Circumscribed Land Thesis") to increasingly fight for progressively deteriorating resources (Ibid).

⁹⁴⁰ State formation in the Nile Valley is sometimes viewed as being (to some degree) less gradual and more authoritarian ("charismatic authority"-based) than in Mesopotamia. And the most common standard for 'commodity money' was more consistently *emmer* (wheat grain) than barley.

⁹⁴¹ Certainly it wasn't just about "bronze", which was developed on the different continents in very different time frames. See also "History". What *was* actually happening, globally, c.3000 BCE-- in northern China & northern South America, too, not just in the Near East & Mesopotamia-- was the "*Mid-Holocene transition*, and [particularly] its crisis at 3200-2900...[which] saw a significant intensification of human economies-- and the restructuring/rationalization that defines the transition from kin-based village societies to bureaucratic states, and to... civilizations perpetuated by systems of artificial memory, writing, and monumental symbolism..." (Brooke, 2014, 183). See also "National identity/Nationalism".

⁹⁴² Raiding pretty much increased through the 2nd millennium BCE in the Near East, until professional raiders, armed with the new, harder iron weapons, ended 'Bronze Age' civilizations altogether in the region, c.1200-800, a.k.a. the 'Bronze Age Collapse' or 'Greek Dark Ages'. See also "Climate change".

⁹⁴³ With western Europe and East Asia, however, **it seems that** not so much is known.

rice-centric cultures such as the Dong Dau & Dong Son of the Red River Valley had little interest in maritimizing the Pacific, and didn't weaponize bronze beyond mostly ceremonial purposes until compelled to do so by the (non rice-culture) Sino-Tibetan Yellow River southward migrations of the 11thc BCE (driven by abruptly increased aridity, and the resultant fall of the Shang dynasty.⁹⁴⁴) See also "Great Divergence (geographic-political)".

5. Iron Age (c.800's BCE-300's AD)- (analogous to Quigley's "Classical man", from c.500 BCE to 500 CE) who "emphasized man's rational equipment and regarded man's concepts [such as the now radically-increased currency & money] as the major portion of [social] reality" (Quigley, 1966, 1223).

5b) Although the salience of harder, iron weapons around the E. Mediterranean goes back to half-a-millennium earlier, the casting of metal *coinage* was, according to contemporary archeological records, 1st employed in late 7thc/early 6thc BCE Lydia, in an apparently successful effort to satisfy *mercenary* soldiers who-- for obvious reasons-- found being paid in cumbersome bullion or grain to be problematic (and because mercenaries are usually foreigners, it was also difficult to pay them 'on account' or tab-- i.e. written IOUs). Within a few decades, most of the thousands of Greek speaking city-states on the other side of the Aegean Sea were employing their own version of the new scheme for generating seigniorage & markets (a.k.a. GDP) via the new, more durable means of payment. Within a few centuries, however, all of these monetary experiments were consumed by the (famously hard-ass/'no debt jubilee') Roman Republic, which kept its own internal-usury social problems at bay by constantly conquering other (less disciplined or ruthless) states and 'nations', until, as a dictatorial Empire, it found no more lands and nations worth the effort of incorporating. The tide of migration was reversed, and the currency, economy, and rule of law could no longer be upheld by the 5thc AD. The Iron Age is sometimes a.k.a. "the Axial Age" of world cultures, as the binding ligaments⁹⁴⁵ of Buddhism, Hinduism, Zoroastrianism, Daoism, Confucianism, and Judaism-Christianity, were all formed during this era of mankind 1st coming face-to-face with a highly monetized social environment (i.e. dealing with a newfound abundance in both coinage and usury-slavery).⁹⁴⁶

5c) In the Orient, the dissemination of large-scale iron did not manifest before the mid-1st millennium BCE (roughly half-a-millennium later than it had around the E. Mediterranean, and also after most of the Bray Cycle cooling had taken place). In the Near East, the arrival of Big Iron had simply coincided with the (climatic violence of the) 2nd Bray Cycle *aridification* (Brooke, 2014)-- a destructive combination from which

⁹⁴⁴ The Shang Dynasty (c.1675-1046 BCE) approximately covers the Bronze Age in (northern) China, wherein, in order to oversee the backbreaking, labor-intensive process of making pottery from the new, harder alloy, the systematic expansion of central government authority over large areas was first enforced. Like the Near East, what is today China experienced, from c.3000-1000 or so, a general drying trend. In China's case, it was also a cooling trend too, as cattle and horses took the place of elephants and rhinos-- a trend that grew more pronounced from 1500 BCE and even more austere from 1100 (forcing great migrations to the south and eventually China's 1st Intermediate period [771-221 BCE]).

⁹⁴⁵ Also in Peru, circa 200 BCE, long-term droughts were alleviating, facilitating the formation of what would come to be known as the (pre-Inca) *Moche* civilization, which was furthering the development of smelted copper alloys. Within the long-term "context" of "recovery" and "growing population" from 800-300 BCE; "competing chiefdom[s]" in the "Andean" region were forging "a wider integration... [of] the great ritual sphere of the Chavin, circling [around] a cult of a supernatural jaguar. In a manner broadly analogous to that of the Chalcolithic interaction spheres of 5th-- and 4th--millennium Mesopotamia, these societies managed complex irrigation systems in an arid climate... and crafted an elaborate ornamental metallurgy from copper, silver, and gold.... [This is comparable] to the Axial Age world religions that were emerging in the Old World Iron Age societies. The *Chavin* sphere [also] reached its peak of influence in a period of intense drought, between 400...and 200 BC, providing... a system of geographical connection across regions beset by unpredictable droughts and floods. As the droughts faded, new local powers emerged... at precisely the same time...[as] the Han in China and the Romans ...[throughout] the Mediterranean... [C]entralized, militarized states... [the] Moche, Nasca, and Tiwanaku" started to develop "around 200 BC" (Brooke, 2014, 309-10); without the use of coins (or 'money' as such, as opposed to shells, simple tallies or other mnemonic devices; pre-Columbian 'axe-monies' [of bronze] are not thought to have developed, first in Ecuador & "middle Sican" Peru, until after 1000 AD). Pre-metallic, Olmec-era "religious integration" of large areas of Mesoamerica, however, goes back to c.1200 BCE (Brooke, 310). See also "Latin America".

⁹⁴⁶ 'The' Axial Age was about coping with societal changes brought about by the coinage revolution-- in the (relatively under-monetized) East and (relatively over-monetized) West, respectively. Hard metal currencies & weapons led, in many places, to a lot of stress, or what are sometimes called social problems-- mass slavery, hereditary castes, & mercantilist Empires of, by, and for looting. People are not always at their best in times of stress, and certain forgivable or overlooked crutches developed. In many parts of South Asia, influential political economists of the day circumscribed citizenship roles-- the kernel of meaningful politics; while Hebrew tribesmen in the deserts between the Persian Gulf and Mediterranean Sea began to circumscribe the cosmos, in deference to the primacy of politics. The world (or at least the "*Indo-European*" world) was henceforth divided between East and West-- and with increasing contrast-- for the next 2000 years, right up to the 20th century. For more on this dynamic, see Ch.1 (or Graeber, 2009). See also "Adolescence of Mankind".

none of the Bronze Age civilizations of the area would survive. China, however, was spared the double-onslaught, and its chaotic (or 1st Intermediate) late Eastern Zhou-Warring States era was more consolidationist (unifying) than catastrophic. After the Iron Age had rolled on for a half-millennium or so there, the process of subinfeudation that dissolved the Eastern Han dynasty (in the early 3rd CE) was concurrent with China's (other-worldly) Axial Age (which featured some state-merging of Daoism-Confucianism, in addition to the [more famous] growth and spread of Buddhism from south Asia; where the *Aggañña Sutta* Buddhist text had long made it clear that, "rice grows as long as Buddhism spreads" (Lopez, 2009, 80). See also "Great Divergence (geographic-political)".

5d) In Africa, the continent-conquering Bantu Expansion was facilitated with Iron Age works by no later than 400 BCE, but was not particularly 'rapid' until c.200 AD (Brooke, 312); and left no accompanying record of a 'cultural unification'. See also "Coined money", "[Debt-Free National Money \(DFNM\)](#)".

6. 'Dark' Ages (300's-500's [China]; 500's-800's [Europe]) - Due to the more-monetized⁹⁴⁷ political environment of the maritime Occident vis-a-vis the relatively contiguous & freshwater Orient (the former being traditionally 2x-4x more monetized per capita⁹⁴⁸, pretty much ever since the introduction of metal coinage, as bullion was also naturally scarce in China [and paper wasn't yet commercialized]), the former experienced-- in most places, through most of the 7th century-- a total cessation of minting & coinage (upheld in part by learned/Church antipathy towards usury, which had indeed grown outrageous in the latter Roman imperial era⁹⁴⁹), and also a de facto prohibition on gold coinage minting [apart from the Eastern/Byzantine Empire], which lasted until 1204. Coins were dear, and robbery was often rife; hence carrying the blasted things was always burdensome and/or dangerous in the fractious political environment⁹⁵⁰...

7. High Medieval (c.1000-1400's [Europe]) - ...which motivated the "Peace of God" movement (990's-1200's) and the ensuing rise of papal "Christendom" (c.1050-1300)... in addition to the pioneering of [again, unlike China] the *widespread usage* of bankers' drafts, cheques, and other forms of paper that eventually (unencumbered by imperial authority [mostly just the Pope & clergy]) grew into the institutionalization of 'fractional reserve'→'bankmoney' creation in 13th-15th century northern Italy and the Holy Roman Empire. And the papacy joined in on the new double-entry accounting (for 'bankmoney' creation), too, **exemplified** by the post-'Babylonian' [Fr] and post-Schism Borgia & (merchant banking) Medici popes⁹⁵¹ of the latter-15th & early-16th centuries (who, by then [3 centuries after their predecessors] sacking of Byzantium & the Eastern Empire)⁹⁵² were no longer able to conceal their monetary-political imperialism and hypocrisy, particularly after the discovery of the New World in the 1490's, and the willy-

⁹⁴⁷ In the age of Coinage (500's BCE-1600's CE), this term ['monetized'] means basically 'coinage-per-capita' (as opposed to agricultural commodity 'credit money'. See also "Sovereign money", "Credit money".

⁹⁴⁸ VonGlahn, 2016, 120; Scheidel, 2009b.

⁹⁴⁹ The (at least purported) ugliness and rapaciousness of terminal-stage Roman usury appears to have also been primary motivation for the formation of Islam (the youngest and most recent of the world's great or mostly transnational religions) in the 7th century. See also "Usury cycles".

⁹⁵⁰ In many respects, the term 'Dark Ages' stuck with the professional (monied/public salaried) historians of future centuries simply because perhaps the only thing they could all agree upon was that there was a distinct lack of coins and (to a lesser extent) written historical resources for them to work with, i.e an acute shortage of historical light... (much more so in Europe than in China [which was simply politically corrupted/subinfeudated], in what they would call the "Dynastic Cycle", as opposed to any 'western' notion of a determinant 'monetary cycle') ...characterized the half-millennium... And nearly any other conclusions beyond that were a matter of conjecture, prior to the advent of modern archeological methods. (Hence Early Medieval history has been in the process of being more-or-less re-written this century.)

⁹⁵¹ Although Rome was (in **conjunction with its rival**, the Venetian Republic) "the hub of international finance" at least as far back as the latter 1200's, it wasn't until 2 centuries later that the Tuscan Medici family provided an example that has since "served as something of a Beta test for the merchant banking families that would follow... Whether Protestant, Catholic, or Jew, the dynastic arcs of these outsized families--Morgan, Medici, Rothschild-- track closely with one another" (Cashill, 2010, 43). After double-entry accounting pioneer Cosimo (Lord of Florence, 1434-64) and his more extravagant grandson Lorenzo the Magnificent (Lord of Florence, 1469-92), Lorenzo's second son, Giovanni, was elected Pope Leo X (r.1513-21). Leo's most-esteemed (and financial) adviser, Lorenzo's nephew-- & Giovanni's first cousin-- Giulio de' Medici was then Pope Clement VII (r.1523-34). Giovanni Angelo Medici, from the Milan branch of the extended family, was later elected Pius IV (r.1559-65), and Alessandro de' Medici, [the original Medici pope] Leo X's great-nephew, was elected Leo XI in 1605 (in a short-lived play for [the new] Bourbon France over [the old] Hapsburg Spain).

⁹⁵² ...and also 2 centuries after their kidnapping and forced re-location (a.k.a. subordination) by Philip the Fair of France in the early 1300's.

nilly race to claim it that ensued). It was now about the money [and increasingly with the onus on the quick & easy-- with bankmoney pretty much always gaining ground and market share] from that point forward. See also "Usury", "Religion", "Adolescence of Mankind".

8. Early Modern (c.1500-1600's [Europe])- The institution (of 'fractional reserve'/bankmoney creation) was at least somewhat controversial (and indeed symbolic of 2nd Estate primacy over 1st Estate; see Hobbes, 1651) until the Glorious Revolution [the 1st great bloodless coup or 'color revolution'] of 1688-94 took over the stamp of the English monarchy (soon to be the British Empire), and placed it with Parliament-- or was that, rather, with the City of London & Bank of England?⁹⁵³ Was all subsequent 'western civilization' to be primarily about fighting and scamming and Imperialism?...

https://www.youtube.com/watch?v=nd_WPdc2Mgg [Burn]

9. 'Modern' (1700-1960's)- ...The American and French Revolutions notwithstanding, the answer seems mostly to have been yes, up until the American public (3rd Estate) stopped the Vietnam War. Wars were probably more of a constant in the UK-USA in the 18th century than in any other (ending up with them fighting each other). This could obviously not be funded just by digging up-- or confiscating-- ever-more gold & silver, as Charlemagne had attempted 10 centuries earlier. On both sides of the Atlantic, it was known by the astute that 'money' was just a way of keeping track of things, that could be either motivating or de-motivating to the speed of commerce and material development of society. This called for experimentation-- or at least a constant empirical tinkering. In America, the early experiments were more with no-money or commodity money, followed eventually (mostly in the 1st half of the 18thc) by experiments with various forms of public paper money, which (particularly in the 1750-70's) got the attention of the British, who tried to clamp down on public paper money experiments in the American colonies (which were challenging their oligopolistic Empire), and also again-- 3-4 decades later-- in both France & the United States... and to more-or-less (but not yet entirely) successful results. See also "Currency Wars, the". The British-- mostly putting out ethnicist or democratic brushfires in the 18th-19th centuries (up until the Empire was sunk in the mid-20thc, really)-- and especially the post-1790 Americans mostly tinkered with: **a**) privately owned banks issuing their own notes/currency, unregulated by the state or country-- i.e. "free banking"; **b**) in the US, such private bank note issuance was then regulated by state governments-- i.e. "state banking"; **c**) the US, after its Civil War, then had a "dualist system" of both state and nationally-chartered banks [creating most of the nation's money supply by issuing new, Treasury-stamped currency with loans], until eventually **d**) the (bank-owned) *Federal Reserve System* (consortium) was able to centralize the Reserves (RAB) of all monetized credit institutions in the US, in the half-century from the 1930's to 1980's (making the national or state-charter issue mostly a moot point). (In the UK, banks, charters, and Reserves had been consolidated a century earlier, from the 1870's-90's). For most of the 20thc, both the UK & US pretended (for nothing ostensibly more profound than the usual monetary/imperial bamboozlement) to be on 'the gold standard'... both in terms of the domestic economy from c.1900 to c.1934, and then internationally until August 1971 (not that anyone ever really took their dollars in to be exchanged for bullion in the 1920's-- or ever really checked up on what was in Fort Knox in the 1960's⁹⁵⁴). See also "Money", "Freedom continuum (maturation)", Appendix C: "1-2-3".

10. Millennial transition (from Information to Knowledge Age; 1970's-2020's)- With the post-Bretton Woods rise of eurodollars and "offshoring" in the 1970's-80's, pretty much all of the preceding era's traditional (nationalist) pretexts were abandoned, in deference to a "New World Order" of free-floating, central-bank-supported bankmoney currencies... the radically deregulated 'neo-liberal' (or 'globalist' bankmoney) system that didn't take very long to panic-crash to in 2008-09. Since then, the Western world's monetary-financial system has been propped up by pretty much (increasingly coordinated) 100% fiat state supports, not that unlike what one would expect to find in a "socialist" system like ("public banking") China or ("always bailing out the banks") France. See also "Separation of Powers", "Monetary reform", "Monetary Reform, international".

See also "Monetary theory (historical)", "Banking, end of, the", "Asset money".

⁹⁵³ More than 3 centuries later the issue of monetary accountability is still salient today. See Appendix C: "1-2-3".

⁹⁵⁴ See Still, 2012 [Ft.Knox].

Establishment, the (synon. 'the Anglo-American Establishment', 'the British-American Atlantic Establishment' [Quigley, 1966]; a.k.a. the 'Zionists', or simply 'They')

1) the prevalent term in the mid-20th century (per Mills, Quigley), prior to the advent of 'Zionists', 'Neocons', 'globalists', 'transhumanists', 'pedophiles' and the like.

See also "Pilgrim Society", "Conspiracy theorist"

See also "Franklin, Benjamin", → "Big 5 (High St.) Banks", → "UKUSA Agreement", → "Intelligence Community (IC)", → "Duopoly", "Parties, political" (full circle).

Estates, 3- (formal: 'Estates of the Realm'; synon: '3 Orders'; sometimes a.k.a. 'old regime')

"A thousand years ago, Europe had a...[three] class society in which a small upper class of nobles and upper clergy⁹⁵⁵ were supported by a great mass of [3rd Estate] peasants. The [1st Estate] nobles defended this world, and the [2nd Estate] clergy opened the way to the next world" (Quigley, 1966, 1234).

See also App.C: "1-2-3".

1) Are "1st" and "2nd" in the wrong order here? Gerard of Fluorenes' 11th century conceptualization⁹⁵⁶ notwithstanding, *princeps* is Latin for "first in time or order", in addition to "the first, foremost or the most eminent".⁹⁵⁷ And in terms of monetary history, the "1st Order" of "money" (that we would recognize as such today) were the coins, always minted in the name of whomever controlled (or was supposed to control) the state, from the mid-1st millennium BCE Mediterranean. See also "Civilization, Western".

2) It was not just in France or on the continent. Actually the "first recorded use of the idea of the '3 Orders' of society in... medieval Europe, is in [English] King Alfred's [893] 'translation' of [and commentary on] Boethius's *De consolacione Philosophiae* [c.524]... [wherein] Alfred... reflects... 'the resources and tools with which to rule are that he have his land fully manned; he must have *praying* men, *fighting* men, and *working* men... without these tools no king may make his ability known'" (Powell, 1994).

2b) In English political institutions (even up to today's Parliament), it's traditionally been called the "Lords Spiritual and Temporal, and Commons". After the lords divorced (mostly in the 11thc), into Spiritual and Temporal lords, "the beginnings of commerce and the growth of towns [eventually] gave rise to a middle class, the merchants... [We] would have, by the year 1300, [all 3 Orders/Estates of the Realm] very clearly established" (Quigley, 1976c-pt.2, mn.136).

3)	<u>1st Estate</u>	(←both→)	<u>2nd Estate</u>	(overlap)	<u>3rd Estate</u>
	princeps	'patricians'	pontifex maximus	'bookish'	plebians-proletariat-slaves
	'those who fight [armed]'	'titled-nobles'	'those who pray [study]'		'those who work [farm]'
		landed bishops			
	mil.-state-bureaucracy	state-edu,media	churches,colleges,uni's,media	'1 st gen.'	farmers-workers-salaried
	state-polit. elite	'rich & famous'	financial ⁹⁵⁸ -media elite	'neuveux'	non-rich/famous, non-state/edu
	coinage	bullion, 'federal funds'	bankmoney, comm. paper	'mutual funds'	bankmoney (>.5 since late 19 th c)
		[RAB]	[TAB], money mkt. funds		

⁹⁵⁵ Quigley explained later that it was, over-simplifying somewhat, "a 2-class system" up until the rise of the Papal Monarchy in the 11th century, when "the lords separated... as a result of the Investiture Struggle, into the *Lords Spiritual*-- that's the Clergy [2nd Order/Estate]-- and the *Lords Temporal*-- what we would call the Nobility [1st Order/Estate]. And [with] the peasants...[we then had] a 3-class system" (Quigley, 1976c-pt.2, mn.136). See also "Civilization, Western"; and also Wickham, 2009 (below).

⁹⁵⁶ Although Gerard's articulation of the '3 Orders' (c.1024) is more famous [at least today], Ælfric of Eynsham (England) in his "Letter to Sigeward" (c.1005-06) had, 2 decades earlier, put forth a full "account of the 3 Orders of the society, comprising *laboratories* [3rd], *bellatore* [1st], and *oratores* [2nd].... in a text written for a layman" (Hill, 2009, 63).

⁹⁵⁷ Carroll Quigley also placed military force at the head of the list of institutional Orders (Latin for 'Estates') that have shaped Western society: "... [T]he nature, organization and control of weapons is the most significant of the numerous factors that determines what happens in political life" (Quigley, 1966, 1,200). See also "Intelligence Community" [M.I.H. & L.I.H.].

⁹⁵⁸ Has money-currency pretty much always been a form of arcane study? Although "the ancient Babylonian temples were a long way from being federal reserve banks, they...performed some of the same functions. Temples injected silver money into the economy by making long-term loans... [which mattered, because] Storage and spoilage...[were] significant problems for a government that distributed, among other things, bread, milk and beer. A money economy solved these problems by allowing individuals to purchase the goods when and where they need them" (Goetzmann, 1994). It "was part of the function of the local 'chapels' in...[Ur] to notarize or witness the drawing up of important documents like deeds of sale... [even] for even tiny plots of property" (Goetzmann, 1994).

- 4) “[N]obody could be a political player before 1000, even in a tiny area, without a locally substantial property, held either in full ownership or in long-term concessions from [2E] churches or [1E] kings” (Wickham, 2009, 515). See also White & White, 2008b (“dominance”).
- 4b) 1st Estate vs. 2nd Estate disputes are an old issue (Monty Python, 1973, mn.2-4), and usually decided in favor of the former (those with the weapons, not the trickery). See also “Timarchy”.
- 4c) (Perhaps more important, however, is that fact that) from the Renaissance centuries to today, “Church [2nd Estate]⁹⁵⁹ and Crown [1st Estate] continued to collaborate, throughout the middle ages and [sic] beyond... [often continuing] to support each other against⁹⁶⁰ the 3rd estate, the common men of labor”, who were expected to ‘know their place’ (Weber, 1989a, mn.9). What does this mean today? “You know when Jeff Bezos... and a handful of other [non-governmental elite] billionaires control the government... then there’s...[not much] difference between them [2E] controlling me or the government [1E] controlling me. They’re both doing it, and they’re both the same” (Dore, 2019, mn.8). See also “State capture”, “Glorious Revolution, the”, “Separation of Powers”.
- 5) “Here are some shorthand definitions that have...[mostly held] true since the French Revolution⁹⁶¹... [albeit] typically wrapped today in layers...of political-class...obfuscation:
Socialist [1st Estate or ‘statist’]- organized [mostly public sector] workers and the army (Napoleon...FDR)
Liberal [2nd Estate or ‘non-state elite’]- the paranoid rich people in charge (Monarchy[/City], Whigs, CFR[/Davos])
Populist [3rd Estate or ‘non-elite’]- the masses, the [illiterate] mob, radicals (Jacobins, [Jacksonians], W.J.Bryan)” (Moon, 2019h). See also “Congress of Vienna” [.understanding].
- 6) In terms of monetary governance (in the history of the USA)...
a) 1770’s-1860’s- 1st Estate primacy; see “Legal ‘money’”, “Currency”.
b) 1870’s-1930’s- 2nd Estate primacy; see “Fin de Siecle”, “Bankmoney regime”.
c) 1940’s-2020’s- 1st Estate/2nd Estate (incr.) merging; see “Money, 2 classes (layers) of”→”Bank welfare”.
d) 2020’s- 3rd Estate (citizenry understanding-primacy?); see “Monetary reform”, App.C: “1-2-3”.
- 7) China, via Mengzi (c.371-c.289 BCE), certainly has “Divine Right” of [1st E] Kings theory; but there’s **no** known articulation of 3 Orders (as opposed to just 2). “The distinction between the great man and the small man was none other than that between [simply] the governing and the governed.⁹⁶² The following are among the most often quoted lines from Mencius: ‘There is work for great men and work for small men (or little-minded people)’, because ‘ some toil with their heart, some toil with their strength; those who toil with their heart rule men, those who toil with their strength are ruled by men; those who are ruled by men feed men, the rulers of men are fed by men’. Nowhere did Mencius apologize for the exploitation of the governed by the governing...” in a direct way (He, et al, 2008, 59). That pretty much held for 23 centuries. See also “Chinese Communism”, “China” [.Mozi].

⁹⁵⁹ Whereas “the” (organized) Church was the original “2nd Estate” of Christendom-- and (arguably) remained its cardinal component well into the 18th century-- the subsequent rise of Banks (particularly over the course of the 19thc) re-ordered this “non-governmental” Estate, placing (since, say, c.1900) banks at the head of this (hence broadened) Estate, to include (essentially) all “non-public sector Elite”. This includes (it is more obvious to some than to others) all Central Banks. “The BoE will not hesitate to take all necessary actions both to support British businesses and [oh, also] households” (Bailey, 2020). See also “Quantitative Easing”, “Bankmoney regime”, “COVID”.

⁹⁶⁰ Public relations and more extensive “marketing scams” veil it (underlying monetary reality) somewhat today-- though the Game is wearing thin. The modus operandi has, all-too-often, been basically: “[T]rying to say...’What does the population-- particularly the young people-- care about? Okay, now [that we’ve got that,] how can we engineer that [vox pop] concern to give us energy to take us where it is [that we want to go]” (Fitts, 2019m). See also “Fascism, ‘Modern’ Hand of”, “Food”, “Dumb-downing”, “Transhumanism”, “Provocation operation (Po)”, “Adolescence of Mankind”.

⁹⁶¹ More specifically, it was from the (ossified seating arrangements at the) Constituent and Legislative (National) Assemblies of 1790-92 that the political spectrum that is still most widely perceived today became entrenched.

⁹⁶² Ironically, He et al (a State-Chinese source) is over-simplifying some. One doesn’t have to be overly romantic to find that a “high system of morals” developed independently in China. “And, unlike [in] Europe, it had done so without permitting a priesthood to become so powerful as to challenge the state’s authority. The emperor of China, furthermore, though seemingly an absolute ruler, was in actual fact limited by the teachings of [subsequent] Confucianism, which declared that ‘the people are the most important element in the state; the sovereign is the least’” (Bodde, 2005, 4). See also “Confucious”.

7b) Then, however, there was Shanghai Jiang Zemin Wang Huning’s stipulation of the “3 Represents”-- a.k.a. what the Communist Party of China was to officially stand for in the 21st century (besides bad Chinglish)⁹⁶³. Introduced by President Zemin in 2000 and ratified at the 16th CCP Congress in 2002⁹⁶⁴, “3 Represents” are:

- 1) Representing the development trend of China’s *advanced productive forces*;⁹⁶⁵
- 2) Representing the *orientation* of China’s *advanced culture*;⁹⁶⁶
- 3) Representing the fundamental interests of the overwhelming majority of *the Chinese*⁹⁶⁷ people.

7c) Why does China (since the 19thc) have 60-year *dynastic* cycles instead of (as in the UK-USA) 80-year *debt* cycles? In addition to the fact that the West was simply endowed by nature with more precious metals than China (thus providing the former with a readily-agreed-upon monetary base for *international* [as opposed to the King or Emperor’s] money-- i.e. ‘2nd Estate’ or ‘free’ [non-state-dominated] money); ...it should also be pointed out that more inclusive monetary regimes tend to be richer-- a.k.a. more successful or stable. *Non-state* money (i.e. international, private-sector or ‘2nd Estate’-initiated), at least in the past, has always been created through debt & interest schedules. Hence the West has allowed “debt money”-based (national) currencies, and the resultant “debt cycles”; while governments in China (at least since the 19th century) have had substantially less of that. Hence China’s State-Imperial “dynastic cycles”, which-- being less inclusive-- are somewhat less stable (and thus demanding of still more State intervention or helmsmanship). Going back to the Qing Dynasty, China has undergone (often extreme) strategic shifts every 3 decades or so; these have been both more frequent and more severe than in the UK-USA. See also “China” [.cycles].

7d) The logic follows...

1st Estate-monopolized regime

more ‘helmsmanship’
30-year strategic shifts

2nd Estate-empowered regime

more debt-money-saturation
40-year, less extreme cultural shifts⁹⁶⁸

3rd Estate-enabled regime

more transparent-accountability
half-century noticeable public adjustments

See also “Slavery”, “Separation of Powers”, “Provocation operation (Po)”, “Adolescence of Mankind”, “Governance”, App.C: “1-2-3”.

[European popular art from 2009, 1789. The 1st and 2nd Estates are supposed to be separate in ‘Western’ culture/civilization, and are not supposed to abuse the 3rd Estate (‘necessary’ I.C. provocation notwithstanding; see also “Timarchy”→“Provocation Op.”).]

⁹⁶³ The translation ‘3 Represents’ sounds silly, but it was in fact a major structural change. as Chinese governments (for millennia) had almost always tried to rank “the merchant near the bottom of the social ladder, well below the honored place they gave the farmer” (Bodde, 2005, 6).

⁹⁶⁴ ...as was Wang’s ability to oversee the New Order, via his de jure promotion to Dir. “of the of the Central Policy Research Office, equivalent in rank to that of a government minister, but more centrally located in the political [CCP] hierarchy... The [next] change of top leaders did not adversely affect Wang’s fortunes, as it did many others, but actually enhanced his [senior] standing. Wherever President Xi Jinping travelled, either domestically or overseas, Wang was part of the entourage, as he had [also] been during the previous 2 administrations under Jiang and Hu, all of which had been *widely publicized* in China’s national media” (Haig, et al, 2017, 6). See also “Chinese Communism (CCP)”.

⁹⁶⁵ This primary stipulation was and is commonly understood as ‘officially allowing capitalists [2ndE] in the Communist [1stE] Party’.

⁹⁶⁶ Guiding culture in China has pretty much always been a state-run [1stE] affair.

⁹⁶⁷ Why not simply “*the people* [3E] of China” (as in “the People’s Republic”)? “*The Chinese*” is obviously an ethnicist term, *excluding* 8-9% of the native-born population from “representation”, while also *including* (it would seem) any and all ethnic (“Han”) “Chinese”, potentially anywhere on the planet (in addition to nearly all of Hong Kong and Taiwan, in addition to Beijing’s role model state of Singapore). See also “Ethnic (National) Identity”, “Separation of Powers”, “Taiwan”.

⁹⁶⁸ Per the salient pivots in Anglo-American socio-political life that marked the mid-points of the *Post-WW2 debt cycle* (c.1979-80) and of the *Gilded Age-Robber barons’ debt cycle* (the mid-late 1890’s), respectively. This is not to imply that the West’s (end-of-cycle) 80-year debt Crises are not comparable to China-type levels of topsy-turviness. See also “Debt cycles”.

Ethics- “Be noble-minded! Our own heart, and not other men’s opinions of us, forms our true honor.”
 - Friedrich Schiller (Edwards, 1908, 520). See also “Happiness”, “Economics”, “Design”, “Methodology”.

Ethnic (National) Identity (ENI)- (from Roman days: group membership *jus sang*, instead of *jus soli*)
 All animate creation, even plants, have a *species life-cycle*. ‘On the other side of the mountain’, so to speak, when “they lose first their genetic diversity, and towards the end of the plant [species] life, near the end of these [genetic] Orders... their population pyramid overturns.... [and they] have vegetative growth...[vis-à-vis] plants with more seed growth...[and] pollination”, thus forming a vicious circle of “their genetic diversity” disappearing and “their population pyramid” becoming inverted (Gaede, 2020, mn.33-34).

1) ENI is the foundation of the term “nation-state”, which assumes that all sovereign states “must be ethnically homogeneous, and that, if they are not, that the dominant ethnic group will control the government [as in most of Ancient Greece] and use that control to benefit the interests (religious, economic, whatever) of the dominant ethnic group” (White & White, 2008). Some ‘ethnic[ity] humor’⁹⁶⁹ (Monty Python, 1974b, mn.18-25). See also “Zionism”, “Adolescence of Mankind”, “Cultural Calendar”.

2) Although the ‘tri-gendered grammar’ belt-- stretching from historic proto-Indo-European speakers, to most Slavic⁹⁷⁰ & Germanic languages today-- is the largest ENI region in the world (White, 2007), it’s not just in Europe.

2b) In East Asia, both Japan and Korea are traditionally ENI, with strict ‘blood’-restrictions (Latin: *jus sang*) on in-group/out-group membership and citizenship. “From the opening of the Far East to Western trade and influence... China⁹⁷¹ was the recipient of American favor and protection, while Japan was regarded with suspicion and rivalry. The culmination of this process was in World War II” (Quigley, 1966, 1146). One should not feed the ethnicist-bonded nations (and expect for much more than trouble). See also “Estates, 3” [.represents].

Citizenship laws across the world

Countries in the Western Hemisphere traditionally followed the ‘law of the soil,’ while in countries in Europe, Asia, and parts of Africa, the ‘law of blood’ dominated. Today, a growing number of countries are adopting a mix of the two.

[*Jus soli* and *jus sang* (ENI), c.2018]

[Only ENI nations are serious about R&D experiments?]

⁹⁶⁹ See also: <https://www.youtube.com/watch?v=Zuw-zkAgCvU> [Emo’91, mn.0-1; also mn.7 (Hitler-ENI [“dog”] joke goes well.)]

⁹⁷⁰ Geographically, the East Asian (& deep African) ENI belts have been, until very recently, among the most isolated and/or inaccessible of regions. At the other extreme, the great Eastern-Central European ENI belt has always been among the most dangerous and turbulent (unbuffered) of the world’s geographic regions. This was not written by a Briton or an American. “The suddenness of the blows, their irregularity, their nasty ability to appear from any direction-- all that makes them unpredictable, and us defenceless. As long as dangers remain eminently [naturally] free-flowing, freakish and frivolous, we are their sitting targets-- there is pretty little that we can do, if anything at all, to prevent them. Such hopelessness is frightening. Uncertainty means fear. No wonder we dream, time and again, of a world with no accidents” (Bauman, 2007, 94-95); if not to say imaginary pasts and less-than-ideal futures. Anyone in danger dreams of order. “[E]ven if some philosophers, like Leibnitz, are right when they argue that even a ‘perfect world’ would not be perfect if it did not contain some measure of evil, [then] at least let that evil be confined to enclosures that are reliably fenced off, well-mapped, and closely watched and guarded” (Bauman, 95). See also “National Identity cycle” [.Authoritarian-to-Ethnicist], “Enlightenment, the” [.Leibnitz].

⁹⁷¹ Although formally *jus sang*, China (like India) has always (or at least ‘almost always’) been substantially less ethnically-discriminatory than the other East Asian states. The African ENI states tend to be somewhere in between. See also “China” [.3-decadeTrends].

2c) The 1949 creation of Israel is also bonded more by ENI than CNI. Does this still matter in the (so-called) 'modern' age? South Korea and Israel are the highest R & D spenders in the world, devoting approx. 4-5% of GDP to Research & Development. See also "Israel".
See also "National Identity/Nationalism", "Civil National Identity", "World War Two".

Euphemism (& code words)- 1) "The substitution of a nice-sounding term for an unpleasant reality. News reports, for instance, call declines in the stock market 'profit taking' or a 'buying opportunity' instead of a loss. In the process of distracting attention, euphemism tends to become elaborated into a full-fledged cover story. Since the **economics profession has become a public relations office creating euphemisms for finance capitalism and the Washington Consensus**, the aim has been to prejudice listeners into perceiving reality as *cognitive dissonance*, rejecting it in favor of the cover story" (Hudson, 2013). See also "Cognitive dissonance".

2)

See also "Quantitative Easing", "**Deceptive Banking Terms (d.b.t.'s)**"; "Keen, Steve".

Euro (transnational currency)- See "European Monetary Union (EMU)".

Euro-banks- non-US commercial banks accepting eurodollar 'deposits' (Braun, Krampf, & Murau, 2020). See also "Eurodollars".

Eurobonds- (a.k.a. 'international bonds'; not to be confused with either 'Euro-denominated bonds' or 'eurodollar-denominated bonds')

1) the international bond market- wherein, for example, a firm in Brazil may issue long-term bonds denominated in the US dollar in European countries (Groppelli & Nikbakht, 1990, 351).

See also "Eurodollars", "National Debt Economy (NDE)".

Eurocurrency- (all offshore currencies, including eurodollars), i.e. all "foreign currency-denominated deposits held at banks located outside a currency's home country" (Goodfriend, 1981, 12).

1) In 1980, Morgan Guaranty Trust Co. estimated the gross Eurocurrency market at \$1.310 trillion (roughly approx. to the amount of US dollars on account in the USA that year), with Eurodollars comprising 72% of that aggregate, at \$943 billion (Goodfriend, 13).

2) Since December 1990, eurocurrency & eurodollars (on account) have been officially free from any US reserve requirements (per the Federal Reserve's **Regulation D**)⁹⁷², and **are, in this century**, of substantially greater volume than US (originated) dollars.

3) "Eurocurrencies are handled in exactly the same way as Eurodollars" (Ehrhardt & Brigham, 727). See also "Eurodollars", "Shadow banking sector, global".

⁹⁷² Eurodollars and other 'eurocurrencies' are primarily regulated by the Fed's **Regulation D**. The history: "Effective Oct. 16, 1969 a 10% marginal reserve requirement was established on... Eurodollars, [held] by member banks and on the sale of assets to their foreign branches.... Effective Jan. 7, 1971" it was doubled, to 20%, but the "action had little effect on required reserves.... Effective May 22, 1975, the reserve requirement against *foreign borrowings of [Fed] member banks*, primarily [e]urodollars, was reduced from 8% to 4%...[and this actually] reduced required reserves [by] approximately \$80 million.... Effective Oct.11, 1979, a marginal reserve requirement of 8% was imposed on 'managed liabilities' of member banks.... *Managed liabilities* included large time deposits (\$100,000 and over with maturities of less than 1 year), *repurchase agreements* against US government & federal agency securities, [e]urodollar borrowings, and federal funds borrowings from a nonmember++ institution." Finally, all "reserve requirements" on all forms of "[e]urocurrency liabilities" were reduced to zero effective Dec. 27, 1990 (Federal Reserve Board, 2020). ++Hence, it is known that (although) Eurodollars mostly derive from 'offshore' banks, those offshore banks do have accounts (a.k.a. memberships) at the so-called 'Fed'; but they've largely escaped control by the 'Fed', much more so than has the ECB. See also "Bretton Woods" [I,II,III,IV], "European Central Bank (ECB)".

Figure 7: Issuance volume of bonds outside the home currency area (EUR billions, 12-month moving average)

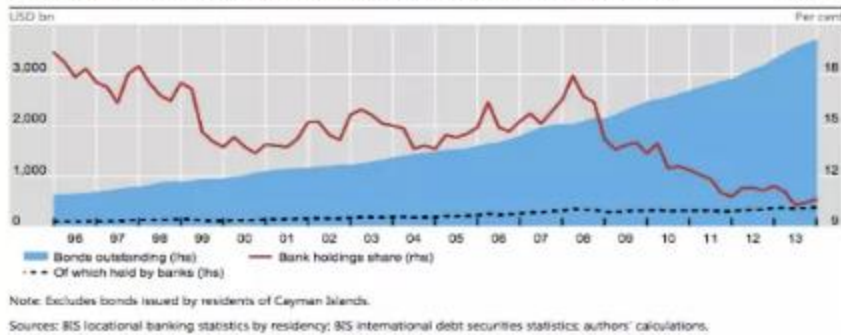

Figure 5: Share of new bonds issued outside the area of the bond's denomination currency (percentages of total issuance of bonds denominated in that currency, 12-month moving averages)

[2008 broke Euro-denominated bonds' attempt to rival 'eurodollars'. See also "Reserve Currency".]

Eurodollar bonds- (not to be confused with 'eurobonds'; > eurodollars volume?) an important source of capital for both multi-nationals and foreign governments.

Banks' share in holdings of dollar bonds issued by non-banks outside the US

[?]

Eurodollars- (synon. 'offshore dollars', the 'asian dollar market' [Singapore]; a.k.a. [mostly] 'unsecured US dollar deposits held at banks or bank branches outside of the US', but sometimes also 'USD lending by non-dollar-based banks'; 'the Kraken' [mythology]; archaic: 'black dollars'; i.e. 'Bretton Woods II' or 'The Whale' [1970's-20??])

According to Barry Eichengreen, the US "dollar *shortage* was the central monetary problem of the postwar period" (2019, 100). And since the 1980's, eurodollars have been "the primary international capital market of the world";⁹⁷³ clearly the creditors are mostly foreigners. See also "Globalization".

1) the term for all US account [non-cash⁹⁷⁴] dollar deposits held outside of the USA and its territories, which radically increased with both the post-World War Two US Marshall Plan and moreover from the early '70's, with the replacement of Bretton Woods fixed currency pegs with the Petrodollar system. "The

⁹⁷³ Legality? "The Secretary of the Treasury may produce currency, postage stamps, and other security documents for foreign governments if--

(A) the Secretary of the Treasury determines that such production will not interfere with engraving & printing needs of the United States; and
(B) the Secretary of State determines that such production would be consistent with the foreign policy of the United States" (31.U.S.C.IV, §5114). See also "Globalism", "Super Imperialism", "Dutch Disease", "Monetary Reform".

⁹⁷⁴ In terms of physical cash (notes), "it is estimated that between 50% and 70% of all [US cash] notes, or between USD 310 billion and USD 435 billion, is...held abroad" (Batta, 2003, 153), with 29% of that aggregate in the former Soviet Union, and 23% of it in Asia/Oceania (p.154). Most "dollars in international commerce move through banking channels.... [More specifically], Wholesale [Primary?] dealer banks purchase from the FRBNY approximately 90% of the US dollars that are exported to the international markets. Most of the remaining purchases are distributed among the offices of the Federal Reserve Banks of San Francisco and Atlanta.... [T]he principal international distribution and consolidation hubs for US banknotes" are Buenos Aires, Frankfurt, London, Zurich, Hong Kong, and Singapore, where US banknotes usually arrive "bundled in blue plastic wrappers from the Bureau of Engraving and Printing" (Batta, 156; 157).

eurodollar world... took shape in the 1960s, mapped neatly on to the outlines of Nato...[with] Washington's assent"⁹⁷⁵ (Tooze, 2018). In the 1990's, over 90% of all international loans were conducted in Eurodollars⁹⁷⁶ (Shaxson, 2012), which unlike domestic US account dollars need not maintain daily reserve requirements and are more or less free from other banking regulations⁹⁷⁷ as well (Kim & Kim, 2015, 174). See also "Super Imperialism", "Reserve currency", "Offshore".

Five-Day Moving Average of Brokered Eurodollar (ED) and Fed Funds Rate Levels

Source: New York Fed staff calculations using data from major U.S. brokers.

Note: All statistics are volume weighted.

[The new Fed Funds rate?⁹⁷⁸ FFR & EDs have long been "close substitutes" (Cipriani & Gouny, 2015)]

2) The "US Government cannot prevent banks in London and in Zurich and in other financial centers from selling deposits⁹⁷⁹ denominated in the US dollar, since these banks are outside US legal jurisdiction.... Participation in the [synon.] *offshore money market* is the primary activity of most of the London branches of US banks", the Big 3 of which are Citibank, Bank of America, and JP Morgan Chase, with Deutsche Bank also a major player (Aliber, 2011, 85). Historically, "regulation of banks in the United States... has been more extensive than the regulation of banks in Britain"⁹⁸⁰ (Ibid).

⁹⁷⁵ BIS researchers point out that, since the "1960s the Federal Reserve, working in conjunction with the BIS and European central banks, [has] repeatedly used swaps to manage eurodollar funding liquidity and Libor yields." (McCauley & Schenk, 2020; <https://www.bis.org/publ/work851.htm>). Others see the rise of eurodollars as more of a UK-USA thing. "The US and UK governments, in particular, saw their interests align with the interests of their internationally expanding financial sectors and therefore made the strategic decision to liberalize financial markets" (Braun, Krampf, & Murau, 2020).

⁹⁷⁶ US *state-monetized credit institutions*' ('banks') "Eurodollar borrowings" in 1994 totaled \$221.4 bn. (Roussakis, 1994, 176). The term eurodollars also includes "the use of international banking facilities (IBFs) by [individual] foreigners residing in the United States" (Burton, et al, 262).

⁹⁷⁷ "Caribbean Eurodollar activity is estimated to be much larger than...[official] (international banking facilities) Eurodollar activity because of regulatory limitations.... Caribbean branches of US-based banks can...take [eurodollar] deposits from US institutions and have no restrictions on foreign corporate depositors.... [And the Fed] has imposed a zero reserve requirement since 1990, making the treatment of Eurodollars *effectively the same as fed funds*....[So] US-based banks consider funding through fed funds & Eurodollars to be close substitutes...[But] fed funds [RAB] can only be lent by depository institutions, government-sponsored enterprises, and a few other eligible entities", whereas eurodollars can also be lent by [see also] Nonbank Financial Institutions (Cipriani & Gouny, 2015). The Fed "has traditionally collected fed funds data from US-based brokers, and started collecting Eurodollar data from the same brokers [only] in 2010... [even though] the overnight brokered Eurodollar market is around *3-to-4 times larger* than the overnight brokered fed funds market. The average daily volume of Eurodollars borrowed overnight" is approx. 140 bn. (Ibid). "[S]maller institutions do not typically have access to the Eurodollar market and [instead *must*] borrow from other banks in the fed funds market instead" (Cipriani & Gouny, 2015).

⁹⁷⁸ a In 2015, the Fed began "to construct the new overnight bank funding rate... [to] be calculated...[from] both fed funds and US-based Eurodollar transactions" (Cipriani & Gouny, 2015).

⁹⁷⁹ another clever euphemism for banks creating TAB-bankmoney by extending their credit.

⁹⁸⁰ For example, in the 1970's, "a bank headquartered in Illinois found it easier to set up an office in London than to set up a branch across the street, because...state law prohibited banks headquartered in the state from establishing a branch within Illinois" (Aliber, 87). In regards to

3) It's critical for eurodollar credit extensions that both banks have accounts at the US Fed either directly or through their subsidiaries, because behind the scenes the interbank payment is in US fed funds/base money; so there is at least some degree of regulatory control, because the Fed could threaten to revoke any bank's (i.e. state-monetized credit institution's) account privileges.

3b) Eurodollars are not counted in the US M1 (money supply), but rather imprecisely in the UK's M3. See also "M3". Who regulates them? "Even if a central bank decides to backstop the foreign-currency liabilities of its domestic banks, its ability to do so is limited by its own foreign-currency reserves. The problem is further exacerbated by the difficulties in assessing counterparty risk that result from depositors, banks, and borrowers often residing on 3 different continents— as in the paradigmatic case of petrodollar 'recycling.' The task of building institutions that could alleviate these problems in the emerging offshore US dollar system... [has been] assumed [since c.1974 (and mostly in secret)] by monetary technocrats" (Braun, Krampf, & Murau, 2020). See also "Technocracy".

4) "the...[prime] example of the mystifying quality of money creation to [evade comprehension by] even the most sophisticated bankers, let alone other businessmen" (Friedman, 1971, 1). Friedman pointed out that funds "placed with these [de facto unregulated] institutions may be owned by anyone-- US or foreign residents or citizens, individuals or corporations or governments.... In principle, there is no hard and fast line⁹⁸¹ between Euro-dollars and other dollar-denominated claims on non-US institutions.... The most important regulation that...stimulated the development of the Euro-dollar market has been Regulation Q, under which the Federal Reserve...fixed maximum interest rates that member banks could pay on time deposits. Whenever these ceilings became effective... the Euro-dollar market expanded. [Even] US banks then borrowed from the Euro-dollar market to replace the withdrawn time deposits" (1971, 3-4). See also "Regulation Q".

5) Unregulated Eurodollars started up as a crypto-imperialist move in the 1940's (World War Two),⁹⁸² when the Soviets and other eastern Europeans needed a safe place (from US regulators) to park their dollars, because they were essentially driven out of the US banking system by the World War One-era Trading with the Enemy Act (1917) and its Alien Property Custodian, which was re-instated by the Roosevelt Admn. in 1942. See also "Globalism" → "Angry Birds".⁹⁸³

[see also "Empire (in the so-called 'modern' age)". "FASAB-56"]

6) "Again, National City Bank took the lead. They offered dollar-denominated CDs in London in 1966 to get around the Regulation Q interest rate ceilings and [also] to avoid the [RAB] reserve requirements mandated on domestic deposits.⁹⁸⁴ Euro CDs... [today] are mostly sold to institutional investors and large US corporations" (Burton, et al, 2010, 254). See also "Money market instruments & Money market funds (MMFs)".

7) It is clear to anyone with eyes in their head that, in short, "the Eurodollar market has grown up as a means of separating the United States dollar from the country of [public] jurisdiction or responsibility for

circumscribing "the ability of...banks to mix [so-called] deposit banking with insurance and securities businesses... the United States... [even after the repeal of Glass-Steagall]... still has the strictest regulations... The least restrictive regulations are found in the United Kingdom, the Netherlands, and Switzerland" (Allen, 2009, 141).

⁹⁸¹ In practice, the "precise line... depends on the exact interpretation given to 'short-term' and to 'banks'." (1971, 3). The BIS, however, simply defined eurodollars as: "dollars that have 'been acquired by a bank outside the United States and used directly, or after conversion into another currency, for lending to a nonbank customer, perhaps after one or more redeposits from one bank to another'" in 1964 (Goodfriend, 12).

⁹⁸² <https://www.youtube.com/watch?v=d5QWcJu0fp4>, mn.29-31. [deleted by YT; unrecovered title]

⁹⁸³ Russia, for one, "did not want to place its oil revenues in dollars in US banks where they might be frozen by the US government during the Cold War era" (Mendelsohn, 2006, 12).

⁹⁸⁴ This could also be phrased (more incisively) as: "From the early 1960s, partly driven by the...Interest Equalization Tax (1963), US banks began to use the Eurodollar market for their own purposes, turning it into an offshore segment of the New York money market" (Braun, Krampf, & Murau, 2020). See also "Federal Reserve Bank of New York (FRBNY)".

that currency, the United States” (Goodfriend, 1981, 12). Notice that this (forthright) comment (from a future Trump nominee to the FRB) is from 1981. “[P]aradoxically, *little is known* about the evolution of the Eurodollar market since the 1980s– the topic all but disappeared... *precisely when* the Eurodollar market had become *the* [sic] backbone of the international monetary and financial system... [And] it is impossible to make sense of financial globalization and US monetary power without a thorough understanding of the *offshore* dollar system” (Baur, Krampf, & Murau, 2020). See also “Globalism”,⁹⁸⁵ “Conspiracy theorist”.

8) This is not just the accumulation of ‘loanable funds’. Money can (it was discovered decades ago) “also be created offshore, denominated in a currency different from that of the country hosting the issuing bank. Thus, banks located in London began to issue US dollar-denominated loans in the late 1950s, thereby *creating* ‘Eurodollars’...[and as] private banks in other developed countries and borrowers in developing countries joined [in on] the Eurodollar market, a global dollar area emerged that existed in parallel to many domestic monetary systems” (Braun, Krampf, & Murau, 2020). See also “Parallel universe”, “Neoclassical Economics”.

[The Rise of Eurodollars (from the fall of Bretton Woods currency pegs); ‘new normal’ by the early ‘80s (Braun, et al, 2020)]

9) How many eurodollars are there? As of year-end 2008, “bank deposits denominated in external currencies totaled nearly \$45,000 billion compared with \$1 billion in 1961.⁹⁸⁶ About 70%⁹⁸⁷ of [all foreign] offshore deposits are denominated in the US dollar [eurodollars] and about 20% are denominated in the euro.... Offshore deposits have grown at an average annual rate of 30%, *much more rapidly* than domestic deposits; the growth was especially rapid in the late 1960s and the early 1970s...” (Aliber, 86); because the Federal Reserve’s “Regulation Q... put a legal ceiling of less than 6%... that time deposits could pay in US banks... [and thus] constituted one of the major attractions of Eurodollar deposits...[when] interest rates soared in the 1970’s. See also “City (of London), the”, “Imperialism, ‘modern’”.

10) 70% of the above 45 trillion is \$31.5 tn. in non-US accounts in 2008; compared to approx. \$7.5 tn. within US accounts (US 2008 ‘M2’ of \$7.8 tn., minus approx. \$0.3 tn. in ‘base money’/cash). In other words, approx. **3/4ths**⁹⁸⁸ of all “US” dollars in accounts in 2008 were held in “eurodollars” abroad.

11) In terms of circulating physical cash, comparable figures for this decade would be \$580 bn. in eurodollars-cash (or 65%)⁹⁸⁹ and only \$312 bn. in US-cash (Amadeo, 2017); **and it has long been**

⁹⁸⁵ “That giant sucking sound” of dollars and jobs leaving the United States was well underway prior to Dallas billionaire H. Ross Perot forecasting it in 1992-93. See also “Reserve currency”, “Debt cycles”, “LIBOR”.

⁹⁸⁶ In “March 1988 Morgan estimated... the gross [entire] Eurocurrency market [of which Eurodollars comprised approx. 67%] at \$4,561 billion.... [and] the gross size of the Eurodollar market at \$3,056 billion” (Goodfriend, 1998).

⁹⁸⁷ Amadeo (2017) estimates that “during the 2008 financial crisis” the figure was 66.6% (\$18 tn. out of \$27 tn.).

⁹⁸⁸ Amadeo (2017) lists \$18 tn. in eurodollars “during the 2008 financial crisis”. The comparable figure for USA dollars on account for 2008 is \$7.8 tn. (given US M2 of \$8 trillion, minus \$200 bn. for circulating cash). Thus, based on Amadeo’s estimate, the grand total of \$25.8 tn. dollars on account in 2008 was approx. 70% eurodollars, and 30% USA dollars. In 1980, Morgan Guaranty Trust Co. estimated the “gross size of the Eurodollar market at \$943 billion.... [up from Morgan’s] earliest estimate... [of less than] \$20 billion in 1964” (Goodfriend, 1981, 13).

⁹⁸⁹ The Fed keeps track of the amount of Federal Reserve notes that are returned for replacement, and the amount of FRNs that are sold to banks. In 2019, \$1.7tn. in “cash” (outside of banks) circulated in the US. The Fed must also keep records of how much “cash” the banks sell to the US public. From there they can’t track it, so what portion is outside US territory is just an estimate (usually about “2/3rds”).

conventional wisdom that “we don’t have a good estimate of eurodollars.... [because they are] completely outside the regulatory purview of US monetary...authorities” (Ricks, 2018c, mn.114-115).

[Frankfurt Bundesbank’s lobby mural, 2014]

12) “The overwhelming majority of money in the Eurodollar market is held in *fixed-rate time deposits*... [whose] maturities... with most of the money held in the one-week to 6-month maturity range. Eurodollar time deposits are intrinsically different from dollar deposits held...in the United States only in that the... bulk of Eurodollar time deposits are [unsecured] *interbank* [RAB] liabilities” (Goodfriend, 14).

13) All eurodollars are either in the form of ‘deposits’ (demand accounts) or [RAB?] loans, with the former being either fixed time deposits (‘savings’ accounts at local banks [TAB?]), or negotiable CDs [RAB?]. Eurodollar loans are primarily short-term, unsecured, interbank (RAB) loans; in \$1 mn. multiples, and “usually... under pre-arranged lines of credit.” There are also medium-term and other term (RAB) loans ranging from 3 to 7 years (Kim & Kim, 2015, 173).

14) “Most Eurodollar deposits are for \$500,000 or more, and they have maturities ranging from overnight to about 1 year⁹⁹⁰.... [The absence of insurance and other compliance] “costs means that the interest rate paid on Eurodollar deposits can be higher than [on] domestic US rates on equivalent instruments” (Ehrhardt & Brigham, 2016, 727). Have eurodollars already taken over the world over the past 4 or 5 decades?...

15) ...“The *petrodollar* story is in fact a *eurodollar* story, always was and always will be. And... eurodollars are... the original bitcoin. A free-float of dollar-denominated claims whose **fractioning** is out of the control of the Federal Reserve system or the state... [which is, in turn] a [de facto] form of underwriting by the richest state in the world which has increased global interconnectedness, global trade and global growth in general. And it is this foregone stake [eurodollars/petrodollars] which has lubricated the global liquidity system ever since the eurodollar story first began in the 1960s. It’s also what has empowered the build up of significant foreign *current account surpluses*, which in themselves represented gigantic [eurodollar] shock-absorbing balance sheets for global supply and demand mismatches” (Kaminska, 2016). See also “Super Imperialism”, “Petrodollar”, “Parity”, “Money market instruments & Money market funds (MMFs)”.

16) The “Latin American debt crisis of the early 1980s, the Asian crisis of 1998–99, and the Global Financial Crisis of 2008-09-- [all] spurred monetary technocrats to gradually expand the Eurodollar market’s backstop infrastructure, culminating in the [2010’s] network of (partly unlimited) swap lines between the Fed and a select number of other major central banks” (Braun, Krampf, & Murau, 2020).

⁹⁹⁰ The “Eurodollar market is essentially a short-term market; most loans and deposits are for less than 1 year” (Ehrhardt & Brigham, 2016, 728).

17) Their (interest rate) futures comprise the largest-volume investment contracts in both the US and the world, and thus have been, for decades, the flagship for interest rate hedging.⁹⁹¹ “If you look at the Eurodollar futures for the next 10 years...[those] yield[s]...tell you what the market thinks the [US] Fed is going to do exactly... out for the next 10 years” (Mosler, 2016, mn.4). See also “Sovereignty”.

Switzerland- most organized;

Ukraine- most war-torn (through all history)

United Kingdom (UK)- the most liberal [.en] corporate-bank rules [.uk] (2ndE empowerment)

⁹⁹¹ Eurodollars borrowings have positively correlated with interest rates. The borrowings have primarily been measured in “liabilities of US banks to foreign branches”; although in December, 1990 the Fed also increased eurodollar volume by removing all reserve requirements on US banks’ eurocurrency “liabilities and...[nonpersonal] time deposits... [thus eliminating] the cost of net transfers from [US] banks’ overseas offices to their US offices” (Roussakis, 1997, 175).

⁹⁹² See also (the development of) “Dutch Disease”.

European Central Bank (ECB)- (est. 1998) 1) An anomaly among CB's, the ECB's "aim is to replace democratically [3rd Estate] elected [1st Estate] governments in Greece and Italy with [2nd Estate] oligarchy. German Chancellor Angela Merkel and other neoliberal leaders claim that *democracy* puts the interest of people ahead of paying bankers and *bondholders*... something has to give. As far as the ECB, the US Federal Reserve, Republicans & Democrats, British Conservatives & Labour are concerned, what should 'give' are living standards, not the debt overhead. This is the leading demand of the oligarchic counter-revolution against 'democracy' that plagues Europe and the entire Western world today.... Before the EU bank-grab, central banks were supposed to create money to finance government budget deficits, so that governments are not forced to borrow from bondholders, or from commercial banks charging interest for credit that they create electronically on their own computer keyboards. The problem is that, unlike the Bank of England or the US Federal Reserve, Europe doesn't have a real central bank to finance government deficits directly. The ECB won't lend to governments⁹⁹³-- which is what central banks were [originally] founded to do. The ECB only buys bonds from commercial banks-- [and] at a higher prices than the 'free market' would set"⁹⁹⁴ (Hudson, 2012g). The people will throw off its yoke when they are ready-- i.e. when they are able. See also "Economics", "Economics, Parity".

2) The ECB "was not modelled on the successful [postwar] *Bundesbank*⁹⁹⁵ in Frankfurt, but the disastrous prior German central bank, the [prewar] *Reichsbank*, which created asset bubble and bust, deflation, hyperinflation and essentially caused...economic chaos" (Werner, 2016c); and has likewise "been a disaster from day one"⁹⁹⁶ (Werner, 2018b, mn.111). "The ECB wants to prolong the recession because it has political goals. The political goal is the creation of a United States of Europe, and transfer of power... to Brussels; and again you can't do this without a crisis. That's where CBs are very, very effective, in engineering such crises" (Werner, 2015b, 116). See also "Inflation/deflation".

3) The biggest CB in the world was created "without a Treasury to have its back. And we have 19 [national] Treasuries that have to bail out national [TAB] banking systems without the help of a [RAB] central bank! ...because the...[ECB] was designed never to bail out the riff-raff...states-- the Italian ones and the Greek ones and so on" (Varousfakis, 2018, mn.18-19); but rather, to foreclose; and then...? See also "Reform, 101", "Monetary Reform".

4) In the 2010's, the "ECB grants loans to banks that are effectively insolvent, [and] accepts highly dubious collateral to an interest rate of zero. This shows how bad the condition of the money and financial system really is" (Stelter, 2018)...

4b) ...as does the authoritarianism. Greece, Spain, and Italy all had their governments "removed at the end of 2011 over a week, two without election, and two replaced by former Goldman-Sachs executives who were part of...the \$12.3-trillion dollar hijack from the American public to bail [out] the fraudulent banking system.... Then in 2012, the "European Commission was threatening to take Hungary's government to court, if it did not make legal & constitutional changes to guarantee [the] independence of its central bank. More deeply and broadly, at the insistence of Germany, the European Union's constitutional base, the Maastricht Treaty, was altered so that sovereign governments must [now formally] introduce 'binding legislation or constitutional amendments' to put their national budgets under [de jure] central [bank] control so that, in...Angela Merkel's [words], it will "'be binding and valid forever.

⁹⁹³ This is a.k.a. "the ECB... cannot create Reserves directly. They don't create Euros directly. The member Central Banks create Euros." (Luongo, 2022, mn.24).

⁹⁹⁴ As Hudson has pointed out, the disabling of funding government was intended. "The whole idea behind the creators of the ECB is that governments [should] have to pay commercial banks to do what they could really do for themselves, for nothing. They let commercial banks use their computer keyboards, to create hundreds of billions of dollars worth of IOU's that bear interest. Whereas the [traditional] Central Bank [i.e. Bank of England, Federal Reserve] has its own computer keyboard. It could create this credit, just as well. But the ECB doesn't... so the ECB is, from the outset, a [disabled] creature of bank lobbyists" (Hudson, 2011b). The primary result of this condition, for Europe, is that government deficits now shrink the economy (through financial leaching), instead of expanding the economy.

⁹⁹⁵ The Bundesbank initially "pushed back against" the broader "*financial stability*" focus that was being pushed upon the ECB in the early 1990's, preferring instead a traditional "*price stability*" (inflation) focus. The "blowup" of the BCCI scandal seems to have then prevented, in Europe, a triumph of the 'broad'er Bank of England "approach", vis-à-vis that of the 'narrow'er Bundesbank perspective. It "was always the thing that [CB] people [then] brought up-- the [basic] inability to see this" (James, 2020, mn.133). See also "Luxembourg", "Groupthink".

⁹⁹⁶ See also "Capitalisms" [disaster].

Never will you be able to change...[national budgets] through a Parliamentary majority” (McMurtry, 2013b). See also “Lender of Last Resort (LoLR)”, “Dystopia”.

5) Central banks (such as the somewhat anomalous ECB) “have the know-how, the data, the information, and all the tools to prevent...[financial crises]. But they’ve never prevented it. The ECB oversaw the creation of these bubbles in Ireland, Portugal, Spain, and Greece.... [The ECB] could do anything. You know if you look at its statute, there’s no government that can tell the ECB what to do and what not to do. And yet the fruits of its labors...[have been] inevitably, that taxpayers have been forced to bail out banks. That is entirely unnecessary, and again shows that the Central Banks are not out for the public good. Why ask taxpayers to bailout banks?” (Werner, 2016b, mn.57). See also “Central Bank”.

6) “Currently, the ECB is engaged in a war to destroy the 1500-16000 community banks in Germany and also Austria and...other countries where there’s also still a few left” (Werner, 2016b, mn.107). In September 2016, “ECB head Mario Draghi (a former banker with Goldman Sachs) said that ‘*There are overcapacities in the banking sector of some countries*’ in the Eurozone. Which country could he have been talking about? Germany boasts by far the largest number of banks– about 10 times as many as the global centre of international finance, the UK. 80% of these banks in Germany are local, not-for-profit community banks, which do not pay bankers’ bonuses, and which serve ordinary people and small firms, creating a strong SME sector (the main employer in most countries).... creating 200 years of superior and stable economic performance [in Germany]. These banks were neither a cause of the 2008 crisis, nor much affected by it, increasing their lending in Germany and ensuring that no recession or rise in unemployment occurred” (Werner, 2016c). “There’s never been a banking crisis due to too much...Small & Medium Enterprise lending. Have you heard that before? No” (Werner, 2018, mn.45).

6b) “It is breathtaking how wrong ECB forecasts for core inflation have been over the past decade-- systematically predicting an upward recovery despite persistent deflationary pressures.

- Philipp Heimberger@heimbergecon, Twitter, Sep 29, 2020.

6c) “ECB to gobble up more debt next year than governments can sell” (FT, 10/20)

6d) The EMU member banks have “pledged all their gold to the ECB” (Luongo, 2022, mn.25), which is about 3 km away from the Bundesbank in Frankfurt.

See also “Lisbon Treaty”, “Greece”.

European Commission (EC)- (the EU’s honcho) member-state appointees serve as a combined Legislature-Executive for the EU. In addition to its role in implementing policy, the EC is the sole body responsible for proposing EU-wide ‘legislation’-- not the (see also) “European Parliament”; “Deep State”.

1) The notoriously corrupt EC actually resigned *en masse* in 1999, after a corruption report concluded that: “It is becoming difficult to find anyone who has even the slightest sense of responsibility”⁹⁹⁷ (Whitney, 1999). See also “Integrity”.

2) “The European Commission has full and unlimited power for all decisions related to the architecture of this European community.”- Fmr. Nazi Head of Legal Planning for Post-War Europe (and the Commission’s 1st President) Walter Hallstein, 1957 (Rappoport, 2013).

⁹⁹⁷ “The European... Commissioners were quite ready to take money under the table from Monsanto” (Engdahl, 2013, mn.23).

3) "...operates more like the priesthood of the 13th Century papacy than a modern civil service" (Evans-Pritchard, 2016). See also "[Charismatic Authority \(CHA\) & Charismatic Dependency \(CHD\)](#)", →"Bureaucratization (process)".

4) Perhaps the only parliament "in the world where the laws are derived from the commissars... I meant the Commission. It is just like the old Russian system where the bureaucrats run everything.... And if they were good managers it wouldn't be a problem. But of course they believe Neoclassical Economics. They're disastrous managers" (Keen, 2016l). See also "EUSSR", "Neoclassical Economics".

5) "The EU's designers and bureaucracy have been complicit in letting the wealthy avoid taxes by accounting tricks such as taking their profits in [non-EU] tax-avoidance and capital-flight centers such as Switzerland" (Hudson, 2012g). See also "Luxembourg", "Angry Birds".

6) And then there was 'COVID'; pushing a "social credit system.... to be laid out by 2030".

- <https://www.bitchute.com/video/AXxs934UYnKG> [SR 3766, mn.9-10]. In summary, a well deserved reputation for world-class destruction, for going on (at least) a quarter-century now.

7) European Commission Updates: 2022- Then "with the war in Ukraine, they just abruptly cancelled...all [long-term Russian energy supplies to EU member states, in exchange for]... spot energy markets...[for] 'price discovery'. So they created this Exchange... in Poland...[which] is thoroughly corrupt...The Board of Directors are people from...one of the Clearing Boards in London... It's an utterly corrupt...[and damaging] scheme and... the prices of energy have been going through the roof.... They just upended everything and made the situation orders of magnitude worse" (Krainer, 2022, mn.18-19). They're "so demented and...so idiotic that it's very difficult to even...find a rational explanation [for] why would anybody be doing this in the first place" (Krainer, mn.27).

See also "Parasite", "EUSSR".

European Constitution- see "Lisbon Treaty".

1) "The great enemy of clear language is insincerity. When there is a gap between one's real and one's declared aims, one turns as it were instinctively to long words and exhausted idioms, like a cuttlefish spurting out ink" (Orwell, 1946).

2) "There is no such thing as an independent European government.... They're all bought and paid for by Washington" (Roberts, 2017c, mn.17-18). See also "Reserve currency", "Washington Consensus".

European Court of Justice (ECJ)- "...claims sweeping supremacy, with no right of appeal" (Evans-Pritchard, 2016). See also "Brexit".

European Monetary Union (EMU)- ("a devilish⁹⁹⁸ design... like removing the shock absorbers from your car" [Varousfakis, 2018, mn.23]; was, as initially agreed in the Treaty of Maastricht, 1991)...

1) ..."implemented by policy elites ['technocrats'] largely in absence of mediating regional and central political parties" (Mckay, 2006). See also "Federalism".

1b) Hence, one should not be surprised, a couple decades later, to find that "political disunity has prevented [what some have always called the] completion of EMU. Contrary to popular belief, EMU is still **only a cash union**, because only the banknotes issued by the ECB (and the coins issued by the member states alongside) are of the same credit quality in all the member states of the euro area. Bank deposits [state-monetized credit extensions], on the other hand, differ according to... in particular...the financial capacity of the [EU member] states to protect these deposits in the event of bankruptcy of banks. A uniform European deposit insurance scheme (EDIS) is to be created in order to ensure the uniform quality of bank deposit money, but political resistance to the pooling of bank risks has so far prevented this. For the same reason, the creation of a 'safe asset' in the form of a [EU-wide] government bond without default risk, urgently demanded by financial market participants, has [also] remained elusive. History has shown again and again that monetary union in the credit [a.k.a. 'debt'] money system needs political union as its guarantor. But political union seems more distant today than at the time of the launch

⁹⁹⁸ ...or perhaps 'desperate' would be more appropriate. See also "Statism" (footnote), "European Parliament".

of EMU more than two decades ago” (Mayer, 2019). See also “Debt money”, “Monetary reform”, “Digital Euro”.

2) Wynne Godley wrote at the time that: “The central idea of the Maastricht Treaty is that the EC⁹⁹⁹ countries should move towards an economic and monetary union, with a single currency managed by an independent central bank. But how is the rest of economic policy to be run? As the treaty proposes no new institutions other than a European bank, its sponsors must suppose that nothing more is needed. But this could only be correct if modern economies were self-adjusting systems [see “Equilibrium”] that didn’t need any management at all” (Godley, 1992). Steve Keen paraphrases Godley’s (now classic) prescient summation of the policy disaster as, “The people who framed this treaty-- since the[y] only desire to create a Central Bank and not a Treasury as well, and they also put these huge limits on what the... national Treasuries could do-- they must believe that capitalism is inherently stable. Since it is not, when a crisis comes along, the rules of the Maastricht Treaty, and the absence of a [governmental] redistributive mechanism through treasuries and taxations across countries, will force countries in decline to continue cutting spending, leading to a downward spiral [of monetary austerity and economic bifurcation], the only escape from which will be immigration or death.... He was spot on... one of the most prescient articles ever written in the history of Economics” (Keen, 2016o, mn.2-3).

3) (During the Mitterrand-Kohl era) “France got trapped¹⁰⁰⁰ into entrapping Germany into the concept of the EU. And Germany said: ‘*Sure...Why not. But we’ll determine the concept of the EU according to the Frankfurt bank; not the French bank, but the Frankfurt bank*’... [So] the Deutschmark was the dominant force... [In the early ‘90’s, Dr. Pieczenik] was in France... I when I saw that conversion from the Deutschmark and the Frank into the EU, I said: ‘*This is the end of France. This is the end of Italy. This is [even] the end of England. This is pretty much a nonsensical idea*’” (Pieczenik, 2018, mn.7), i.e. attempting to glue different nations/languages together with mostly just bankmoney propaganda.

4) The Euro “has prompted cross-border bank mergers in the Eurozone” (Busch, 2012, 19), as well as an implicit (if not to say inexorable) German domination. Only “in Germany” (with its tradition of *landesbanken* and *sparkessbanken*) has “a consultative, often informal, policy style and a high degree of both self-regulation and institutional continuity...contributed to a successful policy outcome with no major bank failures after the 1974 case of Herstatt Bank. This [locally-based] success, however, [has] had its own costs, as the [German] administrative system was [thus] not forced to enhance state capacity in this area, and have thus [far] found it difficult to project its interests onto the European... level” (Busch, 2012, 20); despite being, basically, the EMU’s only (or at least its primary) functional component. This appearance would change with the surfacing of various southern European crises over the next few years (see Evans-Pritchard and Keen, below). See also “Landesbanken and Sparkessbanken”.

5) Since c.2010, many EMU members have been at monetary war with each other. “They signed their suicide notes¹⁰⁰¹ when they signed the Maastricht Treaty, because even a small crisis would have destroyed the Maastricht Treaty¹⁰⁰², and that was because it was designed [c.1990] by Neoclassical economists who live in a fantasy world, which argues that capitalism never has...downturns” (Keen,

⁹⁹⁹ The 12-member “European Community” (EC) of the early ‘90s, as the EU was often called prior to its November, 1993 name change to “European Union” (EU).

¹⁰⁰⁰ Why the passive voice? Paul Craig Roberts has “always understood that the EU itself was a CIA creation, in the sense that the CIA wanted a unified Europe, because it’s easier to control the EU than to control all the independent countries. And...the United States was very much frustrated by [French President, 1959-69] Charles de Gaulle’s unwillingness to join NATO or to follow American direction” in Europe (Roberts, 2018, mn.10-11). “All the [other] European politicians have done for 75 years is kow-tow to Washington... except De Gaulle” (Ibid, mn.19). See also Booker & North, 2004.

So why did he (French President Francois Mitterrand) do it? “The answer he gave...” in private, to a former British MP, was “‘I do not have... the power, the authority to bring about a federation. *But I can bring about with Helmut [Kohl]... a Monetary Union, that is going to create a massive crisis, and then the people that will succeed us will have no alternative but to create a federation*’. But he was precisely wrong.... [This is because] the Crisis... threatens democracy.... [Nobody in Europe wants] more Junker...[or] more Merkel” (Varoufakis, 2018, mn.24-25). See also “France (and the EU)”.

¹⁰⁰¹ Ambrose Evans-Pritchard agrees that the Fiscal Compact’s “rigid structure makes it impossible to jettison a policy regime that amounts to slow suicide... The eurozone needs a complete demolition of the Stability Pact” (2016c).

¹⁰⁰² It’s “stability criteria” for “the eurozone proved [to be] not worth the paper they are written on” (Huber, 2017, 153).

2011c). Two “simply insane” (or poison pill)¹⁰⁰³ Neoclassical Maastricht rules were that: 1) signatories’ aggregate budget debt could not exceed 60% of GDP; and that 2) the budget deficit in any year was not to exceed 3% of GDP, effectively forcing EMU members to “fund deficits by going to the bond market,” instead of from their own central bank (Ibid), as they had been accustomed. The new rules did not slow the growth of deficits and debt within the Eurozone; but did expedite private debt buildup, regressive interest payments, and corruption.¹⁰⁰⁴ See also “National Debt Economy”.

6) Twenty years after Godley’s essay, Michael Hudson noted that “[t]his capture of central bank policy to feed an unregulated and increasingly perverse banking sector is hardly what voters expected when they joined the Eurozone” in the 1990’s (Hudson, 2012g). The attitude thus far this century, however, has been “*Look, our job as central bankers is to support the banks*” (Hudson, 2015c). See also “Lisbon Treaty”.

7) “Six years into the eurozone crisis and there is not a flicker of fiscal union: no eurobonds, no Hamiltonian redemption fund, no pooling of debt, and no budget transfers. The banking union belies its name. [Thus far the ‘new institutions’ are merely that] Germany and the creditor states have dug in their heels” (Evans-Pritchard, 2016); and “the euro is now less prominent than when it was established. ‘By some measures, the euro plays no larger a role than [did] the Deutschemark and French franc that it replaced’” (Sandbu, 2019).

8) “If France goes to Le Pen, then I think the Euro’s days are over as of next year” (Keen, 2016x, mn.37). New national treasuries refusing to pay Euro debts “is going to totally compromise the French and German banks. They’re going to be in desperate need of a rescue.... It’ll make the Lehman Brothers [2008] crash look like a picnic.... Countries will write-off their foreign debts... and also devalue their currencies against the *German Mark*-- which is what the Euro really is” (Keen, mn.38).

9) “The dollar-centered financial system is [in the 2010’s] leaving more *industrial*, as well as 3rd World countries, debt-strapped. Its 3 institutional pillars-- the International Monetary Fund, World Bank and World Trade Organization-- have imposed monetary, fiscal, and financial dependency, most recently...[upon] the post-Soviet Baltics, Greece and the rest of southern Europe. The resulting strains are now reaching the point where they are breaking apart the arrangements [that were] put in place after World War 2.... even when this tears economies apart by forcing them into austerity, to save bondholders, not labor and industry. Yet European countries, and especially Germany, have shied from pressing for a more balanced global economy that would foster growth for all countries and avoid the current economic slowdown...” (Hudson, 2017r).

10) “Especially in Europe, banks are still as dangerous to the economy as they were 10 years ago... The money [today] was created by the same banking industry like before which still has the bad debts in its books.... the Eurozone needs a public and private debt relief of 3 to 5 trillion Euro[s]”¹⁰⁰⁵ (Stelter, 2018).

11) “Every [big] bank in the world-- not just in Europe-- has a plan for Grexit...[or] Italexit...[or] Germany re-issuing the Deutschemark. Everybody. If they don’t, [then] they’re amiss.... The European Central Bank...had a plan... I read it” (Varoufakis, 2018, mn.38).

¹⁰⁰³ Keen’s attribution of pure, unadulterated stupidity for the macroeconomic strategic policies of the past 3-4 decades in particular-- and thoroughly global policies at that-- seems to lack a distinction between what the Hindus might call the *Kshatriya* (a.k.a. “make it happen”) and the *Brahmin* (a.k.a. “let it happen”) types. This author is of the opinion that not only Godley and his readers, but also anyone monetary-historically literate with sufficient zoom out, could see that, in the words of one videographer: “Both sides [of a Hegelian dialectic] agree that, eventually, all things peak. Meaning that there is no [more] escape wherever. The suggestion that we can post-pone Peak [“everything”] with more Dumb is akin to *knawing* [sic] your leg off slowly, whilst shouting ‘*I can make it last!*’” (Jackson, 2010, mn.137-138). Chris Martenson also calls it “*peak everything*” (Fitts, 2019f, mn.27; also in 20-3-19 newsletter). See also “Fundamental Attribution Error” (anti-smugness), “Debt cycles”, “National Identity/Nationalism” (cycle).

¹⁰⁰⁴ From 2004-09, the Corruptions Perceptions Index recorded worsening scores for bribery in 10 EMU nations, versus lessening perceptions of bribery in only 4 EMU nations (Verluisse, 2010). See also “Civil National Identity (CNI)”.

¹⁰⁰⁵ This is because the Eurozone’s banking/debt sector holds liabilities of approx. to 300% of Eurozone GDP; whereas in the US this ratio is a less extreme 200% (Stelter, 2018). See also “Japan model (asphyxiation), the”.

12) Is there a silver lining to be found in all the dark clouds?¹⁰⁰⁶ “If Europe was committed to introducing a *digital euro* [CBDC (in ‘central bank money’/RAB)], [then] it would not be in need of a [TAB] banking union, and could [thus easily] avoid the market distortion and [ever-increasing] risk sharing that come with it” (Wortmann, 2019b, 3). See also “National Debt Economy (NDE)”, “Helicopter money”, “Digital Cash/Currency”.

See also “Debt saturation”, “Eurozone”, “European Union”, “European Central Bank (ECB)”.

EMU Updates: 5/22- It keeps getting¹⁰⁰⁷ worse, not better. “It was never supposed to work actually.... [T]he real purpose of the Euro is...to bleed out every...European people...It started with the Greek[s]; but it will go on. Germany is gonna be possibly last, because we might be the strongest. But they will get to us, too...as they will dominate France and Italy and Spain-- everywhere.... Look around! Prosperity? When? Where? On what planet?.... The Euro is basically [a] financial nuclear bomb. It divides the European countries...[It] does not...[unite] them.”

- M.E.P. Christine Anderson (Anderson, 2022, mn.10). See also “Monetization staircase”

See also ‘World Par Economy (WPE)’, “Reform, 101”.

Composite index of the share of bank deposits, foreign exchange transactions and reserves in euros

Sources: BIS; IMF; CLS Bank International; Iizetski; Reinhart and Rogoff; ECB calculations

[The Euro’s market share has decreased by a quarter since China’s RMB de-pegged from the USD]

European Parliament (EP)- a proverbial rubber-stamp body; 1) “a giant figleaf. The M.E.P.’s don’t actually do anything useful... Everything is done by the European Commission, and they in turn jump according to what their corporate paymasters tell ‘em to do. So Monsanto and people like that really make the rules, and M.E.P.s are just there to make it look decent”- Nick Griffin, member of the EP, 2009-14 (Griffin, 2016).

2) “...a false, pseudo-democratic institution. It’s no more than a democratic disguise for the Commission” (Goldsmith, 1994, mn.44).

3) In October 2005 over half the members of the European Parliament asked the European Commission (the real legislature) and the ECB (the real executive) “to recognise the need to introduce 1 and 2 Euro notes. However, as the...[ECB does not have to answer] to the [so-called] Parliament or [to] the Commission, it [just] simply ignored the motion and petition” from the ‘parliament’ (Sanahuja-Anguera, 2017, 65).

[babel-on?]

¹⁰⁰⁶ https://www.youtube.com/watch?v=xzlbU_SbPpY (Wonderful, pt.2)

¹⁰⁰⁷ Such sentiments and well-informed observations of the EEC-EC-EU-EMU project are not new and come from ‘both sides’; see also Dziobek, et al, 1992, 65. See also “Public Relations (P.R.)”.

European Union (EU)- (keeping Germany anchored to the West, w/o-with-& then w/o the UK in the tent) "England [post-Norman Conquest] was an area of large estates; Eastern Europe was [also] an area of large estates; but France and West Germany were areas of family-sized farms."

- Carroll Quigley, "The State of Estates, 1576-1776" lecture (Quigley, 1976c-pt.2).

Nonetheless, the latter two were conquered in WW2, and superpower/US support for Franco-German integration (into the larger whole) as been uncontested since then. See also "Brexit".

1) The original European Economic Community reduced tariffs (1950's-80's), before transforming into an EMU currency union scheme in the 1990's, and thus officially, with the 'Treaty' of Lisbon (2007), handed over control of Europe to financial (or 'financial-state')¹⁰⁰⁸ capitalism, which is proceeding to turn Europe into a 3rd world country, like finance capital extraction (to other countries & continents) had earlier turned the 3rd world into 3rd world countries¹⁰⁰⁹.

2) "The problem is that the EU has been turned into the opposite of what it was in the beginning", in the 1950's-'60's (Hudson, 2011e).

3) Why? Ill-planned globalism, a cynical version of which goes: Winston "Churchill said in a speech in [1946]... [that there should be] a 'United States of Europe'¹⁰¹⁰.... the first indispensable statement for the establishing of a[n] all-authoritative, powerful world government. So the union of Europe, according to a man like Churchill is only necessary because then you can put it into a world government-- [which] of course is not with European participation.... And a Union that is constructing along these lines *must* [sic] not function. Because if it *would* [sic] function, then you couldn't put it into an all-powerful world government... a Titanic project... [that] is doomed to fail" (Myer, 2018, mn.19-21), despite the pretty P.R. See also "Bernays, Edward (1891-1995)", "Politics",

3b) Alternatively, it should be borne in mind, realistically, that the EU project, "or even [the nascent] Euroland", on the eve of the rollout of the Euro in 1999, was still nowhere near a federal structure; "its supranational institutions [such as the EP] are so weak as to not even amount to a confederate arrangement. The existing EMU is probably best characterized as a *proto-confederation*" (Buiter, 1999). See also "Central Banking-Warfare model", "European Parliament (EP)".

4) Both of these versions would seem to concur, however, that the "Project bleeds the lifeblood of the national institutions, but fails to replace them with anything lovable or legitimate at a European level. It draws away charisma, and destroys it. This is how democracies die.... It is one thing to advance the Project by stealth and the Monnet method, it is another to call a plebiscite¹⁰¹¹ and then to override the outcome.... We do not know who exactly was responsible for anything, because power was exercised through a shadowy interplay of elites in Berlin, Frankfurt, Brussels, and Paris, and still is. Everything is deniable... Has there ever been a proper airing of how the elected leaders of Greece and Italy were [in 2011] forced out of power and replaced by EU technocrats, perhaps not by coups d'état in a strict legal sense but certainly by skullduggery? On what authority did the European Central Bank write secret letters to the leaders of Spain and Italy in 2011 ordering detailed changes to labour and social law, and fiscal policy, holding a gun to their head on bond purchases?... the Project is in irreversible decay" (Evans-Pritchard, 2016). See also "EUSSR".

5) "...a lot of people have become somewhat tired of [it], because there's been a great burden. There is a lot of pressure towards war, sadly. And also of course Europe is being asked to impose these sanctions on Russia, which are also painful for Europe...[but are] not so painful for America" (Werner, 2015b). How long will all this be tolerated? See also (the EU's traditional political heavyweight) "France".

¹⁰⁰⁸ See also "Capitalisms".

¹⁰⁰⁹ "Commerce is a profession of people who are upon an equality; hence among despotic states the most miserable are those in which the prince applies himself to trade" (Montesquieu, 1748, 51). See also "Corruption".

¹⁰¹⁰ Churchill added, in 1948, that "We cannot aim at anything less than the Union of Europe as a whole.... and welcome any country where the people own the Government, and not the Government the people"- presiding over the the First European Federal Congress, The Hague, Netherlands, May 7, 1948. See also App.C: "1-2-3".

¹⁰¹¹ **EU's list of overturned plebiscites:** (Keen, 6/18)

6) On May 27, 2018 the unelected President of Italy made “an intervention which violated the most fundamental rules of ‘democracy’ and international law...[when] the hierarchy of the European Union vetoed the [duly elected] ‘government of change’ which was being formed in Italy, and which had just won a clear parliamentary majority from the voters. Instead, the EU has imposed yet another technocratic government, which had been ready for months, led by ‘Mr. Spending Review’, Carlo Cottarelli, whose only plan is to cut the debt, and who has the support only of the Democratic Party, which lost the legislative elections of March 4. This is the most recent example of that ‘suspension of democracy’ [sic], demanded years ago by the EU...” (Covert Geopolitics, 2018).

7) “What we’re seeing is the economic failure of centralization. The more you centralize, the weaker the economies get... centralization has just wrecked Europe.... I don’t think Europe has a debt crisis. I think Europe’s governance is being re-engineered and debt is being used to do it. So we [UK-USA banks model] go into a place. We encourage them to take on more debt than they could ever afford. Then we do a series of [deregulated technical] things to pull the income. Then we say: ‘*We have a debt crisis*’; and then we start dictating to them terms by which they will stop being run as a sovereign government, and instead report up to the top of the [supranational] financial system. That’s why I call it [running] a *financial coup d’etat*... because it’s not a ‘debt crisis’. It’s a plan” (Fitts, 2011, mn.24-25). See also “EUSSR”.

8) Josep Borrell, the Commission’s VP & EU’s High Representative for Foreign Affairs, “believes the project to boost the euro’s [currency] status should be treated on a par with defence policy: ‘We should reinforce the euro’s international role, and further, our military capacity to act ... The EU has to learn to use the language of power’” (Sandbu, 2019). See also “Angry Birds”, “Reform, false”.

9) The “Soviet model tends to be very, very popular... in the European Union” (Werner, 2021b, mn.10).

9b) Nonetheless, “We may soon see the post of the EU chief diplomat abolished, because the EU has virtually no foreign policy of its own and acts entirely in solidarity with the approaches imposed by the United States.”- Russian Foreign Minister Lavrov, May 10, 2022

10) EU Updates: 10/22- <https://brownstone.org/articles/how-the-eu-is-forcing-twitter-to-censor-and-musk-cant-stop-it/> 11/22- (It gets worse.) The “cosmopolitan leadership class that dominates the...[so-called] democracies...are more & more disregarding... and... repressing the people...making the people pay for their mistakes.... They’re already starting with the rolling blackouts... [and] literal ‘Hot Spots’... hot spots where...[people] can go and get warm.” - <https://www.youtube.com/watch?v=AetydkN5Y2Y> [G.Lira,MasksOff, mn.3-6].

12/22- Croatian President Zoran Milanovic (Dec. 20th): “Ukraine is not an ally. It’s being forcibly made into one. It was cynically granted the status of an EU candidate. That’s what the EU is today: squalor, zero.” See also “European Commission”.

See also “Lisbon Treaty”, “Greece”, “Bernanke, Ben”.

European Union, reform of- (was mostly a 4th-quarter-of-the-20thc idea [see also ‘Brexit’])

1) From back in the pre-EMU days, there were widespread calls that the European Community’s “goals must be reformulated, moving the priority from economic integration to environmental protection, [and] social justice [a.k.a.]...equality.... [More specifically] Democratization must lead to a permanent broadening of the rights of the [notoriously irrelevant] European Parliament, which should take over responsibilities from the Council of Ministers and [notoriously corrupt] Commission. Furthermore, the national parliaments of member states should be granted rights, extending from participation in parliamentary discussions to veto rights. This democratization should also include institutional strengthening of regions, including states, as well as more direct participation by citizens and... NGOs. [Increasing the] handling of neglected tasks at the EC level raises the danger that citizens will [in fact] become alienated from an increasingly anonymous decision-making process. The EC [constitutional structure] should be restricted to formulating EC legislation (directives), [thus] allowing room for independent policy-making.... We do **not** share the opinion frequently voiced by EC bureaucrats and politicians that the EC can serve as a model for a future European-wide unification” (Dziobek, et al, 1992, 66). See also “Brexit”, “France (and the EU)”.

2) After the change to EU and EMU, “...it cannot be ‘democratized’ without replacing [both] the Lisbon and Maastricht treaties on which it [EMU] is founded, and removing German opposition to public

spending on recovery for Spain, Italy, Portugal, Greece, and other countries”; however “[n]ew parties can be formed to replace the old” (Hudson, 2016j). See also “European Monetary Union (EMU)”.

Eurozone- “the eurozone is, an austerity zone... not growing” (Hudson, 2015c); In 2011, “the Eurozone [Finance Ministers] said, ‘We won’t let you, the IMF, be part of our program-- the troika [with the ECB, and EU finance ministers]-- if you don’t pretend that Greece can pay the debt” (Ibid). See also “European Monetary Union (EMU)”.

EUSSR- (a.k.a. the ‘new European Soviet’ [Gorbachev, 2000])

1) “The ideal of the European Union is wonderful. The execution has been almost the opposite of the ideal” (Keen, 2017e, mn.17).

2) “What is so striking... is not that EU officials took such drastic decisions in the white heat of crisis, but that it was allowed to pass so easily. The EU’s missionary press corps turned a blind eye. The European Parliament closed ranks, the reflex of a *nomenklatura*....By design it is almost impossible to repeal the 170,000 pages of the Acquis. Jean Monnet constructed the EU in such way that conquered ground can never be ceded back...” (Evans-Pritchard, 2016). (a.k.a. ‘Hotel California’, ‘roach motel’)

3) This is not a new (or even 21stc) concept. “It is foreseeable that these [former COMECON] countries will fall out of the ‘frying pan’ of the Soviet Union and into the ‘fire’ of complete EC dependency” (Dziobek, et al, 1992, 68). See also “F.I.RE. sector”.

4) 30 years later, for its “dominion over all of Europe... they have to destroy the German middle class. They have to take away everybody’s property. They have to kill the bourgeoisie. This is Lenin, 101.... They are literally following the script.... stabbed in the back by their own government. The German people get it, but they don’t know what to do. They’re frozen.... politically.... They’re not used to political turmoil.”

- <https://www.brighteon.com/1c2e3688-d96c-488b-8c3f-0fa2fc71593c> [Luongo-Adams, 22-10-7, mn.17]. See also “Duopoly” [.German], “Parties, political”.

See also “European Monetary Union (EMU)”, “Lisbon Treaty”, “Helicopter money”.

Evil- 1) [personal level] **It’s evil being puppets...executive murder puppets.** 2) [transpersonal] “is the *conscious* blocking of humanity from developing to its best destiny or potential, for purposes of personal or political gain, or due to mental illness” (Zarlenga, 2014); thus it is hence often misattributed to what is simply incompetence or indifference... or perhaps even some deliberate provocation design for an unseen (and not necessarily bad or evil purpose). See also “Narcissism”.

3) What is the difference between mental illness and simply following (extrapolating) bad or no longer **useful ideas**? In addition to Huxley’s (bonobo mad scientists) and Orwell’s (chimpanzee hierarchists) suppositions on dystopias (a.k.a. bad ideas)¹⁰¹², J.R.R. Tolkien, at around the same time [within the context of the **3rd Currency War** in the first half of the 20thc] contributed what seems to be a (more comprehensive

¹⁰¹² “No man [or at least woman] chooses [what is called] evil because it is evil; he only mistakes it for happiness, the good he seeks.”- Mary Wollstonecraft (Wollstonecraft, 1790), the social philosopher mother of Mary Wollstonecraft Shelly (1797-1851)-- who was, in turn, the first known author on (see also) “Transhumanism (TH)”.

and structural) *monetary angle* on what is now our smörgåsbord of “classic” 20th century dystopias and anthropological dysfunction. Like Huxley’s bad anthropology and Orwell’s bad history, Tolkien’s ‘resonant fiction’ may be seen as revolving around (massive-structural dysfunction in) yet another key liberal art--money¹⁰¹³-- the silent driver that everyone then (in the mid-20thc) was being trained to ignore as a ‘non-factor’. The Oxford Chair of Anglo-Saxon (studies) composed “The Book of Lost Tales” (later post-humously published as *The Silmarillion*) from World War One to the 1930’s-- two centuries after the (private) Bank of England took control of the UK’s monetary system, and during the decades when Wall Street was clamping down on controlling the US (monetary system). The original project was intended, Tolkien admitted in letters, to serve as a veiled-mythological reference to the origins of English history and culture.¹⁰¹⁴ It was 2 decades after the ‘*Silmarillion*’ manuscript was rejected by [establishment] publishers-- and after Tolkien had also been promoted to (the highest-tenured) Merton Professor of English Language and Literature-- that the full professor wrote to his LOTR proofreader that: “[S]ince they [orcs] are servants of the Dark Power [the City of London’s bankmoney Empire], and [a couple centuries] later of Sauron [Wall Street’s sequestering of it (in the mid-20thc)], they must be ‘corruptions’ of mankind’s originally intended nature¹⁰¹⁵ (Tolkien, 1954). See also “Tolkien, J.R.R.”, “Fundamental Attribution Error” (for Huxley), “Orwell, George”, “Dumb-downing”, “Homo Economicus”, “Dystopia”, “English constitution, the”, “Eras of (monetary) History”.

3b) “Purposefulness” and utility, however, are capable of blending into “belief in the concept of superior rights: that party A [always] has rights that party B does not have. To paraphrase Orwell, ‘Some are more equal than others’...., which can in turn lead to unfalsifiable propositions (sometimes a.k.a. ‘spectral evidence’).... Practically speaking... self-righteousness and utopianism...[to the extent that they justify] evil” (White, 2021), are contributors to it. See also “Hypocrisy”, “Zionism”, “Transhumanism”.

4) The difference between evil and stupidity (or indifference) is primarily in consciousness-- whether one is consciously aware of the retarding role that one is playing. See also “Orwell, George (1903-1950)”, “Dumb-downing”. <https://www.youtube.com/watch?v=9fWlChDcbbo> [‘Steve & Eydie’, mn.1]

4b) Hence most of the great ‘evils’ of our day-- from depriving future generations of God’s biosphere, to the ‘central banking-warfare model’-- are not in fact ‘evil’, but are, rather, simply the widespread and large-scale (a.k.a. socially accepted) misuse of tools, tools that are not inherently evil (for instance using psychology and national/social identity [and hence their exploitation] as the basis for economic science. See “NInnies”.

5) According to Catherine Austin Fitts, [karmic vengeance] ‘scorpions’ or ‘slugs’ comprise 5-10% of the population (and used to be identified as such by local Rotaries, Lions, etc. back in the pre-centralization days); but “right now we have the slugs in charge and 80% of the people follow the slugs... That’s one of the ways the top guys control-- they empower the slugs, and then the rest of us get drained and find life very complicated and hard and difficult and frustrating, with our time being constantly wasted.... Right now the dishonest are the ones who are making all the money, and the honest are getting drained” (Fitts, 2017j, mn.41). See also “Statism”, “Epistemological undergrowth (& the F.I.RE sector)”, “Attitude inoculation”.

6) Are history’s great spasms of violence & lethality, hence, ‘evil’?

a) Mongol invasions?- driven by Bray Cycle cold-dry climate; see also “Cycles”.

¹⁰¹³ Systemic deception & dysfunction? Public understanding, even in this incipient 21stc Knowledge Age (of Design), has not yet caught up to even the basic reality that ‘*money*’-- state currency or otherwise-- is a construct that is entirely man-made (like “meters” or “pounds”) in nature. This is because, unlike ‘culture’ (i.e. *cultural anthropology*) or even [the woefully understudied, under-criticized] *history*, the people have traditionally had no role in the determination or setting of a States’ monetary policy. It has always been the ‘big boys’ table-- where no rabble are ever to be invited, yet alone regulars. It is from great deceptions that great dysfunctions arise. See also “Money”, “Economics”, “History”, “Integrity”, “Desk, the”.

¹⁰¹⁴ Tolkien felt that “the English people deserved a mythological tradition as varied and rich as the Norse and the Greeks. That...[was] the initial kernel that Tolkien used to begin the great thought-experiment that became Middle Earth [Lex. ‘Adolescence of Mankind’], a term that seems to reflect the Norse *Mittgard* and [also] the Chinese concept of a ‘middle kingdom’ between heaven and our Earth” (Shenfield, 2018).

¹⁰¹⁵ Tolkien added the *orcs* “are fundamentally... ‘rational incarnate’ creatures, though horribly corrupted [dumbed-down], if no more so than many Men to be met today” (Birzer, 2003). See also “Homo Economicus”, “Methodological Individualism (M.I.)”.

b) Spanish Empire?- driven by monetary ignorance; see also “Commodity money”, “Latin America”.
 c) Anglo-Americans’ WW2- simply that so much was at stake (the most ever). See also “World War Two”, “Demonization”.
 See also “Kakistocracy”, “Political Pronology”, “Transhumanism”, “Super-villains”, “Health care (US)”.

Evil twins? (of the 2nd Industrial Revol./‘explodapedia’)- (the 9 great bankmoney hijackings of the 1st and 2nd Industrial Revolutions era)

1) From the 1st Industrial Revolution through the 2nd Industrial Rev., there have been no less than 8 (large-scale) intellectual ‘hijackings’ of economic & monetary theory. Each of these well-financed appropriations of (prevalent) economic theories occurred within 50 years of the original’s publication, and was supported by (at least) some of the wealthiest counterfeiters-technologists of their respective day:

<u>Original theorist(s)</u>	<u>Appropriator(s)</u>	<u>financed by</u>	<u>motive</u>	<u>cover story</u>	<u>see also:</u>
a) Montesquieu (1748)	Rousseau (1760’s)				“Opposition, controlled”.
b) David Hume (1752)	Adam Smith (1776)	?, City	“ConfUSURY”	“free-trade”	“Money” [.Hume]
c) Adam Smith (1776)	J. Bentham (1818)		Usury	“Utilitarianism”	“Capitalisms”, “Modernity”.
d) David Ricardo?					
e) J.S. Mill?					
f) Henry George (1879)	Karl Marx (1887)	Engels, City	diversion	“socialism”	“Hegelian dialectic”,
g) Leon Walras (1874)	W.S. Jevons (1878)		usury	mathematics	“Neoclassical Econ.”, “Equilibrium”.
h) Carl Menger (1871)	Clark (), Samuelson ()				
i) Georg Knapp (1905)	Innes (1914) vs. Feder (1934)				
j) Simons-Fisher (1930’s)	Tobin-M.Friedman (1960’s)	Yale, Rockefeller	confUSURY	“free-markets”	“H. Economicus”, “methodolog. individ.” “Exogenous vs.Endogenous”.

[appropriate behavior?]

2) The results from the last two of these (h & i) in particular, have now been in place, as a more-or-less unquestioned status quo, since the 1960’s. See also “ConfUSURY”, “Deceptive Banking Terms (d.b.t.’s)”; “Full Reserve banking” [for M.Friedman’s flip-flops].

3) Shivan and cultural destruction sometimes have their own logic

<https://www.youtube.com/watch?v=6Q0WIP71rd4> [Alfre],

<https://www.youtube.com/watch?v=U5IyUFqUN88> [Corbett’14]

See also “Industrial Revolution, 2nd”, “Statism”, “City (of London), the”.

[‘Explodapedia’ cliches]

Ex nihilo (money creation)- (Latin: 'from nothing'; a.k.a. 'from thin air')

1) They're not creating 'money'; they're creating 'credit' (for which they have to pay equity [reserves] to another bank¹⁰¹⁶). And it's not 'from nothing'; it's from promissory notes (which has been going on for more than half-a-millennium). See also "Credit money".

1b) The term is basically misleading. All promises to pay/repay might be said to be made up 'out of thin air', but such language clarifies nothing, and is just inflammatory rhetoric designed to make people think something is wrong, when in fact promises (contracts) are ethical and at the heart of economic activity. Reformers who make this claim are deceiving by omission. The omission is that when the exchange of payment/repayment promises is made for a loan (typical of the mortgage), it is immediately followed by the actual payment by the bank of its own Reserve/RAB asset (an asset of the bank that it cannot 'make up'). The lending bank is out this equity until the loan repayment occurs. The interest is considered compensation for this temporary loss of Reserves by the bank. The reformer may complain of excessive interest, but not of the fact that this particular promise, like any promise to pay/repay, is 'made up out of thin air'. That is like accusing beverages of being mostly water. Big deal. It doesn't make them deceptive. Banks pay for a mortgage loan [TAB credit extension], on the same day that it is issued, with their own [CB money] equity [a.k.a. Reserves/RAB], although [increasingly?] heavily mitigated by the net settlement with the other banks.

2) It is however somewhat easier to claim that base money (a CB liability) is made up 'out of thin air' than is bank credit [TAB], because the act of recording the Fed liability (which creates base money) is itself purchasing its own backing¹⁰¹⁷ (either in treasuries or in QE assets). But again the "thin-air" rhetoric is opaque rather than clarifying. The Fed is legally obligated to rebate its net interest on US treasuries, but no one knows just what that is- since the banking lobby bribes Congress to protect the Fed from independent audit. See also "Federal Reserve audit (and balance sheet)".

3) The Federal Reserve creates base money (Reserves) "by purchasing [Treasury] securities with money created by a few keystrokes... [as opposed to] commercial bank credit [TAB], which banks create by issuing loans" (Forsyth, 2018); that still require some degree of Reserve-backing (Huber, 2017, 71). See also "Loan swaps", "Velocity of money".

4) Hence, only the CB (not its member-banks) has the 'magic wand' for creating 'money from nothing', though CB's have been using it increasingly liberally.

5) 'Out of nothing' is a catchy metaphor regarding the [basic] nature of [all] modern ["fiat"] money. But this should not obscure the fact that creating money...in a specific currency, and ensuring the validity and value of that money, has many prerequisites that cannot be met 'out of nothing'... [Banks are] still dependent.... [on] a fractional amount of reserves [RAB] and cash... [for their] credit and deposit creation.... [Richard] Werner refers [for his creating money 'out of nothing'] to the example case of crediting an internal customer account...[for which] a bank of course...[does] not...need reserves or cash. If the bank in the example were to be very huge and represent, say, half of all customers within a currency area, then about half of all cashless payments would be carried out by simple internal rebooking of overnight liabilities among the internal customers. To [only] that extent [would] the Werner example be right. In the real world... [t]he vast majority of cashless payments include interbank [RAB] transfers...." (Huber, 2017, 71). See also "Fiat", "Open Market Operations (OMO)", "Money creation".

Exchange, Means (or Medium) of- Many economists define money as a means of exchange. They do this to link money to barter. However, money has always had a time factor that barter theory does not account for. Therefore we use term means of payment rather than means of exchange.

¹⁰¹⁶ Banks' credit creation is no more 'out of thin air'/'out of nothing' than are credit card transactions. The credit-extending bank has to make the payment in fed funds/Reserves to the purchaser's bank/monetized credit institution, and there's no Interbank payment that doesn't go through the Federal Reserve.

¹⁰¹⁷ "[W]hen the Federal Reserve writes a check there is no bank deposit on which that check is drawn. When the Federal Reserve writes a check, it is creating money" (Federal Reserve Bank of Boston, 1984). The BIS concurs, that "it is the standard practice of its members that 'the central bank issues its own liabilities for [its own] use as money'" (Desan, 2019). See also "Liability, pseudo".

See also “Barter”.

Excess Reserve- see “Interest on Excess Reserve (IOER)”.

Exchange Stabilization Fund (ESF)- per the *Gold Reserve Act of 1934*, an ‘emergency reserve fund’ for the US Treasury, and hence the USG’s “mother of all slush funds’ (Fitts, 2015b, mn.36), for ‘stabilizing’ (i.e. making) forex markets... “is run [however] by the New York Fed member banks” (McKinney, 2017b, mn.4). See also “International Monetary Fund”.

1) Est. 1934, in reaction to its UK counterpart, the “Exchange Equalization Account...[which had been] formally est. on 1 July 1932.... Other countries created stabilization funds when they joined the Tripartite Agreement in 1936...[I]t was suspicion of the purpose of the EEA that motivated the establishment of the ESF” (Bordo & Schwartz, 2001, 2).

2) With World War 2, “a huge amount of money...[was seized and brought]... to the Exchange Stabilization Fund... And sometimes they say that American History, since the ‘47 [*National Security*] Act, is the history of the mother of all slush funds getting replenished again & [laughing] again. ‘We need more secret money’.... Think of it [since the 1940’s] as your ultimate political kitty, okay?” (Fitts, 2022n, mn.17-18).

3) In the Bretton Wood I days; the “management of the value of the dollar in international trade, as well as the price of gold, was under the jurisdiction of the Treasury. It used a special fund, the...[ESF] to support its interventions in the...[forex] markets...[but it] did not have enough money to effectively operate...” (Auerbach, 2009, 69).

4) ESF “stabilization loans...were very short term, at above market interest rates, and required collateral” (Bordo & Schwartz, 2001, 24). See also “Forex”.

See also “Market maker”, “Special Purpose Vehicles”, “Black Budget”, “Plunge Protection Team”.

Exchange Traded Fund (ETF)- See “BlackRock”, “Diem”.

“Exogenous vs. Endogenous” (money creation)- (moot point of whether monetized credit institutions [‘banks’] create state-monetized credits, or simply [like non-banks] loan pre-existing savings/funds).

“When a bank makes a loan it simply adds to the borrowers’ deposit account in the bank by the amount of the loan. The money is not taken from anyone else’s deposit; it was not previously paid in to the bank by anyone. It’s new money, created by the bank for the use of the borrower.”

- Robert B. Anderson, US Treasury Secretary, 1959, *U.S. News and World Report*, August 31, 1959

This has always been true (since the Italian Renaissance and early modern goldsmith days), and has never changed... although Economists’ storyline about it has changed ‘with the times’. See also “Debt cycles”, “Cultural Calendar”.

1) In the 20th century, however, things got blurry. See also “Neoclassical Revolution”, → “Economics”.

Yes, it was because of Economists and (perhaps deliberately fraudulent)¹⁰¹⁸ theories:

a) (Monetized) Credit-Creation Th.- basically the timeless/classic was most prevalent, up to 1920’s.

b) ‘Fractional’ Reserve Banking/Lending (FRL) Th.- “started to become dominant...[from] 1920’s-30’s”.

c) Financial Intermediation Th.- i.e. that “Banks are like non-banks. There is no difference”.

(Werner, 2021, mn.18-20).

2) *Exogenous* (from the outside) money creation is the demonstrably false¹⁰¹⁹ theory, dominant since the late 1960’s, that banks simply intermediate between (good) savers and (bad) spenders, and thus have no

¹⁰¹⁸ See “Currency Wars, the”, “Industrial Revolution, 2nd”.

¹⁰¹⁹ For starters, such a scenario is dependent upon an all-cash economy (Keen, 2020). This should be obvious to any serious researcher. Nonetheless, “some misled views of how bank [so-called] lending functions have come about...[have] persisted since long. These include the *financial intermediation* and the *fractional reserve* theories of banking, which can be subsumed under a generic ‘loanable funds’ header.... This deceptive understanding is, moreover, related to the misleading notion that ‘savings finance investment’” (Macro & Siebenbrunner, 2019, 4); which is true of *non-bank* (loanable funds) financing, but not of *state-monetized credit institutions*. This has been the cardinal difference, for a number of (confused) centuries, between banks and *non-bank* financial institutions (NBFIs).

different accounting practices than other businesses. *Endogenous* (from the inside) money creation is the law (or at least its *interpretation*¹⁰²⁰), and the modern-international accounting practice, and it is unethical and/or incompetent for banks, economists and other financial institutions to pretend otherwise.¹⁰²¹

3) "It is a fundamental error to divide banks into 'Banks of Deposit' and 'Banks of Issue'. All banks are 'Banks of Issue'. - Henry Dunning Macleod, 1883 (Ricks, 2016, 75); and always have been (which is why they are so highly regulated and coddled).

4) In addition to Kumhof's papers¹⁰²² for the Bank of England (2014-15),¹⁰²³ subsequent CBs have joined the (endogenous/'money creation') bandwagon, including the German Bundesbank and Finland's CB, the Reserve Bank of Australia, "and the list goes on and it's getting longer" (Kumhof, 2019, mn.4-5). Indeed, that December, the IMF chimed in¹⁰²⁴, stating "the [increasingly well-known] fact that [TAB] money is created upon the creation of bank loans [citing Werner's study]... as [simply] accounting reality"¹⁰²⁵ (Macro & Siebenbrunner, 2019, 4). These foreign and international institutions are in addition to publications, some decades ago now, from the Federal Reserve Bank of Chicago: "Modern Money Mechanics: A Workbook on Bank Reserve and Deposit Expansion" (1992), and the New York Fed's: "I Bet You Thought..." booklet (1977). In a nutshell, all monetized credit institutions (banks, credit unions, etc.) are enabled/licensed by the state to extend their [TAB] credits whenever and to whomever they please, as long as the 'loan' amount in TAB credits is eventually covered by sufficient (and increasingly easily attainable) Reserve [RAB] money. See also "Money, 2 classes (layers) of".

5) Richard Werner (2014, 2016) has demonstrated the *impossibility* of Exogenous money creation (a.k.a. 'financial intermediation', or 'intermediation of loanable funds' theory) in today's world, while also providing a historical outline of the falsehood's more prominent economist proponents.¹⁰²⁶ They include: von MISES (1912); KEYNES (1936); Harrod (1939); Domar (1947); Gurley, John G. & Shaw, E.S (1955); Gurley & Shaw (1960); TOBIN (1963); Guttentag & Lindsay (1968); Branson (1968); Tobin (1969); Klein (1971); MONTI (1972); Sealey & Lindley (1977); Baltensperger (1980); Diamond & Dybvig (1983); Diamond, Douglas W. (1984); BERNANKE, Ben & Blinder, Alan S. (1988); Mayer (1988); Eatwell, Milgate & Newman (1989); Baltensperger (1989); GOODHART (1989); Gorton & Pennacchi (1990); Bencivenga & Smith (1991); Diamond (1991); Riordan (1993); BERNANKE, Ben & Gertler, Mark (1995); Diamond (1997); Koo & Fujita (1997); Diamond & Rajan (1998); Myers & Rajan (1998); KRUGMAN & Obstfeld (2000); Allen, F. & Santomero (2001); Diamond, Douglas W. & Rajan, Raghuram G. (2001); Kashyap, A., et al. (2002); Woodford (2003); Allen, F. & Gale, D. (2004a); Allen, F. & Gale D. (2004b); Matthews, Kent & Thompson, John (2005); Romer (2006); Casu & Girardone (2006); Cecchetti (2008); Dewatripont, Rochet, & Tirole (2010); Dewatripont, Mathias, et al. (2010); Gertler, M. & Kiyotaki, N. (2011); Admati & Hellwig (2012); Stein (2014); Brunnermeier & Sannikov (2015); KRUGMAN (2015). Why have they done

¹⁰²⁰ 'Money' and the creation of credits to-be-used-as money is not a straightforward matter in the U.S. Code, which seems to have primarily punted the matter over to the Federal Deposit Insurance Corp. (FDIC) [Bindewald, 2018]). See also "Money".

¹⁰²¹ [+Still, 2019e, mn.13's "Santa Claus" story] Steve Keen adds that "Often these guys", at places like the Bank of England, "are subservient to what they've been taught-- and the people they get taught by-- in academic institutions. To come out and say '*Listen you academics, you're wrong. This is the actual mechanics... And we have to rewrite Economics to reflect that*'. It's a sign that those institutions, which used to be dominated by academic economics, have shifted away, largely because they have to wear the reality of being wrong.... I respect the Bank of England's research staff... the OECD... [and] the I.M.F... [All] this is true progress, and it's not coming from the academics so much. It's coming from those big institutions, which used to be the ones that lead us astray" (Keen, 2014).

¹⁰²² In 2013, Kumhof provided a concise summary: <https://blogs.lse.ac.uk/usappblog/2013/11/25/chicago-plan-revisited>

¹⁰²³ A couple years earlier, in 2012, Mervyn King, Gov. of the Bank of England & Chairman of the UK's Monetary Policy Committee (2003-13) noted that "When banks extend loans to their customers, they create money by crediting their customers' accounts."

¹⁰²⁴ Standard & Poors had earlier publicly explained that banks [so-called] "lend by simultaneously creating a loan asset and a deposit liability on their balance sheet. That is why it is called credit 'creation'-- credit is created literally out of thin air (or with the stroke of a keyboard). The [TAB] loan is not created out of [RAB] reserves. And the [TAB] loan is not created out of [bankmoney] deposits: Loans create deposits, not the other way around. Then the [TAB-bankmoney] deposits need a certain amount of [RAB] reserves to be held against them, and the central bank [readily] supplies them" (Sheard).

¹⁰²⁵ The authors add that banks [i.e. all monetized credit institutions] should "not be called 'intermediaries'... [due to] the fact that the money stock is *endogenously* and elastically driven by demand and [only] constrained loosely by regulation" (Macro & Siebenbrunner, 4). See also "Regulation", "Monetary reform".

¹⁰²⁶ A more concise visualization of this literature review on the subject is provided (at last!) by the IMF (Maceo & Siebenbrunner, 2019, 6).

this? Because “if banks are just agents” as opposed to money creators, then ‘we don’t have to include them in models. You know, they’re just intermediaries. They don’t affect things. They’re just agents’. Well, empirical research has shown for a long time that this cannot¹⁰²⁷ be true” (Werner, 2015b, mn.50-51). See also “Counterfeiting”, “Intermediation of Loanable Funds (ILF) Theory”, “Tobin, James (1918-2002)”. 6) Nonetheless, “it makes their lives easier as mathematical modelers. It’s the core [fallacy], because once you’ve done that, you’ve ignored so much of the real world [that] you might as well be writing fantasy novels for Disney” (Keen, 2016j, mn.6-7). Exogenous money fallacy is mostly a crutch for the employment of economists. See also Still, 2013, mn.5-6, “Neoclassical Economics”. 7) The (exogenous) idea that banks use our [TAB] demand accounts to supply their loans is a fiction, since demand accounts are their *liabilities* of the bank, not assets. Lending what is not possessed is a crime of fraud-- unless the lending is done by bankers. The banking system and the universities profess that banks are (exogenous) intermediaries between savers and borrowers, not (endogenous) money creators. The Fed, in contradiction with a growing number of other CBs, also usually claims that banks are such (exogenous) intermediaries. These claims are false, although, as crutches, they have supported economic modelers’ Big Lie-- that money (which they say is fixed/zero-sum in the aggregate), debts, and banks do not matter.¹⁰²⁸ How can this be? Amazingly, “most banks themselves don’t realize [that] they create money” (Keen, 2017b, mn.33) when they issue loans.¹⁰²⁹ 8) According to Profs. Werner and Keen, it was only in the decades after World War Two that the ‘loanable funds’ fallacy became prominent. Veteran international central banker William White also agrees: “My first job was at the Bank of England from 1969 to 1972”, and much endogenous money creation “was common knowledge in those days. The banks create money by writing up credit to both sides of the balance sheet. So! [throwing his hands up gesture], anyway.... much of what you have been taught is wrong” (White, 2018, mn.2). 9) Nonetheless, the ‘loanable funds’ mythology was even more prevalent a century ago. Perhaps the best example of the profound confusion is evidenced by St. Louis Fed writer Gerald Dunne’s account of the 1913 D.C. political wranglings that led to the Wilson Admn.’s successful congressional caucusing of the *Federal Reserve Act*. For one who knows the nature of ‘modern’ money-- and that, for instance, Reserves are never physically transferred (which would be ridiculous)-- his narrative of events on p.16 is particularly dumbfounding. According to Dunne, even:

a) the *American Banking Association* (ABA) Washington lobbyists “saw the [US] banking network [actually, there were many], notwithstanding its faults [they were ok with Germanizing it], as a delicate [weak], sensitive [nervous/flighty] and complex instrument [again, more than one; see ‘Savings Banks’], whereby funds were collected and allocated [mostly false (except for Savings Banks/Thriffs) early 19thc ‘loanable funds’ mythology/nostalgia] throughout the country, through the medium of reserve balances [(RAB) for *national* banks, since 1864] kept [not physically, but on paper] with large banks in the financial centers. Generally, the disposition [of the ABA/lobbyists] was to keep what was known and to improve on it by drawing on European [German] experience with a single central bank [perhaps the one positive (not just blocking) thing that the banking community’s disparate members could agree on]” (Dunne, 16). More befuddled, of course, was the political side:

¹⁰²⁷ Werner, 2016 “books a dummy loan and finds that the balance sheet of...[one local small] bank does in fact expand. This he takes to be scientific proof that the *credit creation* theory is correct and [that] the others are false... But I don’t think these 3 [money creation] theories are quite as mutually exclusive as he makes them out to be” (Mehrling, 2016). See also “Nobel Prize Economics”, “Monetary Economics”.

¹⁰²⁸ Hudson concurs that Economics textbooks, for many decades now, have been modelling “a fictitious economy that in theory would work without money or debt” (Hudson, 2017o), or also, by inference, the banks that issue debt-money. For economists to deny that banks’ extensions of credit [TAB] create the debt-money/bankmoney that comprises the M1 money supply is as if fish were modelling the existence of their environment without water.

¹⁰²⁹ This is even though sources such as the *Encyclopedia Britannica* clearly explained the bankmoney creation process through the 1st half of the 20th century (in its 14th and 15th editions): “When a bank lends... two debts are created; the trader who borrows becomes indebted to the bank at a future date, and the bank becomes immediately indebted to the trader. The bank’s debt is a means of payment; it is *credit* [debt] *money*. It is a clear addition to the amount of the means of payment in the community. The bank does not lend [real] money” (Hawtrey, 1929, 1951), but, rather, simply its own [TAB] credits. See also “Criminalization of Banking, the”, “Tobin, James”.

b) The new chairman of the House Banking Committee, Carter Glass, “on the other hand, viewed the deposits kept by country banks in the financial centers [there weren’t any (unless he was talking about Savings Banks/Thriffs)] as local money hidden away from worthy local uses to finance gambling in the commodity and securities markets. Moreover, his Virginian distaste for being ruled from afar found a central bank in Wall Street or a Treasury bureau in Washington equally repellent [because that is what already existed (from the latter 1860’s-70’s), except for the ‘central bank’ title.]. For him, the [imagined] transfer of reserve balances [RAB] from the money markets to the regional Reserve banks was a *sine qua non* of reform [Actually nothing was physically moved (in the shell game). It was a non-issue (except, perhaps, for its ability to make ‘the politicians’ look foolish).]” (Dunne, 16). The mythological abstraction of the [non-existent] ‘loanable funds’ being somehow “transferred” got a lot of them fired up enough to get Glass to then get them an audience with Wilson, which amounted to nothing (Dunne, 16-17). The *Federal Reserve Act* passed later that year, strictly on party lines, with hardly anyone in either party understanding it beyond expedient superficialities.

Why does an unemployed E.S.L. teacher have to explain this all, 107 years¹⁰³⁰ later?

See also “Money creation (in the UK-US today)”, “Modernity”, “Big Lie”, “Extraction instruments”, “Criminalization of Banking”.

9) “It isn’t a money warehouse.¹⁰³¹ It’s a money factory”- Steve Keen (Hudson, 2016s).

[monetary privilege...]

Extraction instruments- 1) interest (private tax); 2) the I.R.S.- (collection agency for the banks); 3) Quantitative Easing-- (public welfare for banks); 4) Zero-Negative Interest Rate Policy (user-fees for banks). However, the basic, centuries-old “extraction mechanism at work” is where the government, through its 5) ‘sovereign’ bond sales, “...has to raise taxes in order to pay for [servicing the banks] compounding interest. But you could cut all that out if you had the government creating and allocating money” (Werner, 2011). See also “Compound interest”, “Rentier”.

2) “Banks create debt by loaning money they don’t have, in order to take our real assets” (Keen,)

[...for a toothless peasantry]

Extinction, theory (for any species on Earth, plant or animal)- (Big 3 causes: climate, allopatric-exposure [both of which are pretty much irrelevant today], and *inverted trophic pyramids* [a.k.a. food collapse])
 1eth) primary, of course, is (almost always by super long-term) [see also] “climate change”;
 2eth) by allopatric separation (per the great plague die offs¹⁰³² of the 14th-16th centuries);
 3eth) by loss of bio/genetic diversity, first in the species’ nutrient intake (dependence upon staples such as potatoes, rice, etc.), and then also in the species itself. The former is usually a sure sign of the latter, as the latter is a sign that the species (plant, animal, whatever) is ‘on the other side of the mountain’ in its species life cycle. See also “Usury”.

See also “Cycles”, “Great Extinction, 6th” [ontocide], ← “Usury cycles” (per the consolidating, conformist, and herd/herbivore-like effects of its “invisible hand” of direction/weathervane),

¹⁰³⁰ *Secrets of the Temple* <https://www.youtube.com/watch?v=qz4aNwINrsg> [CCR]

¹⁰³¹ Somehow it appears that only the Big bank foxes were aware of this bankmoney accounting reality in the 20th century. Were ‘They’ doing a poor job of guarding the proverbial chicken coup? Well, they fooled you. There *was no* chicken coup.

¹⁰³² The great plagues of course were not “extinctions”, although their decimating havoc took the populations of (f.e.) England and Mexico 3 centuries and 4 centuries to recover from, respectively.

Extrapolation- see Gaede, 2008; “Cycles”, “Reform, 101”.

Eye color- (light eyes: gray-green-blue-hazel-light brown, unlike skin or hair of course, reveal more brain feedback)

Farm Bureau- The "Farm Bureau is an insurance company that owns a farm organization that organizes farmers so that farmers will *never* [sic] be organized."- Randy Cook (attr. to C. Walters), 22-7-24 email

Farm crisis- See "Food".

Farm income- See "National Income" [.farm income].

Farming- See "Parity pricing (for the primary sector)", "Food", "Commodity money".

Fascism- ('right' totalitarianism-- a thoroughly [so-called] 'modern' phenomenon; etym.: from the Etruscan/Latin *fascis*-- or, "a bundle of wooden rods")

1) Before 1776, "in almost no places did the royal power go down [to] where it interfered with the behavior of peasants...[approx. 80-sth.%] of the whole population" (Quigley, 1976c-pt.2, mn.145-46). See also "Central Banking-Warfare model".

2) "wasn't really about Hitler [see "Attitude inoculation"] or what our history books tell us. It's about mega-banking institutions fueling big government and big corporate business, both of which work together to control everything.... The politician who happens to be in office at the time has very little to do with it"¹⁰³³ (Vrabel, 2011, mn.127). See also "History", "Charismatic Authority (CHA) & Charismatic Dependency (CHD)", "Communism", "Hegelian dialectic".

3) Unconvinced? Take it from the primary source, the term's founder, Benito Mussolini:
"The Fascist conception of the State is [,like war,] all-embracing; outside of it no human or spiritual values can exist, much less have value. Thus understood, Fascism is totalitarian, and the Fascist State-- a synthesis and a unit inclusive of all values-- interprets, develops, and potentiates the whole life of a people."- "The Political and Social Doctrine of Fascism" (Mussolini, 1932).

4) "Fascism is the worship of the state...[in particular] that combination of state-crony¹⁰³⁴ [late stage] capitalism and big government" (Bannon, 2018, mn.9).

5) "Unlike [the original] elitist Italian Fascism, [however] *Nazism* had a high regard for the German peasant. Unlike Fascist Italy, Nazi Germany, while imposing sweeping government control over all aspects of the economy, was not [at the end of the day, just] a corporate state" (Liu, 2005). If, as Montesquieu wrote, "the most durable empire in the world is that of virtue... a tyranny...most frail and transitory [is] that of beauty" (Montesquieu, 1748, 306); <https://www.youtube.com/watch?v=-2cRY4p7KIk> [Inglorious]. See also "Ethnic (National) Identity", "World War 2" [.fascism (irrational)].

5b) The original 'fascism' (even in Mussolini's Italy until the 1930's) was not-- and preferably not at all-- 'racist' (a term that was also taking root in the 1920's). Mussolini's theoretician on the subject wrote that: "Racism or the Principle of Racial Self determination, as it has been called in recent years is a materialistic illusion contrary to natural law and destructive of civilisation."- James Strachey Barnes¹⁰³⁵ *The Universal Aspects of Fascism*, 1928 (Barnes, 1928, 60).¹⁰³⁶ Under pressure from German 'Nazis'

¹⁰³³ And if they did (have something to do with the authoritarianism), that would be a different case, of either "Charismatic Authority" (see White & White, 2008) and/or "Charismatic Authority (CHA) & Charismatic Dependency (CHD)".

¹⁰³⁴ More specifically, a state wherein "we're required to pay taxes into a mechanism, and *they*'re not required to tell us what they did with our money. That's fascism" (Fitts, 2019u, mn.8); or 'socialst'-communism. See also "Hegelian dialectic".

¹⁰³⁵ Maternal side great grandfather was from one of the leading merchant of Penzance, and "Principal of the East India Company College" - wiki.

¹⁰³⁶ Was the Eton-educated Barnes-- a 3rd-generation civil servant who had been a WW1 Royal Flying Corps pilot and then Foreign Office agent at the Treaty of Versailles (after converting to Roman Catholicism & all things Roman in 1914)-- a British spy in Mussolini's Italy? His position seems, up until 1939, to have been the same as Father Coughlin's in the USA. Why was *The Times* also pushing this supposedly inexorable new wave in 1928?: "Fascism is a system of thought, and as such is destined to dominate this [20th] century as surely as Liberalism dominated the last.... [Mussolini's party] had to ask itself by what principles the strength of Italy could be maintained and developed. [Barnes-style] Philosophic Fascism is the answer to this question" (Times, 'the', 1928). In any event, whereas Coughlin was dismissed from public life as soon as Hitler et al had taken the trap-bait in Poland (11-12 years after Barnes' tome, and 1 year after Hitler was TIME

(‘national sozialismus’), however, by 1938 Mussolini, who was known to flip-flop, changed the Party’s official tune (per the “Manifesto of Race”). American ‘fascists’ at the time did not follow suit. (The Rush Limbaugh of the 1930’s), Father Charles Coughlin stated in Feb. 1939 that: "Nothing can be gained by linking ourselves with any organization which is engaged in agitating racial animosities or propagating racial hatreds" (https://www.wikiwand.com/en/Charles_Coughlin#/CITEREFCoughlin1939).¹⁰³⁷ See also “USSR”.
 6) Foolish “[g]overnments believe they can push whole populations against the wall and keep them there year after year after year. But fascism reaches a breaking point.” See also “Lying”.

 See also “Central Banking-Warfare model”, “Duopoly”, “Conspiracy theorist”.

Fascism, ‘Modern’ Hand of- Fascism was never eradicated in the 20th century, but only temporarily put down or suppressed. Although it is predicated on bankmoney, extractive debt-- and the supposedly ‘inexorable’ human problems caused therein-- fascism in this early 21st century, has at least 5 primary branches or fingers, which have mostly developed over the past century or two. In the US (post-Civil War) context, ranked chronologically:

- a) Bankmoney privilege (thumb)- This fountainhead and common denominator of the other branches has been increasing, from humble origins (i.e. the Goldsmith’s tale) in the centuries of the mid-2nd millennium, to today’s (debt-money) private banknotes and account money constituting over 95% of the US money supply (in addition to radically increased ‘monetization’-- i.e. requiring that everything-- including food, water, shelter-- be subject to monetary metering). Nearly everything runs on bankmoney these dayz. In terms of political power, it is primarily manifest in the institutions of *Wall Street* and also the *Israeli lobby*. See also “Bankmoney regime”.
- b) Political Duopoly (ring finger) 1) Democratic Party- from the 1810’s, *state*-based charters enabled the monetary privilege of bankmoney in its earlier stages, eventually leading to financial-economic breakdown and the Civil War, D.N.C. chair August “Rothschild” Belmont, and pretty much ‘little brother’ party status up until the Great Depression & the FDR coalition-- that chose the path of economic recovery via WW2, as opposed to monetary reform. Since then it was pretty much the big brother party through most of the ensuing 80-year debt-money cycle, until the latter stages of corruption, as represented by the Clintons and Obama. See also “Duopoly”, “Bush-Clinton Dynasty”.
 2) Republican Party- from the Reconstruction era, the G.O.P. big idea of *nationally*-based charters for ‘fractional reserve’ banks enabled what was in effect a Bankmoney Empire by the 1890’s... (see also “Pilgrim Society”). Between the respective bookends of T. Roosevelt and the Bushes, this bankmoney steamroller (itself an 1870’s corruption of the initial Greenback dollar-fueled Union victory of the 1860’s) had taken over the economies of nearly the entire world by the turn of the millennium. There’s at least one big problem with that, however. Debt-money systems inherently bifurcate between (debt-money) creditors & debtors. While such structural ‘social’ problems may be masked with the ‘Keynesian’ [or “Democrat”] solutions of redistributive taxation and big (ever-bigger) government, in the latter stages of a debt-money cycle, the ongoing social & corruption problems are increasingly dwarfed by that of “debt-saturation”, which of course constricts new money creation and hence economic growth itself. See also “Productivity”, “Robotization”.
- c) The Medical Scam (middle finger)- 1) “Every year, like clockwork, the US medical system kills 225,000 people. That’s a mainstream conclusion” (Rappoport, 2017e), consisting of Barbara

magazine’s “Man of the Year”), Barnes had shifted, by 1938-39, into ethnic-cleansing type positions, in almost polar contrast to his 1927-28 thesis. See also “Hitler, Adolf” [.motive], “Vatican Bank” [.Knights of Malta].

¹⁰³⁷ (New York Times, Feb. 27, 1939). Coughlin, who strongly supported FDR’s first term and its New Deal (until 1935-36), also stated (half-a-year later) that: "My purpose is to help eradicate from the world its mania for persecution, to help align all good men, Catholic and Protestant, Jew and Gentile, Christian and non-Christian, in a battle to stamp out the ferocity, the barbarism and the hate of this bloody era [of a debt cycle collapse]. I want the good Jews with me, and I’m called a Jew baiter, an anti-Semite" (Coughlin, 1939). See also “Anti-Semitism”, “Zionism”.

Starfield's finding of 106,000 deaths per year from FDA-approved,¹⁰³⁸ correctly prescribed medicines, plus 119,000 deaths from errors and mistakes in hospitals; such systemic- documented *iatrogenism*¹⁰³⁹ constitutes the 3rd leading cause of death in the US, after heart disease and cancer.¹⁰⁴⁰ (Starfield, 2000, 484). "What do you think that does to a population?... 2.5 million deaths per decade" (Rappoport, 2017f, mn.29-30). "The studies that are published in major medical journals are rife with... fraud-- not just now and then, but on a regular basis.... That medical information is just drenched... with disinformation.... It's not just a white lie... The whole thing is saturated with *absolute fraud*.... this mysticism of the white coat.... part and parcel of a globalist [bankmoney] takeover of a debilitated, worn out, distracted, confused, sick, poisoned, toxified world" (Rappoport, mn.40-43); also known (by the 2nd decade of the 21stc) as "the Great Poisoning" of the US in particular; "[s]tudies indicate that 54% of American children have one or more chronic diseases" (Fitts, 2020d). No one could be that evil. It is, rather, madness-- systemic institutional corruption madness (as enabled by [see also] "Economics", "Market fundamentalism"). See also "COVID", "Dumb-downing", App.C: "1-2-3".

2) This is because "the allopathic medical system¹⁰⁴¹ does nothing but [financially] manage disease, and they do it with petrochemical poisons called *pharmaceuticals*"¹⁰⁴² (Imbriano, 2018, mn.14). "The Food & Drug Administration and the Center for Disease Control...[are] criminal networks. They are in the pockets of Big Agriculture and Big Pharma¹⁰⁴³...and their job is to push poisonous vaccines & poisonous foods" (Steele, 2017g, mn.32). See also "Zombie".

3) For example, after Arthur Sackler "developing the techniques to get people addicted to valium and librium [in the 20th century].... Richard Sackler "developed over 400,000 to 800,000 addicts [for his opiod painkiller OxyContin].... He paid off physicians [and]... state medical societies... [and] the American Medical Society. He paid off everybody.... and [now 2.6 million are] heroin [and/or OxyContin] addicts. And... Richard Sacker made sure that 4 out of 5 of those heroin addicts... [are] addicted to [synthetic] Oxytocin" (Pieczenik, 2019, mn.0-1). The family grew "to \$38 billion on the calculated criminal activity of making sure that Americans and people around the world became addicted.... knowing fully well that this would lead to heroin addiction, and overdose and death.... [by telling] every one of his [>700] medical representatives he wanted to make sure that they...forced the physicians, psychiatrists, and anybody in a medical office to write prescriptions...

¹⁰³⁸ "The FDA's track record-- which I've been documenting for the past 25 years-- is a horror show" (Rappoport, 2020h).

¹⁰³⁹ "Undocumented iatrogenism" is another story. Multiple prescription meds put the cells of a body "in bio-chemical chaos [a.k.a. dis-ease]... [I]f you're taking...[strange chemical substances] you're adding to toxicity, so you're making yourself sicker and sicker and sicker. And by the time you're on three drugs, you're in biological [cellular] chaos...[H]ealth is when your cells are functioning normally. Disease is when your cells are in chaos. Modern medicine keeps people sick, makes them sicker, and [if unchecked] kills them [not unlike leeching practices in the 18thc]. The leading cause of death in the United States is *medical intervention*...[It] kills about a million people a year. What other industry would be allowed to do that?" (Francis, 2017, mn.25). The "trauma care and crisis intervention" fields are ok, but "the other 85% of medicine is basically nonsense, and it doesn't work" (Francis, mn.40). "This is the first generation of American children that will not live longer than their parents, because they are so [internally] old and sick...[because] We've lost control of the repair process. You see the body is a self-repairing system, unlike your car" (Francis, mn.44-45).

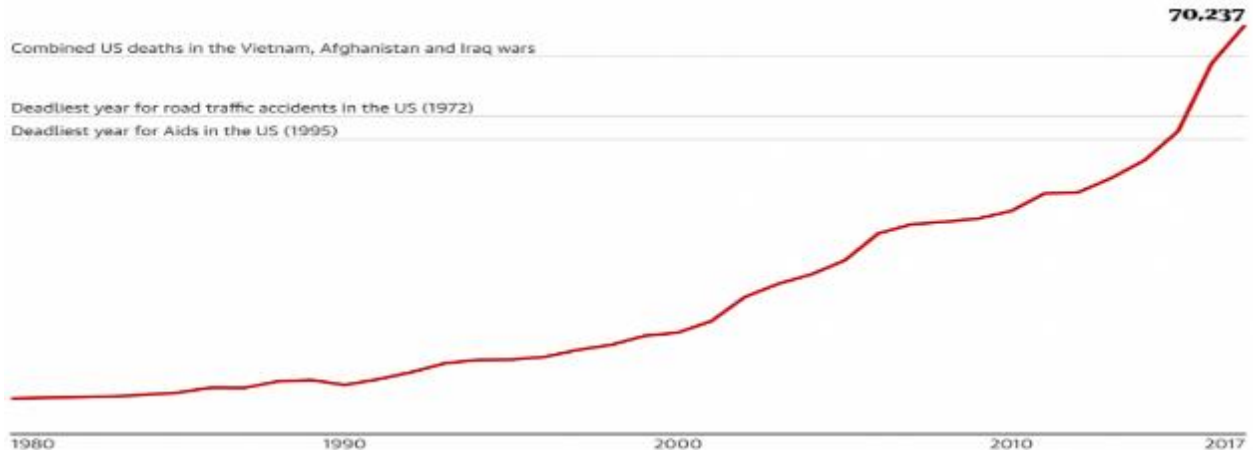

¹⁰⁴⁰ "Linus Pauling once said most cancer research is a fraud. It's a jobs program... and they just go around, around, around in circles. And they keep [like any war economy] announcing great breakthroughs... which never pan out. But they keep announcing new ones to keep you going..." (Francis, 2017, mn.100). See also "Bullshit jobs", "Central Banking-Warfare model".

¹⁰⁴¹ What "we call *allopathic medicine* is about a hundred years old.... [and] it's already on the way out, because...basically... it doesn't work. And it's very dangerous...A few years ago the National Academy of Sciences'...Institute of Medicine... issued a report...[saying] that the medicine we have [today] is now so far behind the science, that it is impossible to bring it up to date, and instead that we have to take the medicine we have and discard it, and start over.... We need to start over.... Where did we ever get the idea that we get help a sick person if we give them poison? A prescription drug is a toxic chemical" (Francis, 2017, 106-108); and, as far as anyone in public knows, they are not removed or effectively filtered from most (public) water supplies in the US (Boerner, 2014). This author is reminded of Colum Gilfillan's classic theory of lead [not just usury] poisoning in the pipes throughout the Roman Empire. See also "Zombie".

¹⁰⁴² The US' "entire pharmaceutical supply is highly dependent on China, and the quality control issues are frightening" (Fitts, 2018h, mn.36).

¹⁰⁴³ See also "Big 6 (scientific publishers)".

[ideally] 7.5 prescriptions per day¹⁰⁴⁴ for [their derivative drug of] Oxytocin.... In short, this is an entity that's a terrorist medical company, and... [they are still trying to increase] the amount of dosages...and [pay off] doctors", even though they have been sued by a number of states and counties over the past decade or so, and Massachusetts is "going to indict the entire [Sackler, not Rockefeller] family for racketeering" (Pieczenik, mn.2-4). See also "Health care (US)", "Dumb-downing".

[US drug deaths, 1980-2017]

4) Is >72k deaths per year a 'pandemic' or crisis? No, but 20 or so may be. In 2009, after "about 20 cases... [that] they claimed were caused by the Swine flu [a.k.a. H1N1].... the W.H.O... declared a global 'pandemic', [changing] their definition of 'pandemic'... so that [only] if you read it carefully [would you notice that] '*widespread death*. No we don't have to have that anymore [in the definition]'.... The C.D.C... [and] the World Health Organization¹⁰⁴⁵-- they're the two, big, megaphone public health agencies that stir up all the fear, and plant...the articles in the press" (Rappoport, 2020, mn.0-1). In summer, 2009, the CDC¹⁰⁴⁶ "secretly...stopped counting the number of swine flu cases in America... [even though] their mandate...at least originally, was to do [just] that...[issuing a weekly] Morbidity & Mortality Report.... (Why?)...[B]ecause the overwhelming number of tissue samples from... 'Swine flu' patients.... are coming back with no sign of Swine flu, or any other kind of flu. And of course they have to hide this fact.... And...[a study of the over-estimation] is published [@ CBS News]"; but not on television; and "no follow-up" or explanation of the discrepancy (Rappoport, 2020b, mn.1-3). See also "COVID".

5) 'Ebola'? The "main reason for floating that cover story was to coverup the real chemical warfare [a.k.a. experimentation] that was taking place.... But the other level is '*Hey, we don't know about germs [for warfare]... They could work on some people...[but] others nothing. We just don't know. Plus, if it does work [on everyone, then] maybe we could get infected*'. But then some wise old

¹⁰⁴⁴ In the previous decade at least, US schools were paid "\$1,000 for every kid they put on Ritalin, and there are some schools...that don't even accept...[a child's] enrollment unless they are on Ritalin... [which] is just one...molecule away from cocaine.... In other words, they make addicts out of our children" (Gerson, 2010, mn.47-48). See also "Dumb downing".

¹⁰⁴⁵ "The World Health Organization (WHO) and the World Bank (WB) are joined at the hip. In 2018, they double-knotted their ties by forming a partnership to monitor outbreaks and epidemics before they spread. Basically, behind the scenes... WHO creates the illusion of global epidemics; WB steps in later, to pick up the pieces of the result-- injured national economies-- by shelling out loans to governments. These loans always carry conditions. The prime condition...[was]: let in private, roaming, foreign, predatory, private investors so they can take over vital sectors of a nation: energy, agriculture, water, etc. But this time, WHO, as planned, has gone ballistic.... The holy grail is *energy quotas* for every [non-elite] person. '*Mr. Smith, this is your wall talking through the glorious Internet of Things. Your energy number for the month is reaching its limit. I want to help you avoid that limit and the social credit score penalties that would be enforced. I'm going to initiate brown-outs and dimming in your home for the next 2 weeks. Your Internet will be shut down-- excepting the hours of midnight to 3 in the morning. Cook all your meals for the day between 4 and 5 am'...*" (Rappoport, 2020c). See also "World Bank".

¹⁰⁴⁶ In "fact, the CDC makes money off of the vaccine patents. And they're in business with the [Big] Pharmaceutical industry...[at] about \$4 billion a year...[which is] a serious [structural] conflict of interest"- Catherine Austin Fitts (Rappoport, 2020b, mn.3-4). See also "COVID".

psychopath says 'Let's do a chemical. And we'll say [sic] it's a virus. And this'll work. Because we know about chemicals.... So let's plant this chemical wherever we want to... And then we'll come in with the story that it's suddenly an epidemic. CDC sends their virus-hunters'.... all true-believers... Whenever they get sent out by the CDC, they're gonna find a virus" (Rappoport, 2020b, mn.7-8); and usually also a resultant 'vaccine'¹⁰⁴⁷ for it. See also "War", "COVID".

6) Meanwhile, *Fentanyl* has become the number one cause of death for US 18-45 year olds.¹⁰⁴⁸ As of Jan. 2022, "[w]e are in the worst overdose crisis we've ever been in in the United States'... [according to the] executive director of the Harm Reduction Action Center in Denver.... In the year ending in April 2021, fentanyl claimed the lives of 40,010 Americans ages 18-45. That's more than car accidents (22,442), suicide (21,678), [what the CDC calls] COVID (21,335), and cancer (17,114)" (Grossman, 2022). See also "Oligarchy", "ConfUSURY".

7) What's the difference between a legal and illegal drug? "The FDA and [its revolving door with Big] Pharma want to be the first and last word. Life and Liberty say they are not the first and last word... [T]here is another...[way to do things]: licenses vs. *contracts*. The medical cartel, backed by governments, has established medical boards which grant licenses to practice medicine. These special persons, doctors, are handed the right to treat and cure diseases. This is an attempt to create a monopoly. There is another avenue: private contracts.... Two adults, Joe and Fred, enter into an agreement. Joe says he has a health condition. He will be the patient. Fred will be the practitioner. Fred has a well on his property. Fred believes the water has a special healing quality. He will give some of it (or sell it) to Joe, who will drink it over the course of two weeks. Both men, in their contract, agree that no legal liability will be attached to the outcome. They are both responsible. They are of sound mind. They don't require government permission to sign or fulfill their contract.... Joe and Fred are operating on their own. They have that natural right. They also have the right to be wrong-- in case the water treatment doesn't work, or is harmful.... [T]hese contracts (and not just in the arena of healing) stand outside governments. They are citizen-to-citizen. They are prior to government. They are intrinsically more real than government. THIS is what COMMUNITY actually means" (Rappoport, 2020h). See also "Common law", "Health care (US)".

- d) The Corporate Media Cartel (pink)- "media" 32% approval rating, acc. to Gallup, 5/2017. "How much outright fake news did Hollywood produce before the millennium turn? Not that much. There weren't that many platforms for news before cable and the internet... the all out fake news produced by Hollywood began after 9/11" (Moon, 2019l). See also "Mockingbird, Operation", "COVID".
- e) The IC/Deep State (index/pointer)- from the 1950's and 'post-war' era, 'Wall Street's brain' was literally formed-- whether or not Presidents Truman & Eisenhower's concurred-- by upper class Wall St. lawyers (confessors), such as the Dulles brothers. One might say that the 1st knuckle of this branch or finger (that is now so imperative to the entire 'fascist', 'Neo-feudalist', or 'New World Order' agenda) was formed in the coup d'état and coverup of the Kennedy assassination in the mid-1960's. The 2nd knuckle was formed in the "late '70's" (Fitts, 2015b, mn.17-18), counter-reaction to reform-minded Democrats, culminating in George "CIA" Bush getting the semi-incapacitated President Reagan to sign (the now notorious) X.O. #12333, which officially 'unleashed' the CIA from PotUS accountability (Conrad, 1985). After 3 decades of Mockingbird corporate media domination, establishing blackmail files on any Democrat or Republican with a pulse, and likewise with most salient overseas politicians (due primarily to control-- via its European equivalents-- of the parallel universe eurodollars economy and giant media), the 3rd

¹⁰⁴⁷ "On big screens all over the country, you can put up movies depicting people being torn limb from limb, drowning in their own blood [from being forced to saw off their own limbs]. You can put up movies with panting soft-porn money shots. You can put up movies that blow up half the world; but you can't show a movie that questions the effects of vaccines. I'm sick and tired of this bullshit" (Rappoport, 2020b, mn.9). See also "Health care (US)", "Bullshit jobs".

¹⁰⁴⁸ Fentanyl Updates: 12/22: <https://www.bbc.com/news/world-us-canada-64047688> ["Enough Fentanyl to Kill Every Single American Seized in 2022"].

knuckle of the finger/branch took form after the post-911 budget increases and “Total Information Awareness” strategy. From the ‘Snowden Revelations’ of 2013, it is now known that the Obama Admin. granted the CIA and other intel agencies [for which public information is even less available] unfettered¹⁰⁴⁹ and warrantless access to the NSA’s (illegal) database of (according to William Binney) all telephone and electronic communications-- for whatever purposes these agencies may see fit, in what would appear to be a Stasi-style free-for-all. See also “Eurodollars”, “Parallel universe”, “Dumb-downing” [planned economy].

See also “Pilgrim Society”, → “Deep State”, → “Wall Street”, → “CIA”, “Duopoly”, “Lobbyists (monetary & fiscal)”.

[Wall St./Banks' Military-Financial-Propaganda complex]

Federal Accounting Standards Advisory Board (FASAB)- (i.e. US federal gov't's accounting 'czar', est. 1990¹⁰⁵⁰; its 2018 'standard 56' “gives those with high level national security clearances the...[a-constitutional ability] to modify government financial statements” [Skidmore, 2020]; not to be confused with the private sector 'FASB') See also “Deep State”.

“At a time when the manners of the Romans were pure, they had no particular law against the embezzlement of the public money. When this crime began to appear, it was thought so infamous, that to be condemned to restore what they had taken was considered as a sufficient disgrace.”

- Montesquieu's *The Spirit of Laws* (1748, 305). See also “State capture” [grand theft state].

Now, however, “the [federal] government's secret, the big banks are secret, the corporations are secret. The whole thing's secret. So now we're in never-never land...because **everything is a [laughing] simulation**” (Fitts, 2022n, mn.47). See also “Civil National Identity”, “COVID”.

1) The American Institute of Certified Public Accountants (AICPA, est. 1887) designated the FASAB, in 1999, as the body responsible for determining the ‘generally accepted accounting principles’ (GAAP) for US government entities. See also “Generally Accepted Accounting Principles (GAAP)”.

2) However, the Government Accounting Office (GAO) “puts the audit opinion on the financial statements of the US government...[and] has offered a *disclaimer of opinion*, every year since 1998. They throw up their hands and they say: *We're sorry. We just can't certify this...We can't make heads or tails out of your numbers. We can't tell the public that you're complying with GAAP.* And the main reason is [that] the Defense Department... [in 2018] was the first time [that the] DoD went through a full, reportable audit. They certified, for the first time, that they were ready for an audit, and they flunked it...” (Bergman, 2019, mn.13). See also “Black Budget”.

3) The problem, of course, goes back deeper. For decades, foreigners have “on occasion...reported that they hold more US debt than the US government reports owing” (Fitts, 2022i). In other words, the “global financial system seems to have a black hole at its centre. Over the last 2 decades, US residents have sold a total of about \$5,500bn worth of IOUs to foreigners, yet the officially recorded net investment position of the US has deteriorated only by a little more than *half* of this amount (\$2,800bn). The US

¹⁰⁴⁹ According to Bill Still, the worst of the revelations was that: “only one person was required to access the huge [NSA] database-- no checks or balances of any kind. And [even] worse, approx. 1 *million independent contractors* had full access to the database, and [very many] were [routinely] misusing it, such as for spying on their girlfriends.... [Snowden's] supervisors... were part of the problem and told him to be quiet and not rock the boat” (Still, 2019g, mn.2-3). Main point? “The US government was [and still is] intentionally violating the US constitution.... [Since Snowden's] disclosure, supposedly at least 2 people are required to login simultaneously to access the database, but even that has not been directly confirmed.... At minimum, Congress, with the input of the public, needs to discuss what they consider to be acceptable spying and database [files] collection...[on] US citizens... [and] who should have access to the database, under what circumstances, and with what safeguards and security measures” (Still, mn.3-4). See also “National Security Agency (NSA)”, “Wall Street”, “Parties, political”.

¹⁰⁵⁰ “I would say that the Federal Accounting Standards Advisory Board does not have the legal authority to waive the constitution... [i.e.] moving whatever they want into a secret set of books that no one knows about” (Fitts, 2018o, mn.31-32). See also “Trump, Donald”.

capital market seems to have acted like a black hole for investors from the rest of world, in which \$2,700bn vanished¹⁰⁵¹ (Gros, 2006).

4) After the Inspector General's Office at the DoD published an entirely redacted (devoid of numbers) financial report earlier in the year, in summer of 2018, "the FASAB... basically took the position that they have the power to waive the [US] constitution, and [that] the government can cook its books, and basically not comply with the rules¹⁰⁵² that say you've gotta prove where the [congressional] appropriations went.... They're basically saying '*We can cook the books in whatever way we want--*¹⁰⁵³ a small group of people...can [(as usual) claim] '*national security*' and keep it all confidential. And when you dovetail that with the fact that we've now allowed private corporations to do... [run] highly sensitive projects and basically... own the most valuable technology in the world, and [the fact that] the [president's] National Security Advisor is [also] free to waive their compliance, with FCC restrictions, [then] you're talking about not only the entire US government budget being meaningless¹⁰⁵⁴, but you're talking now about the [US] stock market being propped up by an infinite amount of secret and dirty money that we can't somehow know about.¹⁰⁵⁵ You know it's very hard if you're an investment advisor and you're looking at the stock market, and you say '*What does this mean?*'... Well, with this accounting system it doesn't necessarily mean *anything*' (Fitts, 2018i, mn.6-8). "This is the end¹⁰⁵⁶ of financial security.¹⁰⁵⁷ I just closed

¹⁰⁵¹ More than a decade later, an American Prof. of Public Finance, Mark Skidmore, apparently figured out what was happening. From no later than "the Carter [Admn.] era, the President had the ability to waive standard business accounting and securities-disclosure obligations required by the SEC"; prior to the Bush Jr. Admn. delegating this to the newly-created "Director of National Intelligence [DNI]" sometime in the early months of 2006 (Skidmore, 2020), by which point perhaps \$3tn. dollars of so was already missing from federal balance sheets. "Note...that the timing of the transfer of this authority to the Director of National Intelligence just preceded the financial crisis; reporting exemptions may well have been granted during the crisis in order to conceal sensitive actions [taken] by the Federal Reserve and other key financial entities" (Ibid).

¹⁰⁵² I.e. the USG financial laws and the US constitution. In announcing the new policy, the FASAB claimed "that if they didn't do this, then the only alternative was to redact the Department of Defense financial statements, which meant that you would have to redact the US government financial statements, which means that we have reached '*never-never-land*' [a.k.a. 'czar' accounting]. Which means the whole thing is a joke" (Fitts, 2018h, mn.26).

¹⁰⁵³ It's not just Fitts. With FASAB-56 "[t]hey didn't give themselves *any* [sic] boundaries... [So] they [now] say '*We can change financial statements in any way we [DoD] deem appropriate and report them to the public*'. So we now have fake books... There's so much non-transparency that it-- it's absurd!. It's crazy. It's not following the constitution.... They gave the people who committed the fraud trillions of dollars, alright?" (Skidmore, 2021, mn.19-20). Then the entire accounting system of the federal government is fraudulent? "I think it is; [at least] it doesn't have any integrity.... You get a financial statement or a report that available to the public; but it means nothing.... It's totally fraudulent...fake. We're in la la land.... I'm just stating the obvious. It's not...rocket science. I'm just not pretending; I'm just saying what it is" (Skidmore, mn.22). "It's now completely non-transparent. We can't say anything about the budgets, other than maybe what they report is accurate.... It's so out-of-whack that it's like a cartoon, and yet we sort of pretend that it's official.... You [now] have about *\$115 trillion* of unsupported, [un]verified transactions that we can't know about. And then you have about *\$30 trillion* in official debt... and you don't want to forget about.... promises in the form of Social Security and...[other entitlements] that are under-funded... [at somewhere between an additional] *100-to-200 trillion*..." (Skidmore, 2021, mn.34-36). John Titus puts Federal Reserve pseudo liabilities, which are really "social Equity" for the public at approx. \$7.3 trillion (Titus, 2021b, mn.46-53).

¹⁰⁵⁴ Gears-within-gears: "The Defense contractors who work for the federal government...and provide all the products & services, you now have no idea what their financial statements mean, and you have no idea what DoD's financial statements mean, which means [that] you have no idea what the US government financial statements mean, which means, as a matter of [illegal] policy, that *you* have to give them... complete financial disclosure, and honest financial disclosure, by pain of law, or you go to prison, but *they* [thanks to, since the 1990's, various 'czars' in the Executive] can make up whatever they want... They can publish financial statements that are complete fiction with no accountability to you" (Fitts, 2018h, mn.26-27). The DoD "is required by law to produce audited financial statements...[but] never has...And it's the reason [why] the federal government cannot produce audited financial statements" (Fitts, 2018o, mn.29-30). See also "Privatization".

¹⁰⁵⁵ It's not unprecedented. In Feb. 1995, the Federal Reserve announced that "" (Auerbach, 2009, 104-105). See also "Imperialism, American".

¹⁰⁵⁶ For decades, prior to the FASAB-56, "the excuse has been... '*Look, I'm having trouble getting my systems to talk to each other*'. That would work for a year or two. But when you have a wealth of resources to get the systems to work, and you use that excuse for 30 years straight-- hello? You know [that] it's a joke.... I've heard hundreds of excuses about why the federal government can't produce reliable financial statements, and at some point you realize... this is a game, and [that] they have no intention of producing reliable financial statements" (Fitts, 2019u, mn.15-16). See also "Privatization".

¹⁰⁵⁷ Truth In Accounting's Bill Bergman agrees that the so-called "risk-free rate" for US Treasuries is now "worthy of question" (Bergman, 2019, mn.16).

down my investment advisory” service for individual investors (Fitts, 2018h, mn.27-28). See also “Black Budget” (‘national security cult’), “Reserve currency”, “Federal Reserve Audit”.

4b) Prof. Skidmore agrees. “[W]hat makes this so crazy...[is that the] list of [secrecy-enabled] agencies is so long,’ [now] says Skidmore. ‘If you don’t even know what’s been modified, why bother reading a summary for any of them?’.... Bluntly put, line items in [any] public federal financial statements may now legally be, for lack of a better word-- wrong. Moreover, the state is [now also] not required to include a disclaimer telling the reader that modifications have been made”¹⁰⁵⁸ (Taibbi, 2019). See also “USSR”, “Imperialism”, “Cult of Secrecy”.

4c) The initial tip? Outsider “Steve [Aftergood] is the person who put us on to FASAB-56.”- Catherine Austin Fitts, Jan 22, 2022. See also “Separation of Powers”, “Constitution, US (of 1787-91)”.

5) In early Oct. 2018, the FASAB, in its ‘Standard 56’, effectively “said [that] the Department of Defense... can classify whatever they want [on ‘National Security’ grounds] and move it onto a separate [set of] books and not disclose it.¹⁰⁵⁹ Now what that means is there is [now] no disclosure. **There is no [federal public] accounting.**¹⁰⁶⁰ They can...[spend] whatever they want [sans questions]. Now this is in complete violation of [even the spirit of] the constitution,¹⁰⁶¹ [and] of...the financial management laws and regulations... The [FASAB] doesn’t have the legal authority to promulgate this policy.... Nor...[may] it give the New York Fed member banks, as depository for the US government, the authority to do those illegal transactions. But they’re all pretending that it does.... When... the economic process is... outside the law, you then have the most powerful financial mechanism ever created by man operating on an out-of-control basis, and everybody’s spending like crazy to control the pork flow, because the pork flow is enormous... [And, ever since the Bush, Jr. admn.] the National Security Director... can wave the application of SEC rules to any Defense contractor doing classified work... So now we’ve created a financial vehicle that can spend an infinite amount of undisclosed money through private corporations who don’t have to report where they got that money when they announce their earnings, or lever that money in the stock market. So we now [like China] have a stock market that is full of secret money...[for] which there is no transparency. And...those contractors are allowed to play who knows what games, and the SEC isn’t gonna do bo peep about it” (Fitts, 2018r, mn.39-42). Henceforth in both US Treasuries and US stocks, “we don’t know what the numbers mean [anymore].... I shouldn’t say [it’s] all meaningless, because... there are plenty of companies who are not involved in classified projects...which we can be reasonably assured are not pumping through tons of illegal earnings” (Fitts, mn.43-44). See also “Secrecy, Cult of”; ShadowGate, 2020.

6) Reactions to ‘Standard 56’ have been telling. “The SEC’s apparent lack of concern (or concession that it is powerless to change what the deep state has decreed must happen) about potentially-misleading financial disclosure must be put in context...[It] is the US government agency that sets the standards for what disclosure is required for public companies and companies issuing registered and exempt securities in offerings to investors”; Department of Defense reaction [except for its Inspector General] was ‘strongly

¹⁰⁵⁸ When asked, on the record, if [paragraph] 8c [of the new ‘standard’] opened the door for greater changes, FASAB answered, ‘We cannot speculate about the changes’” (Taibbi, 2019).

¹⁰⁵⁹ More specifically, Standard 56 “allows federal entities to shift amounts from line item to line item and sometimes even omit spending altogether when reporting their financials in order to avoid [even] the potential of revealing classified information” (Ferrie & Lurie, 2019).

¹⁰⁶⁰ Hyperbole? “This new rule is not confined to a few spy agencies. The Treasury Department’s definition of a “component [federal] reporting entity” includes 154 different agencies and bodies, from the Smithsonian Foundation to the CIA, to the SEC to the Farm Credit Administration, to the Railroad Retirement Board. The notion that any of these agencies could now submit altered public financial reports under the rubric of national security is mind-boggling” (Taibbi, 2019). “With the change in accounting guidelines, which is a full departure from...GAAP, only a few people with high level security clearances have the authority to determine what is deemed to be an issue of national security and these same people will now be allowed to restate financial statements in order to conceal actual expenditures without any disclosure. No one but those few people would [even] know that such modifications were made, thus making evaluation of government financial statements impossible. From this point forward, the federal government will keep [a proverbial] *2 sets of books*, one modified (and useless) book for the public and one true book that is hidden.... Now citizens [now] have no recourse; opacity is now the law of the land” (Kotlikoff, 2019).

¹⁰⁶¹ This is not a new novel sentiment. “The Constitution requires, at a minimum, lumpsum appropriation and accounting, and an end to secret transfer of funds” (Yale Law, 1975, 633)..

supportive' of the new standard; whereas the Treasury "strongly believes that, in order to protect classified information, every component reporting entity in the US Government should *disclose* that its financial statements may have been modified", with most other surveyed US government departments [HUD, Veterans Affairs, and Labor, respectively] falling somewhere in between the DoD¹⁰⁶²-Treasury poles (Fitts & Betts, 2019).

6b) "Trump did FASAB-56.... secret monies for secret armies... [effectively saying] 'We can take the Treasury and we can do whatever we want... secretly...[f.e. issuing] trillions of [dollars in] bonds, off-balance sheet and take the money and put it into our private pockets'.... [Trump] did it along with Nancy Pelosi, Chuck Schummer, Mitch McConnell-- the whole leadership of Congress and the White House did that together.... They were united, and they did it together. And that's a fact" (Fitts, 2020f, mn.29-30). See also "Revolution", "Parties, political".

6c) Other "nations with whom we share intelligence like Australia, New Zealand, Canada, and Britain, [do actually] publish their intelligence budgets" (Taibbi, 2019), and somehow manage to survive. See also "UKUSA Agreement" ['5 Eyes'], "National Security Agency (NSA)".

[to be theater or numbers?]

7) Six months after the 'ruling', there has still "been a complete failure of all politicians-- both progressives and conservatives-- to object to FASAB 56 and its erasure of financial disclosure in the US bond and stock markets" (Fitts, 2019g); although an anonymous (clandestine) agency chose to comment, remarking that: "...there definitely needs to be a limited audience/participative base to protect the discussion of need to know information... The current lack of guidance leaves accounting practices open for interpretation, creating an environment where financial reporting preparers, reviewers and independent auditors may arrive at different conclusions that impact the financial statements'. The *current lack of guidance* comment may be an indication of past problems on the government accounting front... [One] might speculate that these comments came from...CIA, NSA, or [a] similar intelligence agency or [sub-contractor] component" (Fitts & Betts, 2019). See also "Secrecy, Cult of".

8) In other words, we'll "have audits. but you can exclude whatever you want *from* [sic] the audits, keep it secret, and not [have to] tell anybody what's [been] excluded. So when you look at the audited statement [of the federal dept., agency, or of its pals], it...[may well be] meaningless.... And not just for the 24 covert agencies, [but also] for 150 other corporate entities...[W]hen you combine it with the classification laws...it includes all the big corporations and banks doing business with [the federal] government. So now when you look at JP Morgan Chase's [reported] financials, they're meaningless. Because they can get a classification waiver... from the National Security director that waives them from all, or some, SEC [so-called] requirements-- and...[the public] can't know what" requirements, or to what extent its publicly-reported books are being cool (Fitts, 2019w, mn.37-38). See also "Federal Reserve audit" (pre-existing 'norm'). See also "Big 5 banks".

9) Fitts considers FASAB-56 to be "the single greatest increase in the swamp's power in the history of our country" (Fitts, 2019o, mn.37); since 1790, anyway. "FASAB-56 is a way of moving *everything* on-budget... [and hence a] death warrant" for many black ops; "you don't *need* [sic] Jeffrey Epstein[s] anymore. You don't need the Clinton Foundation. You don't need all these laundries" (Fitts, 2019u, mn.38). They can "just do whatever...[they] want now, through government accounts... 'We can take it black. We don't need to be bothered with all this [laundrying, etc.] dysfunction. Now we can just do what we want" (Fitts, 2019w, mn.39). See also "Reserve currency", "Trump, Donald".

¹⁰⁶² Homeland Security (another PotUS Bush Jr.-era creation) also "gave a big thumbs-up [to the new 'standard']." DHS agrees with the [FASAB] Board's overall proposed approach for protecting classified information. Classified information should be protected', it wrote, with redundant satisfaction" (Taibbi, 2019).

9b) In the larger scheme, of course, this represents the end of global “Reserve currency” status. “Maybe I just don’t see the play, but I think, at some point, if you don’t have the mandate of Heaven [then] you can’t rule an entire planet” (Fitts, 2020g, mn.16). See also “Monetary reform”.

10) On a different note, according to some readings of the FASAB, “No accounting methodological change is needed” for the US government to account for ‘sovereign’/public money created by the US treasury, because US coins, in addition to certain cryptocurrencies,¹⁰⁶³ or “‘digital gold’ (or silver, or oil, or any other asset/resource [of the government is])... [simply] booked as an asset, with no corresponding liability on the balance sheet, so it is a *net asset*, and thus increases the assets on one side of the balance sheet and the equity (or *net position*) on the other side, and the balance sheet is balanced that way. This...[makes sense because] public/sovereign money is [after all] unencumbered by real debt. Accounting standards as currently used by the federal government cover all aspects needed for the issuance of public monies” (Kortsch & Walton, 2016, 4; FASAB, 2016).

11) FASAB Updates: 7/22- In summary, the US federal gov’t only “documented the money missing from these 2 federal agencies [DoD & HUD] through fiscal 2015-- and thus [also kept up with] the documented violations of the Constitution related to financial accounts and disclosure as well as financial management laws-- [but] it has not published accounts of where the money went,¹⁰⁶⁴ who has those resources, and how it was reinvested or spent.... Thanks to the federal government’s continual refusal to produce audited financial statements as required by law, and [moreover] the 2018 adoption of FASAB-56 as an administrative policy (which allows federal accounts [from any agency] to be kept off books and secret), we no longer have any reliable means of determining the amount of ‘undocumentable adjustments’ after fiscal 2015...[when] the undocumentable adjustments were \$6.5 trillion-- the largest amount [ever reported] missing in one year¹⁰⁶⁵... In addition, there are numerous [other] black budget and classification laws that can make it difficult, if not impossible, for us to tell what is really going on in [what is actually listed in] the federal accounts” (Fitts, 2022i).

7/22- The Inspector Generals “of federal agencies are supposed to be the first line of defense against corruption within that agency. Increasingly [however], they have become part of the problem¹⁰⁶⁶ of corruption, coverups and cronyism.” - <https://wallstreetonparade.com/2022/07/from-the-secret-service-to-the-fed-inspectors-general-are-enablers-to-corruption-at-the-agencies-they-oversee/> See also “Governmental Accounting Standards Board (GASB)”, “Liability, pseudo”.

Federal Deposit Insurance Corp. (FDIC)- (‘deals with insolvency’ by ‘injecting capital’ [Phillips, 2021, mn.9])

1) More than one-third of US banks had failed prior to the FDIC’s creation via the *Banking Act of 1933*. The scheme was mandatory for all nationally-chartered banks and volitional for state-chartered banks, with an insurance limit initially set at \$2,500. After the *Consumer Protection Act* (2011), the FDIC now insures deposits in commercial banks, savings banks, and S&L’s up to \$250,000.

2) FDIC effectively ended what had been centuries of “double liability” days for banks. “**Between the Civil War** and the Depression, the stockholders of a failed bank got a capital call from the receiver. They were liable for an amount up to and including the **par** value of their shares. They got the dividends in good times. They owned the problem in bad times. In short, they were accountable. They are no more [today], at least not in that most tangible way” (Grant, 2014).

3) It is already conventional wisdom that the *Monetary Control Act of 1980*’s increase of the ‘deposit’ guarantee from \$40,000 to \$100,000 actually *contributed to* (instead of preventing) “some of the moral hazard problems which helped to cause the S&L crisis” (Busch, 2012, 69). See also “Savings & Loan Associations”.

¹⁰⁶³ Is this why all cryptos were called “coins” in the first place?

¹⁰⁶⁴ “When the money left the federal accounts...it left on the financial train tracks run by the New York Fed. The New York [so-called] Fed is a private bank owned by its member banks, including Citibank and JPMorgan Chase” (Ibid). See also “Federal Reserve Bank of New York (FRBNY)”.

¹⁰⁶⁵ In 2015, the Office of the Inspector General found the Army alone-- which had a budget of [only] \$122 billion that year-- [somehow] had \$6.5 *trillion* in ‘yearend adjustments’ [that] they could not ‘adequately support’” (Taibbi, 2019). Violations haven’t been reported since then and the FASAB started talking about what would be known as standard 56 in 2017 (Ibid). See also “Black budget (US)”.

¹⁰⁶⁶ “When I asked FASAB who would be doing the auditing in [the] ‘classified environment[s]’, they [simply] answered: ‘Please contact the federal entity’s Office of the Inspector General for questions pertaining to who does the auditing in a classified environment’” (Taibbi, 2019).

4) This is not a new idea. As “a temporary expedient, deposit insurance” was a helpful measure designed to get us out of the depression. But, in the case of State banks, experience shows that insuring deposits has usually *increased* the risk insured against, by encouraging careless banking” (Fisher, 1935). See also “Minsky, Hyman (1919-1996)”, “Bank welfare”.

5) Fisher was right, but it did not materialize immediately. With, however, the incorporation of all credit unions, and nearly-all S&L’s and Savings Banks (thrifts) into the Federal Reserve (*monetized credit institutions*) system by the early 1980’s-- the newly-enlarged US banking (*monetized credit*) sector became viewed by Washington as Too Big To Fail. Unofficially in 1985 and then officially in Aug. 10, 1987, Congress passed what is now known as the *Competitive Equality Banking Act of 1987*, which made official that the “Full Faith and Credit of US Government [was, and is] Behind the FDIC Deposit Insurance Fund” (FDIC-87-36). See also “Plunge Protection Team”, “Capitalisms”.

5b) FDIC coverage (\$67bn.) would not survive the crash of more than one of the Big 5 banks¹⁰⁶⁷ today. **There is no possibility for banks to honor their legal requirement to provide cash on demand to cover large deposits in a bank run. And even though commercial banks create the vast majority of the money supply, they are incapable of printing out a single dollar to cover their vast liabilities.** Thus...

6) “Explicit guarantees and deposit insurance such as the UK’s Financial Services Compensation Scheme (FSCS) or USA’s Federal Deposit Insurance Corporation (FDIC) should be removed. The government should take steps to remove the public perception of any implicit guarantees.... Accounts that fund risk-bearing assets should not be guaranteed by government” (Dyson, Hodgson, & van Lerven, 2016, 18). As with profits, the “risk of investments should be shared by banks and savers/investors” (Ibid). See also “Regulation”, “Monetary reform”.

Federal Funds (FFs)- (synon. ‘fed funds’; ‘intergovernmental money’; not to be confused with Reserves/RAB, which is ‘interbank’ money [see also d.b.t. ‘federal funds rate’])

1) In broader usage, ‘fed funds’ is the predominant US term for both forms of interbank (‘Central Bank’/Treasury) money-- i.e. both *interbank* and *intergovernmental* money (hence, *any liability of the Fed* [except to NBFIs]). *interbank market*

2) More precisely, however, the term FFs should only be used for ‘*intergovernmental* money’-- *CB-Treasury money* that is circulating between federal government institutions, not for the *interbank* money that circulates between banks.

3) Is it ‘from the 1930’s that a separate stream of government ‘fiat’ (FF’s) was est. (as distinct from RAB). ‘Res. accounts were in place by WW2, but not in 1935’ ??

See also “*Central Bank (Treasury) money*”, “*Money, 2 classes (layers) of*”, “*Reserve (RAB) money*”, “*Interest on Excess Reserves*”, “*Deceptive Banking Terms (d.b.t.’s)*”, “*Federal Funds (Accounts) for All*”.

Federal Funds (Accounts) for All- (synon. ‘Fed Accounts for All’, ‘CB Accounts for All’, or simply ‘FedAccount’ [Ricks]); a.k.a. ‘safe account’ [OnsGeld], or ‘*monetary reform light*’ [Huber])

1) simply removing the prohibition on granting “everyone the right to maintain a deposit account at the Fed...[the] ECB, or other central bank, like we used to have in the past via...‘postal checking accounts’...” (Schemmann, 2015, 34). See also “Postal Savings & Loan system”, “Digital Cash/currency”.

2) “Why is it that only the banks can have safe [RAB] money and the rest of us have to have weak [TAB] money? Why don’t they at least talk about this all publicly?” (Arenillas, 2018). US ‘postal savings banks’ were done away with, without much protest, in the Vietnam War conscription era.¹⁰⁶⁸

2b) “[W]hy should CBDC be introduced at all, if it is not supposed to [widely] spread...?” (Huber, 2021).

3) “[A] good way to understand the Fed’s...approach is that it outsources both the management of accounts and payments, and [also] much of the money creation in our economy, to private banks. Under

¹⁰⁶⁷ Ranking by total assets reported, as of March 31, 2015. JP Morgan Chase, Bank of America, Citigroup, Wells Fargo, Goldman Sachs.

¹⁰⁶⁸ This removal occurred a couple years after the *Coinage Act of 1965* removed the silver from nearly all US coins; and also officially included “Federal reserve notes and circulating notes of Federal reserve banks and national banks...[as] legal tender for all debts, public charges, taxes, and dues.”- Section 31 U.S.C. 5103 (“Legal tender”). See also “Legal Tender”.

our approach, the Fed would continue outsourcing some of the money creation, while insourcing accounts and payments” (Crawford, 2018, 14).

4) It may of course be claimed that banks acquire their capital by finance rather than by productive work and that banks are unnecessary middlemen, skimming off the productivity of the people, and the level of rampant unpunished criminality within the banking sector would support this claim. But modern economies could not function without account money, and someone has to create this national account money supply. Some socialists want to transfer this function from the banks to the government, but (probably more) conservatives think that the government is already owned by the financial oligarchs anyway, so (according to this line of thinking) it would not change much except to leave money & governance even more exposed to the irresponsible parasites that control democratic politics. Probably the majority of Americans now distrust the government even more than they distrust the bankers who control the purse strings of the government. See also “Governance”, “Parties, political”.

5) “The reform would mean allowing families and companies to do what private banks already do: to deposit their money with the [public] Central Bank [or Treasury/Post Office], where the money is totally safe. The measure is very simple, but its effects would be far-reaching because the money kept in the Central Bank is actually money, they are pounds or dollars, while the money issued and maintained by the private banks is not money, but rather [TAB] ‘pseudo-money’, a [RAB-backed & federally insured] ‘promise to return money’, and this is what makes it unsafe” (Ordonez, 2018). See also “Base money”, “Bankmoney”.

5) Moreover, it “is no exaggeration to say that FedAccount [for All] could rival the 1933 advent of federal deposit insurance as a stabilizing force. By making pure sovereign money widely available in ‘account’ form, FedAccount would crowd out runnable [“shadow banking”] cash equivalents, all but eliminating a primary cause of macroeconomic disasters” (Ricks, et al., 2018, 4). See also “Shadow banking (SBS)”.

6) Implementation could be a snap, given the existing infrastructure of “the physical plant and personnel of the US Postal Service... FedAccount...ATMs [should be] installed at post office locations” (Ricks, et al., 3), as other nations are already doing or have already done.

7) In Europe, the basic FFfA/Fed Account plan is usually called ‘Central Bank Digital Currency (CBDC)’ instead. (It seems that they are not so concerned with ‘King James’ Bible/‘mark-of-the-beast’ forecasts over there.) With at least a relatively laissez-faire CBDC plan, “[c]ommercial banks would disappear, without the need to [legally] prohibit them, because without the [massive] state protections... no citizen would want to deposit their money in a commercial bank, [and then] the banks themselves would not want to offer deposits... because, in order to give their clients the same safety of the CBDC, they would [then] have to deposit the money their clients [also] in the Central Bank”, where they could no longer invest [play with] it (Ordonez, 2019, mn.14-15). “There will be no banks in the future, if we have a safe money¹⁰⁶⁹... [but rather] new entities that, *without...the state*, provide payment services and [actual] loans... in competition with the multitude-- *multitude* [sic]-- of new suppliers that always, in...structural reforms arise, as soon as any highly protective sector is liberalized” (Ordonez, mn.18-19). See also “Payment Systems”.

8) The Netherlands’ variant on this approach is known as “safe account”.¹⁰⁷⁰ Ons Geld says that its “introduction...must not be delayed. However, this...must happen gradually. Banks in particular need time to adjust. They are now largely financed with the savings from their account holders.... [and] must be given time to gradually adjust the composition of their financing. This is possible by [statutory] limiting the amount of money that can be held freely in the safe account...[h]owever...impractical.... [Perhaps a more feasible alternative would be] a (progressive) tax...levied on the excess surpassing this upper limit [in a safe account]. That...[would ensure] that the outflow of funds from the banks takes place

¹⁰⁶⁹ Richard Werner agrees: “Even the mainstream economists at the Fed Philly & their collaborators recognise [that] central bank digital currency-- accounts at the central bank for the public, competing directly with banks who have been providing digital currency so far-- will kill the banks” (Werner, 2020b).

¹⁰⁷⁰ “Excessive market power of the banks can be curbed effectively by providing a safe [public] alternative to the bank account. Both the Parliament of The Netherlands and the Scientific Council for Government Policy [have] expressed support for that” recently (Wortmann, 2019d).

gradually. The upper limit can be raised annually, so that households and businesses can secure an increasing share of their money free of [taxation] charge, and banks can [then] get used to the new situation. Ultimately, banks will then fully finance themselves as non-banks do. They [will] then only attract financing from the public through the [lawful] issue of securities, such as shares and bonds” (Wortmann, 2019b, 7).

9) And of course (and in contrast to other monetary reform plans) “if private businesses can offer money-and-payment solutions that are superior to FedAccount [or ‘safe account’, etc.], there is nothing [mandated on the books] to stop them from doing so” (Ricks, et al., 2018, 11). In summary, implementing a “FedAccount [approach] would offer a free public option in banking to all US residents without increasing their taxes or compelling them to switch. It would reduce or eliminate the regressive tax on retailers and consumers...created by debit card interchange fees... [and] would meaningfully augment the Fed’s...remittance to the Treasury by reducing economic rents... It would also appeal to institutional investors and businesses large & small because the program would greatly simplify cash management while offering [potentially] higher [and certainly more stable] interest payments on cash [i.e. account] balances and faster [real-time] payment speeds” (Ricks, et al., 2018, 11-12).

10) Apart from that, **Federal Funds (Accounts) for All** doesn’t really do much, and its short-term effects should not be exaggerated. It is more intended as an informational stepping stone.

11) The main objection to ‘FedAccount’/**Federal Funds (Accounts) for All** is... See also “Cash (War on)”.

12) **FFfA Updates: 11/21-** Laurence Kotlikoff’s “equity-financed mutual funds [EFMFs]” monetary reform plan; tomorrow’s “checking accounts” would be “**cash mutual funds**, where... [EFMF deposits] would... [be] put on reserve at the [structurally-reformed] Federal Reserve. [So] in effect, you’d have an account ...[at] the Federal Reserve... [I]f you wanted to get your money out, you would just...cash-in your shares.... This would replace the [leveraged] checking accounts that we now have.... The name ‘cash mutual fund’ is not one that I invented.¹⁰⁷¹ Fidelity [already] has a ‘cash mutual fund’” (Kotlikoff, 2021, mn.48). See also “Mutual funds”. See also “Inflation/Deflation”, “Digital Cash/currency”, “Monetary reform”.

Federal Funds market- see “Interbank market”.

Federal Funds rate (FFR)- (synon. ‘overnight rate’¹⁰⁷²; a.k.a. ‘interbank rate’ or ‘effective federal funds rate’) traditionally the central focus of US Treasury ‘*monetary*’ policy¹⁰⁷³ (with the ‘fiscal’ policy left to Congress), i.e. “monetary and fiscal” are like the “Dad and Mom” of economic policy.

1) One of the principal determinants of US Reserve (RAB) monetary growth-- and hence also **TAB-bankmoney** growth-- this is the actual/average interest rate at which the big banks and other **monetized credit institutions** lend some of their unneeded **RAB** balances at the Fed to each other, *uncollateralized*, overnight.

2) This is synonymous with the ‘federal funds *effective* rate’ (EFFR), i.e. the actual *weighted average* of all such **RAB** borrowings between banks, as opposed to the FOMC’s desired or *target* federal funds rate (TFFR).¹⁰⁷⁴

¹⁰⁷¹ Nor is the strategy new. Basically Kotlikoff’s plan “would just operate as...Irving Fisher was proposing back when he wrote... [100% Money (1935)], where he was advocating... fixing the whole financial system by having *cash mutual funds*. But what I’m talking about... making the entire financial system an equity-financed mutual fund [EFMF] system, so that it can never fail” (Kotlikoff, 2021, mn.49). See also “Mutual funds”, “Chicago Plan”.

¹⁰⁷² The Federal Funds “*overnight*” rate is not to be confused with the term “*overnight*” deposits, which is another deceptive banking term for checking accounts/(TAB-bankmoney). See also “**Deceptive Banking Terms**”.

¹⁰⁷³ ‘Modern Monetary Theory’ uses and exaggerates US Treasury influence on (what is predominantly) Federal Reserve US monetary policy, in order to advance the theorem that the latter is somehow not a consortium of privately-owned banks, albeit with a titular Board in Washington for dispensing propaganda and statistics.

¹⁰⁷⁴ Sort of like the winter curling sport, the Fed makes a very big deal out of its interest rate-- as opposed to quantity-- theory of money. Hence “the New York Fed...intervene[s] every day in [the] financial markets-- through Open Market Operations, which are the purchase and sale of assets by the Fed-- to try to bring the [actual/‘*effective*’] fed funds rate as close as possible to the *target* [rate, which has been] set by the [Washington Board’s] FOMC” (Williamson, 2016). See also “Interest rates”.

- 3) If “the Fed slows the growth of...[its ex nihilo] monetary base, the federal-funds [RAB] rate rises, leading to a slowdown in...credit [TAB] creation by banks”, and hence also GDP (Forsyth, 2018).
- 4) However, in the post-Quantitative Easing environment, that process doesn’t necessarily work like it used to, “...because the banks [all] have so much [bank welfare] in excess reserves” now (Coy, 2016). See also “Interest on Excess Reserves (IOER)”.
- 5) Due to QE and IOER, banks “don’t need to borrow funds from each other as they would in normal times... [So] the Fed Funds rate... no longer influences bank behavior. It...[fell] to... somewhere between zero and 0.25%” (Coppola, 2015), prior to the Fed’s ‘*normalization*’ of interest rates strategy initiating FFR hikes in December of 2015. See also “Normalization”.
- 6) In March 2015, the FOMC agreed, unanimously, to a normalization strategy of: setting “the *IOER* rate equal to the *top* of the [25 basis point] target range for the federal funds rate and [to] set the offering rate associated with an *ON RRP* facility equal to the *bottom* of the target range” (Federal Reserve Board, 2018b). Like before, the so-called (d.b.t.) ‘discount rate’ is still the de facto *ceiling* on ‘federal funds’/Reserve interest rates, and the (effective) ‘FFR’ is still its actual *average*. The ‘normalization’ policy change was that the IOER bank welfare payments (initiated in 2008) would be significantly marked up, in order to nudge or pull the FFR *upwards*; and the Fed’s ‘overnight reverse repurchase agreement’ (ON RRP) facility (another Crisis-era invention), would, for some years at least [2013-17?], constitute a FFR *floor*. The FOMC added that it wished to reduce [its balance sheet-- mostly] the quantity of reserve balances, “to a level appreciably below that seen in recent years, but [still] larger than before the financial crisis” (Ibid).
- 7) As of winter 2019, David Stockman doesn’t “think the federal funds rate amounts to a tinker’s damn... because there is no federal funds market left. Bernanke destroyed that 10 or 11 years ago.... About 75% of the volume in the federal funds market is not from Wall Street or the big banks... [It’s from] the *federal home loan banks*, which are government agencies that we set up as a parallel to the Federal Reserve System, to help the Savings & Loans and thrifts” (Stockman, 2019, mn.20). See also “Discount rate”, “Reverse Repo agreements (ON RRP)”, “Channel-Floor systems”.

Federal Home Loan Banks system (FHLB)- (; not to be confused with the ‘Federal Home Loan Bank Board’, which was in charge of regulating Savings & Loans until it was abolished in the late 1980’s)

- 1) The FHLB is like a ‘Federal’ Reserve for *regional monetized credit institutions* and other private sector firms within the F.I.RE sector. It is owned by its 8,000 member financial institutions that, like other GSEs, hold Reserve (RAB) accounts at the Fed. See also “Government Supported Enterprises (GSEs)”.
- 2)

Federal Open Market Committee- see “Open Market Committee, Federal (FOMC)”, “Interest Rates”.

Federal Reserve audit (and balance sheet)- (It’s gotten worse, since “1976, when [congressman] Henry Reuss tried to get an audit bill; they [simply] got all the bankers they regulate, told them to go to Washington, and... they blocked the bill for 2 years. Now...[any ‘Fed’] auditors are limited; they can’t audit the parts of the Fed that have to do with monetary policy or international relations, where we found a lot of problems” [Auerbach, 2011, mn.12-13]). See also “Lender of Last Resort/Too Big to Fail”.

- 1) The Federal Reserve (Washington Board’s) “balance sheet is nothing...[but]” the sum of [the] other [Reserve banks’] balance sheets” (Titus, 2020b, mn.6). See also “Federal Reserve Bank of New York (FRBNY)”.
- 2) The Fed’s own Board of Governors establishes guidelines for audits and the audited accounts are only client accounts-- not **operational** accounts.
- 3) “They boldly denounce the [US] Comptroller as a ‘pernicious meddler’, and the counsel of the federal reserve board...have unanimously recommended that the office be abolished” (Loucks, 1916, 47).
- 4) Decades later, in the reform-era 70’s, the *Federal Banking Agency Audit Act* “placed the Federal Reserve under the audit authority of the GAO-- reversing the *1933 Banking Act* provisions that [had] originally removed this authority (31 USCA §714...) Since this change, there have been *dozens* of GAO

audits of the Federal Reserve. These audits have led to suggestions from the GAO on everything from check clearing policies to larger regulatory reforms... [However] there are some *notable exceptions* to the areas [that] the GAO can look into, including:

- a) 'transactions for or with a foreign central bank, [the] government of a foreign country, or [a] nonprivate international financing organization;
- b) deliberations, decisions, or actions on monetary policy matters, including discount window operations, reserves of member banks, securities credit, interest on deposits, [or] open market operations;
- c) transactions made under the direction of the Federal Open Market Committee; or
- d) [any] part of a discussion or communication among or between members of the Board of Governors and officers and employees of the Federal Reserve System related to [the already mentioned] items'.

These are substantial [gutting] exemptions... [and] there have been multiple attempts in Congress to implement a more thorough audit nearly every year-- including... [the] *Federal Reserve Transparency Act of 2017*... These attempts [however] have never succeeded" (Ferri & Lurie, 2018). See also "Open Market Committee, Federal (FOMC)" [.shredding].

5) It is also unclear to what extent some large *nonbank corporations* may possibly have accounts at the Fed-- in contrast to the EU, where only 'credit institutions' and governmental bodies are allowed to have such accounts. See also "Federal Reserve System".

6) Does all this seem 'normal'? See also "N.O.R.M." [.national economic audits], "Normalization".

7) In 2016, primary Reserves (RAB) at the Fed amounted to \$2.2 trillion;

2nd-level (TAB)-bankmoney amounted to about \$11.5 trillion-- over 5 times the Reserves-- even at a high Reserves rate (from QE). In addition, there was also... more than \$27 trillion in (TAB)-"bankmoney-based, [and] thus 3rd-level *money market fund shares*... [at approx.] 2.4 times...[greater than the amount of TAB-] bankmoney" (Huber, 2019b).

8) For an introduction to a (real) Federal Reserve audit, see (Titus, 2021b, mn.43-49).

See also "Auditing", "Credit rating agencies", "Federal Accounting Standards Advisory Board (FASAB)", "Black Budget (US)".

Federal Reserve Bank of New York (FRBNY)- (a.k.a. the 'New York Fed', a 'Fed within the Fed', i.e. 'The Payment System')

1) The New York Fed, since 1916, has been the official fiscal agent of the USG (Strong, 1915), and out of approx. 23,000 employees in the F.R. system (Mallaby, 2016, 328), the FRBNY has about 3,000¹⁰⁷⁵; compared to the typical regional Fed Banks' 1,400, and the Washington Board's 1,850 employees (analogous to brain, body muscles, and face, respectively). See also "Open Market Committee, Federal".

[see also "Payment systems", "Reserve currency"]

2) A primary purpose of this 'brain', so to speak, seems to be running (under titular control from the [smaller/distal] Washington Board) the money-generating *and* allocating FOMC, via the (currently) 23 Primary Dealer banks. See also "Primary dealers (23)", "Pilgrim Society", "UKUSA Agreement".

3) Just in case it's not clear yet, the so-called "'Federal' Reserve *is* [sic] the New York Fed. When we talk about 'the Fed', we're [really] talking about the New York Fed" (Titus, 2020b, mn.7); not so much its 'talking points' from the D.C. (political) Board.

3b) For the FRBNY ownership specs., see also "Big 5 Banks".

¹⁰⁷⁵ Estimates for the number of staff at the FRBNY or Washington Board are often inconsistent. Estimates that we've seen for the former in recent years have ranged from 2,600-3,200; whereas the Board staff appears to have increased from 1,500 in 1987 (Mallaby, 232) to about 1,850 in 2007 (Federal Bank of New York, 2008).

- 4) As of 2018, the FRBNY “offers banking and financial services to about **250 central banks, governments,** and international official institutions... [offering] payment, custody & safekeeping, and investment services to its customers¹⁰⁷⁶.... The New York Fed can [also] assist its account holders to arrange the *shipment of banknotes*. The customer's account is charged for the amount of currency [i.e. cash] provided.... [And, like in Switzerland, the] Bank keeps the identity of all account holders to which vault services are provided *confidential*” (Federal Reserve Bank of New York, 2018).
- 5) Also like Switzerland and the BIS, the FRBNY hosts a number of CB seminars and “lectures at the Bank, on topics such as bank supervision, monetary policy implementation and [confidential] portfolio management... [and also provides] onsite technical assistance, to a requesting central bank, in a variety of areas relating to central bank operations...[ranging] from how to implement new technology to how to run bank examinations” (FRBNY, 2018). See also “Bank of International Settlements (BIS)”, “Regulation”.
- 6) “It’s not as if these [politicians] truly control the government... they have to keep negotiating with the [bureaucratic] Deep State...because a lot of organizations in the Deep State control the day-to-day operations.... The whole financial operation [of the D.S. & USG] is basically implemented and controlled and done by the New York Fed member banks and the big defense contractors. So the [federal] government doesn’t have *information sovereignty* or *financial sovereignty*, and you’ve got an entire operational bureaucracy that...[is] dependent on a lot of these private companies and private banks to implement everything you’re doing. So... imagine if your bookkeeper, and your banker, and your biggest vendor was all [in] your bank, and they controlled your accounts” (Fitts, 2016d, mn.7-8). Fitts adds that “the US government doesn’t [even] have its own bank account. It banks with all the New York Fed member banks.... and all...[US government] Information Systems, unfortunately now, are run by the big defense contractors [in conjunction] with those [NY Fed] member banks.¹⁰⁷⁷ So it doesn’t have information or financial sovereignty, and part of enforcing the constitution is getting that back” (McKinney, 2017b, mn.4). See also “**Military-Executive-Corpocracy (MEC)**”, “Reserve currency”.
- 7) “I believe all the derivative books at the New York Fed member banks are really positions of the US government, or [at least] as agents for the US government. So the last thing...[the US gov’t] is going to do is attack a big bank that’s managing a huge derivatives position for you” (Fitts, 2015b, mn.36). (Speaking of books, here is the NY Fed’s main ‘educational’ creation for 2017-18: <https://www.newyorkfed.org/medialibrary/media/outreach-and-education/comic-books/newyorkfed-onceuponadime-webfullcolor.pdf> ; see also: “Barter”.)
- 7b) “Presumably, its member banks act as agents with respect to the New York Fed’s depository responsibilities for the US government. That means they hold bank accounts or act as servicers or custodians for securities issued by or secured with subsidies or credit provided by the US government and its mortgage insurance funds, such as the Federal Housing Administration (FHA) Single-Family Mortgage Insurance Fund. They also act as custodians and servicers with respect to government-held assets like defaulted mortgages and foreclosed properties acquired when mortgage owners make claims on FHA, VA, and other government mortgage insurance. It is fair to say the [NY] Fed member banks operate-- even control-- a significant part of the US federal balance sheet and related accounts”¹⁰⁷⁸ (Fitts, 2022i).
- 9) The US Dept. of Housing and Urban Development “is financing the insurance for a huge securities operation... [and] is run by the New York Fed member banks and...the big defense contractors. They control it” (Fitts, 2017i, mn.9).

¹⁰⁷⁶ Customers “send us [incoming] payment instructions by authenticated SWIFT, and we execute [outgoing] payments through Fedwire®” (Ibid). See also “Payment Systems”.

¹⁰⁷⁷ “It’s one financial operation that runs a lot of the money for all of the agencies” (Fitts, 2017q, mn.47).

¹⁰⁷⁸ F.e. FRBNY “members/owners can [simply] sell US Treasury bonds, put the proceeds in a *HUD government account*, for which their bank serves as agent for the government, and [then] proceed to move that money into a private account [anywhere]. Very few would be the wiser, particularly if the Treasury bonds were not properly recorded on the US Treasury balance sheet or, as now may also be the case, were sheltered by [the] FASAB-56” rule (Fitts, 2022i). See also “Federal Accounting Standards Advisory Board” [FASAB-56].

10) **We already have a sovereign money [d.b.t. 'fiat'] system... It's just not the government.** It's (run by) the FRBNY;¹⁰⁷⁹ which "maintains currency swap lines with...[hundreds] of central banks, 6 of which are [now] unlimited and unconditional" (Braun, Krampf, & Murau, 2020). See also "Swaplines", "Reserve currency".

11) According to former Assistant Treasury Secretary Paul Craig Roberts, the FRBNY's "board of directors...are the CEOs of Goldman Sachs, J.P. Morgan Chase, [and] Citibank... [and] the regulatory agency directors are [also] all former executives from the big banks" (Roberts, 2017d, mn.34).

12) What is the runner of (pretty much the world's Payment System) doing in the 2020's (that they announce)? Testing "distributed ledger technology to settle the liabilities of regulated financial institutions through the transfer of central bank liabilities." - <https://www.newyorkfed.org/newsevents/news/financial-services-and-infrastructure/2022/20221115>. See also "Public-Private Partnership", "Payment Systems", "Technocracy"; (& please) "Del Mar, Alexander (1836-1926)".

13) **FRBNY Updates: 11/22-** <https://wallstreetonparade.com/2022/11/the-latest-digital-token-scheme-from-hell-new-york-fed-teams-up-with-citigroup-and-sullivan-cromwell/> [FRBNY "has a very long and sordid history with (its co-owner) Citigroup¹⁰⁸⁰]. See also "Bair, Sheila (& Citibank)", "Banksters", "State capture", "Bank welfare". See also "Lender of Last Resort (LoLR)/TBTF", "Federal Reserve", "Primary dealers (23)", "Desk, the", "Black Budget (US)", "Deep State", "Big 4 (Accounting firms)", "ConfUSURY", "Plausible deniability".

Federal Reserve Board (in Washington)- (a.k.a. 'The Fed'; 7 members appointed for 14-year nonrenewable terms, except for the Chair and Vice Chair [4 years, renewable]; "'the capstone' [was what Woodrow] Wilson called it"¹⁰⁸¹ [Dunne, 1990]) **Their primary goal is to enrich the banks**, via interest, not to combat inflation (as their century-long record makes obvious).

1) "The Fed doesn't really control the banks¹⁰⁸² at all. We found that out during the 2008 Congressional investigations.... They don't care about the Fed's regulations... The Fed is just...the curtain, hiding the Wizard... making us *think* that somebody connected to the government is controlling the banks when in fact that's not the case.... It's a private corporation, owned wholly by [its] member banks. And you can never have a corporation that doesn't serve its owners. So the Fed serves the banks, not the banks serving the Fed" (Still, 2015b, mn.27-28). See also "Federal Reserve Bank of New York (FRBNY)".

2) The Washington Board, whose staff of 1,500 or so are legally counted as "government" employees, does not select, choose, or fire board members for the 12 Fed member banks, whose more than 20,000 employees are counted as private, not government. Hence, "[w]e have privatized one of the most important decisions...[that] a government makes...'*How much money circulates*'? And you and I have no say in that, except by those 7 [Washington board] members that are appointed by the president. But they're appointed for 14 years. So that's *our* representation" (Holton, 2013, mn.52-53).

¹⁰⁷⁹ Monetary technocrats' "capacity to act with relative autonomy is bolstered by their (*carefully cultivated*) **epistemic authority** in a notoriously complex field" (Braun, Krampf, & Murau, 2020). See also "**Deceptive Banking Terms (d.b.t.'s)**", "Orwell, George", "Ontology & Epistemology".

¹⁰⁸⁰ Citigroup is "**one of the Wall Street mega banks that actually own [sic] the New York Fed**, while the New York Fed's bank examiners are supposed to supervise it. According to an audit done at the request of Congress by the... (GAO), the New York Fed was the regional Fed bank that funneled the bulk of \$2.5 *trillion* [sic] in *secret* [sic] loans to Citigroup, to prop it up during the 2007 to 2010 financial crisis. The Fed then battled against the media in federal court for more than 2 years to keep the amount and details of those loans (as well as loans to other banks) a secret" (Ibid). See also "Bair, Sheila (& Citibank)".

¹⁰⁸¹ "Just a shuck & jive to get you to think that it's the government and it's not" (Titus, 2020f, mn.14). See also "Shell game".

¹⁰⁸² What the Federal Reserve does control, however, is certain academic publications (and hence promotion) in its arcane field. Monetary Economist Richard Werner briefly outlined some of Fed's tactics for maintaining dominance (group-think) at a recent AMI Conference: 1. "*You have to publish in a very small number of journals*"; 2. "*We'll have to let you go if you don't publish in these*"; 3. "the Boards of these journals" are stacked with Federal Reserve economists. The 'Top 20' journals in Accounting & Finance are edited by Federal Reserve economists. *The Journal of Money, Credit and Banking* has "96% Federal Reserve people on its Board.... I'd love to do research on this [the Fed Board], but I'm not allowed to.... Milton Friedman in 1982 said that '*The Fed should be abolished, because it is a vested interest group... One guy at a desk in Treasury could do the job of the Fed*'" (Werner, 2014c). See also "Academia", "Economics".

- 3) And the verbatim *transcripts* of FOMC meetings “are not released until 5 years after the meeting”, in contrast to the meetings’ minutes, which are at “the Fed’s discretion” and can be “hopelessly vague”, to the point of lawsuits; “almost nobody” reads the transcripts (Titus, 2020, mn.22)
- 4) “The Federal Reserve believes [or at least professes] in its own little deluded head that the rate of interest should [ideally] be 4%.... There are three magic numbers for the economy-- the 2% rate of inflation, the 3% rate of economic growth, and a 4% reserve rate of interest” (Keen, 2017e, mn.22).
- 5) “The person ostensibly in charge is like the rooster crowing at dawn. The course of events is decided by deeper and less visible forces that determine both the character of those nominally in charge [of being the Board’s spokesperson] and the pressures on them” (Friedman, 1985, 4).
- 6) Nonetheless, in times of (inevitable) Crisis, like 2008 or 2020, its role as the (de jure) US monetary sovereign is made clear. “Only the Fed can...[authorize] US currency and act as the superpower backstop for the world’s dollarised financial system. Nobody was sure whether they still existed in Donald Trump’s Washington [vis-à-vis the Treasury & ‘Plunge Protection Team’]. Now we know they do” still exist (Evans-Pritchard, 2020). See also “Sovereignty”, “Plunge Protection Team”.
- 7) 7) According to Tom Luongo, things changed (from summer 2012) “when Jerome Powell was appointed to the” FRB (Luongo, 2022, mn.34). See also “Powellism”.
- 8) FRB Updates: 7/22- The (so-called) Fed’s (so-called) Inspector General (who reports to the Board-Powell) clears Fed Chair Powell (and fmr. Vice Chair Richard Clarida [who resigned early anyway]) of wrongdoing and of “hampering the [mostly insider trading] investigation... [and also] for failing to put the force of law and a chain of command in place for the Fed’s newly upgraded trading restrictions” (Martens & Martens, 2022c). Meanwhile, Clarida’s successor, Lael Brainard, was pushing such oxymorons as ‘decentralized Central Bank Digital Currency’ and “unbacked...stablecoins”¹⁰⁸³ to (of all places) the [see also] “Bank of England”. See also “Offshore”, “City (of London), the”, “Federal Reserve Audit”.
See also “Central Bank”, “Federal Reserve System (FRS)”, “Open Market Committee, Federal (FOMC)”, “Interest rates”, “Neoclassical Economics (NCE)”, “Stock buybacks”.

Federal Reserve Note (FRN)- See also “Note of indebtedness”; [which also represents] “Lawful money” (reserves/RAB).

- 1) Federal Reserve Notes have not been ‘redeemable’ for gold since 1934, nor for silver “since the 1960s” (Federal Reserve, 2013). See also “Fiat currency”, “Coined money”.

Federal Reserve System (FRS)- (‘should [only] be involved in.... illiquidity.... problems in the Payment System’, leaving ‘insolvency’ problems ‘for the government sector’ & Treasury [Phillips, 2021, mn.8])¹⁰⁸⁴ What “we have today...is [per the 19thc German model] a tremendous amount of credit... but notice, it is privately controlled. Furthermore [despite the public pretenses], it is almost impossible to find out what’s going on” (Quigley, 1976b). See also “Federal Reserve audit”, “Ponzi”.

- 1) a public-board-appointed façade, under which lies a much larger privately owned and operated system of regulating the US money supply, via 12 member-bank-owned district banks¹⁰⁸⁵, nominally reporting to

¹⁰⁸³ In presenting “Crypto-Assets and Decentralized Finance through a Financial Stability Lens” to the Bank of England on July 8, 2022, Vice Chair “Brainard repeatedly makes reference to the ‘crypto financial system’ as if it’s a real thing. Crypto is a ‘financial system’ like Bernie Madoff’s illusory split-strike conversion was delivering consistent 13% returns each year...[T]here’s no ‘there’ there” (Martens & Martens, 2022b). See also “Financial Stability Board (FSB)”, “Cryptocurrencies and Stablecoins” (‘stablecoins’ are always backed/tethered).

¹⁰⁸⁴ This is, if you don’t want it to get “real confusing” (Ibid). See also “Treasury”.

¹⁰⁸⁵ Numerous court cases have ruled on this (superficially tricky) matter, and all of them on the side of the Fed being privately-owned, and thus a private entity (or “federally created instrumentality” in the Court’s preferred euphemism), regardless of the president-appointed Board in Washington. See: “*United States Shipping Board, Emergency Fleet Corp. v. Western Union Telegraph Co.*” (No. 113; 275 U.S. 415; 1928); “*Lewis v. United States*” (680 F.2d 1239; 1982); and “*Scott v. Federal Reserve Bank of Kansas City*” (No. 04-2357; 8th Circ. Ct of App; 2005). The FRBNY itself even admits this reality, slyly, when it makes statements like: “New York Fed employees are subject to the same conflict of interest statute that applies to federal government employees” (Federal Reserve Bank of New York, 2018b). The ‘issue’ of Federal Reserve ‘public’ or ‘private’ ownership has always been the same and is only for dupes, especially after the *Banking Act of 1935* restructurings made the System more clearly ‘independent’ or private in its outward appearance. No federal agency has stockholders. See also “Public-Private Partnership (PPP)”, “Big 5 Banks” [for the specifics].

the Federal Reserve Board¹⁰⁸⁶ in Washington. The “only part which has ownership is the 12 regional Federal Reserve Banks, and they are owned by the member banks according to a formula of their size. They [member banks] have to buy shares. The shares are not traded. The shares are very restricted, very limited. So it is a strange kind of ownership that is attributed to the owner banks. There is no other ownership.¹⁰⁸⁷ Some people think there are shares of the Washington Board. There are not.... So, what people have to remember is that the Federal Reserve is not in the Executive branch, it is not in the Legislative branch, [and] it is not in the Judicial branch of our government. Those are the only three branches of our government” (Zarlenga, 2007).

2) Despite its dubious constitutionality, the FRS has (given an exception or two) achieved its most basic fundamental (and ostensible) objective, as planned out in 1910: that a CB (or a supposedly “decentralized” system of CBs) “holding the Reserves of member banks... [could then make those Reserves] available to any bank [that was in trouble, thus]... [e]liminating the need to constrict credit in a crisis... [and hence heading] off bank runs and...financial panics” (Wallace, 2017, 103). As with most Morgan-Rockefeller schemes from a hundred years ago, however, there have been a lot of side-effects to the prescription, sometimes grotesque and gruesome (as one might expect from a system that [since the 1940’s anyway] benchmarks *gross domestic product* above all else. And the Reserves that the entire system was (and still is) predicated upon are no longer necessary in the electronic-digital era. See also “Gross Domestic Product (GDP)”, “[Money, 2 classes \(layers\) of](#)”.

3) “...just a cartel¹⁰⁸⁸ of private banks... working with governmental license.... to encompass everything, by putting everything else in debt” (Vrabel, mn.2). See also “Mafia”, “Banksters”.

4) The 1913 “plan of [Federal Reserve mastermind Paul] Warburg... will be followed out to the letter... They do not propose to lend **money**, just *the credit* of the banker. Then the question for consideration is: can the national bankers loan their credit to you, based on your own property as security, for 6% per annum?” (Loucks, 1916, 175). See also “‘Exogenous vs. Endogenous’ (money creation)”.

5) “The Federal Reserve is the lobbyist for the banks. That was the big change that happened in 1913 (Hudson, 2018, mn.14); although it wasn’t really completed until the Board changes of the *Banking Act of 1935*.

6) “There was a greater degree of monetary stability in the period before the establishment of the Federal Reserve System than in the period after, whether measured by changes in interest rates, instability in the stock of money, instability in prices, or instability in economic activity. By any measure I know of, the [50 year] period after [1913] has been *more unstable* than the one before.... [O]mit the wars and the answer is still the same.... What I am trying to say is that a system which could produce mistakes of that magnitude is a bad system by its very nature” (Friedman, 1965, 5, 7); simply in terms of stability.

6b) Nonetheless, there seems to be no Peter Principle, when ‘there is no [known] alternative’, and since 1962 the Fed “appropriates money for foreign governments without permission of the [US] Congress”;

¹⁰⁸⁶ “[T]here is an ambiguity involved— because the president appoints the Washington Board for 14-year periods. But once he appoints them, they are out of his control for 14 years. There is only one appointment [term]... They don’t get a second.... But you don’t find a Ralph Nader being appointed to the Federal Reserve! It is essentially dominated and controlled by the banking fraternity” (Zarlenga, 2007). Hudson adds that, although the president appoints the FRB, the real “problem is that the banks own the government [parties]; not that they [just] own the Federal Reserve! They have veto power over whoever is put in” (Hudson, 2012h).

¹⁰⁸⁷ There are no legal grounds for stating that the FRS is “public” in anything other than its titular board in D.C., which has no direct powers (only “supervisory”) over the 12 privately-owned Reserve Banks, as stipulated in the *Federal Reserve Act*. The Fed likes to say that “the Federal Reserve System [like Congress] is not ‘owned’ by anyone” (FAQs; March 1, 2017). The fact of the matter, however, is that its dividends (**reported** profits distributed to owners) are disbursed, bi-annually from the Reserve Banks, to the legal owners/member banks, prior to any net profits being remitted to the US Treasury. The Fed admits this on its FAQs site (Ibid), but seems to think that we’re too dumb (or too tired/suspicious of their Fed-speak) to know what dividends are. Court cases over and over again have found that only the Washington Board is legally bound to intra-governmental rules such as the *Freedom of Information Act* (Schall, 2014); and the BIS in Switzerland is **ostensibly** regulated by-- and pays taxes or interest to-- no one.

¹⁰⁸⁸ The 20th century FRS was (particularly after the post-WW2 globalization wave and the ensuing ‘full fiat’ liberalization of the 1970’s) more like the ‘mother of all cartels’ in the US. It “is no different in essence than a banana cartel, or a sugar cartel, or an oil cartel. It’s a grouping of the large, private corporations in the field-- banking-- who have come together to create agreement between themselves-- to limit competition, to preserve their profits, and to make sure that no newcomers come in and take away their [market share] position. That’s what cartels are always designed to do” (Griffin, 2011, mn.4). See also “Big 5 (High St.) Banks”, “City (of London), the”.

while, since 1976 there have been “no transcripts” of the (so-called) Federal Open Market Committee (FOMC) meetings, and “FOIA requests... don’t exist” (Auerbach, 2011, mn.4) See also “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”, “Open Market Committee, Federal (FOMC)”, “Deceptive Banking Terms (d.b.t.’s)”.

7) According to Milton Friedman, the Fed deliberately caused the Great Depression of the 1930’s, and according to Minsky it “was not the main player in resolving the solvency crises of 1929-33 and [of] 1988-92... [Moreover, the Fed has generally] not been able to contain and offset crises that were due to a plethora of non-performing assets on the books of banks and financial institutions”, which require either “equity infusions” or liquidation (Minsky, 1994, 17).

8) There are no known laws “requiring disclosure or confidentiality of the ownership interests” of the 12 Reserve Banks (yet alone their member-constituent banks’ ownership interests), “and finding that information is an opaque process at best” (Ferrie & Lurie, 2018). See also “Federal Reserve audit”.

9) Each of the 12 Reserve Banks has a 9-member board (6 of whom are appointed by the Reserve Bank’s board, with 3 appointed by the Washington Board) to hobnob with the public and supervise executive functions. Most Fed districts also have at least one branch office with its own board (most of whom are appointed by the Reserve Bank’s board, with the remainder appointed by the Washington Board). The overall FRS has approx. 274 executive (non-board) positions-- 108 at the twelve Reserve Bank head offices, in addition to 166 directors positions at the various branches (Ferrie & Lurie, 2018).

10) “In a lot of ways, the Federal Reserve essentially runs itself as a private business that hands over the money [that] it doesn’t pay itself to the US Treasury.... [The 12] district banks¹⁰⁸⁹ [and their sub-branches] have no direct ties to the government” (Ferrie & Lurie, 2018)...

11) ...Thus all of the committees that directly advise the Washington Board “act as a...go between for the [private] member banks and the [public] Board of Governors” (Ferrie & Lurie, 2018). The primary ones are: a) the *Federal Advisory Council* (which meets 4x per year); in addition to its post *Dodd-Frank* supplementary bodies: b) the *Community Depository Institutions Advisory Council* (est. 2010; 2x per year); and c) the *Community Advisory Council* (est. 2015; 2x per year).

12) In addition to these member bank advisory committees, the Washington Board also has 4 primary research divisions. They are: a) the original *Division of Research and Statistics* (which is the largest); b) the *Division of Monetary Affairs*¹⁰⁹⁰ (which directly supports the FOMC, which is mostly what the Washington Board does, in addition to jawboning); c) the *Division of International Affairs*¹⁰⁹¹; and d) the new *Division of Financial Stability* (est. 2010).¹⁰⁹² Collectively, these 4 divisions basically monitor financial markets and larger institutions (all premised on ‘neoclassical’ economic assumptions; see Still, 2013, mn.5-6), while also issuing statistics and conducting longer term research (Federal Reserve Board, 2018c), which is often not as bold as that of the Bank of England researchers. See also “Bank of England” [.Financial Stability].

¹⁰⁸⁹ Just a “politically savvy concession...to those who opposed further concentration of power in New York City”, first schemed out at Jekyll Island in 1910 (Wallace, 103), and not very important to the overall mechanics of the FRS... although they can produce a lot of (often useful) statistics, in addition to the propaganda and P.R.

¹⁰⁹⁰ The DMA goes back at least to the old “Division of *Financial and Monetary Affairs*” established in 1944.

¹⁰⁹¹ The D.I.A. goes back at least to 1934 and the old “Division of *International Finance*”, as distinct from the larger DRS.

¹⁰⁹² The DFS is the new name for what was the (*Dodd-Frank* created) “Office of Financial Policy and Research” from Nov. 2010 up until the May 2016 name change. Prior to 2010 the Washington Board had a staff of over 200 (neoclassical-trained) economists “divided into [only] 3 main groups: research & statistics, monetary affairs, and international finance. The directors of each group are the chairman’s main advisors....the Fed staff [economists often know]... more about data such as the breakdown of the number of automobiles sold to businesses and consumers than does the Bureau of Economic Analysis, which reports the...GDP data. Some of the governors of the Board [however] have complained that senior staff economists at the Board have more power than they do... because the chairman has so much power, and the senior staff members have the chairman’s ear...[And] the governors are not free to use the staff as they please; only the chairman does.... ‘There’s an old admonition that we remember from grade school arithmetic: *Show your work*’. But he [fmr. vice chairman of the Washington Board (in the mid-’90s) Alan Blinder] was never allowed to see it” (Croushore, 2007, 437-38). See also “Groupthink”.

13) The FRS is “supposed to be to regulate the banks,¹⁰⁹³ but instead they’re clients of the banks. The Federal Reserve was created in 1913 as an alternative to what was managing the economy at that time, which was the US Treasury... [i.e. privatizing] what should be the Treasury’s function of public [new] money creation and of [managing] public credit. The Fed’s job [now] is to make sure that there is no public option in banking, and to protect the big banks-- particularly Citibank-- which is the most crooked bank [in the US, recently rivaled by]-- Wells Fargo, to make sure that banks continue to engage in financial fraud.... The Fed is the public relations department for Citibank, and for Wall St., and for Goldman Sachs”¹⁰⁹⁴ (Hudson, 2017i, mn.42-43). See also “Federal Reserve System” [Yellen].

14) Each federal reserve bank effectively possesses a magic check book. When the Fed buys stuff like Treasuries, it *just creates a liability*, which is the seller’s [expected] credit/asset, and the liability is a mere book entry-- unlike the [Feds’] member banks, which must back their liabilities with real reserve assets earned and spent. Of course at a meta-level the viability of this [or any] *magic checkbook* does float upon the strength of the general economy, and excessive Fed liabilities skimming off the top-- like with excessive money supply creation-- would also cause inflation. See also “Inflation/Deflation”.

15) Tax Exemptions-- the 12 [privately owned] Federal Reserve banks (synon. ‘Reserve Banks’, ‘Fed Banks’) “...including the capital stock and surplus therein, and the income derived therefrom shall be exempt from Federal, State, and local taxation, except taxes upon *real estate*.”- 12 US. Code § 531

16) “The people who own the Federal Reserve are more powerful than they’ve ever been” (Fitts, 2018s, mn.46). See also “Federal Reserve Bank of New York (FRBNY)”, “Lawful money”.

16b) Lawful? The “*Federal Reserve Act*...only authorized the Fed to issue liability money, not pure money like coins.... [But] the Fed has.... basically stepped into the shoes of the [supposedly] sovereign US government...[since the 1970’s] without...legal authority [to do so]; and the [ultimate] consequences are.... that its books get merged [with those of the US government]” (Titus, 2021b, mn.52); meaning that (at least) its (ostensible) *raison d’etre* is invalid. See also “Federal Reserve audit”.

16c) “The privately owned [so-called] ‘Federal’ Reserve has no business running the monetary system” in the 21st century (Titus, 2022d, mn.28).

17) In 2011, the FRB issued an official video claiming that: “Its [QE-type asset] purchases are a temporary measure to help the economy recover’. At the time of that video... the Fed had used its magic [sovereign] money button to buy up \$2.2 trillion of debt securities from Wall Street [corporations], thus pushing the interest rates on debt instruments artificially lower...[D]espite that promise that this would be a ‘temporary measure’, the Fed continued over the next decade to use its magic money spigot to the point that it now [11/22] holds \$8.256 trillion of debt securities on its balance sheet, and it can’t figure out how to unwind that monster pile of debt securities without collapsing the US economy.”

- <https://wallstreetonparade.com/2022/11/ftx-was-creating-money-out-of-thin-air-like-the-fed-and-trading-its-own-stock-like-the-wall-street-mega-banks-in-their-dark-pools/>. See also “National Debt Economy (NDE)”, → “Dark Pool”, → “Ponzi”; “Productivity”, “Reform, 101”.

18) C.A. Fitts once contacted “all 12 [Reserve] Banks and...[asked] ‘Who manages your databases? What corporations manage your database? And do you share your data with your members?’ And they wrote back... ‘That’s a confidential policy of this bank’.” “Controlling and having access to the data on fiscal and monetary policy is the basis of huge, huge fortunes.... The ‘Fed’ is about as federal as Federal Express” (Fitts, 2022n, mn.33-35). See also “Federal Reserve audit”, “Accounting standards & reform”.

¹⁰⁹³ Its failures in this are not just recent. “The Fed has never been a vigorous regulator or supervisor in... its entire... existence. What the Fed cares about is... 1] the Federal Open Market Committee... The 2nd thing the Fed cares about is- institutionally it’s run by economists. So they have their own research agendas...[and] a really tertiary concern is supervision” (Black, 2018, mn.2).

¹⁰⁹⁴ One could add to this, after some years of study, that Citibank (although not as large as JP Morgan), has, since the mid-20th century, generally been JPMC’s approximate equal in New York and the FRBNY (at least in terms of policy influence); whereas Goldman, actually since the 1930s when it was private, has been a preeminent financial institution for Washington political influence-peddling. (Goldman is for Washington & political [verbiage] management what JPMC & Citi are for Wall St. & mechanical [numbers] management... with JP Morgan, of course, having the longest-standing London office. See also “Pilgrim Society”). Their representatives could, as far as we know, get together for dinner every Thursday at so & so’s in NY or DC; but the NSA, at least since the 1990’s (if not actually the 1970’s or 50’s), would know about it. See also “Government, Hidden”, “Big 5 (High St.) Banks”, “Internet of Things” [HSBC].

19) **FRS Updates: 9/21-** “The Federal Reserve had rules against this very type of speculative trading for decades, but those *rules have now somehow managed to vanish*¹⁰⁹⁵ into thin air.”

- <https://wallstreetparade.com/2021/09/robert-kaplan-was-trading-like-a-hedge-fund-kingpin-for-five-years-while-president-of-the-boston-fed-a-dozen-legal-safeguards-failed-to-stop-him/>
8/22- list of *foreign banks* operating (with FRS acct.) in US: <https://www.federalreserve.gov/releases/iba/202112/bytype.htm> [Yes, some are (see also) “Chinese Communism (CCP)”].

See also “Shell game”, “Monetary reform”.

[‘golden age of ballooning’ (Monty Python, 1974)]

[inflationary time-bomb.21stc?; ‘Fed’s clients’]

Federalism- (etym.: Latin ‘foedus’-- a pact; sometimes a.k.a. ‘constitutionalism’) a system of government where states or provinces share power with a national government, as in a ‘federation’ (or ‘confederation’) of states, with some substantial¹⁰⁹⁶ degree of ‘states rights’.

“Where love rules, there is no will to power, and where power predominates, love is lacking. The one is the shadow of the other. Even a happy life cannot be without a measure of darkness, and the word ‘happy’ would lose its meaning if it were not balanced by [at least some occasional] sadness.”- Carl Jung

1) “” (Vrabel,).

2) “I consider the foundation of the [United States]’ Constitution as laid on this ground, that ‘all powers not delegated to the US by the Constitution, nor prohibited by it to the states, are reserved to the states or to the people’ (XIIth Amendment), [and that] to take a single step beyond the boundaries thus specially drawn around the powers of Congress, is to take possession of a boundless field of power, no longer susceptible of any definition.”- Thomas Jefferson, in response to Pres. Washington’s inquiry on the constitutionality of a bill for creating a ‘national’ (central) bank (Jefferson, 1791). See also “Constitution, US”.

¹⁰⁹⁵ 13th President of the *Dallas FRB* Robert Kaplan (2015-21) “had previously worked for Goldman Sachs for 22 years, rising to the rank of Vice Chair. Wall Street On Parade asked Goldman Sachs if they were conducting the trading for Kaplan while he was President of the Dallas Fed and they refused to answer that...simple question. Goldman Sachs’s unwillingness to provide a forthright answer is problematic on multiple fronts. First, all of the Fed’s regional bank presidents are allowed to sit in on FOMC meetings, even when they are not voting members, thus having access to insider information.... Kaplan was a voting member in 2020...[when] the Fed initiated a panoply of bailouts and Kaplan was making over \$1 million trades in individual stocks as well as S&P 500 index futures. Kaplan was required to provide the dates of those trades on his financial disclosure forms but failed to do so. Goldman Sachs has a large and sophisticated compliance department. If Kaplan was trading at Goldman Sachs, its compliance department should have had his account flagged as a potential source of insider information. No properly functioning compliance department on Wall Street would have allowed such a man to be trading in and out of S&P 500 futures contracts in lots of more than \$1 million– or any size lots for that matter. (S&P 500 futures are used by speculators to make highly leveraged, directional bets on the market. S&P 500 futures extend the trading day to almost 24/7 from Sunday evening to Friday night.).... Former *Boston Fed* President Eric Rosengren, who stepped down on *the same day* as Kaplan last year, had a joint trading account with his wife... his wife had a \$150,000 to \$500,000 ‘Secured Loan for Investment’ with... Citibank. Citigroup is a Fed-supervised entity and received the largest bailout in US history from Dec.2007 through June of 2010. That included \$2.5 trillion in cumulative loans from the Fed, according to the audit done by Congressional mandate by the Government Accountability Office. The Fed fought for more than 2 years in federal court to prevent that information from becoming public” (Martes & Martens, 2022c). See also “Insider Trading”, “Big 5 Banks”, “Bair, Sheila (& Citibank)”.

¹⁰⁹⁶ Ratification of the US constitution of 1787 was by no means easy or a foregone conclusion. Formerly quasi-sovereign states were, in most instances, in no rush to relinquish their sovereignty (even given the credible threat posed by the British). “‘The whole question turns, sir, on... the expression, *we, the people*, instead of, [we] *the states* of America.”- Patrick Henry, June 5, 1788

2b) The adjective 'federal', however, is used differently (in American English). "Today, we speak of the national government...in Washington, DC, as the *federal* [sic] government, yet people claiming...[to be] true to *federalist* [sic] principles [of a federation] resist central authority and [often] demonize the city that houses the...[national] government.... [It goes back to] 1787, [when] 12 states sent delegates to a federal convention... Afterward, proponents of the plan that emanated from the *Federal Convention* [sic] (that's what everybody called it...) assumed the term *federalist* [sic] for themselves, even though they had [actually] been *nationalists* at the Convention.... [And the] Constitution's proponents won the [ensuing] battle" over labels (Raphael, 2013, xii), spinning their anti-centralization opponents as simply 'Anti-Federalists'¹⁰⁹⁷. See also "Constitution, US".

3) The academic orthodoxy "that federalism is always a result of a collective response to external or internal [military] threats to dominant central and regional coalitions needs to be qualified to include *economic and cultural* [national identity] threats. The EU [botched] and Australian examples demonstrate this. [William] Riker was also mistaken about the precise origins of [the] Indian federation, which owed more to the [India-wide] hegemony of a centralist Congress Party than to central local bargaining" (McKay, 2006). See also "Parties, political", "Corruption".
See also "Unitarism", "National identity/Nationalism", "Civil National Identity (CNI)".

Fedwire Funds- The interbank payment system of the Federal Reserve is the most commonly used method to transfer [interbank/RAB] funds between monetized credit institutions. "Generally the... [monetized credit] institution authorizes its district Federal Reserve Bank to debit its reserve account and to credit the reserve account of the borrowing institution" (Federal Reserve Bank of New York, 2013).
See also "Payment Systems".

Feudalism- (a.k.a. 'manorial feudalism', 'subinfeudation'; i.e. 'pre-capitalism', 'pre-state'-- or at least pre-urban state [manors as proto-cities] ¹⁰⁹⁸)

1) (broad usage) the lack of any distinction between 'public' and 'private' power (one and the same); i.e. no generally understood city-state or national laws.¹⁰⁹⁹ See also "Estates, 3".

1b) c.976, "when we had *no state at all*...all power was private power...[And] we also had, really, no individuals, that is, no isolated individuals. All that we had were individuals so deeply embedded in local communities-- local self-sufficient communities-- that their power relationships within which they functioned were in their day-to-day activities, and the controls of their behavior were almost totally internalized in their neurological and hormone systems. So they obeyed what seemed to them to be their inner compulsions, and what they were doing was fulfilling their functions that they had in this interwoven community structure,¹¹⁰⁰ which changed so slowly, that even in a long life-- and, of course, most people in those days did not live long lives-- but even in a long life, let us say of 60 or 70 years, almost no changes would be noticed by anyone in the pattern...[in] which they had embedded inside of themselves" (Quigley, 1976c-pt.2, mn.116-17). See also "National Identity/Nationalism", "Fundamental attribution error".

2) (narrow usage [a.k.a. 'manorial']) From latter-8th & 9th century "France, [manorial feudalism] subsequently spread through Europe... [getting] to England...[around the time of its unification in the early 10thc]. In a *feudal system*, the lord grants land to the vassal in return for military service. As a result, a small elite group of

¹⁰⁹⁷ "Opponents of ratification [were] less skilled in public relations" (Graebner, Fite, & White, 1975, 157).

¹⁰⁹⁸ Manors had existed in Italy, but between 1100 and 1300 "the manorial system ... was effectively dismantled" (Swanson, 2010). Perhaps the manorial system persisted a century longer there than in Carolingia because; "in much of Italy...[demesnes] were both small and fragmented, with labor obligations correspondingly low, maybe only 2 to 3 weeks *a year*" (Wickham, 2009, 535). This demise of manorial serfdom was basically concurrent with the rise of double-entry accounting practices. See also "Taxation", "Accounting, 'Fair Value'".

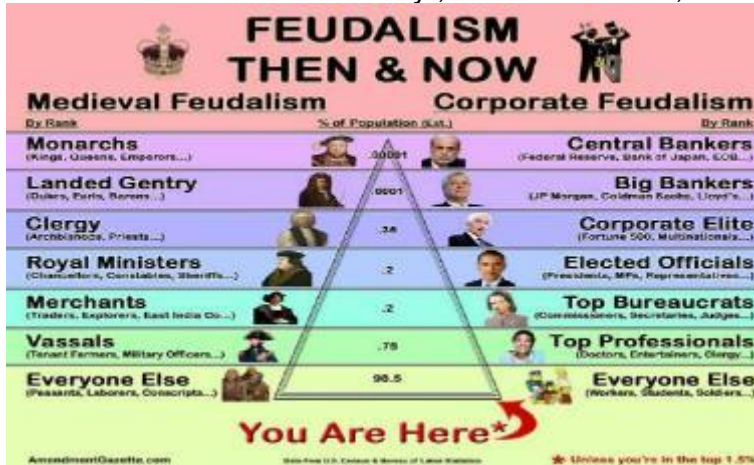

¹⁰⁹⁹ One exception to this might have been mid-millennium Catalonia, where there were "no manors... yet Catalonia had [instead] very distinctive and oppressive [legal] relations between lords and peasants" (Swanson, 2010).

¹¹⁰⁰ Today instead, "at the end of the thousand year period... we no longer have communities, except shattered, broken, crippled ones, isolated ones. Instead, we have states of monstrous power and frustrated individuals, isolated individuals; the state and the individuals working together, from opposite sides, to destroy what we have left of communities-- local, family, or whatever they might be" (Quigley, 1976c-pt.2, mn.117-18). See also "National Identity cycle".

soldiers ruled those who worked the land. As a technical matter, the land belonged to the lord and was given to the vassal for his lifetime only, but there was nevertheless a very strong sense of hereditary rights, and rules of inheritance were...[both significant and strict]... The [English manorial] feudal system started crumbling around 1320 and was essentially dead [by] about 1440, although it did not end officially until the *Tenures Abolition Act of 1660*" (Anthony, 2016). In both earlier (i.e. Francia-Carolingian) and latter (i.e. English) instances, See also "Serfdom".

2b) A historical skew (i.e. imbalance of sources) has long existed. "We know an unusually large amount about [both] manorial estates, [and] particularly of monasteries, [and particularly] in... the 9th century... [because it was] the great period for estate surveys.... The attraction of this sort of detail for a long time stood in the way of a realization by historians that such estates were not typical,¹¹⁰¹ in either their size or their degree of organization... [and] they were also, probably, a sign above all of *ecclesiastical* landowning... [more] tightly organized... [mostly] because lay estates were divided between heirs, and changed hands rather more often.... These were [more or less] models, coming from the royal government" (Wickham, 2009, 535-536). See also "Primogeniture".

3) (in the modern, 'neo-feudalist' sense) when a nation/society's *debt overhead exceeds its ability to pay*. See also "Post-industrial economy", "Financialization", "Feudalism, neo", "K.J.B. (King James' Bible)".

[the post-Roman & pre-democratic Orders-- a.k.a. the 'Early Modern' & [so-called] 'Modern' eras]

Feudalism, neo (ongoing debt & tax-saturation, unaddressed [i.e. no debt-free monetary system→inexorable tax-creep]; a.k.a. 'rule by cartels'; see also "Mexico", "Chile"; [Titus, 2017])

1) Sharecroppers in the pre-New Deal South paid 1/3rd to 1/2th of their crop as rent to landlords. See also "Serfdom, neo", "F.I.R.E. Sector".

2) Today, it occurs when "everybody in the economy... has to pay almost all of their income to the people who possess property. In [medieval] feudalism, this was the landlord. But today, it's not only the landlords. It's [also] the bankers behind the landlords, and it's the monopolists" (Hudson, 2017q, mn.13); including 'the monopolists' who run government(s). See also "Statism", App.C: "1-2-3".

2b) For example, with today's typical worker, "15% is taken off American paychecks at the top-- for Social Security & medical care. When you add that to the debt service and the housing (housing costs [are] often over 42% of American consumer income for the lower 50%...) If you take the 42%...add the 15% tax withholding, and [then also] about 20% of federal and local taxes...[and] only about a third can be spent on goods and services. That's the reason why in New York (and London and other places) commercial stores are going bankrupt. Sears went bankrupt, Toys-R-U's went bankrupt. If you walk up and down the big shopping streets of Broadway, 5th Avenue, Madison Avenue, commercial rents have fallen. Stores are

¹¹⁰¹ The "appearance of such a range of estate documents from the early... 9th century...might...make them seem to be part of the Carolingian political programme, and indeed they were" (Wickham 2009, 536). See also "'Conspiracy theorist'".

closing because fewer people have the money to buy the goods and services that the economy produces” (Hudson, 2019c). See also “Serfdom, neo”, “Monetary reform”, “Reform, false”.

3) a “retrogression...back to...where the commanding heights are held by finance and real estate, not by industry and not by the population at large.... You can see what happened in Russia after the privatization in 1991. You can see it happen in Latvia and the post-Soviet economies. The life-spans shortened. The population dropped. President Putin said that more Russians died as a result of neo-liberalism than died in World War Two, and that was the ‘disaster’ that he meant... [In other words] You have a failing society, beyond sustainability rates.... You can look at debt-pollution very much like environmental-pollution...[where the underlying foundation] has to be stripped... to pay the debt service... asset-stripping is what I mean” (Hudson, 2017b, mn.58-59).

4) Such asset-stripping was to be greatly enabled by the “Trans-Pacific Partnership” (TTP) and “Transatlantic Free Trade Agreement” (TAFTA) “treaties”, prior to President Trump’s withdrawal from the former in January 2017. Under either of the secretive schemes, companies “would be able to demand compensation from countries whose health, financial, environmental and other public interest policies they thought to be undermining their interests, and take governments before extrajudicial tribunals. These tribunals, organized under World Bank and UN rules, would have the power to order taxpayers to pay extensive compensation over legislation seen as undermining a company’s expected future profits”¹¹⁰² (Wallach, 2013); pretty much a pseudo-legalist replacement of congressional-popular sovereignty with corporate-financial sovereignty. See also “Legalism”, “Common law”.

5) uninterrupted or unreformed *financialization*, marked by a “very high cost of living, high cost[s] of doing business, lack of competition, and the only way you can really protect this is militarily, with a National Security State and a Military-Industrial Complex.... [because it] is basically...parasitic” (Hudson, 2018c, mn.18). See also “Usury”, “ConfUSURY”.

6) that “which spreads wider; unless the monopoly of national currency [prevents it], is an organ of political respiration...[more] powerful than feudal monopoly. A close affinity is perceivable between the operations of a feudal and [of a bank] paper aristocracy.... A vassalage, inflicted by means of the necessity, money, is not more voluntary than a vassalage inflicted by means of the necessity, land... The collection of the interest or dividends by a stock aristocracy, is as certain as the collection of rents and services by a feudal” aristocracy (Taylor, 1814, 315). See also “Aristocracy”, “Georgism (& Land Value Tax)”.

7) Libertarian’s (real) founding father, John Taylor, was writing 2 centuries ago. Does such a ‘bankmoney aristocracy’ still pose a ‘neofeudalism’ threat today? (See also “Dystopia”). This is the same thing as asking how is the national currency faring these days, with its [supposed] Congressional guardians? “If legislators continue to slumber, it might very well happen, that... hardly revertible global facts are being created, which will finish off any [public] financial sovereignty” in the Western world (Huber, 2017f). See also “Compound interest”, “Parties, political”.

8) “The Bank is planning to foreclose on the entire West in the decade ahead” (Migchels, 2020b). See also “COVID”→”Chile”.

9) However, with “the separation of money and credit, more precisely speaking the separation of [new] money *creation* by the [Treasury or] central bank from the...[allocation] of money in banking... [then] the banking sector no longer has the quasi *neofeudal* privilege of creating itself the money on which it operates...[Meaningful] money reform [thus also] segregates a bank’s own means for proprietary lending and investment from the customers’ money” (Huber, 2017h); a.k.a. ‘commingling funds’.

See also “Debt peonage”, “Sovereignty”, “State capture”, “Creney”, “Financialization”.

Fiat currency- (issued purely by legal/public decree, i.e. not ‘backed’/supported by any claim to ‘redemption’ in a physical commodity; synon: ‘inconvertible paper’ [JS Mill]; archaic: circulating ‘bills of [public] credit’; anton: ‘hard money’, ‘commodity money’) See also “Currency”.

¹¹⁰² “Some investors have a very broad conception of their rights.... [For example,] European companies have recently launched legal actions against the raising of the minimum wage in Egypt” (Wallach, 2013). See also “Nasserism”.

- 1) State money that is “unbacked” by any commodity money promise, and can be either *debt-based* (i.e. today’s dollar; which has to be backed up by Reserves/RAB), or ‘*debt-free*’ (see “sovereign money”, which requires no backing) in character.
- 2) Since the invention of coins by government, more than 2500 years ago, government *fiat* (‘by decree’) has been required to make **currency** work.¹¹⁰³ Government ‘fiat money’ (a.k.a. **currency**) is not ‘backed by nothing’, as libertarians have been taught and parrot. It is **currency** backed by a tax revenue stream. Tax is the best credit in the world. It is better than gold. No one who fails to put tax foremost in the explanation of money understands money. Every human society has always regulated rights and obligations, including economic ones (as measured in public). It is part of the human condition and an intrinsic function of government. If *national money issuance* were not an *inherent* right of government (per *Juilliard v. Greenman*, 1884), then it would not be able to delegate that right to banks. See also “Bankmoney”.
- 3) The reason most money is and will continue to be governmental, not private, is because credit depends on creditworthiness, which depends on a revenue stream. There is no revenue stream in the world comparable to taxation. See also “Burien, Walter”.
- 4) In addition to the colonial era and Articles of Confederation times in the 18th century, the state (public) nature of money [as a basic/standard measure] was widely acknowledged (despite increasing bankmoney-rooted propaganda) in the 2nd half of the 19th century. “Neither gold, silver, nickel, copper or paper is...[currency] until the fiat of government is stamped upon it. When that is done it assumes a *legal tender* value regardless of its commodity value” (Loucks, 1893).
- 5) “The US military is [also] a real asset. So the US dollar is backed by the force of the US military, which, you know, to date has been very compelling” (Fitts, 2017r, mn.40).
- 6) “You need some way to amend a debt-based system, and that is what *fiat*...[currency] itself should be doing” (Keen, 2016d, mn.15). Nonetheless, there’s no official “governmental definition of the term ‘fiat’ that would extend beyond [physical] notes and coins...”¹¹⁰⁴ (Bindewald, 2018, 182). 12 C.F.R. 215.3, however, covers “Extension of credit” (a.k.a. ‘loans’). See also “Bills of credit”, “Loan swaps”.
- 7) “It is important that this purely representative character of money should be thoroughly understood and constantly kept in mind, for from the confusion resulting from the confounding of money with wealth have flown the largest and most pernicious results” (George, 1898, 493-94). Henry George thought that this confounding of *money* (medium of exchange) with *wealth* (store of value) “has for centuries done more... to retard the improvement of Europe than all other causes put together.... These are not the effects of the confusion of a term. The confusion of the term is one of the effects of the *influence upon thought* of the same special interest...” (George, 141-42). See also “Wealth”, “Smith, Adam”.
- 8) Thomas Jefferson agreed¹¹⁰⁵: “When I speak comparatively of the paper emissions of the old Congress [in the 1770’s-80’s] & of the present banks [from the 1790’s], let it not be imagined that I cover them under the same mantle. [T]he object of the former was a holy one; for if ever there was a holy war, it was that which saved our liberties and gave us I. [T]he object of the latter is to enrich swindlers at the expence of the honest & industrious part of the nation” (Jefferson, 1813c). See also “Bills of credit”, “Gresham’s law”, “US (Treasury) Notes”, “Ex nihilo”, “Deceptive Banking Terms (d.b.t.’s)”, “Money, ‘types’ of”.

Fiduciary accounts- (synon. ‘trustee’) unlike today’s bank ‘savings’ accounts, fiduciary/trustee accounts are fully/legally the property of the owner/depositor, and are thus held ‘*in trust*’ by the lending or financial institution. Some examples include certificates of deposit and **derivatives**, in addition to **sovereign money**

¹¹⁰³ “The issuance of [near-money] deposit instruments and their historical predecessors, bank notes, has almost always been”, even in eras of so-called ‘Free banking’, “a legal privilege” (Ricks, 2016, 10). See also “Money, 3 (contemporary) Tiers of”, “Privilege”.

¹¹⁰⁴ This is incorrect and/or dishonest (on the part of governments), as government ‘fiat’ obviously also includes Reserves (RAB). Thus “fiat” and “lawful money” are synonymous. See also “Lawful money”.

¹¹⁰⁵ Although the younger (and not particularly monetarist) Jefferson had corresponded after the constitutional convention that “Paper is poverty... it is only the ghost of money, and not money itself” (Jefferson, 1788b); it does not take a lot of research to find that, after his presidency, Jefferson had certainly learned the difference between public and private paper money.

(which is a **liability** of the treasury/government, not of the banks/**monetized credit institutions**). Fiduciary assets, as with custodial accounts, are not subject to the claims of creditors, although fiduciaries have much more extensive legal duties than custodians. See also “Custodial Accounts”, “Off-balance-sheet”, “Savings”.

Fiduciary money- (halfway house between [archaic] ‘commodity money’ and [modern] ‘fiat money’) “[A]s British experience during the Napoleonic Wars showed, bank notes by no means lose all or even most of their value when convertibility into gold or silver is [officially] denied” (Galbraith, 1975, 52). See also “**Currency Wars, the**”.

1) State money that is “backed” by a promise (in theory) of redeemability in some form of physical commodity money (typically specie) or coinage. See also “**Backing**”.
1b) Theoretical? Again, the “promise to [‘redeem’, a.k.a. to] pay gold or silver... usually-- one may say all but invariably-- exceeded in volume the metal available” (Galbraith, 1975, 53). See also “**Fiat currency**”.
2) The technological “ability to produce better-quality (that is less falsifiable) domestic coinage at lower cost, and [also] to enforce it *intra vires*, underpinned England’s (and Spain’s) transition from full-bodied to fiduciary money” in mostly the 16th and 17th centuries (Horesh, 2014, 116); and by “the mid-18th century, at the latest, it was not just European-*conveyed* silver bullion that was coveted in...China and Southeast Asia: In fact European-*produced* silver coinage was [even] more coveted and usually at a premium over silver bullion” (Ibid). See also “**Commodity money**”, “**Money, ‘types’ of**”, “**Counterfeiting**”.

Fin de siecle (c.1880-1910)- ([so-called] ‘modernity’s formative era combined what shouldn’t be combined,¹¹⁰⁶ while also separating what shouldn’t be separated¹¹⁰⁷; [brought about by young, warring states’ ever-increasing demand, and then non-state actors’ attainment of monetary-credit privileges comparable to the state; **first mostly with bullion robbery, then mostly with bankmoney shenanigans**]¹¹⁰⁸)

This era “...when many of our present attitudes were really shaped” (Weber, 1989j, mn.26)...
...initiated “an age of profound crisis¹¹⁰⁹, not only in our own country, but in [overall] Western Civilization” - Carroll Quigley (1976c-pt.3, mn.242). See also “**Power**”, →“**Great Extinction, 6th**”, →“**Transhumanism**”.
1) The “corporation had torn free of its [state-dependent] past-- it could be formed almost at will, could do business as it wished, could expand, contract, dissolve’.... Of course, once a corporation could both act beyond the legal definitions of its charter and change its legal location to a venue far removed from the communities where it conducted its operations, the ability of states to hold corporations accountable was greatly diminished. Indeed, the ability of corporations to go ‘venue shopping’ encouraged states to compete with one another to create the most permissive corporate atmosphere” (Nace, 2003, 76).
2) It is inevitable that debt-money drives the people (a.k.a. farmers) off their land, in a process otherwise known as urbanization. The logic clearly follows that these farmers, now in urban agglomerations, are (after some time) going to be ‘better’ or ‘worse’ for the relocation and re-employment-- in terms of being citizens of a constitutional republic (as opposed to proletarian boob bait). Urbanization in America reached the point of no return, c.1890, or in the broader sense, ‘the last 2 decades of the 19th century and 1st decade of the 20th’ (**our** pref. definition of the term). In the 1870’s, approx. 3/4ths of Americans were still rural; by the 1910’s it was only half, to just under half (similar to China in the 2010’s). But the latter 19th century, in America and most of the rest of the world, was generally an era of monetary depression.¹¹¹⁰ See also “**Gold Standards**”.

¹¹⁰⁶ i.e. (see also) “**Ethnic (National) Identity**” + “**Industrial Revolution, 2nd**” [i.e. ‘explodapedia’] & urbanization = ethno-nationalism.

¹¹⁰⁷ i.e. (see also) “**Political Economy**”’s traditional realism towards ‘money’ & ‘politics’ was divided & conquered into (the too-narrow for understanding) “**Political science**” & “**Economics**”.

¹¹⁰⁸ See also “**Adolescence of Mankind**”; (Monty Python, 1974).

¹¹⁰⁹ The “crisis, which...appeared as a breakdown, disruption, and rejection of the 19th century’s way of doing things, was fully evident by the year 1900 [on both side of the Atlantic, and it would be]...brought to an acute stage” during the Great War of the next decade (Quigley, 1966, 835). See also ‘**Industrial Revolution, 2nd**’.

¹¹¹⁰ It has long been known that “[t]he history of agriculture [sometimes a.k.a. the **primary sector**] policy in this country since the late 19th century [up to the mid-1950’s (and **then no more**)], when farmers’ incomes came to depend heavily on a price system operating in national and

Individual adults may sometimes experience what St. John of the Cross termed ‘the Dark Night of the Soul’ or an existential crisis of identity. The “Fin de Siecle” term (see also ch.2) describes when the entire ‘mainstream’ urban culture in ‘the West’ was approaching something like that. Why does this matter more than a century later? Because, in terms of everyday ‘governance’ and authority, we are still living in the shadow-- if not the footprint-- of numerous institutions that were drawn up during this ‘initial urbanization’ (conflated with imperialism) era.

[latter stages of (see also) “Crenney”/“2nd Estate money”]

[1898 artwork]

[see also de Grey]

Our great (or great, great) grandparents may have once fallen off the turnip truck, but they weren't stupid. For each institution that the Money Power managed to erect during the Fin de Siecle, our ancestors had originally proposed something better-- or better for a constitutional republic anyway... which the Money Power then transformed into something-- typically via their control of media and universities-- more fitting for their interests (i.e. keeping the yobos at bay and bankmoney in the saddle-- globally) Here are some examples:

“You [citizens] say” ...

1. Henry George/Land Value Tax (1880's)
2. Constitutional US Notes/Greenbacks (1884)
3. 3rd Party/Ballot Access laws (1890's)
4. Industrial capitalism (1900's)
5. Initiative & Referendum (w/ballot recall) (1910's)
6. (in Europe) Self-determination [anti-imperialism]

→

“We [Money Power] say” ...

1. Neoclassical Economics (Gaffney, 1994)
2. Pilgrim Soc.(1900), Panic of'07/*Fed.Res.Act*
3. 2-Party Duopoly (a la McKinley-Bryan [1896])
4. Finance Capitalism (w/Marxist boogeyman)
5. “March off to World War One”¹¹¹¹
6. Zionism [pro-imperialism]¹¹¹²

international markets, might be written without serious distortion as a series of experimental efforts to displace competitive pricing of farm products and thereby to protect farm incomes” (Dahl, 1954, 741). See also “Industrial Revolution, 2nd”, → “Populism” → “Parity pricing”; “Race-to-the-bottom (of the barrel)”, “Wonderful Wizard of Oz”.

¹¹¹¹ From 1898-1918, the citizenry of 31 mostly central & western US states-- fed up with being electorally & monetarily shrifted-- added citizens' Initiative & Referendum (I & R) amendments to their states' constitutions. The I & R prairie fire was stopped cold, however [along with labor unionization], when American ‘doughboy’ conscripts were sent to France in 1918, and for the next 48 years it stayed that way. The prevalent use (propagation) of “democracy” as a noun-- instead of its adjective-aspirational form-- also dates from the 1910's and seems perhaps to have been an easy ruse, to distract attention away from the fact that I & R was being shelved for the exigencies of ‘modern’ (total) war and the 2nd Industrial Revolution's War-Propaganda Economy.

¹¹¹² In the 100 years since Balfour, it has never been clearly, yet alone consistently, explained why it was that “religious identity suddenly become an issue of nationhood? Had anyone considered giving Catholics such rights in Ireland or Muslims or Hindus such status in India? Was the world to be divided into exclusive religious territories? Of course not. To complicate matters further, one nation (Britain) solemnly promised a national home to what would become in time a second nation (the Jewish State of Israel) on the land which belonged to another people (Palestinian Arabs) while it was still an integral part of a fourth (the Ottoman /Turkish Empire). In pandering to a relatively small group of Zionists, the Balfour Declaration was bizarre, deceitful and a deliberate betrayal of the loyal Arabs fighting in the desert war against the Turks.... What power did these Zionists hold over the British government [or the other way around] to ensure their unquestioned co-operation in the first steps towards a Zionist state at the expense of the rightful owners of Palestine?... The strategic sands of Arabia and the oil-rich lands of Persia, Syria and Mesopotamia had long been prime targets.... It is important to remember that when early discussions about the future of a Jewish homeland in Palestine were in progress, little mention was made of American involvement. The truth is otherwise. America was deeply involved in secret intrigues both directly and indirectly” (Docherty & McGregor, 2017). See also “Pilgrim Society”, “Debt cycles”.

7. 'the land of the free and the home of the brave'

7. "Did you say: 'Land of psychiatry¹¹¹³
and home of the crazed'?¹¹¹⁴

And last but not least...

8. "the good book" (Bible)

8. Scofield Bible (dispensationalism, 'rapture')

[c.1880: Tammany Hall's Boss Tweed nominates; counts votes]

[c.1910: 'Rising Tide' of unions, I & R disturbs many bosses]

3) In the next 4 decades (1910's-'40's) following the fiendish Fin de Siecle, there were a lot of blood sacrifices and loud explosions (a.k.a. trauma-based mind control/mass control) laying down the new law--compensating for the fact that the overall money supply was now *less* constrained (except during the penurious 1930's). This was followed-up by 3 decades (1950's-'70's) of what was, in effect, a global-scale Cultural Revolution, on every continent save Antarctica. Equality and better music is all very well, but one might notice-- when all the bombs, banners, and angel dust had settled, c.1980-- that 5 of the 6 Money Power institutions from the old FDS had emerged as strong (if not significantly stronger) than they had been in the 1950's or 1920's.¹¹¹⁵ See also "Devil". "Imperialism", "Imperialism, Post-",
4) One's comprehension of that extraordinary era (when Industrial Capitalism started taking a back seat to *Financial Capitalism*¹¹¹⁶) in which most of the institutions we see around us today are grounded need not be limited to just words in a book somewhere (see Weber, 1989).

¹¹¹³ ...and their "DSM" bible: <https://home.solari.com/lets-go-to-the-movies-week-of-august-29-2022-psychiatry-an-industry-of-death/> [mn.113-19], <https://evil-guide.tripod.com> . See also "Imperialism".

¹¹¹⁴ https://en.wikipedia.org/wiki/Flexner_Report (1910) → ...and 100 years later... <https://home.solari.com/lets-go-to-the-movies-week-of-august-29-2022-psychiatry-an-industry-of-death/> [mn.122], See also "Civilization, Western" [end]; "COVID".

¹¹¹⁵ 1. *Neoclassical economics* took decades to incubate (as Economics departments didn't even exist until c.1900, and the Fed [to control "monetary economics" propagating] not until 1914), and really didn't come to the fore until well after the Great War era, in the 1970's (when it was trialed in Chile), and then finally coming home to roost in 1980's America, nearly a century after its birth. 2. The *political Duopoly* was no longer systematically challenged after 'the Left' parties' agenda was co-opted by FDR's New Deal coalition in the 1930's (the reactive flashes of Strom Thurmond & George Wallace aside). By the 1980's the Duopoly was as about strong as ever, although its sellout to Neoclassical-Globalism would be confronted in the 1990's, prior to Donald Trump upsetting the applecart in the 2010's. 3. *Finance Capitalism* of course bludgeoned its opposition in the Great War era (1910's-40's), albeit at the price of having to adopt many of industrial capitalism's policies. This 'war-victory economy' heritage endured a few more decades into the 1970's, whereupon Finance-- like its Neoclassical pseudo-intellectual justifier-- stepped up to (apparently ever-increasing) unipolar dominance (at least of the 'political duopoly' and its [lapdog] 'corporate media cartel'). It was readily apparent by the 2000's that NCE, the Duopoly, and Finance Capitalism were all one big team. 4. *Dying for one's country* was the one exception, as its appeal was bled through the 1950's-'70's ('cultural revolution') era, and has never recovered to first-half-of-the-20thc levels (Robots-machines may be doing most of the soldiering a couple decades from now anyway). 5. 1909 *Scofield pernicious* 6. Finally, the Rockefeller-ized "*health care*" sector, which Congress allowed to be taken over by... in the 1910's (Flexner Report) has been (like the CMC) a particular victim of the 1980's-90's financialization ('green eye shade') & consolidation wave. By c.2010, cancer had "become the #1 killer of children" in the US (Gerson, 2010, mn.0-1). See also "Imperialism, 'modern'" [for life exp./mort. rates], "Accounting, Management" (for green eye shade).

¹¹¹⁶ One of the era's most influential (and typically pseudo-historic) studies was Cornell University co-founder Andrew Dickson White's *Paper Money Inflation in France* (1876), which posited the then-trendy idea that "financial laws [are] as sure in their operation as those laws which hold the planets in their course" (Spang, 2015, 215). See also "Market fundamentalism", "Neoclassical Economics".

See also “Great Divergence (historical-economic)”, “Usury”, “Industrial Revolution, 2nd”, “Pilgrim Society”, “Corporate Media Cartel (CMC)”, “Currency Wars, the”, “Myths, Big 6”.

Finance- (synon. ‘funding’) **finding money, mostly through borrowing**, or equity.

1) It is, essentially, a cost of doing business; “and if you let that cost get too high... [then] investment becomes so low that you can have a crisis” (Keen, 2016u, mn.15). The “verdict by the [GDP] statisticians on the financial sector...[is] that a financial transaction doesn’t add value. Why?...It’s a zero-sum gain. If you are gaining from a financial transaction, somebody must have lost the same amount.... So the more people are playing financial markets... the more unproductive the economy gets.... It’s divide & rule... just playing people off against each other, betting against each other...” (Werner, 2016b, mn.30). See also “Baby-boom demographics”, “Sterile”.

2) Of course, “the funding of a bank [a **state-onetized credit institution**] looks different than [that of] a normal business. A [pedestrian] business can issue shares... [and] bonds.... [But] the bank [also] has something [misleadingly] called ‘deposits’, which... they can create themselves [subject to varying governmental regulations]. So they...[are capable of creating] their own funding” (Wortmann, 2018b, mn.6); although the vast majority of them still insist, with a straight face, that this is not the case, and that [just as if they had no banking license] they merely “lend” “loanable funds” that they have accumulated (by virtue of their discipline, no doubt), despite the growing chorus of central bank admissions and empirical studies to the contrary. See also “‘Exogenous vs. Endogenous’ (money creation)”.

3) “The industry is meant to allocate capital. It’s meant to be a handmaiden to actual productive enterprise. It’s not in and of itself productive enterprise. And it became this beast on the side of the economy that had very little to do with the rest of the economy.... The subprime mortgage market... [which] was the most profitable department in all these[Wall Street] firms for several years, was a machine for destroying capital...not a machine for putting it where it was supposed to go” (Lewis, 2011b, cd8:18-19). Indeed by Sept. 18, 2008 so much capital had been destroyed that “there were no bids in the market for anything. There *was no* market” anymore (Lewis, 2011, 240). See also “Market maker”.

4) This was partly because “Money governs finance, as finance governs the economy”¹¹¹⁷ (Huber, 2013, 6); in addition to the fact that 2008 was also a classic “Panic” of (high-leverage) fear-hype. See also “Free market”, “Investment banks”, “Quantitative Easing”, “Homo Economicus”.

Finance Capitalism- (synon. ‘financial capitalism’; a.k.a. ‘late capitalism’ [Sombart]; antec. ‘industrial capitalism’; subseq. ‘state capitalism’) See also “Capitalisms”.

1) “The financial sector always has been so short-term as to be self-destructive. There’s been [increasingly] a race to the bottom. Creditors treat the economy like an oil well, to be depleted...” (Hudson, 2012g). See also “Adolescence of Mankind”, “Montesquieu, Baron de” [Trichotomy].

2) The domination of government and business b^y finance [c.3rd-quarter 19th century]¹¹¹⁸, was philosophically “based on the assumption that politicians were too weak and too ”subject to temporary popular pressures to be trusted with control of the money system; accordingly... [one must allow] bankers to control the supply of money. To do this it was **necessary to conceal...**” both monetary operations and monetary education (Quigley, 1966, Ch.5). See also “Fin de Siecle”, “Duopoly”, “Gold Standards/bullionism”, “**Deceptive Banking Terms (d.b.t.’s)**”, “Economics”, “Reform, false”.

2b) The “rise of financial capitalism in France, as elsewhere, was made possible by the demand for capital for railroad building. The establishment of Credit Mobilier in 1852 may be taken as the opening date for French financial capitalism. This bank was the model for the credit banks established in Germany later, and, like them, conducted a mixed business of savings accounts, commercial credit [extensions], and investment banking...Credit Mobilier failed in 1867, but others were founded afterward... [F]inancial

¹¹¹⁷ And (in the millennialist-era US at least) economics governs the culture? See also “Debt cycles”, “**Cultural Calendar**”.

¹¹¹⁸ “...made necessary by the great mobilizations of capital needed for railroad building after 1830... [which could not be financed by] single proprietorships or partnerships or locally, but, instead, required a new form of enterprise-- the limited liability stock corporation” (Quigley, 1966, 50).

capitalism in France...[had] the same excesses as elsewhere. In France these were worse than those in Britain or Germany (after...[its] reforms of 1884), although they were not to be compared with the excesses of frenzy and fraud displayed in the United States. In France...[&] Britain, the chief exploits of financial capitalism... were to...found in the foreign field, and in government rather than in business securities" (Quigley, 1966, 519). See also "Capitalisms", "Bank, universal".

3) "Now, you don't have a] 'government' doing the planning, you don't have b] 'industry' doing planning; you have c] Wall St. and the financial sector doing the planning. Nobody 100 years ago expected anything like this... a new bureaucracy... not the bureaucracy that Hayek warned about in *The Road to Serfdom* doing the planning, but a much more centralized planning bureaucracy-- on 1] Wall St. in America, 2] the City of London in England, 3] the Bourse in Frankfurt... [and] 4] Shanghai in China. You have financial interests that are somehow centralizing all the planning power and all of the economic surplus in their own hands, in a way that's [now] impoverishing the rest of society. This is something entirely new, *and the political system has not come to terms with it*" (Hudson, 2011b). See also "Financialization", "World Bank", "Bonds".

4) Today, "financial maneuvering and debt leverage play the role that military conquest did in times past. Its aim is still to control land, basic infrastructure and the economic surplus-- and also to gain control of... policy. This financial conquest is achieved peacefully and even voluntarily, rather than militarily. But the aim is the same: to make subject populations pay-- as debtors and as dependent junior trade partners. Indebted 'host economies' are in a similar position [legally] to that of defeated countries. They lose sovereignty over their own financial, economic, and tax policy, as their surplus is transferred abroad. Public infrastructure is sold to foreigners who buy on credit, on which they pay interest and fees that are expensed as tax-deductible, despite being paid to foreigners. The *Washington Consensus* applauds this pro-rentier policy. Its *neoliberal* ideology holds that the most efficient path to wealth is to shift economic planning out of the hands of government into those of the bankers and money managers in charge of privatizing and financializing the economy. Almost without anyone noticing, this view is replacing the classical law of nations..." (Hudson, 2010). If not enough take notice, then the "financialization of the economy is going to end up cannibalizing the industrial sector" (Hudson, 2013b). "Finance has become the new mode of warfare.... [achieving] the takeover of land, the takeover of companies... The Wall St. vocabulary is one of conquest... a replay in the financial sense of what feudalism was in the military sense" (Hudson, 2016e, mn.23-24). See also "Neoliberalism", "Neoclassical Economics".

5) Is financial capitalism, like the Industrial Revolutions that spawned it, pretty much *anachronistic* in the Digital Age? It has "left, as its greatest achievement, an integrated banking system and a heavily capitalized-- if now largely obsolescent-- framework of heavy industry...[the] railroads, steel mills, coal mines, and electrical utilities" (Quigley, 1966, 50). See also "Zombie", "Corrosion-Cancer-Debt". See also "Capital gains", "Thatcher, Margaret", "Accounting, Management", "Homogenization".

Finance companies- (specialized consumer finance agencies, or in-house financial intermediaries, such as the manufacturer-owned automobile finance co's from a century ago¹¹¹⁹; not to be confused with 'financial companies' [insurance and banking services] nor conflated with 'financial services' or 'financial institutions' [the inclusive terms for al.I.RE. sector organizations])

1) are regulated and licensed by states to loan pre-existing money (and not to hold 'deposits'). See also "Financial Intermediaries (non-monetary)".

Finance, public- "Learn public finance if you want to learn about money [& currency]" (Kotlikoff, 2021, mn.110). See also "Money", "Currency", "Eras of (monetary) History".

Financial Account- + (the less substantial) "Capital Account" = the inverse of a nation's "Current Account" surplus or deficit. See also "Current Account".

¹¹¹⁹ Federal Reserve Bank of St. Louis: <https://fred.stlouisfed.org/categories/33490>

Financial Accounting Standards Board (FASB)- (private NGO, est. 1973, to establish GAAP for the pvt. sector in the US; not to be confused with the public sector FASAB, nor with IFRS 'international' stds.).

1) "In subtle but significant ways, our corporate accounting system has been captured.... [The FASB], the private, not-for-profit body charged with making US corporate accounting rules... evaluates the workings of the rule-making process.... [And] the evidence suggests special-interest capture of the accounting rule-making process.... Capture in these contexts involves selectively co-opting conceptual arguments from academia and elsewhere to advance the views of the special-interest groups... [and is thus] an ideology-enabled capture, or *ideological capture* [sic]¹¹²⁰" (Ramanna, 2015, xvii-xviii).

2) "Members of the FASB generally propose rules consistent with the interests from which they hail-- in particular, members from investment banking and asset management generally propose fair-value accounting rules. Managers in nonfinancial firms [also] lobby on issues of particular relevance to them... for rules that further their private interests. On other issues they are generally silent" (Ramanna, xviii-xix).

3) "The growth of financial-services representation [since the mid-1970's] on the FASB parallels the [overall] financialization of the US economy.... [And] all academics... on the the FASB since the mid-1980's appear to be favorably disposed to fair-value rules" (Ramanna, 2015, 14).

See also "Accounting standards", "Accounting, 'Fair Value'", "Federal Accounting Standards Advisory Board (FASAB)", "State capture".

'Financial companies'- See "Financial Institutions/Services" ('companies' is also sometimes used [more exclusively] to group the insurance, investment services, and 'banking services' industries).

Financial coup d'etat (c.1998-2017)- see "Revolving Door, the", "Black Budget (US)", "Feudalism, neo".

Financial Crises- have, for the past 3 centuries, been inevitable, given the rubric of a debt-money system. The primary fraud of this is when "they" (monetary-financial controllers and their mouthpieces) try to attribute such entirely man-made social phenomena to 'market' 'forces of nature'.

See also "Market fundamentalism", "Free market", "Debt cycles", "Big government".

Financial Crisis (of 2008-)- (synon. 'the Great/Global Financial Crisis [GFC]', 'the Great Recession'; a.k.a. 'the coup' [Titus]; i.e. 'CBs buy the banks')

"the greatest white-collar fraud and most destructive white-collar fraud in [world] history, and we have found ourselves unable to prosecute¹¹²¹ any elite bankers"- Bill Black (Fitzgerald, 2013).

vs.

"There's nothing there, there.¹¹²² There wasn't [laughing]"; it was just a Panic (Kotlikoff, 2021, mn.148). Over what? See also "Accounting", "Accounting standards" (in the 21stc).

1) But the 'cure' was at least as bad as the disease. The "crisis and government's reaction to it quickly and dramatically changed the composition and structure of the US financial system."¹¹²³- Thomas Hoenig,

¹¹²⁰ The "evidence does not point... any one special interest group. There is no single extractive institution...[or] unequivocal villain in the story. The capture in accounting rule-making appears to be ad hoc and driven by those with the strongest economic incentives in any particular case" (Ramanna, 2015, xixi). What could be more 'American' than that?

¹¹²¹ To lawyers like Bill Black or John Titus, the great Crises from the 1980's-2020 (climaxing in 2008) have been about 'accounting fraud' and 'fraudulent collateral', respectively. To 'Post-Keynesian reformist' Economists like Lawrence Kotlikoff, however, the entire Financial Crisis of 2008- was nothing more than a classic financial "Panic". See also "Accounting" [the end of], "Monetary reform".

¹¹²² "Looking at it *now*, from a historical perspective-- based on data that has been collected and analyzed...we now know that [all the blame-games back then] subprime mortgages...the 'liar loans', no-doc-loans, & N.I.N.J.A. loans were far too small to have brought down [even] the mortgage market, yet alone entire financial system, even if they'd all been bad [loans]...[which] they weren't" (Kotlikoff, 2021, mn.52).

¹¹²³ "The hurdle, officials say, is that to prove a crime, they must prove *intent*. That means if the government...[brought criminal] charges against any of the CEOs of the companies that led the nation to financial disaster, [then the] prosecutors would have to prove to a [hung] jury, *beyond a reasonable doubt*, that these individuals intended to commit fraud" (Fitzgerald, 2013). Big investment bank executives routinely claim that they were/are not "key decision maker[s]...[for] setting credit policy" but rather "spoke[s] in the wheel" (Wagner, 2013).

Governance-by-denial of accountability is not a good model. See also "Money", "Secrecy, Cult of". See also "Monetary reform" (might actually be an easier [& certainly less economically-damaging] task).

Vice Chairman of the Federal Deposit Insurance Corp., May 2017 (Martens & Martens, 2017). See also “Lender of Last Resort (LoLR)/Too Big to Fail (TBTF)”.

1b) Basically, mega-debt inevitably became “too much for the banks to handle. So the State [‘had to’] step in...[saving] the [Bretton Woods] system with taxpayer money [in 2008]. But that wasn’t even enough. So...[with ‘Quantitative Easing’] the Central Banks had to step in... [keeping] the system alive by pumping ever more [Reserve/RAB] money into the system... more than \$16 tn...to big investors at ever-lower [interest] rates... [T]he system has been on life support since 2008. The [Bretton Woods] system is not able to exist on its own anymore” [as if it ever was] (Wolff, 2020, mn.2). See also “Bretton Woods” [I, II, and III], “Zombie economy”.

2) “Everyone except economists saw it coming” (Hudson, 2015, 10). “Nearly every large Wall Street bank has paid large sums of money to settle fraud cases *without admitting criminal liability* for their huge gains. So no banker has gone to jail. The top executives know that if they are convicted of billions of dollars of fraud, their banks [i.e. the shareholders] will pay a fraction of this amount,¹¹²⁴ not themselves. So the bank still makes a bundle even after paying the *nominal* fine, letting the culprits keep their salaries, bonuses and stock options for writing junk mortgages and operating in a manner that would have sent them to jail back in the 1980’s.... By now, the bankers know that the jig is nearly up¹¹²⁵, so they are giving themselves enormous new bonuses while they can. The Treasury for its part argues that if it fines the banks to recover the full amount of the fraud, the banks will be driven under– and the government will *just have to bail them out again*.... So it does nothing, except receive more campaign contributions from Wall Street.... In the case of Citibank, for instance, the FDIC *could* not disentangle the bank from all the tangle of other Citicorp entities and off-balance-sheet constructs, footnotes and fine print. This makes it almost impossible to draw the line between economically necessary banking, gambling and outright fraud. That should have been the lesson of the post-Lehman Brothers smashup of 2008. But for the banks, the lesson was simply: “*We won. If we make our accounts complex enough, the government can’t regulate or even tax us*” (Hudson, 2012g). See also “Derivatives”, “Federal Deposit Insurance Corp. (FDIC)”, “Insider trading”, “Reserve ‘requirements’”.

3) With subprime mortgages and MBS resellers (and also with eurodollars), “there’s no market maker...[for] the derivatives-securities market, and [thus] the prices [inevitably] plunged to zero” whenever the panic hit (Davidson, 2019, mn.16). “Financial institutions all over the world were holding these derivatives of the United States’ mortgage system, and they were [all] being threatened with bankruptcy”, until the Fed [eventually] stepped in as a ‘market maker of last resort’, buying up much of the [supposedly] toxic assets (Davidson, mn.17). See also “Market maker”, “Bernanke, Ben”.

4) Because of the novelty of the young 21st century’s “derivatives-securities” markets, accounting for the aggregate “costs” of the Crisis’ “bailouts” has been (notoriously) difficult. Catherine Austin Fitts and others, however, guesstimate that the GFC ultimately “resulted in [direct] payments [to the F.I.R.E. sector (culprits)] of \$29 trillion... [with the resultant] burden of an expanded national debt...[falling] ultimately on taxpayers” (Metir, 2020). See also “F.I.R.E. sector”, “Discretionary (US budget)”, “Dynastic cycle”.

4b) That’s a lot of drainage (or [euphemism] ‘overhead’ costs) from the US economic boat. Is it any wonder that...

¹¹²⁴ Fines, no matter how large, are simply absorbed by the shareholders, not the specific culprits per se.

¹¹²⁵ Surveys from that season “showed that an overwhelming majority of Americans felt that the banks should not be rescued, *whatever the economic consequences*...” (Graeber, 16). However, “a lot of the fraudulent debt [simply] got moved over to government balance sheets...so government can deal with it” (Fitts, 2017b, mn.43). See also “‘Modern Monetary Theory’ (MMT)”.

The wealth of U.S. families is yet to recover from the Great Recession

Median wealth of families, in 2018 dollars

['jobless recovery']

5) Although the Fed afterwards shored up commercial and investment banks' Reserves/RAB to the (wholly unprecedented) tune of \$200mn-\$300mn per year, Steve Keen concludes "that the real thing that stopped the [2008-09] crisis wasn't the Fed. It was the increase in the size of the American [annual budget] deficit.... which went to about 15%¹¹²⁶ of GDP.... That's really what stopped the world going into the Great Depression. I'm sure Bernanke's claiming credit for it" (Keen, 2015e). See also "Big Government (growth of)", "Capitalisms", "Bair, Sheila (& Citibank)".

5b) In 2008 it "was clear [to ostensibly everyone] that it's not good to have a small number of Too Big to Fail banks-- it's not good for regulators...[nor] financial stability.... Everyone was agreeing and there was no disagreement. Yet, all of the policies taken since [then] by the big policy makers...the Basel Committee... the Central Banks, the bank regulators, the governments...-- all that effectively made it hard and impossible for small banks...forcing banks to merge" (Werner, 2021, mn.47-48). See also "Dodd-Frank", "Capital Adequacy Requirements", "COVID".

6) Since 2008, the TAB-bankmoney system has been "broke, broken and insolvent; [and just] ...kept alive through the intravenous feedings of [ex nihilo] global central bank Reserves", (RAB-- what the overall 'debt-money' system runs on); whereas central banker's in 1930's mostly did nothing (Bongiovanni, 2019); hence that era's 'debt-deflation', and this era's 'asset-inflation'. What has been the same at the end of both of these 'debt cycles' (ending c.2010 and c.1930-- as well as the preceding debt crashes of the late 1850s and the 1780's-90's) is the citizenry's ongoing money ignorance. See also "Money, 2 classes (layers) of", "Debt cycles".

7) "Financial institutions have a habit of taking over governments. That has happened here in the US, and consequently the spokesmen of the financial agencies of the Treasury Department and the US [have] become the advocates for the large banks. That should be changed" (Galbraith, 2016c, mn.1). See also "Bank welfare".

8) To seasoned observers granted a decade of hindsight, however, it looks less like the financial Apocalypse than just another classic "panic". In 2008 the "financial meltdown" was that approx. "17 large financial institutions either failed or went bankrupt" (Kotlikoff, 2021, mn.9-10). But only Lehman & Washington Mutual actually filed chapter 11 bankruptcy proceedings. The rest were simply "bailed out by federal government [revenue], either" through national "re-organization" & conservatorship (Fannie Mae & Freddie Mac), or "in the form of shotgun weddings... [like] Merrill Lynch or Bear Stearns... [& the latter's] shotgun wedding to JP Morgan," most of it arranged by the FRBNY¹¹²⁷ (Kotlikoff, mn.9-10). See also "Conservatorship", "Bair, Sheila (& Citibank)" [.'underwater'].

9) Underneath the corporate media cartel radar, however, it went further, and deeper. "What ended up happening", after 2008, amidst the flurry of pseudo-reforms [of (mostly) Congress trying to assert its relevancy], was that A) the banks "bailout went through with no strings attached, B) the banks then took over the Justice Department,¹¹²⁸ and C) now you have [Deep State] criminals running the Justice

¹¹²⁶ "The maximum size of the deficit during the New Deal was 5% of GDP" (Keen, 2015e).

¹¹²⁷ For more on Bear-Stearns, see also "Accounting, standards" [Kotlikoff].

¹¹²⁸ See Titus, 2016; Titus, 2017.

department, as we see, basically every day...running the [pseudo-legal] system, and D] the banks are even bigger" (Titus, 2019d, mn.23). See also "Russiagate", "Legalism", "Common law".

10) The "government's massive treasure dump into the balance sheets of the top banks was [nothing less than] a kind of merger [between the two. And].... the facts show [that] the...[government's] response was a massive, sustained investment [f.e. \$5tn. as of 2009] in the wealthiest sector of the economy, which also happened to bear the...responsibility for the disaster" (Taibbi, 2019b). See also "Deceptive Banking Terms (d.b.t.'s)", "Bank welfare".

10b) Perhaps 'responsibility' should be shared. Not everyone is aware of the fact that, f.e., "Congress designed Fannie and Freddie [who, since 2000 in particular, ginned up the MBSs that most commentators have blamed for the Crisis] to serve *both* their investors and the political class. Demanding that Fannie & Freddie... [meet quotas] allowed Congress and the White House to subsidize low-income housing *outside* of the budget... Unfortunately, that strategy remains at the heart of the political process, and of proposed solutions to this crisis... [And yes, both] Fannie & Freddie were active politically, extending campaign contributions to legislators" (Schwartz, 2009, 20). See also "Mortgage-backed securities (MBS)", "Fitts, Catherine Austin", "Parties, political".

11) The "'financial industry'... [which was already on the way to doubling] its share of corporate profits... [from the early 90's to early 10's], received over \$20 trillion dollars of public wealth across borders... [from] 2008 [to 2012], and made [even] bigger profits after the economic collapse [that] it caused, than before.... [via] only the big private banks and bondholders... [getting] the infusions of public wealth" (McMurtry, 2013b). See also "Bank welfare", "Corrosion-Cancer-Debt".

12) No public reforms of significance have been made since the 2008¹¹²⁹ crisis to prevent a recurrence (of another debt bubble buildup, popping, and consolidation). Some people perceive the ongoing danger and long for a moderate, sensible monetary reform to provide near-term safety. Most of the same conditions are present again, and in larger doses. A larger future crash is certain,¹¹³⁰ barring an unexpected reform (or unprecedented warfare). **The Dodd Frank law has already prepared for this planned future crisis, by instituting the BIS' (big bank favoring) Capital Adequacy Requirements, in addition to authorizing the expansion of 'lender of last resort', and perhaps also bail-ins, as practiced in Cyprus (also) under specifications from the BIS.** See also "Capital Adequacy Requirements", "Bail-in", "Reform, 101".

12b) Were the real/structural problems Too Big to Fix? Even though "[a]n economy is often likened to a machine...few economists follow the parallel to its logical conclusion: like any machine the economy must draw energy from outside itself.... The law of entropy commands a one-way flow downward from more to less useful forms. An animal can't live perpetually on its own excreta.... Problems arise when [real world] wealth and [abstract] debt [claims] are not kept in proper relation"¹¹³¹ (Zencey, 2009). See also "Economics", "Primary Sector Economics (PSE)".

13) It's official now. Since 2008, "the only people to see net gains in wealth...have been the richest 20% of Americans" (Taibbi, 2021). See also "Zombie economy".

¹¹²⁹ The institutionalization of direct bank welfare payments (i.e. the Federal Reserve paying "Interest on Excess Reserves") was authorized by Congress 2 years prior. Section 128 of Treasury Secretary Hank Paulson's *Emergency Economic Stabilization [bailout] Act of 2008*, moved up the implementation of *The Financial Services Regulatory Relief Act of 2006*, from 2011 to 2008. Effective only 3 days after its October signing, the Fed began paying interest on member banks' 'excess' reserve balances. Such (literal) bank welfare payments are why banks do not lend as much as they used to-- they don't really need so many customers anymore to collect their dole. See also "Interest on 'Excess' Reserves (IOER)".

¹¹³⁰ According to Mervyn King, recent Gov. of the Bank of England, in *The End Of Alchemy: Money, Banking and the Future of the Global Economy* (2016): "Without reform of the financial system, another crisis is certain, and the failure... to tackle the disequilibrium in the world economy makes it likely that it will come sooner rather than later"; adding that: "**Only a fundamental rethink** of how we, as a society, organize our system of money and banking will prevent a repetition of the crisis that we experienced in 2008."- (King, 2016); <http://www.theguardian.com/business/2016/feb/28/mervyn-king-new-financial-crisis-is-certain-without-reform-of-banks> . See also "Soddy, Frederick (1877-1956)", "National Debt Economy" [a.k.a. alchemy].

¹¹³¹ In other words, the "amount of wealth that an economy can create is limited by the amount of low-entropy energy that it can sustainably suck from its environment, and by the amount of high-entropy effluent from an economy that the environment can sustainably absorb. Debt, being imaginary, [simply] has no such natural limit" (Zencey, 2009); and most macro-Economists still deny or ignore it. See also "Ecological economics", "Reform, 101".

13b) 'Is it dead? Is it really dead?' Even "cross-border financial flows" have not returned from the peak in 2007 (Wolf, 2019). See also "Debt, private".
 See also Ch. 3; "Quantitative Easing (QE)", "Public-Private Partnership", "Taxation of income".

'Financial fascism'- Pierre Jovanovic's term for when "you don't have access to financial information.... What they want is [when] nobody can speak about the... fascism which is taking over...Europe" (Jovanovic, 2018, mn.23). See also "Orwell, George", "Dumb-downing".

'Financial firms'- (usually sector jargon for Nonbank Financial Institutions [NBFIs], and particularly those that provide payment services [PSPs]; not to be confused with [the broader term] 'financial companies'/'financial institutions')
 See also "Central clearing counterparties (CCPs)", "Payment service providers (PSPs)".

Financial institution Holding Company (FHC)- (synon. 'Financial Holding Co's; formerly known as [see also] 'Bank Holding Co's [20thc])
 1)

Financial Institutions/Services- (the most prevalent catch-all term for any industry within the F.I.RE. sector, including both NBFIs [insurance, pensions, mutual funds, brokers-dealers, payment services] and state-monetized credit institutions [banks, credit unions, and most thrifts]; a.k.a. 'financial services'; not to be confused with 'financial firms', which is used more narrowly to identify the NBFi side of the overall financial sector)

1) Every financial institution is either a state-monetized credit institution (d.b.t. 'depository institution') or a 'Nonbank Financial Institution (NBFi)'. In recent decades the latter (NBFi) sector's dollar volume has surpassed that of the former.
 See also "Financial system, the", "F.I.RE. sector, the".

See also “Near monies”, “Shadow Banking Sector (SBS)”, “Federal Funds (Accounts) for All”, “Monetary reform”.

Financial intermediaries (non-monetary)- (not to be confused with ‘nonbank financial institutions’, which trade in near monies) 1) The bankers like to perpetuate the Intermediation of Loanable Funds myth (as if it was still the 18th or 17th century), that Fractional Reserve institutions such as banks do not create ‘deposits’ (TAB), preferring to imagine that they are merely ‘facilitating’ the trade of pre-existing funds between lenders and borrowers. See also “‘Exogenous vs. Endogenous’ (money creation)”.
2) In reality, only non-monetary institutions are “financial intermediaries” of pre-existing money, such as finance companies, (some instances of) savings banks, and building associations (UK).
See also “Fractional Reserve (monetary) Institutions”, “Nonbank Financial Institutions (NBFIs)”.

Financial Intermediation Theory- (a.k.a. “Intermediation of Loanable Funds” theory [Kumhof], ‘funds intermediation’ [Treasury-OCC], or simply the ‘loanable funds’ fallacy)
See “Intermediation of Loanable Funds (ILF) Theory”, “‘Exogenous vs. Endogenous’ (money creation)”.

Financial markets- (a somewhat tricky or d.b.t. for: 1] catch-all term for anything non-physical that is traded; and/or 2] more specifically, the short-term side of financing, plus the OTC derivatives-hedging that has arisen in recent decades)

1) in formal denotation: the historic catch-all/inclusive term for the trading of: securities (long-term debt), ‘money market’ instruments (short-term debt), currencies (forex), equities (stocks/shares), and derivatives (futures-options contracts).

2) the more common connotation: a conflation of 2 (of the above ‘financial market’) subcategories--
a] ‘money markets’ (an informal term that sprang up in the 1970’s to demarcate the New World [post-Bretton Woods] Order of short-term near monies & shadow banking, which have exponentially exploded in the subsequent computerized-trading [and deregulated] decades), which are always short-term; and b] derivatives (deregulated in 1999-2000), which are usually short-term, but may also be long-term.

3) Hence, in the sector slang, the “capital markets” are for (old-school) long-term financing; and the “financial markets” are basically the (N.W.O. of deregulated) ‘money market instruments’ & derivatives

¹¹³³ <https://fred.stlouisfed.org/series/TREAST>

¹¹³⁴ The new form of tribute? In 2018 “[f]oreign investors [have now also] emerged as the biggest buyers of government bonds in China’s domestic market... [reaching] a record 836 billion yuan” (\$121 bn. USD) in May, and approx. double the amount of such holdings from 12 months earlier (Hong, 2018). By September, foreign holdings had surpassed 1.03 tn. yuan (\$150 bn. USD), “bringing the proportion of outstanding Chinese government bonds held by offshore institutions to a record 8%. The enthusiasm for Chinese bonds stands in stark contrast to other emerging markets, as fears of currency contagion from Argentina, South Africa and Turkey have shaken investors’ nerves, pushing up the US dollar” (Galbraith, A., 2018). China “owns less than 6% of US Treasury debt” (Taplin, 2018).

that comprise today's short-term financing & hedging options (many if not most of which involve the [hitherto semi-secret¹¹³⁵] monetary streams of [unregulated] 'eurodollars' and/or Reserve [RAB] money). See also "Capital markets", "Orwell, George".

Financial-Politico Complex- Prof. Keen's term for 1) where "both the political powers-that-be and the financial system are completely wedded together, and they, therefore, are determining the direction of society" (Keen, 2016u, mn.30-31). 2) The financial sector's share of profits from the US economy rocketed up from a 10% share in the early 1980's, to 40% by c.2003 and is (post-crisis) still in the process of supplanting manufacturing as the biggest profit center in the economy (Weissmann, 2013). Largely from lobbying, the financial sector is now "about 3-4 times the size it should be, and is parasiting the economy" (Keen, 2017h, mn.30-31). See also "Parasitism", "Lobbyists".

2) If there's any easier way to extract capital than issuing new bankmoney, raking in compound interest, and consolidating the foreclosures, it would be the command (state sector) economy.

See also "Financialization", "Duopoly", "Political Pronology", "Corporate Media Cartel (CMC)", "Reform, false".

Financial sector debt- 1) "like any other form of private debt" in the present system, it creates money *ex nihilo*, or via "loan swaps". "I trouble is that when the financial sector... [finances business expansion], some of the money... [gets] caught up in gambling over the price of assets, and not producing new factories, but driving up asset prices with leveraged speculation. Now that's been fundamentally the basis of the American economy... ever since the collapse of the stock market back in '87.... That level [approx. 120% of GDP] of financial debt points out a system which is turning more and more into a Ponzi scheme,¹¹³⁶ rather than a real, productive economy" (Keen, 2011e).

2) "One of the problems of trying to analyze debt is that... the data, on the financial sector's own debt, is really a mess... I don't usually include it... and neither does the Bank of International Settlements" (Keen, 2016o, mn.9). See also "City (of London), the", "Bank for International Settlements (BIS)".

'Financial Separation of Powers' (auto-fiat reserves)- (a.k.a. the British disease; i.e. 'the poison pill' of civil society)

1) Does it do more good or harm to the continuum of "accountability vs. opacity"? Initially (and up to the 1600's), there pretty much was (apart from Chrisendom & the bishops) no express 'separation of powers'.

2) Then, nearly 7 centuries after Ælfric of Eynsham's initial articulation of 3 Orders in (Chrisendom) society,... See also "Glorious Revolution, the", "English constitution, the", "Adolescence of Mankind".

2b) Fiat (a.k.a. public sector) 'reserves' (for non-public sector financial entities) were initially rationalized as 'financial separation of powers'-- and the practice did, in fact, pry the budgetary purse strings away from the Crown and into the Parliament in the 18th and 19th centuries. But in the 20thc (i.e. the 'century of central banks'), such public subsidies for privately-owned institutions grew so great that-- even by the 1910's or 20's-- Parliament was no longer in effective (de facto) control (Hollis, 1949.), and several decades of ultra-violence & ultra-secrecy ensued. The latter trend continued, unarrested, through the rest

¹¹³⁵ By this author's estimate, less than 1% of the American or 'Western' population could provide even a halfway sensible (yet alone adequate) definition of either 'eurodollars' or 'Reserve money', (which seems) not that different from the 1970's, despite each of the vehicles' radical increase in prominence since then.

¹¹³⁶ "Ponzi" + global scale = dangerous. See Gaede, 2008; "Transhumanism", "Food"; "Sectors of the economy" [Gaede].

of the century and millennium, culminating in the unprecedented unaccountability of the (see also) “Deep State”s, “FASAB-56” budgetary free-for-all (administrative) ruling of 2018. Secret money-currency for private (unaccountable) armies is not “Civil National Identity”. It’s “Feudalism, neo”, and it’s contagious, spreading from Lockheed-Martin and the DoD; to the “Big...” publicly traded corporations (Kotlikoff, 2019). Global “Imperialism”, and “Separation of Powers” (a.k.a. ‘Western civ.’) are like oil and water, at least over the long term.

3) However, Montesquieu’s civil ontology (in the 18thc) and even Christopher Hollis (2 centuries later, in the 1940’s) were both oblivious to finance’s basic S-curve relationship to civics and civil society-- i.e. that usury, at least over the long-term, is no sane man’s panacea. See also “Usury”, “Separation of Powers”. See also “Empires” (British-American).

Financial services- (synon. ‘financial institutions’; broadly defined, the **entire** financial sector; or also, more narrowly [& less frequently], only the ‘*investment banking*’ & ‘*investment management*’ industries) “[T]he UK is the world’s largest provider of international financial services.... with around 25%”¹¹³⁷, and 19% for the US (Oswald, 2018, mn.28-29). See also “Offshore”.

1) the *colloquial* catch-all term for a broadly defined *financial sector*, including both **state-monetized credit institutions (SMCIs)** and Nonbank Financial Institutions (NBFIs), as well as F.I.R.E. sector firms, brokers, credit card companies, venture capital, conglomerates, and offshore financial centers.

2) In more *specific* usage, financial academics such as Karthik Ramanna define it as simply “*investment banking and investment management*”, each of which “has increased” in prominence at the FASB in recent decades, “and this increase is associated with accounting rules that deploy *fair-value* methodologies” (Ramanna, 2015, 13). See also “Accounting, ‘Fair Value’”.

2b) “‘*Low-quality revenue* is easy to produce, particularly in financial services. Poorly underwritten loans represent (fictional) income today and losses tomorrow”- JP Morgan CEO Jamie Dimon’s Letter to Shareholders, March 30, 2012, p.8 (Black, 2017, mn.35).

See also “Accounting Control Fraud”, “Accounting standards”, “Big 3 (Asset managers)”.

Financial Services Authority (FSA)- (a decade-long effort to demarcate ‘*monetary policy*’ from [the broader mission of] ‘*financial stability*’; and a resultant intermission in Bank of England’s traditional *self-regulation*)
1) The independent (from the UK government & Treasury) Securities & Investments Board (est. 1985) was changed to the Financial Services Authority (FSA) in October 1997, and started, as of December 2001, to exercise statutory powers granted by the *Financial Services & Markets Act 2000*. The FSA also then inherited the role of the Securities & Futures Authority (SFA), which had also been a self-regulatory organization.

1b) It was largely responsible for the regulation of the **entire** financial services industry in the UK from Dec. 2001 to Mar. 2013, whereupon it was abolished¹¹³⁸ and the BoE re-assumed its **traditional self-regulation** of

¹¹³⁷ Is the UK & its (still existing) Crown Dependencies just the tip of the iceberg? “‘If you add to that...[25% figure the] ex-colonies, recently-dependent...[such as] Hong Kong, Singapore, maybe even Dubai and Bahrain, and Cyrus, then you reach a figure of nearly 40%... [which] represents better the position of London in the global financial markets’” (Oswald, 2018, mn.29).empire

¹¹³⁸ Apparently there were problems with accountability. Ed Balls notes that, as far back as 2006, “we knew... [that] we needed further reform.... There were problems [within even the select “war games” group]-- differences of view about moral hazard and the case for [state] intervention... [So] *nobody*-- [not] the Bank, the Treasury, or the FSA-- were ringing the alarm bell about what was happening in the real [as opposed to monetary theory, turf] world... [It] wasn’t being run by” any of the 3 in particular; “people [just] weren’t looking hard enough” (Balls, 2020, mn.236-37). Furthermore, there was something of a Bank-Treasury consensus, in the latter 90’s at least, on “*putting it all in one place*...[but not yet] in the Bank”, which first had to establish its “independence” from the Treasury (Balls, mn.238-39). So, it would appear, that they always considered 2 big steps [1998 and 2013] to be necessary in the making of “a modern central bank”. See also “Moral hazard”, “Lender of Last Resort”.

financial stability in the UK, leading both macro and micro regulation, in conjunction with the newly-created¹¹³⁹ (2013) ‘Prudential Regulation Authority (PRA)’¹¹⁴⁰ and ‘Financial Conduct Authority (FCA)’.¹¹⁴¹

2) “The system changed. It got a bit more rigorous, but not much...[because] it was developing in way which, I think it’s quite right, the banking system *really* wasn’t being...[effectively regulated]¹¹⁴² by *anybody*” (Middleton, 2020, mn.119). The “fundamental flaw” of the era was that “people [whether internal or external to a bank] just didn’t understand what was happening in the development of derivatives and [other] fancy financial arrangements... [So] we [then] got a huge problem on our hands that actually *nobody* was addressing” (Middleton, mn.129). See also “Bank of England” [Financial Stability].

2b) With (what the British call) “financial [sector] stability, you [always] don’t see what the problem is until there is a problem, and [then] it’s often too late, and it’s very, very complex.... [Even] back in the 1970’s, when the... sovereign debt exposure of banks was setting in, the BIS constantly said: ‘We need more information’; and there was *always a pushback* from the banks” (James, 2020, mn.242-43). See also “M3”. See also “Regulation”, “Derivatives”, “Dodd-Frank Act of 2010”.

Financial Stability Board (FSB)- (successor to the 1999-2009 ‘financial security *forum*’, the FSB, est. 2009, within the BIS¹¹⁴³ in Basel; analogous to the EU executive summits, vis-a-vis the everyday EU ‘council’ of ministers, and appears to house the world’s main ‘oversight’ of the *shadow banking* sector [that caught up with and surpassed US GDP c.1995-2004¹¹⁴⁴])

1) “Everybody in the organization is wearing two hats” (Titus, 2020d, mn.38).

1b) The big idea; or “push behind the FSB was to try and enable more information to be gathered on international markets, but one... [cannot] delve deep enough into someone else’s market. And you can see that due diligence *isn’t* happening.... I think globalisation... *does* [sic] make it more difficult.”- Patricia Jackson, <https://www.youtube.com/watch?v=aANly4Guy1E> , mn.140.

1c) “You’ll never get any minutes of these meetings. There’s no transcripts of these meetings. These things are conducted in complete darkness.... [We] don’t know what’s going on there. All you know is that a representative from your country that should be representing you is in that country... really representing... [who knows what] with a bunch of people who have criminal immunity” (Titus, 2020d, mn.38). See also “Secrecy, Cult of”, “State capture”.

2) Since 2009, states have re-defined their relationships with shadow money-issuing banks, via new rules from the FSB that attempt “to *curtail* the issuance of shadow money, because” it has too much “leverage” power. The would-be reforms, however, “have been resisted, and the new Trump Administration has

¹¹³⁹ What’s with the new ‘checks & balances’-type ‘financial regulators’? See also “Technocracy” (@Middleton, 2020, mn.156). It’s bringing them (more) “into politics. That’s what it is” (Ibid).

¹¹⁴⁰ Although the PRA (approx. £275mn.) is located at a different address within The City; the BoE’s Prudential Regulation Committee sets the PRA’s high-level strategy, policy-functions, and rules, while “adopting” its budget (Bank of England, 2020). “It’s not clear-- ever-- quite whether the PRA is another organization or [simply] part of the Bank of England. But I guess it’s more” of the latter (Balls, 2020, mn.239). The PRA does, however, (still) “have external members” on the (BoE’s) Prudential Regulation Committee; so it is like a BoE “subsidiary with outside information coming in.... [T]he head of the PRA has helped the FPC [i.e. the (broader) Financial Policy Committee of the BoE (est.2010)] see what’s possible... and [has] helped us get to our objectives” (Kohn, 2020, mn.241). The (subsidiary) PRA is obliged to act on both of the BoE Committee’s concerns. See also “Regulation”.

¹¹⁴¹ The FCA (approx. £630mn.), unlike the smaller PRA, operates independently of the UK government (as a non-profit “company limited by guarantee”), and is financed by charging fees to members of the financial services sector.

¹¹⁴² Patricia Jackson, fmr. head of the Financial Industry & Regulation Division of the BoE, says that the FSA was often focused on more extraneous issues than a bank’s basic liquidity. “The balance of their focus was too much...on conduct. And I think they had also taken a fundamental decision that they did not want interfering [with] banks’ business models.... [which is] taking a lot of the armoury away and then you’re not going to react the [basic] buildup in risk. I *do* [sic] think there were *fundamental* [sic] issues in the FSA...To start with, [it used to] work reasonably well between The Bank [of England] & the FSA, in the sense that the seeming individuals had all worked with each other for a long time in The Bank of England, together...[inaud. sentence] But it was this [too cozy] closeness to what was going on in the banks, which really...[didn’t] get out...[in] the data...[And with such a] focus in the FSA, they weren’t reacting fast enough to really what was going on the ground.” - <https://www.youtube.com/watch?v=aANly4Guy1E> (mn.126-28). See also “Criminalization of banking, the”, “Luxembourg”, “Bank of England”.

¹¹⁴³ “...and it is governed by those same... BIS provisions” (Titus, 2020d, mn.35). See also “Sovereignty”.

¹¹⁴⁴ The “shadow banking” sector (SBS) means different things to different scholars & organizations. See also “Shadow Banking”.

been very clear that they want to take away some of the...immigration of the Repo market” from the more regulated (or at least more complex) US shadow banking sector (Gabor, 2017, mn.1-2). See also “Shadow banking (SBS)”, “Bank of International Settlements (BIS)”, “Exchange Stabilization Fund (ESF)” [the FSB’s model?].

3) Globalist “FSB members are nothing if not adept at flashing the right [double-agent] badge at the right time... [in order] to conceal the...[globalist bankster] cartel’s hands¹¹⁴⁵ on the very levers of government” (Titus, 2017, mn.31). See also “Geithner, Timothy”, “Bank of International Settlements”. See also “Lender of Last Resort/Too Big to Fail”, “Globalism”, “Usury”, “Sovereignty”.

Financial system, the- inclusive of all (see also) “Financial Institutions/Services” & the Treasury/government.

Financialization- (euphemism for cartelization, ‘casino economy’, [& eventually] liquidation)

1) “when you run the economy for the benefit of the financiers, not for the economy as a whole” (Hudson, 2018-pt.2, mn.15). See also “Leverage”, “Usury”, “Homogenization”, “Robotization”, “Tickbox”.

2) “What is important to recognize here is that the basic dynamic is *shrinkage*.... *Financial* engineers– the class that has replaced *industrial* engineers– aim to get rich not by earning profits (which are taxable), but by capital gains, which are taxed at much lower rates. So today’s financialized tax code encourages speculation rather than profit-making direct investment. The company won’t report a profit, but the financial manager hopes to increase its market price to re-sell it on the stock exchange. This is done not so much by new investment or innovation, but by *cutting costs* and selling off its pieces to make a capital gain. This is how Republican Presidential candidate Mitt Romney’s Bain Capital made money. It is ‘*balance sheet*’ engineering, not aimed at raising production or living standards” (Hudson, 2012g). “Financial *derivatives* don’t have much to do with production and employment– except to shrink markets....; because bailing out the banks while keeping debts in place has the effect of shrinking market demand and employment” (Hudson 2012g); see also “*Derivatives*”. “I don’t think you would want finance to manage anything. Almost everything it touches, it untracks, because the financial time frame is short-run. Financiers are into [not much more than] making a very quick profit” (Hudson, 2019c).

3) “The aim is to extract [cash-in on] the surplus before anyone else does. Under this prime directive, political economy turns into the *anti-social* economics of Ayn Rand and the Chicago School. Financial predators [parasites] find their Alan Greenspans and Tim Geithners to act as their factotums, to give government power to the most avaricious and shortsighted members of society.... *Financialization* [simply] leads to the bankruptcy of *local* banking systems so that outsiders can swoop in for a huge property grab. Many countries have pension systems that can be looted after the manner perfected under Pinochet in Chile in the late 1970s. Many banks do indeed become casualties. The most highly criminalized US banks– Countrywide, Washington Mutual, and their cohorts deepest into fraud in recent years– were absorbed by the 5 largest US ‘too big to fail’ giants” (Hudson, 2012g). See also “Big 5 (High St.) Banks”, “Bair, Sheila (& Citibank)”.

4) “What I have found on planet Earth is that...the system is not run to maximize ‘financial’ goals, but the financial system is used to achieve control and management. The financial system is much more a way to allocate resources, to settle wars among each other, to compete and to cooperate. So it’s much more of an allocation system... as opposed to a ‘market’ system” (Fitts, 2014, mn.30). “The federal government is in complete violation-- and has been for decades-- of the rules in the constitution regarding financial management.” For example, “‘*all spending has to be envisioned by an appropriation*’. [The] government is in complete violation” of that, and of “the financial management laws that say you have to have financial statements. So, for example, if you’re a publicly traded company-- like all the publicly-traded companies that [now] run the information & payment systems and bank accounts for the US government [laughs]-- if you didn’t produce your audited financial statements as required by law...[then] the Exchange would throw you off, [and] you couldn’t raise money in the capital markets... You wouldn’t be allowed to

¹¹⁴⁵ ...and also the global mega-bank cartel’s “contempt for the nations that it systematically loots” (Titus, 2017, mn.32). See also “Contempt”, “Banksters”.

function, and yet the US government is the largest securities issuer in the world. They're allowed to function every day in the market despite...[being] in violation of all the laws" (Fitts, 2017, mn.5-6). See also "FASAB" [FASAB-56], "Fitts, Catherine Austin" [Lockheed-Martin].

5) "The situation is much as if criminals had used their crime proceeds to take over the government, abolish the anti-crime laws, abolish the police force (or put their own gangsters in control), and give amnesties to the prisoners.... that is basically how today's world has been financialized" (Hudson, 2012g). Armies are no longer needed to grab national assets, "as long as countries believe that There Is No Alternative... Margaret Thatcher's phrase... But of course there is an alternative, and that's what Economics is designed to prevent people realizing" (Hudson, 2016c). See also "Parasite", "Academia".

5b) Basically financialization fills the vacuum of declining public institutions (in the 'monetization = modernization' train of thought)... up until 'they'/it starts 'running out of tarmac', so to speak. Then everything changes, from the international money, on down the (basic/planetary) hierarchy of: Ecology-Economy-Politics-Media. See also "Greece", "Great Extinction, 6th", "Ecological economics", "Reform".

6) Financialization Updates: 8/22- Q: "What do they practically think is gonna happen to Russia, Iran, India and China; do they really sincerely believe they're gonna break them up into little parts, have them all run by comprador elites and make a killing, do they believe that?"

A: "No. That's just one [extreme bullying] scenario they have. They [will, more likely] say 'if we can't do that, then we're gonna sell all of our stocks & bonds, and we're gonna try to buy into an investment position in these [new] countries, and we'll gamble on their currencies going up and we'll make money on the [new] casino'. It's easier to make money in an economy that's crashing than it is in an economy that's rising. If you're one of the 1%, you think 'Well OK, the United States economy is going to shrink; boy, we will be able to pick up all sorts of companies at distressed prices. We can certainly buy German and French [firms] that are broke at distressed prices, then we can make our own new arrangements with Eurasia on some kind of beneficial terms and we'll come out OK" (Hudson, 2022). See also "Parasitism". See also "Common sense", "Monetary reform", "Graham, Benjamin".

Economic data suggests a strong correlation between an expanding financial industry and rising income inequality

Note: Original graph from Philippon (left scale) has been reformatted and overlaid with income share data including capital gains (right scale).

Original notes: VA is value added, WN is compensation of employees, "fin" means finance and insurance, "fire" means finance, insurance, and real estate. For "NIPA", the data source is the BEA, and for "Hist" the source is the Historical Statistics of the United States.

FINANCIAL-INDUSTRY PROFITS AS A SHARE OF U.S. BUSINESS PROFITS

Fintech- (from Paypal to cryptos and phone apps) "" (Omarova, 2020).

"technological advancements in the private financial sector.... should not serve as an excuse for public policy stasis" (Ricks, et al., 2018,10). See also "Big 5 (on S&P 500)".

See also "Money Services Businesses (MSBs)", "China", "Cryptocurrencies and Stablecoins".

[Fintech sector has been approx. 29% payments/transfers, 28% lending, 16% robo-fn. advice, 8% cryptos, 6% crowdfunding, & 5% insurance]

F.I.RE. sector- (collective term for the Finance, Insurance, and Real-Estate industries [overseen, in theory, by accountants & politicians], all 3 of which have gaming or rent-seeking [*“money from money”*] in common. As “finance” these days approximates the top “1%” of income in the post-millennial US, the broader F.I.RE. sector comprises the *top “5%”*.)¹¹⁴⁶ See also “Usury”, “Accounting”.

1) “Financial planning under oligarchic government is all about the F.I.RE. sector.... The National Income and Product Accounts [a.k.a. GDP] need to recognize the magnitude of the F.I.RE. sector, and treat its revenue as eating into the economic surplus, not increasing it” (Hudson, 2012g).

1b) Interest “is about 12% of [US] GDP” (Hudson, 2020c, mn.’6). See also “Gross Domestic Product”.

2) “...75% of the worker’s budget in America is spent on the [F.I.RE.] sector, before it’s spent on goods and services” (Hudson, 2012c [& repeated 2020c, mn.7]); “we’ve become...a rent-seeking economy” (Hudson, 2020c, mn.7). See also “Rentier”, “Debt peonage”.

3) For “many years the National Income economists...couldn’t even separate them [banks & real estate], because they are so symbiotic and so interwoven. This is not really part of the production economy...” (Hudson, 2017h, mn.21); but are, rather, extractions from it. See also “Real Estate”.

4) The US insurance industry is regulate’ (pretty much **only**) “at the state level... [American Insurance Group] AIG’s problems during the crisis raised concerns that state-level regulation could not adequately mitigate systemic risk posed by an insurer’s noninsurance activities (such as securities lending and credit default swaps).” - <https://www.everycrsreport.com/reports/IN10982.html> . See also “Black Budget” [.9/11].

4b) Hence the *Dodd-Frank Act of 2010* authorized a new Federal Insurance Office (FIO) to ‘monitor’ all aspects of the US insurance industry. However, the FIO is “expressly prohibited against exercising general supervisory or regulatory authority over the business of insurance.... [and] prohibited from preempting [any] state laws or regulations relating to an insurer’s rates, premiums, underwriting or sales practices, or state coverage requirements for the capital or solvency of an insurer.”

- <https://www.namic.org/Issues/federal-insurance-office> .

4c) In 2009, Senator Dick Durbin famously remarked that banks “own” Congress. Eight years later former Congressman Dennis Kucinich posted that: “Our political process is owned by for-profit *insurance* companies” (Kucinich, 2017).
